rect provocation to change them, is high treason, to be punished by detention (unlimited) and fine of from 400*l.* to 2000*l.*

"5. Whoso shall publicly avow himself a Republican, or suggest a wish, hope, or threat, that the Government ought to assume that form, to be imprisoned from six months to five years, and fined from 20*l.* to 400*l.*

"6. Similar denunciation to the letter against all who shall call themselves Carlists, or profess Carlist views of government.

"7. A journal convicted twice, to be fined doubly, and even four times the amount for every succeeding offence.

"8. Any editor opening subscriptions to pay off a fine, to be imprisoned for that offence from one month to one year, and fined from 20*l.* to 200*l.*

"9. Forbids publishing the names of jurors, either before or after political trials.

"10. Every editor must sign each number of his paper. Any editor who may beforehand have signed a blank sheet, to be punished correctionally with imprisonment, for a term varying from one month to one year, and with a fine varying from 20*l.* to 120*l.*

"11. Refusing to insert government contradictions of statements (being previously paid)—imprisonment one month to a year, and fine from 20*l.* to 200*l.*

"12. An editor refusing to disclose the name of the author of any article, imprisonment for that offence alone, from a month to a year, and fine from 40*l.* to 200*l.*

"13. A new editor must be named if a journal is to continue its publication during the imprisonment of an editor for any breach of the laws against the press.

"14. No engravings, drawings, lithographic prints, or emblems of any description to be published, exposed, or sold, without the authorisation, in Paris, of the Minister of the Interior, and in the departments, of the prefect—fine from 4*l.* to 40*l.* and imprisonment.

"15 and 16 relate to political representations at the theatres, which are proscribed under severe penalties."

There are twenty-one more articles in this Bill, chiefly of a technical nature, but some of them are devised to give the law-officers of the Crown an advantage over the defendant, and to narrow the right of appeal to the Court of Cassation. Another Bill cuts up root and branch all that is valuable in trial by jury. It proposes to authorize secret voting, and in lieu of unanimity, empowers a jury to return a verdict of guilty by a majority of 7 to 5.

A third Bill relates to the treatment the tribunals should give to contumacious prisoners who refuse to plead, misconducting themselves and insulting the court, as was recently practised by the Lyons and Paris Republicans.

The Chamber of Deputies named three separate committees to consider these project of law, and a majority appeared inclined to vote for the bills in their full extent, or with very slight modifications. The first bill, carried by a majority in the Deputies, of 229 to 149, was that relating to the jury. The press bill now under discussion, will probably have an equal number of votes in its favour, and among the amendments and addenda proposed, all that we have seen go to increase rather than diminish the rigour of the measures. One of the new provisions is, that the obligatory deposit of 50,000 francs now required from newspaper proprietors as security for the payment of damages and costs in case of action or prosecution, shall be raised to 200,000 francs, or about 8000*l.* sterling; an amount not easily obtained by literary or political speculators in France.

On the 14th of August the peers pronounced sentence on the Lyons' prisoners, condemning the more culpable to transportation or long imprisonment, and the rest to the surveillance of the police. The Court has since adjourned until the last week of September, when they will proceed with the trial of the other political prisoners.

It appears that Fieschi is not likely to die of his wounds, but that he obstinately refuses to make any revelation. A special commission has been despatched to Corsica, his native country, to inquire into the assassin's connexions and motives.

These details, which however speak "trumpet-tongued" for themselves, have occupied so much room that there is none left for remark or comment. We deeply deplore what has happened, and what is taking place; nor can we help thinking that Louis Philippe might have made a more liberal, a wiser, and every way better use of the sanguinary catastrophe, and of the active sympathy it created in his favour. As it is, France must cease to take her rank among the constitutional and free governments of Europe. Her liberty is now not worth a pint of *vin ordinaire*. Ministers affirm that the French people are not fit for the enjoyment of liberty: we shall soon see how they will tolerate a despotism as complete as that which Charles X. only contemplated, and for the contemplation of which they drove him from his throne and country.

SPAIN.

The affairs of this unhappy country have been proceeding in as bad a manner as possible. Inactivity or defeat in the field, dissentions in the cabinet, insubordination and outrage among the people, are among the most prominent and saddening features that present themselves, and announce something very like a fast-coming and general anarchy. Instead of turning their arms against the pretender, and ending the horrors of a civil war by heroic actions and patriotic sacrifices, Spaniards have been massacring defenceless monks and plundering convents. Instead of rallying round their infant Queen and the Constitution as now established, which affords them a reasonable prospect of freedom, a set of incurable fanatics and mad ultra-liberal students, who cannot or will not see the character and inclination of the vast majority of their own countrymen, have been setting up the standard of revolt against the Queen, embarrassing beyond the power of calculation all the operations of the government, and affording the finest opportunities and the brighest hopes to the despotic party, who, if they succeed, will succeed mainly through the insanity of these men that are dreaming of a republic or democracy, utterly impossible in Spain, as incompatible with all the feelings and notions of the mass of the people.

We have all along apprehended these dissensions and outbreaks, and we have been looking in vain for *one* man with the qualities of a statesman—for a single glimpse of practical political wisdom of a high order among the Spanish legislators. Spain seems to have lost her energy of production, and the mould in which such men are formed. Wars, and revolutions, and representative assemblies, which call forth talent and genius elsewhere, seem to have been thrown away upon her.

Trace her through the war of the French invasion, the Cortes of 1812, the revolution and Cortes of 1820, the campaign against the Bourbon army of the Duke of Angoulême in 1823, and then again in the Cortes of 1834, and what has Spain put forth beyond a guerilla chief or two, wholly incapable of conducting a regular army, and some half dozen of flashy orators, whose political wisdom and administrative talents bore no proportion to the brilliancy and enthusiasm of their set speeches? This is a melancholy fact, which almost makes us despair of the Constitutional cause in Spain.

It appears that the system of a gradual suppression of the monastic orders has been given up, as not being in accordance with the impatience of the movement party and with the wants of the government. At the end of July, Count Toreno in one paper ordered the immodiate sale of 900 convents, the money proceeding from which was to be paid, on account, to the *home* debt, which bears no interest. This preference to the domestic over the foreign creditor has much shocked the impartiality of our Stock-Exchange. The total number of the monks atrociously murdered by the Urban militia and the mob in different cities, is stated as high as eighty; and, besides these, many other persons have been killed in riots at Barcelona, Saragossa, and Seville. In consequence of the insurrection at Barcelona, Llauder, the Captain-General of Catalonia, and one of the best friends of the existing Constitution, has been obliged to flee with his family into France, where he bitterly complains of the state of destitution and abandonment in which he was left at a moment of crisis by the cabinet at Madrid.

On the 10th of August Don Carlos marched upon Vitoria, and it should seem that his troops are now penetrating into the interior of Old Castile. Meanwhile the English and other foreign levies are pouring into the Peninsula to strengthen the Queen's party, and the French legions from Algiers, which sailed from Africa early in August, are in all probability safely landed before this. Tejano, moreover, is said to have pressed the Cabinet of Lisbon for the immediate marching of the Portuguese contingent.

The insurrections and revolts in the provinces caused the greatest consternation in Madrid, where the Council of Ministers sat for a whole day and night, distracted and divided in opinion as to the measures to be adopted. People expected that the storm would burst in the capital also, nor were they disappointed in the sad expectation.

On Saturday the 15th of August, amidst the cries of "Long live the constitution of Isabella II.," and "Death to Ministers—death to Toreno," "Long live Liberty," the infantry of the Urban militia rose against the government, and fortified themselves in the great square, or Plaza Real, by overturning carts and carriages and erecting barricades. They then got up a petition to the throne, praying for a change of men and measures, for the total extinction of convents, and the immediate order of a levy of 200,000 men to be sent against the Carlists. There they stopped, and, after changing the name of the "Royal Square" into that of "Constitution Square," they passed the night under arms in singing Riego's hymn, "Tragala Peros," and other liberal songs. From the beginning it was evident that these burgher soldiers were more inclined to make a noise than to come to blows; but the aspect of things was, notwithstanding, very alarming.

On the 16th the Queen Regent, who was absent at Ildefonso, sent in a royal decree declaring Madrid to be in a state of siege, and calling upon all the military and civil authorities to repair instantly to their posts.

Fortunately the troops of the line in garrison, under the command of General Espeleta, and the artillery remained steady, and these, being joined by most of the cavalry of the militia, put down the mutineers without firing or receiving a shot, and the whole affair ended, *for the moment*, in a few knife and dagger assassinations, the Urbanos cutting the throats of some men suspected of royalism. We shall probably have to relate a frightful sequel to this disgusting story, in our next Number.

PORTUGAL.

THE Ministry has been again changed. Senhor Jose da Silva Carvalho has been recalled to the office of Finance Minister, and has introduced into the cabinet Senhor Rodrigo de Fonseca Magalhaes as Minister for the Home Department. The change is attributed to the total incapacity of Senhor Campos, and the general discredit which his financial operations were throwing on the country. It is said that the new Minister will be supported by all the monied interest of Portugal. The Marquises Saldanha and Loule, and the Duke of Palmella, remain at the head of the departments of War, Marine, and Foreign Affairs.

The official paper, the 'Diario do Goberno,' published some important government measures towards the end of July last, and among others some decrees regulating the municipal affairs of Portugal on a new plan, and dividing the country according to a different arrangement. Another decree is one dated the 22nd, signed by the Duke of Palmella, announcing that the treaty of 1810, between England and Portugal, is suspended. The ministerial journals justify the suspension on the ground that our government violated the treaty by reducing the duties on French wines, and equalizing them with the duties on Port wine, &c. The last corps of the English troops in the service of Donna Maria has been ordered to be paid off. The sale of the national property continues, and with more success than had been in general anticipated.

SOUTH AMERICA.

SINCE we last noticed this part of the world, there may have been some half dozen of revolts, petty revolutions, or preludes to things of that sort; but though, no doubt, each of them has been destructive of some individual comfort and prosperity, as political events affecting the rest of the world, they have all been very contemptible. We subjoin an account of the *last*, which happened in Venezuela. This account is taken from an English letter dated Caraccas, July 9th, a day or two after the event:—"The night after the packet was dispatched from this place, which sailed from La Guayra yesterday, a revolution broke out here, headed by the party called Bolivians, who seduced the few troops which were in garrison, took prisoner their colonel and captains, and proceeded to arrest the authorities. Dr. Vargas, the President, the Vice-President, and the Councillors of State, are all confined as prisoners in the Government House. The rebels have proclaimed General Marino their chief. Our Consul applied to the new Governor, who replied, most satisfactorily, that all property would be respected. There is, in my opinion, nothing to fear in this respect. General Paez is at his estate, and within six days will, in all probability, take part with the constitutional government and upset the rebels. His name alone is an army. As this is a most unexpected event, and of a novel character, it is possible that some time may be required to put things in order." The writer of this letter seems to be a cool, sensible person, for he adds—"We are accustomed to revolutions here, and they sound more than they really are. No bloodshed will take place, except perhaps amongst the rebels." *Tant mieux!*

MEXICO.

THERE has also been a struggle in Mexico, which has terminated in the overthrow of the army of the Federal Constitution, and the establishment of a new form of government, having the President Santa Anna at its head, with the title of Emperor, or Dictator.

CHRONICLE OF OCCURRENCES.

July 29. Michael Thomas Sadler, Esq., formerly M.P. for Newark, and afterwards for Aldborough, in Yorkshire, and so well known for his exertions in connexion with the factory question, and for his works on population and on Ireland, died at Belfast of disease of the heart, aged fifty-five,

August 1. Their Majesties, accompanied by a large party, and attended by the civic authorities of the City of London, in their barges, &c., went by water from Whitehall Stairs to Greenwich. After inspecting Greenwich Hospital, and partaking of refreshments at the house of Admiral Sir Thomas Hardy, governor of of the hospital, the royal party returned up the river.

3. Considerable excitement prevailed in Dublin from the circumstance of a meeting being held there, for the purpose of censuring a speech made at a corporation meeting by the Recorder, Mr. Shaw, M.P. The meeting being threatened with interruption by a band of Orangemen, who had broken up a previous meeting called for the same purpose, the people were induced to assemble armed with bludgeons and other weapons. Upwards of 20,000 persons were present, and the meeting passed off quietly, with the exception of a tumult caused by the attempt of about two hundred men to force their way to the platform, in which a number of individuals were injured.

5. The fifth annual meeting of the British Association for the advancement of Science commenced at Dublin. On the 15th the Provost of Trinity College gave an entertainment to about three hundred members, including all the foreigners then in the city. Before dinner the company assembled in the library of the University, when the Lord Lieutenant, who was one of the guests, conferred the honour of knighthood upon Professor, now Sir William Hamilton (the Professor of Astronomy in the University). Mr. Thomas Moore, who had been admitted a member of the association by acclamation, and without payment of the usual fees, was also among the guests, and an entire absence of party feeling and political allusion distinguished the entertainment,

13. At a meeting of the General Assembly of the Church of Scotland in Edinburgh, it was moved by Dr. P. Macfarlane, that the Commission lately appointed by the Crown for inquiring into the opportunities of religious worship and means of pastoral superintendence afforded to the people of Scotland was composed of men whose principles did not entitle them to the confidence of the friends of the Church. After some discussion, the motion was carried by a majority of 90 to 3.

— A Chapter of the Order of the Garter was held by his Majesty at Windsor Castle, when Prince George of Cumberland and Prince George of Cambridge were elected knights, with the usual ceremonies.

Meetings have been held during the month in almost all the large towns and cities of England, for the purpose of petitioning both Houses of Parliament in favour of the Municipal Reform Bills.

THE WORKING OF THE NEW POOR LAW.

It will be recollected that by one of the clauses of the late Poor Law Amendment Act the three commissioners appointed to carry the act into execution are directed to submit annually a general report of their proceedings to one of his Majesty's principal Secretaries of State, in order that it may be laid before both Houses of Parliament. The first Report made by the commissioners in compliance with this provision has just been printed, and is one of the most satisfactory, as well as most interesting, public documents to which our attention has ever been called. It is intended, we understand, to reprint it immediately in a form suitable for general circulation, and therefore we shall not attempt to give any minute abstract of it here; that task, indeed, would be one of no little difficulty, owing to the compactness of the form in which the facts and arguments are presented, and the great economy of words which is preserved throughout the statement, along with the utmost clearness and sufficiency of explanation. The importance of the subject however is such that we must shortly notice a few of the variety of points adverted to in the Report, were it only with the view of thereby exciting our readers to procure and peruse the document for themselves.

The first exertions of the commissioners were directed to the removal of certain misapprehensions respecting the provisions of the new act which were found to prevail extensively among parochial functionaries. For this purpose, in addition to a vast number of answers to individual applications, several circulars were successively addressed to all the parishes in England and Wales. One of these, dated the 8th of November last, set forth, as general recommendations, some of the chief preparatory measures which it might be necessary to adopt in introducing the new system. "In the instances of voluntary change made by the parish officers," says the Report, "it was stated that the most severe alterations were too frequently adopted towards the aged and infirm persons, they being the least capable of opposing a powerful resistance. In this communication, as in most others relating to the first alterations of relief, we deemed it necessary to urge caution as regarded this class of paupers, and to endeavour to extend protection to them. With reference to the able-bodied paupers, we endeavoured to enforce the adoption of a more correct principle for their employment, namely, by task work, at such wages as would render the condition of the independent labourer the most eligible. Another measure, which we then urged in our recommendations, as a preparative to the final adoption of the system which it was the view of the legislature to carry into complete operation, was the gradual substitution of relief in kind, *i. e.* in bread, and other necessaries, for relief in money. We have never failed to urge the adoption of this form of relief, whether in cases in which it was necessary to give relief accompanied by the exaction of a return of labour, or in cases in which it appeared that no parish labour could be enforced."—p. 6.

Among the advantages connected with relief in kind, one is mentioned which is not commonly noticed, namely, that "in the present condition of the country, it diminishes the fluctuations of allowance in the way of unintended and unwarranted increases." The commissioners add, "The reports which we have received from a considerable number of parishes, show that the recommendation of this substitution of relief in kind has been extensively acted upon, and that the effects in every instance that has been presented to us, have been, to a greater or less extent, beneficial. In some of the London parishes the adoption of this form of relief has occasioned a reduction of the burthen of the out-door pauperism to the extent of nearly one-third. In the rural parishes the change is marked by complaints on the part of the beer-shopkeepers, and in towns by the diminished consumption of gin, immediately following the adoption of this mode of relief."—p. 7.

The circumstances in which many parishes were placed, however, led the commissioners to direct their chief attention to the general introduction, as speedily as possible, of the workhouse system. Many difficulties and disadvantages were found in practice to be incidental to the mode of relieving able bodied paupers by setting them to work during the day, and allowing them to return to their own homes during the night. "Without, therefore," continue the commissioners, "omitting to sanction or enforce the application of out-door labour in aid of or as preparatory to the use of the workhouse, wherever preponderant obstacles and inconveniences did not occur to prevent it, we have been led to the conclusion, that in the greater proportion of cases the public time and means are best economized by immediate proceedings for the earliest and most direct adoption of the workhouse system."—p. 8.

The nine assistant commissioners whom the commissioners were authorised to appoint in the first instance on their own authority were not all appointed till the 1st of December. Subsequently six additional assistant commissioners have been appointed with the consent of the Lords of the Treasury. With this agency the commissioners have been engaged in taking steps for the establishment of the workhouse system by the uniting of parishes in various parts of the country. "The principle," they observe, "which we have adopted for the selection of the districts for our proceedings in the formation of unions, has been to commence with those in which vicious modes of administration had become the most deeply rooted, and where the pauperized classes were the most demoralized, and the burthens of the rate-payers were the heaviest. It was, however, soon perceived in practice that the amount of the pecuniary burthen beyond the general average of the amount of rates per head on the population of England and Wales, formed the most correct index of the relative amount of disorder arising in a district from mal-administration."—p. 9.

The applications made by parishes for the appointment of Boards of Guardians have been numerous, the commissioners state, beyond their power of immediate compliance. "In several instances, however," they add, "where we have so far complied with them that we have caused an assistant commissioner to visit the district, it has been found upon examination that although evils of the [illegible] did exist, yet that in amount they were [illegible] below the evils in action elsewhere, we directed a suspension of proceedings in favour of the most heavily burdened districts."—p. 9.

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

In all their proceedings in relation to parishes the commissioners of course act upon the reports of their assistant commissioners, who have personally investigated the circumstances of the case. The manner in which the inquiry is conducted appears to be well adapted both to obtain the necessary information and to secure for the measures to be taken the approbation and support of the interests immediately concerned. "It has been a general practice," says the Report, "with each assistant commissioner, before finally determining upon his recommendations with relation to any district, to convene a meeting of the parties the most deeply interested in the proposed arrangements, namely, the principal owners and rate-payers and parish officers. At this meeting he has explained the measures which it was his intention to recommend to the board for adoption, and has invited the exposition of any objections, and the suggestion of any additions, to those measures.

"It is satisfactory to us to be enabled to state, that in scarcely any instance have the measures thus submitted for a change of system in any district failed of obtaining the concurrence of a large majority of the meeting. In the greater proportion of cases the measures proposed have met with almost unanimous approbation."—p. 10.

Various important advantages are obtained by the union of parishes. Among others "it has," to use the words of the Report, "been proved that the expense and loss of time in building new workhouses may, in many cases, be saved by a union of parishes and the combination of their existing workhouses and poor-houses, by assigning one or two classes of the paupers to one of the separate workhouses within the district, which house would be unsuitable to the more extended classification of paupers required even for a single parish." Again, it is stated that "in several of the unions the expense of management by paid officers giving the whole of their services to the parishes united, is found to be less than the personal expenses heretofore charged to the rate-payers by the unpaid annual officers." "Another advantage of extended management," the commissioners remark, "has been manifested in the course of our proceedings, namely, the abatement of the influence of local jealousies and animosities." "The most convenient limits of unions which we have found," they add, "has been that of a circle, taking a market-town as a centre, and comprehending those surrounding parishes whose inhabitants are accustomed to resort to the same market. This arrangement was found highly convenient for the weekly attendances of the parish officers, and some portion of the guardians and other auxiliaries to good management were derived from the town itself."—p. 12.

It is to be observed, however, that the use made of the workhouse under the new system is entirely different from that contemplated by the act commonly called Gilbert's Act and by many local acts, which direct that the only persons received into the workhouse shall be children, and "such as are become indigent by old age, sickness, or infirmities, and are unable to acquire a maintenance by their labour." The principle of the new system is to consider the workhouse as the depôt of the whole pauperism of the parish or union, and its principal use as being for the reception of able-bodied paupers. Were there no able-bodied paupers, or no danger of such making their appearance, workhouses might be dispensed with. Comparatively little inconvenience would be occasioned by dispensing relief to children, and aged, and sick persons, at their own homes, if these were the only descriptions of persons that ever became, or threatened to become, paupers. But to meet and stay the spreading plague of able-bodied pauperism, little or nothing can be done without workhouses. We cannot better illustrate this than by transcribing a portion of the evidence as quoted in the present Report of the Rev. Thomas Whately, the gentleman who conducted the processes which were so successfully applied before the new act was passed in dispauperizing the parish of Cookham in Berkshire. "You have spoken of the workhouse system as the only means of producing the desired effect, and yet you appear to have dispauperized the parish without offering the able-bodied paupers the workhouse?—Yes. Although we got rid of the able-bodied paupers by giving them trenching, and without taking them into the workhouse, yet that was only a temporary expedient; and it would not have been possible to have effected this without having had the workhouse in the rear to fall back upon: nor will it be possible, as I conceive, to continue the beneficial arrangements in the parish without it. The first irruption of paupers were got rid of by specific labour; but the incidental paupers, who were continually coming as the *avant couriers* to a tribe of others, could not have been provided with work, especially in the time of frost or snow; and these were silenced by the offer of the workhouse. When a single pauper came in, we could not provide out-door work: we could not have employed a superintendent to superintend the work of one man, nor could we have got trenching for one man, or for two men. If we had not had the workhouse to retire upon, we should have had an influx of paupers applying for work during the winter, whenever the ground was closed by frost or snow. The workhouse, we have found, is the only means of stopping gaps of this kind; and I am persuaded that it is the only means by which the same results can be effected throughout the country."—pp. 7, 8.

Guided by these views the commissioners state that they have invariably felt it their duty, as an indispensable preliminary to any beneficial change of system, to advise the immediate dissolution of the unions formed under the authority of Gilbert's Act and other local acts involving the same principles. The incorporations formed under these acts they have generally found among the most deeply pauperized of the districts which the assistant commissioners have examined.

Along with the extension of the districts of management, the commissioners have had their attention called to the election and constitution of the Boards of Guardians created by the new act. It being provided by the act that the votes of the rate-payers in the election of the Guardians "shall be given or taken in writing, collected and returned in such manner as the said commissioners should direct," the commissioners have prescribed that the mode of voting shall be by a paper drawn up according to a certain form, which shall be left by the parochial officers at the house of each rate-payer, in order that he may set forth upon it in his own handwriting the name of the person or persons for whom he votes, and which after having been left with him one clear day shall be called for by the collecting officer. "We must observe," they say, "upon the preceding statement, that by leaving the vote to be certified at the house of the voter, he is enabled to perform the act with more calmness and deliberation than we believe is obtainable by any mode of voting in ordinary practice. As the progress of the votes is unknown, so are the motives to use undue means to affect the result diminished, and the voter is proportionately shielded from the use of those means. Though the process required additional officers for the collection of the votes, we should nevertheless consider the arrangement economical: for, supposing one officer should be capable of collecting within the prescribed time three hundred votes, we deem it the best economy of the public time that one officer should be required to go to three hundred persons and collect their votes, in a form which at the same time serves for the formation of the most perfect register, than that three hundred persons should, in order to exercise their franchise, be taken from their business and to a distant place of election, and lose their time amidst tumult and the liability to insult in attending to have their votes registered by one officer."—p. 16.

In the great majority of instances the elections of the new Boards of Guardians have been made unanimously; but in the instances where contests have taken place the mode of voting above described has been found to answer perfectly. At the election in the parish of St. Martin in the Fields voting papers were collected from 1522 persons, whereas at no previous election, even when the most strenuous exertions were used, had the number of voters exceeded 750.

The Guardians having been elected, it next became necessary to settle the manner in which these functionaries were to proceed in conducting their business. The leading principle adopted by the commissioners on this head was, that the substitution of the new system for the old should be very gradually effected. A few simple rules for the regulation of out-door relief were in the first instance laid down; while "to make the transition still more easy," continues the Report, "a distant day has usually been fixed for the peremptory operation of the rules, leaving an interval for their gradual enforcement, according to the discretion of the Guardians. In some cases this period has been further extended at the request of the Boards. In many

cases modifications of the rules, either as to their matter, or as to the time of their enforcement, appeared necessary to adapt them to the wants of the district; and as yet these regulations have not been promulgated as general rules. In districts where the administration of relief is in advance of the pauperized districts, the rules have been modified to promote a further advance. In the Cookham union we have ordered that all out-door relief to the able-bodied shall be discontinued. We have established that in the parish of Sandridge no out-door relief whatsoever shall be allowed."

The commissioners have been able to carry their plans into effect without the erection of many new workhouses, those already existing having been employed whenever they could be made even partially available for the new system. In upwards of 2000 parishes, which have been formed into 112 unions, the total number of new workhouses at this time in preparation is stated to be only thirty-seven.

The Report now proceeds to advert to the regulations which it has been deemed necessary to lay down for the management of the paupers who become inmates of the workhouses. Of these one which the commissioners consider as essential to good workhouse management, is the separation of the sexes in separate apartments, usually of the same house. The statement contained in the Report upon this point is particularly deserving of attention, and cannot, we think, be perused by any candid and unprejudiced mind without removing any feeling which may have been imbibed adverse to the course adopted by the commissioners. The fact, they observe, is "that in nearly all the workhouses in the larger metropolitan parishes, and in all the well-regulated and efficient workhouses throughout the country, the rule which we propose to continue has been acted upon for many years." "All the past experience," they afterwards add, "of well-managed workhouses proves that the continued residence in the workhouse of any considerable proportion of the usual out-door paupers would be but temporary. In none of the new unions where the workhouse system has been applied have any considerable number of married couples, who were out-door paupers, accepted relief within the workhouse. The instances of the reception of married couples, even temporarily, into the workhouse, where the separation of the sexes is enforced, are extremely rare; we can only therefore contemplate the necessity of submitting to the rule as likely to occur in a small proportion of the cases of the out-door paupers, and in those cases only as occurring for a short time. Permanent domiciliation in a workhouse is the result we least of all contemplate as arising from the proposed arrangement. Should that result occur in any peculiar localities, we should consider that the cases called for the application of other remedies, and amongst them, of a migration to a field where the demand for labour is more extensive and certain. We therefore apprehend that it would be a most dangerous experiment were we to authorize such a new and extensive qualification of the recognized workhouse system, as might have the effect of domiciliating and reconciling to a habitation in a workhouse, a class which, experience clearly proves, would not otherwise be induced to accept of this mode of relief."

It appears, besides, from the foreign communications to the late Commissioners of Inquiry, that the rule in question is adopted in the most efficient workhouses in the United States, and generally in every civilized country in Europe where a system of relief, analogous to relief in a workhouse, prevails.

One of the most interesting sections of the Report is that which relates to the result of the experiment that has been made of facilitating the migration of families of labourers from the southern agricultural to the northern manufacturing counties. The commissioners, however, appear to have been led by their inquiries to entertain considerable doubts as to the reality, or at least as to the extent, of the superabundant population generally asserted to exist in the former part of the kingdom. "In the rural districts, where the allowance system prevails," they observe, "it is common to represent the whole of those who are for any considerable period thrown upon the rates as a surplus population. Until the system of making allowances in aid of wages, or of making the parish the labour mart, is completely eradicated; until relief is given only under circumstances rendering the acceptance of it conclusive evidence of entire destitution; until the acceptor is taken completely upon the parish, and this change of system has been made, not only in the single parish, but throughout the district, and has been for some time in operation, we should, as at present advised, scarcely feel warranted in pronouncing on the reality of the strongest cases of an apparent surplus of population which have at any time been presented to us. We have had instances of parishes which appeared, *primâ facie*, to be burthened with a surplus population of more than one-third, which surplus has been absorbed almost entirely within the parish itself, by the operation of the workhouse system."

In most districts, nevertheless, it is admitted "are found large families of children, widows with young families capable of labour, but for whom there appears to be no immediate employment within the rural districts." On the other hand, "the rate of wages for families comprehending three or four working hands in the manufacturing districts, is at least double the amount of the best wages obtained by families of the same description within the agricultural districts; and, moreover, the demand for labour at such wages is steadily increasing."

"On these grounds," the commissioners proceed, "we directed a circular letter, of the date of 2nd of March, to be sent to certain of the manufacturers in Lancashire and other districts, where we were informed that there existed the greatest demand for labourers. In this letter we offered to those who had a demand for labourers, to make the circumstances known in rural parishes containing families willing to migrate, from whom such a selection could be made as might meet the wishes of the employer. . . . . The first trial of the measure was made in the parish of Bledlow, Bucks, where it had been represented to us that numerous families were subsisting in extreme distress, and where it was threatened that the lands would be thrown out of cultivation, in consequence of the increasing burthen of the rates.

"We found greater reluctance on the parts of the labourers to accept offers of employment than we anticipated. It had been previously made known within the district, that our proceedings were preparatory to the gradual abolition of all out-door relief to the able-bodied, and the introduction of the workhouse system; but we were desirous that the migration should be voluntary on the parts of the pauperized labourers. We had not sanctioned the withdrawal of their accustomed allowance, or countenanced any intimation of such a reduction as being likely to follow their refusal. That this might not be done, we directed the assistant-commissioners to communicate the offers personally to the families who were dependent on the rates. He went from house to house of the labourers' families of that parish who had stated that they were the most deeply distressed, who had in their public memorial addressed to the Board, declared that they were then living only on 7*s.* per week wages, obtained by families consisting of several individuals. To these he successively offered engagements for constant employment, on terms ensuring about 24*s.* per week per family of four working hands, for the first year of their service, and 30*s.* for the second. But not one family could in the first instance be induced to accept the offer. The majority intimated that they would in preference, in the coming spring, renounce their 'parish pay' rather than remove. After this general refusal, one family was persuaded to accept; before their departure another family accepted employment on the terms proposed. After these had departed, and had tried their new situations, a number of others accepted the offers, making in all eighty-three individuals who migrated from that parish. Subsequently, a large migration took place from the parish of Princes Risborough, and the example was followed in other places without our intervention. . . . . The results are in substance, that nearly the whole of the individuals who have migrated are now in constant employment in Lancashire, and earning collectively as families, three times the amount of wages which they had at any time earned in the districts which they had quitted. They have been provided with superior cottages, which they have been enabled to furnish by means of advances of money from their employers, to be repaid by instalments from their wages. They have abundant supplies of fuel, at such low rates as to be enabled to enjoy the luxury of a fire to an extent unknown to the labourers of the southern counties. The head of the first family who migrated declared that not all the horses in Buckinghamshire should draw himself and family back to his parish. Similar ex-

pressions of satisfaction at the change were made by others of the heads of families to Dr. Kay. The employers of the workpeople have expressed themselves well satisfied with the conduct of these southern families, and have declared their intention of seeking families from the same districts in the event of their requiring additional hands. On the other hand, the migrants have been cordially received by the established manufacturing operatives. This circumstance is accounted for partly by their natural preference for their own countrymen, and partly from the fact that the adult operatives participate in the advantages of a supply of young working hands, as the increase is requisite for the advancement of their own more skilled labour. It has been reported to us, that so sensible have been the adult operatives of those districts of the necessity of an increased supply of hands, that although they have sometimes been guilty of acts of riot to prevent the introduction of new machinery, scarcely any instances are on record where they have taken steps to resist with violence the influx of new hands.

"The effect of the migration upon the parishes has been a proportionate reduction of the rates. It has been reported to us that in the parish of Bledlow, where the experiment was first tried, the rates were reduced one half, mainly in consequence of the migration."

In conclusion, the commissioners express themselves upon this head as follows:—

"To whatever extent it may be found expedient to promote further migration, we should in no case promote a removal of any labourers to the manufacturing districts where there was not a clear and specific demand for the labourers to be removed; and in all cases we deem the gradual absorption, family by family, preferable to the removal of considerable numbers. The expenses of these removals have, in the first instance, mostly been defrayed by the parishes from which the families have been removed. These expenses have been considered as relief. The expense of removal of 113 persons from Princes Risborough was 1*l.* per head."

It appears that the expedient of foreign or colonial emigration, for which the act authorizes parishes to raise money by loans, either from the Commissioners of Exchequer Bills, or from private individuals, has been very sparingly resorted to. Only nineteen parishes have borrowed the sum of 2473*l.*, with which they have sent abroad 320 individuals, mostly to Upper Canada. The number of applications from parishes is stated to have been 80 in all; but the commissioners add—"It is a remarkable fact, that hitherto no demands for the sanction to emigration have been made to us from any of the parishes which have been wholly or partially dispauperized; nor have we at present any reason to expect that this cautionary provision of the legislature will be extensively used."

The amount of what the commissioners have accomplished during the first year the system has been in operation is summed up in the following statement:—

"The total number of parishes which have been united by us since the 6th of December last, the date of the first union, and subjected to the progressive introduction of the new act, is 2066, constituting 112 unions. The population of the parishes united and placed under Boards of Guardians forms one-tenth of the population of England and Wales; but in consequence of the most heavily-burthened districts being selected for our earliest proceedings, the proportion of the rates affected by the change is one-sixth of the total amount of rates in England and Wales.

"In the county of Kent eight old incorporations have been dissolved by consent; 211 parishes have been formed into 13 unions, which include the whole of East Kent.

"In the county of Sussex five old incorporations have been dissolved, and 242 parishes, comprising nearly the whole of the county, have been formed into 16 unions.

"Nearly the whole of Hants has been re-organized into 21 unions, comprising 275 parishes.

"The whole of the county of Berks has now been united into 11 unions, comprising 176 parishes.

"In the county of Oxford 185 parishes have been formed into five unions.

"The greater proportion of the county of Bucks has been included in seven unions, comprising 162 parishes.

"In the county of Suffolk three of the old incorporations have been dissolved, and 129 parishes have been united into four unions.

"In the county of Northampton 153 parishes have been formed into seven unions.

"In the county of Cambridge 61 parishes have been united into three unions.

"In the county of Essex 91 parishes have been united into three unions.

"Nearly the whole of the parishes in the county of Bedford have been united into four unions.

"The whole of the parishes of the county of Hertford have been formed into 12 unions.

"In the county of Norfolk, where proceedings have been recently commenced, 63 parishes have been included in two unions.

"In Wilts two unions, comprising 45 parishes, have been formed.

"In Middlesex one union has been formed.

"In the county of Gloucester, 37 parishes have been formed into one union."

As to the pecuniary results either already realized from the partial introduction of the new system, or likely to be secured by it when it is generally in operation, it has as yet been found impossible to speak with much definiteness. From a tabular abstract, however, comprehending the cases of twenty of the earlier unions, it appears that their expenditure, calculated upon corresponding periods, has been reduced this year to about only two-thirds of what it was last year.

In regard to the more important subject of the general effects produced by the change upon the condition of the able-bodied paupers, whose allowances in aid of wages have been discontinued, more distinct information has been obtained. "Careful inquiries," says the Report, "have been made as to the subsequent condition of those who had refused to accept relief in a workhouse. In the Faringdon union, for example, all out-door relief was discontinued, and relief in the workhouse was offered to 240 able-bodied labourers. Of these, not more than about 20 entered the workhouse, and not one-half remained there more than a few days; the diet in the workhouse being at the same time high as compared with the diet of large classes of independent labourers. Mr. Gulson found, at the time of his inquiry, that the whole of these labourers had got into independent employment. On inquiry of some of the farmers who had previously represented to him that they had then no means of employing any additional labourers, he received for answer, that the additional employment was now given in consequence of the improved character of the labourer."

It is added:—"In all our more recent reports from the dispauperized parishes, it is stated that the wages are improved, and that the amount paid is greater than in the adjacent pauperized parishes. As an exemplification of the tenor of our information relating to the circumstances under which wages are affected by the change, we give the following portion of an examination of Mr. John Clark, a farmer of Bledlow, a parish in the Wycombe union, Bucks: 'If I have the free use on Saturday night of 5*l.* instead of paying it to the overseer, I shall be able to lay this out in labour on my land in the next week. Whilst the labourer was half pauper and half labourer, he was like a man with two masters, and could do justice to neither; but now he feels that he is only a labourer, he works hard and willingly. My 8*s.* wages will purchase for me labour sufficient to produce 10*s.* worth of crop; but with a pauper, my 5*s.* paid will be a loss; for all the labour such a man will do would not be worth half-a-crown. With independent labourers, the more I have in moderation the more I make; but for the paupers, the more I have the more I lose. I will employ as many of the former and as few of the latter as I can. Ten independent labourers would do me more good than five; whilst of paupers, five would be more desirable than ten.'

"Where the indolence generated by the old system of parochial employment has been thus superseded by habits of industry, the train of vices generated by indolence are found to be gradually diminishing. The increase of sobriety is frequently denoted to us, in the progress of the change, by the complaints of the beer-shop keepers that the consumption of beer has diminished, and by their activity in opposing the progress of a further change. In the parish of Iver, it was found that the change of system was marked by the almost immediate discontinuance of the poaching and pilfering, which had before that time prevailed to an unusual extent. Now that an external appearance of misery will no longer avail in the dispauperized parishes as a means of obtaining increased allowances, and that the

bounties on filth and improvidence offered by the old system of out-door relief are removed, it is reported to us that an increased attention to cleanliness, neatness, and comfort, is beginning to be observable in the cottages of the labourers.

"A further moral result which is reported to us as being conspicuous in the dispauperized districts, is that the venal and improvident marriages, which were consequent upon the allowance system, have immediately been diminished."

The following passage will afford some notion of the amount of saving that may be counted upon merely from the more advantageous terms on which provisions for the inmates of workhouses are procured under the new system.

"George Tattam, Esq., the chairman of the Board of Guardians of the Wycombe union, in the course of an examination as to the operation of that union, states, in answer to an inquiry as to the effects of making contracts for provisions in the union.

"'I learn that all the little tradesmen are violent in their opposition to the contract. It is clear that under the old system they had an advantage in the number of paupers which they have not now. The more money there was paid to the paupers, the more there was to be spent amongst the tradesmen, but the reverse is now the case. And under the old system paupers were often encouraged to get into debt, in order that an increased price might be charged upon the several articles they bought, and their custom ensured for the future.

"'Is there a saving effected to the union by the system of contract?—Decidedly there is. We give one-half in kind (subject of course to exception under particular circumstances). The price of bread by contract being 4*d.* for the loaf, and the charge of the little tradesman being generally 6*d.*, there is a saving of one third upon the quantity we give in kind; that is a saving of one-sixth upon the whole relief. The average cost of relief of all the parishes before the union, was about 30,000*l.* a year; therefore, by this contract alone, 5000*l.* a year will be saved,—a sum more than sufficient to pay all the expenses of management of the whole union for eleven years to come, and a reduction alone of one-sixth of all the rates upon every parish in the union.'"

"We cite," the commissioners add, "another instance of the further effects of the change, as stated in the evidence of an overseer of a parish in the same union:

"'Do you find any other result from the payment in kind?—Yes: I do find that the little tradesman, who had formerly an interest in the increase of pauperism, now persuade the paupers to find work. Formerly, the more paupers, the more money the little tradesmen made; but now that a contractor supplies the bread, the less pauperism and the more independent labour, the more money to the shopkeeper. One of these shopkeepers called and remonstrated with me that all the men were not employed, and I know that he and others do all they can to prevent the men being paupers, and encourage their becoming independent labourers."

The section of the Report which relates to the operation of the clauses of the Act providing for the support of illegitimate children, we must content ourselves with strongly recommending to the attention of all upon whom an outcry, very perseveringly kept up, may have produced an impression adverse to this part of the new law. The commissioners state that the testimony conveyed both in the reports of the assistant-commissioners and in communications made to them from all parts of the country, strongly preponderates in favour of the principles adopted on this subject by the legislature. "In several of the more populous parishes," it is added, "the reduction of the cases of bastardy has been to the extent of one order made now, where ten were made before the passing of the Act." And they conclude their statement as follows:

"The evidence of the benefits now daily becoming manifest from the approximation to a sound principle in the administration of relief in this class of cases has not been accompanied by any countervailing statements of evils or injuries traceable as consequences of the alteration of the law. Cases of hardship might have been expected to occur; cases of the desertion of children and of infanticide always formed a large class of cases in the returns of the statistics of crime during the existence of the old law; but we have seen no evidence of the increase of such cases subsequently to the passing of the Poor Law Amendment Act, nor amidst all the complaints unreservedly made to us, with claims for our aid to provide remedies for any real or supposed evil or inconvenience, have we received any authenticated cases of hardship. Some alleged cases of this description have been displayed before the public, but on investigation, in every instance which came to our knowledge, they were found to be fraudulent."

The only other head of the Report we can now notice is that which adverts to the late riotous proceedings on the part of the paupers in several of the parishes or unions in which the new mode of administration has been introduced. "An opinion," it is observed in the first place, "of the character of these riots, and of the state of the paupers in the districts where the riots occurred, may be formed from the fact, that in nearly the whole of the cases the riots were occasioned by the rule which requires that one-half of the relief should be in bread or other necessaries." "It is to be observed," the commissioners add, "that the introduction of these changes, and especially of the regulations for the substitution of relief in kind for relief in money, were preceded by complaints, not from the labourers, whom alone the change could legitimately affect, but from the shopkeepers and others engaged in furnishing supplies of goods for the use of parishes." These persons are not charged with having actually taken a part in the breaches of the peace which ensued; but the rioters are affirmed to have been undoubtedly incited in most instances by their "violent expressions of hostility to the measure, denunciations of its principles, always incorrectly stated, and expressions couched in the form of predictions, suggesting the probable occurrence of riotous proceedings, and how the acts of violence might or would happen."

In every case, however, the riots have been promptly suppressed, and generally without the aid of the military. Indeed only in a single instance have the military been called upon to act, and then a party of yeomanry merely assisted the metropolitan police in taking some of the rioters into custody. "When we recollect," say the commissioners, "the extent of erroneous impressions respecting the principles and provisions of the act which have prevailed, even amongst the educated and better-informed classes, and the persevering misrepresentations with which the public mind has to the last been assailed on this subject, we cannot but consider that the obstructions which have been attempted to be created on the part of the labouring classes are, on the whole, much less than might have been expected. We have great satisfaction in being able to state that we have received information that a considerable proportion of the labouring classes in some of the agricultural districts are not adverse to the change. We have learned that a few weeks since several persons, in the character of delegates from some trades' unions in the manufacturing districts, went amongst the agricultural labourers of Sussex, using violent language, and, representing to them that the act was intended to depress their condition, urged them to join the other unions, and take measures for resisting the law. In consequence of these proceedings, conferences were held amongst the agricultural labourers, who ultimately declined connecting themselves in any way with the alleged delegates, and stated 'that although they were apprehensive that they should have to endure much suffering in making the change, yet that they were satisfied it would be the best for them at last to be freed from the parish.'"

Finally, in concluding this their first Annual Report, the commissioners tender their assurance that their "labours are sustained by an entire conviction that the act, in every main provision, will fulfil the beneficent intentions of the legislature, and will conduce to elevate the moral and social condition of the labouring classes, and promote the welfare of all." In this conviction we entirely share. The only danger which there was that the great measure we have been considering should to any material extent miscarry, may now be regarded as over. The difficulty of setting it in motion has, under the judicious management of the commissioners, been fairly overcome; and let us add, what is an additional subject for congratulation, that their task, although undoubtedly one of great delicacy, has been facilitated even beyond what the most sanguine expectation could have anticipated that it would have been, by the good sense of the general body of the people. Certainly it has not been for want of excitement abundantly administered to them that the labouring classes have so generally refrained from taking any part in opposition to a change which it would not have been at all surprising if, even with-

out being thus stimulated, they had looked upon with some apprehension and dislike. With a considerateness, however, which does as much honour to their moral nature as to their head, they have perceived, in spite of all the violent exhortations addressed to their passions, that their interest, in common with the rest of society, is not the maintenance of pauperism, but its extirpation; and they are not to be moved by any rhetoric, however loud, which assumes the opposite proposition. The consequence is, that the admirers of a numerous and well-fed pauper population, and a liberal encouragement of bastardy, appear to be at last almost convinced that the day for that particular species of national glory is gone by, and that it is needless for them to waste any more breath or ink in trying to bring back a taste for it. The task of being eloquent, and argumentative, and satirical, and pathetic, upon such matters, seems to be now chiefly devolved upon the police-reporters, the accident-men, and the other members of the penny-a-line order of literati.

REPORT OF COMMISSIONERS OF EXCISE INQUIRY ON THE GLASS MANUFACTURE.

[Concluded from No. 32.]

ACCORDING to the representations of a deputation of CROWN GLASS manufacturers which waited upon the Commissioners at Newcastle, the cause of the depression under which this branch of the trade labours is not so much any thing in the mode of charging or collecting the duties, as their heavy amount. So long indeed as the duty is continued at its present rate, the manufacturers are rather averse to the removal even of those regulations which are injurious to their manufacture, from an apprehension that they would thereby be exposed to still greater injury from the door which would be opened to the commission of frauds in regard to the duty. It is asserted "that repeated instances of fraud in the crown glass trade have occurred, and that in consequence of such frauds the prices of the article have been brought down so low, that for the last two or three years the trade has been to the honest manufacturer wholly unproductive." Upon this subject the following statement is well deserving of attention:—"In regard to the frauds here alluded to it may be observed, that this deputation express a strong concurrence in the opinions which we have submitted on former occasions, as to the injurious consequences resulting from the manner in which offences against the revenue laws are usually dealt with by the Excise: they state, that the cases of fraud 'have been always compromised, which is what we complain of: we say, that if a man is detected in a fraud, he should never be allowed to be a manufacturer again. They give their opinion, that the frauds have not been followed up to the extent they ought to be; and they add,—'We know that they have not been followed up, and that the same parties have done the same thing once, twice, and thrice, and that they have always been compromised, and not brought into the Exchequer.'—'The same manufacturers are still going on. In our trade, for a great length of time, we have been selling at a loss. and and we know those low prices were first established by the parties who had committed frauds, and that others were compelled to follow them.'"

One of the complaints made by the deputation referred to the alleged unfair operation of the enactment which allows the same drawback upon the exportation of the squares of German sheet glass as upon those of crown glass, notwithstanding the fact already explained, that the former, from the manner in which it is blown, admits of being cut into such squares, without any of the waste that arises in the case of the latter from the circular form which it assumes after being flashed, and from its thick selvage or bullion. In these circumstances it is contended that the drawback becomes a direct bounty, given without any reason, to the manufacturer of the inferior or German sheet glass. "The extent of this bounty," say the Commissioners, "may be conceived from the statement of Mr. Hetherington, that on the exportation of squares of German sheet glass, the drawback ought not, at the utmost, to be above five per cent. more than the duty, whereas the drawback actually allowed, amounts to more than one-third, or 33 per cent. on the amount of the duty. The consequence, as might have been expected, is, that the manufacture of this description of glass is undertaken for the sake of the bounty. Mr. Cookson states, 'there is no consumption in this country. I have no doubt a man would make as much in a month as there is demand for in the course of a year: it is not an article that will sell in this country.' Mr. Cuthbert also states, 'what we made, we made for exportation: we found no demand for it in England, and did not go on with it.' Mr. Hetherington also expresses his belief that the manufacturers of this glass 'export the principal part of what they make,' and he naturally adds his opinion that the law is defective in this respect.'"

The Commissioners, however, it is proper to add, afterwards had an opportunity of examining Mr. R. L. Chance, of the firm of Chance and Hartley at Birmingham, which is stated to be the greatest crown glass works now in England; and he asserted that the denomination of glass called German sheet, so far from being an article for which there is no demand except as an article of export, has not only superseded all other kinds of window glass on the Continent, but that its use is rapidly extending in this country. Mr. Chance and his partners manufacture German sheet glass to a large amount both for exportation and for home consumption. According to his calculation the present duty on crown glass is at the rate of from 200 to 250 per cent. on the cost price of the manufacture. He does not complain, however, of the regulations for the charge and collection of the duty. The Commissioners call attention to his examination, "as affording a striking illustration of the disposition prevalent amongst traders under the Excise laws, and especially with those who are proprietors of the highest class of establishments, to become from habit so much reconciled to the interference with their business occasioned by the Excise regulations, as not to appear sensible of the disadvantages and inconvenience which they actually suffer by those means." "It will be seen," they observe, "that Mr. Chance, in the early part of his examination, describes the regulations, in as far as they affect his business, to be in the highest degree unexceptionable, and to occasion no annoyance or interruption whatever. In the course of that examination, however, he fully concurs with other witnesses in designating those regulations, in the various points upon which we have been commenting, to occasion to the manufacturer a useless waste of time and expense, and in some instances to be fraught with absurdity and injustice."

Upon the subject of BROAD or SPREAD GLASS the Commissioners say—"Mr. Thomas Dunn, who belongs to the only work in which the broad or spread glass is made, in the neighbourhood of Newcastle, states that a very small quantity is now manufactured; 'the demand is now so small, we cannot keep the house at work the whole year, we lie idle three months:' he adds, 'that if the duty was repealed, that glass would not be made at all, for we could make the crown nearly as cheap.'"

The state of the manufacture of FLINT GLASS is the next head of the Report. Among the Newcastle manufacturers in this branch, the Commissioners found the same willingness, as the crown glass manufacturers expressed, "to submit to the inquiry and inconvenience to which they are subjected by the Excise regulations for the sake of the security which those regulations are supposed to afford to the revenue, and at the same time to the fair trader, against the competition of the fraudulent, who would make the evasion of the duties the means of underselling him." "They still, however," it is added, "are led to think that there must be considerable evasions in order to account for the low prices at which the articles are in some places sold: they state from their own knowledge the instance of wine-glasses, commonly sold by the retailers in London at 3*s.* 7*d.* a dozen, which the manufacturer, paying the duty, could not have sold, at a profit, under 6*s.* a dozen."

The following are some additional extracts from this part of the Report: "On being asked whether, in their opinion, a total repeal of the duty on flint glass would lead to a great extension of the trade, they (the deputation) answer, 'There is no question of that; many articles would be made of glass which are not, and that would lead to great increase of consumption and a great improvement, from which we are deterred by the Excise regulations.' As evidence that the duties interfere with invention, they state, 'We are compelled to produce forty per cent. of manufactured goods out of a pot charged with the metal, and if we do not we pay the duty for the deficiency. Suppose a man chose to try experiments by making one article or another, he could not produce his forty per cent.' . . . . The evidence of Mr.

William Powell, an extensive and experienced manufacturer from Bristol, will be found to confirm strongly the representations we had received from so many other quarters, of the depressed state of the legal trade, more especially in flint glass. Having given his opinion, that with respect to the bottle trade the revenue was protected, and the system pursued not very objectionable, he states, that with respect to flint glass that certainly is not the case; and he adds, 'I do not see what legislative protection can be given to the flint-glass trade, unless there were officers about as thick as the tiles on houses, for there are thirty manufacturers in this city (London), at this moment unknown to the government, employed in melting up what we call cullet, or broken glass, such as the stems of goblets, bottoms of tumblers, the thick parts of decanters, and so on; they can be melted in a garret or a cellar, and made up into saltcellars, cruets and casters, bird-boxes, smelling bottles, and a variety of articles used by perfumers, and it is done to a very large extent; and my belief is, that there is no legislative precaution can prevent it.' He is of opinion, however, that a reduction of duty would have its effect in remedying the evils. He also strongly points out the mischief which may be done in the market by even one house that will run the risk of evading the duty. Mr. Powell confirms what has been stated by the other witnesses, as to the bar to all improvements in the manufacture, arising from the existing regulations. He observes, 'I do not see how he (the manufacturer) could make those improvements; for, in point of fact, the Excise laws lay down a certain system, and he must comply with that system.' On being asked, whether it would be possible to make much relaxation without giving rise to fraud, he answers, 'I should say not. From the very nature of the thing, I do not think any legislative regulation would protect the revenue effectually, or protect the fair trader effectually, particularly in flint glass. I should say, in regard to flint glass, nothing would do but a total abolition of the duty.'"

A memorial is afterwards given, which was presented to government in March last by a deputation of flint glass manufacturers, who state that in consequence of the extensive system of fraudulent dealing occasioned by the duties, the trade has at length become totally unremunerative—the memorialists "being ready to prove that in London, which is the great market for their manufactures, scarcely one individual article can be sold for prime cost, upon fair and honest means, and many are sold very far below it."

"In confirmation," the Report proceeds, "of the representations contained in the above memorial, Mr. Hawkes (M. P. for Dudley) distinctly states that his own business, which is one of the best established in the kingdom, has been actually relinquished by two members of his family after an experience of the fruitlessness of any attempt to carry it on successfully, and at the same time legitimately; and that he is himself induced to keep up the concern merely as an employment for one of his sons, and under the expectation that a change in the circumstances of the trade must necessarily take place by the repeal, or at least the reduction of, the present Excise duties. The above statement of Mr. Hawkes, it should be observed, is completely in accordance with the representation to which we have already referred, as having been received from the proprietors or managers of other established glass works in various parts of the united kingdom. And this concurrence of evidence would certainly lead to the conclusion, that if things are permitted to remain much longer in their present state, the business in question must at no distant period be universally abandoned by the established and legal manufacturers, and left altogether in the hands of those who, either with or without a licence, are allowed the opportunities of making the same branch of trade a lucrative concern, solely by means of evasions of the law. The progress which this illegal carrying on of the trade has already made in supplanting the legal practice, may be in some measure estimated from some of the examinations taken in Scotland and Ireland, where it is shewn that the supply of large and distant markets, in those parts of the kingdom, has been furnished in great part at prices which render it evident that the duties could not have been paid in addition to the ordinary cost of production."

The estimate of the Newcastle deputation is, that evasion of duty takes place in London alone to the extent of 65,000*l.* annually; "and they add," say the Commissioners, "that the source of illegal profits is not confined to this immense amount of simple evasion, but is also largely supplied in the shape of a direct premium on fraud at the public expense, by obtaining the drawback on exportation for goods which have never been charged with duty. . . . . Such practices may obviously be resorted to by persons having no other connection with the glass trade, but it is understood that they are carried on to a great extent by regularly licensed houses; and it will be seen that it is the opinion of the deputation, to whose evidence we are referring, that no inconsiderable portion of such houses is maintained wholly by the means, and for the purposes of such frauds."

Some very valuable information is also given from the examination of Mr. Pellatt, of the long-established house of Pellatt and Co., one of the leading establishments in the kingdom for this branch of the manufacture. Mr. Pellatt states that he has recently relinquished the business of his manufactory, which was decidedly the largest in London, in consequence of the disadvantageous circumstances under which a business of that description must at present be carried on. "Mr. Pellatt," it is added, "gives decisive evidence as to the great extent of the interference of the Excise regulations with the process of manufacture, and he especially alludes to the English manufacturer being prevented from adopting an improved mode of working, which has for some time been practised in France, where it has been found advantageous that the two operations of fusing the materials, and of working them up into wares, should be carried on at separate times. The English manufacturer is prevented from adopting this course in consequence of our Excise regulations, which compel him under all circumstances to carry on the operations of fusing and working simultaneously, or at least within the same week. Mr. Pellatt states that when he was working at the full, he was in consequence of the Excise duty and regulations put to an expense of about 1000*l.* per annum, in addition to the cost which he should have incurred in the conduct of his establishment, if the duty and restrictions had not existed; and he adds that he conceives it to be on this account that the French manufacturer can undersell him."

The BOTTLE-GLASS manufacture is the next branch to the consideration of which the Commissioners proceed. Here also the manufacturers complain in the strongest terms of the annoyance and injury they suffer from the Excise regulations. "They urge," say the Commissioners, "another point upon which we are satisfied that your lordships will agree with us in thinking that efficacious measures should be immediately adopted, for the purpose of removing the doubt and uncertainty which at present appear to prevail as to the law on the subject.

"The statement of Mr. Cookson on this subject is as follows —'The materials of which common bottles are composed are various. The crown-glass manufacturers have a refuse which is too impure for them to use, which has been used by bottle manufacturers; it has improved the colour of the common bottle glass, inasmuch as they apply it particularly for chemical purposes and in making large vessels for oil of vitriol and carboys. The finer the material the tougher the glass; but all this refuse is considered by the Excise as an improper thing to be used in common bottle metal, consequently it is prohibited and must be thrown away, though a very useful article; but I believe many of us are using it at this moment, though contrary to law. I was prosecuted in the Exchequer, and it did not cost me less than twenty journeys up to London till I got it settled. I have no doubt that every one of us uses it now, though contrary to law.' Mr. Cuthbert adds, 'I do not consider that there is any law to prevent it; but it has created a terror on our minds so great, that I had rather give up the use of it than go into the Exchequer to contest it.' The only ground suggested for prohibiting the use of the material is, that 'it would make the goods so fine that it would bring them into competition with flint glass.' The article in question is called crown-cullet, and is described as being thrown away upon the ballast-hills, and as being 'utterly useless for making crown glass; but in the bottle glass it is a cheaper material than any we can use.' Mr. Cuthbert adds, 'I have no doubt, if our hills were dug up, there are hundreds of tons of it buried.'

"It would be hardly possible to imagine an instance in which the injurious operation of Excise regulations could be placed in a stronger light than that of which the particulars are above detailed, in which, as a consequence of those laws, we see hundreds of tons of an article which is known to be the cheapest and at the same time the best

that could be used in one of our most useful and most extensive domestic manufactures, lying uselessly at the very doors of the manufacturers, who are prevented from making any use of it solely by the dread of the construction which might be put upon a doubtful clause of an Excise statute."

In commencing their statement with respect to the PLATE-GLASS manufacture, the Commissioners observe—"Newcastle is the seat of one of the only two manufactories of plate glass in the United Kingdom, the other being that of a joint-stock company, called the British Plate Glass Company, whose works are at Ravenhead, in Lancashire. The public are highly indebted to the enterprise and skill of Messrs. Cookson and Cuthbert, which enabled them about twenty years ago to enter into successful competition with the monopoly which, up to that period, had been enjoyed by the company: the result of that competition has been a reduction of full fifty per cent. on the former prices of plate glass, and in consequence the acquisition of this beautiful article of manufacture has been proportionably facilitated, and its use extended amongst all classes of consumers."

In the Appendix to the Report are given the examinations both of Mr. Isaac Cookson and Mr. William Cuthbert, and of Mr. Cockburn, the governor of the British Plate Glass Company. Messrs. Cookson and Cuthbert state, that the general regulations affecting the manufacturers of plate glass place them under difficulties greater than are experienced by any other branch of the glass trade. They mention among other things that, in consequence of the regulations respecting the duty, they had been prevented from executing an order for an experimental lens for the Commissioners of Northern Lighthouses on a new principle, which promised to be attended with important advantages. "The difficulty in this case arose," says the Report, "from the plate glass manufacturers being restrained to a certain thickness in their plates, and from the thickness required for the proposed lenses, being such as would have brought them under a charge of 98*s.* per hundred weight, being formerly the rate of duty on flint glass, but which rate, though it has been since reduced as to that description of glass, is continued on plate glass, if made beyond a certain thickness, with a view to the protection of the manufacture of flint glass."

Most of the statements made by Messrs. Cookson and Cuthbert are confirmed by the evidence of Mr. Cockburn. "That gentleman states," observe the Commissioners, "that in the earlier stages of the manufacture in England the profits were sufficient to cover the losses arising from those various accidents, but that since the very great reduction of prices, which is well known to have taken place within these few years, the interests of the concern which he represents have suffered materially from the necessity of paying the duty upon the materials or manufactured goods, the sale of which has, by any of the above-mentioned accidents, been altogether or in great measure prevented; as an instance of this fall in price, it is mentioned that the large-sized plates which formerly sold for 21*l.* can now be bought for 5*l.*"

In Mr. Cockburn's examination," it is added, "will be found some interesting information on the comparative state of the manufacture of plate glass in France and Great Britain. The result of such a comparison is upon the whole satisfactory, inasmuch as it shows that by the application of skill and machinery we are enabled to produce plates of a size superior to any that are produced in foreign manufactories, and that in all the larger sizes of plates the price in England is lower than in other countries—at the same time, however, such a comparison affords a striking instance of the injurious effects of our high Excise duties, since, whilst with respect to the larger and more costly plates in which the amount of the duty forms a comparatively insignificant addition to the price of the article, the superior skill and resources of the British manufacturer receives its appropriate reward by his being enabled to prevail over all competition; with respect to the smaller plates on the other hand, in which the amount of duty necessarily forms a large component part in the price of the goods, the same manufacturer is universally undersold in the French and other foreign markets. Mr. Cockburn it will be seen is of opinion that the advantage which the British manufacturer is generally considered to possess over all foreigners, from the abundance of coal, is more than compensated to the French manufacturer by the superiority of the process when wood is used, in consequence of the fire from wood being much less liable than that from coal to be affected by the extraneous substances, which frequently injure both the texture and the colour of the glass."

We cannot enter at any length upon those parts of the Report which refer to the state of the glass manufacture in Scotland and in Ireland. In both countries the duties appear to have reduced it to a state of the greatest depression. The capital of the Leith Glass Company, the largest in Scotland, amounted originally to 135,000*l.*; but no dividend has been received upon it for eighty years past. Indeed it appears that the works have been stopped altogether for the last three or four years. The Appendix also contains the examination of Mr. Peter Brown, "who represents himself," to quote the words of the Report, "to have been engaged in establishing one of the finest glass works in the kingdom, at an expense of more than 30,000*l.*, which now lies wholly idle, entirely, as he conceives, in consequence of the operation of the Excise laws, and especially of the means which they afford of evading the duties." "The whole of the evidence in regard to Ireland, it will be seen," observe the Commissioners, "paints in strong colours the depressed state of this branch of manufacture since the imposition of the Excise duty in 1825. At that period it is stated that there was one bottle-house in a very flourishing state, and four flint-glass houses doing very extensive business in Dublin; but that at present, in that city, bottle glass is made to a very limited extent, and only one flint-house is actually at work; that there were two establishments at Cork, of which only one remains; one at Waterford, where at present there is none: and three at Belfast, of which only one remains. The falling off of the revenue received from glass in Ireland of course corresponds with this decrease in the number of the licensed manufacturers, as it will appear from the preceding account, that in the year 1826, the amount of the flint-glass duty in Ireland was 19,146*l.*, whilst in last year it had fallen to 14,919*l.*"

A subsequent portion of the Report presents some striking evidence in illustration of the impediments thrown by the Excise duties and regulations in the way of the application of the various kinds of glass to some of the most important purposes connected with the arts and sciences. Mr. Aiken, the secretary to the Society of Arts, "expresses," say the Commissioners, "a decided opinion that the Excise regulations on the preparation of the various kinds of glass must unquestionably present a great impediment, and in many cases a complete bar in the way of those experimental researches which are necessary for the adequate pursuit of objects connected with some of the most important branches of science, and some of the most ornamental of the arts in which the material of glass is an indispensable ingredient. In illustration of this interference in the latter cases, he mentions the beautiful art of painting or enamelling on glass, in which, as is well known, we are far less successful than our ancestors: this inferiority of the modern productions, Mr. Aikin attributes to the impediments arising from the Excise restrictions, to the repeated application of heat or other processes, varying according to circumstances, which may be required during the preparation of the glass, in order to bring it to the proper texture for bearing the process of enamelling, and especially to the requisite degree of hardness. The art of making artificial precious stones or gems from glass, he states to be in great measure relinquished by the regular manufacturers, because the preparation of the materials adapted for this purpose cannot be carried on according to the existing regulations of the Excise, and the process is accordingly conducted by means of small pots of a size not recognized by the regulations which are sent to ovens or furnaces constructed for potters or other trades. With respect to the more scientific purposes, Mr. Aikin refers to the instance of glass for optical instruments, to which we have already alluded in a former Report, and he gives an interesting and clear detail of the manner in which the most essential requisite of glass intended for these purposes, namely, uniformity of substance throughout, is prevented from being obtained through the Excise regulations, which do not allow of the repeated fusions and subsequent levigations or reductions to powder which is found to be the most successful mode of attaining the desired uniformity of texture."

The witness states that, in consequence of these impediments, there is a transfer going on of the manufacture of lenses for telescopes from England to the continent. A letter which is added from M. Dollond the optician strongly

confirms this evidence, which is further corroborated by the statements of Mr. Frederick Fincham, a gentleman engaged in extensive business as a manufacturing chemist, who, after having succeeded in making green or bottle glass of a quality far superior to any that had hitherto been produced in this country, was compelled to desist from prosecuting his experiments by the Excise. "He was informed," says the Report, "that his work could not be allowed to continue, because he produced an article so good that it could not be sufficiently distinguished from flint glass, the danger being that this article, which for a great variety of purposes was admitted to be in all respects as good as the comparatively highly taxed, and therefore high-priced, article of flint glass, would be substituted for that description of glass to the detriment of the revenue, however much the substitution might conduce to the convenience of the public. The question relating to this particular kind of manufacture becomes of more importance from its being shown, by the evidence of Mr. Aikin and of Mr. Fincham, that the description of glass called green glass is much better adapted to some purposes of high importance in the arts than the white or flint glass —the purposes specified are for some chemical operations or experiments in which certain acids are used, which are found sensibly to act upon the oxide of lead, a proportion of which is contained in all vessels prepared from flint glass. This effect of the acid is so injurious to the operation, that for the purposes in question green glass (which is free from the oxide of lead) can only be used: but as the vessels made from green glass in England are in great measure confined to quart or pint bottles, and are not allowed to be made of a less capacity than such as will contain six ounces, our chemists are, for the purposes alluded to, obliged to have recourse to vessels of green glass made in other countries; and it is for this reason, as observed by Mr. Aikin, that the Italian oil bottles, usually called Florence flasks, are so generally employed in chemical experiments."

In relation to this part of the subject we may notice a circumstance which is not adverted to by the commissioners, the recent discovery of a sand in New South Wales which is stated to be admirably adapted for the manufacture of optical instruments and all other articles of flint glass. From a memorial, dated Sydney, 1st July, 1833, addressed to the Government in this country, by the discoverer, Mr. James King, who complains, with apparent justice, that the merit of his discovery has been very inadequately appreciated in the quarters where he had a right to expect encouragement, we extract the following passage of a letter from James Dunlop, Esq., F.R.S., the eminent Government astronomer at Paramatta. "But the important result of your discovery of that unexhaustible deposit of sand between Sydney and Botany Bay will be to furnish the glass manufacturers with the principal ingredient of flint glass in a state of greater purity than it has hitherto been obtained for the manufacture of flint glass for optical instruments, the perfection in which has not yet been attained to satisfy the wants of science. The sand being free of iron and other metallic impurities, is of itself a sufficient recommendation to the manufacturer by removing a difficulty in the way of obtaining glass unobjectionably free from colour, *and to the optician of great importance in the construction of the achromatic telescope*, the loss of light in them being dependent upon and in proportion of the colour of the glass used in their construction. The mean of the specific gravity of the four specimens which you sent me is 3.274, which is very nearly the medium specific gravity of that usually manufactured by Messrs. Pellatt and Co. for optical purposes, of which I send you a specimen (by Watsford's coach) which I purchased at their works about January, 1828; its colour (looking through the edge) resembles that of pale roll-sulphur or yellow, which is in all probability occasioned by the presence of iron in the sand, from which it is made, *while your specimens are of the colour of pure water, and will therefore intercept less light.*"

To this we may add the following extract from the Report of Messrs. Pellatt and Co., the glass manufacturers of London:—

"We have much pleasure in acquainting you, that having used the quantity of sand furnished by your house from Sydney, we find it *decidedly* superior to any we have previously employed.

"The most esteemed property of this sand, and which makes it *of the greatest importance to glass-makers*, is derived from the absence of oxide of iron and every other combination that would affect the colour of the glass when made.

"It is also free from insoluble matter; *glass made from this sand is more brilliant and watery than any other.*

"We consider it fortunate at this period that this sand has been discovered, as the sand from Lynn Regis, with which most glass-makers were supplied, is now very bad in quality, and has in consequence been given up by many."

The commissioners conclude their able and interesting Report by some general observations and recommendations, the spirit of which may be gathered from the opening paragraph:—

"After the observations," they say, "which we have submitted on the various points which have formed the subject of remark in the course of our preceding references to examinations and other evidence, the result of our general consideration of that evidence, and of all the other information which we have obtained in the course of our inquiries on this subject, may have been anticipated; and it is hardly necessary to report, in any detail, our decided opinion as to the objectionable nature and extensively injurious effects of the head of duty under consideration. We are satisfied that, if we had the opportunity of pursuing our inquiries on this complicated subject into all the details which belong to it, the impolicy and evil consequences of the tax, as regards the interests of the native manufacturer and consumer, and also of our foreign commerce, would appear in so strong a light, when compared with the amount of net revenue produced from it, as to call for its general condemnation.'

The manufacture of flint-glass, however, they remark, is undoubtedly the branch of the trade which requires the most immediate attention to the circumstances under which it is at present carried on. Of the duties upon this description of glass they recommend the total repeal, as soon as the financial arrangements of the Government shall admit of the adoption of so desirable a measure. In regard to plate-glass, they consider it to be extremely desirable that a reduction of the duty, to the amount of one-half of its present amount, should be conceded as soon as possible. The duty on crown-glass they recommend should be reduced to its amount before the last augmentation in 1813. In the case of bottle-glass, they recommend the total repeal of the duty, on the simple ground, that one-half of it is at present returned in the shape of drawback. In regard to all the branches of the manufacture, a revision in simplification of the excise regulations involved the abolition of many of them, which appear to be either wholly useless, or particularly vexatious and injurious in their operation, is also strongly urged.

The extent to which the Chancellor of the Exchequer has seen meet to comply with the recommendations of the Commissioners in his late Budget, will appear from the following resolutions, which were agreed to by the House of Commons on the 15th of August:—

"1. That the duties and drawback on flint glass should cease and determine; and that, in lieu of the said duties, there shall be charged, levied, and collected, for and upon every one hundred pounds weight of the fluxed materials, or metal, or other preparations made in the United Kingdom for the making of flint glass, six shillings and eight pence; that, in lieu of the said drawbacks, there shall be allowed and paid for and upon every one hundred pounds weight of flint glass which shall be made in the United Kingdom, and for and in respect of which, or of the materials, metal, or other preparations from which the same shall have been made, all excise duties payable thereon shall have been duly charged, and which shall be exported as merchandize to foreign parts, eighteen shillings and nine pence."

"2. That, in lieu of the drawback of four pounds eighteen shillings per hundred weight now payable on German sheet glass exported in panes, there shall be allowed and paid, for every hundred weight of panes of German sheet glass made in any part of the United Kingdom, and for which the excise duty thereon shall have been duly charged, and which shall be exported as merchandize to foreign parts, such panes not being of less dimensions than six inches in length by four inches in breadth, four pounds two shillings and eight pence."

"3. That the drawback now payable on unground and unpolished plate glass shall cease and determine."

PRISON DISCIPLINE AND PRISON EDUCATION IN AMERICA.

A Prison, when properly organized and conducted, may be looked upon as a house of education for persons who have been badly brought up, but differing from other schools in this respect:—that those to whom its management is entrusted, must labour to eradicate bad habits and dispositions, as well as to inculcate others of a different character. The necessity for the construction and support of these penal seminaries is, in some considerable degree, a penalty which the community is called upon to pay, for neglecting to train aright during childhood, the classes which furnish the majority of those for whom prisons are needed; and it appears only reasonable to hope, that when the necessity for such earlier discipline shall have been recognised and generally acted upon, so as to include in its benefits all within the ages at which the tendency to criminal causes is the strongest, our successors may have less reason than we now have, to be anxious inquirers after the most efficacious system of prison discipline.

Hitherto our prisons have indeed been seminaries, but of what a description! They have been schools for the conversion of venial offenders into the most accomplished criminals,—places from which it has been hardly possible for any to emerge without the loss of the last lingering spark of virtue,—haunts in which schemes of villany have been planned and prepared, to a degree which has rendered them worse than useless, making them instrumental for the encouragement, instead of the repression of crime, and promoters of the evil for the suppression of which they are instituted.

This statement has been brought forward, and its truth has been acknowledged again and again; societies have been formed; and volume after volume has been written, with a view to the correction of the evil; but from some cause or other, and principally, no doubt, owing to the supineness of the legislature and of the executive government, little or nothing has hitherto been attempted for arresting the mischief. Happily for the best interests of society, the legislature and the government of the present day appear to be awaking from that supineness. One evidence of this better state of things is offered by a volume now before us, the Report on the Penitentiaries of the United States, made in August, 1834, by Mr. William Crawford, and printed by order of the House of Commons. His Report furnishes the result of inquiries into the systems of prison discipline enforced in the United States of America, which have been made under instructions given by Lord Melbourne, when Secretary of State for the Home Department.

It is a mistake to imagine that any particular system of prison discipline is extensively pursued in America: scarcely any two States of the Union exhibit entire uniformity in this respect. Seventeen out of the twenty-four States which compose the Union, have established prisons which are called Penitentiaries, and in which, efforts are made for reclaiming the prisoners confined in them: but the system under which it is sought to accomplish this end, is greatly dependent in each case, upon the views and opinions of individual inhabitants of the state, and most frequently of the superintendent of the prison. In addition to these penitentiaries, there are in America two other descriptions of prisons,—county gaols and town gaols, which are used for the confinement of persons before trial, and of convicts the term of whose imprisonment does not exceed one, or at most two years. These gaols contain convicts guilty of every shade and description of minor crimes, and these persons are indiscriminately, and without any attempt at classification, confined with prisoners awaiting their trial, some of whom may be entirely innocent of the offences with which they are charged, but who are nevertheless subjected, for months together, to every evil that can result from corrupt association. It is clear, that as regards those institutions, we have not anything to learn from the Americans. "I have visited," says Mr. Crawford, "many miserable places of confinement, but seldom, if ever, witnessed such a combination of wretchedness and depravity as is to be found in some of the county gaols and town prisons of the United States." It is only of the penitentiaries, established in he different states that Mr. Crawford gives any detailed account, rightly judging that there could be no necessity for travelling so far from his own country, in order to describe a badly managed prison. Our description of those penitentiaries, and of the system of discipline adopted in them, will be given in the order wherein they occur in Mr. Crawford's Report.

The eastern penitentiary of Pennsylvania stands about two miles from the centre of the city of Philadelphia. The site occupies about twelve acres. The building is of stone; every room in it is vaulted and fire-proof, and the whole is surrounded by a wall thirty feet high, in the form of a square, and having a tower placed at each angle, for the purpose of overlooking the establishment. In the centre of the area thus inclosed, is a circular building, radiating from which are the corridors, and on each side of these the cells are placed. Each corridor, of which, when the prison is completed, there will be seven, may be inspected through its entire length, from the centre building. The corridors consist of two stories, and are to contain altogether 844 separate cells, three containing 100 each, and the remaining four being planned each to contain 136 cells. The cells on the ground floor of those wings which were first erected, are eleven feet nine inches long, eight feet wide, and sixteen feet six inches in height in the centre of the arched ceiling. These cells have each an airing yard attached, eighteen feet long and eight feet wide, in which the inhabitants of the cells are allowed to walk for an hour daily. The cells on the upper story are of course without this outlet, neither is there any airing yard provided for either of the four corridors last erected. To compensate for this want, the cells in the new corridors are made three feet longer than those already described. The partition walls between the cells are built of stone, and are eighteen inches thick, which effectually prevents all communication between prisoners in adjoining cells. The lower cells are constructed three feet longer than those above, to admit of their being lighted by means of a sloping skylight; the upper cells are lighted from the roof, by which means all communication between the inmates of the upper and lower cells is prevented. Arrangements are made for preserving the cleanliness of the cells, each of which is amply supplied with water.

On his first reception, a prisoner is examined; his age, height, complexion, &c. are recorded; he is then undressed, his hair is cut short, his person is cleansed in a warm bath, and he is clothed in the prison uniform. He is next blindfolded and led to his cell, the regulations of the prison are explained to him, and he is admonished to adhere strictly to them, when the hood by which he is blinded is removed, and he is left alone. After this, during the whole term of his imprisonment, which frequently lasts for many years, and sometimes for the whole of life, he is visited only by the warden, the deputy keeper, and occasionally by one of the official visitors of the prison. The state of solitude and inaction soon becomes so irksome, that the prisoners petition for some employment, which, if they appear sufficiently subdued, is given to them as a favour. It never occurs that the interval which precedes employment exceeds a fortnight, and this interval, whatever its duration, is uniformly alluded to by the prisoners as having been the most painful part of their imprisonment. The two leading features in the discipline of this penitentiary are,—first, the entire separation of the convicts at all times, and their exclusion from every human being, except the officers of the prison and the visitors, authorised by the state legislature; and secondly, the deprivation of all intercourse with the world, extending even to any knowledge concerning their family and friends.

Under these circumstances, the power vested in the warden of the prison and his officers, might be grossly abused. To guard against this evil, several salutary provisions have been made by the state legislature: the inspectors are required to visit the prison at least twice in the week, and on each of these occasions to speak to each prisoner, and to listen to any complaint that may be made of oppression on the part of the officers: it is of course provided that these visits of inspection shall be made without the presence of the warden or any of his assistants. The visitors appointed by the legislature are, the governor of the state, the speaker and members of the senate, the speaker and members of the House of Representatives, the secretary of the state, the judges of the supreme court, the attorney-general and his deputies, the judges of all the courts in the state, the mayors and recorders of the cities of Philadelphia, Lancaster, and Pittsburgh, the commissioners and sheriffs of the several counties, and the acting committee of the "Philadelphia Society for the alleviation of the miseries of public prisons,"

These visitors are forbidden, under a heavy penalty, to deliver to, or to receive from, a convict any letter or message, or to supply him with any article.

Such of the convicts as are employed at trades which cannot be carried on in a cell, such as blacksmiths and carpenters, are allowed to leave their cells and work separately in small shops, in which they are locked up, or they are associated with some other artificer, not a prisoner; the greatest care is taken in these cases to prevent one convict from seeing another.

The Auburn penitentiary, about which so much has been said and written in this country, was built in 1816, by direction of the legislature of New York, as a place of confinement for the western division of that state. It was not until 1820 that this prison was completed, so as to assume the character which it has since borne. A new range of cells, five stories high, containing 220 chambers, was completed in 1832, making the whole number in the prison 770. The whole establishment occupies a square plot of ground 500 feet in length on each side; the boundary wall, which is consequently 2000 feet in extent, is thirty feet high. The form of building adopted at Auburn does not offer the same facilities for inspection from a central point, as are afforded in the Pennsylvania penitentiary just described.

The system adopted in this prison differs essentially from that pursued in the Philadelphia penitentiary. The seclusion and separation of the convicts are not attempted during the day, but at night each convict is locked up in his own cell, without the power of communicating with any other inmate of the prison. During the day, they work and take their meals in the presence of one another; but during the whole of this time, no communication whatever, by word, sign, or look, is allowed to pass between the convicts; and if any such are observed, the detection is immediately followed by punishment with the whip. This correction is certain and immediate, its quantity and severity depending altogether upon the will of the attendants, against whose acts there is no appeal. All that is required from the attendants is, that they shall report the name of the prisoner corrected, the nature of his offence, and the number of lashes that have been inflicted: but there is no check upon the accuracy of reports thus made, and they consequently afford no protection against the abuse of power.

In 1825, the legislature of New York determined upon building another penitentiary within the state, and fixed its sight at Sing-Sing, on the east bank of the Hudson, thirty-two miles from the city of New York. The choice of this site was determined by the presence of marble quarries, it being believed that the convicts might be profitably employed in quarrying the marble, and preparing it for sale in New York. It is a singular fact with regard to the building of this prison, that it was constructed by a party of convicts from Auburn, who lived during the time of its building, in a shed, run up by themselves; and that not one of them made his escape during the progress of the work. The prison of Sing-Sing is 600 feet long, and forty feet broad: it contains 1000 separate sleeping cells. In most of its arrangements, this prison resembles the penitentiary of Auburn: the principal difference observable is, that the inmates do not take their meals in company, but each one in his own cell. Except on Sunday, the chaplain of the prison has not any communication with the convicts, and as the number of these is frequently about 800, it can but rarely fall to the lot of any individual prisoner to be thus attended.

Whatever advantages may attend the systems here explained, they are confined to male convicts. Not any females are received at Sing-Sing; those committed in the eastern divisions of the state, for the use of which division this prison was built, are sent to Belleve, a prison under the superintendence of the municipal authorities of the city of New York. Here the wretched inmates are all confined in one room; "the old, the young, all colours and conditions, are indiscriminately confined together; the adept in crime is the companion of the novice in guilt. If virtuous sentiments linger about the new convict sent to Belleve, they are sure to be obliterated by the infamy of the character and conduct of those with whom they are associated."* Not any attempt is made to introduce any order or discipline among the convicts. At Auburn, female convicts are received, and are placed under the direction of a matron; but the discipline of the prison adopted with regard to males is not extended to females, and in fact, the space allotted to females is so contracted as to render it impossible to effect either classification or almost any other beneficial arrangement.

The penitentiary for the state of Connecticut stands on the south side of a large bay, formed by the Connecticut river at Wethersfield, about three miles from the town of Hartford. The building was finished for the reception of male prisoners in 1827; but the female department was not completed until 1830.

This prison is conducted on the same plan as those at Auburn and Sing-Sing. The prisoners are lodged in separate cells at night, and labour together during the day; all intercourse by conversation or gesture being strictly prohibited. Silence is not, however, enforced as in those two establishments, by the use of the lash; a difference which is altogether owing to the judicious management of the warden, as there is no positive regulation which forbids that degrading species of discipline. If any convict is reported guilty of a breach of the prison regulations, the complaint is carefully investigated, and if substantiated, the delinquent is punished by solitary confinement in a dark cell, without employment; his allowance of food is diminished, and for every day thus passed, a day is added to the term of his sentence. We are told that "this mode of correction has in no instance failed to subdue the most refractory."

"Great attention is paid at this penitentiary to the moral and religious welfare of the convicts: attendance at prayers is required every morning, and the evening is employed in teaching the most ignorant. A Sunday school has been established by, and under the superintendence of the chaplain. After the performance of service on Sundays, he is assiduously engaged in visiting the prisoners from cell to cell."

Three directors of the penitentiary, who have not any immediate authority over the convicts or the funds of the institution, visit it weekly, in rotation, to examine the state of the prison and the treatment of the convicts, and to inspect the accounts.

That the good which is said to have been effected in this prison in the way of reforming the convicts, is owing to the peculiar qualifications of the warden, has been rendered evident by the fact, that circumstances having induced that officer to retire for a time from the duties of the post, the discipline became disordered in a frightful degree, but was altogether restored in a few weeks after he had been induced again to take the management upon himself.

The state prison of Virginia, which is situated at Richmond, is conducted upon the same plan as those of Auburn and Sing-Sing, with this difference, that the imprisonment —the shortest period for which convicts are sent being two years—is composed partly of solitary confinement and partly of labour, in company with others. This regulation does, indeed, exist in the statutes of some other states, but with respect to all, save Virginia, the practice of solitary confinement by day, as part of the punishment, has fallen into disuse. In Virginia this practice appears to have been the subject of much discussion and consideration, and the law has frequently undergone alteration in respect of it. It is the present practice to cause a twelfth part of the term of imprisonment to be passed in solitude. The times at which this punishment is inflicted are one week in every three months, during all except the last year of imprisonment, and then four weeks' solitude, being the maximum allowed at any one period, is inflicted immediately previous to the prisoner's discharge. The variations in this part of the practice of the Richmond penitentiary have been occasioned by different acts of the State Legislature. In 1824 it was laid down as the rule from which no departure was to be allowed, that every convict brought to the penitentiary should, "within ten days after his commitment, or as soon as is found practicable, be confined in a dark and solitary cell, and continued therein on low and coarse diet, without interruption, for the period of six months, unless such period exceed the time for which he was sentenced to solitary confinement, or he be sooner discharged by law (pardon?) The residue of the sentence for solitary confinement shall be executed at convenient intervals, at the discretion of the Board of Directors, but in portions of time not less than a fortnight each, and so distributed that they shall fall as nearly as may be at regular intervals from each other."

* Report of the inspectors to the legislature of New York, quoted by Mr. Crawford.

By an act of 1826 it was required that the period of solitary confinement, soon after entering the prison, should be three months only instead of six, and that an equal period of three months should be inflicted on each prisoner immediately preceding his discharge. In the following year it was found necessary by the legislature to intrust the superintendent (with the approval of the physician) with the power of removing any prisoner from solitary confinement should his health require it; but this indulgence was not allowed to abridge the term for which that portion of the punishment was awarded; the convict was again, when his health permitted it, to be returned to solitude, there to complete the term which had been interrupted. In 1829 an act was passed, which decreed that every convict should be confined in his solitary cell at convenient intervals of time, reserving, to be inflicted immediately preceding his discharge, three months of his sentence of solitary confinement; but the power intrusted to the superintendent of removing from solitary confinement on the score of health, was continued under the sanction of the physician. It was not until 1833 that the system now enforced, and which has already been explained, became the law.

The penitentiaries maintained in the remainder of the seventeen states by which they have been erected, are administered, with some slight modifications, upon the plan of association, with silence during the day, and separation during the night. It is not necessary for our purpose to transcribe from Mr. Crawford's Report any more precise description of them, since this would be little more than a repetition of our account of the New York penitentiaries. Our space will be better employed in exhibiting the apparent effects which have followed from the various modes of discipline which have been adopted.

In adopting their systems of discipline, the different states have for the most part given the preference to plans which provide for the associated labour of the convicts. One cogent reason for this preference appears to be the greater profit derived from labour thus conducted, and consequently the diminishing of the burthen upon the state for the maintenance of its criminals. This motive, if all other things are equal, might be allowed to weigh seriously in favour of the adoption of such a plan: but if it should be found that in practice it offers less security for the future good conduct of the convicts, the greater present gain will be purchased at too dear a price, even if the matter be viewed as a mere money question, and wholly apart from all moral considerations. It is universally acknowledged that to bring about the reformation of criminals, it is indispensably necessary to prevent any communications from passing between them; and in every case where associated labour is used—with the solitary exception that has been noticed—this necessary object is enforced by a discipline at once brutal and degrading, which may be efficacious in enforcing a certain degree of slavish obedience, but which is powerless as a means of recovering the character and purifying the hearts of those to whom it is applied. "It is true," says Mr. Crawford, "that the dominion of the lash produces instantaneous and unqualified submission, but this obedience is but of a temporary nature. It imparts no valuable feeling, and presents no motive that is calculated to deter eventually from the commission of crime and amend the moral character. In the year 1828 the superintendent of this penitentiary (at Auburn) published a work, in which he gave a list of 160 convicts, four-fifths of whom were stated on their liberation to have become honest and respectable. On my visit to the penitentiary of Sing-Sing, I was informed that thirty of those persons were then in that prison, and I was assured that an additional number of twenty had also been there since the appearance of that publication."

It is but too probable that the proportion of recommitments was much greater than is here stated. Fifty out of 160 were known to have continued unreformed from the circumstance of their re-appearance at one of the prisons of the same state as that in which their previous punishment had been inflicted; but no inquiries are ever made into the after conduct of discharged convicts; and in a country like the United States, which furnishes considerable facilities for travelling to great distances, it is surprising that so large a proportion as that just mentioned should have remained in that part of the country in which they could be recognised so easily. How many of the remaining 110 availed themselves of the facilities afforded for conveying themselves to distant parts where they were previously unknown, and might therefore more easily pursue their criminal courses, it were vain to inquire; but there seems no good ground for hoping that the proportion so acting was otherwise than considerable.

One of the strongest arguments that have been adduced against the moral efficacy of the system of combined labour, under any modifications, is the facility which it affords for recognising former inmates of prisons. This position has been thus strongly taken up by Mr. Crawford:—"The propensity of convicts on their liberation to revive acquaintances formed in prison, is notorious. If any individual so situated be disposed to abandon his criminal habits, he is too often assailed by temptations from his late associates, and threatened by exposure. An instance of this kind was related to me by a convict, who had manifested great contrition for his past life, and conducted himself so well as to obtain his pardon from the Walnut Street prison. Having been recommitted, he was asked why he had returned. He replied, "I intended to behave well, and I went for that purpose into the State of Ohio, where I hoped that my former character would be unknown, and I might set out anew in life. I got employment, and was doing well, when unfortunately I one day met a man who had been a convict here at the same time as myself. I passed him, feigning not to know him: he followed me and said, "I know and will expose you, so you need not expect to shun me. It is folly to set out to be honest, come with me and drink, and we will talk over old affairs. I could not escape from him; my spirit sunk in despair, and I went with him. The result you know." The evil thus pointed out is aggravated at Auburn and most of the other penitentiaries, by the admission of the public to visit them on the payment of a quarter dollar (about a shilling) by each visiter. The amount of money thus collected cannot be an object worthy of any consideration in estimating the propriety of the system; but it has been urged that the presence of visiters acts as a check upon the attendants, preventing undue severity towards the convicts. The advantage here pointed out can of course only be experienced during the actual presence of visiters; and as it is probable that the largest portion of time will be passed in their absence, this check will not be productive of much practical good. Another evil resulting from these visits arises from the relief which it must afford to the convicts during what would otherwise be felt the irksome monotony of their confinement, thus continually to see new faces, and to hear the kindly voices of fellow creatures, who may innocently and unconsciously bring tidings to them of the world which for a time has cast them off, and with which it is so desirable that they should hold no communion that can tend to lighten the weight of their punishment.

One part of the system pursued in all the penitentiaries in the United States appears to meet with universal approval. That men who have temporarily forfeited their liberty by indulgence in criminal courses should be suffered to pass the period of their seclusion in idleness, is a moral solecism which finds but few advocates in the present day. By means of the crimes to which they owe their imprisonment they have already sufficiently burthened the community, and if no motive connected with their own future good suggested the usefulness of labour in their case, it would assuredly be right that they should be made to contribute towards the expenses of institutions which they alone have rendered necessary. It was seriously urged at one time, before the subject of prison discipline had undergone investigation so fully as it now has, that the profitable employment of criminals during their confinement was hurtful to society, through the tendency thus created to diminish the demand for labour on the part of the honest and industrious. The objection here stated has not indeed been brought forward in the United States, where there is always a sufficiency of employment awaiting all who are willing to labour; but in this country, where we have at various times experienced the evils of a redundant labouring population, the notion has been allowed sufficient weight to occasion its appearance and approval in reports gravely put forth by the more popular branch of our legislature. The fallacy involved in this opinion has been well exposed by Mr. Crawford in his Report, and we cannot perhaps better dispose of the question than in his own words:—

"Objections have, I know, been urged against the employment of criminals in any trade, on the ground that the practice tends to diminish the demand for the labour of the honest and industrious; but the same may be said of the

introduction of labour into a parish workhouse. Every man, whether convict or pauper, is entitled to his fair share in the productive employment which the country affords; nor does he forfeit the right of earning his subsistence by becoming the tenant either of a poor-house or a gaol. The law does not doom the criminal to idleness as well as to imprisonment. If the individual were previously engaged in habits of industry, his employment during confinement cannot diminish the demand for the labour of others. Should this not have been the case, it becomes the duty of society, by the applications of such means as may be essential for the purpose, to render the idle industrious, in order to convert him into an honest man."

If the argument of those who deprecate the competition in the labour market of the criminal with the honest part of society be good for anything, it involves this contradictory conclusion, that the well-being of one part of the community depends upon the criminality and idleness of the rest, to support whom there are no means other than taxing the industry, and thus abridging the comforts of the more deserving.

There is hardly any practice, however good its tendency when under proper regulations, that may not be perverted to evil consequences. This appears, from Mr. Crawford's statement, to be the case with regard to the employment of convicts in some of the American penitentiaries.

"A few years since," he observes, "the ordinary terms of imprisonment were thought inconveniently long, and hundreds were pardoned to make room for new commitments. In certain of the states a sentence of even two years is considered as insufficient to render a prisoner's labour available, and hence it is not improbable that the present periods will, ere long, be extended. It is remarkable that this change of opinion has been produced without reference to the degree of punishments due to specific crimes, but with a view to pecuniary results. The profitable labour of the prisoners is in fact the popular feature in the management of the American penitentiaries: and I am inclined to think that the great desire which exists to rid the community of the burthen of supporting criminals has occasioned in most of the states the establishment of penitentiaries: while, throughout the whole country, this feeling has evidently given a great impulse to the progress of prison discipline. There are unquestionably, in every state, those whose interest in these institutions springs from higher motives: but with the exception of New England and Pennsylvania, I have generally found that the public approbation in reference to prisons has been measured, not by their permanent effects on the moral character of the liberated convict, but by the profits of the establishment. The productive employment of prisoners is certainly an object of considerable importance, and every exertion should be made for its accomplishment consistently with the great moral purposes of a gaol. I am however of opinion, that to attain this result too large a sacrifice is made in some of the penitentiaries in the United States. Various trades are introduced, and beneficial arrangements neglected, solely with a view to profit. The objects of punishment have been thus lost sight of. The gloom of the penitentiary has been dispelled, and the attention of the convict distracted by the continual bustle and varied occupations of the manufactory. It is one thing to render a convict a skilful mechanic, and another to induce him to become an honest man; and the interests of society are injured instead of being benefitted, when, for the sake of profit, the penalties of the law are weakened, and the moral effects of imprisonment suppressed."

Among the various experiments on the subject of prison discipline made in the United States, has been that of continued solitary confinement, without labour. The following account of some of these experiments is taken from Mr. Crawford's Report:—

"Solitary imprisonment has been objected to as unequal in its effects, operating with greater severity upon active than upon sluggish minds: but inequality applies to every species of punishment, affecting men more or less according to the endless varieties of character, disposition, and even physical conformation. The experience of both England and America has however shown, that the penalties of solitude are of a more just and general nature than is usually ascribed to them, and that they are peculiarly irksome, not to the sensitive and cultivated mind so much as to the hardened and depraved. The terrors of solitude operate most powerfully on that class, in the treatment of whom severity is most desirable. The warden of the Eastern Penitentiary has remarked, that in every instance in which a prisoner has been brought to see the errors of his past life, his cell has in a great measure appeared to lose its horrors. Many vague and confused notions are entertained on this subject. In America the opponents of this system have produced very erroneous impressions by the publication of certain experiments made a few years since of solitude without labour; statements which have also been widely circulated in England, to the great prejudice of solitary imprisonment of every description. Having carefully inspected the prisons in question, I feel bound to state my conviction that the fatal effects which have been described were not the result of solitude, but of the contracted dimensions and unhealthy condition of the cells in which the experiments were conducted. A trial of solitary confinement, day and night without labour, was made at Auburn in the year 1822, for ten months, upon eighty of the most hardened convicts. They were each confined in a cell only seven feet long, three feet and a half wide, and seven feet high. They were on no account permitted to leave the cell during that long period on any occasion—not even for the purposes of nature. They had no means of obtaining any change of air, nor opportunities of taking exercise. The most disastrous consequences were naturally the result. Several persons became insane, health was impaired and life endangered. The discipline of the prison at that time was one of unmixed severity. There was no moral nor religious instruction of any kind communicated within its walls, nor any consolation administered by which the convict was enabled to bear up against the cruelty of this treatment. Nor was a trial of the same description, which took place in the State of Maine, conducted under more advantageous circumstances. The night-rooms or cells at this prison are literally pits entered from the top by a ladder, through an aperture about two feet square. The opening is secured by an iron grate, used as a trap-door; the only other orifice is one at the bottom, about an inch and a half in diameter, for the admission of warm air from underneath. The cells are eight feet nine inches long, four feet six inches wide, and nine feet eight inches high. Their gloom is indescribable. The diet, during confinement, was bread and water only. Thus immured, and without any occupation, it will excite no surprise to learn that a man who had been sentenced to pass seventy days in one of these miserable pits hung himself after four days' imprisonment. Another condemned to sixty days also committed suicide on the twenty-fourth day. It became necessary to remove four others—who were unable to endure this cruelty—from the cell to the hospital repeatedly, before the expiration of their sentence. It is said that similar experiments have been made in Virginia, and that various diseases, terminating in death, were the result. The cells in which the prisoners were confined have been since disused; they are, in fact, dangerous, being on the basement story, and so dark as to require a lamp on visiting them. In damp weather the water stands in drops on the walls. The cells were not warmed at any season of the year. A prisoner's feet were actually frozen during his confinement. No fair trial of the effects of solitude could have taken place, as has been alleged, in the penitentiary of New Jersey, the cells being so arranged that the convicts can converse with perfect freedom. From experiments of this character no just conclusions can therefore be derived unfriendly to solitary imprisonment of any kind, especially when accompanied by employment in large and well ventilated cells, the arrangements of which have reference to the preservation of the health, regular employment, and improvement of the mind of the offender."

Such a condition of things as is here described by Mr. Crawford is stated by him to exist in the Philadelphia penitentiary. The principle upon which this prison is conducted has been already described. It is worthy of remark, that the system of this prison was adopted by the State Legislature, not from any well-grounded hope of its efficacy, but to effect a compromise between two parties holding very opposite opinions upon the subject of prison discipline. One of these parties, possessed of great influence in the Legislative Chamber, warmly advocated the infliction of solitary confinement without labour; while the other party, influenced by the opinion of commissioners who had been appointed to visit other gaols and to report their opinion as to the most eligible plan, as strenuously urged that the convicts should be employed in association in the day and be confined apart

at night. Thus pressed in two opposite directions, the legislature adopted the middle course of solitude both by day and night, but accompanied by labour.

The seclusion in which the inmates of this prison are kept is perfect. They know nothing of what is passing in the world, or among their friends and relations, and are even kept profoundly ignorant of everything occurring in the prison beyond the walls of their own cells. In illustration of this latter fact, Mr. Crawford, in his recent examination before the Select Committee of the House of Lords, appointed to inquire into the state of gaols in England, relates the following anecdote:—A convict confined in this prison one day said to the warden, "I have a very great favour to ask of you, Sir: I should very much like to know whether or not such a one (whom he named) who was concerned with me in the robbery, was ever apprehended." The warden replied, that he could give him no information upon such a subject. He said, "Little did the man think that the individual after whom he inquired had been confined for ten months in the very adjoining cell."

Another proof of the completeness of this seclusion is deserving of mention for another reason. The prisoners in this building were kept in entire ignorance of the existence of the cholera, which had committed great ravages in the city; and it appears reasonable to ascribe to this ignorance the fact, that during the whole time of the prevalence of the disease, not a single convict was attacked by it, although the hospital for the reception of cholera patients was in the neighbourhood of the penitentiary. It is a very extraordinary fact, that in the Glasgow Bridewell—a prison conducted upon the same principle as the Philadelphia Penitentiary, and which we shall presently notice—the inmates experienced a similar immunity. We learn from a paper concerning the Glasgow Bridewell, drawn up by Dr. Cleland, that although, from the 13th of February to the 3rd of June, 1832, there occurred 1325 cases of cholera in that city, followed by 687 deaths, not a single prisoner was attacked by that dreadful disorder.

Of the different plans pursued in the American penitentiaries, Mr. Crawford gives a very decided preference to that of the Philadelphia prison. In his opinion, "solitary imprisonment is not only an exemplary punishment, but a powerful agent in the reformation of morals. It inevitably tends to arrest the progress of corruption. In the silence of the cell contamination cannot be received or imparted. A sense of degradation cannot be excited by exposure, nor reformation checked by false shame. Day after day, with no companions but his thoughts, the convict is compelled to reflect and listen to the reproofs of conscience. He is led to dwell upon past errors, and to cherish whatever better feelings he may at any time have imbibed. These circumstances are in the highest degree calculated to ameliorate the affections and reclaim the heart. The mind becomes open to the best impressions, and prepared for the reception of those truths and consolations which Christianity can alone impart. Instances have occurred in which prisoners have expressed their gratitude for the moral benefit which they have thus derived."

The remarks and reflections here quoted are applicable to solitary confinement under every modification. In speaking of its effects as applied in combination with labour in the Philadelphia Penitentiary, Mr. Crawford thus expresses himself:—"Having had the unrestrained privilege of visiting the cells at all times, I have had many opportunities of conversing in private with a considerable number of the prisoners. Aware of the strong feeling which exists of the danger resulting from long periods of solitary confinement thus strictly enforced, my inquiries were carefully directed to the effects which it had produced upon the health, mind, and character of the convict. I have uniformly found that the deterring influence is extremely great, and such as, I believe, belongs to no other system of good management; for although in large bodies, associated together, silence may by strict discipline be in a great measure maintained, prisoners thus debarred from speaking have inevitably recourse to other modes of communication. I do not wish it to be inferred that moral corruption can result from intercourse so limited; yet when men are, day after day, thrown into the society of each other, the irksomeness of imprisonment becomes impaired, and its terrors materially diminished. The eastern penitentiary imparts no such relief: of the convicts with whom I conversed, many had been previously confined in the New York and other prisons, where corporal punishments were frequent; but these persons have declared, that that discipline was less corrective than the restraints of continued solitude."

Mr. Crawford complains of the neglect of the legislatures, in not providing religious teachers for the instruction of the convicts. In Pennsylvania the law does indeed authorize the appointment of a chaplain, but makes no pecuniary provision for his support. "It is true, that occasions occur, highly honourable to the parties, in which clergymen visit the penitentiary, and gratuitously afford their assistance, by the performance of divine worship." Mr. Crawford says, what will be readily believed, that these services are gratefully appreciated by the prisoners. In the impressive stillness of the cell even the sound of the human voice is a relief, and few situations can be more favourable to the reception of religious truth. But valuable as are these services, however desultory, their benefits are but partial and temporary, and utterly inadequate as a substitute for a systematic and unremitted course of religious instruction. Books are provided, but convicts who are unable to read remain uninstructed. The deficiency here noticed has been repeatedly made the subject of public complaint by the officers of the prison, and it is, to say the least, a very extraordinary circumstance, that where so much has been done, and where so much money has been expended for proving the efficacy of an experiment for the reformation of criminals, so very obvious and necessary an accessory should be omitted in the establishment.

One very important consideration in the management of a prison, whatever may be the system of discipline adopted, is the character and qualifications of the superintendent. It is a consideration, however, to which, unfortunately, but little attention has usually been paid in this country. It has been thought quite sufficient that the person to whom the management of criminals has been entrusted, should bear a fair character for honesty and sobriety, so that it has not been uncommon to see persons whose acquirements have not amounted even to the mere elementary branches of reading and writing, appointed to the fulfilment of duties which require from them the constant exercise of firmness, temper, and discretion, that they may avoid the commission of errors, and be enabled to impart some of those benefits which the punishment of a prison is designed to produce. It is to be feared, that in some cases, and particularly where gaols are placed under the jurisdiction of the smaller class of municipal corporations, even the slight degree of *moral* qualification that has been mentioned, has not always been insisted upon. This is an abuse which, under the spirit of inquiry and reformation now abroad, it is not possible should long continue to exist. Much has been done already to remedy it in the metropolis, and in other large towns, as well as in some county prisons, the governors of which have been selected from the well educated classes of society; and if any judgment can be formed by means of the evidence recently given by some of these officers, before the committee of the House of Lords appointed to inquire into the present state of gaols, their selection has been made with great judgment and discretion. The governors or wardens of American penitentiaries are usually gentlemen by station and habits, and devote themselves to the performance of their arduous duties with a degree of enlightened zeal, which is found productive of the best results. In many places in England the same class of officers will now bear a comparison with those of America, and we are convinced that when, by further discussions and inquiries, magistrates shall become generally convinced of the good effects resulting from a more careful selection of officers, the ignorant race of gaolers will be everywhere replaced by better qualified persons.

The bridewell, or house of correction at Glasgow, to which we have already made allusion, is governed upon the same plan as the Philadelphia penitentiary, and it is proper to observe, was so managed for five years before the erection of the American prison. Judging from the number of recommitments alone, we shall not be justified in asserting the successful operation of the Glasgow bridewell, but we have little doubt that the unfavourable comparison which in this respect the Scotch prison will bear with the American, is owing to the much shorter periods for which commitments are made to the former than to the latter.

The small comparative good effected by prison discipline,

of even the most efficacious description, when applied for very limited periods, is rendered strikingly apparent by the following statement, made out by Mr. Brebner, the keeper of the Glasgow bridewell, and recently laid before the House of Lords. Of prisoners sent into the prison for the first time, for

14 days'	confinement, about	75 per cent. returned.
30 "	"	60 "
40 "	"	50 "
60 "	"	40 "
3 months'	"	25 "
6 "	"	10 "
9 "	"	7½ "
12 "	"	4 "
18 "	"	1 "
24 "	"	0 "

During seventeen years, in which Mr. Brebner has been keeper of the bridewell, there have been ninety-three commitments for two years, and out of the whole of these, there has not been an instance of the recommitment of one of them.

The shortest period for which commitments are made to the Philadelphia penitentiary is one year; the greater number have to undergo sentences of two, three, and four years confinement, and some are imprisoned for ten and even twelve years.

The total number of convicts confined in this prison, from its opening in 1829, to November, 1833, was 209; of whom

24	were under 20	years of age
102	were between 20	and 30
51	" 30	and 40
20	" 40	and 50
8	" 50	and 60
3	" 60	and 70
1	" 70	and 80
209		

156	of these were 1st	convictions
25	" 2nd	"
16	" 3rd	"
6	" 4th	"
2	" 5th	"
4	" 6th	"
209		

Up to the time when this statement was made up, not any recommitment to the Philadelphia Penitentiary had occurred: one person has since been recommitted. But it is not possible to form any correct judgment from this circumstance, in regard to the efficacy of the discipline in deterring from crime; because, at the time that the statement was given, 162 out of the 209 persons committed were still undergoing their sentence; and of the remaining forty-seven, which number includes seven who were pardoned, ten had died, including one sentenced to twelve years' imprisonment, who committed suicide after undergoing about two years' confinement.

One part of the instructions given to Mr. Crawford on leaving England, directed him to visit the houses of refuge established for the support and reformation of young persons in the cities of New York and Philadelphia. Having for the period of nearly twenty years been connected with the management of the institution in London, known as the "Refuge for the Destitute," Mr. Crawford was well qualified to judge concerning the efficacy of the American establishments; and it is, therefore, a subject of regret, to see that he does not find much to approve in the system upon which they are conducted.

Establishments of this kind in England, receive only as their inmates, young persons who have been not simply charged, but actually convicted of crimes; whereas in New York and Philadelphia, the houses of refuge are open to vagrant youth of every description, who, when once placed within them, forfeit their personal liberty, and are placed at the entire disposal of the managers of the institutions, until they have attained their majority. For thus depriving them of their liberty, the sentence of a court is not at all necessary: and it appears from an extract that Mr. Crawford has given from a report of the managers of the New York refuge, that they are desirous of receiving all who may be brought to them, under circumstances which prove them to be "more sinned against than sinning." In their ninth report, the managers say, "We think that we can safely urge, that the condition of all children in the habits of vagrancy, or who are abandoned, or have no parents or guardians, or who have drunken parents, would be much improved if they were sent to the refuge. That there are many hundred of such children in this city cannot be doubted, and it is much to be regretted if, from any mistaken views of clemency, either on the part of parents or magistrates, they are not sent to this establishment."

The remarks which Mr. Crawford makes upon this almost indiscriminate invitation, appear to us so good, that we are induced to give them insertion:—

"Houses of refuge for the reception of destitute children, like most other charitable asylums, require to be very carefully guarded by such restrictions as will prevent the encouragement of the evil which they are designed to suppress.

The same reasons for which foundling hospitals have proved mischievous, apply with equal force to other establishments which open their doors indiscriminately to destitute youth, thus weakening the bonds of parental obligation, and affording encouragement to the vicious and depraved, to neglect and forsake their offspring. It is true, that in a thinly peopled country, where the pressure of indigence is not felt, and where the services of a young family soon become, in a pecuniary sense, a source of profit, there can be but few inducements to a parent to forsake his children; and consequently, the evils which flow from indiscriminate charity, although they cannot fail in some degree to exist, are not strikingly apparent. The principle of an enactment is, however, not the less unsound, which invites the idle and the dissolute to throw upon a public institution the maintenance of their children, which renders a mere act of vagrancy on the part of a youth a qualification for admission into an asylum, in which he shall be supported, educated, and taught a trade, and thus derive advantages superior to those which are enjoyed by the offspring of the honest and deserving. Such an institution is a direct bounty on parental neglect, and operates most unjustly upon those who, disdaining to have recourse to charitable aid, strive to maintain their families by prudent habits and honest industry."

THE TRADE WITH CHINA SINCE THE ABOLITION OF THE MONOPOLY.

When it was proposed to put an end to the East India Company's monopoly of the trade to China, strong apprehensions were entertained by many persons that the result of the experiment would be to cut us off from all commercial intercourse whatever with that great country—that henceforth we should neither be able to obtain our wonted supplies of tea and silk thence, nor to find there any longer a market for our manufactured goods. As yet we have no means of ascertaining the value of our exports to China since the opening of the trade, the shipments being in a great measure confounded in the Custom House books with those made to the possessions of the East India Company; but we know enough upon this branch of the subject to be assurred that the value of our manufactures introduced into Canton since the overthrow of the monopoly has been considerably greater than that of the shipments previously made by the Company. Upon the other branch of the subject—our imports from China—that being altogether a direct trade, we have more precise information; and we have much gratification in presenting the following highly satisfactory statements:—

Table of the importations of raw silk from China in each of the last eight years:

	lbs.
In 1827	128,234
1828	212,895
1829	120,970
1830	19,198
1831	8,374
1832	28,105
1833	22,181
and in 1834	582,834

Comparative Statement of the Quantities of Tea imported into the United Kingdom in the Season 1833–4, being the last year of the East India Company's monopoly, and the Season 1834–5 being the first year of open trade.

Two or three ships of the Season 1834–5 are not yet arrived. Their cargoes may amount to about two millions of pounds, and in that case the imports of the present season will exceed those of the last by thirteen and a half millions of pounds weight; but as the imports of 1833–4 were about 1,500,000 pounds short of the average importations of that and the two preceding years, we may consider the importations of the present season to be twelve millions of pounds greater than the annual shipments under the East India Company's monopoly.

PUBLIC GENERAL ACTS.—SESSION 1835.

1. An Act to explain an Act of the first year of his present Majesty, for the more effectual administration of justice in England and Wales, so far as relates to the execution of criminals in the county of Chester.

2. An Act to amend an Act of the thirty-eighth year of King George the Third, for preventing the mischiefs arising from the printing and publishing newspapers, and papers of a like nature, by persons not known, and for regulating the printing and publication of such papers in other respects; and to discontinue certain actions commenced under the provisions of the said Act.

3. An Act to apply certain sums to the service of the year 1835.

4. An Act for raising the sum of fifteen millions by exchequer bills, for the service of the year 1835.

5. An Act for punishing mutiny and desertion, and for the better payment of the army and their quarters.

6. An Act to indemnify the governor-general and other persons in respect of certain acts done in the administration of the government of the British territories in the East Indies, subsequent to the 22nd day of April, 1834, and to make those acts valid.

7. An Act for the regulation of his Majesty's Royal Marine Forces while on shore.

8. An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the state, and to substitute declarations in lieu thereof; and for the more entire suppression of voluntary and extra-judicial oaths and affidavits.

9. An Act to apply a sum of eight millions, out of the Consolidated Fund, to the service of the year 1835.

10. An Act to allow, until the 28th day of July, 1835, the importation of certain articles, duty-free, into the island of Dominica, and to indemnify the governor and others for having permitted the importation of such articles duty-free.

11. An Act to indemnify such persons in the United Kingdom as have omitted to qualify themselves for offices and employments, and for extending the time limited for those purposes respectively until the 25th day of March, 1836; to permit such persons in Great Britain as have omitted to make and file affidavits of the execution of indentures of clerks to attorneys and solicitors to make and file the same on or before the first day of Hilary Term, 1836; and to allow persons to make and file such affidavits, although the persons whom they served shall have neglected to take out their annual certificates.

12. An Act for continuing to his Majesty, until the 5th day of July, 1836, certain duties on sugar imported into the United Kingdom, for the service of the year 1835.

13. An Act to regulate the importation of corn into the Isle of Man.

14. An Act to continue to the 31st day of December, 1836, and from thence to the end of the then next session of parliament, an Act of the tenth year of his late Majesty's reign, for providing for the government of his Majesty's settlements in Western Australia on the western coast of New Holland.

15. An Act to continue until the 31st day of May, 1838, and to the end of the then next session of parliament, the allowances of the duty of excise on soap used in certain manufactures.

16. An Act for altering and amending the law regarding commitments by courts of equity for contempts, and the taking bills *pro confesso*, in Ireland.

17. An Act to extend to Ireland certain provisions of an Act made and passed in the first year of his present Majesty's reign, entitled 'An Act for consolidating and amending the laws relating to property belonging to infants, femes covert, lunatics, and persons of unsound mind.'

18. An Act to exempt carriages carrying manure from toll.

19. An Act to amend and consolidate the laws relating to the merchant seamen of the United Kingdom, and for forming and maintaining a register of all the men engaged in that service.

20. An Act to consolidate certain offices in the collection of the revenues of stamps and taxes, and to amend the laws relating thereto.

21. An Act to amend and alter an Act of the fifty-ninth year of his late Majesty King George the Third, for vesting in commissioners the line of road from Shrewsbury in the county of Salop to Bangor Ferry in the county of Carnarvon; and for discharging the trustees under several Acts of the seventeenth, twenty-eighth, thirty sixth, forty-first, forty-second, forty-seventh, and fiftieth years of his then present Majesty, from the future repair and maintenance thereof, and for repealing so much of the said Acts as affects the same line of road.

22. An Act to continue for three years, and from thence to the end of the then next session of parliament, two Acts of the second and third year and the third and fourth year of his present Majesty, relating to the care and treatment of insane persons in England.

23. An Act for the establishment of loan societies in England and Wales; and to extend the provisions of the Friendly Societies Acts to the islands of Guernsey, Jersey, and Man.

24. An Act for the encouragement of the voluntary enlistment of seamen, and to make regulations for more effectually manning his Majesty's navy.

25. An Act to extend the accommodation by the post to and from foreign parts, and for other purposes relating to the post-office.

26. An Act for the appointment of convenient places for the holding of assizes in Ireland.

27. An Act to continue and amend certain regulations for the linen and hempen manufactures in Ireland.

28. An Act for removing doubts as to the declaration to be made and oaths to be taken by persons appointed to the office of sheriff of any city or town being a county of itself.

29. An Act for investing in government securities a portion of the cash lying unemployed in the Bank of England belonging to bankrupts' estates, and applying the interest thereon in discharge of the expenses of the court of bankruptcy, and for the relief of the suitors in the said court; and for removing doubts as to the extent of the powers of the court of review and of the subdivision courts.

30. An Act for protecting the revenues of vacant ecclesiastical dignities, prebends, canonries, and benefices without cure of souls, and for preventing the lapse thereof, during the pending inquiries respecting the state of the Established Church in England and Wales.

31. An Act to give effect and validity to certain contracts and presentments for repairing and keeping in repair certain public roads in Ireland and the sureties entered into for the execution thereof.

32. An Act to impose certain duties on tea.

33. An Act for preventing the vexatious removal of indictments into the Court of King's Bench; and for extending the provisions of an Act of the fifth year of King William and Queen Mary, for preventing delays at the Quarter Sessions of the peace, to other indictments; and for extending the provisions of an Act of the seventh year of King George the Fourth, as to taking bail in cases of felony.

34. An Act to amend two clerical errors contained in an Act passed in the ninth year of the reign of his late Majesty King George the Fourth, entitled 'An Act for consolidating and amending the laws in Ireland relative to larceny and other offences connected therewith.'

35. An Act for consolidating the offices of paymaster-general, paymaster and treasurer of Chelsea Hospital, treasurer of the navy, and treasurer of the ordnance.

36. An Act to limit the time of taking the poll in boroughs at contested elections of members to serve in parliament to one day.

37. An Act for the further reduction of the militia staff, and to suspend the ballot for the militia.

38. An Act for effecting greater uniformity of practice in the government of the several prisons in England and Wales; and for appointing inspectors of prisons in Great Britain.

39. An Act to exempt certain retailers of spirits to a small amount from the additional duties on licences; and to discontinue the excise survey on wine, and the use of permits for the removal thereof.

40. An Act to provide for the better collection of the duties on wood the produce of places in Europe.

41. An Act to amend the law relating to securities given for considerations arising out of gaming, usurious, and certain other illegal transactions.

42. An Act to authorize the granting of superannuation allowances to the commissioners and officers of the courts for the relief of insolvent debtors.

43. An Act for enlarging the powers of magistrates in the appointment of special constables.

44. An Act for raising the sum of thirteen millions five hundred twenty-one thousand five hundred and fifty pounds by exchequer bills, for the service of the year 1835.

45. An Act to carry into further execution the provisions of an Act passed in the third and fourth years of his present Majesty, for compensating owners of slaves upon the abolition of slavery.

46. An Act to amend, until the end of the next session of parliament, an Act of the second year of his present Majesty, for making provision for the dispatch of the business now done by the Court of Exchequer in Scotland.

47. An Act to repeal so much of an Act, passed in the third and fourth years of his present Majesty as relates to the amount of the salary granted to the clerk of the crown in chancery; and to make other provisions in relation to the said office.

48. An Act for the better prevention and more speedy punishment of offences endangering the public peace in Ireland.

49. An Act for continuing, until the 1st day of June, 1837, the several Acts for regulating the turnpike roads in Great Britain, which will expire on the 1st day of June, 1836, or with the next session of parliament.

50. An Act to consolidate and amend the laws relating to highways in that part of Great Britain called England.

51. An Act for granting relief to the Island of Dominica; and to amend an Act of the second and third years of His present Majesty, for enabling His Majesty to direct the issue of exchequer bills to a limited amount for the purposes therein mentioned.

52. An Act to authorize the court of directors of the East India Company to suspend the execution of the provisions of the Act of the third and fourth William the Fourth, chapter eighty-five, so far as they relate to the creation of the government of Agra.

53. An Act to repeal an Act of the ninth year of His late Majesty, for regulating the carriage of passengers in merchant vessels from the United Kingdom to the British possessions on the Continent and Islands of North America; and to make further provisions for regulating the carriage of passengers from the United Kingdom.

54. An Act to render certain marriages valid, and to alter the law with respect to certain voidable marriages.

55. An Act for facilitating the appointment of Sheriffs in Ireland, and the more effectual audit and passing of their accounts; and for the more speedy return and recovery of fines, fees, forfeitures, recognizances, penalties, and deodands; and to abolish certain offices in the court of exchequer in Ireland; and to amend the laws relating to grants in custodiam and recovery of debts in Ireland; and to amend an Act of the second and third years of His present Majesty, for transferring the powers and duties of the commissioners of public accounts in Ireland to the commissioners for auditing the public accounts of Great Britain.

56. An Act to regulate the admeasurement of the tonnage and burthen of the merchant shipping of the United Kingdom.

57. An Act to extend to Scotland certain provisions of an Act of the ninth year of His late Majesty, to consolidate and amend the laws relating to savings' banks; and to consolidate and amend the laws relating to savings' banks in Scotland.

58. An Act to amend the Acts relating to the hereditary land revenues of the Crown in Scotland.

59. An Act to consolidate and amend the several laws relating to the cruel and improper treatment of animals, and the mischiefs arising from the driving of cattle, and to make other provisions in regard thereto.

60. An Act for carrying into effect a treaty with the King of the French and the King of Sardinia, for suppressing the slave trade.

61. An Act for carrying into effect the treaty with the King of the French and the King of Denmark, for suppressing the slave trade.

62. An Act to repeal an Act of the present session of parliament, intituled 'An Act for the more effectual Abolition of Oaths and Affirmations taken and made in various Departments of the State, and to substitute Declarations in lieu thereof, and for the more entire Suppression of voluntary and extra-judicial Oaths and Affidavits;' and to make other provisions for the abolition of unnecessary oaths.

63. An Act to repeal an Act of the fourth and fifth year of His present Majesty, relating to weights and measures, and to make other provisions instead thereof.

64. An Act to alter certain duties of stamps and assessed taxes, and to regulate the collection thereof.

65. An Act for preventing the publication of lectures without consent.

66. An Act to amend the law relating to the customs.

67. An Act for the improvement of the navigation of the river Shannon.

68. An Act to defray the charge of the pay, clothing, and contingent and other expenses of the disembodied militia in Great Britain and Ireland; and to grant allowances in certain cases to subaltern officers, adjutants, paymasters, quarter-masters, surgeons, assistant surgeons, mates, and serjeant-majors of the militia, until the first day of July, 1836.

69. An Act to facilitate the conveyance of workhouses

and other property of parishes and of Incorporations or unions of parishes in England and Wales.

70. An Act for abolishing, in Scotland, imprisonment for civil debts of small amount.

71. An Act for appointing commissioners to continue the inquiries concerning charities in England and Wales until the first day of March, 1837.

72. An Act for abolishing the excise incorporation in Scotland, and for transferring the funds of the said incorporation to the consolidated fund, and providing for the payment of the annuities to the widows and orphans of late and present members of the incorporation fund.

73. An Act to provide that persons accused of forgery in Scotland, shall not be entitled to bail unless in certain cases.

74. An Act for the more easy recovery of tithes.

75. An Act for the amendment of the law as to the tithing of turnips in certain cases.

76. An Act to provide for the regulation of municipal corporations in England and Wales.

77. An Act to repeal the duty and drawback on flint glass, to impose other duties and another drawback in lieu thereof, and to reduce the drawback on German sheet glass exported in panes; and to repeal the drawback on unground and unpolished plate glass; and to amend the laws relating to the duties on glass.

78. An Act to explain and amend an Act passed in the second and third year of the reign of King William the Fourth, for amending the representation of the people in Scotland; and to diminish the expenses there.

79. An Act to suspend, until after the 6th day of April, 1836, proceedings for recovering payment of certain instalments of the money advanced under the Acts for establishing tithe compositions in Ireland.

80. An Act to apply a sum of money out of the consolidated fund and the surplus of ways and means to the service of the year 1835, and to appropriate the supplies granted in this session of Parliament.

81. An Act for abolishing capital punishments in cases of letter stealing and sacrilege.

82. An Act to abolish certain offices connected with fines and recoveries and the cursitors in the Court of Chancery, and to make provision for the abolition of certain offices in the superior courts of common law in England.

83. An Act to amend the law touching letters patent for inventions.

84. An Act to empower grand juries in Ireland to raise money by presentment for the construction, enlargement, or repair of piers and quays.

PARLIAMENTARY ABSTRACTS.

Analysis of Public Expenditure, as taken from the Account of Public Income and Expenditure, printed by order of the House of Commons, March 17, 1835, moved for by Mr. Gillon.—No. 302.

		Effective.	Non-Effective, or Dead Weight.	
Public Debt.	£.			
Permanent Debt	23,890,000			
Terminable Debt	3,654,000			
Interest on Exchequer Bills	696,000			
Management of Debt	260,000			
	28,500,000	£.	£.	£. 28,500,000
Collection of the Revenue of Customs, Excise, Stamps, Taxes, and Post-Office		3,220,000	430,000	3,650,000
Expenses of the Royal Family and Civil Government		970,000	600,000	1,570,000
Expenses of Courts of Justice, Police and Correction		822,500	..	822,500
Diplomatic Expenses		214,000	71,000	285,000
Public Works and other Miscellaneous Services, not included in the above		2,330,000	..	2,330,000
Army, Navy, and Ordnance		7,918,000	4,148,000	12,066,000
Total Expenditure	£28,500,000	£14,274,500	£5,249,000	£49,233,500
Surplus of Income				£1,410,000
Total Income				£50,633,000

Appropriation of the grant of 20,000l. voted by Parliament in aid of building Schools in England.—The amount of the applications which have been made and reported upon by the British School and National School Societies during 1834, to the Treasury, is 44,238l. To meet these applications a sum of 20,000l. (the second grant) was voted by Parliament. From this 484l. 14s. was deducted, the grant of the previous year having been exceeded by that sum; and also a sum of 175l. which had been promised, but accidentally overlooked. There remained, therefore, 19,340l. 6s. at the disposal of the Board, and the principle adopted in the distribution was to give priority to those applications, in which it was proposed to forward the education of the largest number of scholars by the smallest expenditure. Acting on this principle, the applications from such schools as proposed to educate two scholars for every 1l. applied for received consideration, and, as far as the money in the hands of the Board would allow, were attended to. The following table exhibits the amount of the population in the towns and districts where the schools are situated, which have received aid from the grant; the number of scholars in the schools, the estimated expense of erection, the sum applied for, and the sum granted:—

	Amount of Population in towns & districts where schools are situated.	Number of Scholars proposed to be educated.	Estimated expense of erection, &c.	Amount asked for.	Amount granted.
Granted on 11th July, 1834	349,912	18,254	£18,177	£8,040	£7,978
Granted on 27th Jan. 1835, to schools connected with British School Society	382,374	7,040	13,340	6,335	3,520
Ditto to National School Society	581,696	11,152	20,318	9,034	5,576
Granted on 3rd February, 1835	521,836	4,288	7,484	3,607	2,144
Granted on 18th March, 1834, for school at Bungay	5,000	300	300	150	150
Totals	1,840,818	41,034	£59,619	£27,166	£19,368
Add the sum required to make good the amount appropriated over the grant of the previous year					£484 14 6
Total amount appropriated during 1834					£19,852 14 0

The total amount of the applications which the Board were unable to comply with, and which therefore had to stand over, was as follows:

	Population.	Scholars.	Expense.	Amount asked for.
Total applications not complied with	1,283,291	37,510	58,746	25,366

Respecting the appropriation of that portion* of the 10,000l. voted by Parliament in 1834 in aid of schools in Scotland, the following rules have been laid down:

"1. That no portion of this sum be applied to any purpose whatever, except for the erection of new school-houses, and that in the definition of a school-house the residence for masters be not included.

"2. That no application be entertained, unless a sum be raised by private contribution equal at the least to one-half of the total estimated expenditure.

"3. That the amount of private subscription be received, expended, and accounted for, before the issue of public money for such school be directed.

"4. That the applicants whose cases are favourably entertained, be required to bind themselves to submit to any audit of their accounts which this Board may direct, as well as to such periodical reports respecting the state of their schools, and the number of scholars educated, as may be called for."

Fire Insurance Companies.—An account of the sums paid into the stamp Office for duty on insurance from fire, and of the sums insured by each fire office on farming stock exempt from duty during 1834:—

London Offices.	Duty on Insurance. £	s.	d.	Amount of Farming Stock Insured exempt from Duty. £

Total	£7,946,000	£444,880	

The bonds of the foreign debt originally contracted by Mexico and now remaining in circulation, amount to 5,280,000*l.*; since then there has been created 1,590,000*l.* additional stock in payment of the arrears of interest due up to 1st April, 1831, interest to commence on the 1st April next, at which period a further issue is to take place of 1,076,000*l.*, being one half of the annual interest reserved on the bonds since July, 1831. On the 1st April, 1836, the foreign debt of Mexico will therefore amount to about eight millions sterling, independently of the sum of 650,000*l.* more, which will then be due for arrears; and it will require an annual remittance of at least two millions and a half of dollars to provide for the interest.

The gross revenues of Mexico have averaged for some years past about twelve millions and a half of dollars, from which must be deducted between two and three millions for the expenses of collection. The ordinary expenditure of Mexico may be estimated at thirteen millions and a half of dollars, exclusive of the interest due on the foreign loans; owing however to the extraordinary expenses of the government during the late civil wars, the actual expenditure has exceeded fifteen millions; in fact, the expenses of the army alone have annually absorbed more than two-thirds of the ostensible revenues of the country.

The principal sources from which Mexico derives her income are the duties levied on imports and exports, which have varied from five to as much as eight millions of dollars a year. The tobacco monopoly has produced as much as one million of dollars, but nearly half is absorbed in the management; the other ordinary branches of revenue consist of the stamps, coinage, and post-office, producing altogether about half a million of dollars, whilst the contingent levied on the different states may be rated at from one to one milion and a half more.

There can be but little doubt that the resources of Mexico, under a proper administration, might be made to provide for her ordinary expenditure, and leave something for the foreign creditor; until, however, the army is greatly reduced, it will continue to absorb all the surplus revenues of the country, whilst the high rate of duties gives such encouragement to smuggling, carried on through the northern provinces with the United States, that the fair trader can stand no chance, and the principal source of revenue will inevitably diminish in proportion.

Steam Vessels.—Number of steam-vessels registered in Great Britain in July, 1835:—Number of vessels, 397; tonnage, 36,849. Number belonging to Great Britain not registered, 84; tonnage unknown. Number building in Great Britain, 46; tonnage unknown. Of the registered vessels 98 belong to the port of London, 56 to Glasgow, 28 to Liverpool, 14 to Bristol, 15 to Hull, 80 to Newcastle, and 14 to Sunderland. The vessels belonging to the two latter places are all small, the tonnage of each varying from 10 to 30. The remaining places are, Beaumaris, 1; Biddeford, 1; Cardiff, 1; Carlisle, 2; Chepstow, 3; Colchester, 1; Cowes, 3; Dover, 6; Gloucester, 1; Goole, 3; Ipswich, 2; Lancaster, 2; Ramsgate, 4; St. Ives, 1; Southampton, 8; Stockton, 7; Swansea, 4; Whitehaven, 4; Yarmouth, 1; Aberdeen, 7; Alloa, 4; Cambeltown, 2; Dundee, 4; Inverness, 1; Kirkaldy, 3; Leith, 4; Port-Glasgow, 2, and Stranraer, 1.

POLITICAL RETROSPECT FOR SEPTEMBER, 1835.

GREAT BRITAIN.

THE last month has at length brought the proceedings of Parliament to a close, after a session of unusual duration and labour.

The Commons sat for about an hour on the morning of Saturday, the 22nd of August, but nothing of importance took place.

On Monday, the 24th, both Houses re-assembled, when the Lords, on the motion of Viscount Melbourne, went into Committee on the Irish Church Bill. At the commencement of the discussion, it was stated by Lord Ellenborough that he and his friends intended to oppose what were called the appropriation clauses of the Bill, but would lend their assistance to make the rest of the measure as perfect as possible. When the clauses came to be considered, the 10th, which authorized the re-opening of former tithe compositions, was struck out on the motion of Lord Ellenborough, without a division. On the 40th clause, providing that tithe compositions should be increased or diminished, according to the price of corn for the preceding seven years, the numbers on a division were 35 for the clause, and 126 against it. The Earl of Haddington then moved that all the clauses providing for the suppression of sinecure benefices, and the appropriation of their revenues to the purposes of education, being those from the 61st to the 88th inclusive, should be omitted. A long debate followed, at the close of which their Lordships divided, at half-past two o'clock in the morning, when the numbers appeared to be,—for Lord Haddington's motion, 138; against it, 41. The clauses accordingly were struck out;—and the Ministers having subsequently declared that they did not intend to proceed with the Bill after it had been thus mutilated, the entire measure was dropped.

In the Commons, this evening various Bills were advanced a stage, but no discussion of much interest took place. Among others, the Report on the Glass Duties' Bill was brought up, and the Bill recommitted, that a clause might be inserted, enacting that the reduction of the duty and the drawback should commence from the 10th of October. The Stamps and Assessed Taxes' Bill was also recommitted, and a clause inserted in it reducing the stamps on life insurances not exceeding the amount of 500*l.* The Registration of Voters' (Ireland) Bill went through Committee. The clause declaring the invalidity of future marriages within the prohibited degrees of affinity, which had been thrown out by the Committee, was restored to the Marriage Law Amendment Bill: and the Lectures Publication Bill was read a second time.

On Tuesday, the 25th, in the Lords, after the Imprisonment for Debt Bill had been postponed till next Session, the Weights and Measures Bill referred to a Select Committee, and several other Bills passed through Committee, or read a second time, the Municipal Corporations' Bill was recommitted, on the motion of Lord Melbourne. The following alterations were then made on this measure:—Clause 5 was so altered, on the motion of the Duke of Wellington, as to take the Cinque Ports out of the operation of the Bill;—an insertion was made, on the motion of the Earl of Devon, in clause 15, providing, that in towns divided into four or more wards, persons possessed of 1000*l.*, real or personal estate, and, in other towns, those worth 500*l.*, should be eligible as councillors;—on the motion of the Duke of Richmond, clause 39 was so amended as to impose the duty of dividing the boroughs into wards on the revising-barristers, instead of the county magistrates;—in the 59th clause, on the motion of Lord Lyndhurst, a provision was introduced, enacting that the present town-clerks, and all future town-clerks, should hold their offices for life, the motion having been carried by a majority of 104 to 36;—and finally, on the motion of the same Noble Lord, and after a debate of considerable length, a clause was added to the Bill confining the exercise of the ecclesiastical patronage vested in municipal corporations to such members of the council as should be members of the Church of England. The remaining clauses were then agreed to.

The Commons met this morning at twelve, when various Bills were read a second or third time, with scarcely any discussion. In the Committee on the Lectures Publication Bill, Mr. Wakley moved that lectures delivered at public establishments should be exempted from the operation of

the Bill; but the motion was negatived by a majority of 29 to 9.

On Wednesday, the 26th, in the Lords, after a short conversation respecting the affairs of Spain had arisen on the Marquess of Londonderry withdrawing his motion on that subject, a debate took place on the motion for the second reading of the Constabulary Force (Ireland) Bill, which terminated in the Bill being thrown out, on the motion of Lord Roden, by a majority of 51 to 39.

The Commons did not assemble in sufficient numbers to form a House.

On Thursday, the 27th, the Lords divided on the question that the Report (which was in favour of the measure) of the Committee on the Great Western Railway Bill should be received, when the motion was carried by a majority of 50 to 28. A debate, characterized by much heat and personality, then arose, on Lord Melbourne moving the Order of the Day for receiving the Report on the Municipal Corporations Bill, and addressing the House in explanation of the course which Ministers intended to pursue with regard to that measure. After the Report had been received, Lord Melbourne moved that the words in the 6th and subsequent clauses, relating to the appointment of aldermen as councillors for life, should be struck out; but the motion was rejected by a majority of 160 to 89 (there being 57 proxies with the majority, and 43 with the minority).

The Commons met only for a short time in the morning.

On Friday, the 28th, in the Lords, on the motion that the Municipal Corporations Bill should be read a third time, Lord Winchilsea moved, as an amendment, that the Bill should be read a third time that day six months; but, on a division, the amendment was negatived by a majority of 69 to 5. The Bill was then passed. The remainder of the evening was occupied by a conversation on the subject of the Scottish Church Commission, which led to nothing.

The Commons having this evening gone into a Committee of Supply, the sum of 218,861*l.* was voted to defray the charge of the disembodied militia of Great Britain and Ireland. The Municipal Corporations Bill was then brought down, as amended, from the Lords; when it was ordered, on the motion of Mr. Spring Rice, and after some observations from Mr. Hume and Mr. O'Connell, that the entire Bill should be reprinted. In a later part of the evening, Mr. Buckingham's Compensation Bill was withdrawn, after a short conversation, on the Speaker intimating that it was a Private Bill, and ought to have gone through the preliminary forms laid down for such Bills by the Standing Orders of the House.

Both houses also assembled on Saturday, the 29th. In the Lords, various Bills (among others, the Islington Market Bill) were read a third time, and passed. In the Commons, on the motion of Mr. Spring Rice, a Bill was brought in, and read a first time, authorizing the Government, in urgent cases, to refrain from calling upon the owners of tithes in Ireland, who had received relief from the Million Loan, for repayment of the advances made to them, before the 5th of April next.

In the Lords, on Monday, the 31st, the Dublin Police Bill was read a second time, after a short discussion.

In the Commons, Lord John Russell called the attention of the House to the Lords' amendments on the Municipal Corporations Bill. A long debate followed his Lordship's speech—after which the consideration of the amendments was proceeded with. The provision appointing aldermen for life was agreed to be struck out; and an enactment was substituted for it, to the effect that a third part of the town councillors, elected by the whole number, should bear the name of aldermen, and remain in office for six years, one-half of them going out at the end of every three years. The clause providing for the continuance of the present justices of peace for their lives was then restored to its original form, according to which it had been provided that they should go out of office on the 1st of May next.

On Tuesday, the 1st of September, among other bills which were passed or advanced in the Lords, the Patent Bill, as amended by the Commons, was taken into consideration, when it was agreed, on the motion of Lord Brougham, that a conference should be applied for on the subject of one of the changes which had been made by the other House.

The Commons, who met at twelve o'clock, proceeded with the consideration of the Municipal Corporations Bill. In regard to the qualification clause, it was agreed that every rate-payer should be eligible as a councillor, who, in towns having four or more wards, should be rated at 30*l.* a-year, or should declare himself to be possessed of 1000*l.*; and in the smaller boroughs, who should be rated at 15*l.*, or should be possessed, on his own declaration, of 500*l.* Mr. Roebuck moved, as an amendment, that a rating of 10*l.* should be a qualification in all towns, but the motion was negatived by a majority of 271 to 37. An amendment, proposed by Sir John Campbell, the effect of which was to do away with the necessity of any further property qualification than one existing at the time of making the declaration, was then carried by a majority of 167 to 53. On the objection being made, however, that the qualification was thus got rid of altogether by a side-wind, Ministers, who declared that they had no such intention in giving their support to the amendment, agreed that the clause should be re-considered the following day. It was next agreed that clause 52 should be amended, so as to give the town-councils the power of dismissing the town-clerks at their pleasure. Some debate took place on Lord John Russell moving the restoration of the clause giving town-councils the power of recommending justices of the peace to the Crown, but the motion was carried on a division by a majority of 164 to 69. The Tithes Instalment (Ireland) Suspension Bill then went through Committee, without being opposed, though the progress of business was for some time interrupted by an altercation of unusual violence between Sir Henry Hardinge and Mr. Henry Grattan.

On Wednesday the 2nd, in the House of Lords, a discussion of some length took place on the motion for the second reading of the Bill for improving the mode of registering voters in Ireland, which ended in the Bill being thrown out by a majority of 84 to 27.

In the Commons the Municipal Corporations Bill was taken into further consideration. On the motion of Lord John Russell, the clause relating to the rights of freemen was amended so as to take from them their privilege of exemption from toll. The insertion in the qualification clause of words making it necessary that councillors should be duly qualified during the whole time of their continuance in office, was then after some debate carried on the motion of the same Noble Lord, by a majority of 155 against 56. In regard to the Church patronage in the hands of corporations, it was agreed, on the motion of Mr. Spring Rice, that the town-councils should be compelled to sell all the rights of presentation they possessed within a certain time, and to invest the produce of the sale in public securities for the benefit of the borough fund, and that in the mean time the patronage should be exercised by the bishop of the diocese. The clause relating to the division of towns into wards was next considered; when an amendment upon the clause was carried, providing that the division into wards should commence with towns having not less than 9000 inhabitants, instead of with those of 6000, as proposed by the Lords. Finally, the boroughs of Alnwick, Llanelly, and Yeovil, were restored to the schedule of boroughs coming under the operation of the Bill, from which they had been struck out by the Lords. A Committee to draw up reasons for these amendments to be stated in a conference with the Peers was then appointed on the motion of Lord John Russell; and it was agreed that a conference should be requested. After this, the Lords' amendments on the Weights and Measures Bill, on the Tithes on Turnips Bill, and on the Tithes Recovery Bill, were agreed to; and the Lectures Publication Bill was read a third time, and passed.

On Thursday the 3rd, the Lords, on the motion of Lord Salisbury, threw out the Music and Dancing Bill, which stood for a third reading that day. It was then agreed that the request of the House of Commons for a conference on the amendments to the Municipal Corporations Bill should be complied with; and certain Noble Lords having been appointed to conduct it, it soon afterwards took place in one of the Committee-rooms. On the return of their Lordships, the amendments and reasons of the Commons were read by the clerk; and it was agreed that they should be taken into consideration on the following day.

In the House of Commons, on the Chancellor of the Ex-

chequer moving the third reading of the Consolidated Fund Bill, Mr. Hume moved that the third reading of the Bill should be postponed till the Monday following, in order that the House might have an opportunity of seeing in the mean time what the Lords did with the Corporations Bill; but after a short conversation, this amendment was withdrawn. A Committee of Members, headed by Lord John Russell, then proceeded to hold the conference which had been agreed upon with the Lords; and soon after their return, the House was counted out.

On Friday the 4th, the Lords threw out the Dublin Police Bill, which stood for committal that day. Lord Melbourne then called the attention of their Lordships to the amendments of the Commons on the Municipal Corporations Bill, upon which the House went into Committee, and the discussions which followed lasted till four o'clock in the morning. The amendment of the Commons, empowering the town councils to recommend justices of peace to the Crown, was struck out by a majority of 144 to 82. On the motion of Lord Ellenborough, it was carried by a majority of 79 to 33, that the division into wards should commence with boroughs having 6000 inhabitants. Finally, the boroughs of Alnwick and Yeovil were again struck out of the Bill. The other amendments of the Commons were agreed to.

Their Lordships also assembled on Saturday, the 5th, when the Report of the Committee on the amendments was received.

On Monday, the 7th, another Conference took place between the two Houses, at which the amendments of the Lords were communicated to the Commons. When the Commons returned to their own House, Lord John Russell proposed that the Bill, in the state in which it was now left, should be agreed to; and, after a short debate, this motion was assented to by the House. Mr. Hume then brought up the Report of the Select Committee appointed to inquire into the state of Orange Lodges in England; and, after stating its recommendations, moved that it should be printed, which motion was agreed to. The House, at its rising, adjourned till Wednesday.

On Tuesday the Municipal Corporations' Bill was again brought up to the Lords, along with several other Bills; their Lordships amendments on which had likewise been agreed to by the Commons. The Tithes Instalment (Ireland) Bill was then read a third time, and passed.

On Wednesday, the 9th, in the Lords, the Consolidated Fund Bill was read a third time, and passed. The House of Commons was counted out, after it had sat about half an hour.

On Thursday the 10th, his Majesty, soon after two o'clock, came to the House of Peers, and, the Commons, headed by their Speaker, having appeared at the Bar, read a speech, in which he stated that he continued to receive from all foreign powers, satisfactory assurances of their desire to maintain the most friendly understanding with this country—that he should continue, in concert with the three powers with whom he had concluded the treaty of quadruple alliance, to direct the most anxious attention to the state of Spain—that he had concluded fresh conventions calculated to prevent the traffic in African slaves with Denmark, Sardinia, and Sweden—that he hoped soon to receive the ratification of a similar treaty which had been signed with Spain,—and that he was engaged in negotiations with other powers of Europe, and in South America for the same purpose. His Majesty then proceeded;—"I perceive, with entire approbation, that you have directed your attention to the regulation of municipal corporations in England and Wales; and I have cheerfully given my assent to the Bill which you have passed for that purpose. I cordially concur in this important measure; which is calculated to allay discontent, to promote peace and union, and to procure for those communities, the advantages of responsible government." After noticing the improved internal condition of Ireland, which had permitted the substitution of enactments of a milder nature for the necessary severity of the expired Coercion Act, and thanking the Commons for the readiness with which they had voted the supplies, his Majesty concluded as follows:—"My Lords and Gentlemen, I know that I may securely rely upon your loyalty and patriotism; and I feel confident that in returning to your respective counties, and in resuming those functions which you discharge with so much advantage to the community, you will recommend to all classes of your countrymen, obedience to the law, attachment to the constitution, and a spirit of temperate amendment, which, under Divine Providence, are the surest means of preserving the tranquillity, and increasing the prosperity which this country enjoys."

Lord Denman, as Speaker, then declared the Parliament to be prorogued to the 10th of November.

FRANCE.

The Chambers have scarcely opposed a single clause of the obnoxious laws proposed by Ministers after the affair of the infernal machine, but have in some instances seemed inclined to go even farther in restricting the liberty of the subject than the King proposed or wished.

We noticed the passing of the Jury Bill by the Deputies, last month. It has since gone through the Peers, and as the law now stands in France, a majority of seven jurymen to five can give a verdict. The celebrated mathematician and philosopher Monsieur Arago strenuously opposed the Bill, and went into some curious calculations to show the injuries to the cause of justice and humanity, that would inevitably arise out of the alteration of the law of jury. But though he took up ground where the very susceptible self-esteem of the nation was committed, he wholly failed in his opposition to the ministerial plan. As the subject is of life and death importance to all of us, we have made some extracts from M. Arago's speech, which place the advantages of our own jury system in a strong light.

"The judgment of man is, after all, but a probability, and probabilities are determined by numbers. If, then, a verdict is resolved upon by ten men out of twelve, there is greater probability that it will be a just verdict, than if it had been resolved upon by seven in twelve. The degree of certainty of a judgment is in direct proportion to the number of judges who have delivered it. And you yourselves, would you not place greater confidence in a judgment pronounced by a majority of 200 against 100, than of two against one? I was sorry to hear the minister of justice, and the reporter of the Committee speak lightly and contemptuously of the unanimity required by the English jury system. If we are inclined to treat that unanimity with derision, so much the worse for us, for it was not only the other day that it was instituted, and it has been found a very proper defence to the lives and properties of British subjects.

* * * * * *

"If you take the hypothesis that the verdict of a jury be decided by a majority of seven against five, as the Bill before you proposes, you will find the result of your calculation to be a fearful one. The chances of error in such a case are in the proportion of one to four. I cannot go through all the calculations before you, without appearing as if I were delivering a lecture to you; but I can assure you they were formed in the most conscientious manner on mathematical principles, and they are supported by the authority of Condorcet, Condillac, Laplace, and all who are versed in the science of calculating probabilities. In all that, however, there is no merit whatever, for nothing can be plainer. But, in order to be just, we must admit that the jury's error may be as often in favour of the accused as against him; so that instead of a proportion of one to four, let us suppose that the probability of error to his prejudice, if the absolute majority be seven against five, is one to eight, or even one to ten. We shall then have it rigorously and mathematically demonstrated, that among the men led to execution there is one in ten who is innocent.

"According to the present system, by which the verdict of a jury may be formed by a majority of eight against four, the probability of error is in the proportion only of one to eight; and as the error may be as much in favour of the accused as against him, let us suppose the proportion to be one in sixteen. Well, then, at the present day we have one innocent man in sixteen who suffers. And you find this is not enough! Even with the English system of unanimity error may occur, for the human mind is everywhere liable to error; but in that case the chances of error are infinitely smaller, for they are in the proportion of one in 8000. Thus, gentlemen, you see what are

the advantages of the system of unanimity in juries over every other, and which you seem to treat as beneath your notice. For my part, relying on the progress of human reason, I shall look with hope for the day when that unanimity will be imperatively required by the laws of my country. Our national pride would revolt at the idea of our not being placed, when framing a treaty of commerce with another power, on the footing of the most favoured nations; and yet to us legislators, now about to contract anew with our own country, it is proposed that we should place it at a deplorable distance behind England!"

The general debate on the projected law against the press closed, on the 24th of August, with a long speech by the Duke de Broglie, who, before the Revolution of 1830, was president of a patriotic society, styled "Les Amis de la Presse," but who now denounced the liberty of the press as a thing wholly incompatible with the existence of any regular form of government or public order in France. The Duke did not directly charge the guilt of the assassin Fieschi on the newspapers, but, in common with his colleagues, who, at one time of their lives, have all taken the popular side of the question, both in speaking and writing, he alleged that the sanguinary insurrections in Paris and Lyons, and all the *émeutes* and troubles that have happened since 1830, have been occasioned by a ferocious, a demoralized, and demoralizing press. We will not attempt to decide how much truth there is in this assertion; but de Broglie was placed in an awkward position, when he was asked what share the press had had in bringing about the Revolution of July, which had made him a minister, and his master a King! On this debate, M. Royer Collard, who is called the very father and founder of the Doctrinaire sect, declared his open hostility to his former pupils and bosom-associates, and spoke strongly against the measures. His defection was felt as a serious and embarrassing loss, but it in no way mitigated the severity of the Cabinet. On this occasion Chateaubriand was delivered of one of his usual declamatory lectures. He said that the present measures would not answer their purpose—that ministers must establish the censure after all, and that on the day they did establish it they would surely die; and he added, that the freedom of the press could only exist under a legitimate monarchy, or under a republic.

Some petitions were got up in the departments against the press law, but, generally speaking, the French have shewn but a luke-warm zeal on the subject, whilst the people—the *bourgeoisie* of Paris—have expressed any feeling rather than one of sympathy for the newspaper editors. On Saturday, the 29th of August, the Bill was carried, in the Chamber of Deputies, by a majority of 226 to 153, the only alteration introduced of any importance being the reducing of the caution-money required of a newspaper, from 200,000 francs, or 8000*l.*, to 100,000 francs, or 4000*l.*

On the 1st of September the law was carried up to the Chamber of Peers, who referred it, as usual, to a Committee. The Committee made their Report through the Baron de Barante, an eminent literary character, who strongly recommended the adoption of the Bill, and it was accordingly adopted by the Peers, without change or limitation, on the 9th of September, by a majority of 101 to 20! The three laws, namely—that of the press, that of the jury, and that relating to the conduct of courts of justice, were all published in the *Moniteur* as soon as the Press Bill passed the Peers, and they were accompanied, in that paper, by two supplementary clauses, which, coming in the shape of "Royal Ordonances," look about as unconstitutional as those which hurried on the crisis of the elder branch of the Bourbons. Several journals were immediately given up. The Session of the Chambers, which had been of extraordinary length, closed on Saturday, the 12th of September. Thirty new Peers have been added to the Upper Chamber.

It appears that the trial of Fieschi, before the Court of Peers, is fixed for the 20th of October.

The popularity of Louis Philippe and his family, with the national guards, and all the middling class (which, in France is, indeed, everything) has not suffered by these recent and most arbitrary measures. The fact is as evident as it is extraordinary. The King, who is travelling in the departments, accompanied by his wife and some of his children, has been everywhere received with the most enthusiastic demonstrations of loyalty and affection. The industrious *bourgeois* have had changes enough—they want peace at home and abroad, and to be allowed to earn and to eat their bread in tranquillity. It will remain to be seen whether even these blessings may not sometimes be purchased at too dear a price, and whether the French people will continue in the same loyal temper for a twelvemonth?

The army of observation, on the French side of the Pyrenees, is said to have received some insults from the troops of Don Carlos; but it is now quite evident that Louis Philippe has greater apprehensions of the ultra-liberal party—the eighteen hundred and twelve Cortes-men, who have thrown everything in Spain into confusion—than he has of the Carlist faction.

SPAIN.

We left the affairs of this country in a deplorable state last month, and they certainly have not improved since then. The revolt of the Urban militia in Madrid was not followed by any very serious consequences; but several of the disaffected cities in the provinces have established Provisional Governments, independent of the Queen Regent and the Cortes at Madrid, and have addressed the National, or Central Government, in a tone that renders its authority almost contemptible. The Royal proclamations addressed to these Juntas, and denying the legality of their authority, as well as all the measures they may adopt, seem to have been everywhere burnt, and Saragossa, Valencia, Barcelona, Cadiz, Seville, Granada, Malaga, Corunna, now make their own laws, and boast of the union which subsists between their respective Juntas. In some of these places, they have formally proclaimed the Democratic Constitution of 1812, with its Cortes of one Chamber. The disaffection to the established Government seems to be spreading with a continually increasing rapidity. A few days ago, we read that Algesiraz and Saint Roch, two towns in Andalusia, and only a few miles from Gibraltar, and the city of Caceres, in Estremadura, had declared for "the cause of liberty," (as the Spaniards call their revolts, which put all liberty in jeopardy), and we now see it confidently reported that the Asturias have also risen, and proclaimed a Provincial Junta at Oviedo. Even without counting the Basque provinces, and the ground occupied by Don Carlos, more than one-half of Spain has shaken off the weak authority of the Queen Regent. We do not hear of any progress made by the Carlists in Catalonia, or in Arragon; but the partizans of the Pretender—who are become more numerous, not only in those provinces, but all over the kingdom, in consequence of the sudden seizure of Church property, and the violence exercised upon them by the Ultra-Liberals—are only waiting their time for reprisals and retaliation, and the dreadful dissensions among the Constitutionalists can hardly fail to favour their cause everywhere.

A few days after the Urbanos commotion at Madrid, the Queen's Government adopted some severe measures against the press. One paper was suppressed as revolutionary and anarchial, and the editors and writers of two or three other journals were arrested, while some gentlemen of the press saved themselves by flight. At the same time, measures were taken to remodel the unpopular Ministry.

On the 30th of August, the Government Gazette published the resignation of the Marquis de las Amarillas, and the appointment in his place of Castro Toreno. Don José Sartorio was substituted for General Alava, in the Navy Department, and Don Manuel de Rivaherrera for Alvarez Guerra, in the Home Department. M. Mendizabal was urgently called from Lisbon, and with his aid Toreno hoped to be able to keep something like a Government together. The garrison of the capital was reinforced, by 3000 men, who were drawn from the provinces, [illegible] formity of their serviees were much wanted—but without [illegible]ons in Engtional force the tranquillity of the capital co[illegible]rs of prisons depended upon. [illegible] in the spirit

Early in September, it was reported here that t[illegible] nearly the had dismissed the Toreno Ministry, and app[illegible] throughout wholly new and Ultra-Liberal Cabinet, with Arg[illegible] Majesty's the head of it. The report was premature, thoug[illegible] regulations whatsoever,

appears that some such sweeping change took place a few days after. We are still, however, in doubt whether the orator Arguelles, or Mendizabal, who is a man of business, is to be considered as Prime Minister. The latter of these two gentlemen arrived at Madrid on the 7th of September, where, after declaring he would not accept office either under, or with Toreno, he proposed a new plan for the military operations against Don Carlos, and shewed the Queen the necessity of adopting more liberal measures, *and contracting a new loan!* The newspaper accounts of these events are more than usually confused, and we will not puzzle ourselves about them, as very probably, while we are writing, fresh Ministerial changes are taking, or have taken, place at Madrid.

In the North of Spain there has been some hard fighting; and the British and Irish auxiliaries, commanded by General Evans, though they have not gained any great advantage, have maintained their national character for bravery and steadiness. For the first time since this tedious contest began, bayonets have been crossed, and whole regiments have charged at once, without standing and looking at the enemy for days together. An experienced military man who has served with the Queen's troops—a Frenchman, who has seen very different service—gives a deplorable account of the unwarlike, spiritless, manner in which both Carlists and Christinos have hitherto fought. After marches and countermarches, he says—"*ils étaient là à se regarder.*"

On Sunday, the 30th of August, General Evans, with 1600 men, and Jauregui, the governor of the province, with 1400 Spaniards, and a battalion of the regiment of Africa, made a sortie from St. Sebastian, and carried and destroyed some strong entrenchments the Carlists had erected on the Venta-hill, at the distance of four miles from the town. On retiring to St. Sebastian, the Spanish volunteers in the Queen's service, who had expended all their ammunition, were hotly pressed by the Carlists; General Evans moved up a regiment of British grenadiers, who, after pouring in a well-directed fire, drove back the Carlists at the point of the bayonet. The loss sustained in this sortie appears to have been very trifling.

On the 11th of September, a much more serious engagement took place in the neighbourhood of Bilboa, to which city and to Portugalette, most of the British auxiliaries had been removed. This battle is said to have lasted ten hours, but the results of it are stated to have been rather favourable to the Carlists. Some of their outposts on the river, have fired into the boat of an English man-of-war, and wounded two or three men.

According to the French papers, the Spanish ambassador at Paris, the Duke de Frias, has received from Louis Philippe, a positive refusal of all armed interference.

Don Carlos has named a new commander-in-chief, having appointed in all due form, and with extraordinary solemnity, the Virgin de los Dolores, a particular kind of local Virgin Mary, in high repute among the Basques, to be generalissimo of his troops. It would be spoiling this "Royal Decree" to abridge it; it ought to be read at full length.

PORTUGAL.

This country seems just now to be enjoying considerable internal tranquillity, but her fate hangs on a thread, and depends on circumstances which she has not the power to control. If the Constitutional cause be again sacrificed in Spain, it will be once more ruined in Portugal. In their foreign relations, the cabinet of Lisbon have contrived to get into a quarrel with the Court of Turin. Donna Maria who appears to be a very difficult person to re-marry, is said to have refused the Prince of Carignan, the son of his Sardinian Majesty, who, indignant thereat, has offered an insult to the diplomatic agent of Portugal. Perhaps a simpler and a truer story is, that the King of Sardinia never contemplated any such marriage, and in favouring the emissaries of Don Miguel, has only acted upon sympathies and antipathies, which are common to all the absolute sovereigns on the Continent. However this may be, the Duke of Palmella set forth a decree on the 31st of August, proclaiming, that in retaliation for insults received, the exequatur given by him in Donna Maria's name to the Sardinian consuls and inferior agents in Portugal, was suspended, and that in two months from the date of the decree, no vessel bearing the King of Sardinia's flag, unless driven in by stress of weather, should be admitted into Portuguese ports.

CHRONICLE OF OCCURRENCES.

Sept. 1. A meeting of the Grand Orange Lodge was held at the residence of Lord Kenyon, which was called in consequence of the recent parliamentary investigations. The Duke of Cumberland, as Grand Master, was in the chair.

3. A public dinner was given to Sir Robert Peel, by about 200 gentlemen of the town and neighbourhood of Tamworth.

4. A respectable individual, the proprietor of an extensive library and newspaper office in the Edgeware Road, killed his son, a boy about nine years of age, and made a desperate attempt on his own life, from the effects of which however he is recovering. He has since been tried for the murder, but acquitted as being insane. A respectable neighbour, who kept a shop adjoining, and was intimate with the family, was so much excited by all the circumstances of the case, that a fit of apoplexy ensued, which caused his death.

5. A dinner was given to Lord Auckland at the Albion Tavern, Aldersgate Street, by the Directors of the East India Company, previously to his Lordship setting out for India as Governor-General.

8. A musical festival commenced this day at York, which was continued for several successive days. The oratorios were given in York Minster. Among the most distinguished of the visiters to York on this occasion were the Duchess of Kent, Princess Victoria, Duke and Duchess of Northumberland, Earls Cawdor, Fitzwilliam, Lords Milton, Morpeth, &c. &c.

— Captain Back and his companions arrived at Liverpool in the packet ship, North America, from their perilous Arctic Land expedition. The gallant officer and his companions have visited the Great Fish River, and examined its course to the Polar Seas. On the same day Joseph Bonaparte and suite sailed from Liverpool for Philadelphia.

milder nat… dinner was given to Captain Hindmarsh, R.N., at the
Coercion Act… vern, Aldersgate Street, as the governor of the newly
ness with whic… ny of South Australia. The Duke of Wellington had
concluded as … to attend and preside, but he sent an apology, ex-
know that I … good wishes for the success of the speculation—
patriotism; an… Torrens took the chair In the course of the chairman's
respective cou… Australian Act requires to be sold previous to the com-
you discharge… of the colony had been disposed of.

…eeting was held at the Ladye Chapel, Southwark, for the purpose of hearing a farewell address from the well-known traveller and missionary to the Jews, Joseph Woulfe, who is about to proceed to Timbuctoo.

14. Dr. Brinkley, bishop of Cloyne, died in Dublin. Previous to his promotion to the bishopric of Cloyne, Dr. Brinkley held the astronomical chair in Trinity College, Dublin. Cloyne is one of the sees abolished by the Irish Church Temporalities Act.

On the nights of the 12th and 13th August last, the Islands of Antigua and St. Kitts were visited by a violent hurricane, which has been the cause of the loss of many lives, and an extensive destruction of property. The Governor of Antigua has permitted the importation, duty free, for six months into that island, of provisions and building materials, as some alleviation of the calamity.

Mr. O'Connell, having been invited to public dinners in several places, has been making a tour through England and Scotland. Public dinners were given to him in Manchester, Newcastle, Edinburgh, and Glasgow; and in addition to the speeches delivered upon these occasions, he has addressed large congregations of individuals who assembled to receive him on his entries into the different towns.

A convict ship, the George the Third, Captain Moxay, is stated to have been lost in the month of April last, at the mouth of the Derwent, Hobart Town, when 132 persons perished, the greater part of whom were convicts.

The Sir Walter Scott, with a cargo of cotton, from New Orleans to Liverpool, encountered a heavy storm in coming down the Gulf stream, on the 21st of May last, during which the vessel was struck by lightning, and set on fire. The crew and passengers, among whom was a lady, had barely time to save themselves in the small boats. They were ultimately picked up by a ship, and safely re-landed in America.

REPORTS OF THE LORDS' COMMITTEE ON THE PRISONS OF ENGLAND AND WALES.

In the paper inserted in our last Number on the subject of Prison discipline in America, we took occasion to advert to the pernicious effects of our own gaols as they have heretofore been conducted, where crime, instead of being diminished, is fostered and increased. It is one of the most gratifying proofs of the moral advancement of the present age, that the importance of this subject has become fully recognised, that the legislature has given to it a most patient investigation, and that the government is desirous of promoting the best digested plans for reforming the discipline of our prisons. The interest thus awakened, and the exertions prompted by it, will, we may confidently hope, be in course of time productive of a striking improvement in the moral condition of society.

At the beginning of the last Session (March, 1835) a Select Committee was appointed by the House of Lords to inquire into the present state of the several Gaols and Houses of Correction in England and Wales. The Duke of Richmond, who was the promoter of this inquiry, took throughout, the leading part in the investigation. The Committee has been most indefatigable in its exertions to obtain an accurate knowledge of every thing appertaining to the subject they were appointed to examine. The members of it have visited the prisons in and about London, where they have sought to ascertain the nature and extent of the evils of the present system, by the examination of numerous individuals, while they have endeavoured to arrive at just conclusions, in regard to the remedies most proper to be applied, by consulting many persons who were known to have given much previous attention to this subject. The result of this well-conducted investigation is embodied in the following resolutions which were announced in the second of the five Reports of the Committee, ordered to be printed 1st July, 1835:

1st. That it is expedient that one uniform system of prison discipline be established in every gaol and house of correction in England and Wales.

2nd. That for the sake of securing uniformity of discipline, it is expedient that the Rules and Regulations of the gaols shall in future be submitted to the Secretary of State for his approval, instead of as at present to the Judges of Assize.

3rd. That inspectors of prisons be appointed to visit the prisons from time to time, and to report to the Secretary of State.

4th. That entire separation, except during the hours of labour and religious worship and instruction, is absolutely necessary for preventing contamination and for securing a proper system of prison discipline.

5th. That silence be enforced, so as to prevent all communication between prisoners both before and after trial.

6th. That persons whose trials have been postponed, or who, having been tried, have been acquitted on the ground of insanity, shall not be confined in the gaols or houses of correction.

7th. That the officers of the prisons shall not be permitted to receive any portion of the prisoners' earnings.

8th. That the earnings of convicted prisoners shall be hereafter paid to the fund out of which the prison is maintained.

9th. That the dietary of every prison be subject to the approval of the Secretary of State, as a part of the prison rules and regulations, and that it is most desirable that convicted prisoners should not be permitted to receive other than the gaol allowance; but if in any case of very urgent and special necessity, the surgeon should order any increase of diet to a prisoner not in the infirmary, he shall state in his journal the cause and extent of such order.

10th. That the practice in some prisons, and in certain cases, of paying money to the prisoners in lieu of supplying them either wholly or in part with food or fuel, be declared to be illegal.

11th That the use of tobacco in any shape by the prisoners be prohibited in every prison.

12th. That convicted prisoners be not permitted to receive visits or letters from their friends during the first six months of their imprisonment, unless under peculiar and pressing circumstances.

13th. That the use of day rooms, as such, be discontinued.

14th. That no wardsman, monitor, yardsman, or prisoner be permitted to sell any thing whatever, or to let out to hire any article to any person confined in the prison.

15th. That where a chaplain shall be appointed to a prison or prisons, and the number of prisoners including debtors, which it is calculated may be received therein shall not be less than fifty, it is most desirable that the time of such chaplain should be devoted to the duties of such prison or prisons, that he should not hold any other preferment with cure of souls, and that he should reside as near as possible to the same.

16th. That in every prison wherein the number of prisoners exceeds fifty, a schoolmaster, not being one of the prisoners, shall be appointed.

17th. That every prison be provided with a certain number of solitary cells for the punishment of refractory prisoners.

18th. That in cases where the punishment of whipping is resorted to, it is expedient that it should be defined, as regards both the extent to which it may be carried, and the instruments with which it may be inflicted.

19th. That at every Michaelmas Quarter Sessions twelve specified days be appointed, viz., three in each quarter; and that on each of such days the visiting justices do visit and inspect the prison under their charge, according to the provisions of the sixteenth and seventeenth sections of the Gaol Act.

In consequence of the labours and reports of this Committee, an act of parliament was last Session passed, entitled "An Act for effecting greater uniformity of practice in the government of the several prisons in England and Wales; and for appointing inspectors of prisons in Great Britain." This act has been framed in the spirit of the above resolutions, and is in substance nearly the same. The whole government of the prisons throughout England and Wales is now invested in his Majesty's principal Secretaries of State; all rules and regulations made by justices of the peace, or other persons whatsoever,

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

which they have been heretofore authorized by law to make for the government of any prisons in England and Wales, or for the duties to be performed by the officers of such prisons, are in future to be submitted to one of the principal Secretaries of State, who, if he thinks fit, may alter such rules and regulations, or make additional rules and regulations thereto. When he has signed a declaration that the rules, &c., are proper to be enforced, they become binding upon the Sheriff and all other persons, without any other sanction or approval.

By the new act, also, Government is empowered to nominate and appoint five inspectors, whose duty it is to visit and inspect, either singly or together, every prison in any part of the Kingdom of Great Britain. These inspectors have full authority to inquire into all matters touching prisons and prison discipline, to examine the officers attached to the respective establishments, to inspect the books and papers relating thereto, &c. Each of the inspectors is required, on or before the first day of February in every year, to make a separate and distinct Report in writing, of the state of every prison visited by him, and to transmit the same to the Secretary of State; and a copy of every such Report is to be laid before both Houses of Parliament within fourteen days after the 1st of February, if they shall be then assembled. The five inspectors are already appointed, and are about to enter upon the performance of their duties. It is only necessary for us to add, that Mr. Crawford is one of the persons appointed to this high and important trust, in order to produce a conviction that this measure will not prove nugatory, or be found a mere nominal reformation. Our limits will not allow us to enter into the remaining enactments of the bill; the points already stated are the most important, and are calculated to produce the most striking changes in our prison discipline.

That a reformation was needed is now universally admitted. In going over the evidence presented with the reports, it becomes matter of surprise that the evil should never have been efficiently grappled with before, that it should have been an acknowledged fact that our prisons were nurseries of vice, and yet that no extended means should be applied to arrest the mischief. In the minutes of evidence, annexed to the First Report, the examinations of between forty and fifty persons are given. A very considerable proportion of these are governors or chaplains of gaols in the country, and they all, without one dissentient voice, concur in opinion as to the contaminating influence of prisons as at present conducted. Mr. Chesterton, governor of Coldbath Fields House of Correction for nearly six years, says he is "quite sure of it." Lieutenant Sibly, governor of the Brixton House of Correction, asserts that "most assuredly a prison is destructive to every casual offender." Mr. Orridge, thirty-seven years governor of the prison at Bury St. Edmund's, gives similar testimony. Mr. T. C. Neale, for ten years governor of the Springfield Prison, Essex, affirms that the prisoners leave his prison decidedly worse than when they were committed. He continues—"We have had in that prison 600 solitary prisoners, and in those cases where they were absolutely in solitude, I consider that they were no worse; but before trial, associating indiscriminately with men committed for all sorts of crimes, they are so liable to contamination, that I think anything you can do afterwards would not remedy it." The testimony of a prisoner committed to the Springfield Prison, and afterwards removed to the Penitentiary, Milbank, more than corroborates the above statement, and gives a dreadful picture of the baneful influence of that gaol. The following is but a small part of his evidence:—"You think the discipline in the prison at Springfield is not such as would make any man better?—Many a lad went in there on the most trivial charge, and went out a confirmed and complete villain. Those men, for example, who were there for three months for comparatively minor offences, associated with men who were sentenced by law to be transported?—Yes. And they were allowed to communicate with one another as much as they thought fit?—Yes, exactly, there was no restraint; they were put in the yard together, and brought down; they kept on so many on the wheel, and so many were to keep off; there was no one to look over us. We had free communication, and we got off the wheel when we liked. Sometimes the turnkey would call out that there was not the number, and he would threaten to stop our bread and cheese at night: that was all the constraint we had. . . . . Some (of the prisoners) if put under proper restraint would have reformed; I know that, not only from my own observation, but from what I heard from others, who stated that they had been convicted on various trivial charges, and when they came to be transported they reflected upon it; I have heard them state that if they had been properly checked, and had received punishment, they would never have committed the crime they were going to leave the country for." Mr. Walker, keeper of the Abingdon House of Correction, says that he could mention several instances which have come to his knowledge of young offenders having gone out of prison much worse than when first committed, and this can only be attributed to their having of necessity become companions of the worst description of thieves. "One young lad was lately executed for a highway robbery where much violence had been used; he had been out of prison little more than a month, where he had been before three or four times. The evening before he suffered he told me he attributed his wretched end to the ill advice of fellow prisoners."

The Rev. W. Russel, chaplain of the Penitentiary, Milbank (who has been appointed one of the five inspectors under the act just passed), in his evidence before the Committee gives the substance of a conversation he had with a prisoner who had been sent from Stafford Gaol, and of whom he made enquiries as to the state of the prisoners before trial in that gaol. "His answer was, that from thirty to fifty were associated together before trial, of all ages, all kinds and degrees of crimes; and that he had seen men who had come into that prison perfectly unacquainted with all the art and science of crime quit that gaol as well informed as the most experienced London thief. . . . . After trial they were from ten to twenty together in the day-rooms, where they have an opportunity of conversing unreservedly; and the same system of instruction in crime, the same conversation as to their former exploits, and as to the best modes of perpetrating crime and escaping detection, went on daily. His observation was, they are herded together like a flock of sheep."

It would be useless to quote the evidence of a similar character which might be adduced to show the pernicious effects of a committal to most of our prisons; but we cannot entirely dismiss the subject without a few words concerning the prison of Newgate. The account of the depravity existing within the walls of this great metropolitan prison, as shown in the evidence, is in the highest degree revolting. We can here give but one or two very short extracts. The evidence of a boy fifteen years of age was read to the governor, who did not impugn his statement in any material point. He was placed with the tried and untried, five or six of whom had been convicted before, and one of them no less than four times; there were persons for different offences, some for house-breaking, some for highway robbery, &c. "He slept in a room with about twenty prisoners; three slept on two mats placed on the ground; there were no bedsteads." "This youth describes the conduct and language made use of by the greater number of prisoners he was obliged to associate with as most depraved and shocking; some boasting of their former robberies, some cursing and swearing, some telling obscene stories, and some singing vile songs. There was a wardsman who had been a tried prisoner upwards of two years; he was appointed to keep order and regularity in the yard and in the room, but he was full as bad as any of the rest."—p. 307. This prison is under the jurisdiction of the Lord Mayor and Aldermen. From the evidence of Mr. Hoare, chairman of the committee of the Society for Improving Prison Discipline, it appears that it is too generally the case throughout the kingdom for prisons under corporate management to be badly conducted. He was asked—"Do you not believe that the gaols under the corporate bodies of this country are, from various causes, in a much worse state of discipline than the county gaols and houses of correction?—Some of the larger gaols are pretty well regulated; the smaller gaols are extremely bad, and I should say without hesitation great nurseries of crime. Where there is a very small number of prisoners confined in one place, prison discipline cannot be enforced; they have not the requisites. Many gaols are without any religious instruction, many without any place of separate confinement, almost all without employment; a gaoler who is occupied about other things perhaps a great part of the day, the establishment not sufficiently large to employ proper officers. In short, they are so exceedingly bad that

the sooner they are abolished the better; they cannot be carried on as at present without great evil."

The following excellent remarks on the state of our prisons are by Lieutenant Sibly:—

"That our prisons were formerly disgracefully neglected is probably quite true; many were in the hands of men who were perhaps vicious themselves, and who therefore could not be expected to attend to the moral improvement of their unfortunate charge, or to set a good example by their own conduct; or the prisons were by far too confined for the number of unhappy wretches who were constantly thrust into them; and it may be reasonably feared that not only neglect but petty cruelty and violence were not unfrequently practised towards prisoners who were unwilling to pay for comforts, or too humble to command attention and redress; while the richer villain could indulge in all sorts of riotous debauchery uncontrolled. But I believe most thinking men who are acquainted with the subject will agree that public opinion, and after it the law, has gone quite as much on the opposite side—that a timorous feeling, miscalled humanity, has usurped the seat of sound judgment and wholesome rigour, and that the ease, comfort, and care of a prison is rather an inducement to the commission of crime than a warning to deter.

"From the degraded state of wretchedness, idleness, and vice which it is feared were but too common to our gaols, the change to hard labour was a great and decided improvement; it immediately produced some degree of order and regularity, and by employing some part of the prisoners' time it prevented, or at least diverted, the current of evil; but at the same time this regularity, this order, and cleanliness have produced ameliorations and comforts which too strongly tend to destroy the ends of discipline, and increase the mischief it was intended to prevent.

"The great and overwhelming evil of prisons, is well known to be the contamination of offenders, young and old: even the most expert and wicked of their class cannot enter a prison without being still further initiated in the mysteries of crime, while the young, the timid, and the novice immediately become hardened and reckless from the example of their infamous associates. It is most strange that the magnitude of this evil has been acknowledged so long and so universally that it has almost become a by-word uttered without producing emotion, or else a feeling of despair, as if the mischief was felt to be irremediable, and that thousands who complain of any thing like severity in our prisons feel little or no compunction in submitting a young offender to their influence. The legislature also has so feebly endeavoured to meet this enormous evil by 'classification,' that the attempt can only excite a smile in any one who will take the trouble to think on the subject. Supposing any class to be ever so well formed, supposing it possible for the individuals composing it to have committed only one species of crime, will not their proficiency be as various as the individuals themselves? and will not the placing a young offender in it be exactly like putting a young apprentice in a manufactory among other apprentices and workmen, some of whom will be first-rate hands? and will it not be placing him precisely in that branch which the young tradesman has chosen for himself, which he is therefore likely to learn with avidity, and in which he is likely to be most expert?"

Silence, and, as far as possible, separation, are recommended by all the witnesses examined as the only means of preventing contamination and producing reformation. The extent and degree of separation are rather matter of discussion, and all the witnesses are not exactly agreed as to those points; but that silence should be strictly enforced is now universally admitted. The Rev. W. Russel, chaplain to the Penitentiary, gives his unqualified testimony in favour of this system in the following evidence:—

"You are an advocate for carrying the system of silence to the greatest extent to which it can be carried?—Undoubtedly so. As the means of preventing the more experienced thieves from contaminating those who are comparatively innocent?—Not only to prevent the more experienced thieves from contaminating others, but for giving the prisoners more opportunities of reflection, depriving them of those means they now have of solacing themselves with companions of similar tastes and habits, and driving away serious thoughts, and also with a view of deterring others from entering a situation where they will be subject to so serious a privation; in every way I consider it of importance."

Mr. Chesterton, the governor of Coldbath-fields prison, says, "I cannot sufficiently express my opinion of the excellent character of the system; I think it is admirable. I do not know anything which has been suggested for many years which is likely to be attended with so much public benefit, since under it further contamination becomes impossible."

Mr. Mance, keeper of the Petworth House of Correction, and inventor of the Ergometer, is strongly in favour of silence. He observes, "I am fully persuaded that no discipline short of universal silence (including a prevention of intercourse with friends from without the prison) and separate confinement will check crime or reform the criminal."

Silence being considered essential to the discipline of a prison, the manner in which it can be best enforced remains to be ascertained. If it be considered that all communication between prisoners should be prevented, it appears impossible to effect this object unless by entire separation. Those prisoners especially who were acquainted with each other before their arrival in prison will be anxious for verbal communication; "they will have the same or indeed better means to elude the officer than he has to *detect them*; the employment will be amusement to *them*."

The Rev. W. Russel recommends a separate cell for each prisoner as the only means of preserving silence. He thinks that if prisoners are brought together in the day-time they will communicate, that there is no other effectual security against this communication than to lock up the prisoners in separate cells the moment they come from work, and that their work should be of such a description that they should be kept as separate from each other as if in their distinct cells. This gentleman's distinction between *separate* and *solitary* is worthy of notice.

"You think that silence cannot be effectually enforced at all except in solitary cells?—Except in separate cells. Solitary I conceive something infinitely greater than that now spoken of: solitude is a very different thing from separation. Do you refer to cells in which prisoners can speak to one another?—No; in which they cannot speak to one another; but then they are drawn together in bodies to work, that breaks the solitude; they communicate with the officers, that breaks the solitude; they are conscious that there is a man in the next cell to them, and that breaks the solitude. The full effects of solitude can never be produced upon the mind and the constitution of a man who feels that he is surrounded by his fellow-creatures. He is permitted opportunities of communicating with the governor, chaplain, and surgeon, and of speaking to the officers immediately in charge of him, and from time to time seeing his fellow-prisoners and working together with them."—p. 35.

It may be doubted, however, whether it can ever be consistent with efficacious management for prisoners to work *together*, even though it were possible to preserve, under such circumstances, the most rigid silence. They have a constant temptation to transgress; they will naturally seek means for gratifying this wish, and their minds will be in a state of excitement and irritation very unfavourable to reformation. Would it not be much better to withdraw the inducement? In many prisons silence is attempted to be enforced by appointing monitors from among the prisoners, and thus another evil is superadded without the required result being attained. These monitors are selected because they are intelligent and clever, and consequently are, in many instances, the greatest criminals; placed in these responsible situations they are excused from other labour, have additional allowances of food, &c., and thus their own imprisonment is rendered nugatory; while, instead of assisting the turnkeys, they will, in most cases, combine to deceive them on all occasions. It may be doubted whether, under the best regulations acted upon under the best officers, strict silence could be perfectly preserved when coupled with hard labour; but even if the insuperable difficulties for enforcing this system could be overcome, still the congregating together is in itself a great obstacle to reformation. It is well observed by Lieut. Sibly, that "if prisoners can communicate by signs or looks, they might nearly as well be permitted to do so without restraint, inasmuch as the watching for times and opportunities drives away reflection, furnishes employment and amusement, and thereby alleviates almost all the irksomeness of confinement and discipline."

It has been attempted to combine hard labour with separation, by having the tread-wheel divided into compart-

ments, so that each prisoner works upon it without seeing or having any communication with the others. This plan has been adopted in the gaols at Gloucester, Maidstone, Bedford, and elsewhere. But since *entire* separation is not practised in those prisons, the effects of hard labour combined with separation have not been ascertained by positive experiment. It may, however, well be questioned whether a system of hard labour be calculated to produce that state of mind most conducive to reformation. Many individuals well qualified to judge of the subject are decidedly of opinion that hard labour in itself is unfavourable to this desired result. Lieut. Sibly, who appears to have given the question his serious consideration, observes, "that hard labour punishment, and especially tread-wheel labour, contains in itself a counteracting principle to reformation on account of its bodily excitement, its mental irritation, its irregularity, and partial operation; or any other kind of labour, since all labour *must* afford much scope for deception, *must* give way to medical excuses, and *must* require or admit of some communication. * * * That hard labour punishment with a restricted diet, as at present, makes bodily punishment the *primary*, and mental punishment the *secondary* consideration, whereas it should be the reverse. * * * That the operation of the present law is lenity and mercy to the hardened and abandoned culprit, while it presses with tenfold severity on the casual offender, and indeed tends irresistibly to destroy him. That solitary confinement or mental punishment is the most simple and only natural and proper mode of punishing a rational being.

In a long and able paper on the nature and merits of solitary confinement, and on the bad tendency of prison discipline as at present conducted, he concludes with the following summary. "Thus it will be seen that the plan I recommend as the only one which will render punishment efficient and certain is a *modified* system of solitary confinement, allowing restricted communication with the officers of the prison, permitting as much air and exercise as may be necessary for the preservation of health, and no more; providing suitable mental instruction and occasional handicraft employment; combining increased severity of punishment with its shortened duration; inducing habits of soberness and reflection; decreasing the expense of prisons; and above all, wholly preventing that most fatal and enormous evil, *gaol contamination*."

The evidence of several persons examined is decidedly against solitary confinement, and many instances have been brought to show its pernicious influence on the health, bodily and mental, of individuals subjected to it. But the *modified* solitary confinement here recommended is totally different from that inhuman incarceration which was formerly meant by this punishment. It is the offender's total separation from his fellow-prisoners, but not absolute and unmitigated solitude; confinement in an airy, light, and well-ventilated cell, in the arrangement of which due regard is paid to cleanliness; air and exercise allowed sufficient for health; and intercourse with his fellow-men for the purpose of spiritual and moral instruction, when the mind and heart become softened by solitude and are in a favourable condition for receiving good impressions, while the severity of the sentence may be alleviated or increased according to the state of mind of the prisoner, by a more free or a more restricted communication with the officers of the gaol, at the discretion of the superintendent. That every punishment is more or less severe according to the disposition of the individual on whom it is inflicted, the following case, as related by Sir James Williams, affords an example.

"There were two soldiers whom I visited myself in our solitary cells at Coldbath-fields. I put the question to one of them, 'How long have you been here?' 'Six weeks,' I think he said, but I know that he said he had been half his time; and I said, 'Which do you think is the best, receiving corporal chastisement, or being confined in this cell?' He said, 'I would rather, though I have served half my time, receive the punishment to-morrow morning at the halberds than remain here the other half of the time.' In the very next cell I went to was a rough Irishman, and when I put the same question to him, he said, 'Oh, your honour, I have no arms to keep clean, nor no duty to perform, and nothing to do but to be here; it is no punishment at all.'"

The evidence of a few of the keepers of the different gaols tends to show that modified solitary confinement has no bad effects on the health and mind. The two following extracts are given in support of this opinion.

"Solitary confinement on such as have transgressed by not observing the rules of the prison has proved of great service; and the gaoler is of opinion that one month of solitary confinement would be a more severe punishment than twelvemonths' hard labour without it. Solitary confinement has never been attended with any ill consequence to the health of any of the prisoners who have been subjected to it."

The above evidence is from the town-clerk of Sandwich; that which follows is from the governor of Winchester County Bridewell.

"Some years back I was in the habit of having very many military men committed to me for solitary confinement for three, four, and six months. In no instance was mind or body impaired by it, though I have scores of times heard them confidently declare, that rather than undergo three weeks' solitary confinement, they would take 500 lashes."

The next question to be considered is, how this system of silence and separation can be put in force throughout the country. It is the opinion of Mr. Crawford, and of many others, that in the end it would be most economical for the country to increase the prisons to the extent of furnishing separate cells for the accommodation of each prisoner. In a shorter period a much severer punishment could be inflicted, and consequently there would be a great saving in many ways: in the diminished time during which the prisoner would have to be maintained in prison, in the smaller portion of his labour which would be lost to his family and to society, and, what is of far more importance, in restoring to the community a character improved, if not entirely reformed, instead of being deteriorated by the present contamination of a prison. Mr. George Bullar, secretary of the Prison Discipline Society, has found, from an analysis of the gaol returns, that of 136 prisons which are included in the act 4 Geo. IV. c. 64, 36 only had a sufficient number of cells to admit of each offender being placed apart at night. The total number of persons confined in these prisons at one time in the last year was 18,197; but the number of sleeping-rooms and cells was only 11,704, leaving a deficiency of about 6500 cells. There are altogether in the prisons included in the act about 1300 day-rooms, most of which, with the large sleeping-rooms, may be altered and divided into single cells; but even with this subdivision there would still be about 3500 cells too few to provide for the separation of the greatest number of prisoners in confinement at one time: to this extent, therefore, it will be necessary to construct additional buildings. It is estimated that the requisite alterations and additions, the particulars of which with respect to each gaol are furnished by Mr. Bullar, will cost 203,061*l*. Two causes, however, should be taken into consideration, which may materially diminish the number of prisoners confined, and therefore render unnecessary so large an addition of cells as here contemplated. It is the opinion of many persons experienced on the subject, that sentences to imprisonment with solitary confinement should be for a very much shorter term than imprisonment under the present discipline. It is considered that a quarter of the time, or, in some circumstances, even less, will be sufficient; if so, the occupants of our prisons will change more frequently; and they may possibly, therefore, without enlargement, afford accommodation in solitary confinement for the same annual number of prisoners as are at present committed. A large portion of our present gaol accommodation is taken up with prisoners who are confined for debt. Out of 12,765 prisoners, the total number of those under confinement at Michaelmas, 1834, there were 1770 debtors. But if imprisonment for debt should be abolished, a large proportion of the space of our prisons would become vacant, and might be appropriated to the accommodation of criminals.

From a careful examination of the plans of the several prisons included in the gaol act, Mr. Bullar furnishes the following classification of them:—

Prisons on the radiating plan, having the means of central inspection into the buildings and airing-courts	15
On the same plan, with wing buildings attached to the centre	10
Carried forward . .	25

Brought forward . .	25
Ditto, but in which the inspection is incomplete . .	18
On the circular or polygonal plan, with buildings round the courts	13
On the quadrangular plan, or with parallel buildings	41
Irregular plans, with modern additions . .	11
Ditto (chiefly old prisons)	28
Total . .	136

The prisons on the radiating plan are all of modern erection, originating with Mr. Bentham. Those on the quadrangular plan were mostly built in Howard's time (about 1780), and although on very improved principles in comparison with the old gaols, they are still very defective. Previous to that period the prisons were erected principally with the object of ensuring the safe custody of the prisoners, and the internal arrangement was, except as it related to this point, but little regarded.

Very recently, since the question of prison-discipline has been made a subject of inquiry and interest, great improvements have taken place in several of our gaols, and many of the visiting justices and governors of the respective prisons seem to be enlightened men, and anxious to carry forward the projected improvements. In April, 1834, an entire new system of discipline was introduced into the Wakefield house of correction, by the strict enforcement of silence at all times; at work, at mess, during the hours of exercise, and at night. The prisoners are, except when the house is excessively crowded, confined each in a separate cell at night. The various rules and regulations for preserving order and cleanliness, for preventing contamination, and producing reformation, are so good, and appear likely to be so beneficial, that the governor of Coldbath-fields prison has likewise adopted them, and with similar advantage. There has lately been a great and striking improvement in that place of confinement, testified by the governor, chaplain, visiting justices, and all who have had an opportunity of judging. In Bedford gaol there was great laxity of discipline, and many abuses were going forward. About three years ago a visiting justice undertook to recommend and enforce some great change: he at first met with opposition, but at length succeeded in introducing alterations and improvements, and for the last two years silence has been enforced as strictly as possible, with very satisfactory results. During the last year the silent system has been maintained in several prisons in various counties with the same good effect, and the evidence of many of the prisoners has been brought forward to show the good working of this system. In Wakefield prison, sixty-four unconvicted prisoners were questioned by a visiting magistrate; out of this number only ten said they disliked the enforcement of silence: seven of these had been re-committed (one five times for felony), and were therefore supposed to be in some measure hardened offenders. The irksomeness of this discipline is felt to be greater in proportion to the badness of the individual's character, and therefore the plan carries with it this great recommendation, that the severity of the punishment is greatest towards those who deserve it most.

It was our intention to give an account of the Penitentiary at Milbank, which is used only for convicted prisoners, and is conducted on an improved principle, not found however quite with so much success as was at first expected. The manufacturing system carried on prevents the practice of that strict silence and separation most favourable to reformation; while the health of the convicts is injured by their sedentary habits, and by the effects of the unfavourable situation of the prison, in the middle of a marsh and in the immediate neighbourhood of manufactories. We regret that our limits will not allow us to enter further into detail concerning this institution. The following statement is extracted from the evidence of Mr. Griffith, governor of Salop County Gaol:—"The principles acted on here are to keep the prisoners as much and as usefully employed as possible; to allow them rest at stated intervals, when the mind is still kept active by reading lessons, &c. I entirely disapprove of solitary confinement without employment, unless it be for short periods. No doubt the punishment must be intolerable, but it tends rather to enervate and crush the mind, than to give it that energetic action which may effectually reform the character. * * * The disease is in the mind, and by no means incurable if properly treated. A rigid discipline calculated to keep the mind in lively action, and prevent it as much as possible from sinking into its old machinations, is, I conceive, the only means of restoring it to its proper tone. * * * I do not make the above observations as being merely speculative, as I have in numerous instances seen them realized. My present groom was a convicted felon, and sentenced to two years imprisonment. His father also was convicted of a different crime and received a like sentence. Being an old man, I had less hope of success than with his son, as the juvenile mind is more easily dealt with. I however observed each of them daily to conform to the enforced regulations with less pain to themselves, and before the expiration of their durance they performed their duty with alacrity and apparent willingness. Each appeared to have acquired systematically some principle for the regulation of his future conduct. On their release, I employed the old man in my garden until he was engaged by the Shropshire Coal Company, where he still is. The young man, as I before observed, is my groom. They have been out of prison upwards of three years, and now can be well recommended should they want employment."

The want of uniformity in the discipline of the different prisons throughout the country is certainly in itself an evil. The regulations of many of the gaols are at variance both with the Gaol Act and with each other, and the discipline will naturally be found still less uniform and consistent than the regulations. It is a common practice at present among the prisoners to discuss the comparative merits of different prisons, and mark their preference by saying, that a month in such a gaol is worse than a year in another. Mrs. Fry states in her evidence, that "It is very lamentable to see the great variety of treatment, and what I call unfairness in the prisons; in one prison they have every comfort of life, and in another they are in a state of misery, distress, and want."

This produces an inequality of punishment, and consequently an injustice, which it is most desirable should be remedied. The only measures which could remove the evil are those which have just been adopted—the appointment of inspectors, and the vesting of the general control and government of the prisons in the Secretary of State instead of the local authorities.

The prisons of Scotland are found, from the returns, to require reformation still more than those of England and Wales, and it is to be hoped they will be the subject of another Bill in the ensuing Session.

HOUSE OF COMMONS' OFFICES AND FEES.

The third Report from the Select Committee on Printed Papers is occupied with the results of the inquiry into the House of Commons' offices and fees, it being a branch of that Committee's duties to continue the inquiry made by the Committee "on House of Commons' offices," of session 1833. The following is an abstract of the Report.

The Committee of 1833 recommended that certain offices should have fixed salaries assigned to them; and in pursuance of that recommendation, an act was passed in 1834, by which such salaries were settled prospectively. [See *Companion*, Nos. 12 and 21.] The present speaker, his secretary, and the serjeant-at-arms, having been appointed since the passing of that act, hold their offices in conformity with its provisions.

Journal Office.—The Committee of 1833 recommended a scale of salaries for the clerks of the Journal Office, namely, to the chief clerk 1000*l.*, and to seven assisting clerks 2500*l.*, in different proportions. Mr. Bull, the late clerk of the Journals, having died during the session, the present Committee think that his successor should receive a fixed sum of 1000*l.*, but that with respect to the assisting clerks the present mode of paying them is preferable to assigning them definite sums. Their emoluments arise from various items, and, as there is much work at night, it is thought that some inducement to industry, and to the speedy dispatch of business, ought to exist.

Public Bill and Fee Office.—The gross amount of fees paid in the offices of the House of Commons in session 1834 was as follows:—

House fees	£5,753 11 6
Committee fees	9,412 9 5
Carried forward . .	£15,166 0 11

Brought forward . .	£15,166	0	11
Ingrossing fees . . .	5,814	10	0
Private Bill Office fees . .	1,552	5	0
Housekeeper's, &c., fees . .	1,458	15	0
Election fees . . .	476	15	4
Recognizance fees . . .	30	0	0
For inspections and copies of papers .	243	13	4
Total . .	£24,741	19	7

The Committee concur in the opinion of the previous Committee, that it is very desirable that the collection of all fees receivable on the passing of private bills, and on other business of the House, should be made by one and the same person. They therefore think that the receiver of the House and ingrossing fees should collect all other fees now collected by the deputy housekeeper, speaker's secretary, and committee clerks, &c., for which he should be allowed, over and above his salary, a per centage of 1*l.* 10*s.* on the amount collected; and that he should also be paymaster of all salaries and charges on the House establishment, giving sufficient security for the performance of his duties, and making out a yearly account of receipts and expenditure, to be laid before the House.

The clerk and receiver of fees is also agent for the Treasury in the management of revenue and other public bills. This arrangement the Committee think economical and satisfactory, but instead of his present allowances, amounting, on an average of the years 1833-34, to 1381*l.*, they suggest that he should receive a fixed salary of 1000*l.* a year (exclusive of the per centage on the collection of fees), and that no other payments should be made to him. It is also suggested that his four clerks, instead of being paid by fees, should receive fixed salaries of 600*l.*, 400*l.*, 200*l.*, and 150*l.* respectively.

Committee Clerks' Office.—The four principal clerkships were abolished by the act of 1834, as being sinecures: but the Committee think that the office should also be placed on a more efficient footing. So much of the business of the House of Commons is now performed in Committees, as to render it desirable that the clerks should have an accurate knowledge of the routine of business, and be active and attentive to their duties. At present the committee clerks are appointed to public and private committees in rotation, taking the chance of the continuance of the committee for one day or during the session. But as all the fees on private business are, at the end of the session, brought into one sum, of which each clerk receives an equal share, they have been in the practice of handing over to their assistants as many of the private, and retaining themselves as many of the public committees as possible. It is suggested that the office of Superintendent of Committee Clerks should be forthwith abolished: that all the clerks should be responsible to the Chief Clerk of the House of Commons, and to him alone, as his position and authority must enable him better than any other person to enforce a regular and punctual performance of duties; and that, as the pressure of business is very unequal in different periods of the session, he should have full authority to provide for its dispatch by bringing temporary assistance from other departments. It is also suggested that the ancient allowance of 50*l.* from the Exchequer to the four clerks should be discontinued; that the office should be (prospectively) arranged into three desks, with three clerks to each, the first three having 800*l.* yearly each, the three senior assistants 300*l.* each, and the three junior assistants 100*l.* each, making 3600*l.* in all: but as an encouragement to industry on the part of the assistants, they should be allowed to charge for copies of minutes of evidence made out for private parties, at a rate suggested by Mr. Ley, in his evidence—viz. 4*d.* a sheet of 72 words, the same quantity for which, by the present table of fees, one shilling is charged.

Clerk of Committee of Privileges, &c.—An annual salary of 100*l.* has been paid by the Treasury to the clerk of privileges and of elections, which the gentleman holding the offices considers as a retaining fee on account of both. The standing committee of privileges being now dropped, the office of clerk may be abolished, as the duties of attending any such committee which may hereafter be appointed may be transferred to the committee clerks. The emoluments of the clerk of elections are large, varying however according to the number of election committees that are appointed, and the time over which their sittings extend. An account is rendered in the Appendix to the Report, which gives his net receipts for the years 1833-4, and also for session 1835, up to 31st July. The net receipts for last session, without including the Carlow election committee, which was sitting at the time of rendering the account, amount to 1503*l.* The Committee of 1833 recommended that the duties of clerk of elections should be transferred altogether to the committee clerks: but the present Committee do not concur in that recommendation, being convinced that the office should be preserved as a distinct one, having a room independent of the committee clerks' office, for the transaction of business. In addition to his duties as clerk of elections, it is suggested that the individual holding the appointment should act as clerk of recognizances for election petitions (at present a separate office), and also have the duty of settling allowances to election witnesses, and act as clerk to the taxers of private bills. It is proposed that a fixed salary be assigned to the office, of 600*l.* per annum.

Private Bill Office.—The fees received in this office are recommended to be carried to the fee-fund, and the four clerks to be paid salaries of 800*l.*, 450*l.*, 350*l.*, and 150*l.* each, and no other emoluments to be allowed.

Ingrossing Office.—The office of clerk of ingrossments having been abolished on the recommendation of the Committee of 1833, it is suggested, on the same principle adopted in regard to the Private Bill Office, that the three working clerks receive 700*l.*, 400*l.*, and 150*l.* each annually, the fees being carried to the fee-fund. The Committee think it worthy of consideration whether in ingrossing the black letter might not be changed to the common letter.

Vote Office.—No change has been made in this office in consequence of the recommendations of the former Committee. These recommendations the present Committee think should be forthwith adopted; that the charge of 2*l.* 12*s.* 6*d.* to members for delivering parliamentary papers in town, or forwarding them to the country should be abolished, on the broad principle that members ought not to be put to any expense in the performance of their duties; and that the expense of delivery thus thrown upon the public may be met by a reduction in the expense of the office. The present charge is 2762*l.*, which, with fees from members for delivery of papers amounting to 1957*l.*, makes an annual charge of 4719*l.* The future charge is recommended to be 1900*l.*, by which a saving to the public will be effected of 862*l.*, and, along with the saving to members of fees, a total saving of 2819*l.* The present deliverer of votes having been appointed since the recommendations of the Committee of 1833, the Committee think that the alterations might take place next session.

Serjeant-at-Arms, Housekeeper, &c.—The serjeant-at-arms is the official housekeeper, but his other duties preclude the possibility of his attending to the housekeeper's duty, which is performed by deputy. The Committee recommend strongly to the attention of the House an application from Sir William Gosset for an official residence within the precincts of the new House, in order to enable him to look better after the entire establishment. Various recommendations are made with a view of reducing the expense of the housekeeper's department, and of exercising control over the different items of it.

Doorkeepers and Messengers.—The emoluments of the three doorkeepers are considered to be quite disproportionate to the nature of their duties and office. It is proposed to abolish the situation of lower doorkeeper, and that the other two should receive 500*l.* and 400*l.* each of salary, in lieu of all allowances from members and fees of any kind from the public. It is recommended that there be a head messenger at a fixed salary of 400*l.*; four others at 300*l.* each; two at 200*l.* each; four supernumeraries at 105*l.* each, to be afterwards increased to 120*l.*; and a library messenger, whose salary may be settled by the Library Committee. Two persons are employed in the letter office; but the Committee think this department susceptible of improvement, and recommend it to the attention of the lords of the treasury and the postmaster-general.

Payment of Witnesses.—Little uniformity has hitherto prevailed in the amount of allowances made to witnesses in attendance on Select Committees. Usually from 5*s.* to 10*s.* a day has been paid to tradesmen; gentlemen a guinea; professional men two guineas, or, if from a dis-

tance, three guineas. The allowances for travelling expenses have also been various, according to rank and circumstances. It is now proposed to place all such expenses under proper control, and methods are suggested by which this may be done with a due attention to regularity and economy.

MEMBERS' WAITING ROOM.—This room is not at present considered as part of the establishment of the House of Commons, and is supported by fees paid by members. It is now proposed to be included in the establishment, the fees to be abolished, and the charge of the persons in attendance upon it to be placed upon the accounts of the Serjeant-at-arms.

A number of other subjects connected with the business and expenses of the offices and general establishment of the House are considered, but they are too minute to be specified in such a summary as the present. The object of all the suggestions thrown out is to ensure efficiency, and reduce expense. The Report concludes with the following Resolutions, which were agreed to by the Committee:—

1. That this Committee, adopting the principle expressed by the Committee on House of Commons Offices in 1833, are of opinion that no clerk or officer of this House appointed since session 1833, shall be henceforth permitted to transact private business, or indirectly to participate in any benefit arising therefrom.

2. That the Committee clerks and their assistants, as well as the clerks in the Private Bill Office (who are at present restricted), be henceforth prohibited from acting as agents for private bills, or from being concerned, either directly or indirectly, for petitioners, or sitting members before Election Committees.

3. That as regards such clerks or officers as may have been on the establishment previous to session 1833, such practice shall cease and determine on the 1st of January, 1840, unless within twelve months from the date of this Report any such clerk or officer so circumstanced shall declare his intention to surrender his public office; in which case he shall be entitled to such compensation as may be determined upon by the Lords Commissioners of his Majesty's Treasury.

4. That all payments made by members for the delivery of sessional papers from the Vote Office, all gratuities paid to doorkeepers, messengers, and superintendent of the members' waiting room, shall cease after the present session.

5. That in reference to all those officers whose emoluments shall be affected by the preceding Resolutions, it is the opinion of this Committee that the Treasury should make such allowance as they shall, under all the circumstances, consider equitable, with the view of commencing the new scale and arrangement of the offices of the House in the next Session of Parliament.

FIRST REPORT OF THE COMMISSIONERS FOR INQUIRING INTO THE CONDITION OF THE WORKING CLASSES IN IRELAND.

THIS Report, with an Appendix and Supplement, makes a folio volume of 1120 pages, but of these the Report itself only occupies ten. The commission directs inquiry to be made "into the condition of the poorer classes in Ireland, and into the various institutions at present established by law for their relief; and also whether any and what further remedial measures appear to be requisite to ameliorate the condition of the Irish poor, or any portion of them." The evidence as yet collected relates solely to the first branch of the inquiry. The Report goes no farther than giving a list of the counties in which the evidence was taken, and of the heads under which it is arranged, and then briefly states the difficulties which were encountered in the inquiry; the course pursued so as to show how far the evidence is full and impartial, and therefore worthy of reliance; and the reasons why the commissioners have been unable as yet to report on the second branch of inquiry.

The difficulties of the inquiry are stated to have arisen from the great proportion of the population about and amongst whom the inquiry was to be made constantly fluctuating between mendicity and independent labour; from the extreme and painful circumspection which it was necessary to exercise; and from the numerous theories which assailed the commissioners on every side. "In whole districts," states the Report, "scarcely one of that class of substantial capitalist farmers so universal in England can be found. The small resident gentry are but few, and the substantial tradesman is not to be met with at intervals of two or three miles as in England; for there are but few towns of sufficient trade to create such a class. The clergy of the various persuasions, and the proprietors, when resident, are in many cases so much at variance with each other, or with the working population, on political questions, that great caution was requisite in regard to the manner and degree in which we could avail ourselves of their assistance. Similar difficulties existed with regard to the constabulary, from the frequent collision in which they are placed with the people; and parochial authorities can scarcely be said to exist."

The first act of the commissioners in collecting information was to circulate a set of statistical questions. Of these about 7600 were circulated, 3100 were returned filled up, and the state of about 1100 parishes was described by them. As however the information thus obtained could neither be sufficient nor extensive enough, it was necessary that personal inquiry and investigation should take place. The Board could not proceed from one part of the country to another to receive local evidence with any prospect of completing the inquiry within a reasonable period; it was therefore resolved to depute individuals for the purpose. "The difficulty, great under any circumstances, of selecting persons upon whom reliance could be placed as possessing intelligence in tracing the truth, diligence in pursuit of it, patience in examining a variety of persons of different views and habits, and impartiality in deciding between conflicting statements, was much increased by the peculiar state of society. In a community which had long been divided into politico-religious parties, each regarding the other with jealousy and animosity, it was extremely difficult to find persons who would be able, even if they were desirous, to divest themselves of every partial feeling, nurtured as they had been in an anti-social state. And even when persons should have been found who really were themselves thus impartial, there was still a danger that they would be suspected of partaking of the prejudices with which their relatives, friends, and connexions were known to be imbued." The mode adopted by the commissioners to avoid, on the one hand, the evils just stated, and, on the other, the danger of employing persons in the inquiry ignorant of the social construction of society in Ireland, of the habits and feelings of the people, and of the peculiar idioms of the language, was by joining in the inquiry in all cases a native of Great Britain with a resident native of Ireland.

Each assistant commissioner was directed to pursue the following course:—

"1st. To request the attendance of persons of each grade in society, of each of the various religious persuasions, and of each party in politics: to give to the testimony of each class an equal degree of attention, and to make the examinations in the presence of all—in fact in open court. Not to allow any person to join in conducting the examination, and to state at the opening of the proceedings that any statement made by an individual, and not impugned by any person present, would be considered to be acknowledged as at least probable by all.

"2ndly. To note down, at the time of examination, the replies given, or the remarks which occurred to him; to register, as nearly as might be possible in the words of each witness, the statements which might be made; to register the names of all the persons who attended the examination; and before proceeding to examine another district, to send the minutes of the previous examination to the office of the commissioners in Dublin, signed by both the assistant commissioners."

In assigning reasons why they have not yet been able to report upon the second branch of inquiry, viz. "Whether any and what further remedial measures appear to be requisite to ameliorate the condition of the Irish poor," the commissioners defend themselves against complaints made both within and out of Parliament as to the time and money expended in prosecuting the inquiry. They contrast the complicated nature of their duties, and the extensive field which the commission opened, with the nature and extent of other commissions, such as the inquiries into corporations, and into the poor-laws. The date of the present Report is 8th July, 1835. A second Report, accompanied by obser-

vations as to certain parts of the subject referred to the commissioners, is expected to be in readiness to be submitted to his Majesty towards the end of the present year; and in February, 1836, it is anticipated that the commission will be closed by a final Report.

ALTERATIONS IN THE FRENCH TARIFF.

The government of France is proceeding, slowly indeed, and not very efficiently, in the improvement of the laws and the modification of the duties by which its trade with foreign countries has been regulated.

Several *projets de loi* connected with this subject have at different times of late been laid for consideration before the French legislature, but have not been pressed upon its attention by the government, and not any one of the proposed alterations has consequently passed into a law. In the year 1826 some amendments were indeed made by the Chambers in their Customs' Laws, but numerous prohibitions and restrictions upon commerce were suffered to continue in force. The advocates of various interests who have felt themselves aggrieved by these restrictions, however, have not ceased to urge their claims for alteration upon the government and the Chambers. On the other hand, the party which has, or fancies it has, an interest in upholding the restrictions, has been sufficiently numerous and powerful to render any material change of system by means of the legislature difficult of accomplishment, and, under these circumstances, the government has availed itself of the provisions of a law passed in December, 1814, which gives to the executive the power of reducing or modifying certain duties provisionally, and without the preliminary sanction of the Chambers.

This course was adopted in July, 1834, when several prohibitions were abolished in favour of the importation of certain articles previously furnished to consumers in France by contraband dealers, and the removal of another kind of prohibition, that preventing the exportation of raw, thrown, and dyed silk, was confirmed.

By an ordonnance, dated 10th October, 1835, several additional alterations have been made in the regulations and duties affecting the importation of articles of foreign produce. We shall notice these alterations as far as they materially affect the commercial relations of this country.

By the ordonnance of July, 1834, plain India silk handkerchiefs (bandannoes) called by our neighbours *foulards*, were first allowed to be imported on payment of the duty of 16 francs per kilogramme, equal to 5*s*. 10*d*. per lb. This duty, having been found too high to take the trade out of the smuggler's hands, is by the present ordonnance reduced to 11 francs per kilogramme, or 4*s*. per lb. In the report of M. Duchâtel, by which the ordonnance is introduced, the wish is expressed of equally permitting the importation of dyed or printed India handkerchiefs, but the law of 1814 does not endow the government with power to do so. Indigo brought direct from India in French ships pays a duty of 50 centimes per kilogramme, about 2½*d*. per lb., while other importations of this dye were liable to four times that duty. This distinction is now abolished, and indigo the produce of any country out of Europe may be imported direct in French ships at the duty of 50 centimes. Olive-oil has hitherto been divided into two classes, that fit for culinary purposes paying 35 francs per 100 kilogramme, about 14*l*. per ton, while that of inferior quality used in manufacturing processes paid only 25 francs, about 10*l*. per ton. The higher duty is now abolished, and olive-oil of all qualities is to be charged at the rate last mentioned. The duty charged upon the admission of olive-oil to consumption in this country was reduced in 1834 from eight guineas to four guineas per ton. The high duty charged by France is intended as a protection to her native oil growers. The quantity of this produce imported into France from Italy, which is very great, is required to supply the soap manufactories, which are extensive. France exports largely of soap, upon the shipment of which to foreign countries a drawback is granted equal to the duty paid upon the oil of which it is made. It is much to be regretted that the high duty long charged in this country upon olive-oil has occasioned the employment of tallow by our soap manufacturers, and as foreigners have not had the same inducement for using that we have had for making an inferior article, we have, comparatively speaking, no export trade in soap; under different circumstances there is no reason why we should not compete successfully with France in that branch of commerce. The little soap which we do export is made of palm-oil, the duty upon which has lately been reduced to 1*s*. 3*d*. per cwt. In this respect the French government has now imitated our example by reducing the duty on palm-oil to one half its former rate, leaving it, however, at four times the sum paid in England.

The question of the importation of coals is one of importance both to France and to this country. Under any fair system of duties we might expect to export very largely of that article to France, and it has been a matter of complaint on our part, not so much that France should, in order to protect the interests of the proprietors of forests, impose heavy duties on the admission of coals, as that she should make an invidious distinction between the produce of one country and another, charging our coals, which must be sea-borne, with a duty equal to 8*s*. per ton, and admitting the produce of the Belgian mines across the frontier at only three-tenths of that rate. This distinction is now so far reduced by the ordonnance, that sea-borne coals may be admitted into all ports to the southward of Les Sables D'Olonne (a small town of La Vendée, a little to the north of La Rochelle), at the same rate of duty as coals admitted by land. The old duty of 1 franc per metrical quintal is still charged in all the ports of the Channel and of the Bay of Biscay, which lie to the northward of Les Sables D'Olonne. This relaxation, partial as it is, may somewhat facilitate our trading operations with Bordeaux, Charente, and the French ports in the Mediterranean. Our export of coals to the different ports of France amounted in 1834 to 59,690 tons.

The only remaining alteration in the French tariff which we think it necessary to notice, is that which relates to the duty on cast and wrought iron. Having on a former occasion (No. 15, March, 1834) gone at some length into the examination of this subject, we shall now content ourselves with simply stating the alteration provided in the ordonnance.

Pig-iron, the duty on which has been 9 francs per metrical quintal (about 3*l*. 12*s*. per ton), will now pay 8 francs (about 3*l*. 4*s*. per ton), and bar-iron, upon which 25 francs per quintal (10*l*. per ton) has been levied, will now be admitted upon payment of 20 francs (8*l*. per ton.)

CHANGES OF ADMINISTRATION, AND HISTORY OF PARTIES.

[Continued from Number 33.]

On the 8th of November (1768) Parliament reassembled, with the Duke of Grafton still at the head of the ministry, and indeed, now that Charles Townshend was dead, with, it may be said, the uncontrolled management of affairs in his own hands. Lord North is understood to have confined himself almost entirely to his own department as Chancellor of the Exchequer; and Lord Camden, the only other member of the Cabinet whose talents and standing were such as to give him much influence, having lost Lord Chatham, with whom he had hitherto acted, appears merely to have retained his place in the feeling that a few months more would either restore his party and principles to their former ascendancy, or afford him a fair opportunity of following the example of his friend, and giving in his resignation. It is obvious that he had not at the present moment the same excuse for retiring which existed in the case of Lord Chatham, who, besides the state of his health, which wholly incapacitated him for business of any kind, had to allege the consideration that after having accepted office as premier he was bound in justice to himself to withdraw after the actual direction of the government had fallen wholly into the hands of another. Lord Camden, on the contrary, having served under Lord Chatham, could not well object to serve under the Duke of Grafton, who, notwithstanding their temporary separation during the short time that the Marquis of Rockingham was in power, had always declared himself to be one of Lord Chatham's most attached disciples and followers, and to no one of whose acts, in the formation of the present ministry, Lord Chatham himself had as yet thought proper to offer any public opposition.

The Address proposed by ministers was agreed to by the

Lords without opposition; but in the Commons the question is stated to have given rise to some warm debates, no account of which, however, has been preserved. The conduct of the government in regard both to America and to the affair of Corsica and other matters of continental policy, appears to have been severely condemned by both the Rockingham and the Grenville parties. It is material to observe that about this time a reconciliation was effected, through the medium of Mr. John Calcraft, member for Rochester, between Lord Temple and Lord Chatham. The health also of the latter noble lord began rapidly to improve after his retirement from office, although it does not appear that he took any part in the discussions of parliament during the present session.

The two great subjects of contest during this session were, the case of Mr. Wilkes, and the affairs of America. We shall notice some of the principal divisions, in so far as they are recorded, which took place upon each in either House, with the view of illustrating the state of parties at this interesting crisis.

The case of Mr. Wilkes was brought before the House of Commons on the 14th of November by a petition from himself, in which he prayed for the interference of the House to enable him to take his seat as a member. After a great deal of discussion it was agreed that the petitioner should have liberty to attend the House to support the allegations of his petition, and should also be allowed the assistance of counsel, on the 2d of December.

Meanwhile, on the 17th of November, a motion was made with the view of obtaining an inquiry into what was popularly called the late massacre in St. George's Fields; but it was negatived by a very great majority. According to the Parliamentary History, "many gentlemen thought that, though in some instances some measures of government could not easily be defended, yet, in the present temper of the times, too minute an inquiry into the acts of government upon that occasion, or any public censure passed upon them, might serve too much to lower it in the public opinion, and to increase that licentiousness which was already too prevalent among the populace: on this principle many in opposition either remained neuter, or fell in with administration."

The hearing of Mr. Wilkes's petition, having been twice postponed, had not yet come on, when on the 23rd of January, 1769, it was moved "That John Wilkes, Esq., although he is convicted of publishing a seditious libel, is entitled to privilege of parliament." This motion was made by Mr. Joseph Martin, one of the members for Gatton, who, as he stated in his speech, had always voted against Wilkes at his elections.* The manner in which it was treated affords a curious example of a species of unworthy advantage, which we have already had occasion to notice as having, in those times, been not unfrequently taken over their opponents by the majority in the House, although now altogether discarded from parliamentary warfare. In the first place an amendment was moved by Lord North, and carried after a warm debate by a majority of 165 to 71, the effect of which was to give to the original motion the following new form:—"That John Wilkes, Esq., although he is convicted of printing and publishing a malignant, seditious, and scandalous libel, and of printing and publishing three obscene and impious libels, and now stands committed to the King's Bench prison, by virtue of two several judgments in the Court of King's Bench for the said offences, is entitled, by privilege of parliament, to be discharged from his imprisonment for the said offences." The main question being then put in this altered shape was negatived at once, even the original mover himself and his friends probably declining to support it. It would still, however, according to the usual mode of acting, appear in the Votes as his motion; and it was no doubt the object of the minister by the course which he had taken, to bring in this way his opponents into odium, in addition to defeating the motion. Aware of this Mr. Martin now moved, "That, in entering in the Votes of this day the proceedings of the House upon the said question, the original motion be stated, with the proceedings of the House in making the several amendments thereunto." The minister however would not yield the point, and, to the discredit of the House, it was resolved by a majority of 96 to 52 that the Votes should be drawn up in the usual misrepresenting, or at least misleading form. It may be recollected that the same manœuvre was attempted on the 29th of January, 1765, in the case of Sir William Meredith's motion for declaring the illegality of general warrants; but upon that occasion the House eventually agreed that the Votes should be so made out as to exhibit the whole proceedings in the manner in which they had actually occurred. (See *Companion*, No. 28, p. 343). It was now contended that whatever temporary misconception might be produced by the Votes, "in the Journals the state of the case would be seen at large, which was sufficient to establish any member's character to posterity." Unfortunately, however, the mischief would be done long before posterity could interfere in the matter.

The hearing of Wilkes's petition was at length taken into consideration on the 27th of this month, when Lord North moved that counsel should be confined to two points only, which he specified, in the petitioner's allegations. One object of this proposition seems to have been to divide the supporters of the petition. In the Parliamentary History there is printed from the Hardwicke papers a Letter to Lord Hardwicke giving an account of the debate, in which it is said, "Wilkes's friends and most of Lord Rockingham's, together with the young patriots, were for taking in the whole (that is, the whole matter of the petition), Sir Joseph Mawbey (one of the members for Southwark), the person by whom the petition had been presented, taking the conduct and lead. Mr. Grenville thought with Lord North, and defended the limitation." Sir George Saville, Mr. Dowdeswell, Mr. Burke, Sergeant Glynn, and Colonel Barré, are mentioned as having been the principal speakers against the motion of the minister; which on a division was carried by a majority of 278 to 131.

Several succeeding days were occupied in discussing the petition in the manner determined by this motion. On the 1st of February, it was agreed without a division, that the petitioner had not made good the two allegations upon which he had been heard. On the 2nd it was resolved by a majority of 239 to 136, that he had been guilty of the publication of "an insolent, scandalous, and seditious libel," in printing a letter which had fallen into his hands, addressed by Lord Weymouth, one of the Secretaries of State, to the magistrates of Surrey, some time before the riots in St. George's Fields, and which he had denounced, in a prefatory statement, as having been the cause of the blood that had flowed on that occasion.

On the day following, a motion for the expulsion of Mr. Wilkes from the House was made by Lord Barrington, the Secretary at War, and seconded by Mr. Rigby, the Paymaster-General. The motion was opposed by Mr. Burke, Mr. Dowdeswell, Mr. T. Pitt, (afterwards Lord Camelford, the elder brother of Lord Chatham) Mr. Beckford, Mr. Cornwall, and Mr. Grenville, but was carried on a division by a majority of 219 to 137. Mr. Burke called this the fifth act of the tragi-comedy, acted by his Majesty's Servants, at the desire of several persons of quality, for the benefit of Mr. Wilkes, and at the expense of the constitution.

On the 16th of the same month, Mr. Wilkes was re-elected for Middlesex, no other candidate having appeared, although a Mr. Dingley, a merchant of London, had intended to get himself proposed, but was induced, owing, as he alleged, to the intimidation exercised by the mob, to retire before the nomination.

On the 17th Lord Strange moved, "That John Wilkes, Esq., having been in this Session of Parliament expelled this House, was and is incapable of being elected a member to serve in this present Parliament;" and, an amendment proposed by Mr. Dowdeswell having been first rejected by a majority of 228 to 102, the motion was carried in its original form by a majority of 235 to 89.

On the 16th of March, Wilkes was returned for Middlesex the third time. On the following day the return was again declared null and void by the House, and a new writ ordered.

The next election took place on the 13th of April. This time an opponent to the popular favourite appeared in the person of Colonel Henry Lawes Luttrell, son of Mr. Simon Luttrell (afterwards Lord Irnham), who, that he might become a candidate for Middlesex, vacated his seat for Bossiney. Colonel Luttrell having obtained only 296 votes, while Mr. Wilkes had 1143, the latter was again returned by the Sheriffs. On the 14th, Mr. Onslow, to quote the account given in the Parliamentary History, "moved that the Sheriffs of Middlesex should immediately attend the House with the poll; which was agreed to; but the Ministry having neglected to give the Sheriffs notice,

they were so long in coming, that the House got into confusion and riot for two hours, and then the night was so far advanced, that it became improper to enter into any new debate that night. A motion was made by the Ministry to adjourn to next day, which was Saturday. The opposition opposed Saturday as contrary to the custom of Parliament, which never did any thing of consequence on that day; that Saturday was dedicated to other business, or pleasure; that it seemed as if the hurrying on this business was such a measure of Government, that unusual means were taken to ensure its success; that precipitation might sooner inflame than quiet the minds of the people. However, the Ministry were so eager to finish the affair, that they voted for Saturday by a majority of 207 to 115." On that day accordingly a motion made by Mr. Onslow, "That Henry Lawes Luttrell, Esq., ought to have been returned a Knight of the Shire to serve in this present Parliament for the County of Middlesex," was after an animated debate carried by a majority of 197 against 143. Among the opponents of the motion was Mr. Grenville, whose speech is said to have been one of remarkable force and ability. The return was now amended by the substitution of the name of Colonel Luttrell for that of Mr. Wilkes. The only other proceeding that took place in the course of the Session in relation to this matter, was a vote to which the House came on the 8th of May, after hearing counsel in support of a petition of the freeholders of Middlesex against the return being thus amended. A resolution, asserting that Colonel Luttrell had been duly elected, was carried on this occasion by a majority of 221 to 152.

Very soon after the opening of the session Committees had been appointed in both Houses to examine and report upon certain papers relating to American affairs which were submitted by the crown. Ever since the news of the passing of the taxation act of the session of 1767 (see *Companion* No. 33, p. 457) had arrived in America, a re-awakened spirit of dissatisfaction had been strengthening and extending itself in that country. The centre from which the flame spread to the other colonies was the province of Massachusets Bay, and its capital, the town of Boston. So early as the 28th of October in the same year, the freeholders and other inhabitants of that town at a public meeting unanimously entered into resolutions, pledging themselves to prevent as far as possible the importation of the different articles on which the new duties were imposed. On the 15th of February, 1768, the Assembly, or House of Representatives, of the province, placed itself at the head of the popular movement by addressing a circular letter to all the other colonies, inviting them to combine with it in taking measures to defeat the Act. In June following, during the next session of the legislature, the seizure of a ship in the port of Boston by the officers of the customs for contravention of the new law, occasioned a violent tumult in the town, which the Assembly, when applied to by the governor for their assistance, declined interfering to put down. Being also required to rescind their proceedings of the previous session in the matter of the circular letter, they refused to do so by a majority of 92 to 17. Upon this the governor, pursuant to instructions he had received from the government at home, dissolved the Assembly. This measure, however, had only the effect of still further inflaming and exasperating the public mind. Soon after, also, information was received that the English ministry had determined to send over a body of troops to keep the town in awe, and that in fact two regiments had already embarked on that destination. This intelligence raised the ferment to the highest pitch. At a public meeting held on the 12th of September, a petition was drawn up and forwarded to the governor requesting him to reassemble the legislature, and, on his refusal, it was next day resolved to summon a general convention of all the colonies, to be held at Boston on the 22nd of the same month. On that day accordingly the convention met, composed of delegates from ninety-eight towns and eight districts. This body went no farther, however, than to draw up a petition to the king against the late act of parliament, and an address to the people recommending the observance of peace and subordination. The meeting then dissolved itself on the 29th, and on the same day the first division of the troops entered the town, which now returned to its wonted tranquillity.

Such were the events narrated in the papers laid before parliament. The discussions to which they gave rise commenced in the House of Lords, where, on the 15th of Dec., 1768, Lord Hillsborough moved eight resolutions strongly condemnatory of the proceedings of the Assembly of Massachusets Bay and the people of Boston. The resolutions were carried without a division, as was also an address to the crown subsequently proposed by the Duke of Bedford, approving of the conduct of the administration. Although there was no division however upon these motions, it appears from a minute among the Hardwicke papers that they gave rise to some debate, in the course of which sentiments unfavourable to the resolutions were expressed both by Lord Temple and the Duke of Richmond. Lord Shelburne, also seems to have given them only a qualified approval. Lord Camden said nothing. "The Duke of Grafton," says the minute, "spoke as a minister for maintaining the right of parliament, and that he desired every body to understand that by these resolutions and address parliament had precluded itself from respecting (that is, we suppose, from reconsidering) any of the acts for laying duties in the colonies for this session."

The Resolutions and Address were then sent down to the Commons for their concurrence; and the question was discussed at great length in that House on the 26th of January, 1769. The debate terminated in great disorder. The opponents of Ministers maintaining that the motion upon one point asserted a direct falsehood, inasmuch as it attributed to the Assembly of Massachusets the passing of a resolution which in fact never had been passed by that body, Mr. Grenville got up and said that this was a short question:—if there was any such resolution on the Journals of the Boston Assembly, he desired it might be read. "Others," proceeds the Parliamentary History, "called out 'Read, read.' This threw the whole bench of ministers and clerks into a most ridiculous confusion, as they could not, when now called upon in the face of the House, find any such; the business of the House stood still; one side laughing, the other side in the most shameful perplexity, for more than a quarter of an hour." Then, "the chorusmen," continues the account, "who at proper times call for the question, helped them out at this dead lift by an incessant recitative of the words 'Question, question, question.' At length, at four o'clock in the morning, the whole House in confusion, laughing, &c, the Resolutions and Address were agreed to." It is stated in the Annual Register, which was at this time under the conduct of Mr. Burke, that the Rockingham and Grenville parties now entirely united in condemning the taxation acts of 1767, although upon that point they had hitherto been supposed to be irreconcilably at variance. It is also affirmed, that the Ministers (from whatever cause) were unusually cold and languid in support of the Resolutions and Address.

The subject was again discussed on the 8th of February, when the Report of the Committee which had passed the Resolutions was brought up. In the course of this debate, Alderman Trecothick (one of the members for London) stated a remarkable fact, namely, that when Mr. Charles Townshend's project of raising a revenue by the taxation of the colonists was in agitation, the merchants all told him the effects the attempt would produce in America, and offered to pay the taxes here in England. On a division the Report was received by a majority of 169 to 65.

Later in the session Mr. Townshend's Act was again brought before the House, by a motion for its repeal introduced in a long speech by Governor Pownall, formerly Governor of Massachusets Bay, and one of the most steady opponents of the American policy of the administration. "Every person," says the account in the Parliamentary History, "seemed to agree with the motion: but the ministry complaining that the late time of the session would not allow a matter of so much consequence to be properly agitated, as they were not prepared for it, a motion was therefore made to put it off till next session." The day on which Governor Pownall's motion was made is not given; but from his speech it appears to have been after the disturbances in the Colonies were understood to have been completely put down. He urged the repeal on the Government mainly on the considerations that the authority and power of the English legislature had at that time its full effect—that the people had submitted, were paying the taxes, and were at peace. In point of fact, however, the inhabitants both of Boston and New York had, in conformity with resolutions into which they entered—the former on the 1st of August, 1768, and the latter on the 15th of September following—almost entirely ceased to im-

port or purchase any of the newly taxed articles from the 1st of January in the present year.

On the 9th of May Parliament was prorogued.

The month of January in the present year had been distinguished by the first appearance in the political warfare of the day, (under that signature,) of the celebrated JUNIUS. This powerful assailant, from that concealment which has been as inscrutable to succeeding times as it was to his own, began by directing his attacks more particularly against the Prime Minister, with an energy and perseverance, which appeared determined to give him no rest until he should have been driven from power.

The public mind, however, scarcely required the virulent excitements administered to it from this quarter to keep it in a state of the utmost inflammation and dissatisfaction. The attack which was conceived to be made upon the rights of electors throughout the whole kingdom by the proceedings in the case of Wilkes, and the pains which were taken to keep alive the popular indignation which had been aroused by the affair of St. George's Fields—combined with the general contempt into which the administration had fallen, both through the opinion which was entertained of the want of anything like commanding talent in its leaders, and through the exposures of its mismanagement and inefficiency which had been made in the late parliamentary discussions of the American question—to make the great majority of the country restless under the present state of things, and impatient for a change. Petitions to the Crown, complaining in the strongest terms of the conduct of ministers, and praying for their dismissal and also for a dissolution of the parliament, were sent up during the summer from all parts of the kingdom.

In this temper the nation was when Parliament was again called together on the 9th of January, 1770, and his Majesty addressed the two Houses in a speech commencing in the following astounding manner:—"My Lords and Gentlemen, it is with much concern that I find myself obliged to open the session of Parliament with acquainting you, that the distemper among the Horned Cattle has lately broke out in this kingdom, notwithstanding every precaution that could be used for preventing the infection from foreign parts,"- and so on, to the end of a long paragraph in the same strain. The ridicule with which this portentous ministerial effusion was everywhere received was unbounded. The Session immediately received the nickname of the Horned Cattle Session. "While the whole kingdom," said Junius in a Letter to the Duke of Grafton, "was agitated with anxious expectation upon one great point, you meanly evaded the question, and, instead of the explicit firmness and decision of a King, gave us nothing but the misery of a ruined grazier."

The debates upon the Address in both Houses were of the highest interest. In the Lords, Lord Chatham, now completely restored to health, led the opposition, by moving the insertion of a paragraph noticing the discontents prevailing in many parts of the kingdom, and the late proceedings of the House of Commons in the case of Wilkes—to neither of which topics the Address proposed by ministers, being as usual a mere echo of the Speech, made any allusion. But the most remarkable of the speeches delivered was that of Lord Camden, the Chancellor. His lordship, according to the report in the Gentleman's Magazine, "declared that he had accepted the seals at first without any conditions; that he meant not, therefore, to be trammelled by his Majesty—I beg pardon, said he, by his ministers; that he had suffered himself to be so too long; that, for some time, he had beheld with silent indignation, the arbitrary measures which were pursuing by the ministry; that he had often drooped and hung down his head in Council, and disapproved by his looks, those steps which he knew his warmest opposition could not prevent; that, however, he would do so no longer, but would openly and boldly speak his sentiments. That as to the incapacitating vote, he was of the same opinion with the noble Lord who spoke before him (Lord Chatham); that he considered it as a direct attack upon the first principles of the constitution; and that if, in giving his decision as a judge, he was to pay any regard to that vote, or any other vote of the House of Commons, in opposition to the known and established laws of the land, he should look upon himself as a traitor to his trust, and an enemy to his country; that the ministry, by their violent and tyrannical conduct, had alienated the minds of the people from his Majesty's government—he had almost said from his Majesty's person; that, in consequence, a spirit of discontent had spread itself into every corner of the kingdom, and was every day increasing; and that if some methods were not devised to appease the clamours that so universally prevailed, he did not know but the people, in despair, might turn their own avengers, and take the redress of their grievances into their own hands." "In a word," it is added, "he accused the ministry, if not in express terms, yet by direct implication, of having formed a conspiracy against the liberties of their country." There can be little doubt, from events that followed, that some such speech as this was actually delivered by Lord Camden; but it is strange that in another report, understood to have been furnished by Sir Philip Francis, and given in the Parliamentary History, there is no notice of his Lordship having taken any part whatever in the debate. In that report, however, Lord Temple is made to observe, at the conclusion of the debate, on a motion for an adjournment of some days having been made by Lord Pomfret, "that the House well knew for what purpose the ministry wanted an adjournment; it was to settle the disordered state of the administration, which was now shattered in a most miserable manner, and in all likelihood would soon fall to pieces: and particularly to dismiss the virtuous and independent Lord who sat on the woolsack, and to supply his place with some obsequious lawyer, who would do as he was commanded." According to this report, also, Lord Shelburne, "said nearly the same (with Lord Temple,) and added, that after the dismissal of the present worthy Chancellor, the seals would go a-begging: but he hoped there would not be found in the kingdom a wretch so base and mean-spirited, as to accept of them on the conditions on which they must be offered." The original Address was eventually carried by a majority of 203 to 36. Lord Camden voted with the minority.

In the Commons the opposition to the ministerial Address was led by Mr. Dowdeswell, who moved the insertion of words, acquainting his Majesty with the necessity "of immediately inquiring into the causes of the unhappy discontents which at present prevail in every part of his Majesty's dominions." The amendment was rejected by a majority of 254 to 138. Among others who took part in the long and keen debate which preceded this division was the Marquis of Granby (the Master-General of the Ordnance, and Commander-in-Chief of the Army), who publicly expressed his regret for having in the last Session voted with the majority on the question of the disqualification of Mr. Wilkes. "That vote," he said, "I shall always lament as the greatest misfortune of my life. I see that I was in error, and I am not ashamed to make this public declaration of it, and give my vote for the amendment." On the other hand, General Conway, who held the office of Lieutenant General of the Ordnance, and who might have been expected also to join Lord Camden and the other dissentients in the Government, expressed himself in favour of the disqualifying vote, and against the present amendment. In this debate likewise the Honourable Charles Fox, afterwards so celebrated as the opponent of everything illiberal and arbitrary in politics, defended the original Address, in his first speech in Parliament of which any report has been preserved.

After what had occurred in the debate on the Address in the Lords, Ministers could hardly avoid demanding that Lord Camden should give up the Great Seal. When it was proposed, however, that their Lordships should adjourn for a few days, for the purpose of making certain arrangements relative to an office so closely connected with the House, that it could not sit without the person filling it, a strong protest was entered against the proposition, concluding in the following terms: "It is difficult for us to give our sentiments upon a motion, which the Lord who mentioned it (Lord Weymouth, one of the principal Secretaries of State), though called upon, refused to explain. But when we reflect that this hint came from a noble Lord in high and confidential office, we think it could have alluded only to the removal of the Lord High Chancellor of England, the Speaker of this House; and when we recollect the part, so honourable to himself, but perhaps so offensive to administration, which that noble Lord had taken the first day of this Session, we cannot but be apprehensive that there may be some evil counsellor hardy enough to attempt punishments for freedom of debate in Parliament, and to

dare advise his Majesty to remove from his office a peer of this House, at the head of the law, for his vote in Parliament."

Lord Shelburne's prediction, that the Great Seal, when taken from Lord Camden, would go a-begging, was literally verified. It was indeed, in the first instance, at the pressing entreaty of the king, accepted with the greatest reluctance by the Honourable Charles Yorke, the second son of the former Lord Chancellor Hardwicke, and who, it may be remembered, had been Attorney-General, first during the administration of Lord Bute in 1762, and again during that of the Marquis of Rockingham in 1765. Mr. Yorke received the Great Seal on the 18th of January, but died by his own hand on the 20th. He was to have been ennobled by the title of Baron Morden, but his death took place before his patent of peerage was completed. The Chancellorship was then offered successively to Sir Eardley Wilmot and Lord Mansfield (the Chief Justices of the Common Pleas and the King's Bench), but refused by both. Eventually Lord Mansfield was appointed interim Speaker of the House of the Lords, and the Great Seal was put into commission.

The removal of Lord Camden was immediately followed by the resignations of his friend Mr. Dunning, the Solicitor-General, and of Mr. James Grenville, who held the office of one of the Vice-Treasurers of Ireland. The following officers of the Household at the same time threw up their places: the Earl of Huntingdon, Groom of the Stole; the Duke of Manchester and the Earl of Coventry, Lords of the Bedchamber; and the Duke of Beaufort, Master of the Horse to the Queen. The Marquis of Granby also resigned all his appointments except his regiment of the Blues.

On the 22nd of January a short debate, rendered interesting by the circumstances of the moment, took place in the House of Lords, on the Marquis of Rockingham moving that the House would take into consideration the State of the Nation on Thursday, the 24th inst. As soon as his Lordship had sat down, the Duke of Grafton rose, and said that he did not intend to oppose the motion; on the contrary, he was ready to go into the question whenever the House should think proper. He added a few observations in defence of the government upon some points on which it had been attacked by Lord Rockingham. But the most remarkable speech was that of Lord Chatham, who followed his Grace. Leaving the immediate subject before the House, he took occasion to declare himself an advocate for a reform of the representation of the people in the House of Commons. "The boroughs of this country," he said, "have properly enough been called the rotten part of the constitution. . . . . But in my judgment, my Lords, these boroughs, corrupt as they are, must be considered as the natural infirmity of the constitution. Like the infirmities of the body, we must bear them with patience, and submit to carry them about with us. The limb is mortified, but amputation might be death." This, it is to be observed, if the words have been correctly reported, is by no means the same with the view which has been taken by some other defenders of this part of the old representative constitution, who have illustrated their theory of the body politic by a somewhat similar analogy drawn from the natural body,—to that which is original and essential in which, however, and not to any merely accidental and superinduced infirmity, they have compared the rotten boroughs. Lord Chatham went on to recommend, as the proper mode of infusing fresh blood and new health into the representation, the extension of the representation of the counties. His Lordship concluded his speech with the following announcement of the coalition of himself and his friends with the Rockingham party: "My Lords, besides my warm approbation of the motion made by the noble Lord, I have a natural and personal pleasure in rising up to second it. I consider my seconding his Lordship's motion, and I would wish it to be considered by others, as a public demonstration of that cordial union which, I am happy to affirm, subsists between us; of my attachment to those principles, which he has so well defended, and of my respect for his person. There has been a time, my Lords, when those who wished well to neither of us, who wished to see us separated for ever, found a sufficient gratification for their malignity against us both. But that time is happily at an end. The friends of this country will, I doubt not, hear with pleasure, that the noble Lord and his friends are now united with me and mine, upon a principle which, I trust, will make our union indissoluble. It is not to possess or divide the emoluments of government; but, if possible, to save the state. On this ground we met; on this ground we stand, firm and inseparable. No ministerial artifices, no private offers, no secret seduction, can divide us. United as we are, we can set the profoundest policy of the present ministry, their grand, their only arcanum of government, their *divide et impera*, at defiance."

The motion was accordingly agreed to; but when the 24th arrived the House was still without a Speaker, and the discussion was postponed till the 2nd of February.

In the meantime, greatly to the surprise of everybody, on the 28th of January the Duke of Grafton resigned. It was commonly believed at the moment that the removal of Lord Camden had been the act of his Grace, as the head of the administration, and indeed the person who had the credit of being almost the sole mover and director of the government. It has since, however, been asserted that this supposition was altogether a mistake. "The dismission of Lord Camden," says Mr. Belsham in his 'History of Great Britain,' "injuriously imputed to the influence of the Duke of Grafton, was in fact the immediate cause of his Grace's resignation; and the friendship which had long subsisted between these two noblemen suffered no interruption in consequence of the unhappy political differences now prevailing." If this statement be correct, we must conclude that the almost unparticipated control in the government generally attributed to the Duke was not really possessed by him—that instead of being, as was popularly imagined, the King's sole minister, he was not even so much as chief minister, except in name. It is indeed in the highest degree probable that some of his colleagues, especially Lord North, had, latterly at least, acquired an ascendancy in the Cabinet which was not generally suspected. At the same time it is scarcely to be believed that the Duke of Grafton had either, up to the time at which he left the government, shown any inclination to the views entertained by Lord Camden in preference to those of Lord North and his other colleagues, or even that he would have resigned the premiership simply on account of the removal of Lord Camden. He did not in point of fact resign until the additional difficulties and embarrassments occasioned by several other resignations, by the sudden death of Mr. Yorke, and by the mortifying rejection of the Great Seal in every quarter to which application was made, had accumulated around his position. It is also said that the sharp and incessant scourge of Junius gave him real and great pain; and the wish to escape from an infliction which he felt so keenly, may doubtless be reasonably enough supposed to have had some share in forming his determination. His torturer, however, pursued him into his retirement in a farewell invective of undiminished bitterness.

The resignation of the premier made a complete reconstruction of the administration necessary. Lord North was now placed at the head of the government, with the office of First Lord of the Treasury, in addition to that which he already held of Chancellor of the Exchequer. The other places left vacant by the recent resignations were then filled up as follows. The post of Groom of the Stole, resigned by the Earl of Huntingdon, was given to the Earl of Bristol, who, again, was succeeded in his office of Lord Privy Seal by the Earl of Halifax, the same who had been Lord-Lieutenant of Ireland in 1761, during Mr. Pitt's second ministry. The Earl of Waldegrave, who was a son-in-law of Earl Gower, was made Master of the Horse to the Queen, in room of the Duke of Beaufort. The Earl of Coventry was succeeded as a Lord of the Bedchamber by the Earl of Pembroke; it does not appear that any successor was appointed to the Duke of Manchester, the other Lord who resigned. Nor was any appointment immediately made to the office of Master of the Ordnance, vacated by the Marquis of Granby, who died very soon after his resignation. In the Treasurership of the Navy, Viscount Howe gave place to Sir Gilbert Elliot, whose office in the Household of Treasurer of the Chamber was given to Mr. George Rice, previously one of the Lords of Trade. Mr. Rice was soon after replaced at the Board of Trade by Mr. Bamber Gascoigne. In the office of Master of the Household, Sir F. H. Drake, Bart., was substituted for the Hon. H. F. Thynne. A few new names were also introduced in some of the subordinate departments of the government; the most remarkable of which was that of the Hon. Charles James Fox, who was made one of the Junior Lords of the

Admiralty. Finally, Mr. Dunning was succeeded as Solicitor General by Mr. Edward Thurlow; and Mr. Welbore Ellis (afterwards Lord Mendip) became one of the Vice Treasurers of Ireland in the place of Mr. James Grenville. It may also be mentioned that the lower House of Parliament as well as the upper received about this time a new Speaker, by the election on the 22nd of January of Sir Fletcher Norton in place of Sir John Cust, who died that day. Sir Fletcher had been shortly before appointed by the government to the sinecure place of one of the Chief Justices in Eyre, which had been heretofore held by the Earl (afterwards Marquis) Cornwallis. Lord Cornwallis was transferred to the office of Constable of the Tower.

Lord North's ministry, therefore, it will be perceived, was, in its first construction, a continuation, for the greater part, of that of the Duke of Grafton. That of the Earl of Halifax, indeed, was the only new name added to the Cabinet; and even in the subordinate places of the government the changes were very few. As the formation of this ministry, however, brought to a close the long series of rapid changes which, with the exception of the comparatively considerable period that Mr. Pelham was in power, had allowed scarcely any thing beyond a temporary arrangement of the government to exist since the overthrow of Sir Robert Walpole, twenty-eight years before, it will be convenient that we here present a tabular view of all the several appointments usually affected by a change of administration as they were filled both under the Duke of Grafton and under his successor, when he first assumed the direction of affairs. A reference on any occasion to this table will at once make clearly intelligible the notices we shall afterwards have to give of the further changes in various offices that took place during the continuance of Lord North's tenure of power. The new appointments, we may remark, though mostly made before the end of February, were not completed in all respects as we are now to state them till after the lapse of some months. There appear for instance to have been two Commissions of the Board of Trade and Plantations, the one dated the 12th and the other the 16th April, before that dated the 16th May, in which the name of Mr. B. Gascoigne was inserted. In the first the name of Lord Greville (afterwards Earl of Warwick) was substituted for that of the Hon. Thomas Robinson, made Vice-Chamberlain of the Household, who was the son of Sir Thomas Robinson, the Duke of Newcastle's Secretary of State in 1754, and a few months after this time succeeded his father as Lord Grantham; and in the second the name of William Northey, Esq. (previously a Groom of the Bedchamber), was inserted in place of that of Viscount Lisburn, made one of the Lords of the Admiralty.

	DUKE OF GRAFTON'S MINISTRY. January, 1770.	LORD NORTH'S MINISTRY. February, March, April, May, 1770.
First Lord of the Treasury and Premier .	Augustus Henry Fitzroy, Duke of Grafton.	Frederick North, Lord North (afterwards Earl of Guilford).
Lord Chancellor . . .	Charles Pratt, Baron Camden (afterwards Earl Camden).	Commissioners, Sir Sidney Stafford Smythe (one of the Barons of the Exchequer), Hon. Henry Bathurst (one of the Justices of the Common Pleas), and Sir Richard Aston (one of the Justices of the King's Bench).
Lord President of the Council . .	Granville Leveson Gower, Earl Gower (afterwards Marquis of Stafford).	Continued.
Lord Privy Seal . . .	George William Hervey, Earl of Bristol.	George Montagu Dunk, Earl of Halifax.
First Lord of the Admiralty . .	Sir Edward Hawke (afterwards Baron Hawke).	Continued.
First Lord of Trade and Plantations .	Wills Hill, Earl of Hillsborough (afterwards Marquess of Downshire).	Continued.
Chancellor of the Exchequer . .	Lord North.	Continued.
Principal Secretaries of State . .	Thomas Thynne, Viscount Weymouth (afterwards Marquess of Bath), and	Continued.
	William Henry Nassau de Zuleistein, Earl of Rochford.	Continued.
Principal Secretary of State for the Colonies	Earl of Hillsborough.	Continued.
Chancellor of the Duchy of Lancaster .	James Smith Stanley (properly Lord Stanley, but commonly called) Lord Strange (eldest son of the Earl of Derby).	Continued.
Secretary at War . . .	William Wildman Barrington, Viscount Barrington.	Continued.
Paymaster-General of the Land Forces .	Richard Rigby, Esq.	Continued.
Treasurer of the Navy . . .	Richard Howe, Viscount Howe (afterwards Earl Howe.)	Sir Gilbert Elliott, Bart. (father of the first Earl of Minto).
Postmasters-General . . .	Francis Dashwood, Baron Le Despencer, and	Continued.
	John Montagu, Earl of Sandwich.	Continued.
Chief Justices in Eyre . . .	Thomas Osborne, Duke of Leeds, and	Continued.
	Charles Cornwallis, Earl Cornwallis (afterwards Marquess Cornwallis).	Sir Fletcher Norton (afterwards Baron Grantley).
Junior Lords of the Treasury . .	George Onslow, Esq. (afterwards Baron Cranley, Baron Onslow, and Earl of Onslow).	Continued.
	Charles Jenkinson, Esq. (afterwards Baron Hawkesbury and Earl of Liverpool).	Continued.
	Jeremiah Dyson, Esq.	Continued, and Charles Townshend, Esq.
Junior Lords of the Admiralty . .	John Buller, Esq.	Continued.
	Henry Temple, Viscount Palmerston.	Continued.
	Lord Charles Spencer (second son of the Duke of Marlborough).	Continued.
	Charles Townshend, Esq.	Wilmot Vaughan, Viscount Lisburne (afterwards Earl of Lisburne).
	Sir George Yonge, Bart.	Admiral Francis Holburne.
	Sir Piercy Brett, Knt.	Hon. Charles James Fox (afterwards Lord Holland).
Junior Lords of Trade . . .	Soame Jenyns, Esq.	Continued.
	Edward Eliot, Esq. (afterwards Baron Elliot, father of the present Earl of St. Germains).	Continued.

	William Fitzherbert, Esq.	Continued.
	John Roberts, Esq.	Continued.
	Hon. Thomas Robinson (afterwards Baron Grantham).	George Greville, Lord Greville, (afterwards Earl of Warwick).
	Viscount Lisburne.	William Northey, Esq.
	George Rice, Esq. (afterwards the Right Hon. G. Rice, father of the present Lord Dynevor).	Bamber Gascoigne, Esq.
Attorney-General	William De Grey, Esq. (afterwards Baron Walsingham).	Continued.
Solicitor-General	John Dunning, Esq. (afterwards Baron Ashburton).	Edward Thurlow, Esq. (afterwards Baron Thurlow).
Lord Lieutenant of Ireland	George Townshend, Viscount Townshend (afterwards Marquess Townshend).	Continued.
Vice-Treasurers of Ireland	Hon. James Grenville (younger brother of Earl Temple and the Right Hon. George Grenville).	Welbore Ellis, Esq. (afterwards Baron Mendip).
	Robert Nugent, Esq., Viscount Clare (afterwards Earl Nugent), and	Continued.
	Earl Cornwallis.	Continued.
Lord Chancellor of Ireland	James Hewitt, Baron Lifford (afterwards Viscount Lifford).	Continued.
Commander-in-Chief	John Manners, Marquess of Granby (eldest son of the Duke of Rutland).	No new appointment.
Master-General of the Ordnance.	Marquess of Granby.	No new appointment.
Lieutenant-General of the Ordnance	Hon. Lieut.-General Henry Seymour Conway (afterwards Field-Marshal Conway, second son of Baron Conway, and younger brother of the Earl of Hertford).	Continued.
	THE HOUSEHOLD.	
Lord Chamberlain	Francis Seymour Conway, Earl of Hertford (afterwards Marquess of Hertford).	Continued.
Lord Steward	William Talbot, Earl Talbot.	Continued.
Groom of the Stole	Francis Hastings, Earl of Huntingdon.	Earl of Bristol.
Treasurer	John Shelley, Esq. (afterwards Sir John Shelley).	Continued.
Comptroller	Thomas Pelham, Esq. (afterwards Baron Pelham, and Earl of Chichester, cousin of the Duke of Newcastle).	Continued.
Cofferer	Hans Stanley, Esq.	Continued.
Master	Hon. Henry Frederick Thynne (afterwards Baron Carteret, younger brother of Viscount Weymouth).	Sir Francis Henry Drake, Bart.
Treasurer of the Chamber	Sir Gilbert Elliot, Bart.	George Rice, Esq.
Master of the Horse	Robert Bertie, Duke of Ancaster and Kesteven.	Continued.
Keeper of the Great Wardrobe	John Ashburnham, Earl of Ashburnham.	Continued.
Captain of the Yeomen of the Guard	Hugh Boscawen, Viscount Falmouth.	Continued.
Captain of the Band of Gentlemen Pensioners.	George William Lee, Earl of Lichfield.	
Lords of the Bedchamber	George William Coventry, Earl of Coventry.	Henry Herbert, Earl of Pembroke and Montgomery.
	George Montagu, Duke of Manchester.	No new appointment.
	Frederick St. John, Viscount Bolingbroke.	Continued.
	John Ker, Duke of Roxburghe.	Continued.
	John Peyto Verney, Baron Willoughby De Broke.	Continued.
	George Fermor, Earl of Pomfret.	Continued.
	Edward Harley, Earl of Oxford and Earl Mortimer.	Continued.
	William Douglas, Earl of March (afterwards Duke of Queensberry).	Continued.
	Thomas Bruce Brudenell, Baron Bruce (afterwards Earl of Ailesbury).	
	Lord Robert Bertie (uncle to the Duke of Ancaster).	Continued.
	George Walpole, Earl of Orford.	Continued.
	George Bussey Villiers, Earl of Jersey.	Continued.
Master of Horse to the Queen	Henry Somerset, Duke of Beaufort.	John Waldegrave, Earl of Waldegrave.

THE EXCISE ON HOPS.

Although ale (or a liquor brewed from malted corn) is stated by various ancient authors to have been the common drink in very early times of the Egyptians (who have the credit of its invention), and also of the Germans and other northern nations, nay, even according to Strabo, of the nas been and Spaniards before they took to the extensive cul- neither of of the vine, there is no mention of hops having found a sufficie as one of its ingredients till a comparatively us both. But the Our own Saxon ancestors, like the Germans, of this country whey sprung, were great drinkers of ale. There the noble Lord and for the regulation of ale-houses in the laws mine, upon a princ of Wessex, which were published in the be- ne eighth century. It has been supposed by some writers that wormwood, or some other plant of a similar nature, was employed in the brewing of ale before hops were made use of for that purpose.

Hops are said to have been first used by the German brewers in the early part of the fourteenth century. From Germany the use of the new ingredient found its way to the Netherlands, and also, probably, after no long time to other continental countries. It was very late, however, in being introduced into England, if we may trust the old rhymes,

"Turkeys, carp, hops, piccarel, and beer,
Came into England all in one year;"

and

"Hops, Reformation, bays, and beer,
Came into England all in one year."

We must understand these statements, however, with an allowance for poetic licence. Turkies, which were at first called Guinea cocks, or India fowls, are recorded to have been first brought to this country in the fifteenth year of Henry the VIIIth, that is in 1524. The Reformation can hardly be said to have come in quite so early. As for beer, again, whatever may be considered to be the proper distinction between that species of malt liquor and ale, the name at least appears to have been known long before this time. Anderson, in his 'History of Commerce,' quotes a statute of the Scottish Parliament, passed in 1482, (the twenty-third year of James the IIIrd.,) entitled, 'Of the bringers home and sellers of corrupt wine,' in which it is enacted, 'That no person shall mix wine *or beer* under pain of death.' He afterwards also refers to a license, printed in 'Rymer's Fœdera,' and dated in the year 1492, from Henry the VIIIth to a Fleming therein named, to export fifty tons "of the ale called beer" (*cervisiæ vocatæ bere*). In the same year it appears that one of the King's attendants into France was Peter Vanek, who is described as a beer-brewer of Greenwich in Kent. The name, however, in this instance would seem to indicate that Peter was a foreigner —probably a Fleming. The use of hops in ale or beer brewing is said to have been received by us from the people of the district of Artois in French Flanders.

There can be no doubt, however, that hops were cultivated to some extent in England before the middle of the sixteenth century. In a statute passed in 1552, in the reign of Edward the VIth, lands set with hops are expressly excepted from the regulations laid down in the act, with the view of promoting tillage and the growing of corn. The hop is indigenous in England. Harrison, in his 'Description of Britain,' published in 1586, says, 'Hops in time past were plentiful in this land; afterwards also their maintenance did cease; and now being revived, where are any better to be found? Where any greater commodity to be raised by them? Only poles are accounted to be their greatest charge. But sith men have learned of late to sow ashen-trees in ash-yards by themselves, that inconvenience in short time will be redressed' (Book ii. chap. 19). The language here used would seem to imply that the hop had not merely grown in the country as a weed in former times, but had been cultivated as a crop.

At first, the hops used by the English brewers were all imported from Flanders; but the home plantations soon began to afford a considerable supply. In another part of his work (Book i. chap. 18), Harrison writes as follows:— "Of late years, also, we have found and taken up a great trade in planting of hops, whereof our moory hitherto and unprofitable grounds do yield such plenty and increase, that there are few farmers or occupiers in the country which have not gardens and hops growing of their own, and those far better than those do come from Flanders unto us. Certes the corruptions used by the Flemings, and forgery daily practised in this kind of ware, gave us occasion to plant them here at home; so that now we may spare and send many over unto them. And this I know by experience, that some one man, by conversion of his moory grounds into hop-yards, whereof before he had no commodity, doth raise yearly by so little as twelve acres in compass two hundred marks; all charges borne toward the maintenance of his family—which industry God continue! though some secret friends of Flemings let not [cease not] to exclaim against this commodity as a spoil of wood, by reason of the poles; which, nevertheless, after three years do also come to the fire, and spare their other fuel." From another passage (in Book ii. chap. 6), it appears that the price of hops was then about 10*d.* a pound. With eight bushels of malt, it is stated that the usual practice was to throw in "a pound and a half of new hops, or peradventure two pounds," according to their quality. "I value my malt at ten shillings," concludes the writer, "my wood at four shillings, which I buy, my hops at twenty-pence, the spice (this is specified as "half an ounce of arras, and half a quartern of an ounce of bay-berries finely powdered") at two-pence, servants' wages two shillings and six-pence, with meat and drink, and the wearing of my vessel at twenty pence; so that for my twenty-shillings I have ten score gallons of beer or more, notwithstanding the loss in seething, which some being loth to forego do not observe the time, and therefore speed thereafter [that is, accordingly] as their success, and worthily. The continuance of the drink is always determined after the quantity of the hops, so that being well hopped it lasteth longer; for it feedeth upon the hop, and holdeth out so long as the force of the same continueth, which being extinguished the drink must be spent or else it dieth, and becometh of no value.'

Harrison's own practice appears to have been regulated by a deep sense of the importance of not giving the hop time to lose its virtue. In entering upon his description he premises that he is "scarce a good malster;" "nevertheless," he adds, "since I have taken occasion to speak of brewing, I will exemplify in such a proportion as I am best skilled in, because it is the usual rate for mine own family, and once in a month practised by my wife and her maid-servants, who proceed withal after this manner, as she hath oft informed me." "Some," he goes on to observe, "instead of arras and bays, add so much long pepper only, but in her opinion and my liking it is not so good as the first; and hereof we make three hogsheads of good beer, such, I mean, as is meet for poor men as I am to live withal, whose small maintainance (for what great thing is forty pounds a year *computatis computandis* able to perform?) may endure no deeper cut." Most of our readers will probably be of opinion that a consumption of beer at the rate of a hundred and twenty gallons per month, and an expenditure upon that one article amounting to nearly a third part of a man's whole income, was cutting deep enough.

Thomas Tusser, in his "Hundred Good Points of Husbandry," first printed in 1557, gives the following particular directions on the subject of hop-planting:—

"Whom fancy persuadeth, among other crops,
To have for his spending sufficient of hops,
Must willingly follow, of choices to choose,
Such lessons approved as skilful do use.

Ground gravelly, sandy, and mixed with clay,
Is naughty for hops any manner of way;
Or if it be mingled with rubbish and stone,
For dryness and barrenness let it alone.

Choose soil for the hop of the rottenest mould,
Well dunged and wrought as a garden-plot should;
Not far from the water, but not overflown:
This lesson well noted is meet to be known.

The sun in the south, or else southly and west,
Is joy to the hop, as a welcomed guest;
But wind in the north, or else northerly east,
To the hop is as ill as a fray in a feast.

Meet plot for a hop-yard once found as is told,
Make thereof account as of jewel of gold;
Now dig it, and leave it the sun for to burn,
And afterward fence it, to serve for that turn.

The hop for his profit I thus do exalt;
It strengtheneth drink and it favoureth malt;
And being well brewed long kept it will last,
And drawing abide, if ye draw not too fast."

The importation from Flanders, however, of a portion of the hops used in brewing appears to have continued till after the beginning of the next century. In an act of parliament passed in the first year of James I. (1603) the importation of bad foreign hops, or the employment of such in brewing, is prohibited; and heavy complaints are made of the adulteration of foreign hops, in the sacks of which, it is stated, were often found great quantities of stalks, powder, sand, straw, &c.; "by means whereof," it is added, "the subjects of this realm have been of late years abused to the value of twenty thousand pounds yearly, besides the danger of their healths."

Like most other improvements the use of hops was at first denounced as a pernicious innovation; and Henry the VIIIth actually prohibited their being mixed with ale. It is true that this prejudice did not take in such judges as our friend Harrison, who speaks with great contempt of a sort of ale which was still made in his day without hops, as being "thick, fulsome, and of no continuance." But the sticklers for "the ancient way" had by no means, it would seem, all died out at a much later period. Mr. Macculloch, in his "Commercial Dictionary," has quoted a curious passage from a book entitled "The Improver Improved," by Walter Blithe, first printed in 1649, in which he observes "that hops were then grown to be a national commodity, but that it was not many years since the famous city of London petitioned the parliament of England against two nuisances; and these were Newcastle coals, in regard

to their stench, &c., and hops, in regard they would spoil the taste of drink, and endanger the people; and had the parliament been no wiser than they, we had in a measure pined, and in a great measure starved; which is just answerable to the principles of those men who cry down all devices, or ingenious discoveries, or projects, and thereby stifle and choak improvement."

The duty on hops is the subject of one of the late Reports of the Commissioners of Excise Inquiry. The following abstract of this Report from the Digest prepared by order of the Commissioners, presents a sufficiently-complete view of the present state of the hop plantations and trade of this country.

"The first duty on hops was imposed by the 9th Anne, c. 12, at 1*d.* per lb. It was fixed at its present rate of 2*d.* per lb. by the 45th Geo. III. c. 94.

"The duty does not extend to Ireland; but hops imported from thence pay the English duty.

"No drawback is allowed on hops exported to Ireland; but a drawback of the whole duty is allowed on hops exported to the Isle of Man and to foreign parts.

"A return of the rates and amount of duty since 1770 is given at page 3 of the Report, showing the extraordinary fluctuations of the duty, varying from 14,913*l.*, the lowest amount in any one year, viz., in 1783, to 476,895*l.*, the highest amount, which was in 1826.

"A return is also given of the number of acres under cultivation for hops in each year since 1807, which shows a gradual increase since 1832, the number of acres cultivated in the three following years having been,—

In 1832	. . .	47,101 acres.
1833	. . .	49,187 „
1834	. . .	51,273 „

"The number of persons surveyed in 1834 is stated to have been 7242, being the greatest number surveyed under any one of the growing-duty trades, except that of malt.

"A full statement is given in the Report of the regulations for charging and collecting the duty on hops, which objects are carried on in a different manner from that of the other duties of excise, being invariably completed in a period of one or two months, temporary assistant officers being employed for the purpose, which has been found more economical than employing a part of the permanent establishment of the excise.

"The total number of such officers has been in each of the last three years 270, and the total expense as follows, viz.—

In 1832	. . .	£3,316
1833	. . .	3,432
1834	. . .	3,675

forming a very small per-centage on the revenue derived from a good crop.

"It appears from letters addressed to the Commissioners by Members of Parliament representing the hop districts, that the growers are generally satisfied with the present arrangement for the collection of the duty, and are not desirous of any change, either in the rate of duty, or in the regulations under which it is charged.

"The Commissioners call attention to the evidence of Mr. Ellis of Barming, as entitled to particular weight, from his being the most extensive, as well as one of the most experienced cultivators of hops in the kingdom, the number of acres cultivated by him being at present 500, the greatest number cultivated by any other person being 164 acres.

"Sir Francis Doyle and Mr. Dehany consider the duty to be well and cheaply collected: but they suggest that the period allowed for claiming the drawback on hops exported, which is now indefinite, should be restricted to three years from the growth. The Commissioners of Inquiry recommend the adoption of this suggestion.

"Mr. Dehany also suggests the extension of the duty to Ireland, by which one of the few remaining distinctions which prevent the trade between the two countries from being in all respects a coasting trade would be removed—and he considers there will be the less objection to it, as there are very few, if any, hop-growers in Ireland.

"The Commissioners express their concurrence in Mr. Dehany's suggestion.

"The question of the extent of credit which is allowed by law to the grower of hops, before his duty is collected, is fully entered into in the Report.

"By the original Act of Anne a credit of six months was allowed, but under the 1st and 2d Wm. 4, c. 53, a full year must now elapse before the duties are entirely discharged—an extent of credit very much exceeding that which is allowed in any other case. It will be sufficient here to state, that the Commissioners of Inquiry refer to their Reports on paper and on malt, in which they have fully explained the opinion they entertain, 'that excise duties ought to be collected upon the articles charged, as soon as those articles shall be ready to be disposed of by the maker,'—an opinion which they conceive to apply with greater force to the case of hops, in which a much more protracted period of payment is given, although the sale of hops generally takes place as soon as they are ready for consumption.

"The Commissioners, however, express their sense of the difficulty of withdrawing an indulgence, which is in part coeval with the imposition of the duty itself; but, being persuaded of the mischief which arises from the extension of credit in excise duties, they recommend that the attention of the department of excise should be called to the possibility of effecting an arrangement on terms satisfactory to the planters, under which this duty might, with respect to the time of payment, be assimilated to the other duties of excise.

The Commissioners conclude their observations by a few comments on the effect which the high customs duty of 8*l.* 11*s.* per cwt. on hops imported from foreign countries has, in confining the supply in a great degree to the home grower, and thereby increasing the cost to the consumer in England—a species of monopoly which would prevent the consumer deriving the benefit of a reduction of duty, by a corresponding reduction of price in the market; and, under these circumstances, they express their opinion, that there seems to be no reason why the revenue should not benefit by the present amount of duty, more especially as hops are comprised in that class of articles to which they have already referred in their Seventh Report, as being more fitting subjects for taxation than those which may be reckoned among useful manufactures."

GLASS DUTIES.

(5 and 6 Will. IV. c. 77.)

THE new duty is 6*s.* 8*d.* on every one hundred pounds' weight of fluxed materials for making flint glass, with an additional duty of 2*d.* per pound, instead of the former duty of 6*d.*, on all excess in the manufactured article above the weight of the fluxed materials. A drawback of 18*s.* 9*d.* is allowed on every hundred pounds' weight of flint glass exported. The drawback on German sheet glass exported in panes is 4*l.* 4*s.* per hundred weight. But the act does not alter the drawback on crown glass not being German sheet glass.

Flint glass for exportation is not to be entitled to drawback unless properly manufactured and finished, and worth at least 5*d.* per lb. And glass exported in panes of a greater specific gravity than 2.800, and all coloured glass exported on drawback, are not to be entitled to the drawback allowed on crown glass, but only to the drawback allowed on flint glass.

Plate glass and German sheet or crown glass are not allowed to be made at the same time in the same house.

The drawback on unground and unpolished plate glass is repealed.

The restriction as to the making of plate glass of a greater thickness than five-eighths of an inch is repealed, and plate glass may now be made of any thickness. But no plate glass for exportation is entitled to the drawback which when ground and polished is of a less thickness than one-eigth of an inch.

There are various excise regulations in this Act of importance to the glass manufacturer.

We subjoin the following note on this subject from the Second Digest of the Reports of the Commissioners of Excise Inquiry, which has just been printed:—

"The Chancellor of the Exchequer has concurred in and acted upon the recommendations of the Commissioners of Inquiry, in so far as regards the abolition of the excise permits on wine, and to a limited extent of the excise survey on wine-dealers, agreeably to the Second Report of the Commissioners, and also by reducing the duty on flint glass from 6*d.* to 2*d.* per lb., in reference to which latter measure there cannot be a stronger confirmation of the correctness of the views of the Commissioners, as well as

of the expediency of the course pursued by the Chancellor of the Exchequer, than the fact, which it is as gratifying to know, as it is important in a national point of view, that already, within the short period which has elapsed since the announcement of the reduction of the duty, extensive glass manufactures, who had been compelled to close their works from the impossibility of carrying them on against the ruinous competition with illicit makers, are taking measures for putting their works again into a state of immediate activity.

"In point of fact, there seems to be every prospect, every right to assume that the loss of revenue consequent upon the beneficial measure which has been adopted by the Chancellor of the Exchequer, will be even at first but small, and prospectively, none;—whilst an impetus will have been given to a most important branch of our national manufactures, which will operate the more powerfully, and the benefits of which will be the more extensively diffused and felt, in proportion as that manufacture has hitherto been labouring under the depressing hand of the excise, subject to a ruinous duty, and to a still more ruinous competition with illegal manufacturers as well as to restrictions in the modes, and times, and processes, of the manufacture, such as to have proved altogether prohibitory of any attempt at those immense improvements of which it is well known the manufacture is susceptible, were the manufacturer left to the free and unfettered exercise of his skill, enterprise, and capital.

"It is clearly, therefore, an object of national importance, as well as one in which the interests of the manufacturers are deeply concerned, that such freedom from excise restriction should, in conformity with the recommendation of the Commissioners of Inquiry, be afforded at as early a period as possible, by the total abolition of the reduced duty of 2*d.* per lb.; and it is superfluous, after what has been stated, to point to the extensive national benefits which will arise from a similar abolition of the other heads of glass duties, and of their concomitant restrictions and regulations, whenever the finances of the country will admit of so important a measure of relief."

ABSTRACT OF PRIVATE BILLS.

SESSION 1835.

Abstract of Petitions and Private Bills in Parliament, Session 1835.

Petitions presented to the Commons	181
Lord's Bills	44
	225
Bills read a first time	201
" second time	180
" third time	166
Number which received the royal assent	161

POLITICAL RETROSPECT FOR OCTOBER, 1835.

GREAT BRITAIN.

THE past month has afforded scarcely any thing to relate under the head of our domestic politics.

The public attention since the rising of parliament has been chiefly occupied with the proceedings of the courts which have been held throughout the country for the annual revision of the registration lists of electors. This year the contest of parties has been waged on this arena with much more zealous effort and more systematic tactics than on any former occasion. The objections that have been made to names in the overseers' lists have been unusually numerous, and the decisions of the barristers have accordingly been watched in all quarters, as furnishing important indications in regard to the results of the ultimate struggle at the polling-booths, whenever that may come. It is extremely difficult however to say what is the real amount and character of the effect produced by the great exertions that have been made, or in what state the constituency has been left upon the whole by the purification it has received. As usual, in their public organs, both the friends of the ministry and their opponents profess to have been the gainers—each party, probably, being led to that conclusion as much by their wishes and hopes as by any thing else, and at all events holding it good policy to keep up the spirits of their adherents by such representations.

The prorogation of parliament, and the dispersion of public men over the country after their seven months' close imprisonment in the metropolis, have also been taken advantage of, for the getting up of numerous provincial displays in the way of dinner-eating and speech-making. The tone which this kind of agitation has hitherto taken, certainly indicates any thing rather than an approximation of the two great contending parties in the state.

FRANCE.

THERE are rumours of fresh changes in the French Cabinet, but for the present every thing remains in much the same state as when we last wrote, nor have any very important events occurred within the kingdom. According to one account, which, however, is disputed, and does not seem very probable, the ministerial differences are said to proceed from questions of finance, Louis Philippe having opposed the plan of M. Humann, the minister of Finance, to reduce the Five per Cents.

Acting on the new laws as passed by the two chambers, government is following up its persecution of the press. What the French papers call "a commission of censorship" (and the *thing* seems to merit the *name*) has been established in all the large cities that possess a theatre, a copper-plate or newspaper press.

Certain secret political societies have been discovered in the army. These were mainly introduced and kept up by a few of the common soldiers and non-commissioned officers, that had been tampered with by the Republican party, who seem resolved to consider their game not yet lost. A captain of the 37th regiment of the line has been implicated. According to their constitution and the oaths of their members, these military lodges or clubs were to communicate with one another on every possible occasion, and they were to continue their secret labours until the number of their proselytes should enable them to strike a blow—dethrone the king, and establish a pure democracy. The proceedings of these societies, which are fatal to the discipline of that army in which they once get established, never are kept secret. While these silly men were amusing themselves with their shiboleth and mysterious signs, every thing they did was reported to the government.

It appears that the demoralizing infection of this clubism had reached the army of observation on the Spanish frontier. An order has been sent to General Castellan, who commands a division of that army, to send every regiment, in which it should be proved that secret societies existed, to Algiers and the coast of Africa. The French government seem determined to persevere in a system that will be fatal to the tranquillity of that country, and eventually to the security of their new conquest and colony. They throw all their turbulent and vicious men—all their most desperate blackguards upon Algiers, where it would be necessary above all things to conciliate the Arabs and other natives, by an exhibition of European virtue, moderation, and gentleness. We have alluded on a former occasion to the atrocities that have been committed on the African coast by a reckless, fierce, and dissolute soldiery. Even according to French officers and writers they are frightful!

As long as these practices obtain Algiers can never be any thing but a loss to the French nation.

Early in October, four men were arrested on suspicion of being engaged in a plot to assassinate the King on his road from Paris to Fontainebleau. Some of the political prisoners who lately escaped from their confinement have been retaken.

Louis Philippe has announced furloughs or leaves of absence for 40,000 men, which is, in other words, a temporary reduction of his army to that amount. Coupled with similar reductions in other continental armies, this should seem to indicate that the chances of a war are more remote than ever. We see it mentioned in various places that a plan for the rapid transmission of telegraphic despatches between London and Paris is almost completed. Nine telegraph stations are to connect London with our Channel coast, and fourteen stations will connect Paris with the opposite side of the Channel. It is calculated that thus (when the weather is clear), news may pass from London to Paris, or *vice versâ*, in an hour and a half. Some doubts, however, are entertained, as to whether the French government will permit the establishment of this means of communication. The first employment of the telegraphs would be to transmit the price of stocks, but they of course could be made to serve other purposes.

According to the Parisian newspapers the French funds are improving. A part of the new force about to be sent out to Africa is to proceed to Oran, and there take vengeance on the Arabs for the insults they are said to have offered to the French flag.

What Messieurs les Journalists call "insults," we should term a victory gained by the natives in defence of their country. The French, who have been some years at Oran without making the least impression on the country, attempted during the past summer to advance their line of posts from the narrow slip of coast, and subject the territory by force of arms, and in this attempt they were thoroughly beaten and driven back to the shelter of the walls of Oran by a host of Arabs, who, in their frequent encounters with regular troops, have learned some military discipline, and who are said on this occasion to have had several Europeans among them to manœuvre and to direct their attacks.

The interminable story about the American indemnity, to which we have had to allude so often, has not yet reached its *dénouement*. General Jackson will not apologize for his hard words, and the French government who made the apology a *sine qua non* will not part with their hard cash. It is now stated that the stern old president threatens to stop all commercial intercourse between the United States and France, in case the fixed instalment of the indemnity of 25,000,000 francs should not be paid into the States' treasury by the 1st of December.

SPAIN.

IN our retrospect of last month we were not quite certain as to the composition of the new liberal cabinet, which it now appears stood as follows:—

M. Mendizabal, President of the Council and Minister of Finance.

General Alava, Foreign Affairs.

Gomez Becerra, Chief of the Saragossa Junta, and an old member of the Cortes, Minister of Justice.

M. Ulloa, Procurador for Cadiz, Minister of Marine.

M. Almodovar, Chief of the Junta of Valencia, Minister of War.

M. Martin de los Heros, Minister of the Interior.

These ministers immediately revoked the royal order that declared Madrid to be in a state of siege, and, among other important measures, tried to suppress or gain over by an exposition of their new and liberal plan of government, all

those provincial revolutionary juntas that had arisen under Toreno's administration in different parts of the kingdom. With the exception of the juntas of Andalusia, they were successful in all these explanations, but the Marquis de las Navas, the head of those juntas, who was with an Andalusian army of 10,000 men, continued his march on Madrid, where people were for some time in great anxiety and doubt as to his scope and intentions.

The late, or Toreno ministry, by a decree, dated Sept. 3rd, had denounced all the juntas as illegal and treasonable; but Mendizabal, by a decree of the 25th, annulled that of the 3rd, granting a full amnesty to all comprised within it. This was natural enough, seeing that two of Mendizabal's colleagues in office had belonged to these juntas only a few days before. It was also judicious, in the deplorable weakness of government, to make concessions, and conciliate those whom they could not control by force; but moderate men are afraid that the new cabinet may have pledged itself to *too much*, and have given confidence and strength to a party that does not seem disposed to forego old democratical dreams, or be satisfied with anything less or more than the One Chamber Cortes.

The Urban militia of Madrid, dismissed and disarmed by the Torenos for their revolt on the 16th and 17th of August last, have received back their arms and been re-organized. Commissioners have been appointed to draw up a new electoral law. These men have all been chosen from the extreme rank of the ultra-liberal party. Everything goes to show that Spain is on the eve of many new and hazardous changes.

It certainly appears that since the appointment of the Mendizabal cabinet, more life and spirit has been thrown into the management of affairs and the prosecution of the war against Don Carlos. The subaltern functionaries, the *employés* and clerks of government, who have long been in Spain about the laziest and most dilatory of mortals, have been pretty generally replaced by more active men, and some discrimination has been shown, not merely in naming generals and commanders-in-chief, but in filling up the inferior ranks of the army. A recent traveller tells us that half of the captains and lieutenants of Rodil's and Mina's army were corpulent old gentlemen who had entered the service some seven and twenty years ago, and, after fighting the French in the war of Independence, had done nothing for twenty years. No wonder that they could never keep up with the light-footed Basques, and the young indefatigable Navarrese, of Don Carlos.

But the capital resource of the new ministry lies in the financiering talent and stock-exchange experience of Mendizabal, who is now labouring to restore the ruined credit of Spain, and procure fresh loans by the appropriation and sale of church and monastic, or, as they call it, national, property. The struggle of patriotism and constitutionalism is more and more resolving itself into a stock broker's job, and the fate of the Spanish Queen and Cortes is locked up in the *Bourses* of London and Paris.

Count de las Navas and his juntas, with the mass of the very ultra-liberals, proposed that a constituent assembly of the Cortes should be convoked forthwith, to modify the constitution, to set aside the regal convocation and derive their charte directly from the nation, instead of considering it as octroyé, or granted by the sovereign. Under these generalities, however, there was doubtless concealed the secret design, or wish, of driving Christina, the Queen Regent, from the government, dissolving the council of regency named by her husband, the late King Ferdinand, and extinguishing the Chamber of Proceres or upper house.

As to the council of regency it is almost as well as dissolved already, for about the best members of it, as Las Amarillas and Zea Bermudez, after having figured unsuccessfully in the ministry, have not only been discredited both by court and country, but have lost their confidence in themselves and much of their earnestness in the cause. Under these circumstances Christina must depend wholly on whatsoever cabinet may be imposed upon her, and the regency council will become a mere name. For the moment, it appears that Mendizabal has induced Las Navas and the Andalusian juntas to submit and allow time for the political modifications. The Andalusians who were at Despenaperros and Manzanares, within a few short marches of Madrid, have volunteered, and are now being organized into battalions that will be sent as soon as possible into the north against Don Carlos. In this manner it is said that 20,000 men will be disposable. It is as difficult as ever to get at the truth, but it seems to be generally allowed that the Queenite army has gained several advantages over the Carlists. Not to mention other skirmishes and operations on a small scale, General Cordova defeated, with considerable loss, a Carlist corps-d'armée on the 25th of September at Villacayo. On the 9th of October the Navarrese battalion of Don Carlos which had penetrated into Catalonia was signally defeated, and O'Donnell, the second in command, made prisoner. On the 11th General Cordova entered Puenta de la Reyna with a considerable convoy of provisions; on the 12th a Christino column of 6000 foot and 200 horse entered Pampeluna without encountering any opposition from the Carlists; on the 13th 3000 of the Queen's troops advanced from Puento de la Reyna to Mendigorria, and re-established the bridge; Gurrea's column marched from Lerin to Larraga equally without opposition. The Count d'Espagne, one of the main props of the Carlist cause, was obliged to fly for safety into France. This was a most serious loss to the pretender, but we see it is stated that the Count has *evaded the vigilance of the French police* and again joined the army of Catalonia. A ship conveying arms, ammunition, clothing, &c., to the Carlists, has been captured by the Queenites. On the 15th of October a long conference took place at Larraga between General Cordova and the Carlist commander Eguia, who has succeeded General Starralde. After the interview, which lasted six hours, Eguia returned to the head-quarters of Don Carlos, who had been for several days at Estella.

Gangs of robbers, who sometimes pass for Carlists and at others for Constitutionalists, have been taking great advantage of the troubled, horrid state of the northern provinces. On the 13th a party of twenty of the Queen's soldiers fell in with a troop of the kind, and killed their chief and one of the banditti; but this will do little towards suppressing those marauders, who will increase in numbers and audacity as this detestable civil war is prolonged. According to some of those "private letters" which newspapers *publish*, the nobility of Spain have come forward to assist Mendizabal with their own private fortunes. A committee of seven grandees is said to have offered, in the name of their order, to raise, arm, and support ten battalions during the rest of the civil war; while the Duke of Ossuna, besides paying his part of the general subscription of the peers, has volunteered to arm and maintain 100 lancers at his individual expense. The Spanish agents in London have been instructed to apply to our government for a further accommodation of 50,000 stand of arms.

We regret to say that General Alava, whose prudence and political moderation are well known, remained but a very few days on the cabinet list as minister for foreign affairs. On the 4th of October the Queen Regent, by a royal decree, made known her acceptance of his resignation, and that his portfolio should be held *ad interim* by Mendizabal, who was already president of the council and minister of finance. The general was to return to his embassy at London.

PORTUGAL.

A NEW candidate for the hand of Donna Maria has started up in the person of the Prince of Saxe Cobourg Gotha, who, it appears, is travelling somewhere among the Turks.

Don Miguel, who supports the royal style, and keeps a Portuguese newspaper of his own in Italy, has put forth in that journal a curious address to his nation. The point on which he chiefly dwells, and one on which he will carry the sympathies of many of the Portuguese with him, is the seizure and sale of church property. But for several reasons it is worth while transferring this characteristic document to our pages.

"Portuguese!—The ills which overwhelm you pierce me to the soul. The vile slavery to which the insurgents are desirous of reducing you fills me with indignation and horror. The revolutionists have not been satisfied with lighting up, in the midst of you, the most unjust, the most perfidious, the most atrocious war—with uniting themselves to foreign mercenaries, for the annihilation of the wise and salutary institutions of our ancestors—with having insulted religion—with having trodden under foot the most sacred laws—with having separated themselves from the supreme empire of the church—and with having established a most infamous and most horrible schism; they are now making prepara-

tions for disposing of a great mass of Portugal to ambitious foreigners. Ecclesiastical property—that fine property—those majestic edifices, the gifts and legacies of the piety of our ancestors, which were possessed and inhabited by your sons, your relatives, your friends, and by so many virtuous men, and which brought to mind so many glorious epochs of the monarchy, are about to be put up to public auction, to pass into the hands of foreigners—the old and irreconcileable enemies of our industry, of our religion, and our customs. This property—these edifices—these temples—where hitherto virtue found an asylum, and misery daily succour where God was served, and where the holy ceremonies were celebrated with so much pomp, will soon be converted into warehouses, and theatres, and houses of gaiety, and perhaps of prostitution. Nothing more can in fact be expected from foreigners, corrupted and depraved in their doctrines and their customs—enemies and depreciators of the true church and the holy religion of Jesus Christ. Portuguese! Our country is about to be sold, and the product of the sale will, by fraudulent and dark transactions, return into the hands of these same purchasers. The clergy are about to be reduced to horrible misery and a fatal dependence; it will fall into contempt; it will receive the wages of government and be its slave; and the Lusitanian Church, formerly so flourishing, will be reduced to nothing—will lose its glory, its majesty, and the pomp of its worship. Portuguese! These are the fatal precepts of impious men, who entitle themselves the liberators of the country. As for me, I am always your defender, your real friend. I will never cease to oppose the ills which oppress you, and the tyranny by which you are enslaved. I protest against the sale of the ecclesiastical property, and against all the usurpations and sacrilegious acts of violence that the usurping government has dared to commit. I will do all that I can to defeat its projects—all that can be required of me by religion, honour, and the love I bear you. I again declare that, when I shall re-appear in the midst of you—when I shall re-ascend the throne which belongs to me, and which I hope will be restored to me by the God of the great Alphonso, I will not recognise the validity of the sale of this property; I will be inexorable. All the purchasers, whether natives or foreigners, shall lose their capital. No law, no right, can validate such a sale, nor oppose my protest with justice. Portuguese! Look upon your tyrants with horror—detest their measures and their dark designs. Consent not that the patrimony of relatives—the property of the church, should go into the hands of foreigners; but wait awhile—wait—the time of salvation is not far off. Portuguese take no vengeance—entertain no private hatred. When I shall be in the midst of you, I shall be the first to pardon. All the Portuguese are my children. I shall forget the indiscretions of which they have been guilty. I have no intention but that of healing your wounds, and of uniting in one bond the great Portuguese family. My wishes are for the happiness of the nation; my desire is to repair the evils of revolution. All who join me and abandon an impious faction shall be received as friends. Be of good cheer, Portuguese. Let valour and intrepidity be your motto when the favourable moment shall have arrived—be firm against tyranny, and heaven shall crown your fidelity and your patience, as well as the wishes and efforts of your sovereign,

"MIGUEL."

The Don's hit at heretical, wicked foreigners, is meant for us Englishmen, though it should appear he is mistaken in one of his facts, as scarcely a capitalist of our nation has gone into the market for the Portuguese church property, which, however, finds rather a ready sale, and fetches high prices.

This prince, who declares himself to be so certain of recovering possession of the throne of Portugal, has been residing for some time at Venice, but has recently returned to Rome, where he is treated with the greatest distinction. He travels under the name of Count de Ramalhao. Instead of being in want of money he seems to have copious treasures at his command, and his expenditure is said to be enormous. The nobility, the cardinals, archbishops, bishops, and all the hierarchy of Rome treat him as if he were king. This is quite natural. The internal affairs of Portugal are tranquil, and the government has been chiefly occupied by questions of trade and finance. The official paper, the "Diario do Goberno," of the 3rd of October, contained the following decree:—

"Her Majesty having, by a decree of the 23rd April, this year, resolved to reduce to 4 per cent. the interest of the debt which was at 6 per cent., this operation being nearly completed, has now determined, with the same view to the diminution of the national burdens, that the measures prescribed by the said decree of 23rd April, shall be applied to all those stocks which bear interest at 5 per cent., and the payment of which is confided to the Counsellors of the Junta of Public Credit. The holders of five per cents. who dissent must present their bonds (apolices) to the committee from the 1st to the 31st October. Those who do not declare their dissent within that time will be presumed to have agreed to the conversion. The payment of the principal and interest due to the end of the present half year will be made by the committee from the 2nd of May, 1836."

It has been determined to march the auxiliary corps, which has been so long kept on the frontier, (to assist the Queen Regent, in case of need,) into the northern provinces of Spain; and the latest French papers state that 1500 men, forming the advanced guard of the corps, entered Zamosa on the 6th of October.

THE HOLY ALLIANCE.

THE grand review at Kalisch, on which point troops had been so long concentrating, and which, according to some of our newspaper theorists, was to lead to an almost general continental war, has passed over as a splendid pageantry, and so has the conference of the Emperors of Russia and Austria and the King of Prussia at Toplitz.

An event that has immediately succeeded does not look very warlike. The Emperor of Austria has made a considerable reduction in his army, and this good or consoling example is said to have been followed by his Prussian Majesty. It is allowed on all sides that the finances of Russia are in a sadly embarrassed state—another excellent assurance that peace will not be disturbed for the present. We do not pretend to know what passed at that close meeting, but another result of the Toplitz conference is not unreasonably supposed to be a determination to preserve tranquillity between the kingdoms of Holland and Belgium.

The States General of Holland met on the 20th of October. The King's speech was moderate and pacific, containing a favourable picture of the internal prosperity of the country. It had a marked influence on the funds. The speech made no allusion to the Toplitz conference, but it seems to be understood that it was *there* arranged that the differences still subsisting between the Dutch and Belgians should be settled without any recourse to arms.

HUNGARY.

THOUGH this country is included in the dominions of the imperial House of Hapsburg, it has a constitution of its own, and unlike Austria and the dependencies of that empire, it is governed, in most essentials, by an hereditary and an elective chamber. The efforts which have been made here of late years for the extension of a rational liberty—for the education of the people—for the improvement of roads—the opening of canals, and the rendering navigable the magnificent river Danube—are in the highest degree interesting; but unfortunately our news-collectors hardly ever devote a line to the subject. This omission, we suspect, does not arise merely from their mistake of considering Hungary as nothing but a pale satellite of Austria. The transactions of the national diet, the reports, newspapers, and books of the Hungarians, which formerly used to be in Latin, are now all in the Magyar, or Hungarian language—an idiom that is most difficult to learn, and that is known to very few foreigners indeed.

The Diet has been sitting, and many important national questions have been debated in it with great spirit. The magnates, or peers, had a conference with the deputies, or commons, on the 22nd of September, which ended in a friendly and satisfactory manner. Having settled the point of their new Emperor-King's title, which is to be Ferdinand V. of Hungary, the two houses passed a law relative to the peasantry. This law, called the Urbanic Law, had long been a subject of contention. We believe the object of it is to extend the rights of the peasants, who not very long ago were complete serfs. There certainly remains an im-

mense deal to do in Hungary, but the recent progress, the signs and indications are very promising.

This is a subject to which, on some early opportunity, we shall devote a separate article.

TURKEY.

After an expensive and somewhat exhausting effort Sultan Mahmoud has succeeded in suppressing the Albanian insurrection, which, however, is very likely to break out afresh next year. In the middle of September the Vizier of Roumelia defeated the insurgents, who imprudently gave him battle on an open field. After this the Turks entered Scutari, which may be considered as the Albanian capital, without any resistance. The Turkish squadron, which had been employed in blockading the Albanian coast, was then ordered to Tripoli.

Both Mr. Ellis, our envoy to Persia, and Lord Durham, our ambassador to Russia, were allowed to pass the Dardanelles with less than their usual impediments on the part of the Turks; and, whatever our party newspapers may say, the reception they met with at Constantinople was, in all respects, such as was due to the representatives of the majesty of Britain, nor was any, the least slight put upon our nation in their persons either by Russians or Turks.

CHRONICLE OF OCCURRENCES.

Sept. 24. The Right Hon. John Pitt, Earl of Chatham, the son of the first and the brother of the second William Pitt, died in his 80th year. The title is now extinct.

29. An extraordinary meeting of the Commission of the General Assembly of the Church of Scotland was held, to consider the course which should be adopted with respect to the commission for inquiring into the state of the Church. Drs. Cook and Chalmers made long and warm speeches on the subject, but ultimately it was agreed that every encouragement should be given to the inquiry.

— The Duchess of Kent and the Princess Victoria went to Ramsgate, to receive the King and Queen of Belgium, who arrived in the course of the day.

— The election of Lord Mayor for the city of London took place at Guildhall. The alderman in rotation, W. T. Copeland, Esq., M.P. was chosen.

Oct. 1. The new sheriffs, John Lainson and David Salomons, Esqrs. were in the usual manner inducted into office. Considerable interest was attached to the event, from the circumstance of Mr. Salomons being of the Jewish persuasion. In the evening, a dinner, at which the Lord Mayor presided, was given, to celebrate the inauguration. A letter from the Duke of Sussex expressed regret at the state of his health not permitting him to be present at a meeting which celebrated another triumph of liberal principles.

4. This day happening to fall on a Sunday, was pretty generally celebrated over the country in the different churches and chapels, as a centenary of the Reformation, the printing of the first English Bible (that of Bishop Coverdale) having, as appears from the Colophon, been finished on the 4th of October, 1535.

7. A fire broke out at the Milbank Penitentiary, near Vauxhall-bridge, which at one time assumed a very alarming appearance. Viscount Melbourne, Lord Bexley, and other noblemen and gentlemen arrived during its progress, and were very active in their exertions. No accident occurred, nor did any of the prisoners effect their escape. The fire has been ascertained to have originated accidentally.

11. Their Majesties, attended by a party, visited Greenwich, being the anniversary of the battle of Camperdown. A monument by Chantrey, erected under the orders of the King to the memory of Sir R. G. Keats, formerly governor of Greenwich Hospital, was exposed to public view for the first time. The inscription records that the late admiral was his Majesty's shipmate on board the Prince George, and that the monument was erected by the King to testify private friendship as well as esteem for the public character of the deceased.

13. The Pique frigate, having on board Lord and Lady Aylmer, returning from Canada, arrived at Portsmouth from Quebec, after a stormy passage. She struck on the coast of Labrador, in the straits of Belisle, but with great exertion was got off. The injuries which she received rendered the passage across the Atlantic a perilous adventure, and on her arrival in the Channel it was with great difficulty that she was brought into port. Her captain, the Hon. Henry Rous, brother to the Earl of Stradbroke, and the sailing master, were tried by a court martial for having run the vessel upon Point Forteau, but were fully acquitted from all blame, the evidence adduced tending to show that they had acted with skill, coolness, and intrepidity

14. A meeting was held at the town-hall, Birmingham, "to take into consideration the cruel oppression and aggravated sufferings to which the negroes of our West India colonies are still subjected, under the name of apprenticeship, notwithstanding the enormous sum of 20,000,000*l.* sterling granted to the West India proprietors by the British parliament; also to consider the propriety of presenting a memorial to Lord Melbourne, on the adoption of such resolutions as the meeting may deem expedient." Resolutions in the spirit of the requisition were agreed to.

19. The Queen, on a short tour through the country, arrived at Oxford, accompanied by Prince George of Cambridge and the Duchess of Saxe Weimar. Her Majesty visited the University, where the Duke of Wellington, as Chancellor, read an address of congratulation, to which a suitable reply was given.

21. The first stone of the city of London School (on the site of Honey-lane Market, Cheapside) was laid by Lord Brougham, in the presence of the committee appointed by the Common Council to superintend the institution, and the officers of the Corporation. A very large assemblage was present; and in the evening the event was celebrated by a dinner at the City of London tavern.

The Corporation of Cork having chosen a mayor and two sheriffs, the names of the parties were submitted, as is usual, to the lord lieutenant and privy council of Ireland for approval. The approbation was however withheld, on the ground of the elected individuals being Orangemen, and by implication partizans. Another election was thus rendered necessary, when a new mayor was chosen, but the rejected sheriffs were re-elected. After some discussion this election was approved. On the new lord mayor of Dublin being presented to the lord lieutenant, the recorder (F. Shaw, Esq. M.P.) made a speech, in which he expressed a hope that in any municipal reform which might be made, regard would be had to the peculiar construction of society in Ireland. His Excellency, in his reply, told the lord mayor to consider himself not as the chief or yearly nominee of a party, but as the head of a great community, and intimated that prosperity could only be attained by doing away with that artificial state of society alluded to by the Recorder, and assimilating the government of Ireland to that of Britain.

The Irish government, in answer to many applications, have decided that the military or police shall not be permitted to aid in the collection of tithes, nor be called out in any case of the enforcement of civil rights by distress, unless their presence be rendered necessary by actual riot.

On the 10th of August the Governor of Jamaica (Marquis of Sligo) suddenly dissolved the Assembly under somewhat singular circumstances. The address of the Assembly, in answer to the Governor's address on the opening of the session, being in a tone and spirit which the Governor did not approve, he came to the resolution of immediately dissolving the Assembly before it could proceed to any business, which he did in a speech pointing out the improprieties of the answer to his address, and throwing the blame of any ultimate proceedings on the conduct which had been pursued by the Assembly.

Some singular scenes have occurred during the month in Dublin at the sittings of the Commission to inquire into the election of Messrs. O'Connell and Ruthven. By a rule which the Commissioners had laid down no oral communications were permitted in court, every thing being conducted in writing. They had also decided against entering into a certain class of evidence tendered by the counsel for the sitting members. Upon this Mr. O'Connell appeared in court, to enforce, in person, his right to be heard; but was refused permission to speak. As he persisted, the chairman of the Commission adjourned the court, and the adjournment was repeated for three successive days, Mr. O'Connell appearing daily in support of his claim. On the two following days adjournments were again rendered necessary by the illness of the Chairman; and in the mean time Mr. O'Connell went down to Limerick to be present at a public dinner given to him in that city. Subsequently, after considerable altercation as to the choice of a proper individual, a new chairman has been appointed.

Major-General Middlemore, of his Majesty's service, and not an officer of the East India Company, has been appointed governor of St. Helena, which island will henceforth be under the direct authority of his Majesty's government, and not under that of the Board of Directors of the East India Company; the garrison, it is also stated, will consist of troops of the line, by which arrangement a great saving to the public will be effected in the reduction of the St. Helena corps.

APPROACHING MUNICIPAL ELECTIONS.

THE great subject of political interest during the coming month will be the elections of the new town councils throughout England and Wales under the Corporation Reform Act. Those whom this matter chiefly concerns are no doubt the inhabitants of the boroughs which are to enjoy the immediate advantage of the new system of government, and above all the householders who are actually to exercise for the first time the franchise which the law has put into their hands. Both these classes of persons, and the last mentioned especially, may be reasonably supposed to have in general already made themselves familiar with all the forms connected with the exercise of their new rights and duties; but there are probably many others of our readers whose attention has not been so directly called to the subject, to whom we shall be doing an acceptable service by presenting here a detail of those provisions of the statute which relate to the approaching elections, separated from the great mass of other matter with which they are mixed up in the hundred and forty-three long enactments which constitute the entire body of directions promulgated by the legislature for the regulation of our municipal corporations. This great measure of reform is really interesting to the whole country; and yet it may be apprehended that the extent and complication of the act have confined any intimate knowledge of its provisions to a comparatively small portion of the community.

The first thing that is to be noticed is, that by the 140th clause it is enacted that it shall be lawful for his Majesty, if he shall think fit, by the advice of his Privy Council, to substitute, for the present year, any other days coming before the 1st of February next for those mentioned in the act as the days on which the elections are to take place, or other matters to be done.

An Order in Council accordingly was issued on the 11th of September last, thus altering the times for the principal parts of the act coming into operation; but it is to be remembered that although such postponement has taken place for the present year, the days originally named in the act are those which must be adhered to for the several things required to be done in it in all future years.

The 9th, 10th, 11th, 12th, and 13th clauses are the enfranchising enactments of the statute, or those which specify the description of persons who are henceforth to form the municipal constituency. They are as follows:—

"9. And be it enacted, that every male person of full age who on the last day of August in any year shall have occupied any house, warehouse, counting-house, or shop within any borough during that year and the whole of each of the two preceding years, and also during the time of such occupation shall have been an inhabitant householder within the said borough, or within seven miles of the said borough, shall, if duly enrolled in that year according to the provisions herein-after contained, be a burgess of such borough and member of the body corporate of the mayor, aldermen, and burgesses of such borough: provided always that no such person shall be so enrolled in any year, unless he shall have been rated in respect of such premises so occupied by him within the borough to all rates made for the relief of the poor of the parish wherein such premises are situated during the time of his occupation as aforesaid, and unless he shall have paid on or before the last day of August as aforesaid all such rates, including therein all borough rates, if any, directed to be paid under the provisions of this Act, as shall have become payable by him in respect of the said premises, except such as shall become payable within six calendar months next before the said last day of August: provided also, that the premises in respect of the occupation of which any person shall have been so rated need not be the same premises or in the same parish, but may be different premises in the same parish or in different parishes: provided also, that no person being an alien shall be so enrolled in any year, and that no person shall be so enrolled in any year who within twelve calendar months next before the said last day of August shall have received parochial relief or other alms, or any pension or charitable allowance from any fund intrusted to the charitable trustees of such borough herein-after mentioned: provided, that in every case provided in this Act the distance of seven miles shall be computed by the nearest public road or way by land or water.

"10. And be it enacted, that no medical or surgical assistance given by the charitable trustees of any borough shall be taken to be such charitable allowance as shall disqualify any person from being enrolled a burgess as aforesaid; nor shall any person be so disqualified by reason that any child of such person shall have been admitted and taught within any public or endowed school.

"11. And be it enacted, that in every borough it shall be lawful for any person occupying any house, warehouse, counting-house, or shop to claim to be rated to the relief of the poor in respect of such premises, whether the landlord shall or shall not be liable to be rated to the relief of the poor in respect thereof; and upon such occupier so claiming, and actually paying or tendering the full amount of the last-made rate then payable in respect of such premises, the overseers of the parish in which such premises are situate are hereby required to put the name of such occupier upon the rate for the time being; and in case such overseer shall neglect or refuse so to do, such occupier shall nevertheless, for the purposes of this Act, be deemed to have been rated to the relief of the poor in respect of such premises from the period at which the rate shall have been made in respect of which he shall have so claimed to be rated as aforesaid: provided always, that where by virtue of any Act of Parliament the landlord shall be liable to the payment of the rate for the relief of the poor in respect of any premises occupied by his tenant, nothing herein contained shall be deemed to vary or discharge the liability of such landlord, but in case the tenant who shall have been rated for such premises, in consequence of any such claim as aforesaid, shall make default in the payment of the poor's rate payable in respect thereof, such landlord shall be and remain liable for the payment thereof in the same manner as if he alone had been rated in respect of the premises so occupied by his tenant.

"12. And be it enacted, that where any house, warehouse, counting-house, or shop in any borough shall come to any person by descent, marriage, marriage settlement, devise, or promotion to any benefice or office, such person shall be entitled to reckon the occupancy and rating, in respect of the

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

occupancy thereof by the person from or by whom such house, warehouse, counting-house, or shop shall have so come to him, as his own occupancy and rating conjointly with the time during which he shall have since occupied and been rated for the same, and shall be entitled to be enrolled a burgess in respect of such successive occupancy and rating, provided he shall be otherwise qualified as herein provided.

"13. And be it enacted, that after the passing of this Act no person shall be enrolled a burgess of any borough, for the purpose of enjoying the rights conferred for the first time by this Act, in respect of any title other than by occupancy and payment of rates within such borough, according to the meaning and provisions of this Act."

By the 15th clause it is directed that on the 5th of September in every year (but by the Order in Council, on the 7th of November for this year), the overseers of the poor of every parish wholly or in part within any borough shall make out an alphabetical list, to be called the Burgess List, of all persons who shall be entitled to be enrolled in the Burgess Roll of that year, according to the provisions of the act, in respect of property within such parish. These lists, signed by the overseers, are to be delivered by them to the Town Clerk of the borough on the said 5th of September (but this year on the 7th of November), and copies of them are also to be kept by the overseers to be perused by any person without payment of any fee, at all reasonable hours between the 5th and 15th of September (but this year between the 7th and 17th of November). The Town Clerk, moreover, is forthwith to get these lists printed, and to let any person have a copy on payment of a reasonable price, and is besides to cause a copy of all of them to be fixed on or near the outer door of the Town Hall, or in some public and conspicuous situation within the borough, for the whole of the week immediately preceding the 15th of September in every year (but this year for the week preceding the 17th of November). Of course, this has already been done in all the boroughs coming under the act. By the 16th clause it is provided that where there shall be no Town Clerk, or where that officer shall be dead or incapable of acting, all matters required by the act to be done by and with regard to the Town Clerk, shall be done by and with regard to the person executing duties in such borough similar to those of Town Clerk; and if there be no such person, then by and with regard to such fit person as the Mayor shall appoint. It is also directed that every precinct or place having no overseers shall, for the purpose of making out the aforesaid lists, be deemed within the least populous of the borough parishes adjoining thereto.

The 17th clause directs in what manner persons whose names have been omitted from the overseers' lists are to make their claims, and the manner in which notices of objections are to be given. A person whose name has been omitted is to give notice thereof to the Town Clerk in writing on or before the 15th of September in every year (but this year on or before the 17th of November). And every person whose name shall have been inserted in any Burgess List may object to any other person as not being entitled to have his name retained on the list, by giving notice of his objection in writing both to the Town Clerk and also to the person objected to on or before the 15th of September (but this year on or before the 17th of November). The Town Clerk is then to make out separate lists both of the claimants and of the persons objected to, and cause copies of each to be publicly exhibited for the eight days immediately preceding the 1st of October in every year (but this year for the eight days preceding the 1st of December). He is also to keep copies to be perused during the same time by any person, without payment of any fee, at all reasonable hours; and is to deliver a copy of either to any person applying for it, on payment of a sum not exceeding one shilling.

The 18th and 19th clauses direct the manner in which the revision of the lists is to be proceeded with. They are as follows:—

"18. And be it enacted, that the Mayor and the two Assessors hereinafter mentioned, to be chosen in every year by the burgesses of every borough, shall hold an open court within such borough, for the purpose of revising the said Burgess Lists at some time between the 1st day of October inclusive and the 15th day of October inclusive in the year 1836, and every succeeding year, having first given three clear days' notice of the holding of such court, to be fixed on or near the outer door of the Town Hall or in some public and conspicuous situation within the borough; and the Town Clerk of every such borough shall, at the opening of the court, produce the said lists, and a copy of the lists of the persons claiming and of the persons objected to, so made out as aforesaid; and the overseers, vestry clerks, and collectors of poor's rates of every parish wholly or in part within every such borough shall attend the court, and shall answer upon oath all such questions as the court may put to them or any of them touching any matter necessary for revising the Burgess Lists; and the Mayor shall insert in such lists the name of every person who shall be proved, to the satisfaction of the court, to be entitled to be inserted therein, according to the provisions of this act, and shall retain on the said list the names of all persons to whom no objection shall have been duly made, and shall also retain on the said lists the name of every person who shall have been objected to by any person, unless the party so objecting shall appear by himself or by some one on his behalf in support of such objection; and where the name of any person inserted in any one of the said lists shall have been duly objected to, and the person objecting shall appear, by himself or by some one on his behalf in support of such objection, the court shall require proof of the qualification of the person so objected to; and in case the qualification of such person shall not be proved to the satisfaction of the court the Mayor shall expunge the name of every such person from the said lists, and he shall also expunge from the said lists the name of every person who shall be proved to the court to be dead, and shall correct any mistake or supply any omission which shall be proved to the court to have been made in any of the said lists in respect of the name or place of abode of any person who shall be included in any such list, or in respect of the local description of his property: provided always, that no person's name shall be inserted by the Mayor in any such list, or shall be expunged therefrom, except in the case of death, unless notice shall have been given as is hereinbefore required in each of the said cases.

"19. And be it enacted, that every Mayor holding any court under this act for the revision of the said lists shall have power to adjourn the same from time to time, so that no such adjourned court shall be held after the 15th day of October in any year, and shall have power to require any overseer, or person having the custody of any book containing any rate made for the relief of the poor during that or any preceding year, in any parish wholly or in part within the borough, to produce the same and allow the same to be inspected at any court to be held for revision of the Burgess Lists, and shall have power to administer an oath to the Town Clerk and to the overseers, and to all persons claiming to be inserted in or making objection to the omission or insertion of any name in any of the said lists, and to all persons objected to in any of such lists, and to all persons claiming to have any mistake in any of such lists corrected, and to all witnesses who may be tendered or examined on either side; and the mayor and assessors shall, upon the hearing in open court, determine upon the validity of such claims and objections, and the Mayor shall, in open court, write his initials against the names respectively struck out or inserted, and against any part of the said lists in which any mistakes shall have been corrected, and shall sign his name to every page of the several lists so settled."—pp. 17—20.

For this first year, however, the 20th clause directs that the lists shall be revised by so many barristers as may be deemed necessary for that purpose by the authority empowered to appoint them, namely, the senior Judge, or in case of his absence from the kingdom, the next Judge in the commission of assize for the summer circuit in this year for every county. The appointment is directed to be made before the last day of September. Power is given to the Judge to appoint either one or more barristers to revise the lists for each borough in the county, and the same barrister to revise the lists of more than one borough. The pay of the revising barristers, at the rate of five guineas to each for every day he shall have been employed, over and above his travelling and other expenses, is to be paid out of the borough fund. The revising barristers are by the Order in Council to hold their courts at some time between the 1st and 15th of December (instead of between the 1st and 15th of October, as originally directed); and "shall," says the clause, "for that purpose during this year be in the

place and stead of the Mayor and Assessors, and shall revise the lists of burgesses in this year in the manner hereinbefore enacted concerning the Mayor and Assessors in every succeeding year." It is also enacted that if it shall be made to appear to the appointing Judge that for any cause the lists cannot be revised within the specified period, it shall be lawful for him and he is required to appoint one or more barristers to act in the place of, or in addition to, those originally appointed. The business of the first half of the month which is now about to begin will therefore consist of the proceedings in the courts of the revising barristers.

The 21st clause enacts that "every person authorized by law to make an affirmation instead of taking an oath shall make such affirmation in every case in which by this act an oath is required to be taken; and if any person taking any oath required by this Act, or making any affirmation instead of taking such oath, shall wilfully swear or affirm falsely, such person shall be deemed guilty of perjury, and shall be punished accordingly."

By the 22nd clause the town-clerk is ordered to cause the Burgess Lists thus revised to be fairly and truly copied into one general alphabetical list in a book, with every name therein numbered according to the order in which they stand, and he shall cause such book to be completed on or before the 22nd of October in every year (but on or before the 22d of December in this year). "And every such book," it is added, "in which the said Burgess Lists shall have been copied shall be the Burgess Roll of the burgesses of such borough entitled to vote, after the passing of this Act, in the choice of the Councillors, Assessors, and Auditors of such borough as hereinafter mentioned, at any election which may take place in such borough between the 1st day of November inclusive in the year wherein such Burgess Roll shall have been made and the 1st day of November in the succeeding year."

By the 23rd clause it is directed that copies of the Burgess Roll thus completed shall be every year printed, and sold at a reasonable price.

The 25th clause enacts that the persons to be elected as magistrates in every borough shall be a Mayor, a certain number of Aldermen, and a certain number of Councillors. These persons altogether for the time being shall be called the Council of such borough. The Aldermen shall be in all cases one-third of the number of the Councillors: and on the 31st of December in this year (as it is directed by the order in Council, instead of the 9th of November as originally appointed) the Councillors first to be elected under the provisions of the Act, and on the 9th of November in the year 1838, and in every third succeeding year, the council for the time being of every borough shall elect from the councillors, or from the persons qualified to be councillors, the aldermen of such borough, or so many as shall be needed to supply the places of those who shall then go out of office according to the provisions now to be stated; namely, "that upon the 9th day of November, 1838, and in every third succeeding year one-half of the number appointed as aforesaid to be the whole number of the aldermen of every borough shall go out of office, and the councillors immediately after the first election of aldermen shall appoint who shall be the aldermen who shall go out of office in 1838, and thereafter those who shall go out of office shall always be those who have been aldermen for the longest time without re-election: Provided always, that any aldermen so going out of office may be forthwith re-elected, if then qualified as herein provided; provided also, that the aldermen so going out of office shall not be entitled to vote in the election of a new alderman."

The 26th, 27th, and 28th clauses also relate to the election and retirement of the aldermen, and are as follows:—

"26. And be it enacted, That the mayor and aldermen shall, during their respective offices, continue to be members of the council of the borough, notwithstanding anything hereinafter contained as to councillors going out of office at the end of three years.

"27. And be it enacted, That whenever any extraordinary vacancy shall take place in the office of alderman of any borough, the council of such borough shall, within ten days after such vacancy shall occur, on a day to be fixed by the mayor for such purpose, elect some other fit person to fill such vacancy, either from the councillors or from the persons qualified to be councillors; and in any case any councillor shall be elected to fill the office of alderman, then the vacancy which will thereby be occasioned in the council shall be filled up at the time and in the manner hereinafter directed; and every person so elected an alderman to fill an extraordinary vacancy shall hold such office until the time when the person in the room of whom he was chosen would regularly have gone out of office, and he shall then go out of office, but may be re-elected if then qualified as herein provided.

"28. And be it enacted, That no person being in holy orders, or being the regular minister of any dissenting congregation, shall be qualified to be elected or to be a councillor of any such borough or an alderman of any such borough; nor shall any person be qualified to be elected or to be a councillor or an alderman of any such borough who shall not be entitled to be on the Burgess List of such borough, nor unless he shall be seised or possessed of real or personal estate or both to the following amount, that is to say, in all boroughs directed by this Act to be divided into four or more wards to the amount of 1000*l.*, or be rated to the relief of the poor of such borough upon the annual value of not less than 30*l.*, and in all boroughs directed to be divided into less than four wards, or which shall not be divided into wards, to the amount of 500*l.*, or be rated to the relief of the poor in such borough upon the annual value of not less than 15*l.*, or during such time as he shall hold any office or place of profit, other than that of mayor, in the gift or disposal of the council of such borough, or during such time as he shall have directly or indirectly, by himself or his partner, any share or interest in any contract or employment with, by, or on behalf of such council; provided that no person shall be disqualified from being a councillor or alderman of any borough as aforesaid by reason of his being a proprietor or shareholder of any company which shall contract with the council of such borough for lighting or supplying with water or insuring against fire any part of such borough."

The 30th clause enacts that the annual election of councillors shall take place on the 1st of November in every year; but by the order in council it is directed that for this present year the election shall be on the 26th of December. Then come the following six clauses, directing how many new councillors are to be elected every year, and the manner in which the election is to be conducted:—

"31. And be it enacted, that upon the 1st day of November, 1836, and in every succeeding year, one-third part of the number appointed as aforesaid to be the whole number of the councillors of every borough shall go out of office; and in the said year 1836, those who shall go out of office shall be the councillors who were elected under the provisions of this Act by the smallest numbers of votes in this present year, and in the next year, 1837, those who shall so go out of office shall be the councillors who were elected under the provisions of this Act by the next smallest numbers of votes in this present year, the majority of the whole council always determining, when the votes for any such persons shall have been equal, who shall be the persons so to go out of office; and thereafter those who shall so go out of office shall always be the councillors who have been for the longest time in office without re-election: provided always, that any councillors so going out of office shall be capable of being forthwith re-elected, if then qualified as herein provided.

"32. And be it enacted, that every election of councillors within any borough, according to the provisions of this Act, shall be held before the mayor and assessors for the time being of such borough, except as herein is excepted; and the voting at every such election shall commence at nine o'clock in the forenoon, and shall finally close at four o'clock in the afternoon of the same day, and shall be conducted in manner following: that is to say, every burgess entitled to vote in the election of councillors may vote for any number of persons not exceeding the number of councillors then to be chosen, by delivering to the mayor and assessors or other presiding officer as hereinafter mentioned a voting paper, containing the christian names and surnames of the persons for whom he votes, with their respective places of abode and descriptions, such paper being previously signed with the name of the burgess voting, and with the name of the street, lane, or other place in which the property for which he appears to be rated on the Burgess Roll is situated.

"33. And be it enacted, that at every election in any borough, the mayor, if it shall appear to him expedient for

taking the poll at such election, may cause booths to be erected, or rooms to be hired and used as such booths, for different parts of such borough, which may be situated either in one place or in several places, and shall be so divided and allotted into compartments as to the mayor shall seem most convenient; and the mayor shall appoint a clerk to take the poll at each compartment, and shall cause to be affixed on the most conspicuous part of each of the said booths the names of the parts for which such booth is respectively allotted; and no person shall be admitted to vote at any such election except at the booth allotted for the part wherein the house, warehouse, countinghouse, or shop occupied by him as described in the Burgess Roll may be; but in case no booth shall happen to be provided for any particular part as aforesaid, the votes of the persons voting in respect of property situate in any part so omitted, may be taken at any of the said booths; and public notice of the situation, division, and allotments of the different booths shall be given two days before the commencement of the poll by the mayor; and in case the booths shall be situated in different places, the mayor may appoint a deputy to preside at each place: provided also, that no election shall be holden under this Act in any borough in any church, chapel, or other place of public worship. * * *

"34. And be it enacted, that no inquiry shall be permitted at any election as to the right of any person to vote as a burgess in any borough, except only as follows; that is to say, that the mayor or other presiding officer shall, if required by any two burgesses entitled to vote in the same borough, put to any voter at the time of his delivering in his voting paper, and not afterwards, the following questions, or any of them, and no other:—

"1. Are you the person whose name is signed as *A. B.* to the Voting Paper now delivered in by you?

"2. Are you the person whose name appears as *A. B.* on the Burgess Roll now in force for this borough, being registered therein as rated for property described to be situated in ? [*Here specify the street, &c., as described in the Burgess Roll.*]

"3. Have you already voted at the present election?

And no person required to answer any of the said questions shall be permitted or qualified to vote until he shall have answered the same; and if any person shall wilfully make a false answer to any of the questions aforesaid, he shall be deemed guilty of a misdemeanor, and may be indicted and punished accordingly.

"35. And be it enacted, that the mayor and assessors shall examine the Voting Papers so delivered as aforesaid, for the purpose of ascertaining which of the several persons voted for are elected; and so many of such persons, being equal to the number of persons then to be chosen, as shall have the greatest number of votes, shall be deemed to be elected; and in case of an equality in the number of votes for any two or more persons, the mayor and assessors, or any two of them, shall name from amongst those persons for whom the number of votes shall be equal so many as shall be necessary to complete the requisite number of persons to be chosen; and the mayor shall cause the Voting Papers to be kept in the office of the town clerk during six calendar months at the least after every such election; and the town clerk shall permit any burgess to inspect the Voting Papers of any year, on payment of 1*s.* for every search; and the mayor shall publish a list of the names of the persons so elected not later than two o'clock in the afternoon of the day next but one following the day of such election, unless such day be Sunday, and then on the Monday following.

"36. And be it enacted, that if the mayor of any borough shall, at the time when it shall be necessary to execute the powers and duties herein provided with respect to elections, be dead, absent, or otherwise incapable of acting, the council of such borough shall forthwith elect one of the aldermen to execute all such powers and duties in the place of the mayor; provided that in the first election of councillors and of auditors and assessors, as hereinafter provided, the mayor alone shall act with all the powers and duties hereinbefore enacted concerning the mayor and assessors jointly in such elections."

The 37th clause relates to the election of the two auditors and the two assessors, who are to be chosen by the burgesses from the persons qualified to be councillors. The day for the first election of these officers is appointed to be the 1st of March, 1836; and for every subsequent election the same day of every following year. The manner of the election is to be the same as for the councillors. No burgess is to be elgible as auditor or assessor who shall be of the council, or who shall be the town-clerk or treasurer of the borough.

By the 38th clause it is directed that all the existing members of the Common Council or governing body of the borough shall go out of office, and their whole powers and duties shall cease, immediately after the declaration of the first election of councillors under the new Act; "provided nevertheless," it is added, "that any of the persons so going out of office shall be eligible to be elected and appointed under the provisions of this Act: provided also, that such persons as are justices of the peace in any borough at the time of passing this Act shall continue to have and exercise all the powers which at the time of passing this Act they have as justices of the peace, until the 1st day of May, 1836, and no longer: provided also, that in every borough in which, by statute, charter, bye-law, or custom, any election is appointed to be holden between the day of passing this Act and the 1st of May next, both inclusive, no such election shall be holden, but every person holding office in any borough on the day of the passing of this Act shall continue to hold such office, and to have all the powers, and be subject to all the duties, and be entitled to the same salary and fees of such office, as he would have had and been if elected to such office between the day of the passing of this Act and the said 1st of May until the time provided by this Act for him to go out of office; any statute, charter, bye-law, or custom notwithstanding."

The next series of clauses relate to the division of certain boroughs into wards.

By clause 39th the revising barristers are authorised and required to divide the boroughs into the number of wards which the Act assigns to each within six weeks after the passing of the Act, and to determine and set out the extent, limits, and boundary lines of such wards, and what portions of the borough shall be included therein respectively. This division being transmitted to one of the Secretaries of State, and published in the London Gazette, shall, if approved by his Majesty, by advice of his Privy Council, be deemed to be in force till altered by authority of Parliament. If not approved by the King in Council, it shall still be in force "until such time as his Majesty shall by advice of his Privy Council, upon further information and report from such barristers, definitively approve the division of such borough into wards in manner hereinbefore mentioned."

After having fixed the boundaries of the wards, the barristers are directed by the 40th clause to apportion the whole number of councillors assigned by the Act to the borough among the several wards; "and in assigning," the clause goes on, "the number of councillors to each ward, the said barrister or barristers shall, as far as in his or their judgment he or they may deem it to be practicable, have regard as well to the number of persons rated to the relief of the poor in such ward as to the aggregate amount of the sums at which all the said persons shall be so rated: provided always, that the number of councillors assigned to each ward shall be a number divisible by three; and a copy of the particulars of the number of councillors so assigned to the several wards of the borough shall be forthwith transmitted to one of his Majesty's principal Secretaries of State, and, subject as aforesaid to the approval of his Majesty by the advice of his Privy Council, shall be published in the London Gazette, and another copy of such particulars shall be delivered to the town clerk of the borough, to be by him safely kept among the public documents of such borough; and the number of councillors so assigned to each ward of such borough shall, after such publication as aforesaid, be the number to be elected in such ward, and shall so continue until the same shall be altered by authority of Parliament: provided always, that if his Majesty, by the advice of his Privy Council, shall not approve the number of councillors so assigned to each ward, such publication shall nevertheless be made, and the number of councillors so assigned to each ward of such borough by such barrister shall be the number to be elected in such ward at any election of councillors under this Act until such time as his Majesty shall, by advice of his Privy Council, upon further information and report from such barrister, definitely approve such assignment in manner hereinbefore mentioned."

The following clauses direct the manner of proceeding in the ward elections:—

"43. And be it enacted, that in every case in which there shall be a division into wards of any borough, the burgesses of every such ward, and none others, shall on the day fixed for the first election of councillors, separately elect from the persons qualified to be councillors the whole number of councillors assigned to such ward respectively; and on the 1st day of November in any subsequent year shall separately elect from the persons qualified to be councillors one third part of the whole number of councillors assigned to such ward, and on the 1st day of March next after the first election of councillors in such ward, and in every subsequent year, shall separately elect from the persons qualified to be councillors two assessors for such ward; and every such ward election first after such division into wards of any such borough shall be held before the mayor, or the person whom the mayor for the time being shall appoint in that behalf, and in every succeeding year shall be held before the alderman whom the councillors chosen in such ward shall yearly appoint in that behalf and before the two assessors of such ward; and the assessors who shall hold the Court for revising the Burgess Lists with the mayor shall be the assessors of the mayor's ward, and the votings and others proceedings in all other respects at such ward elections shall be conducted in the same manner as at elections for councillors or assessors respectively by the burgesses of the whole borough, and the alderman and assessors of each ward shall have the same powers in regard to elections in their ward as the mayor and assessors for the whole borough if not divided into wards; and every person so elected a councillor or assessor in such ward shall hold his office for the same time that he would have held it if he had been elected by the burgesses of the whole borough and if the number elected in such ward had been the whole number for the borough.

"44. And be it enacted, that every burgess of any borough shall be entitled to vote in the election of the councillors and assessors to be chosen within that ward in which the property of such burgess for which he appears to be rated on the Burgess Roll for the time being of such borough shall appear to be situated, and not otherwise; and if any burgess shall be rated in respect of distinct premises in two or more wards, then he shall be entitled to be enrolled and to vote in such one of the said wards as he shall select, but not in more than one.

"45. And be it enacted, that for the purpose of better ascertaining who are the burgesses of any such ward, the Burgess Roll of every borough so divided into wards shall thenceforward be made out, by or under the direction of the town clerk, in alphabetical lists of the burgesses in each ward, to be called "Ward Lists."

"46. And be it enacted, that if at any election of councillors or assessors for any borough any person shall be elected a councillor or assessor in more than one of the wards of such borough, he shall within three days after notice thereof choose, or in his default the mayor shall declare, for which one of the said wards such councillor or assessor shall serve, and such person shall thereupon be held to be elected in that ward only which he shall so choose, or which the mayor shall so declare."

In case of any extraordinary vacancy in the office of councillor, auditor, or assessor for any borough, it is directed by the 47th clause, that on a day to be fixed by the mayor, or in the case of a councillor or assessor, where the borough shall have been divided into wards, by the alderman of the ward in which such vacancy has happened (such day not to be later than ten days after such vacancy), the burgesses entitled to vote shall elect another qualified person to supply the vacancy. The mode of election shall be the same as that provided for the ordinary election of councillors; and the person elected shall hold his office until the time at which the person in room of whom he was chosen would regularly have gone out. The clause concludes, however, with the proviso, "That after the full number to be regularly elected of the councillors in any year shall have declared their acceptance of office no new election of councillors shall be made by reason of such extraordinary vacancy, unless the number of councillors remaining after such vacancy shall not exceed two-thirds of the whole number of the council of such borough."

By clause 48 it is enacted, "That if any mayor, alderman, or assessor of any borough who shall be in office at the time herein appointed for the revision by them of the Burgess List under this Act, or for any election of councillors, assessors, or auditors which he is required to conduct or declare, shall neglect or refuse to revise such Burgess List, or to conduct or declare such election as aforesaid, every such mayor, alderman, and assessor shall for every such offence, forfeit and pay the sum of one hundred pounds; and if any overseer of any parish wholly or in part within any borough shall neglect or refuse to make out, sign, and deliver such list as aforesaid, or if the town clerk of any borough shall neglect or refuse to receive, print, and publish such lists as aforesaid, or if any such overseer or town clerk shall refuse to allow any such list to be perused by any person having right thereunto, every such overseer and town clerk respectively for every such offence shall forfeit and pay the sum of fifty pounds; and the said penalties hereby in such case imposed shall be recovered, with full costs of suit, by any person who will sue for the same within three calendar months after the commission of such offence, by action of debt or on the case in any of his Majesty's superior courts of record; and the money so to be recovered shall, after payment of the costs and expences attending the recovery thereof, be paid and apportioned as follows; that is to say, one moiety thereof to the person so suing, and the other moiety thereof to the treasurer to be appointed by virtue of this Act, to be by him applied in aid of the borough fund herein-after mentioned."

The 49th clause is that which provides for the annual election of the mayor. By the order in council, it is directed that the first election of mayor in each borough shall take place on the 1st of January, 1836; but for the future, the clause enacts, that "On the ninth day of November in every year the council of the borough shall elect out of the aldermen or councillors of such borough a fit person to be the mayor of such borough, who shall continue in his office for one whole year; and in case a vacancy shall be occasioned in the office of mayor of the borough during such year by reason of any person who shall have been elected to such office not accepting the same, or by reason of his dying or ceasing to hold the said office, the council of the borough shall within ten days after such vacancy elect out of the aldermen or councillors of the said borough another fit person to be the mayor thereof for the remainder of the then current year."

The 50th and and 51st clauses are as follows:—

"And be it enacted, That no person elected a mayor, alderman, or councillor, or auditor or assessor, for any borough, shall be capable of acting as such, except in administering the declaration herein-after contained, until he shall have made and subscribed before any two or more such aldermen or councillors (who are hereby respectively authorized and required to administer the same to each other) a declaration in the words or to the effect following; that is to say,

'I, A. B., having been elected mayor [*or* alderman, councillor, auditor, or assessor] for the borough of do hereby declare, that I take the said office upon myself, and will duly and faithfully fulfil the duties thereof according to the best of my judgment and ability; [*and in the case of the party being qualified by estate say,* "And I do hereby declare that I am seised or possessed of real or personal estate, or both, [*as the case may be*] to the amount of one thousand pounds, or five hundred pounds [*as the case may require*] over and above what will satisfy all my debts']." And that every alderman who shall have made and subscribed the foregoing declaration in respect of estate shall once in every period of three years, if required in writing so to do by any two members of the council, make and subscribe a declaration that he is qualified to the same amount in real or personal estate, or both, as the case may then be, as the amount mentioned in the declaration originally made and subscribed by him: Provided always, that nothing in this Act contained shall be construed to dispense with the obligation of any person to make and subscribe the declaration provided and enjoined by an Act made in the ninth year of his late Majesty George the Fourth, intituled, 'An Act for repealing so much of several Acts as imposes the necessity of receiving the Sacrament of the Lord's Supper as a qualification for certain offices and employments.'

"And be it enacted, That every person duly qualified who shall be elected to the office of alderman, councillor, auditor, or assessor, and every councillor who shall be elected to the office of mayor for any borough, shall accept such

office, to which he shall have been elected, or shall in lieu thereof pay to the mayor, aldermen, and burgesses of such borough such fine not exceeding fifty pounds in case of aldermen, councillors, auditors, or assessors, and such fine not exceeding one hundred pounds in case of mayor, as the council of such borough by a bye-law to be made as hereinafter provided shall declare in their behalf; and such fine if not duly paid shall be levied by the warrant of any justice having jurisdiction within the borough, who is hereby required on the application of the council to issue the same, by distress and sale of the goods and chattels of the person so refusing to accept office, with the reasonable charges of such distress; and every such person so elected shall accept such office by making and subscribing the declaration herein before mentioned within five days after notice of his election, otherwise such person shall be liable to pay the said fine as for his non-acceptance of such office, and such office shall thereupon be deemed to be vacant and shall be filled up by a fresh election to be made in the manner hereinbefore mentioned: Provided always, that no person disabled by lunacy or imbecility of mind, or by deafness, blindness, or other permanent infirmity of body, shall be liable to such fine as aforesaid: Provided also, That every person so elected to any such office who shall be above the age of sixty-five years, or who shall have already served such office respectively, or paid the fine for not accepting such office respectively, within five years from the day on which he shall be so re-elected, shall be exempted from accepting or serving the same office if he shall claim such exemption within five days after notice of his election: Provided always, that nothing in this Act contained shall extend to compel the acceptance of any office or duty whatever in any borough by any military, naval, or marine officer in his Majesty's service on full pay, or by any officer or other person employed and residing within any of his Majesty's dockyards, victualling establishments, arsenals, or barracks."

By the 52nd clause it is provided that if any person holding the office of mayor, alderman, or councillor shall be declared bankrupt, or shall apply to take the benefit of any Insolvent Act, or shall compound by deed with his creditors, or being mayor shall be absent for more than two calendar months, or, being an alderman or councillor for more than six months at a time, unless in case of illness, he shall immediately become disqualified and shall cease to hold office, and shall besides, in the case of absence, be liable to the same fine as if he had refused to accept his office.

The 53rd clause relates to the penalties to which persons acting without being qualified subject themselves, and is as follows:—

"53. And be it enacted, that if any person shall act as mayor, alderman, or councillor, or auditor, or assessor for any borough without having made the declaration hereinbefore required in that behalf, or without being duly qualified at the time of making such declaration, or after he shall cease to be qualified according to the provisions of this Act, or after he shall have become disqualified to hold any such office, he shall for every such offence forfeit the sum of 50*l.*, such sum to be recovered, with full costs of suit, by any person who will sue for the same within three calendar months after the commission of such offence, by action of debt or on the case in any of his Majesty's superior courts of record; and every person so sued by reason of not being so qualified in respect of estate shall prove that he was at the time of so acting qualified as aforesaid, or otherwise shall pay the said penalty, without any further evidence being given on the part of the plaintiff than that such person has acted as the mayor, or as alderman, councillor, auditor, or assessor (as the case may be) of such borough: provided always, that it shall be lawful for any defendant, by judge's order to be obtained within fourteen days after he shall have been served with process in any such action, to require the plaintiff to give security for costs; and in such case all further proceedings in the said cause shall be stayed until the plaintiff shall give security to the satisfaction of the proper officer of the court for the costs of such action in case a verdict shall pass for the defendant, or the plaintiff shall become nonsuit, or discontinue such action, or if upon demurrer or otherwise judgment shall be given against the plaintiff; and the defendant shall in either of such cases recover his full costs, as between attorney and client: provided also, that no such action shall be brought except by a burgess of such borough, nor unless the burgess bringing the same shall, within fourteen days after the commission of the offence, have served a notice in writing personally upon the party committing such offence of his intention to bring such action; and in case the plaintiff in any such action shall obtain a verdict, the money so to be recovered shall, after payment of the costs and expenses attending the recovery thereof, be paid and apportioned as follows: that is to say, one moiety thereof to the person so suing, and the other moiety thereof to the treasurer to be appointed by virtue of this Act, to be by him applied in aid of the borough fund: provided always, that all acts and proceedings of any person in possession of the office of mayor, alderman, councillor, auditor, or assessor, and acting as a mayor, alderman, councillor, auditor, or assessor, shall, notwithstanding such disqualification or want of qualification, be as valid and effectual as if such person had been duly qualified."

The next three clauses refer to the punishment of persons convicted of bribery at borough elections. We give them also in full:—

"54. And be it enacted, that if any person who shall have or claim to have any right to vote in any election of mayor, or of a councillor, auditor, or assessor of any borough, shall, after the passing of this Act, ask or take any money or other reward by way of gift, loan, or other device, or agree or contract for any money, gift, office, employment, or other reward whatsoever, to give or forbear to give his vote in any such election; or if any person, by himself or any person employed by him, shall, by any gift or reward, or by any promise, agreement, or security for any gift or reward, corrupt or procure, or offer to corrupt or procure, any person to give or forbear to give his vote in any such election; such person so offending in any of the cases aforesaid shall for every such offence forfeit the sum of 50*l.* of lawful money of Great Britain, to be recovered, with full costs of suit, by any one who shall sue for the same, by action of debt, bill, plaint, or information in any of his Majesty's courts of record at Westminster; and any person offending in any of the cases aforesaid, being lawfully convicted thereof, shall for ever be disabled to vote in any election in such borough, or in any municipal or parliamentary election whatever in any part of the United Kingdom, and also shall for ever be disabled to hold, exercise, or enjoy any office or franchise to which he then shall or at any time afterwards may be entitled as a burgess of such borough, as if such person was naturally dead.

"55. And be it enacted, that if any person offending in any of the cases aforesaid shall, within the space of twelve months next after such election as aforesaid, discover any other person offending in any of the cases aforesaid, so that such other person be thereon convicted, such person so discovering, and not having been before that time convicted of any such offence, shall be indemnified and discharged from all penalties and disabilities which he shall then have incurred by any such offence.

"56. Provided always, and be it enacted, that no person shall be made liable to any incapacity, disability, forfeiture, or penalty by this Act imposed, in any of the cases aforesaid, unless prosecution be commenced within two years after such incapacity, disability, forfeiture, or penalty shall be incurred, anything herein contained to the contrary notwithstanding."

The 58th clause directs that the council of every borough shall appoint a town clerk, to hold his office during pleasure, on the 9th of November in the present year. No alteration of this day is mentioned in the order in council; but it is probably intended that the clerk shall be elected on the some day with the aldermen, namely, on the 31st of December. The council are also every year to appoint a treasurer, who is not to be the same person with the clerk.

The only other clauses of the Act which it is material for us to notice for our present purpose are the 61st and the 69th. The former directs that on the 1st of November in every year (but on the 1st of January, 1836, in the first instance, by the order in council), "in the city of Oxford, in the town of Berwick-upon-Tweed, and in the counties of the cities of Bristol, Canterbury, Chester, Coventry, Exeter, Gloucester, Lichfield, Lincoln, Norwich, Worcester, and York, and in the counties of the towns of Caermarthen, Haverfordwest, Kingston-upon-Hull, Newcastle-upon-Tyne, Nottingham, Poole, and Southampton, the council shall

appoint a fit person to execute the office of sheriff, with the like duties and powers as the sheriff or the person filling the office of sheriff in the said town and counties respectively would have had if this Act had not passed; and every person who, at the time of the passing of this Act, shall hold the office or execute the duties of sheriff in the said town and counties respectively shall continue to hold and execute the same until the first appointment of a sheriff therein under the provisions of this Act, and no longer."

The 69th clause, which directs in what manner the council is to proceed in deciding upon the questions that come before it, is as follows:—

"69. And be it enacted, that all acts whatsoever authorised or required by virtue of this Act to be done by the council of such borough, and all questions of adjournment or others that may come before such council, may be done and decided by the majority of the members of the council who shall be present at any meeting held in pursuance of this Act, the whole number present at such meeting not being less than one-third part of the number of the whole council; and at all such meetings the mayor, if present, shall preside; and the mayor, or, in the absence of the mayor, such aldermen, or in the absence of all the aldermen, such councillor as the members of the council then assembled shall choose to be the chairman of that meeting, shall have a second or casting vote in all cases of equality of votes; and minutes of the proceedings of all such meetings shall be drawn up and fairly entered into a book to be kept for that purpose, and shall be signed by the mayor, alderman, or councillor presiding at such meeting; and the said minutes shall be open to the inspection of any burgess at all reasonable times on payment of a fee of one shilling: provided always, that previous to any meeting of the council held by virtue of this Act a notice of the time and place of such intended meeting shall be given three clear days at least before such meeting, by fixing the said notice on or near the door of the town hall of the borough; and such notice shall be signed by the mayor, who shall have power to call a meeting of the council as often as he shall think proper; and in case the mayor shall refuse to call any such meeting after a requisition for that purpose signed by five members of the council at the least shall have been presented to him, it shall be lawful for the said five members to call a meeting of the council by giving such notice as is hereinbefore required in that behalf, such notice to be signed by the said members instead of the mayor, and stating therein the business proposed to be transacted at such meeting; and in every case a summons to attend the council, specifying the business proposed to be transacted at such meeting, signed by the town clerk, shall be left at the usual place of abode of every member of the council or at the premises in respect of which he is enrolled a burgess, three clear days at least before such meeting; and no business shall be transacted at such meeting other than is specified in the notice: provided always, that there shall be in every borough four quarterly meetings in every year at which the council shall meet for the transaction of general business, and no notice shall need to be given of the business to be transacted on such quarterly days; and the said quarterly meetings shall be holden at noon on the 9th day of November, or if the 9th day of November shall fall on a Sunday on the day following, and at such hour on such other three days before the 1st day of November then next following as the council at the quarterly meeting in November shall decide; and the first business transacted at the quarterly meeting in November shall be the election of mayor."

As already mentioned, however, it is directed by the order in council that the first election of mayor in each borough shall take place on the 1st of January, 1836; and it is also ordered that the first quarterly meeting of the council shall be holden at noon on the same day.

In the 31st Number of the 'Companion' (for July, 1835) we gave a list of the boroughs which it was then proposed that the Act should comprehend, with the number of councillors which the bill at that stage allotted to each. The schedules, however, were afterwards considerably changed, and we therefore now present them as they are appended to the Act, omitting only the legal style of the corporate body of each borough.

BOROUGHS WHICH ARE TO HAVE A COMMISSION OF THE PEACE.

SECTION I.—Parliamentary Boundaries to be taken until altered by Parliament.

Borough.	Wards.	Alder.	Council.

CHANGES OF ADMINISTRATION AND HISTORY OF PARTIES.

[Continued from Number 35.]

THE commencement of Lord North's administration (in February, 1770) found the public mind fast getting tired, and preparing to subside into comparative indifference, after the excitement and agitation of the preceding nine years. This feeling grew more marked every day, as it became evident that the country had at last obtained a government the several members of which were at least united among themselves, and as the prospect of further Cabinet revolutions for the present gradually disappeared. In both Houses of Parliament, also, the new Ministers were from the first supported by large majorities, and for some years the Opposition went on dwindling in numbers every session. Little of the union which held together the Ministerial forces reigned in that camp. There the adherents of the Marquis of Rockingham, those of Lord Chatham, and those of George Grenville, formed rather three several parties than one, after all the pains that had been taken to reconcile and combine them. While each body thus fought separately and in its own way, (not to speak of a number of stragglers who had no standard at all to rally around,) the advantage of the most splendid power in debate which had ever appeared upon the theatre of Parliament, was almost wholly thrown away and lost. But on the other side, also, it is to be remembered, there was an eminent share of the same kind of strength. It was a great time; and Mansfield, North, Jenkinson, Wedderburn, Thurlow, were no unworthy antagonists of Chatham, Camden, Burke, Grenville, Dunning, Barré, Saville, and Charles Fox, who had no sooner given full promise of the wonderful orator he was to become than he joined the same brilliant ranks.

The great measure of Lord North's first session was the bill which he obtained leave to bring into the House of Commons on the 5th of March, for the repeal of all the duties imposed upon articles imported into the American colonies by the act of 1767, with the exception of the duty upon tea. The tea-duty, which was only threepence on the pound, and was acknowledged to produce only 16,000*l.* a year, was of course retained merely as an assertion of the rights of the mother country. Governor Pownall moved as an amendment to the motion of the Minister, that this tax should be repealed along with the rest; but even thus early, and upon so momentous a question, the Opposition could not conceal the differences that divided them. Mr. George Grenville, the original projector of the unfortunate scheme of taxing America, and the author of the Stamp Act of 1764, rose immediately after Governor Pownall, and declared that he should not vote upon either side. The Ministers, he said, had ever since the Cabinet which succeeded that of Lord Rockingham, proceeded in American affairs without plan or system of any kind—neither relinquishing the right of raising a revenue from the colonies, nor exercising it to any useful purpose. "I cannot," he added, "on the one hand suppose that a partial repeal of the present tax act will reduce the colonies to temper, nor, on the other, by forcing Government into a total repeal, can I suppose we have sufficiently provided for the dignity of the nation." Among the Minister's bands also, however, there was at least some affectation of dissent from his proposition. "Lord Barrington and Mr. Welbore Ellis," says the 'Parliamentary History,' "opposed the amendment, and also the original motion; they were not for taking off the tax at all, as they saw no probability that this would quiet North America; they therefore were for putting the act in execution absolutely, and by all the powers of this nation united." On a division the amendment was rejected by a majority of 204 to 142.

A succession of further efforts on the American question, by the Opposition in both Houses, followed during the remainder of the session, but they were all unsuccessful. On the 9th of April Alderman Trecothick moved for leave to bring in a bill to repeal the American duty on tea, but was defeated by a majority of 80 to 52. Soon after this, news arrived of a formidable attack which had been made upon the King's troops stationed there by the people of Boston, on the 5th of March, the very day on which the Minister had brought forward what he intended as the conciliatory and healing measure of the partial repeal. On the 8th of May Mr. Burke moved in the House of Commons a series of resolutions condemning the whole course of the Ministerial proceedings with regard to America, but they were thrown out by a majority of 199 to 79. The same fate attended a similar motion made in the Lords on the 18th of the same month by the Duke of Richmond, only 26 peers having voted for, and 60 against it.

The Opposition were this session signally defeated also on another great question, the reversal of the vote of the Commons incapacitating Mr. Wilkes and seating Colonel Luttrell as member for Middlesex. On the 1st of May Lord Chatham presented to the House of Lords a bill for effecting that object; but when their Lordships came to vote, the Contents were only 43, and the Non Contents 89.

On the 18th of May parliament was prorogued.

The next session opened on the 13th of November. The same day Mr. George Grenville, whose health had been for

some time declining, died; "and this event," says the 'Annual Register,' "having left that particular party of which he was considered as the principal without a leader, some of the most distinguished of them, and who appeared the most sanguine in opposition, went over to the court. Those of the old Whigs who are called the Rockingham party, which was the strongest and most numerous of those in opposition, still continued to act upon the same principles on which they set out; and those who were particularly attached to the Earls of Chatham, Temple, or Shelburne, took a general part with them in most public measures."

In both Houses the Address of thanks was agreed to without a division, though in the Commons the question gave rise to a debate of some length.

The following were the chief divisions which took place in either House before the Chrismas recess. In the Commons, on the 27th of November, a motion which was made by Captain Constantine Phipps to take from the Attorney General the power of filing informations ex-officio, was, after a long debate, rejected by a majority of 164 to 72; and on the 6th of December Mr. Sergeant Glynn's motion for a committee to inquire into the late proceedings of the Judges in Westminster in cases relating to the liberty of the press, was also lost after a debate of great length, the numbers being Ayes 76, and Noes 184. These motions had chiefly a reference to the recent prosecutions of Woodfall and Almon for printing and publishing the famous Letter of Junius to the King, and the charges delivered to the jury at the two trials by Lord Mansfield. The subject is elaborately discussed by Junius in his 41st letter (dated the 14th November this year), which is addressed to Lord Mansfield. In the Lords, on the 5th of December, Lord Chatham again brought forward the subject of the disqualification of Wilkes, with the view of effecting its reversal; but the motion was negatived by a majority of 52 to 20.

In the Speech delivered at the opening of the session, the King had announced to Parliament the recent seizure of the Falkland Islands by the governor of Buenos Ayres, and had intimated that he had made an immediate demand from the Spanish court of satisfaction for that injury. After some negociation the affair was at length settled by the restoration of the islands, and a disavowal by Spain of any particular order having been issued for the seizure, although it was admitted that the governor of Buenos Ayres had had general instructions to act as he had done, and, as was generally belived, a secret arrangement was made that the islands should be eventually given up to Spain. In point of fact, they were evacuated by England about three years after. It is understood that Lord Weymouth, the Secretary of State, was so disgusted with the disposition shown by his colleagues to accept of this compromise, that he determined to retire from office. He resigned the seals in December, while the negociations were still proceeding; and on the 19th of that month they were given to the Earl of Sandwich, who was succeeded as one of the Postmasters General by the Hon. H. F. Thynne, Lord Weymouth's brother. This, however, was only an interim arrangement, Lord Sandwich being on the 12th of January, 1771, removed to the head of the Admiralty, from which Sir Edward Hawke was removed; and on the 22nd of the same month Lord Halifax being transferred from the Privy Seal to the Secretaryship of State. The Privy Seal was given to Henry Howard, Earl of Suffolk and Berkshire. On the following day the Great Seal was taken out of commission, and the Hon. Henry Bathurst, eldest son of Baron (afterwards Earl) Bathurst, was appointed Lord Chancellor, and raised to the peerage with the title of Baron Apsley. At the same time Mr. De Grey being made Chief Justice of the Common Pleas, was succeeded as Attorney General by Mr. Thurlow; and the office of Solicitor General, which the latter left, was bestowed upon Mr. Alexander Wedderburn, afterwards Baron Loughborough, and Earl of Rosslyn. The whole effect therefore of these changes upon the composition of the Cabinet was the substitution of Lords Suffolk and Apsley for Lord Weymouth and Sir Frederick Hawke. The political complexion of the administration remained precisely the same as before.

When the Houses reassembled after the adjournment, the affair of the Falkland Islands was warmly debated in both. The chief discussion in the Commons took place on the 13th of February, when an Address to the King approving of what had been done was carried by a majority of 271 to 157. In the Lords the ministerial address was carried on the following day by a majority of 107 to 38. Junius has made this affair the subject of one of his letters, in which the argument is wound up in the following striking and characteristic words:—"A clear unblemished character comprehends not only the integrity that will not suffer, but the spirit that will not submit to an injury; and, whether it belongs to an individual or to a community, it is the foundation of peace, of independence, and of safety. Private credit is wealth: public honour is security. The feather that adorns the royal bird supports his flight. Strip him of his plumage, and you fix him to the earth."

In the course of the remainder of the session the subject of the rights of electors, as affected by the vote which had disqualified Mr. Wilkes, was again brought forward in both Houses. On the 7th of February in the Commons a motion made by Sir George Saville, for leave to bring in a bill to secure the rights of electors, was negatived by a majority of 167 to 103. "One reason," says the Parliamentary History, "the numbers were but small on either side was, that this point having often been debated several paired off, and the question being put before it was expected, many gentlemen were absent in the coffee-houses." In the Lords, on the 30th of April, the Duke of Richmond moved to expunge a resolution which had been passed the preceding session indirectly sanctioning the vote of the House of Commons, and the motion was supported by Lord Chatham; but the ministers made no reply, and it was negatived without a division. On the 1st of May Lord Chatham once more made a vain attempt to carry his point by moving an Address to his Majesty beseeching him to dissolve the parliament, as the only means of ending the contest between the House of Commons and the electors of Middlesex; but after a long debate, which has not been reported, the motion was negatived by a majority of 72 to 23.

This session, however, is remarkable for one of the very greatest victories ever achieved by the popular element of the constitution, the successful assertion and maintenance, after a most severe contest, by the proprietors of newspapers of the right of reporting the debates. Strange as it may appear to us in the present day, it was not till towards the close of the year 1770 that the debates began, for the first time, to appear in the newspapers. They had till then only been given in magazines, and other periodical works published at considerable intervals. The more general attention to public affairs, however, which had recently been excited by various causes, and more especially by the proceedings of the House of Commons on the Middlesex election, and by the Letters of Junius, had suggested to the printers of newspapers the scheme of giving the proceedings of Parliament to the public, not after they had thus become, as it were, matter of history, but from week to week, and from day to day, as they occurred. For this, it is to be observed, is really the important distinction between the mode of reporting now adopted and that which was previously practised. By the old system, the public were indeed informed of what their representatives had done after the discussion was completely over, and the matter to which it had referred settled, at least for the present,—just as they were informed of what had been done in a former reign, or a former century; all power of interfering with or influencing the discussion, either by petitions, or by the exposure of the misstatements or false reasoning employed on either side, or by any other demonstration of opinion, might be said to be taken away. Yet the exercise of such power appears to be contemplated, not only by the spirit of the constitution, but even by all its forms; for why the repeated discussions of every measure, with generally considerable intervals between, which the rules of Parliament require, unless it were intended that members should thus have an opportunity of fully learning the sentiments of their constituents, or of the nation in general, before coming to a final decision, and of availing themselves of all the new information respecting every subject brought before them which the agitation of it without doors may call forth? If not, why are not the members of either House of Parliament rigorously secluded, like a jury, from all communication with the outer world while discharging their functions, and called upon to declare by a single vote a determination upon each case submitted to them, which no re-consideration must shake? There is every reason to believe that the attempt to keep the public out from a knowledge of the debates during their progress, either by prohibiting their publication,

or by locking the doors of the house, is a mere modern usurpation, and that the universal understanding of the constitution in earlier times was entirely consistent with the principle of the existing practice. By the mode now established the Parliament is kept constantly under the actual observation of the country, and no determination can be come to there without the public voice having been allowed its fair opportunity of influencing the legislative vote.

The newspapers first began actually to report the debates as they occurred about January, 1771. On the 8th of February, the subject was brought before the House of Commons, in a motion by Colonel George Onslow (one of the Lords of the Treasury), for calling to the bar two printers, of the names of Thompson and Wheble, who had committed this offence, as it was deemed, against the standing orders of the House. After many unsuccessful attempts had been made to get hold of these two individuals, on the 9th of March, at the request of the House, a royal proclamation was issued, offering a reward of fifty pounds for the apprehension of either of them. On the 12th of the same month, Onslow brought before the House the cases of six more printers, who had offended in the same manner. The discussion which arose lasted till four o'clock on the following morning, and in the course of it the House divided no fewer than twenty-four times. All the efforts of the opposition, however, to weary out the pertinacity of the ministerial majority, by thus contesting the ground with them at every step, were unavailing; the majorities were generally two or three, and sometimes nine or ten, to one; in fact, a large section of the opposition at last withdrew from the struggle altogether, and left the House; and in the course of this night, and a continuation of the battle on the 14th, on which evening twelve more divisions took place, all the accused were finally ordered to attend at the bar. On the 15th, Wheble having been at length caught, was brought before Wilkes, (now one of the aldermen of the city), who immediately discharged him from custody, and made him enter into his recognizance to prosecute the person who had apprehended him at the next sessions. Thompson was in like manner set at liberty by Alderman Oliver, before whom he had been brought up, the same day. On the 16th, Millar, another printer, being brought by one of the messengers of the House of Commons before the Lord Mayor, Crosby, was also at once discharged by that magistrate, who moreover bound him over to prosecute the messenger for assault and false imprisonment at the sessions, and compelled the latter to give bail to answer the charge. These daring acts of defiance of its authority were forthwith, as was to be expected, brought before the House, whose vengeance was now turned away from the printers to the magistrates who had protected them. After various preliminary proceedings on the 25th, or rather about half-past three o'clock on the following morning, a vote, committing Alderman Oliver to the Tower, was carried by a majority of 170 to 38. On the 27th, the committal of the Lord Mayor to the same place of custody was voted by the still larger majority of 202 to 39. On both these occasions, a great many of the members in opposition withdrew altogether. The consideration of the resistance which had been offered to the authority of the House was then resumed; and on the 28th a secret committee of twenty-one members was appointed by the then unusual and solemn process of ballot, "to examine into the several facts and circumstances relative to the late obstructions to the execution of the orders of the House, and to consider what further proceedings may be requisite to enforce a due obedience thereto." The Committee sat regularly, and did not make its report till the 30th of April. At last, when this anxiously-expected document was produced, it turned out to consist merely of a long deduction of facts and cases, ending with a recommendation to the House to consider whether it might not be expedient that the House should order that Millar should be taken into the custody of the Sergeant-at-Arms. "The report being read," says the Parliamentary History, "the House burst out into a roar of laughter at the impotency of the conclusion." Mr. Burke compared the deliberations of the Committee to those of the assembly of mice, who came to a resolution that the cat, to prevent her doing any further mischief, should be tied up, but unfortunately forgot to say how the tying up was be managed. Eventually nothing was done in consequence of the Committee's recommendation; and no further attempt was made to prevent the publication of the debates. Thus was established a practice which is now rightly considered to be essential to the effective working of the representative principle, and which the Parliament might in our day as well cease from meeting altogether as set about putting down.

The session ended on the 8th of May.

The death of the Earl of Halifax, on the 8th of June, occasioned another movement in the Cabinet. The vacant Secretaryship of State was now given to the Earl of Suffolk, and the Duke of Grafton was reinstated in the ministry by being appointed to the Privy Seal, which his Lordship left. At the same time the office of Chancellor of the Duchy of Lancaster, vacant by the recent death of Lord Strange, was given to Thomas Villiers, Baron Hyde, afterwards Earl of Clarendon, an individual who had spent the greater part of his life in diplomatic services at different continental courts.

The restoration of the Duke of Grafton to a place in the Cabinet seems to have excited more of the rancour of Junius than any other public event which happened during the period over which his letters extend. Looking upon his own attacks as what had principally driven his Grace into retirement, he resents his recall as almost a personal affront, and pours out his indignation against both the new minister and his royal master with a bitterness and fury beyond what he has given way to on any other occasion. In a private note to his printer, sent along with this letter, he expresses himself so well pleased with its execution that if it should fail in producing the sensation he expected, he positively would never write again. The manner in which the king is spoken of in this performance far exceeds in irreverence any thing in the Letter addressed to his Majesty. At the close of his abuse Junius tells the Duke that what he has now written is only the preface to a future correspondence. "The remainder of the summer," he says, "shall be dedicated to your amusement." The remainder of the collection, however, contains only three more letters to his Grace, from whom the writer's attention was immediately called away by an antagonist—the celebrated John Horne Tooke—who did not let him have all the fighting, or all the triumph either, to himself. In one of the other Letters to the Duke he says, "Your Grace's re-appointment to a seat in the Cabinet was announced to the public by the ominous return of Lord Bute to this country. When that noxious planet approaches England, he never fails to bring plague and pestilence along with him." This notion, which was in those days so generally entertained, of the continued interference of Lord Bute in prompting from behind the throne the management of public affairs, or at least the appointment to places in the government, may now be safely pronounced to have been a mere delusion. It was supported by no proof whatever, and never rested upon any thing beyond the suspicions of public hatred. The facts may be held to be correctly stated in a letter addressed to the newspapers in October, 1778, by Lord Mountstuart, the Earl of Bute's son, in which we find the following explicit declaration: "He (Lord Bute) does therefore authorise me to say, that he declares upon his solemn word of honour that he has not had the honour of waiting on his Majesty but at his levee or drawing-room; nor has he presumed to offer an advice or opinion concerning the disposition of offices, or the conduct of measures, either directly or indirectly, by himself or any other, from the time when the late Duke of Cumberland was consulted in the arrangement of a ministry in 1765, to the present hour."

Parliament did not re-assemble till the 21st of January, 1772; and the session which then commenced, though the affairs of India and other important subjects gave rise to several long discussions, was scarcely marked by any party contest. Sir George Saville, however, on the 27th of February, repeated in the House of Commons what he called his annual protest against the illegality and injustice of the proceedings of the House in the case of the Middlesex election, by again moving for leave to bring in a bill for more effectually securing the rights of electors throughout the kingdom; and this time the motion was negatived only by a majority of 181 to 135. The session was terminated on the 10th of June, by a speech from the Throne, in which his Majesty began by emphatically expressing the satisfaction he had felt in observing the temper and the prudence which had during the course of it governed all the deliberations of both Houses.

Throughout this session, "administration," says the Annual Register, "had carried everything with such irresistible force, that opposition seemed to be reduced to little

more than a name, and could afford only a weak and unavailing dissent to measures which it was not capable of impeding; whilst its members were weary of fruitless exertions, in which the irregularity was so great as scarcely to admit of a struggle." With respect to parties, it is remarked that the remains of the old Whig and revolution interest, known under the name of the Rockingham party, although there were some actual desertions from them, and a doubtful appearance in a few of those that remained, were in the main rather better united than the rest. "They, in general, continued pertinaciously in their old opposition to the system and measures of the Court, and firm in the support of their leader." The party considered to be particularly attached to Lord Chatham "did not seem nearer to a political arrangement with administration; though they agreed with them in many other measures, or at least in some parts of many of the measures of this session. This circumstance added extremely to the weakness of opposition." It is added, that although several of the late Mr. Grenville's friends, soon after his decease, went over to the Court, some continued on their old ground, and acted occasionally with the other parties dissenting from administration. It is proper to observe that the Annual Register must be considered as having been at this time an organ of the Rockingham party.

In a sarcastic pamphlet, now forgotten, which was published in the present year, under the title of 'A Scheme for the Coalition of Parties, humbly submitted to the Public,' and which is understood to have been a production of Soame Jenyns, who, it may be remembered, occupied one of the places at the Board of Trade, we find the following sketch of the existing state of parties, in which with a good deal of exaggeration there may possibly also be some little truth: —"I have diligently inquired whether our present dissensions have arisen, as formerly, from any differences of opinions, or any contradictory articles in our political creeds; but on the strictest investigation I can find no such differences to exist: parties I see many, but cannot discern one principle amongst them; they are neither Whigs nor Tories, Monarchy-men nor Republicans, High-Church nor Low-Church, Hanoverians nor Jacobites; they have all acted alternately on all these principles as they have served a present occasion, but have adhered to none of them, nor even pretended to profess them; they have all been ready to support government whenever they have enjoyed the administration of it; and almost all as ready to subvert it whenever they were excluded. I see few, very few, who have formed the most distant intentions of destroying the government, or changing the constitution of this country; but I am afraid I see as few who scruple to plunge them both into the most imminent danger rather than be stopped in the wild career of their headlong ambition: from whence it appears to me plainly demonstrable that all our present dissensions are nothing more than an outrageous contest for power and profit, there being no other cause from whence they can possibly be derived." Jenyns's cold nature, however, snug in place, could ill appreciate whatever there might be of really generous and disinterested patriotism in the efforts which were directed against himself and his colleagues.

In the latter part of this year some changes were again made in the persons composing the ministry, on the Earl of Hillsborough resigning his posts of Secretary of State for the Colonies and head of the Board of Trade. "This resignation was not, however," says the Annual Register, "the effect of any difference with the Court, that nobleman having quitted his places in great good humour, and being immediately after promoted to an English earldom. But as those measures which had caused the greatest dislike and uneasiness in the Colonies, had originated in Lord Hillsborough's administration, this change was by many considered as conciliatory with respect to America." The conciliatory appearance was kept up by the admission into the Cabinet as Lord Hillsborough's substitute in both his places of the Earl of Dartmouth, who however is described by the writer in the Register as "having upon this occasion quitted his old friends in opposition." William Legge, second Earl of Dartmouth, was the grandson of the first Earl, who had been Secretary of State with Harley and St. John in Queen Anne's Tory ministry of 1710 (See *Companion*, No. 25, p. 272), and nephew of the late Right Hon. Henry Bilson Legge, who had been Chancellor of the Exchequer in the administration of the Duke of Newcastle in 1754 (See *Companion*, No. 27. pp. 315 and 316), again with Mr. Pitt in 1756 (See *Companion, ibid.*) and lastly, with Mr. Pitt a second time from 1757 to 1761, when he was dismissed by the influence of Lord Bute (See *Companion*, No. 28, p. 339). Lord Dartmouth, who had been First Lord of Trade in the administration of Lord Rockingham, in 1765, had not recently taken any prominent part in parliamentary proceedings; but in the few lists which have been preserved his name occasionally occurs as one of the minority.

Franklin, writing from London, on the 17th of August, 1772, to his son, Governor Franklin, says, "At length we have got rid of Lord Hillsborough, and Lord Dartmouth takes his place, to the great satisfaction of all the friends of America. You will hear it said among you (I suppose) that the interest of the Ohio planters has ousted him; but the truth is, what I wrote to you long since, that all his brother ministers disliked him extremely, and wished for a fair occasion of tripping up his heels; so seeing that he made a point of defeating our scheme, they made another of supporting it, on purpose to mortify him, which they knew his pride could not bear. . . . The King, too, was tired of him, and of his administration, which had weakened the affection and respect of the colonies for a royal government, with (of?) which (I may say it to you) I used proper means, from time to time, that his Majesty should have due information and convincing proofs. . . . The regard Lord Dartmouth has always done me the honour to express for me, gives me room to hope being able to obtain more in favour of our colonies upon occasion, than I could for some time past." (Memoirs, vol. iii. pp. 328. See also pp. 329, 330, 332, 334, 335, 336, 337, 338, 339, 343, 346, 347, 348, 349, 366, 367, 368)

About the end of October, Simon Harcourt, Earl Harcourt (grandson of the Chancellor of that name) was appointed Lord Lieutenant of Ireland in the room of Viscount Townshend, who was made Master General of the Ordnance. At the same time Sir Jeffrey Amherst (afterwards Baron Amherst) was substituted as Lieutenant-General of the Ordnance for General Conway, who was promoted to the government of the Island of Jersey.

Parliament reassembled on the 26th of November, but the affairs of the East India Company again formed the great business of this session, and scarcely any thing occurred in the course of it which it is necessary to notice for our present purpose. On the 26th of April, 1773, however, the House of Commons was again somewhat suddenly called upon to repeat its annual vote upon Wilkes's case. That gentleman having made his appearance in one of the rooms belonging to the Clerk of the House, and sent for one of the Lord Steward's deputies to swear him in as one of the members for Middlesex, upon the deputy refusing, sent a paper into the House to Mr. Sergeant Glynn, complaining of this treatment. On this the Sergeant immediately moved that Mr. Wilkes should be called in to make good the matter of his complaint. A short debate arose, which was followed by a division, when the numbers appeared to be 124 for, and 227 against the motion. "Whilst the numbers who divided in favour of Mr. Sergeant Glynn's motion were in the lobby," continues the Parliamentary History, "encouraged by the fullness of the House, and the numbers who rather unexpectedly joined them, they, after a short consultation, determined to take advantage of the favourable circumstance. Accordingly Sir George Saville was applied to, who readily agreed that then was the proper time to renew his motion relative to the rights of election. Sir George therefore gave notice in the lobby that the moment the division was finished he should make another for leave to be given to bring in a bill for more effectually securing the rights of the electors of Great Britain, with respect to the eligibility of persons to serve in Parliament." The motion was accordingly made, and after some debate a division took place, when 151 members voted for the motion, and 201 against it. It will be observed that only one member more voted upon this than the former division, although the difference between the majority and minority, which had last time been 103, was now brought down to 50.

The session was brought to a close on the 1st of July.

In the month of January in this year on the death of the Earl of Lichfield, the place of Captain of the Band of Gentlemen Pensioners was given to George Edgecumbe, Baron Edgecumbe (afterwards Viscount Mount-Edgecumbe and

Valletort, and Earl of Mount-Edgecumbe), who about two years before had been made one of the Vice-Treasurers of Ireland in room of Earl Cornwallis. Mr. Jenkinson succeeded to the vacant Vice-Treasurefship, and his place of one of the Lords of the Treasury was given to Mr. Charles Fox. Mr. Fox's successor at the Board of Admiralty was Mr. Thomas Bradshaw, the Duke of Grafton's Private Secretary, immortalized, as well as his patron, by the spite of Junius.

The expectation of a speedy dissolution of the Parliament, the sixth session of which was now over, was by this time acting to increase the apathy of the public mind, which the exhaustion consequent upon protracted excitement had produced. "Administration," says the Annual Register, had long carried everything with so triumphant a sway, that no common event seemed capable of endangering its security. . . . . The minds of the people, engaged by a succession of new objects, were no longer quite so powerfully affected by what had so strongly agitated them for some years past. This remission in the spirit of the people at large had given a facility for desertions of several from the opposition to the Court, which was liberal in rewarding those seasonable conversions. There was no very material change in the state of parties, except that general decline of strength in the opposition. The Rockingham party still continued whole and unbroken, and invariably pursued its original line of public conduct. By this means, though constantly overpowered, it notwithstanding continued in some degree formidable. The same differences of opinion or affections, and the same occasional junction in others, still took place between them and that which was attached to the Earl of Chatham."

A new movement in American affairs however was now rapidly preparing the revival, in a more formidable shape than ever, of the greatest question of the times. The irritation of the fatal tea duty, left in force when all the other taxes were repealed by the act of 1770, had served to keep up in the minds of the colonists feelings of dissatisfaction and alienation, which in all probability would otherwise have gradually died away. For some time this temper did not break out into any acts of violence, but the smothered flame lay ready to burst forth at the provocation of the first accident. At last in June of this year his Majesty's armed schooner the Gaspee, which had been stationed at Providence in Rhode Island to prevent smuggling, was suddenly attacked in the night by 200 armed men, who compelled the officers and men to go on shore, and then set the vessel on fire. The excitement produced by this exploit was kept up and greatly inflamed by the publication immediately after of the famous letters of Hutchinson and Oliver, the Governor and Lieutenant-Governor of Massachusetts, which Dr. Franklin had recently sent over from England. These letters, addressed to parties in England who were expected to lay them before the ministers, and who actually did so, represented the disposition of the colonists in the worst light, and recommended the severest measures as necessary for the eradication of the bad spirit which was affirmed to prevail in the country. The manner in which they had come into Franklin's hands was long a mystery; it is now known that they were given to him by a Dr. Williamson, who stole them from the government office where they had been deposited. Franklin conceived it to be his duty, in his capacity of agent for the colonists, immediately to transmit them to America. He appears from his correspondence (see Memoirs, vol. iii. p. 338) to have dispatched them on the 2nd of December, 1772. It was some time after their arrival in America, however, before the resolution was taken to publish them. When the publication took place, the fiercest indignation at what was called the treachery of the writers was aroused over the whole of America. A resolution was forthwith proposed in the House of Representatives of the province of Massachusetts for an address to the Crown praying the removal of both Hutchinson and Oliver, and carried by a majority of 82 to 12. This Address appears to have been received in London towards the end of August.

Such was the alarming state, as far as known, of affairs in America, when the British Parliament was again called together on the 13th of January, 1774. The King's speech, however, contained no allusion to what had occurred; and the Address of thanks appears scarcely to have given rise to any debate in either House. Sir George Saville brought forward his annual motion about the rights of electors this year on the 15th of March. He said that "he flattered himself he had this year some glimmering hopes of carrying his question; that the House was not now in that heat and ferment in which it formerly was; that truth had now a chance of prevailing: that the House was now in cool deliberation, and no doubt this question, by being calmly considered, might meet with friends, who in times more heated than the present were of another opinion; that this was not a question meant to stagger and overthrow administration, such a thing was the farthest from his thoughts; that he himself would wish to grant the Ministry a long lease of their possessions, if this great object might prevail." The debate ended with the rejection of the motion by a majority of 206 to 147.

Very soon after this arrived the news of the daring outrage perpetrated at Boston in Massachusetts, on the 18th of the preceding December, when a number of the inhabitants entered some ships which were lying in the harbour laden with tea belonging to the East India Company, and threw the tea overboard to prevent its being landed. A message from his Majesty, calling upon Parliament to enable him to take measures for putting down a spirit of disorder which had risen to so alarming a height, was presented to the House of Commons by Lord North, on the 7th of March.

The introduction of three measures of severe coercion and punishment, directed against the people of Boston and the province of Massachusetts, quickly followed. On the 14th of March was brought forward what was called the Boston Port Bill, enacting the immediate removal of the Boston Custom-house establishment, and the discontinuance of all landing or shipping of goods at that port. On the 28th, the minister announced the bill for the government of Massachusetts Bay, by which its charter was taken from that province, and nearly everything of a popular character which had hitherto formed part of its constitution swept away, and replaced by the untempered despotism of the crown. And on the 15th of April, the House was called upon for leave to bring in a bill for the administration of justice in Massachusetts, by which the governor of that colony was empowered to send all persons charged with capital offences there to take their trial in England.

As far as is to be gathered from the Parliamentary History, the Boston Port Bill, although debated at several of its stages, was not met on its passage through the House by any opposition which was carried the length of a division. Of its reception in the House of Lords nothing is recorded. The Massachusetts Government Bill was also debated at its various stages in the Commons; and on the question of the third reading a division took place, when the numbers were 239 for the bill, and only 64 against it. In the Lords, the third reading was carried by a majority of 92 to 20. There were also divisions on the Massachusetts Justice Bill, in both Houses; when the question was carried in the Commons by a majority of 127 to 21, and in the Lords by a majority of 43 to 12.

Besides these three bills, which were first brought forward in the House of Commons, two others of an auxiliary character were in the course of the session introduced by Ministers into the House of Lords;—one for providing quarters for the troops on service in North America, the other for giving a new constitution to the province of Quebec. The third reading of the former was carried, in the Lords, by a majority of 57 to 16; and the second reading of the latter, in the Commons, by a majority of 105 to 29. Many other divisions also took place upon the Quebec Bill in Committee in the House of Commons, in most of which the ministerial majorities were equally overwhelming.

The only other discussion of the session which it is necessary that we should notice, is that which took place in the Commons on the 19th of April, on a motion made by Mr. Rose Fuller, for the House to resolve itself into a Committee of the whole House to take into consideration the American duty upon tea. It was upon this occasion that Mr. Burke delivered his celebrated Speech on American Taxation, to which we have several times referred, undoubtedly one of the most splendid displays ever made in the House of Commons. Mr. Fuller's motion was negatived by a majority of 182 to 49.

It is stated that the standing order for the exclusion of strangers was strictly enforced by the House of Commons during the progress of the several American Coercion Bills.

It was in the course of these discussions that Mr. Fox, having been abruptly dismissed from his seat at the Trea-

sury Board, in the beginning of March, first joined that band of the friends of liberal politics, whose great leader he was soon to become, and, in the words of Gibbon, in the conduct of a party to approve himself equal to the conduct of an empire.

This important session ended on the 22nd of June, and on the 30th of September following the Parliament was dissolved. As the term of seven years to which it might legally have been protracted would not have expired till May, 1775, what was considered to be its premature extinction occasioned much surprise. The Annual Register says that no similar instance had occurred since 1746, and that that was the only occasion on which such a measure had been resorted to during the long reign of George II. But, in point of fact, George II.'s first Parliament, which was dissolved in April, 1734, had to a day precisely the same duration with that now brought to a close, namely, six years, four months, and twenty-one days. In more recent times we have been accustomed to Parliaments of all dimensions.

Up to the announcement of the dissolution, if we may trust to this authority, the country generally continued to take little interest in political transactions. "An unexampled supineness," it is affirmed, "with regard to public affairs prevailed among the great body of the people. Even the great commercial and manufacturing bodies, who must be the first to feel and the last to lament any sinister events in the colonies, and who are generally remarkable for a quick foresight and provident sagacity in whatever regards their interest, seemed now to be sunk in the same carelessness and inattention with the rest of the people."

The note, however, having been sounded for another clear stage and a new trial of strength, it is admitted that some of the elections were contested with extraordinary perseverance and ardour, and that, according to "some of those who are curious in attending to such observations, notwithstanding the surprise and the shortness of the time, a greater number of the old members were thrown out than was common at general elections." Of course Wilkes, already elected Lord Mayor of London, was now returned for Middlesex without opposition; and, of course also, the ministers did not renew their contest with that doughty demagogue.

The new parliament assembled on the 29th of November. The King's Speech now began by adverting to the daring spirit of resistance and disobedience to the law which continued to prevail in America. It was by this time known, indeed, that the coercive measures of the last session had only exasperated the temper they had been expected to quell, and that the colonies were now in a state of all but actual insurrection. General Gage, who had been sent out as Governor and Commander of the Forces to Massachusetts, soon found himself nearly stripped of all authority whatever. Associations for mutual support had been generally entered into throughout the provinces. Finally, a provincial assembly held at Concord, in Massachusetts, had deliberately proceeded to pass resolutions for arming the people. Every thing indicated a resolute determination on the part of the colonists to proclaim their independence rather than yield submission to the late acts of the British parliament.

The Address was warmly debated in both Houses, and was not carried in either without a division. But in the Lords a ministerial majority of 46 was opposed only by a minority of 9 (all of whom, however, immediately affixed their names to a strong protest against the fatal colonial policy of the government); and in the Commons the numbers were almost as unequally divided, being only 73 against the original Address, and 264 in favour of it.

Meanwhile the leaders of the popular cause in America were also proceeding in their course with the unfaltering resolution of men who had made up their minds to peril every thing on the issue. While the Congress of the province of Massachusetts, or the Provincial Congress as it was called, still sat at Concord, a General or Continental Congress, composed of deputies from nearly all the provinces, assembled on the 26th of October at Philadelphia. The great act of this first or preliminary Congress was a Declaration of Rights which it drew up and issued, claiming a total exemption from any species of internal taxation imposed by the British Parliament. This document, however, still professed an allegiance to the mother country, and even admitted the right of the latter to enact such laws as it chose for the regulation of trade. The Congress afterwards drew up an address to the people of Great Britain, a memorial to the West India colonists, calling upon them to unite and co-operate with their continental brethren in their present struggle, another of the same tenour to the inhabitants of Canada, and finally an earnest petition to the king beseeching, ere it should be too late, the redress of their grievances. Having then passed a resolution appointing another Congress to meet, if necessary, at the same place in May, they dissolved themselves after a session of about eight weeks.

Accounts of the most important of these events had reached the English ministry by the time that parliament re-assembled after the Christmas recess. On the 19th of January, 1775, the first day on which the House of Commons met, a voluminous collection of papers relating to them was laid on the table by his Majesty's command. When the same papers were presented the following day to the Upper House, Lord Chatham immediately rose, and concluded a long speech by moving that an Address should be presented to his Majesty beseeching him to withdraw the troops from Boston forthwith, but the motion was rejected by a majority of 68 to 18. On the 1st of February the same noble lord made another attempt to recall the legislature from the disastrous course upon which it appeared to be bent, by presenting a bill for settling the troubles in America, which while it asserted the supreme authority of Great Britain, provided for the removal of all the actual grievances of which the colonists complained; but he was again defeated by a majority of 61 to 32. On the following day, the House of Commons having resolved itself into a committee of the whole House to consider the papers, after a long and animated debate, agreed upon an Address to his Majesty in the terms proposed by ministers by a majority of 304 to 105. The question was again debated at great length on the 6th, when the Report of the Committee was brought up; and this time the division was 288 for ministers and 105 against them. "The principal men both days," says Gibbon, in a letter to Mr. Holroyd, "were Fox and Wedderburn, on the opposite sides; the latter displayed his usual talents; the former, taking the vast compass of the question before us, discovered powers for regular debate which neither his friends hoped nor his enemies dreaded." Previous to the debate of the 2nd, "the avenues leading to the House," says the 'Parliamentary History,' "were so extremely crowded that there was not room for the members to pass. Complaint being made, the lobby and galleries were cleared, and none were allowed to remain, the Irish members excepted." The second debate lasted till half-past two in the morning.

The Address thus agreed upon by the Commons having been communicated to the Lords for their concurrence, the question was amply debated by their Lordships on the 7th. The result was that the Address was carried by a majority of 104 to 29. It expressed the opinion of Parliament that a rebellion actually existed within the province of Massachusetts Bay,—declared that the two Houses never could so far desert the trust reposed in them as to relinquish any part of the sovereign authority over all the dominions of the crown vested in the three branches of the British Legislature, and besought his Majesty to take the most effectual measures to enforce obedience to the laws,—assuring him, in the most solemn manner, that it was the fixed intention of the two Houses to stand by him against all rebellious attempts in the maintenance of his rights and their own.

This Address may be regarded as amounting to a declaration of war against the Americans. It was so considered when the news of its adoption reached the colonies. On the day after it had been presented to the King, namely, on the 10th of February, another penal measure was brought forward by Lord North, in the shape of a bill for restraining the trade and commerce of the New England provinces; and this new bill also was carried through all its stages in both Houses by the usual majorities. At the same time a considerable addition was voted to the forces both by sea and land.

Soon after, namely, on the 20th, what was designated by his Lordship a proposition for conciliating the differences with America, but which was, in reality, only a device for seducing such of the provinces as might be taken in by it from the general confederacy, was laid before the House by Lord North, in the form of a resolution, that Parliament would forbear to levy any internal taxes upon any colony which should undertake of itself to make proper provision

for the several expenses of its administration. This scheme was received with no encouragement from the Opposition, and produced no effect in America. In the course of a few weeks another bill was brought in, and passed, to restrain the trade of the southern colonies, in the same manner as the Act already mentioned had restrained that of the northern.

On the other hand, every proposition of a really conciliatory or healing character was rejected by large majorities. On the 22nd of March, Mr. Burke, in another speech of extraordinary power, which has also been published, submitted to the House of Commons a series of thirteen resolutions, recommending the repeal of all the late obnoxious Acts. When the first resolution was proposed from the chair, 78 members voted for it, and 270 for the previous question. On the 17th of May, in the Lords, a motion by Lord Camden, to repeal the Quebec Government Act, was negatived by a majority of 88 to 28. A similar motion, proposed in the House of Commons on the following evening, by Sir George Saville, was supported by 86 members, but opposed by 174. Several other discussions, which took place upon American affairs, and which we cannot notice, terminated, all of them, in the same discomfiture of the friends of moderation and peace, and in the same triumphant success, for the moment, of the advocates of violent, and, as the issue proved, fatal courses.

The only other great party question which was brought forward in the course of the session, was that of the expulsion of Mr. Wilkes, by the last Parliament. On the 22nd of February, Wilkes himself brought this subject before the House of Commons, by moving that the resolution by which he had been declared incapable of sitting should be expunged from the Journals. The debate which ensued was marked by one or two curious passages. Wilkes, in his speech, had imputed to Lord North a declaration, that if any other candidate had only six votes, he should be member for Middlesex; on which Lord Stanley corrected the honourable member, and stated that it was his father, the late Lord Strange, who had made that declaration. General Fitzroy then rose, and said, that Wilkes was likewise mistaken in attributing his expulsion to Lord North; the real author of the measure was his brother, the Duke of Grafton, who was then at the head of the Ministry. But the most remarkable speech was that delivered by Captain Luttrell, a younger brother of the Colonel. He observed, that situated and connected as he was, he could not give a silent vote upon the question; "but," he continued, "as I ever wish to observe a consistency in my conduct, so I must express that detestation here I have uniformly done without doors, of every illegal proceeding respecting the Middlesex election. Sir, I shall not contend for the impropriety of Mr. Wilkes's expulsion; but as he was eligible in the eye of the electors to be again returned for Middlesex, I never can reconcile it to my ideas of right, how a person not possessed of the suffrages of a majority of legal freeholders, could, by a vote of this House, become a legal member; therefore I have constantly lamented that no arguments of mine, or of the real friends to the Colonel, could prevent him from undertaking, or prevail with him to relinquish, an act which I have ever considered of the greatest injury to the public. But when the Colonel undertook this ministerial job, it was upon the fullest confidence and assurance of being returned by a majority of legal votes. Sir, he never meditated the violation of the sacred right of election, but he was unfortunately doomed to be the vehicle through which the machinations of a certain faction were to be carried into execution; and if he has been suspected of Quixotism in the head, I trust he never will be guilty of Stewardism at heart." The motion was negatived by a majority of 239 to 171. Both Captain Luttrell and his younger brother, Temple Luttrell, a barrister at law, voted in the minority. Wedderburn, the Solicitor-General, also voted and spoke on the same side. Another vote which Wilkes had was that of Gibbon, who, in general, was among the steadiest of the Ministers' supporters. He says himself, in a letter to Mr. Holroyd, "I was a patriot; sat by the Lord Mayor (Wilkes), who spoke well, and with temper; but before the end of the debate fell fast asleep."

On the 26th of May, Parliament was prorogued; his Majesty commencing his speech with a cordial expression of his entire satisfaction with the conduct of both Houses during the session.

POLLING AT ELECTIONS ACTS.

ACTS FOR THE AMENDMENT OF THE ENGLISH AND SCOTCH REFORM ACTS.

5 & 6 Will. IV. caps. 36 & 78—passed 25th Aug., and 9th Sept., 1835.

THE Act 5 & 6 Will. IV., c. 36, amends so much of the English Reform Act as relates to the time of keeping open the poll at contested elections in boroughs. At all contested elections in boroughs, or towns, or cities or towns which are counties of themselves, the time of keeping open the poll is limited to *one day*—to last, if necessary, from eight o'clock till four. The polling-booths are to be so divided, as that not more than 300 electors shall be allotted to poll in each; and if a candidate, or his proposer or seconder, being electors, shall so require, they are to be divided so as that not more than 100 shall be allotted to poll in each—but the expense of this latter arrangement is to fall on the party or parties requiring it. The oaths of allegiance, abjuration, and supremacy, or any other oath in lieu of them, are not to be permitted to be required of electors. Liverymen of London may vote in any booth allotted to the district where they own or rent the premises, by virtue of which they have a title to vote, and they may give in their vote either as liverymen, or as owner or tenant of premises. The sheriff or returning-officer has power to adjourn the nomination of candidates, or the business of the poll, in case of riot or disturbance.

The Act 5 & 6 Will. IV., c. 78, makes similar provision with respect to limiting the time of keeping open the poll to one day, and of dividing the booths, at all contested elections in burghs or districts of burghs in Scotland.

The sheriff is to endorse on the back of the writ the day on which he received it, and within two days thereafter is to announce the time of election, which is not to be less than four nor more than ten days after receipt of the writ. But from this provision, the districts of burghs comprehending Kirkwall, Wick, Dornoch, Dingwall, Tain, Cromarty, Ayr, Irvine, Campbeltown, Inverary, and Oban, are excepted. Where a poll takes place for a district of burghs situated in different counties, the poll books at the final close of the poll are to be sealed up, and transmitted to the returning-officer by the sheriff or sheriff's substitutes.

Any freeholder, whose rights are preserved by the Reform Act, may apply to the sheriff to remove his name from the district list to the county list, which can be done after one month's notice; where a liar and life-renter are registered in respect of the same freehold, they must both concur in the application. The vote of a liar of a freehold is not to be reckoned at any election where the life-renter has voted.

The sheriffs composing the court of appeal constituted by the Reform Act, may assemble at the different circuit towns on such day as they may fix between the fifteenth and twenty-fifth days of September in each year, whether the circuit courts for this and the succeeding years shall have been held prior to these dates or not: and where such court shall consist of four sheriffs, the sheriff against whose judgment an appeal is brought can have no voice in the determination.

Neither of these Acts affects the provisions of the English or Scotch Reform Acts as respects county elections.

ACT FOR THE ABOLITION OF UNNECESSARY OATHS.

IN No. 21 of the 'Companion,' will be found an abstract of the Report of the Lords' Committee on the subject of the abolition of unnecessary oaths. An Act, based on the recommendations of that Report, was introduced during the late session, and passed (the 5 Will IV. c. 8.); but an informality was overlooked in it, by which some of its provisions were unintentionally made to have an *ex post facto* effect. The Act did not receive the Royal Assent until the 12th of June last, and magistrates were, by the 12th clause in it, prohibited from administering or receiving voluntary oaths or affidavits from the 1st of June. There were other objections to the clause, as in abolishing voluntary oaths or affidavits, no provision was made for such as were required to give validity to written instruments, proof of debts, or other matters, by which, as appeared from some of the police reports in the newspapers, great inconvenience was

experienced almost immediately after the passing of the act. Another act was therefore passed to repeal the previous one, and to extend its provisions, which received the Royal Assent on the 9th of September, and came into operation on the 1st of October last. The following is an abstract of it—it is the 5 & 6 Will. IV. c. 62.

A declaration is to be substituted by the Lords of the Treasury for all oaths, solemn affirmations, or affidavits, hitherto required in the public departments, relating to the collection of revenues, auditing of accounts, &c., &c. A copy of such declaration as may be agreed upon by the Lords of the Treasury, is to be published in the London Gazette, and to come into operation in twenty-one days after publication, and no oath afterwards can be administered.

Declarations are also to be substituted in lieu of oaths in the following cases:—

Churchwardens and sidesmen, on entering office. The oath on quitting office is abolished.

In all trusts relating to turnpikes, roads, lighting, paving, watching, or improving any town or place.

In the taking out of patents.

In the business of pawnbrokers.

On the transfer of stock at the Bank of England, or relating to the loss, mutilation, or defacement of Bank Notes or Post Bills.

In matters relating to the recovery of debts in British Colonies, &c., under the 5 Geo. II. c. 7, and 54 Geo. III. c. 15.

In attesting the execution of any will, codicil, or deed; and in all suits on behalf of his Majesty in any court of law or equity relating to debts or accounts.

Where voluntary oaths or affidavits have been required to give validity to written instruments, a declaration is to be substituted—but justices are prohibited from administering or receiving any voluntary oath or affidavit in matters of which they have no control by statute, except where they may relate to the preservation of the peace or the prosecution of offences, or where an oath may be required by the laws of any foreign country to give validity to instruments designed to be used in such country.

All corporate bodies who have power by law to administer oaths, &c., may substitute a declaration.

The Act, however, does not affect the taking of the oath of allegiance, nor the administering or taking of any oath in judicial proceedings in courts of justice.

The same penalties which are annexed to the taking of false oaths in certain cases are annexed to the making of a false declaration; and in all cases under the Act, where declarations are substituted for oaths, any person making or subscribing a false declaration is held to be guilty of a misdemeanor.

The same fees are to be payable on the making of declarations as on the taking of oaths.

The Lords of the Treasury are (as we have already stated) to prescribe the form of the declaration to be used in the public departments—and corporate bodies may prescribe what declaration they will substitute for such oaths as they have hitherto administered—but in all other cases the following is to be used:—

"I, A. B. do solemnly and sincerely believe, That and I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the year of the reign of his present Majesty, intituled, An Act to repeal an Act of the present Session of Parliament, intituled, An Act for the more effectual abolition of Oaths and Affirmations," &c., &c.

LETTERS PATENT AMENDMENT ACT.

5 & 6 Will. IV., c. 83.—Passed 10th Sept. 1835.

By this Act, any person who has obtained Letters Patent for any invention, may enter with the clerk of the patents in either of the three kingdoms, a disclaimer of any part of his specification, or a memorandum of any alteration in it; which disclaimer or memorandum is to be deemed to be part of such letters patent in all courts whatever. The Attorney-General, Solicitor-General, or Lord-Advocate (as the case may be), without whose fiat the disclaimer or alteration cannot be enrolled, may require the party applying to advertise the alteration in such manner as shall be thought fit.

In disputed cases, respecting the originality of any claim to an invention or discovery, if a jury by a verdict shall find that the party who has obtained letters patent, has not an original claim to the invention or discovery which he has patented, or if the patentee or his assigns shall discover that some other person had, unknown to them, invented or used the same before the date of the patent, the matter may be referred by petition to the Judicial Committee of the Privy Council, for consideration; and if the committee are of opinion that the patentee believed himself to be the original inventor, and that the invention was not publicly used before the date of the patent, the patent may be confirmed, or new letters patent granted. But notice must be served on the opposing party, who is entitled to be heard before the committee against the confirmation of the patent.

In any action or suit at law respecting a patent, if a verdict pass in favour of the patentee or his assigns, the Judge may grant a certificate, which, on the event of a second trial respecting the same patent, may be given in evidence; and if a second verdict is passed in favour of the patentee or his assigns, he or they shall be entitled to have treble costs, unless the Judge who tries the second action certifies that treble costs should not be given.

Any person intending to apply for the prolongation of the term of a patent, must give notice of his intention by advertising three times in the 'London Gazette,' once in each of three London papers, and three times in a country paper published nearest to where he resides; and any person may enter a caveat at the Council Office. Should the matter be referred to the Judicial Committee of the Privy Council, both parties may be heard by counsel and witnesses for and against the application. If the decision be in favour of the patentee, the term of the patent may be extended for any period not exceeding seven years.

In actions respecting patents, plaintiff and defendant must file notices of such objections as they mean to rely on at the trial; and in taxing the costs of any action, regard is to be had to such part of the case as has been proved at the trial, and the costs of each part of the case shall be given as either party has succeeded or failed therein.

The penalty for imitating the name, stamp, mark, or device, of any patentee, without consent, or in any mode interfering with patented rights, is fifty pounds for each offence. This does not apply to stamping the word "patent" on any thing for which a patent, formerly obtained, has expired.

MARRIAGE AMENDMENT ACT.

5 & 6 Will. IV., c. 54.—Passed 31st Aug. 1835.

This Act declares that all marriages within the prohibited degrees of affinity which have been celebrated before the passing of the Act are valid, and are not to be voidable by any sentence of the Ecclesiastical Court, unless pronounced in a suit depending at the time of the Act passing. But this is not to affect marriages between persons within the prohibited degrees of consanguinity.

All marriages which shall hereafter be celebrated between persons within the prohibited degrees of consanguinity or affinity, are to be absolutely null and void to all intents and purposes whatsoever.

The Act does not extend to Scotland.

DUTIES ON TEA.

By the 5 and 6 Will. IV. c. 32, it is enacted, that the various rates of duties on teas imposed by the 3 and 4 Will. IV. c. 101, are repealed; and that from and after the 1st of July, 1836, a uniform rate of duty of 2*s.* 1*d.* on each pound of tea, is to be collected.

ACT FOR THE REDUCTION AND REGULATION OF STAMPS AND ASSESSED TAXES.

5 and 6 Will. IV. cap. 64; 9th Sept. 1835.

All deeds, bonds, or other instruments made in Ireland for the purpose of submitting matters in dispute to arbitration, awards thereupon, are exempted from stamp duty

The stamp duties on policies of assurance on lives exceeding 100*l.* are reduced in Great Britain of on insurances not exceeding 50*l.*, the duty by from 50*l.* to 100*l.* it is to be 5*s.*

The Commissioners of the treasury are authorized to compound with the East India Company for the stamp duties on India bonds. Transfers in England of the territorial debt of the East India Company are to be chargeable with a stamp duty of 30*s.* only; and letters of attorney for voting on the election of East India directors are exempted from duty.

Members of any of the Inns of Court may be admitted in any of the other inns duty free.

The Commissioners of the treasury may appoint such number as they shall think fit of the distributors and sub-distributors of stamps to be collectors of the land and assessed taxes in Scotland, such collectors giving security; and all bonds, bills, securities, &c. entered into by them in pursuance of their office, are to be free from stamp duty.

The land tax in Scotland is to be collected and paid under the same rules and regulations as the assessed taxes.

The sum of 3*l.* 10*s.* per annum is to be charged on race horses in lieu of former duties.

The exemption granted to farmers from the duty on one riding horse by 4 and 5 Will. IV. c. 73, is explained to extend only to such occupiers of farms or estates under the rent or value specified in that act as obtain their livelihood principally by husbandry; and the exemption granted to certain officers by the 52 Geo. III. c. 96, for one male servant being a soldier, is extended to such number of servants being soldiers as may be allowed to each officer by the regulations of the service.

PARLIAMENTARY ABSTRACTS.

New Churches.—The Fifteenth Annual Report of the Commissioners for building New Churches, states, that since the last Report, four churches and chapels have been completed, at Bollington, in the parish of Presbury, in the county of Chester; at Norbury, Stockport, in the same county; at Cross Stones, in the parish of Halifax, county of York; and at Spotland, in the parish of Rochdale, in the county of Lancaster. In these accommodation has been provided for 4506 persons, including 2370 free seats.

On the whole, the Commission has completed 212 churches and chapels, in which provision has been made for 283,555 persons, including 155,938 free sittings, to be appropriated to the use of the poor.

Five churches and chapels are in progress, at Dover, North Shields, Carmarthen, Tredegar, county of Monmouth, and Habergham Eaves, county of Lancaster.

Plans for four chapels have been approved of, to be built at Sheerness, Loughborough, Newport, and in the parish of St. John the Evangelist, Westminster.

Grants are proposed in aid of nine new churches and chapels, the plans for which have not been laid before the Board.

Since the last Report, the Board has afforded, or expressed its willingness to afford, facilities for obtaining additional burial-ground for various parishes which are enumerated in the Report.

The Commissioners also report, that under the powers vested in them by the Church-building Acts, they have, with the necessary consents, re-united the rectorial and vicarial tithes of the parish of Orwell, in the county of Cambridge, and formed the same into a rectory.

The Commissioners propose granting the perpetual patronage to persons building and endowing chapels under the 1st and 2nd Will. IV. c. 38, in the following instances:—At Bude, in Cornwall; Fareham, Hants; Mincham, Strafford; Levens, Westmoreland; Ivybridge, Devon; Ettingshall, Stafford; Brathay, Lancaster; Southend, Essex; Edgbaston, Warwick.

The Exchequer Bills issued up to 28th July, 1835, amount to £1,500,000.

The total quantity of proof spirits distilled in the United Kingdom, in the year ended 5th January, 1835, was—

England, from a mixture of malt with unmalted grain, 4,652,838 gallons.

Scotland, from malt only, 5,994,623 gallons; from a mixture of malt with unmalted grain, 3,198,468 gallons. Total, 9,193,091 gallons.

Ireland, from malt only, 62,895 gallons; from a mixture of malt with unmalted grain, 9,307,148 gallons.

Total number of gallons for the United Kingdom 23,216,272.

Quantity imported into England from Scotland, 2,575,316 gallons; amount of duty paid, 965,743*l.*

From Ireland into England, 416,147 gallons; duty paid, 156,055*l.*

From Scotland into Ireland, 550,294 gallons; duty paid, 76,599*l.*

No spirits were imported into Scotland from England or from Ireland during the year ended 5th January, 1835.

PARLIAMENT.

The representation of the borough of Devizes being vacant by the death of Wadham Locke, Esq., a contested election took place on the 25th of November.

Member Returned.	Unsuccessful Candidate.
T. E. Estcourt, Esq., 157.	Captain Dundas, 145.

This is the first borough election in England which has come under the operation of the 5th and 6th Will. IV., c. 36, limiting the time of taking the poll to one day.

The following places are vacant:—

North Northamptonshire, by the death of Lord Viscount Milton:—North Leicestershire, by the death of Lord Robert Manners:—West Gloucestershire, by the elevation of the Marquis of Worcester to the peerage, on the death of his father, the Duke of Beaufort.

Bankruptcy Analysis from Oct. 27 to Nov. 20.

Auctioneers, 2; bill-broker, 1; brassfounder, 1; brewer, 1; builder, 1; button-maker, 1; cabinet-maker, 1; coal-merchants, 2; corn-merchants, 2; drapers, 3; farmer, 1; flax-spinner, 1; factors, 2; grocers, 4; glove-manufacturer, 1; iron-masters, 2; iron-founder, 1; ironmonger, 1; linen-drapers, 3; lodging-house keeper, 1; leather-factor, 1; machine-maker, 1; miller, 1; mercer, 1; picture-dealer, 1; scrivener, 1; salesman, 1; ship-builder, 1; ship-chandler, 1; stationers, 2; tailor, 1; tavern-keeper, 1; timber-merchants, 2; tobacconist, 1; warehouseman, 1; wine-merchants, 2; wood-turner, 1; woollen-draper, 1; upholsterer, 1. TRADE, STATISTICS, &c.

Statistical Notices respecting the Province of Texas in the North Part of Mexico.—Mexico, while under the dominion of Spain, so far from encouraging emigration, threw every obstacle in the way of settlers, in order that the wealth and resources of the country might remain unknown. Military posts were kept up in different parts of the country, and any foreigner found within the limits was subjected to imprisonment. In 1821 Mexico proclaimed herself independent On the 4th January, 1822, the first colonisation law was passed inviting foreigners to settle, offering them lands, and promising protection to their persons and property.

At this time Texas was almost an unexplored country, totally uncultivated and uninhabited, except by a few natives, congregated together in three or four small villages.

The first attempt at a settlement was made in 1821, by Colonel Austin, an American, who obtained a grant from the Mexican government of a tract of land on the Rio Brasos, which grant has served as a model for other settlements. Austin's settlement is now said to contain 15,000 inhabitants. As the salubrious climate and extraordinary fertility of Texas became more known, it began to attract the attention of the planters in the southern States of America, and emigration to it from thence was proceeding at a rapid rate, when Mexico, alarmed lest the new population should throw off their connexion with her and attach themselves to the United States, passed a law on the 8th April, 1830, prohibiting the citizens of the United States from settling in Texas. This law was however repealed on 21st May 1834, and the population has increased so astonishingly, that, in November last, it was estimated at 40,000 souls; almost every week companies of from fifty to one hundred persons are on their way to settle in Texas.

The province of Texas is considered one of the richest and best watered countries in North America. The soil is every where ready for the plough, almost the whole country being a rich grass land. The climate admits two or three crops in the year, and is suited to almost every variety of production. Sugar-cane, cotton, indigo, rice, tobacco, Indian corn, wheat, rye, oats, besides a great variety of fruits, such as peaches, grapes, lemons, oranges, figs and olives, &c., are produced in the greatest abundance and perfection; and notwithstanding its southern latitude, with the exception of the immediate vicinity of the coast, it cannot be surpassed in salubrity. Good water may be had everywhere in the province at the depth of thirty feet, and in the upper country springs and rivulets abound.

One distinctive characteristic of this beautiful country is its exemption from swamps and stagnant pools. The land invariably ascends from the water-courses, and, rising from moderate eminences, precludes the formation of swamps to any injurious extent. This is one efficient cause of the singular purity, elasticity, and equability of the atmosphere of Texas, which is moreover refreshed by lively breezes from the ocean, rolling over a dry and verdant surface.

Texas is admirably situated with reference to markets, owing to her vicinity to New Orleans, Cuba, the West India Islands and Central America, possessing an extent of coast stretching from the River Sabine to Rio Grande, a distance of 500 miles, and containing some of the best harbours in the Gulf of Mexico, particularly Galveston, Matagora, Aranzas, and the Braso de Santiago. Many large navigable rivers traverse every part of the province, and empty themselves into these harbours. The most conspicuous of these rivers are the Sabine Nuches, Trinity, San Jacinto, Brasos, Colorado, Guadalupe, San Antonio, Nucces and the Rio Grande, all of which are navigable, some of them for 300 or 400 miles into the interior. By the treaty also, entered into between the United States and Mexico, the right of navigating the Red River (which forms the northern boundary of Texas) through the Mississippi to New Orleans, is secured to the inhabitants of Texas.

The Roman Catholic religion is declared to be that of the state. Formerly a profession of this religion was made a condition of settlement; but, by the law of 21st May, 1834, protection is offered to the person and property of every settler, whatsoever may be his religious tenets.

The constitution of Mexico is a federal republic, the general government having power to legislate on all matters of common interest to all the states, each particular state regulating within its own limits the administration of justice, the transfer of property, and all matters which are not a part of the general concerns of the nation. Liberty and property are amply guarded by adequate laws, the administration of which is committed to competent tribunals, whose proceedings are public and accessible to all.

Texas may be approached by water along the whole extent of coast, and the settler can reach the interior with his family and effects with little trouble or expense. He is permitted to carry with him whatever he requires for his subsistence or his business, duty free, and his land and property are declared exempt from taxes for the period of ten years from the time of settlement. The settler has nothing to fear from the civil commotions of Mexico; Texas is too remote to be affected by them.

In the year 1832 a company was formed in New York, entitled the Colorado and Red River Land Company, which entered into a contract with the States of Coahuila and Texas, and undertook to introduce 650 families as colonists within the space of six years from that date, the state having assigned them tracts of land on the Colorado, Guadalupe and Red Rivers, to the extent of twenty millions of acres.

On the part of the state it was agreed and provided by law, that each family introduced by the contractors should be allowed 4428 acres of land; that the state would guarantee the contracts made by the contractors, and give them a bounty of 23,000 acres for every 100 families thus introduced.

By the stipulations in the contract the contractors are authorised to select lands for themselves where they please, their premium lands not exceeding 28,000 acres for every 100 families.

The settlers receive their titles directly from the state, the land being given to them in pure donation on their obtaining the consent of the contractors.

The permission to locate, after being signed by the contractors, is presented by the settler to the Commissioner of the State, who exchanges the same against a patent-deed for the quantity of land designated, not exceeding 4428 acres.

A law however was passed by the States of Coahuila and Texas, on the 26th March, 1834, and is now before the general government, which declares that the waste and unappropriated lands of the state are not hereafter to be given away to settlers or placed under contract, but are to be sold by public auction. The minimum price is fixed at ten dollars per allotment of 177 acres, making the price at which the refuse lands of the state can be purchased, including the fees of transfer, about sixpence sterling per acre.

Danish Possessions.—The population of the Duchy of Schleswig, in February last, amounted to 332,866 souls, and that of the Duchy of Holstein to 435,528. The number of inhabitants of these two duchies has, during the last thirty-two years, experienced an increase of 164,309.

Woollen Manufactures in Russia.—"There were not more than forty manufactures who sent in specimens of their articles to the last exhibition of the products of national industry at Moscow; of these twenty-seven were manufactures established in that town, of whom but one-third therefore contributed their quotas. There are in all 417 woollen manufacturers in Russia, but one-tenth part only of them sent specimens to the exhibition in question. The principal flocks in Russia, indeed almost the only ones, are in the provinces of Tauria, Poltowa, and Yekaterinoslaf. The leading proprietors are the Duke of Anhalt-Koethen, who has 17,000 sheep; M. Vassal, a Frenchman, who has 30,000; General Potier, 19,000; Baron Stieglitz, who possesses two sheep-grounds, 13,000; Count Litta, 22,000, and Count Rasumofski, 54,000."—*Journal of the Russian Minister for the Home Department.*

Literature &c., Russia.—According to a Report from the Board of Censors for foreign publications, 300,000 volumes of books in foreign languages were imported into the Russian dominions during the year 1834; this is nearly 29,000 more than in the year preceding. There appeared, under the cognizance of the Board of Censors for the Home Department, 728 original works and 116 translations, which give a total of 844 new publications in the Russian language. The same Board sanctioned the appearance of 48 newspapers. Last year the Ministry of Public Instruction sanctioned the printing of 113,200 copies of school-books of various descriptions; and in the same interval 94 additional public schools, including the University of St. Vladimir, at Kief, were opened.

POLITICAL RETROSPECT FOR NOVEMBER, 1835.

GREAT BRITAIN.

The domestic political movements of the past month have been for the most part confined to party dinners and other meetings, and to some incidents in which individuals have figured rather than either parties or principles.

The barristers appointed to settle the boundaries of the wards into which certain boroughs are directed to be divided by the late Act for the regulation of municipal corporations, have been proceeding in the performance of their duties, without, however, attracting more than a local attention. In some instances they have called public meetings of the inhabitants of the borough, with the object of learning the views entertained with regard to the most advisable division among the persons most interested, and also best acquainted with the circumstances of the case.

There has been received within the last few days the speech delivered on the 27th of October, at the opening of the Parliament of Lower Canada, to the two Houses, by

Lord Gosford, lately appointed the Governor-in-Chief of that province, and also the head of the Commission which has been sent out to endeavour to compose the differences by which the colony has been for some time agitated. The Address of his Excellency, which is of unusual length, is very conciliatory in its tone, and notices in succession a great number of points which have been made matter of complaint or dispute by the different political parties in the country. Upon such of them as belong merely to the administrative practice of the Government such assurances are given as would probably, if the controversy were confined to these, be entirely satisfactory. In regard to the constitutional changes demanded by the popular party, the language employed is not so definite. The leading views of the Government and of the Commission, however, may probably be gathered from the paragraph with which his Excellency concludes this head of his discourse:—"In a declaration put forth by many among you who inhabit this city, I have seen the following objects enumerated:—First, to obtain for persons of British and Irish origin and others, his Majesty's subjects, labouring under the same privations of common rights, a fair and reasonable proportion of the representation in the Provincial Assembly; secondly, to obtain such a reform in the system of judicature, and the administration of justice, as may adapt them to the present state of the province; thirdly, to obtain such a composition of the executive council, as may impart to it the efficiency and weight which it ought to possess; fourthly, to resist any appointment of members of the Legislative Council otherwise than by the Crown, but subject to such regulation as may ensure the appointment of fit persons; fifthly, to use every effort to maintain the connexion of this colony with the parent state, and a just subordination to its authority; and, sixthly, to assist in preserving and maintaining peace and good order throughout the province, and ensuring the equal rights of his Majesty's subjects of all classes. If these objects are indeed all that are desired by the whole commercial interest, I trust it will be satisfactory to those who aim at them to know that there is not one of them which is not strictly within the line of duty of the King's Commissioners to take into consideration, to receive respecting them the fullest evidence and information which may be offered, and finally, to submit to our gracious Sovereign and his Ministers their impartial and well-weighed conclusions."

FRANCE.

THE several Courts of Paris having opened, M. Persil, the Minister of Justice, immediately took the field as a champion against the press, and as the censor-general of books and newspapers. He drew some odium upon himself by seizing, among some works which were really objectionable, sundry merely philosophical books, that contained neither sedition, blasphemy, nor immorality—three ingredients not unfrequently found in modern French productions. For some time M. Persil refused to restore the property thus seized, but at last he notified to the booksellers that they might send for their books. The united efforts of many journalists could not make this a subject of popular excitement. Prints and the Theatre are also vigilantly watched, and permission for printing and selling engravings, and a license for the representation of dramatic pieces, are always withheld when there are any political allusions, or any immorality or obscenity. If the operation of these severe laws could stop that torrent of filth and obscenity that has flowed from Paris to nearly every part of the globe in the shape of French engravings, a great good would be done to society, but we much doubt whether the present rigour will have this effect, while the arbitrary character of the authority thus exercised by the executive is evidently most dangerous, and in every way objectionable.

The following is an abstract of a Royal Ordonnance, which was published on Saturday the 1st of November, for the determining of the distribution of that branch of the budget for the ensuing year which includes the expenses of the War department:—It is divided into distinct chapters, the first of which, for the salary of the Minister, clerks, and attendants at the War Office, allots to 1,354,000f.; the second, for furnishings to the hotel, 230,000f.; the third, for printing, 130,000f.; the fourth, for the staff of the army, 14,30[illegible]; the fifth, for the Gendarmerie, 17,679,210f.; the sixth, for recruiting, 475,000f.; the seventh, for military justice, 209,000f.; the eighth, for pay and maintenance of the troops, including hospitals and marching money, 108,645,000f., with an addition of 10,096,000f. for clothing and encampments; the ninth, for pay of non-activity, 388,000f.; the 10th, for military beds, 4,558,000f.; the 11th, for remounting the cavalry, 2,634,000f.; the 12th, for harness, 230,000f.; the 13th, for forage, 16,638,000f.; the 14th, for transports, 913,000f.; the 15th, for war depôt and new military chart of France, 377,000f.; the 16th, for the *matériel* of the artillery, 6,905,000f.; the 17th, for *matéris* of the engineers, 9,475,000f.; the 18th, for military schools, 1,831,000f.; the 19th, for temporary expenses, 5,278,000f.; the 20th, for invalids, 3,038,000f.; the 21st, for administrative services in Africa, *nil;* the 22nd, for accidental and secret expenses, *nil;*—total, 205,383,210f.

The quarrel with General Jackson and the United States seems to be growing more serious. Mr. Barton, the American Chargé d' Affaires, demanded and obtained his passports, but has not yet left France. He openly declares that his government will not offer the excuses set down as a *sine qua non* by the French Cabinet and Chambers, and the question at issue seems to be still further involved by a dispute as to the interest to be paid to the States on the 25,000,000f. The whole subject will be once more submitted to the Chamber of Deputies, where a loud and long debate may be expected. In the meantime all diplomatic relations are in suspense between the two countries. We have heard it reported that an offer made by Lord Palmerston to arbitrate between them has been declined.

France is making great naval preparations both at Brest and Toulon, but the strong gathering of fleets of different nations in the Levant may have as much to do with this as the American quarrel. France has a ship of the line, a frigate, a sloop of war, four brigs, and two schooners in the Levant. England has five men-of-war, two sloops, five frigates, two schooners, three brigs, and two steam-boats. Russia has six men-of-war, four frigates, and two sloops of war. Austria has a frigate, a schooner, and two smaller vessels. Egypt has six vessels of the line, four frigates, a schooner, three brigs, and eight schooners armed *en flûte*. Turkey has one man-of-war, five frigates, two sloops, two brigs, and two schooners, besides sixteen vessels of smaller dimensions. Thus about 100 war vessels are stationed in the Levant. The French squadron is the smallest.

It is reported that Russia has again claimed of France the sum of 120 millions of francs due to Poland from that country.

The British government is said to have remonstrated with the French on the facility allowed to the partisans of Don Carlos in sending supplies through France and by the frontier of the Pyrenees; and it is quite certain that measures have been adopted recently by Louis Philippe's ministers to prevent the grievances complained of, which militated very seriously against the objects proposed by the Quadruple Alliance. By doing their duty in this respect the French will powerfully contribute to the putting a stop to the wretched civil war in Spain.

Louis Philippe has suffered a severe loss in the death of Admiral de Rigny, who had remained in office through all the numerous changes of the Cabinet, and who was devotedly attached to the King. For some time he had acted as Minister for Foreign Affairs. He was a brave officer, a well-informed, and in many respects a very clever man. He commanded the French division of the combined fleet at the battle of Navarino, and afterwards showed some diplomatic talent in settling the difficult and tedious Greek question. He died at Paris on Saturday the 7th of November, in the prime of life.

He was buried with great state on the 11th, the procession and all the ceremonies passing off in order and peace. This and the late funeral of the victims of Fieschi's infernal plot are said to be the only public funerals in France since 1830 from which riot, or bloodshed, or some other lamentable consequences have not arisen.

At the re-assembling of the Parisian bar, according to a custom which we think would be more honoured in the breach than in the observance, certain of the functionaries delivered set orations. Messieurs Martin du Nord and Desmontiers lectured and climaxed on the evils resulting from a too eager pursuit of popularity, and on the necessity of *civil* courage. M. Dupin (in the Court of Cassation) harangued on the virtues of some former lawyers and statesmen and on the

vices of others, and set down as one of the capital causes of the first great French Revolution the corruption, debauchery, and forfeiture of all self-respect of the public officers of the crown. One of his illustrations was amusing. In describing the vulgar tyranny and triviality of the Chancellor Maupeou, he said that on one occasion the chancellor so far forgot the dignity of his office that he played at blind-man's buff in his stately robes with Madame du Barry, one of the low mistresses of Louis XV. Maupeou did worse things than this. M. Dupin left the application to the auditory, who, with some of the journalists, chose to consider it as an indirect allusion to the character and practices of M. Persil, and hence arose a good deal of embarrassment to M. Dupin, who certainly did not so understand it.

The Moniteur of the 12th of November contains a royal ordonnance, naming eight individuals as a commission to consider what reduction may be made in the duty payable on the importation of saltpetre from the Indies. The duty at present payable is 52½ francs per metrical quintal. Of course the saltpetre manufacturers of France are opposed to a reduction.

The Bank of France is now considering a proposition made by M. d'Argout, the governor, to reduce the rate of discount from four to three per cent. A commission has been named to examine and report.

According to the Courier Français, M. Humann, the Finance Minister, has abandoned his favourite project of converting the five into three per cents.

On the 16th of November the peers met as previously convoked to continue the *Procès Monstre*, or the trial of the republican insurrectionists of April, 1834. Seventy-eight accused remain to be judged, but as a good many have escaped, only forty could be produced from the prisons and brought into court. Of these some refused to plead or answer the questions put to them, and some replied unwillingly or insolently. The old scenes of disorder and disrespect were renewed; a number of the prisoners would not rise when the peers entered, and even persisted in keeping their hats on. These republicans were equipped in a curious variety of costume. Some were dressed à la Robespierre, some wore *blouses* or smock-frocks, and some with a cynicism, which may become of necessity fashionable among them, appeared in rags studiously arranged for effect. According to our newspaper correspondents they were, however, in very good condition, and looked like men who had suffered few privations in the way of eating and drinking. So tediously has this state trial "dragged its slow length along," and so little interest does it now excite among the Parisians, that there were only a few idle boys to witness the re-opening of the court. We must own to something of the same kind of indifference, and shall not return to this subject until it is finally disposed of.

On the same day the peers formed themselves into a secret committee to hear the report got up by Count Portalis on Fieschi's atrocious attempt to murder the king. Some of the Paris politicians assert very positively that the efforts of the government to attach the plot to one of the great factions—to the Republicans or the Carlists—have signally failed, and that all the *dramatis personæ* will prove to be only Fieschi and four other scoundrels of the same vulgar stamp. The names of the four accomplices are Pepin, Boireau, Bechet, and Morey, who are said to have been formally denounced and impeached by Fieschi because they refused pecuniary assistance to the woman with whom he lived. After M. Portalis had read his report, the Procureur-General demanded of the court that these five men should be immediately put on their trial on the double charge of treason and murder. With a very short deliberation the court complied, but agreed, however, to hold another sitting with closed doors on the following day.

The Duke of Orleans left Ajaccio, in Corsica, for the Coast of Africa on the 7th of November. His visit to Corsica is represented as having been very beneficial to the cause of his father and family in that island.

The Chamber of Deputies is to be convoked on the 28th of December.

SPAIN.

The affairs of the young queen, or the Constitutionalists, offer, on the whole, a decided improvement. This is at once a cause and a consequence of the rise of Spanish credit and Spanish bonds in our money markets; and Señor Mendizabel's Stock-exchange powers have done more service than armies and the Cortes.

The Juntas in the provinces have been completely dissolved without recourse to arms or any hostile collision. The influential ex-minister, Las Amarillas, the Duke of Infantado, the Duke of Alcumada, and other noblemen of great weight, have resolved to support Mendizabel's government. Thus, having their hands comparatively freed, Ministers have been enabled to direct nearly the whole of their attention to the prosecution of the war against Don Carlos, who seems to be dreadfully in want of money, the nerve of war—even amongst the most faithful and most devoted people of Biscay and Navarre.

The official Gazette of the 25th of October contained an ordonnance for the levy of 100,000 men, declaring that every Spaniard from the age of eighteen to forty must henceforward be regarded as a soldier. The following classes are excepted:—all such persons as are physically disqualified; all men who have been discharged from the army or navy; all priests, monks, and the clergy generally; all sons of poor widows, or of fathers sixty years old, who support their parents by their labour. An exemption may also be purchased for about 40*l.* English—an enormous sum for poor Spaniards. The most robust fellows we ever saw in Spain were among the monks, and we should have thought an excellent regiment or two might have been raised out of the suppressed orders; but we believe their constitutionalism is more than suspected.

On the 27th of October the Christino troops had the advantage in a warm combat, and cut their way into Salvatierra; but the Carlists being reinforced during the night and next day, the Queen's General, Cordova, was obliged to retire on Vittoria. Cordova's object, which was well conceived, but failed through want of men, was to open the high road of the Borunda, between Vittoria and Pampeluna. On his retreat a squadron of horse strayed from the proper line of march and was lost, but the rest of his troops were never *entamé* by the Carlists, who have evidently lost spirit. Both the advance and retreat, through a most difficult country, were conducted with better generalship than has been usually shown by the party. His loss was very trifling. The Carlists had 80 killed and 400 wounded, and about another hundred either deserted or were taken prisoners. At the conclusion of a dispatch dated Vittoria, the 30th of October, Cordova expresses himself in sanguine terms on his position and plan for future operations.

"In the meantime," he says, "though the bulk of the enemy's forces are concentrated around me, the bridge of Arminon has been established, and its fortifications are in progress, as are also those of Larraga. The bridge of Lodosa has also been protected and substantially fortified, and the bridges of Argu have been blown up and destroyed. General Espartero was enabled to reach Bilboa without accident, and will have returned to Vittoria to-morrow morning with the mass of the British division, and of Jaureguy's brigade, all under the orders of General Evans. To cover this movement I mean to set out myself at daybreak in the direction of Villareal and Ochandiano, and I believe that we shall have another encounter with the rebels, who will seize the opportunity of opposing a junction under shelter of the extensive thickets of Ochandiano."

It appears that Cordova advanced to Ochandiano as he proposed, and returned without opposition; that General Evans with 8000 men got safely in to Vittoria, and that on the 3rd of November a sanguinary conflict, which Don Carlos observed from a *nearer* distance than usual, was fought near the latter city to the disadvantage of the absolutists. All this goes counter to the boast made by Zumalacarreguy on the 10th of June last, when that chieftain said he should be in Bilboa in three days, and in Vittoria in twelve.* Zumalacarreguy failed in these promises, and since his death the Carlists have gained little glory in the field. He left no man at all equal to him behind, and the mediocre geniuses that surround the Pretender have been burning with jealousy of one another, and quarrelling for the chief command. The notorious priest Moreno in pushing his claims for advancement disgusted many of the

* See "A Chapter in the History of Charles Vth. (Don Carlos) by the Baron de los Valles," a volume in which there are some signs of Parisian book-making, but also *some truth* and a good deal of amusement. The Baron makes his hero the very model of a good and great King, which the Don is *not*, any more than he is the thorough monster he is described by his enemies.

officers, and gave so much offence to Don Carlos that he was commanded never again to appear in the presence of that Prince.

It appears that the Count d'España did not return to Spain, as we stated last month, after his flight into France; and that the Carlists considered him as a defaulter and traitor. We mentioned, in our October number, that the Don had named the Virgin Mary generalissima of his army; but, either because her ladyship has been lukewarm in his cause, or has not been successful in the field, or for some other reason, he has now appointed a mortal commander-in-chief, who is either Eguia or Ituralde;—we are not quite sure which.

It is also stated that the Carlist juntas in Biscay and Navarre have quarrelled, every one with all the rest; and that the people, worn out by long and constantly-increasing levies, and exactions of money and provisions, are tired both of the war and the Don, and are becoming very clamorous. Old Mina has been appointed Captain-General of Catalonia, a circumstance which is in itself quite enough to account for sundry new discontents having broken out there, and for the Carlists having obtained a few advantages in the province.

The Portuguese auxiliary force reached Zamora at the end of October, since when we have heard nothing certain about them. It should seem it was expected that these Portuguese would form a junction with Generals Cordova and Evans at Vittoria, but that there have been difficulties encountered at Lisbon in completing the body and forwarding their march. The Madrid correspondent of the 'Times' is in an extasy at the voluntary contributions made by the citizens there, for the cause of the constitution: according to him, "not a day passes but the 'Gazette' contains some noble trait of patriotism worthy of being preserved," and then he goes on to say that "a poor overseer of police" has just given for the fund intended for equipping troops—*his estate!* A Spanish policeman! an Alguasil! *Le patriotisme! ou, diable, va-t-il se nicher!*

Mendizabal has also made earnest representations to the French government on the subject of the supplies Don Carlos has received from across their frontiers, and some of the journalists say he has also demanded from them "a more cordial and energetic co-operation." He has likewise been preparing for the session of the Cortes, which he has looked forward to with rather more confidence than we can share, as we rather fear the out-break of some ultra-liberal intemperance. It is supposed that Antonio Gonsalez will be president of the Procuradores, and that if Mendizabal cannot carry the Address to the Queen's speech (which is to be a very detailed one), he will immediately dissolve the Cortes, and appeal to the nation through a fresh election. It is generally believed that the liberal orator and author, Galiano, will support Mendizabal's cabinet, and probably even join it. We do not think the latter event at all unlikely;—he has given up the editorship of a journal called 'La Revista' already. The Queen-Regent's speech is eagerly expected, and nowhere with more impatience than in that temple of liberty, the Stock Exchange.*

PORTUGAL.

Dom Miguel's proclamation, which we quoted in our last number, appears to have produced some effect, as a popular insurrection in his favour has broken out in the Alemtejo. The movement, however, seems to have been trifling and ill-concerted, and to have perished in its birth. According to some of our journalists, the cause of Dom Miguel and Don Carlos has been taken up (of all the mighty potentates in the world!) by the King of Sardinia, the once liberal and even revolutionary Prince of Carignano. Several of the newspapers have given accounts, which we can scarcely credit, of his Majesty's getting ready troops and a fleet to send against the constitutionalists of Spain and Portugal. If the disaffected, liberty-seeking Italians could be depended upon in such a crusade, and if affairs were in a better condition, the King of Sardinia would not be so contemptible an enemy as the newsmen consider him in their ignorance. He has a fine army, which not long ago exceeded 30,000 men;—the Piedmontese, the Savoyards, and Sardinians are brave and good soldiers;—8000 or 10,000 such troops landed on either coast would be no joke; and his fleet, manned chiefly by Genoese, the best sailors in the Mediterranean, and far better and steadier than Spanish or Portuguese seamen, is, we should think, equal, or nearly so, to that of Portugal. If our readers refer to our October number, they will find a short account of a quarrel and the breaking off of diplomatic relations between the courts of Lisbon and Turin. Were they left to themselves, we can *just* consider it possible that these small powers might fire off a little gunpowder at one another, by sea; but we are quite sure that so much as this will not be permitted by Austria, the guide and rigid guardian of his Sardinian and Piedmontese Majesty. Austria is all for peace,—so is Prussia,—so is France,—and so, out of necessity, is Russia. A civil war, as in the north of Spain, may be allowed to linger on in a corner, but we feel totally confident that a conflict between nation and nation, or anything at all likely to lead to a general war, will not be allowed.

It is said that Donna Maria's second marriage now proceeds smoothly, and that the Prince of Saxe Cobourg Gotha will certainly be her husband. We observe, with great satisfaction, the progress making by an English association, called "The Peninsular Steam Company," which is to have not only some fine large steamers, to sail one every week, from London and Falmouth to Lisbon, Cadiz and Gibraltar, but also a number of smaller branch steamers, to keep up a regular communication with Oporto and all the intermediate ports along the coasts of Portugal and Spain. This is more likely to advance the march of trade and civilization than almost anything else we know of.

* Since the above was in type, her Majesty's speech has arrived; it will be noticed in our next Retrospect.

HOLLAND.

The States General have carried up an Address on the King's Speech, delivered on the opening of the present session on the 20th of October. After re-echoing most of the sentiments of the Royal Speech the Address strongly expresses a regret at the continued interruption of friendly relations with Belgium, and hints at the pressing necessity of adjusting all differences between the two countries. Some of the journals confidently promise, within three months, an entire and friendly settlement, to be brought about by means of what they call a common mediation. It is also reported that King Leopold will dwell upon this subject in his opening speech to the Belgian Chambers. The greatest difficulty in the way of a definitive arrangement arises out of the Luxembourg question, but we trust even this will be settled sooner or later by paper and without cold steel and cannon balls.

RUSSIA AND POLAND.

A speech, said to have been delivered by the Emperor Nicholas to the municipal body at Warsaw, has gone the round of all our own, and most of the continental newspapers. It is so extraordinary, that we confess we have doubted, and still doubt its *complete* authenticity, for whatever else he may be, the reigning Czar is neither a madman nor a fool, and the most tyrannical of sovereigns have now-a-days the merit or simulation of being courteous in demeanour and mild in speech. As, however, a pretty general belief in the genuineness of the document obtains, and as we have heard an opinion expressed by some persons, who are better judges of the matter than the editors of newspapers, that the Emperor may have said something *very like* what is set down for him, we will preserve the speech in our columns:—

"Gentlemen,—I know that you have wished to address me, and am acquainted with the contents of your intended address; but to spare you from delivering falsehood, I desire that it may not be pronounced. Yes, gentlemen, it is to save you from falsehood; for I know that your sentiments are not such as you wish to make me believe them to be. How can I put faith in them, when you held the same language to me on the eve of the revolution? Are you not the same persons who talked to me, five and eight years ago, of fidelity and devotedness, and made me the finest protestations of attachment, and yet, in a very few days after, you violated your oaths, and committed the most violent actions? The Emperor Alexander—who did more for you than an Emperor of Russia ought to have done—

who heaped benefits upon you, who favoured you more than his own subjects, and who rendered your nation the most flourishing and happy—the Emperor Alexander was treated with the blackest ingratitude. You never could make yourselves contented with your most advantageous position, and in the end, became the destroyers of your own happiness. I thus tell you the truth in order to throw a true light upon our relative positions, and that you may know upon what you have to depend, for I am now seeing and speaking to you for the first time since the disturbances. Gentlemen, we require actions and not mere words; repentance should come from the heart; I speak to you without anger, and you must perceive that I am perfectly calm; I have no rancour, and I will do you good even in spite of yourselves. The Marshal who stands before you, fulfils my intentions, seconds all my views, and also watches for your welfare." At these words the members of the deputation bowed to the Marshal. "Well, gentlemen, but what signifies these salutations? The first duty is to perform one's duties, and to conduct ourselves like honest men. You have, gentlemen, to choose between two alternatives; either to persist in your allusions, as to an independent kingdom of Poland, or to live tranquilly as faithful subjects under my government. If you persist in your dreams of a distinct nationality, of the independence of Poland, and of all these chimeras, you will only draw down upon yourselves still greater misfortunes. I have raised this citadel; and I declare that, on the slightest insurrection, I will cause its cannon to thunder upon the city. Warsaw shall be destroyed, and certainly shall never be rebuilt in my time. It is painful to me to speak thus to you—it is always painful to a Sovereign to treat his subjects thus; but I do it for your own good. It is for you, gentlemen, to deserve an oblivion of the past; it is only by your obedience to my government that you can obtain this. I know that there is a correspondence with abroad, and that mischievous writings are sent here for the purpose of perverting the minds of the people. The best police in the world, with such a frontier as yours, cannot prevent clandestine relations. It is for you to exercise your own police, and keep the evil away. It is by bringing up your children properly, by instilling into them the principles of religion and fidelity to their Sovereign, that you can keep in the right path. Among all the disturbances which agitate Europe, and all those doctrines which shake the social edifice, Russia alone has remained strong and intact. Believe me, gentlemen, that it is a real blessing to belong to this country, and enjoy its protection. If you conduct yourselves well—if you perform all your duties, my paternal solicitude will be extended over you, and notwithstanding what has passed my government will always watch over your welfare. Remember well all that I have now said to you."—*Journal des Debats.*

It appears that the Emperor has made very liberal donations to Russian noblemen and courtiers of the forfeited estates of the Polish nobles who took part in the last revolution.

A very amusing display of sympathy for the cause of liberty and the independence of nations is just now made by a certain party, out of whose faults and blunders all the mischiefs have originally arisen. Who directed the councils of England in 1814 and 1815—those momentous years, when, if ever, the broad foundations of future tranquillity ought to have been laid? Was it the Whigs that sanctioned the annexation of the Duchy of Warsaw to Russia, almost without the shadow of a guarantee that the new Polish constitution and the separate administration of the state promised by the emperor Alexander, should be respected by him and his successors? At the same time, was it the Whigs that smiled complacently while the German princes broke all the promises they had made to their people in the hour of danger, of granting them the advantages of representative forms of government?

Again, in Italy, over whose disunion and misfortunes they now pretend to lament, who stood by and saw the moderate constitution of Sicily, which had been recommended to the people and the nobility, and pressed upon the king by English ministers, ambassadors, generals and admirals, attacked and overturned just as it was beginning to work well? Who restored to the poor Neapolitans the blessings of the government of old Ferdinand, the Bourbon, without using any influence to induce that ignorant and stupid, rather than malevolent monarch, to introduce some changes in his wretched system? Who united the republic of Genoa with the states of the king of Sardinia—the sovereign *then* on that throne being the most incurable of all old despots and bigots? A great deal of nonsense has been said and written on the subject of this annexation; of which, had any binding engagements been made for the better government of the Genoese, we should most cordially approve, as we approve of every thing tending to bind up the many petty states of Italy into one respectable whole. In spite of ancient renown, there was little to claim the affections of the lovers of liberty in the proud, cruel, and oppressive oligarchy of Genoa; but his Sardinian Majesty contrived to revive some of its worst and most obsolete features under his absolute monarchy. The British fleet and army which gave up to him the possession of the Genovesato, had scarcely turned their backs, when Victor Emmanuel re-introduced the use of torture, and restored several of the feudal rights and odious privileges of the nobles.

In Lombardy, where the French dominion had become so odious that the Milanese of their own movement overthrew the *régime* by their revolution of April 21st, 1814, and set forth their ancient and inalienable right to independence, an army of Austrians, who at first advanced as pacificators, were allowed to seize all that magnificent part of Italy, and turn over the population, like so many herds of beasts, to their old master the Emperor. The views of the Lombards were moderate—they would have contentedly submitted to a prince of the house of Austria, provided their old municipal institutions had been restored, the liberty left them of exercising a control over their own revenue, trade, &c., with a few other of the advantages of a representative government. There was nothing factious, anti-social, or demagogic. The nobles—the men of property, all the educated classes of the citizens were agreed. "The name of independence, indeed," says the historian Carlo Botta, "was in the mouth of all, and the love of it in their hearts; nor has ever nation offered so much ardour, so much unanimity as the Italians showed on that crisis."

An English General,—a man of worth and honour, who was well acquainted with the Italian character, had gone on, from Genoa to Milan, and into his hands, and at the order of the electoral colleges that fairly and *de facto* represented the Lombard people, an Address to England and the Holy Alliance was placed. This paper was mild and dignified, and merely asked what we have stated. It was drawn up by the celebrated Ugo Foscolo, who, notwithstanding his eccentricities, was moderate in politics, and altogether exempt from a Jacobinical or levelling spirit. It was sent; but, as we have good reasons for believing, *it was never read by Castlereagh or one of our Tory Cabinet*, who, after having preached liberty to them, made not a single effort to avert the fate the Italians dreaded. A deputation of noblemen and gentlemen waited on the British General, to whom they confidently asserted, that if their rational demands or prayers were rejected, England might count upon two things:—first, that Austria would exclude her manufactures from Lombardy to force her own into the market; secondly, that the Italians would be tranquil or contented, but constantly in that state of mind, of which demagogues and thorough-paced revolutionists make the most advantage. Events have justified both predictions. It has been much the same story in other countries, and Spain and Portugal are still suffering from the evil adjustment of the Tory peace. When the discreet views of the best classes of society were rejected and scorned, the work of national reform, and constitution-making was taken up by clubs, secret societies, mutinous soldiers, discontented lawyers, beardless boys, and turbulent adventurers of all descriptions; and precious work they made of it at Cadiz and Madrid, Lisbon, Naples, and Turin! The right-minded, noble-hearted men (and those were many) who engaged in those movements, were almost invariably duped and sacrificed. The follies—the excesses—the miserable failures of the Ultra-liberals, brought a discredit on the very name of liberty; and this happened in 1820, 1821, 1822, and 1823, because the respectable constitutional parties, abandoned wholly by our Tory Cabinet, were allowed to do nothing in 1814 and 1815.

We are quite aware that, notwithstanding the commanding position we occupied at the end of the last war, there were many difficulties to be encountered; but what was difficult *then* is *now* almost impossible. We hope we shall hear no more of this impudent talk about the woes of Poland, the wrongs of Italy, and the baseness and truckling to despots

of the present Ministry. If the Tories were in plentitude of power to-morrow, what would *they* do to correct what *they did?* Would they *now* plunge us into a war for the doubtful experiment of uniting and constitutionalizing Italy, or for the driving of the Russians out of Poland and Lithuania?

CHRONICLE OF OCCURRENCES.

Oct 30. Mr Thomas Reynolds, who was charged with taking part in a riotous assembly at a meeting in Cobourg Gardens, Dublin, on the 3rd of August last, (see 'Chronicle of Occurrences' in Number 33,) was tried at the Dublin Commission before Chief Justice Doherty and Baron Smith. He was found guilty, and sentenced to be imprisoned for nine months, and at the expiration of that period to give security, himself in 200*l.* and two sureties in 100*l.* to keep the peace. The verdict and sentence appear to have created considerable surprise.

31 The Earl of Charleville died, rather suddenly, at Dover. He was in his 72nd year. He was one of the representative peers of Ireland.

Nov 3. The Recorder of London moved, in the Court of King's Bench, on behalf of the Lord Mayor, (Alderman Winchester,) for a rule to show cause why a criminal information should not be filed against Mr. Roteh, the chairman of the Middlesex Quarter Sessions, for having sent a hostile message to his lordship with an intention of provoking a breach of the peace. The dispute arose out of some remarks made by the Lord Mayor in the Court of Aldermen on the evidence of Mr Roteh before the Lords' Committee on Gaols, relative to the gaol of Newgate. The rule was granted, and has since been made absolute.

4 A fire broke out in a power-loom spinning and weaving mill at Levenshulme, between Stockport and Manchester, by which the building was entirely destroyed. The fire occurred about eight in the morning, as the work people were leaving for breakfast, and was occasioned by the clothes of the superintendent of the gas department catching fire, which, as he rushed out of the premises, was communicated to some combustible matter. He was severely burned, and died next day Among several accidents that occurred, one young girl leaped from the attic story to the ground, and was carried to the Manchester Hospital in a hopeless state. All the individuals thrown out of employment were speedily re-engaged by other spinning firms. The manager of the factory has been committed on a charge of manslaughter, on a coroner's warrant, the accident having occurred, as alleged, through orders which he had given to the individuals employed in the gas department.

8. Lord Viscount Milton, eldest son of Earl Fitzwilliam, died at Wentworth House in his twenty-fourth year. By his death a vacancy has been occasioned in the representation of North Northamptonshire His lordship's illness was typhus fever. His character, and the expectations entertained of his future eminence and usefulness, have created universal regret at his sudden and untimely death. Lord Milton was married to the second daughter of the late Lord Liverpool.

9. This being Lord Mayor's Day, the usual procession and excursion on the Thames took place, and the dinner in the evening was attended by Lords Melbourne, Glenelg, Sir J. Hobhouse, Mr. Spring Rice, the Judges, &c. &c

9. Redschid Bey, the new ambassador from Turkey, made his public entry into London, accompanied by Nourn Effendi, who, since the departure of Namick Pasha, has been *Chargé d'Affaires.* It is stated that the special object of Redschid Bey's mission is, to ascertain what degree of sympathy exists on the part of our government with Turkey, and also to make himself familiar with English customs.

10 Parliament was prorogued till the 17th Dec. The Commissioners were Lords Melbourne, Denman, and Glenelg The only member of the House of Commons present was the Attorney-General, Sir John Campbell, the other representatives of the House being some of the clerks and officers.

— A public dinner was given to Lord John Russell at Bristol, on which occasion a piece of plate, which had been purchased by subscriptions of a sixpence from each person was presented. His lordship on his health being drank, took a review of the great state questions which had been, of recent years, agitated and carried, and also of the positions of political parties. Lords Seagrave and Ebrington, and Mr. Thomas Moore, were present, and addressed the meeting.

11. A political dinner was given at Bath, to General Palmer and Mr. Roebuck, the two members for that city, which was attended by about 800 individuals. Among the speakers were Colonel Napier, the author of the History of the War in the Peninsula, and Mr Hume, the member for Middlesex.

— The new Commissioners of Charities held their first meeting in Great George Street, Lord Brougham (Chief Commissioner) in the chair. It is expected that this commission will terminate this long protracted inquiry. The names of the commissioners are, Lord Brougham, Sir E. B. Sugden, Rt. Hon. T. F. Lewis, Rev. R. Eden, Rev. H. H Milman, Messrs. Warren, Warre, Carlisle, Lefevre, Nicholls, M'Mahon, Sir J. J. G. Walsham; Messrs Grant, Wrottesley, Finch, Smith, Romilly, Macintosh, Pennington, Martin, Miles, Clarke, Sedgwick, Long, Hume, Fellowes, Humphrey, Peter, Gunning, Johnstone, and M'Queen. The amount of the income of charity property as far as already ascertained, may be seen by a reference to the table in "Parliamentary Abstracts," at p. 542 of the present number.

12. A solicitor, the secretary of a Conservative Club, was summoned to show cause at the Court of Requests in Castle Street, Leicester Square, why he refused to pay the sum of one guinea to a tradesman for loss of time. It appeared that the solicitor had objected to the registration of the tradesman's vote, on which the latter, at considerable inconvenience to himself, attended before the revising barrister, when the solicitor did not press the objection, and the vote was consequently allowed. The court gave a verdict for the plaintiff, for the full amount claimed, with costs. The proceedings however have been carried into the Court of Exchequer, it being contended that the Court of Requests had no jurisdiction in the case.

14. In the Rolls' Court, an application was made for a special injunction to restrain the mayor and corporation of Liverpool from carrying into effect certain proposed loans or levies of money, for the purpose of augmenting the stipends of the ministers or clergymen of those churches, the advowsons of which belonged to the corporation. The injunction was granted.

— Two agricultural associations held their anniversaries this day, one at Shrewsbury, at which Lord Darlington presided, the other at York, at which E. S. Cayley, Esq, M. P. presided At both these meetings, the chief topics were, Agricultural Distress, the Repeal of the Malt Tax, and the Currency. At the Shropshire meeting, a Mr. Bather made some pointed observations on the relative positions of landlord and tenant, contending that landlords must reduce their rents and establishments, and farmers alter their style of living, before application should be made to Parliament for relief.

15. Lord Robert Manners, M. P. for North Leicestershire, died at Belvoir Castle, after a short and sudden illness.

18. About sixty of the principal Spanish residents and merchants in London dined together, at the London Tavern, for the purpose of celebrating the opening of the Spanish Cortes under the administration of M. Mendizabal. At this meeting it was stated that a subscription which had been set on foot, for the purpose of forwarding military stores for the Spanish army, had been contributed to most liberally.

20. The ward of Aldgate being vacant by the death of Alderman Thorpe, a contested election took place, and the numbers of the two days' polling were announced this day at Guildhall by the Lord Mayor The election was declared to have fallen on Sheriff Salomons The candidates were Mr. Salomons, who had 75 votes, Mr. Humphreys, M. P. for Southwark, who had 67, and Mr. Jones, who had 68. The Lord Mayor addressing the meeting, congratulated the ward of Aldgate on being the first ward in the City of London which had returned an alderman of the Jewish persuasion.

23. In the Court of King's Bench an application was made for a *mandamus* directed to a particular individual, to hold a court leet, for the purpose of swearing in the mayor of Lyme Regis The mayor had been elected on the 31st of August last, but the annual court leet had not been held on the 5th October, by which it was contended that the corporation of Lyme Regis was virtually dissolved. The rule was made absolute in the first instance.

— Death of the Duke of Beaufort, in his 69th year. He is succeeded by his son, the Marquis of Worcester, M. P. for West Gloucestershire, which of course creates a vacancy.

Three serious accidents have occurred during the month on the River Thames, by steamers coming in collision with small boats, by which a number of individuals have lost their lives. In two of the cases, verdicts of manslaughter have been returned by inquest juries on the bodies of the sufferers, against the captains, and a pilot; and in the third instance, a verdict of accidental death was returned, with a deodand of 100*l.* on the steamer. The frequency of these accidents of late calls for [illegible] interference.

THE EXCISE ON PAPER.

Even the most concentrated extract of the essence of all the learning that has been accumulated on the subject of the various materials used for writing upon in different ages and countries would be out of place here. Writing, which is nothing more than marking, has been practised in all the ways in which marks can be made, and upon all the substances capable of receiving and retaining any kind of mark. Some such materials are supplied ready to our hands by nature: as the flat rocks and stones upon which many ancient inscriptions are cut. Others, such as wood, admit of being easily converted into fit receptacles for writing by a little mechanical fashioning. Among the less cumbrous and more flexible materials that have been employed for the purpose are the leaves of trees; especially some of those leaves of large surface, and superior toughness of fibre, produced in oriental countries. The Cumæan Sybil is fabled to have written her prophecies on leaves. And we still speak of the leaves or folios (which properly signify the same thing) of a book. It is evident that, although there might be writing, there could be no books until some such thin material as this came into use. Books have been made, however, and in some countries are still made, of very thin boards of wood; and they might also be formed of plates of ivory or of metal. But, for obvious reasons, such materials as these could never have been very extensively employed. The first substance manufactured in large quantities expressly for the purposes of writing and book-making was the Egyptian papyrus, from which paper still takes its name. This substance, a preparation from the inner bark of a plant, was manufactured in vast quantities, principally at Alexandria in Egypt, and latterly also at Rome, and probably in other parts of the world, down to a comparatively recent date. Some think the papyrus was in use so lately as in the tenth or eleventh century of our era. Parchment, or prepared sheepskin, had also been long in extensive use in the Greek and Latin world; and probably much longer among the oriental nations. It is said to have been first employed in the western world, between two and three hundred years before the birth of Christ, in the city of Pergamus, in Asia Minor; whence its name Pergamenum, which we have corrupted into parchment.

None of these preparations, however, at all resembled what we now call paper in the essential characteristic of the manufacture; which is the complete destruction of the original substance, and the production of a new and entirely different fabric out of the debris. Both papyrus and parchment were merely the natural material shaped and polished, or, at most, what might be called raised for particular use; as freestone or marble is cut into blocks for building, or as leather is tanned for making shoes. They were no more than what we have already designated them, preparations; our modern paper is a composition—a product wholly artificial, not simply in its form or its surface, but in its very texture and consistency.

The notion of reducing a fibrous substance to powder, with the view of remixing the particles into a very thin and at the same time strongly coherent paste, seems to be as little of an obvious one as that of any other process, of the character of a merely manual operation (for essentially this is no more), which it would be easy to name. It is difficult to imagine what could have led to it—what other process previously practised could have either suggested it or accidentally given birth to the discovery. It would not be very readily supposed, before the attempt had been made, that it could prove successful. The first paper (of the modern species) known in Europe appears to have been fabricated of cotton, though it very soon came to be made also of hemp or flax. The use of these materials, in their natural state, for the purpose of conversion into paper, probably preceded the employment of cotton and linen rags for that purpose. It is now generally agreed that Spain was the country in which the new fabric was first introduced, and that it was known there so early as the ninth or tenth century. There can be little doubt that the invention was brought over by the Arabs, or Moors, as they were called, who were then in possession of a great part of that country. Considerable manufactories of paper are known to have existed soon after this time in various parts of Moorish Spain.

But whence did the Arabs learn this manufacture? It is known to have been carried on in various eastern cities subject to the rule of that race in the seventh century of our era. "The inestimable art," says Gibbon, "of transforming linen [perhaps he ought rather to have written cotton, or silk] into paper, has been diffused from the manufacture of Samarcand over the western world;" and he adds in a note, "The librarian Casiri relates from credible testimony, that paper was first imported from China to Samarcand A. H. 30 (that is, in A. D. 652), and *invented*, or rather introduced at Mecca, A. H. 88 (that is, A. D. 710)." It can scarcely be doubted that the invention originated in China, where, at any rate, it is certain that it was known long before the date here assigned to its introduction at Samarcand. The Chinese accordingly claim the invention as their own, though it is said to be admitted by some of their authorities that the subject is not without obscurity. It appears that, for a long period after this nation possessed the knowledge of letters, they were unacquainted with any material for writing upon of the same nature with what we now call paper. At first they wrote commonly, not with ink or any pigment at all, but with an iron stylus or bodkin, like what the Romans used with their waxen tablets, and on boards of wood, flattened pieces of bamboo, or plates of metal. Afterwards they came to fabricate a paper which must have somewhat resembled the Egyptian papyrus, from the inner bark of the bamboo and of other trees. But still this was merely an adaptation of the natural substance, and not a conversion of it into something else. The first manufacture of paper from any kind of pulp is attributed by some of the Chinese authorities to the year 95 of our era, in the reign of their Emperor Hoti. It is said to have been the invention of a mandarin of high rank named Tsay. He employed as the material of the composition not only linen and silk, but also the inner bark of different species of trees. In course of time, many other substances came to be used; and paper is said to be now actually made in China of cotton, of linen, of silk, and not only of many kinds of

[Printed by William Clowes and Sons, Stamford Street.]

bark, but even of the wood both of the bamboo and the cotton plant reduced to dust, and also of a variety of other natural products. It is very well known, indeed, that paper may be fabricated of almost any fibrous substance, vegetable or animal. Paper has even been made in modern times of the mineral substance called asbestos, the well-known and remarkable quality of which (as indicated by the name) is not to be affected by fire, at least under a very high degree of heat. The paper made of it retains the same prerogative, the fire only expunging what may have been written upon it. A German naturalist, Bruckman, who wrote a treatise upon asbestos, had four copies of his book taken off upon this kind of paper, which are said to be deposited in the library of Wolfenbuttel.

The history of paper, therefore, as far as it can be traced, is shortly as follows. It is said to have been invented in China between seventeen and eighteen hundred years ago. From thence the manufacture was transferred, about twelve hundred years ago, to the Tartar city of Samarcand, then in the hands of the Arabs or Saracens. From Samarcand it speedily spread to Mecca and the other cities of Arabia Proper; and from thence the conquering people who had thus obtained possession of it carried it forth with them, in one direction to the northern coasts of Africa, and to Spain, in another to Damascus and the rest of their Syrian empire. It was probably introduced into Spain before the tenth century; but it may perhaps be doubted whether the rest of Europe originally obtained the knowledge of the invention from that country, or had it from Asia by the way of Constantinople and Greece. In the twelfth century it appears to have become the common material for writing upon throughout this quarter of the world. There is much dispute, however, as to the date at which cotton paper first began to be supplanted by that made from linen. According to some authorities, as has been already observed, paper was manufactured from linen by the Moors of Spain before the tenth century. Other writers, however, contend for a much later origin of this improvement. "The manner of making the cotton-paper," says Anderson, in his History of Commerce, "introduced the still better and cheaper paper made of linen rags. This last invention Montfaucon ascribes to the twelfth century; yet others make it so late as 1417; and an octavo treatise in English, entitled 'The General History of Discoveries and Improvements,' says that rag-paper was not invented till about the year 1452; while Rombold, in his Dissertation on Paper, printed at Berlin in the year 1744, fixes its invention to have been in 1470, though probably somewhat earlier. The cotton-paper now (A.D. 900) invented very nearly resembled our rag-paper: but as the latter was much cheaper in its manufacture, as being made of rags, which before were thrown on the dunghill, it soon drove out of use the cotton-paper, which necessarily bore a much higher price."

It was long before the manufacture of paper was introduced into this country. "Until in or about this year, 1690," says the writer we have just quoted, in another place, "there was scarce any other kind of paper made in England but the coarse brown sort. But the war with France occasioning high duties on foreign paper, the French Protestant refugees settled in England chiefly, and also our own few paper-makers, now began to make white writing and printing paper; which in length of time has been brought to so great perfection, both for beauty and substance, that in our own time (1764), we import only certain kinds of Genoa and Dutch paper, which, however, bears but a small proportion to all the paper used in the British dominions. How great a saving this has proved to Britain may partly be conceived from what has been often formerly affirmed by such as are well acquainted therewith, viz., that to France alone, from whom we now take none even in time of peace, we paid annually to the amount of one hundred thousand pounds for paper only." In 1721, according to the 'British Merchant' published in that year, two-thirds of all the paper used in England was made at home. This proportion is said to have amounted to 300,000 reams. "In 1783," says Mr. M'Culloch, (Dictionary of Commerce, 2nd edition, p. 875), "the value of the paper annually manufactured was estimated at 780,000*l*. At present, besides making a sufficient quantity of most sorts of paper for our own use, we annually export about 100,000*l*. worth of books. We still, however, continue to import certain descriptions of paper for engraving from France, and a small supply of paper-hangings. The duty on both amounts to about 2800*l*. a year. In 1813 Dr. Colquhoun estimated the value of paper annually produced in Great Britain at 2,000,000*l*.; but Mr. Stevenson, an incomparably better authority upon such subjects, estimated it at only half this sum. From information obtained from those engaged in the trade, we incline to think that the total annual value of the paper manufactured in the United Kingdom, exclusive of the duty, may at present amount to about 1,200,000*l*. or 1,300,000*l*. There are about 700 paper-mills in England, and from 70 to 80 in Scotland. The number in Ireland is but inconsiderable. Of these mills, we believe, very few have lately been unemployed. About 27,000 individuals are supposed to be directly engaged in the trade; and beside the workmen employed in the mills, the paper manufacture creates a considerable demand for the labour of mill-wrights, machinists, smiths, carpenters, iron and brass-founders, wire-workers, woollen manufacturers, and others, in the machinery and apparatus of the mills."

In a passage quoted above from Anderson, the substitution of linen for cotton in the manufacture of paper was spoken of as having at first greatly lowered the cost of the manufactured article. Now, however, that cotton has become much more plentiful and much cheaper than linen, it has been again resorted to, we believe, to a considerable extent, in the manufacture of printing-paper, and even of writing-paper. Its only recommendation is its cheapness; for from the comparative weakness of the fibre in cotton, paper when made from that material has far less strength and durability than when made from linen. A judicious admixture of linen of coaca pulse greatly corrects the evil.

The rags of which English paper is made are obtained in part at home, but chiefly from abroad. "The rags of our own country," says an article upon this subject in the 96th Number of the Penny Magazine (Monthly Supplement for September 30th, 1833), "do not furnish a fifth part of that we consume in the manufacture of paper. France, Holland, and Belgium prohibit, under severe penalties, the exportation of rags, because they require them for their own long-established manufactories. Spain and Portugal also prohibit their exportation. Italy and Germany furnish the principal supplies of linen rags both to Great Britain and the United States. They are exported from Bremen, Hamburgh, Rostock, Ancona, Leghorn, Messina, Palermo, and Trieste. They arrive in our ports in closely packed bags, containing each about four hundred-weight; which, according to the respective qualities of the rag, are marked S.P.F F., S.P F., F.F., F.X., and F.B. There are many varieties of rag even in these divisions; and their qualities are pretty clear indications of the state of comfort and cleanliness in particular districts and countries. The linen rags of England are generally very clean, and require little washing and no bleaching before they are ground into pulp. The Sicilian rags, on the contrary, are originally so dirty, that they are washed in lime before they are fit for the foreign market. The greater portion of the rags from the north of Europe are so dark in their colour, and so coarse in their texture, that it is difficult to imagine how they could have formed part of any inner garments; while those, on the other hand, which are collected at home, evidently belong to a people who are 'clothed in fine linen every day.'"

To this article in the Penny Magazine we must refer the reader for a description both of the old method of making paper by hand and of the modern process by machinery - undoubtedly one of the most beautiful and miraculous in the whole range of mechanical contrivance. We shall only state generally the leading results which have been obtained in this manufacture by the impulse it has, within these few years, received both from mechanical ingenuity and from chemical science. They have together in a manner revolutionized it, and given it a new field and a higher rank among the arts. One of the results, in the first place, of the application of machinery is absolutely new; it is something which formerly could not have been accomplished by any expenditure of time or labour; we mean the length to which a single sheet of paper may now be extended. The magnitude of a sheet of paper made by hand is of course limited by the size of such a tray or frame as a man can dip into the pulp and

lift up with his two hands; in the machine the paper is wound off upon a roller, and the web may be made as long as the roller will hold. But secondly, the economy of time effected by the new process is so immense as to be something still more important, and we may add, even more wonderful, than this novelty of product. "By the agency," says Mr. M'Culloch, speaking of Mr. Dickenson's invention, "of a great deal of complicated machinery, so admirably contrived as to produce the intended effect with unerring precision, and in the very best manner, a process which in the old system of paper-making occupied about three weeks is performed in as many minutes! A continuous stream of fluid pulp is, within this brief space of time, and the short distance of thirty feet, not only made into paper, but actually dried, polished, and every separate sheet cut round the edges, and rendered completely ready for use!" The writer of the account in the Penny Magazine, describing the machinery employed at Albury Mill, near Guildford, belonging to Mr. Magnay, says, "From the commencement of the process, when the pulp flows out of the vat upon the web of wire, till the paper into which it is formed is received upon the reel, somewhat less time than two minutes is occupied. We ascertained the fact by drawing our finger across the wet mass before it left the web, and tracing the rent into the final stage of the formation of the paper. The web of wire travels at a rate which produces twenty-five superficial feet of paper per minute." And while these mechanical improvements have been thus multiplying the *power* of production in the manufacture, the supply of the *material* has been augmented by another branch of science. Chemistry has now discovered comparatively cheap and easy methods of rendering certain descriptions of rags fit for being used in the making of writing and printing paper, which formerly either could not be made available for that purpose at all, or only at an expense which equally precluded their employment. In this way the augmented facility of the manufacturing process has been left free to produce its full benefit.

The consequence is that, notwithstanding a largely increased demand, consequent not only upon the increase of the population but upon the constantly extending consumption of the article, the price of paper has of late years fallen very considerably. Meanwhile, however, the duty, being levied not upon the value but upon the quantity, has remained the same as it was before the fall of price. This duty is the subject of the Fourteenth Report of the Commissioners of Excise Inquiry, which is itself (including the Evidence and Appendix) a volume of nearly 200 pages, but of which the following is the abstract that has been drawn up by the Secretary to the Commission:—

"*Paper.*—This Report opens with a recital of the Acts of Parliament under which the paper duties are collected, commencing with that by which such duties were first imposed, viz. the 10th of Anne, c. 19, dated in 1711, which recites, as a reason for the grant, the necessity of raising large 'supplies of money to carry on the present war, until your Majesty shall be enabled to establish a good and lasting peace.'

"The duties on paper were first levied in Ireland by the 38th Geo. III., c. 5, and were charged by a rate on the machinery employed in the manufacture. They were assimilated to the duties in Great Britain by the 5th Geo. IV., c. 55.

"The rates and amounts of the paper duties since 1770 are stated in a return in the Appendix, which was of too voluminous a nature to insert in the body of the Report.

"The gross receipt in 1834 was 833,822*l.* 12*s.* 4*d.*, the net receipt 771,162*l.* 13*s.*, from which latter sum the charges of the collection are to be deducted.

"A drawback of the whole duty is allowed on all paper made in the United Kingdom on exportation; and by the 43rd Geo. III., c. 69, and 5 Geo. IV. c. 55, allowances of duty were granted to clothiers, hot-pressers, and to the universities, which amounted, with the drawback in 1834, to 62,659*l.* 19*s.* 4*d.*

"A licence duty of 4*l.* is charged on all manufacturers of paper.

"A list of the witnesses examined is given in pages 4 and 5 of the Report, and in the following pages (6 to 10) will be found a full detailed statement of the regulations of the Excise under which the several duties upon paper are collected.

"The Commissioners advert to the important advantage which is enjoyed by the paper-makers under these regulations, viz., that unlike other growing-duty traders, they have 'the process of their manufacture exempt from Excise interference,' to which exemption the Commissioners attribute 'the very great progress which has been made in the application of various improvements to this manufacture, especially those arising from the extensive introduction of machinery, which have enabled the manufacturers, by combining the two processes of making and drying the paper through the operation of large cylinders heated by steam, to complete in a few minutes a quantity of paper which formerly occupied a period of as many weeks.'"

"*Injurious Effects of the Separation of Paper into Two Classes.*—The separation of paper into two classes by the 43rd Geo. III., c. 69, with two rates of duty, appears from the concurrent testimony of almost all the witnesses examined upon the point, to be attended with the most injurious effects. This separation was effected by the 43rd Geo. III., c. 69, by which it was enacted that all paper and pasteboard should be considered first class, and subject to 3*d.* per lb. duty, unless made *wholly* out of old tarred rope and cordage, *without extracting therefrom the pitch, or tar, or any part thereof*, and without any mixture of other materials therewith.

"It appears from the evidence of Mr. Dickenson, the chairman of the deputation of London paper-makers, and himself an eminent and extensive manufacturer, as well as from that of Mr. Gater and Mr. Gaussen, also considerable manufacturers, and which is confirmed by the deputation of paper-makers at Glasgow:—

"1st. That old tarred rope, which during the war, and before chain-cables came into use, was worth 4*l.* to 5*l.*, or less, is now worth 11*l.* to 12*l.* per ton.

"2ndly. That while old tarred rope has so much increased in price, some sorts of first class materials have so much declined in value as to be worth only 3*l.* 10*s.* to 4*l.* per ton.

"3rdly. That it has been found practicable, without extracting the pitch or tar of the old rope, completely to neutralize the smell of it: the result of all which is that that which at the time the law was settled, formed a good practical distinction between first and second class papers, has long ceased to be so; and that a very extensive evasion of the law, by the use of first-class materials in second-class paper, is the consequence.

"The department of Excise acknowledge that frequent complaints and disputes arise upon the subject: that it is difficult to distinguish between the two; and that one rate of duty would be infinitely preferable to two.

"It is almost superfluous to add, that the continuance of the present classification is condemned by the Commissioners of Inquiry, as calculated to produce consequences highly injurious both to the manufacturer and to the revenue."

"*Injurious Effects of the High Duty on the First-Class Paper.*—The injurious effects produced by the present high rate of duty on first-class paper is the next point adverted to, in reference to which, in consequence of the decline which has taken place in the price of paper, the rate of duty is described as amounting now to double what it was, and as forming a great check on the consumption of paper, as well as a great inducement to avoid paying the duty; the rate of profit therefore to the manufacturer has been reduced so low, by the competition with the smuggler, that a very large proportion of the capital vested in mills and machinery is represented as affording no return. On the inferior descriptions of wrapping-paper the rate of duty is stated to be not less than 200 per cent., and on the finer sorts, such as printing paper, it is 50 per cent.

"The frauds on paper in Ireland are stated by Mr. Saurin, the Solicitor for Ireland, and by Mr. Plunkett, the Inspector of the Revenue Police, and Mr. Ryan, the Collector for Londonderry, to exist to an enormous amount.

"The prejudicial effect of the high duty in reference to paper used in the printing of books is forcibly demonstrated by the Commissioners of Inquiry, and is illustrated by references to Mr. M'Culloch's 'Commercial Dictionary,' and to the evidences of Messrs. Knight and Parker, the publishers of the 'Penny' and 'Saturday Magazines.'

"The demand for books is stated to be so extremely uncertain, that in a case where a publisher calculates,

from the best information, the probable sale of 1000 copies of a work, he perhaps does not sell 500 copies, or even so many as 250 copies. The duty, however, has been paid on the whole 1000 copies, and therefore adds materially to the loss resulting from the speculation.

"The duty on the paper employed in a work such as the 'Penny Cyclopædia' is estimated by Mr. Knight at one-fifth of the whole; and he states that such a speculation, which now pays at 5,000 copies, would, if the duty were reduced one-half, pay at 40,000 copies, and, if entirely repealed, at 30,000 copies.

"Mr. Knight further expresses his opinion, that a considerable reduction of the paper duty would call numerous such works into existence.

"The operation of the duty on the ordinary volume is estimated by the London deputation at from 1*s.* to 2*s.* 8*d.* a volume, according to the sale.

"The proportion of paper used in printing is estimated as exceeding two-thirds of the whole.

"The Commissioners of Inquiry justly observe, therefore, 'that a large reduction of duty will be materially felt, precisely in that branch of the manufacture to which it is desirable that relief should be afforded.'

"The effect of the repeal of the duty on almanacs, which amounted to 1*s* 3*d.* on each almanac, is very remarkable. No less than 200 new ones are described as having immediately started, of some of which upwards of 250,000 copies were sold within a short period, although the old ones maintain their ground; and Moore's Almanac is stated this year to have actually doubled its former sales.

"The result of the evidence received, and the observations of the Commissioners of Inquiry in the several parts of the United Kingdom, is stated by them to be, 'that the duties at their present rate and mode of charge, have a most injurious tendency, both in creating temptations to evade the law, and also in checking the consumption of an article which would otherwise be in demand for all classes of the people.'

"'As a remedy for these evils,' the Commissioners recommend 'that the present division of paper into two classes should cease, and that so long as that manufacture shall continue subject to an Excise duty, such duty shall be levied at an uniform rate; and that the present rate of first-class paper should be reduced one-half, and accordingly that 1½*d.* per lb. should be fixed as the whole amount to be levied on paper of all descriptions;' and further, that the present separate classes of pasteboard should in like manner be consolidated and reduced, and subject to one duty of 14*s.* per cwt., that rate of duty to be also payable on mill-boards and other boards, which now pay a duty of 1*l.* 1*s.* per cwt.

"The manufacturers calculate that a very small loss of revenue will result from these measures. The net-produce of the duty on first and second-class papers in 1834, was 718,043*l.*, from which, if the duty on second-class paper be deducted, viz. 101,023*l.*, there will remain 617,020*l.* Mr. Gaussen calculates that not more than 150,000*l.* of the above sum would be lost in the first year, and that every year afterwards that loss would become less. The London deputation estimate the 'amount which would be received by the Excise, after the consolidation of the duties on first and second-class paper, at 680,000*l.*,' leaving a loss of revenue of only 62,980*l.*

"The Commissioners of Inquiry advert to a complaint which appears to have been made by the deputations of paper-makers both in Edinburgh and Glasgow, of the loss and inconvenience arising from missing opportunities of conveyance, to which they are frequently subjected by the regulation which requires them to retain their paper on the premises for twenty-four hours after the departure of the officer who had weighed it and charged it with duty. The English manufacturers, as well as the officers of Excise, are opposed to the alteration of this regulation, on the ground 'that a shortening of the period would open a door to evasion of duty.'

"The Commissioners of Inquiry consider it inexpedient to dispense with this regulation during the continuance of the present rate of duty; but in deference to the 'strong feeling which the whole of the Scotch manufacturers have expressed upon the subject,' they suggest that 'some relaxation as to time may be allowed as soon as the duties are reduced and consolidated into one.'

"*Penalties.*—The Commissioners of Inquiry recommend a revision and reduction of the whole of the penalties established by the laws relating to paper, upon the grounds that 'the original penalties in the Act of Anne, establishing the duty, in no case exceeded 50*l.*, and were generally very much below it;' and that 'enormous penalties do not and will not check smuggling, so long as the temptation afforded by high duties exists.' The Commissioners specially allude to one penalty of 200*l.*, which is inflicted by the 1st Geo. IV., c. 58, sec. 6, for every label delivered to the manufacturer by the Excise, for which he cannot account. The utmost loss of revenue consequent upon the loss or misuse of the label, being the amount payable upon one ream of paper, which, in the case of writing and printing paper, would be from 5*s.* to 6*s.* 3*d.*, and on a ream of mill-board, 25*s.* The Commissioners suggest that a penalty of 40*s.*, or at most 5*l.*, would be quite sufficient to prevent fraud on this point.

"*Mode of Charge in Ireland.*—The manufacturers in Ireland, it is stated, are anxious to return to the original mode of levying the duty in that country, viz. 'by a licence duty imposed upon the engine according to the contents of the vats.' The introduction of the English mode of charge into Ireland was effected in consequence of the recommendation of the Parliamentary Commission of Revenue Inquiry contained in their Eighth Report; and the Commissioners state that 'all the evidence they have obtained leads them to concur in that Report; and that they, therefore, do not feel disposed to recommend a return to the former mode of levying the duty in Ireland.'

"A few other changes are mentioned as having been suggested by the Scotch manufacturers, as well as by the London deputation, such as 'the abolition of the present regulations which compel the keeping an account of the daily produce of the manufacture, and of the restrictions in regard to the number of sheets to be contained in a ream, as well as the obligation to send out no smaller quantity from the mill than a ream.' The latter restrictions were probably necessary when the duty was collected on the number of sheets and not on the weight of the paper, but are not only inapplicable now that the duty is charged by the weight, but afford, the Commissioners observe, 'just cause of complaint to the manufacturer, as well as an argument in favour of the earliest possible revision and consolidation of all the twelve or thirteen Acts relative to paper.'

"The Commissioners strongly urge a general consolidation of all the Excise laws."

"*Want of Communication between the Board of Excise and the Traders.*—The Commissioners of Inquiry observe upon a point which they state to have been repeatedly brought under their notice by the manufacturers of all descriptions, but which has been more especially insisted on by the manufacturers of paper; viz., 'that the Board of Excise do not allow any direct communication between themselves and the traders,' and that the only means the trade has of being made aware that an application has ever even reached the Board, or what is the result of it, whether favourable or unfavourable, is by a verbal communication through the supervisor. The Commissioners of Inquiry comment upon this mode of proceeding, as being in every respect highly objectionable, and suggest that it should be forthwith amended by the establishment of the same facility and freedom of communication in the Excise, as exists in the departments of the Customs, Stamps, and Taxes.

"*Credit.*—With regard to the extent of credit which is now allowed to the manufacturer after the duty becomes due, the opinions received by the Commissioners appear to have differed. In practice the duties are now collected only for twelve weeks. The Commissioners express their opinion that 'giving a long credit on an article which can be instantly brought to market after the duty is charged is an objectionable practice, because the trader receives the amount of duty for a considerable time before he pays it,' and they therefore recommend (sufficient notice of the intended alteration being given) that, 'in case of a reduction of duty, it should in future be collected in the round which follows the charge.'

"*Export Regulations.*—The Commissioners of Inquiry suggest relief, in the case of export, from the expense of the bond and some other expenses.

"*Allowances.*—The Commissioners further express their

opinion, that when the duty is reduced to 1½*d.* per lb., the allowances repaid to clothiers and hot-pressers, which amounted in 1834 to 6274*l.*, may be safely discontinued.

"*Expenses of Collection.*—The Returns of the Excise state that no greater reduction of expense than 6250*l.* could be obtained by the repeal of the duties on paper.

"The Commissioners recommend the abolition of the survey on makers of tea-trays and papier maché, which is attended with no advantage to the revenue; and they advert to the amount of duty paid on paper used at the public offices and for printing, which is estimated by Mr. Dickinson at 29,000*l.*, one-half of which, or about 15,000*l.*, will be immediately saved by a reduction of one-half the duty on first-class paper.

"*Stained Paper.*—The Commissioners of Inquiry conclude their observations on the paper duty by stating, that they deem the repeal of the duty on *stained paper* to be absolutely necessary to the full development of the benefit that will arise from the reduction of that on paper itself.

"The stained-paper duty was imposed by the original Paper-Duties Act (10 Anne, c. 18), and is distinguished by its being a second charge upon an article already highly taxed in its plain or simple state. 'Printed goods and stained paper' appear to have been officially classed together by the Board of Excise; and the Commissioners observe, that it is remarkable the latter duty was not repealed at the same time with the former, to which it was much more analogous than to the paper duty.

"The present duty on stained paper is 1¾*d.* per square yard, averaging about 1*s.* per lb. in addition to the 3*d.* per lb. levied on the paper in its plain state. A drawback of the whole duty of 1¾*d.* is allowed on exportation.

"The amounts of stained paper charged with duty, and of revenue received therefrom, in the year ended 5th January, 1835, are as follows:—

	Yards.	Revenue.
England . . .	8,071,094	£58,851 14 6
Scotland . . .	59,782	435 18 2
Ireland	618,268	4,508 4 1
	8,749,144	£63,795 16 9

"There are 108 paper-stainers in England, two in Scotland, and forty-six in Ireland; each of whom is charged with a licence duty of 4*l.*

"A list of the witnesses examined is given at page 29 of the Report; and in the two following pages are contained the Excise regulations, under which the duties are charged and collected.

"From these regulations it appears, that the stained-paper duty is charged on all paper prepared for use before it is stained; and that if a sheet therefore becomes spoiled or unsaleable in the staining, the paper-stainer must bear the loss.

"The price of stained paper is stated to be 2*s.* 6*d.* per piece; the two duties amount to 1*s.* 3*d.*, so that we have at once 100 per cent. of duty, in addition to incidental expenses and to the losses of the nature above described.

"The operation of this disproportionately high duty is very severely felt, particularly in the inferior papers, with regard to which Sir James Williams states, that 'for 100 pieces of high-priced paper they sell 1000 of the low-priced.' In such a state of things it is almost needless to add that evasion of duty takes place to a great extent, more especially in Ireland, where out of forty-six paper-stainers fourteen appear, from the Excise return for 1832, to have paid duty under 10*l.*, forty-three under 100*l.*, and three only paid duty above that amount. It is asserted that Irish stained-paper is imported into England, and sells for one-third less than English paper, so that the evasion of duty in Ireland is not only injurious to the revenue, but prejudicial to the interests of the manufacturers of the United Kingdom.

"The expense of collecting this head of duty is estimated by the Excise at 1800*l.*, the produce of the duty being 63,000*l.* The Commissioners of Inquiry however do not concur in the correctness of this estimate, but, on the contrary, express their opinion that a 'much greater expense is incurred.' Copious extracts from the evidence are given in proof of the laborious nature of the duties imposed upon the officers, and which also show the highly rigorous and vexatious regulations and restrictions to which the manufacturer is subject in consequence of the duty, and of the extent to which he is checked in all attempts at improvement by those regulations.

"Mr. Gaussen states that 'the paper makers themselves could, if this duty were abolished, print a cheap ornamental paper for the poor, simultaneously with the original manufacture; that they can produce at least thirty durable colours, and can render paper like watered silks and grained leather, as well as emboss it; and that the duty and labour for staining can thus be saved.'

"The Commissioners of Inquiry state, 'that after full inquiry, both amongst those concerned in the trade, and also amongst the various authorities of the Excise, they find themselves unable to suggest any measures for the prevention of the great extent of evasion which is at present practised, or for the protection of the fair trader, other than a total repeal of the duty on stained paper, as speedily as the state of the revenue will permit, and, if possible, simultaneously with the reductions and consolidation of the paper duty already proposed, it appearing to the Commissioners that the advantages anticipated from this latter measure will be in the highest degree increased by the concurrent repeal of the duty on stained paper.'

"The London deputation 'consider that the abolition of the duty on stained paper would be followed by an immense increased consumption of paper, so as in a great degree, if not entirely, to diminish the apparent loss to the revenue which would arise from the repeal.'

"The Commissioners close their Report with the following recapitulation of their recommendations:—

"1st. That the two existing classes of paper should be consolidated into one.

"2nd. That the rate of duty should be fixed at 1½*d.* per lb. on all paper.

"3rd. That all classes of paste-boards and mill-boards be in like manner consolidated, and that the duty to be levied on them be fixed at 14*s.* per cwt.

"4th. That the reduced duties be collected in the round following the charge.

"5th. That on the reduction of the duty, the allowances to hot-pressers and clothiers be discontinued.

"6th. That the penalties now existing be revised with a view to their reduction.

"7th. That the Acts of Parliament relating to paper be revised and consolidated, and that the manufacturers be furnished by the Board of Excise, with a digest of the regulations affecting their trade.

"8th. That the survey on makers of tea-trays, bottle-stands, and other articles of that description be discontinued; and,

"9th. That the duty on stained paper be repealed, and the survey abolished."

The duty on paper, it appears from this statement, is not so objectionable as some other Excise duties are, on the ground of any interruption to the manufacture occasioned by the mode of its exaction: nor is the expense at which it is collected large. Although, also, the frauds and evasion practised in regard to it have been carried to a considerable extent, especially in Ireland, it does not appear that this evil is essential to the duty, or that there would be any great difficulty in establishing such an improved system of regulations and management as would keep it pretty completely in check. The great objection to the duty is its amount, and the manner in which it operates both upon all manufacturers and dealers in the article, and upon the best interests of the public. As an illustration of its pressure in both directions, nothing can be more striking than the following statements which we extract from a representation by Mr. Dickenson, Mr. Phipps, and Mr. Magnay, given in the Appendix to the Report. We shall give, in the first place, their calculation of the present *ad valorem* effect of the tax, by which it appears that it is chargeable with the absurdity and injustice of being heaviest upon paper of the coarsest and cheapest description:—

	Price obtained by maker, independent of duty.	Duty.	Rate per cent of duty on prime cost of paper.
First Class Paper.			
Wrapping Paper marked A From 38*s.* to 42*s.* per cwt. is the current selling price of this paper, called Royal Hand, which is extensively used by	14*s.*	28*s.*	200

	Price obtained by maker, independent of duty.	Duty.	Rate per cent. of duty on prime cost of paper.
grocers and other shopkeepers in London, and throughout the country; but this low price is the effect of smuggling. If the duty were paid on all the paper sold by the manufacturer, he could not afford to sell it for less than from 50*s.* to 51*s.* per cwt.			
Printing Paper, marked B	56*s.*	28*s.*	50
Fine Writing Paper, marked C	126*s.*	28*s.*	22
Second Class Paper, D	21*s.*	14*s.*	66
To bring paper into this class, the law requires that it should be made wholly out of old ropes or cordage, without separating or extracting therefrom the pitch or tar, or any part thereof.			
Sheathing Paper, marked E	14*s.*	21*s.*	150

Forty-two shillings' worth of wrapping paper, therefore, it appears, pays as much duty as seven pounds fourteen shillings' worth of fine writing paper. This gross inequality and unfairness, however, might no doubt be corrected by an amendment of the scale of duties, which would also have the effect of putting an end to the greater part of the frauds that now take place in the trade. But this improvement would not touch the principal objections to the duty, arising from the peculiar nature of the book trade. One of these consists in the great enhancement which necessarily takes place in the amount of the duty during the transmission, so to speak, of the pressure from the paper manufacturer to the purchaser of a printed book. "The difference," the authors of the representation before us observe, "between what the public pay to the retail stationer and the price which the manufacturer obtains for paper, is fully 75 per cent.; so that the duty is exceedingly enhanced to the consumer. But the increase it causes in the price of books and other publications is greater. Where the sale is large and quite certain, it amounts to not less than 80*l.* per cent. . . . . But in cases where the sale is uncertain, that is to say, in three cases out of four, the bookseller must, in addition to this necessary commercial charge, augment his price further to cover his risk of loss on so large a preliminary payment as that of the whole duty on the paper used for his edition—of which, on the average, he perhaps sells less than one half. A demy octavo volume in boards weighs not less than two pounds; but we confidently believe that, instead of the duty augmenting its price to the consumer sixpence, it actually has the effect of increasing the price not less than two shillings; and we are of opinion, that if school-books and established works could be produced with a less outlay of capital the price would be reduced in a much greater proportion; and that we are justified in saying that it is a tax which greatly checks the diffusion of knowledge, and counteracts the improvement that would result from the instruction of the poor."

A statement is subjoined of the publisher's necessary charges to cover the duty on an edition of 1000 copies of a demy octavo volume of thirty-six sheets (576 pages); from which it appears, that if the whole edition be sold, the enhancement of the price of the volume by the operation of the duty is one shilling: if only 750 be sold, 1*s.* 2*d.*; if only 500 be sold, 1*s.* 6¾*d.*; and if only 250 be sold, not less than 2*s.* 8*d.* The additional charge actually made upon the public in consequence of the duty, in the case of each individual work, will not, of course, be comformable to this calculation; for the publisher must fix his price before he can know how many copies of his edition he is to sell (a necessity which forms the main hardship of his case in reference to this duty); but in the long run, or on an average, the pressure of the tax upon the purchasers of books will be as here stated.

COUNTY RATES.

WHAT is commonly called the public revenue does not by any means represent the whole amount of the money that is every year collected in this country for public purposes. The entire income of the nation may be considered as divided into several portions, each differing from the rest in the mode in which it is collected and expended. The mass of it no doubt remains in what we may call the natural state, that is, in the hands and entire management of individuals. But a large share also is diverted into a variety of other channels. There are, first, the taxes exacted by the state. Then there is that separate provincial taxation called in this part of the kingdom county-rates; and collected also, both in Scotland and in Ireland, under other names. There are the other local taxes paid in many cases by the inhabitants of boroughs. There are the assessments for the relief of the poor. There are the district collections for the maintenance of highways and of sewers. There are church-rates and Easter-dues. All these are claims from which no man can escape, whose situation and circumstances are such as to bring him within the line of liability marked out by the law. He may never cross his own threshold from the first day of January to the last of December, and still they will be demanded of him. He must pay them for doing no more than living in a certain locality. Next comes a large class of exactions in the shape of fees to the clergy, to officers of the courts of law, and to other public functionaries, which are not paid by every individual, but only by those who voluntarily place themselves in certain situations which the law has defined. Under this head also are to be reckoned port-dues, tolls, and other similar exactions. Another large portion of the national income is that which consists of the tithes, of the profits of glebe-lands and parsonage-houses, and of the rents drawn by civic corporations, by universities, colleges, schools, charities, and all other foundations enjoying the same species of support. Next we must set down the revenue annually drained away by the numerous institutions existing among us, which depend for their support upon voluntary contributions; and by the other demands upon his public or party spirit, which every man is constantly encountering in one or other of a thousand shapes. And, lastly, there is the vast amount of money which is every year poured into the many speculations, old and new, in each of which a number of persons are associated together in pursuit of a commercial object—such as banking companies, insurance companies, canal and railroad companies, mining companies, trading companies, and all others which are not mere private partnerships, but are open to any one who choose to purchase a share in the concern.

If we wish to ascertain the whole extent to which what may be called public association in pecuniary matters is carried in this country, both under the compulsion of the law and voluntarily, we must reckon up the sums annually diverted from individual expenditure in all these several ways. It would be curious to calculate the proportion which they might altogether bear to the total annual income of the nation. Certainly, what is commonly called the public revenue, large as is its amount, would not be found to form the largest part of the whole sum of the public contributions.

With the exception, however, of this taxation imposed for the general purposes of the state, and flowing directly into the public treasury, but little attention has until very recently been called even to those of the sums thus annually collected from the nation, the payment of which is enforced by the authority of the law. The chief of these are poor-rates, tithes, church-rates, and county-rates. The Poor-Law Amendment Act has now, it may be confidently hoped, put the first-mentioned impost in a course of gradual diminution, after a long period of steadily progressive increase. Tithes and church-rates have only as yet been partially looked into by Parliament; and little or nothing has been done (at least in this part of the kingdom) for the amendment of the law in regard to either. The public attention, however, has been awakened in regard to both, and a revision and reform of the existing state of things must ere long take place. The subject of County-Rates has also lately obtained the notice and consideration of both Houses of Parliament. Two Reports upon it, from a Select Committee of the House of Lords, are now before

us; together with a preliminary Report from a Commission appointed by the Crown, on the recommendation of the House of Commons. Of these papers we shall now proceed to lay the most material parts before our readers.

We shall give the first Report of the Lords' Committee at length, as a convenient introductory statement of facts. It is dated 1834, and is as follows:—

"By the Lords Committees appointed a Select Committee to inquire into the charges on the county rates in England and Wales; and to report to the House; and to whom leave was also given to report from time to time to the House; and to whom was referred the petition of the grand jury of the county of Carmarthen assembled at the general sessions of the peace of the said county, complaining of the local taxation paid by the agriculturists of England and Wales, and praying their Lordships for relief;

"*Ordered to report.*—That the Committee have met; and having prosecuted their inquiries, as well into the extent to which county expenditure has increased as into the causes by which that increase has been occasioned, proceed to submit to the House the result of their inquiries as far as they have hitherto gone, together with such suggestions as have occurred to them as to the means by which that expenditure may be reduced or more equitably provided for.

"It appears, upon a comparison of the county expenditure taken at decennial periods from 1792 to 1832, that the increase has been both progressive and considerable. The county rates in 1792 amounted to 315,805*l.*, and in 1832 to 783,441*l.*, being an increase of 148 per cent.; and as the heads of this expenditure have throughout remained unaltered, the Committee have had little difficulty in ascertaining, by an analysis of the returns which have been laid before them, the causes to which the increase may be attributed, and in forming their judgment as to the best mode in which any saving may be effected. From this analysis of the returns it appears that a large portion of the increased amount of county rates has been occasioned by causes connected with and dependent upon what may be deemed in themselves evidences and results of the growing population of the country, and of general improvement in its condition. The great extension, during the period above referred to, of improved means of communication throughout the country, has naturally called upon the counties for increased contributions for the erection of bridges: an urgent necessity has at times existed of having recourse to extraordinary expenses in preserving the public peace: the great increase of county business generally has swelled the demand for legal charges; and various other incidental items have also added to the general mass of county expenditure. To that portion, therefore, of the augmented charge the Committee do not conceive that they are called upon to advert, as requiring the special interference of the legislature with a view to relief from it as a burden. But their serious attention has been directed to another branch of charge which has greatly increased of late years, and which presses with peculiar severity upon those county resources from which county rates are levied; they allude to the large expense incurred for the administration of criminal justice throughout the country. The crimes, for the repression of which this expense is borne by the landed interest exclusively, mainly affect personal property, as far at least as regards many of the minor felonies; and the Committee cannot but consider that such a mode of providing for such an expense is no less partial than onerous. They are desirous, therefore, of calling the attention of the House, somewhat in detail, to its nature and progressive amount. It appears to have been in some degree occasioned by the altered construction, as well as the increased number, of gaols and houses of correction; by the system of classification and more strict discipline which has been generally introduced into prisons of late years; and by various regulations of a general nature which have been deemed necessary for the improvement of places destined for the reception of criminals. But that portion of the increased expenditure which is caused by the allowances for the expenses of prosecutions appears to the Committee in a far different light, and requires particular consideration. In the year 1792 the county charges for prosecutions in England and Wales did not exceed 34,218*l.*; in 1832 they amounted to 157,119*l.*, being an increase of 339 per cent. It is true that during this period the augmentation of population might fairly account for a part of this excess; but an augmentation of population from 55 to 60 per cent. is insufficient to account for an increase of allowance for prosecutions amounting to 359 per cent.; and the Committee are of opinion that much of it is to be ascribed to the operation of the 58 Geo III. c. 70.

"Previous to the passing of that Act the statutable rewards for the conviction of certain offenders operated as an adequate encouragement for the prosecution of persons guilty of counterfeiting coin, burglary, housebreaking, robbing in shops, warehouses, coach-houses, or stables, or stealing horses, or stealing or destroying sheep or cattle. These crimes constitute the great mass of offences tried at the assizes, and the statutable rewards upon the conviction of the offenders were payable in the first instance by the sheriffs, and were taken, as far as they went, to defray the expenses of the prosecutions, and allowed to the respective sheriffs in accounting with the crown. The costs of such prosecutions to that extent were thus charged upon the general revenues of the country.

"The 58 Geo. III. c. 70, at the same time that it repeals all such parts of former statutes as provided that rewards should be paid to prosecutors upon conviction for the above-recited crimes, provides that the county rates shall in future be charged with the allowances to prosecutors in such prosecutions.

"To this transfer of payment for prosecutions from the public purse to the county rates is to be added the increased charge arising from allowance of costs in the prosecution of certain misdemeanors, which has been allowed by subsequent statutes. Thus then the recent change in the law has thrown exclusively upon the land the whole expense of prosecutions, in the carrying on of which personal property is equally interested.

"It is not immaterial to add that the allowances for prosecutions at the assizes, over which the county magistrates have no control, are generally three-fold the amount of those which are given for similar prosecutions at the sessions, where the magistrates possess and exercise a direct and rigid supervision.

"Upon a review of all these considerations the Committee feel themselves warranted in calling the serious attention of the House to the equity, not to say necessity, of making some alteration of the law in this respect; and therefore strongly recommend that the costs of prosecutions at the assizes should be borne by the general revenues of the state, under such regulations as may effectually prevent all abuse and unnecessary expenditure.

"It further appears to the Committee, that the county rates, which have hitherto been submitted to with passive indifference, have been rendered liable to many payments which in principle and in analogy should be charged upon the general funds of the country.

"They would exemplify this observation by the charges of conveying transports to the places of embarkation. The expenses of transportation from the place of embarkation are charged upon the public purse, and there appear no reasonable grounds for exempting the same from the expense of conveying the convicts from the prisons of the interior to the places of embarkation.

The same observations apply in principle to the charge of supporting smugglers in gaol at the county expense; and the Committee are of opinion that all such charges should be defrayed out of the revenue of the department whose laws are broken.

"However much the Committee may have reason to lament the increase of county expenditure in minor points, and more especially in the payments to clerks of the peace, as well as in the salaries of officers, and other incidental expenses, they abstain from making further direct observation upon them, inasmuch as any abuse in such respects may be remedied by the existing powers of the superintending magistracy.

"The attention of the magistracy has been directed to the importance of economy in county expenditure, as has been lately evinced in more than one county, by their refusal to sanction charges upon county rates for returns made to the Secretaries of State or either House of Parliament, which, although generally complied with, are nevertheless not warranted by law; and the Committee cannot but entertain the opinion, that the public revenues

should be liable to all disbursements incurred in obtaining statistical or other information for the use of the legislature or any public department.

"The Committee, having thus stated their general views upon the important matter submitted to their consideration, beg to lay before the House the evidence which they have taken, together with an appendix, and also an index to this their First Report."

A large mass of minutes of evidence is appended to this Report, the principal part of which consists of a set of accounts, prepared from various parliamentary papers, of the expenditure of the county rates since 1792, in the several counties of England and Wales. These tables extend to above 200 pages; and the information they present is throughout of too minute a character to admit of any condensed view being given of it. It will be sufficient for our present purpose to extract the following—

SUMMARY of the EXPENDITURE of COUNTY RATES in ENGLAND and WALES for 1792 and 1832, or for such other Year as could be obtained nearest to each Period, under the several Heads, with the Increase or Decrease of each, together with the Rate per Cent. of Increase or Decrease.

The Second Report of the Lords' Committee is little more than a proposal of a particular form, which they recommend should be prescribed by law as that in which the treasurers of the several counties should keep their accounts of the receipt and expenditure of the county rates. They suggest that the accounts thus kept should be annually transmitted to one of his Majesty's principal Secretaries of State, for the purpose of being laid before both Houses of Parliament. From a table contained in an Appendix to the First Report, it appears that the entire emoluments of the Clerks of the Peace (eighty-four in number) in England and Wales, amounted in 1830 to 47,888*l.* 16*s.* 7*d.*, in 1831 to 49,522*l.* 9*s.* 2½*d.*, in 1832 to 54,968*l.* 13*s.* 1½*d.*, and in 1833 to 55,570*l.* 5*s.* 9½*d.*; making the average annual remuneration of each, on the average of the four years, 629*l.* 16*s.* 8½*d.*

Two other important recommendations are also urged in the Report: the first, the expediency of establishing by law a more uniform and efficient system of prison discipline throughout the kingdom; the second, the amendment of the present system of the parochial constabulary force, with a view to increase its efficiency. Both of these are reforms demanded by many other considerations, as well as by those connected with the present subject; but it is very desirable that the attention of the legislature should be called to them on every occasion on which their importance and necessity come into view.

His Majesty's Commission, appointing H. J. Stephen, Esq., Sergeant-at-Law, T. L. Hodges, Esq., C. S. Lefevre, Esq., and Fortunatus Dwarris, Esq., Barrister-at-Law, to inquire into the collection and expenditure of the county rates and highway rates of England and Wales, is dated the 5th of November, 1834; and the said Commissioners make their Preliminary Report on the 11th of August, 1835. By this time they had called for 736 returns from clerks of assize, clerks of the peace, town-clerks, treasurers of counties, treasurers of exempt jurisdictions, and gaolers and keepers of houses of correction, &c., but had only received 482, of which many were found to be imperfect and requiring amendment. "The state of our returns," observe the Commissioners, "being thus defective, we had intended to delay our Report until our information upon the various subjects which the inquiry embraces could be rendered more complete. But having, with the aid of our existing materials, been enabled with respect to some of these subjects to arrive at certain conclusions, which, from the facts already before us, are not, in our belief, likely to be varied by any evidence to be hereafter received; and having founded upon them a plan calculated to reduce the expenditure of prosecutions, and to produce other beneficial and important results, we have at length determined, contrary to our original design, to submit to your Majesty an outline of that plan."

They then proceed to remark, that for more than forty years past there has been a large and constantly progressive increase in the expenditure occasioned by prosecutions, and that in a much greater ratio than the increase of the population. Thus, in the West Riding of Yorkshire, in 1814, with a population of 600,000, there was an expenditure in prosecutions of 2,823*l.* 4*s.*; but in 1824, when the population had increased only to 831,074, or by 38½ per cent., the cost of prosecutions had increased to 10,150*l.*, or by 259½ per cent.; and again, in 1834 the increase of the population (now 960,000) having been 15½ per cent., the increase in the cost of prosecutions (now 13,727) had become 35¼ per cent.

Without going fully into the causes of this augmented expenditure, the commissioners conceive that it "is chiefly owing to an increase in the number of prosecutions, which, as well as the general expenditure, is in a much greater ratio than that of the population, and partly to an increase in the outlay in each case, individually considered." The actual average expense of an excise prosecution throughout the country is stated to amount to about 19*l.*, and to vary in different counties from 15*l.* to 50*l.* The average cost of a prosecution at the quarter sessions is stated to be about 7*l.* 10*s.*, and to vary from 3*l.* to 13*l.*

When the returns for which they have called are complete, the Commissioners propose to subject each of the several charges connected with prosecutions to the strictest examination, with the view of ascertaining to what extent its reduction may be possible. "We have already, however," they add, "collected from an analysis of the expenditure in prosecutions, that a very large portion of it, and that which is most capable of economical regulation, consists of the charges for conveying witnesses to the place of trial, and their loss of time, maintenance and other expenses there during the period of the assizes and sessions,

In connexion with this fact, we have noticed with great interest, the circumstance that in those cases where an offence is cognizable in a court of local jurisdiction, and prosecuted there, the costs of the proceedings are always found to be comparatively very light. Thus from Leeds we have a return which proves that offences prosecuted in the borough courts are tried at an average expense of 4*l.* 9*s.* 6*d.*, while the charge for prosecuting an offence committed at Leeds and tried at the York Assizes, may fairly be stated on an average at 50*l.* The point, however, is best illustrated by the returns we have obtained from the exempt jurisdictions throughout the country. These towns are privileged to try in their own courts exclusively, the ordinary offences committed within their precincts, but send their capital felonies to be tried at the assizes; and it appears by the returns, that a prosecution of the former class costs the town on an average 5*l.* 8*s.* 6*d.* only, and one of the latter, 59*l.* It is true that the offences tried at the assizes are in their nature generally more expensive, but that consideration is by no means sufficient to account for this great inequality, which is mainly owing to the absence (in towns) of the charges for conveyance and maintenance of witnesses and allowances for time, there being in general no necessity for these, when the offence is tried in the same town in which the prosecutor and witnesses reside. A similar result is obtained (differing only in degree) when the expenses of prosecutions at the ordinary quarter sessions for the county are compared with the costs of like cases, and [at?] intermediate sessions held by adjournments at different large towns, and disposing of the cases arising in the town and neighbourhood. Thus at an intermediate quarter sessions for the West Riding of Yorkshire, held at Sheffield in the course of last year, the expense of thirty-three prosecutions averaged 4*l.* 1*s.* each. Had these cases been taken to Pontefract, it appears from the evidence before us, that the average would have been several pounds higher, as at Pontefract Sessions in 1833 180 prosecutions averaged 9*l.* 15*s.* 2½*d.* each."

Led by these considerations, the Commissioners had devised a plan for extending over a greater part of the country the benefit of local trials, which they subsequently found to harmonise to a great extent with the provisions for the improvement of local jurisdictions contained in the Municipal Corporation Reform Bill.

"The plan," they proceed, "is to send round to every large town within each county an ambulatory judge of criminal jurisdiction, who shall hold sessions there for the trial of all such offences as are now ordinarily disposed of at quarter sessions, the capital cases being still reserved for the judges of assize. Such judge would hold a session for the town and its precincts, and also a separate session for some division of the county at large, of which that town might be considered the centre. The magistrates acting for the town, or the magistrates acting for the division (as the case might be) should we think be associated to the new functionary, and sit on the same bench, but should not be empowered to interfere, except in giving information and advice. The jurisdiction of the county magistrates at quarter sessions, so far as regards indictments, which has been exercised of late so extensively as to dispose of cases of horses and sheep-stealing, and other principal and highly penal felonies, would thus be superseded, while in all other respects the jurisdiction of the county magistrates would remain entire and undisturbed."

Besides the economy of this plan, it is conceived that it would be attended by various additional advantages. It would enable the pressure of the expenditure for prosecutions to be fairly divided between the town and the country; it might be conveniently connected with another arrangement for the trial before the same judge of civil causes, where the sum in dispute was small; and it might be taken advantage of to secure a greater frequency of jail deliveries than is now attainable.

"With respect," it is added, "to the question by whom the ambulatory judge is to be appointed and paid, we answer, without difficulty, by the Crown. If this expense were to fall upon the county or the towns, it would, no doubt, materially affect the value of the plan, in an economical point of view; and as it appears to be in the contemplation of your Majesty's Government to apply part of the funds at its disposal in aid of the county rate, we humbly conceive there is no way in which a portion of the intended relief can be so well bestowed as by undertaking the payment of the ambulatory judges. With the duty of payment it would be natural to connect the right of appointment. Indeed, unless that were to be exercised by the Crown, it would be difficult to make any arrangement on this subject which would be satisfactory to all the different portions of the county over which, in turn, one common judge might be appointed to preside. The principle of trying offences on the spot by an ambulatory criminal court, has been subjected to experiment in the West Riding of Yorkshire, where the quarter sessions are held at Doncaster in January, at Pontefract in April, at Skipton and Bradford in June, and at Leeds and Sheffield in October. At the latter place, it has further been found advisable to hold intermediate sessions by adjournments, one between Michaelmas and Christmas, and the other between Christmas and Easter. The only expense occasioned by this arrangement, has been in the attendance of the clerk of the peace, and in the taking over the prisoners from the house of correction at Wakefield, the cost of which, however, is inconsiderable, as they are carried in a caravan, containing at the same time 20 persons. The saving in the expenses of a prosecution thus conducted on the spot, has been shown to be nearly one-half, while at the same time the personal convenience of prosecutors, witnesses, and jurors, generally persons in business, has been greatly promoted."

This suggestion for the establishment of local courts may be classed with those already mentioned for a reform in our system of prison discipline, and in the parochial constabulary force, as another recommendation springing out of the present inquiry of a measure still more important on other grounds than on those with a more especial reference to which it is here proposed. The more interests that come to be arrayed in favour of any improvement, the greater chance is there, of course, of its being speedily carried into effect; and it sometimes happens that inferior interests are more potent than those of a really higher character in enlisting in its support the most influential and effective services. The expectation of thereby diminishing the county rates may now be expected to come in aid of all the strong considerations of every other kind which call for an improved system of parochial police, an improved prison discipline, and an improved administration of justice throughout the kingdom.

In the remainder of their Report, the Commissioners express considerable doubts of the expediency and fitness of the plan of throwing the whole or any part of the expenses of prosecutions at the assizes and sessions upon the general revenues of the county. "We think it," they remark, "an unnecessary and unadvisable departure from what we regard as a sound principle of municipal law, *viz.* that crime should in its pecuniary consequences be a local burden. We apprehend, too, that it will lead to a large increase of expense; for upon such a plan the control of the expenditure would be confined to the agents of Government, and we are of opinion that the check required will never be effectually exercised by non-residence. But if, on the other hand, it should be found practicable to charge on the public revenues the expenses connected with gaols and bridewells throughout the country, we see many advantages in a plan of that description, if the management of those institutions were also placed in the hands of your Majesty's Government, and conducted upon general and uniform principles."

Some observations then follow on the expenses incurred in the conveyance of prisoners from one gaol to another, and in allowances to discharged prisoners on route, which we must pass over. The concluding head of the Report, however, is of greater interest, and we therefore give it without abridgement.

"A subject which has strongly engaged the attention of the Commissioners, is the undeniable hardship of charging on the realty all the expenses attending the invasion of personal property. Thefts are necessarily of chattels; the costs of prosecution being taken out of the poor's rate, fall entirely on real property; but the difficulty (amounting to an impossibility) of raising a fund, except out of land and buildings, by the taxation of stock in trade, or of profits of trade, or of funded property, renders a complete and effectual remedy for this injustice quite impracticable. Still great relief to the agricultural in-

terest has been afforded in Lancashire and the West Riding of Yorkshire (and we are informed in Cheshire), by making new valuations of the county or riding. This has been effected in the West Riding of Yorkshire, at an expense not exceeding 800*l.* or 900*l.*, and in Lancashire, 1000*l.* It has relieved the landed interest to the extent of one-third of the local charge, having brought the large towns and manufacturing districts to pay a full equivalent for the charges they bring upon the county. The mode of producing this desirable effect has been by rendering liable property in mills, factories, &c., which either never contributed before or did not pay a just proportion.

"In both Lancashire and Yorkshire, owing in part to the praiseworthy liberality of the great commercial towns, the new valuation has been well received throughout the county and riding respectively, and no appeals have been brought against it; the result is, that Leeds, in Yorkshire, where a new valuation has taken place, occasions to the riding an expense of 294*l.*, and contributes 1672*l.*; while Birmingham, in Warwickshire, where there has been no new valuation, furnishes about three-fourths of the prosecutions, and contributes little more than one-fourth of the rent.

"This inequality is explained when we perceive that, in Warwickshire the amount levied upon the land for poor's rate and county rate, in 1833, was 107,142*l.* 18*s.*, and upon mills and factories not more than 2720*l.* 9*s.* Again, in Leicestershire, a manufacturing district, the amount levied upon the land in the same year, was 108,330*l.* 3*s.*, and upon mills and factories only 783*l.* 2*s* And, notwithstanding the examples of Lancashire, Yorkshire, and Cheshire, the moderate expense attending the new valuations in those counties, and the encouraging result, the disproportion between the sums levied upon land, and upon mills, factories, &c. throughout England and Wales, is strikingly manifested when it is seen that, of the total monies levied by assessments for poor's rate and county rate in each county, in the year ending 25th March, 1833, which make 8,607,501*l.* 9*s.*, land and dwelling houses contributed 8,070,147*l.* 18*s.*

"While a new valuation is thus found to supply, so far as is practicable, a defect of principle in local taxation, in reaching, if not stock in trade or profits of trade, yet the buildings in mills and factories, &c., in which trade is carried on, its more direct operation is obviously to correct the inequalities resulting from the extensive changes in the value of rateable property occurring since a former valuation was made, either by the creation of the property, or by towns having risen into importance, or having greatly advanced in prosperity without any revision of the county rate. Thus Weymouth and Leamington furnish instances of newly risen flourishing places, which have not as yet been charged to the county rate upon the increased value of the property.

"Under these circumstances we feel quite satisfied of the expediency of new and periodical valuations in all other counties similarly circumstanced, adopted with so much success in Lancashire and Yorkshire, &c."

REPORT FROM THE SELECT COMMITTEE ON CONSULAR ESTABLISHMENTS.

THE Select Committee of last Session appointed to inquire into the Consular Establishment, have made the following Report:—

"Your Committee have had several documents laid before them from the Foreign Office, and amongst the number a copy of the instructions sent to his Majesty's consuls resident abroad, which is appended to this Report. The result of their investigations on this subject has led them to the conclusion not only that those instructions have within the last two years been rendered very full, but that they are well calculated to secure, in many respects, an improved system as regards the whole department; and farther, that some additional advantage may be obtained by an extension of the measure already adopted, of prescribing to the consuls an uniform plan for the transmission of their returns to the Foreign Office.

"That the civil and criminal jurisdiction of British consuls in the Levant seems to require to be better regulated and defined, and that your Committee recommend this subject to the attention of government, with the view of obtaining from Parliament the necessary powers for that purpose.

"Statements have been laid before your Committee of the reductions which have been from time to time effected in the salaries and emoluments received by British consuls, together with the remonstrances made against such reductions, and they feel themselves warranted in stating that no grounds have been laid before them to justify further reduction; but on the contrary it is their opinion that the diminution of the total expense could not be carried to a greater extent without detriment to the public service.

"That your Committee recommend that the several consuls stationed at the ports of the Barbary States should, in common with all other consular officers, be under the direction of his Majesty's principal Secretary of State for Foreign Affairs.

"That your Committee are of opinion that the relaxation made in 1832 of the system pursued since 1825, of preventing consuls from engaging in trade, was beneficial. They are of opinion that many cases may exist in which it is expedient that the functions of consuls should not be mixed up with commercial transactions in the place where the consuls reside; but that in many others there seems no objection whatever to consuls trading, if in consequence the services of a better class of persons can be obtained at a more moderate charge to the public. Your Committee, therefore, recommend that no fixed rule upon the subject be laid down, but that the Secretary of State should exercise, as heretofore, his discretion in prohibiting trading to consuls in certain places, and authorizing it in others.

"Your Committee have considered whether any improvement could be made in the nature of the fund from which consuls at present receive their salaries, and a proposal was submitted to them for charging a part of their remuneration in places of considerable trade on the tonnage and imports entering such ports; but, upon the whole, your Committee are of opinion that the mode at present in force, of payment by annual vote of Parliament, is to be preferred

"That it further appears to your Committee that the table of notarial fees appended to the Act 6 Geo. IV. c. 87, requires revision, and they recommend this matter to the attention of the government.

"Your Committee further recommend that instructions be sent to all his Majesty's consuls, requiring them, once in every six months at the least, to transmit to the Foreign Office the fullest information which, from time to time, they can possibly obtain with regard to the agriculture, foreign and domestic trade, manufactures, population, public works, and whatever else may be considered as bearing on the commercial interests of Great Britain, in order that through the agency of those officers a complete body of statistical information may be furnished in the communications abovementioned, and in such a manner as that their several statements should be brought down to the latest possible date, and that those periodical communications, received in the first instance at the Foreign Office, and subsequently handed over to the Board of Trade, be examined under the direction of the President thereof, with a view to having such portions of them printed as that Board shall not deem it inexpedient to make publicly known; and also that, with the view of enabling British consuls more fully to furnish information connected with trade, as well as for the better and more efficient performance of their other duties, your Committee recommend that the requisite proceeding be adopted for obliging the masters of all merchant vessels, on entering and quitting port, to wait on the consul and lay before him his ship's papers, as far as a regulation of this nature can be carried into effect consistently with the interests of trade.

"That your Committee having examined the advantages to be derived from transferring the consular department to the Board of Trade, are convinced that such transfer would be inconsistent with the interests of the public service, it being in their opinion impossible to separate those functions of the consuls, which must necessarily refer to the Foreign Office, from their commercial duties, which may be connected more directly with the Board of Trade.

"And, in conclusion, your Committee have further to recommend that consuls be relieved from the charge of postage of all documents transmitted to them by the Foreign Office, and for all returns sent by them in pursuance of their instructions."

The following are some of the most important papers given in the Appendix to the Report:—

This Paper is imperfect, in consequence of the Returns not being all received.

STATEMENT showing the total expenditure for the consular service in each year from 1826 to 1834, inclusive:—

Salaries to consuls-general, consuls, and vice-consuls:—

1826	1827	1828	1829	1830
£95,791	£97,021	£93,102	£90,863	£91,350
1831	1832	1833	1834	
£84,148	£71,416	£6,380	£61,072	

Contingent expenses:—viz., chaplains' salaries, maintenance of churches, chapels, burial grounds, relief of distressed British subjects, special services, &c.:—

1826	1827	1828	1829	1830
£13,040	£17,709	£11,589	£11,119	£9,962
1831	1832	1833	1834	
£8,692	£11,051	£10,221	£10,000	

Total consular expenditure:—

1826	1827	1828	1829	1830
£108,831	£114,730	£104,691	£101,982	£101,312
1831	1832	1833	1834	
£92,840	£82,467	£74,028	£71,072	

The returns for 1834 not being complete, an estimate is all that can be given.

TRADE, STATISTICS, &c.

Beet-Root Sugar.—We have compiled the subsequent information from De Dombasles' 'Inquiry into the State and future Prospects of the Manufacture of Beet-Root Sugar.' The first point to be ascertained is the price at which the article can be produced. Now, experience shows us, that the cost of 1000 lbs. of beet-root in the neighbourhood of all the manufactories in France is 8 francs (about 6*s.*) But further improvements will undoubtedly be made in the cultivation of the root; and even at this moment contracts have been made with several growers for supplying the manufacturer at a lower rate. We will suppose, however, that the price mentioned continues. When sugar was first made from the root, it yielded 3lbs. of the sugar for every 100lbs. weight of the root; the quantity obtained was afterwards raised to 4½lbs.; and at this day it has been generally increased to 6lbs., and where due skill is used, to nearly 7lbs. Hence we see that 1000lbs. of root yield only 60lbs. of sugar, although it is known, by chemical analysis, that beet-root contains ten per cent. of crystallizable sugar; nor can there be any question that at least eight per cent. will in a short time be extracted under improved processes. In this case, every pound of sugar will cost two sous (about 1*d.*), and no more, so far as the price of the material only is concerned. The cost of manufacture (and the author speaks of what is actually done by several makers) amounts to not more than 6 francs (about 4*s.* 6*d.*) for every 1000lbs. weight of sugar. In this way, where 50,000 cwt. are daily made, the simple cost of manufacture is 600 francs (about 24*l.*) per diem. But the value of the molasses and the cakes, after the saccharine matter has been extracted, come in diminution of that expense, and this cannot be estimated at less than 2 francs (about 1*s.* 6*d.*); the actual cost of manufacture is thus reduced to 4 francs (about 3*s.*) Assuming, therefore, as the bases of calculation, that 6lbs. of sugar are obtained, that 1000lbs of beet-root cost 6*s.*, and that the expense of manufacture is 3*s.*, it is obvious that a pound of the sugar costs about 2*d.*, or, more correctly speaking, 1⅞*d.* If, however, the 1000lbs. of root are made to produce 8lbs. of sugar, the price will not exceed 1½*d.*, a price at which no foreign sugar can be sold, in France at least. As yet, in France, each individual is estimated to consume but 3¾lbs. of sugar, whilst in England the average consumption for each individual is 16lbs. a year.

Trade of Russia.—The trade of this country assumed last year a somewhat new aspect. There was so bad a harvest in 1833 that many provinces, instead of being large exporters of grain, became, in consequence of the remission of all duties, considerable importers; and hence ensued a natural decrease in the importation of other articles. When, however, the necessity of providing supplies of foreign grain ceased, the trade of Russia reverted to its accustomed course.

The exports to foreign countries in 1834 amounted to	Roubles 217,322,446	
„ Finland	2,440,993	
„ Poland	10,656,441	
Total	230,419,880	or £10,360,900
The imports from foreign countries amounted to	Roubles 214,324,630	
„ Finland	969,919	
„ Poland	2,798,803	
Total	218,093,352	or £9,996,000
Excess of exports over imports		£364,900
The importation of gold and silver exceeded the exportation in the sum of	Ro. 15,402,575	or £706,050

The largest articles of export were

Hemp	Poods 2,824,935
Copper	317,222
Timber and deals	Ro. 8,985,489
Raw hides	11,235,988

Of the last article the export was double the quantity exported in 1833, owing to the prodigious number of beasts slaughtered by reason of the want of fodder. The export of tallow from the northern ports of the empire amounted to 3,780,831 poods; somewhat less than the export of the preceding year; but from Odessa there were exported 788,000 poods, double the quantity exported in 1833.

With regard to the imports, the most observable fact was, that in 1834, 1,100,000 tshetwerts of grain, valued at 20,714,000 roubles, of about 949,440*l.*, and 469,479 vedros of spirit from corn, for the use of the great brandy distillery in St. Petersburg, were imported.

Prussia.—During the last fifteen years the number of births in the Prussian dominions, exclusively of Neufchatel, has amounted to 7,583,017; among these there were 257,068 still-born children, namely, 147,705 boys, and 109,363 girls. In the same interval there were 5,457,209 deaths, including the still-born children; and 26,576 of the entire number had attained to upwards of ninety years of age. Between the years 1826 and 1834, 430 individuals died of hydrophobia; and, during the last six years, 38,733 of various casualties. In 1831 the cholera carried of 32,647 persons. During the last fifteen years 16,680 persons committed suicide, amongst whom were 2981 females; 44,699 fell victims to the small-pox; and 70,215 females died in the pains of child-bearing.

Number of Emigrants from the United Kingdom during 1832, 1833, and 1834:—

	1832.	1833.	1834.
British North America	66,339	28,808	40,060
United States	32,980	29,225	33,074
Cape of Good Hope	202	517	288
Australian Settlements	3,792	4,134	2,800
Total	103,313	62,684	76,222

Wheat.—Annual Average Prices of Wheat from 1815 to 1834:—

	s.	*d.*		*s.*	*d.*
1815	63	8	1825	66	6
1816	76	2	1826	56	11
1817	94	0	1827	56	9½
1818	83	8	1828	60	5
1819	72	3	1829	66	3

Note.—All under ten years are employed on silk only; children between ten and twelve years are subject to the education clauses of the Bill for regulating labour in Factories, except those in silk, and work nine hours per day, or forty-eight hours per week. On the 1st of March, 1836, this regulation will be extended to those children who will then be under thirteen years. Young persons between twelve and eighteen years work twelve hours a-day, or sixty-nine per week. In 1836 the regulations will be altered, so as to include only those from thirteen to eighteen years of age.

POLITICAL RETROSPECT FOR DECEMBER, 1835.

GREAT BRITAIN.

THE Addresses in answer to the Governor's Speech, both of the House of Representatives and of the Legislative Council of Lower Canada, have been received. That of the Council expresses confidence in the benevolence and wisdom of his Excellency's intentions, and also in the prospect there is of their realization. The Address of the House of Representatives, though perfectly courteous, is very far from cordial; and cannot be said to afford ground for much hope of any settlement of the differences that agitate the colony being effected on the principles that had been announced by the Governor. In evident reference to the reserve that had been maintained in his Excellency's Speech upon the subject of organic changes in the constitution of the Government, the Address says, "We pray to be allowed to assure your Excellency, that the representations which have been made by this House and by the people, on the subject of the present constitution of the legislature of this province, were so made after mature deliberation, and a most careful consideration of the principles of government, and of past events. The general opinion of the people gives additional strength to our conviction, that no arrangement of a merely administrative nature could produce that harmony, which, in common with your Excellency, we have so much at heart, with a view to the full and effective representation in the legislature of the country of the rights, interests, desires, and wants of the people thereof." According to intelligence that has since arrived, the Legislative Council had on the 13th of November, thrown out the bill sent up by the House of Representatives, for the appointment and payment of Mr. Roebuck as agent for the colony in this country. In the 'Quebec Gazette' of the 11th of November, however, it is stated that the contingencies of the Assembly, including the payment of the agencies of Messrs. Viger and Roebuck, and other irregular charges, had been paid by Lord Gosford that day, unconditionally.

In the course of the month the 'London Gazette' has announced his Majesty's approval of the division of numerous boroughs, and the boundaries assigned to the wards by the revising-barristers, according to the provisions of the Corporation Reform Act. In the cases of several boroughs, also, it has been declared that the division and assignment made by the revising-barristers, appearing to be in certain particulars liable to objection, are disapproved of; "but nevertheless," it is added, "his Majesty, by the advice of his Privy Council, doth order that the particulars of the division and assignment so made by the said barristers, shall be published in the London Gazette, in order that such force and validity may be given thereto as is authorized and directed by the said Act." They will, by the 39th clause of the Act, remain in force for the present, and until other divisions shall be definitively approved of by his Majesty in Council.

On Thursday the 17th, Parliament assembled *pro formâ*, in conformity with the last prorogation, when it was further prorogued to the 4th of February, then to meet for the dispatch of business. The Lords Commissioners were Lord Melbourne, Lord Denman, and Lord Glenelg.

FRANCE.

THE political trials, and even the proceedings against the murderer Fieschi, attract little attention in Paris, compared with that excited by the American quarrel. Mr. Barton, the Secretary of Embassy of the United States, who had been acting as ambassador, embarked at Havre, for New York, on the 2nd of December; and diplomatic relations between the two countries may now be said to have ceased entirely. Most of the French papers, even including those in the pay of the Ministry or King, have assumed a very warlike tone; but we are still disposed to believe that these hostilities will end in mere paper bullets.

On the 1st of December, the "Moniteur" contained a Royal Ordonnance, by which Rear-Admiral Mackau was appointed Governor of Martinique, in lieu of Rear-Admiral Halgen, who is recalled. A second Ordonnance has also been published in the same official journal, containing the following articles:—

"Art. 1. That Rear-Admiral Baron de Mackau, Governor of Martinique, take the command of the Squadron of Observation, which is to assemble in the West Indies.

"Art. 2. On his arrival at Fort Royal, that general officer will have the command-in-chief of all the naval forces of France in the West Indies and Gulf of Mexico; and hoist his flag on board the ship Jupiter, or any other, as the service may require.

"Art. 3. In his quality of Governor, he will command in chief the troops of the colonies of Martinique, Guadaloupe, and their dependencies."

This is not quite so dreadful as it looks. The French naval force *now* in the West Indies and Gulf of Mexico is very weak, and some time must be consumed before it can be materially strengthened. It is said that the Finance Minister, M. Humann, has positively refused to make any advances for such an armament without the full authorization of the Chambers, which is not to be obtained without a long debate. It is, however, quite certain that an extraordinary degree of activity prevails in the chief sea-ports and dock-yards of France, as if she really expected a maritime war. According to a letter from Toulon, that has been printed in some of the newspapers, it appears, that the French are to take to sea with "great guns." Every ship of the line is to be furnished with four extra howitzer-cannon, of the calibre of 80 pounds; every frigate of the first class is to have two; and every steamboat of 180-horse power, three of these eighty-pounders. Frigates of the second and third class are to carry four extra thirty-pounders. The three ships of the line Duquesne, Pallas, and Amphitrite, are to be repaired and put into commission. The "Courrier Français" states that, counting all classes and sizes, the small with the large, France has, *nearly* ready for service, 119 ships of war; and that, in six months, she could fit out a considerable number in addition. The United States, according to the same authority, has not half of this force: but we fancy the French have been counting all their schooners and little tenders carrying four three-pounders, and have not taken that species of craft into the American account. "But the United States," say the quidnuncs of Paris, "are to have Russia as an ally!"

We need not report the slow progress made or making in the State trials; it will be enough to give their result whenever that shall be obtained. A few of the provincial Republicans of 1833 have been found guilty, but no definite sentence has been passed.

We mentioned last month the departure of Louis Philippe's heir for the African coast. It is stated that he arrived safely at Algiers, and immediately set out with Marshal Clauzel for Oran, in the neighbourhood of which place the Arabs continue to gather in strength. The "Constitutionnel" has published one of Clauzel's orders of the day, in which the Marshal congratulates the troops on having their fatigues and dangers shared by so illustrious a personage as the Duke of Orleans. His Royal Highness has no separate command. The part of the Army of Africa which was on full march against Abdel Kader, the Emir of Mascara, was about 12,000 strong; it was divided into four brigades, under Generals Oudinot (who leads the vanguard), Perregaux, D'Arlanges, and Combe.—All these troops had been assembled by degrees within the walls of Oran. It should appear that they were transported thither by sea, being unable to effect the march from Algiers by land. They count, for their success against the Arabs, on their artillery, as they carry with them a good supply of mountain-cannon and Congreve rockets. The forces of the Emir are stated as high as 15,000 irregular foot and 8000 horse.

Louis Philippe seems to aim at making the same use of the conquest and army of Algiers that Buonaparte did of those of Egypt: a little military glory goes a long way with the French people.

SPAIN.

THE Cortes summoned by the new premier, Señor Mendizabal, met at the time appointed; and on the 12th of November, the lower house proceeded to the election of their president and secretaries. In the case of the president the Ministry suffered a defeat. Their candidate, Ochoa, a man of liberal principles, obtained 51 votes; Isturiz, who has been closely connected with the juntas, was elected on 53 votes. Ochoa, who belonged to the moderate opposition in the last session of the Cortes, was supported by Toreno, Martinez de la Rosa, Riva Herrera, Tomeruelos, Arango, and other old Ministerialists.

The change thus indicated in the state of parties in the lower house is very important: the conservatives, or former ministerialists of the governments of Martinez de la Rosa and Toreno, are obliged, as a *pis aller*, to take up with Ochoa and the less violently liberal party, thus almost ceasing to be anything by themselves, and leaving the field to what we may call the liberals and the ultra-liberals. Another important change is, that instead of delivering her opening speech in the Proceres or Peers, the Queen went to the Procuradores, it being settled that the lower house is henceforward to enjoy that privilege and honour. It is by no means improbable that the next thing will be to ask why Peers and Commons should not meet in, and form only one house, as they did by the constitution of 1820? The Chamber of Proceres assembled under the presidence of the Bishop of Majorca, and elected the Duke de Rivas and Count Miraflores as provisional secretaries. According to the Parliamentary usages of Spain, these elections, and other minor matters, were settled before the Queen went down to the houses, it being prescribed that the sessions of Cortes are not to opened by the Crown until after both chambers or houses have officially announced that they are duly constituted.

The health of the Queen-Regent was in so delicate a state that it was feared she would not be able to attend; but on the 16th of November, this inexperienced, unhappy young woman went in state to the Estamento of Procuradores, where she was received by a deputation of twelve Peers and twelve members of the Commons. Within the house, such of the Proceres as chose to attend took the post of honour at the right of the throne; the Procuradores sate on the Queen's left. Mendizabal, as Prime Minister, presented the Royal Speech, which her Majesty, though pale and nervous, is said to have read with great fluency. Passing over long paragraphs of compliment and commonplace, we select the following as the most interesting passages of the speech:

"I have placed my confidence in the Ministers who are honoured with that of the nation. If the representatives of the Spanish monarchy, who at this moment surround the throne of my beloved daughter, favour them equally with theirs, I hope that without new loans, or an augmentation of the taxes, resources will be found, not only to terminate the war of the factious, and to prove sufficient for the other obligations of the state, *but also to ameliorate the lot of its creditors, national as well as foreign, and to place public credit on a solid basis.*

"The Sovereigns who signed the treaty of the Quadruple Alliance continue to give us repeated proofs of their adherence to the principles therein laid down, affording aid, as far as my Government considers proper, to the sacred cause which we defend. To this treaty my august daughter is indebted for the copious assistance, in arms and ammunition, afforded for the support of her throne by my august ally the King of Great Britain, and the authorisation granted by that government to English subjects to take up arms in her defence. Faithful to the same confederation, the King of the French, my august uncle, has author-

ized the removal from the shores of Africa to Catalonia of the Foreign Legion, which has already begun to give to our just cause such essential services. We have to expect equal results from the concurrence of the 10,000 Portuguese, who, according to a convention made with her Most Faithful Majesty, my much-beloved cousin, and as a consequence of that treaty, have already commenced entering into our territory. Their Majesties the Emperor of Brazil, the Kings of Denmark, Sweden, Belgium, and Greece, and the republic of the United States of North America, preserve towards us that powerful union and friendship which they have always professed to us. Our relations with the other powers are conformable to the line of policy which their governments thus far follow, and to the dignity and independence of our nation.

"Negociations have been entered upon with the states of Spanish America; and I have believed it suited to the interests of the nation and of the throne, and well adapted to the confidence inspired in me by the Cortes, to consult them on a business of so much and such transcendant importance, without, however, infringing on the prerogative of the Crown."

There then follows a eulogium of the troops employed against Don Carlos, and the Queen promises them the erection of "a hospital for invalids." After praising "the valour and excellent discipline" of the British and other foreign auxiliary forces, the speech explains the immediate necessity of enlisting another army of Spaniards; and here, if we may depend on our own sagacity (for the words used are obscure), there is a hint at the establishment of something not unlike the French law of conscription. In the next place, the speech declares that the militia, or Urbanos, are henceforth to be called 'The National Guard.' It then proceeds—

"Three most important projects of law will be presented to your deliberation—that of elections, the basis of the representative government—that of the liberty of the press, which is the soul thereof—and that of the responsibility of ministers, which is the complement thereof—insuring, and at the same time rendering compatible, the inviolability of the monarch and the rights of the nation.

"Various useful decrees have been circulated from the office of the Secretary of Finance, and in particular that which tends to diminish the condemnations in cases of contraband, and which is specially grateful to my feelings, since its object is to alleviate misfortunes, and to restore to society many useful persons, to the profit of agriculture and of the arts, and not less to the advantage of public morals. But it has not yet been possible to form a general plan for this most extensive budget. I hope that you will authorise my Government to make in it the proper modifications, and that you will place it in a situation of presenting to the future Cortes a complete system of financial administration. When the amount of the receipts produced by these modifications, and the sum of the expenses, ordinary as well as extraordinary, shall be known, the estimates will be presented with all due exactness, which, considering the actual circumstances of the nation, it is impossible at this moment to verify. I believe my government worthy of such confidence—to the Cortes it belongs to suit it to the appropriate occasions.

"In the judicial order many abuses have disappeared, and there has been established a regular and uniform system in all the proceedings of the tribunals. The efforts of zeal and ability are continually directed towards the labours of preparing and arranging the new codes, and in the regulation of the clergy, of whom the commission, composed of prelates and of other individuals replete with virtues and with information, will not cease its labours until the objects are completed. A project of law will be laid before you for establishing in a decent manner the lot of the regular clergy."

In the next clause of the speech a promise is given to encourage and perfect the organization of municipal institutions and provincial councils or deputations. This, we confess, looks well, and like a renunciation of the Bonapartean system of centralization which so many Spaniards hastily adopted. If this promise is kept, the advantages derived from it may be very great; and it fortunately happens that the municipal institutions of the country have an ancient and still firm basis to stand upon, and only require a few repairs. It is also promised that a municipal character shall be given to the police and lower courts; or, in other words, that the corporations of towns, and the respectable citizens, shall appoint their own officers, constables, magistrates, &c. Her majesty then proceeded:—

"The corporate (*proprios*), the half-pay saving funds (*montes*), and the granary property (*positos*), have particularly attracted my attention. A law will be presented to you for the alienation of the first; which law will be combined in such a manner, that without diminishing the value of the lands, and without doing any injury to the inhabitants of the towns, the products of the sales may perhaps defray all the expenses of the system of roads and canals, which is within a few years to be formed, and which, by favouring the transport of goods and commerce, will give value to the products, and consequently to the lands themselves, the price of which will have augmented with the augmentation of the cultivated grounds. Private wealth, and that of the state, will thus increase in rapid progression, and the national properties allotted to the extinction of the national debt can be sold at a proper valuation; the more especially if the granary stores (*positos*), preserving always their ancient and beneficial destination, shall at the same time serve as a basis for 'provincial banks,' which will be found to favour speculations of industry, and among them that which is most important in its public and private results—the purchase of national properties. The Government, convinced that it is never a good administrator of this species of property, proposes, with the consent of the Cortes, to offer immediately for sale all such property now in its power, and also all that may for the same reasons belong to it hereafter.

"To the system of communication, which is the great want of Spain in the order of material subjects, is referred the convention which I have concluded with her Most Faithful Majesty on the navigation of the Douro, and which is to be extended to that of the Tagus, Minho, and Guadiana."

All this clause, which is the last of any consequence in the speech, is perfectly in a right spirit; and we wish that Spain may have peace and wisdom enough to carry its provisions into effect. We have, however, our doubts; and should our fears be realized, the property of the *proprios*, the *montes*, and the *positos* will be dissipated for immediate necessities, without procuring any great and lasting good. Badly and corruptly as these things have been administered, up to this moment they have still formed *a property* in Spain.

Our readers will have paid attention to the paragraph relating to the long and idly delayed recognition of the independence of the South American states. The interest of this part of the speech was considerably increased by the presence of several South Americans who, until lately, would have been considered as rebels and traitors. Generals Soublette and O'Leary, diplomatic agents from Venezuela, Señor Santa Maria from Mexico, and two or three other diplomatists charged with the settling of the negociation, sate in one of the tribunes. England, France, Portugal, the United States, Sweden, Denmark, and Belgium had each an ambassador, minister, or chargé-d'affaires present, but the seats which should have been occupied by the representatives of Austria, Russia, Prussia, Holland, Naples, Rome, and Sardinia, were empty as before. Count de las Navas, who so lately led the threatening army of the Juntas to within a few marches of Madrid was there in the dress of a common soldier of the National Guard. This nobleman's *sans-culotism* seems to be tolerably complete: when in the field with the insurgent Andalusians, he wore a red night-cap instead of a hat. Isturiz, who was the Count's principal adviser, was there of course, and (as we have mentioned) he was elected president or speaker of the Commons, in opposition to the wishes of a Ministry that has been chosen on account of its great liberalism. It appears the report in our last Number, that Galiano would support Mendizabal, was premature: at all events, he was one of those who most strenuously exerted themselves and voted for Isturiz.

There was a great taking off of hats and waving of handkerchiefs as Christina went to and from the Cortes.

The addresses in answer to the Queen's speech were rather unexpectedly voted in a most favourable spirit by both houses. A few days later the new electoral law was brought up and carried. The qualification for the elective franchise is very much reduced; and by this law there is

to be one Procuradore or Member for every 50,000 inhabitants.

The military operations in the north of Spain are soon told. The Carlists, having concentrated their forces in Catalonia, claimed some success there, but the operations were not important. An armed schooner belonging to the Queen captured a Dutch vessel, which was conveying arms and ammunition to Don Carlos. At the middle of November, Onate was the Pretender's head-quarters: General De Lacy Evans having marched to join Cordova, Bilboa was once more invested; or rather its neighbourhood was once more infested by the Carlists. These mock investments and sieges that end in nothing begin to be especially tedious. It has also been reported in the newspapers, that the Carlists had laid siege to San Sebastian; but, having *no artillery*, they were obliged to renounce that hopeful enterprise.

On the 24th of November, the Foreign Legion gained a battle near Angues, and drove the division of Guergue back on Barbrasto. On the 29th, General Harispe, in command of the French Army of Observation on the Spanish frontiers, obliged the Carlists to destroy some works they had erected for the attacking of Behobia, a place in the hands of the Queenites. The ostensible motive for this was, that the Carlists could not attack from those works without endangering French lives and French property; as at that particular point the Spanish frontier is almost *enclavé* in French territory.

On the same day old Mina issued one of his usual proclamations, as Captain-General of Catalonia, declaring the whole of that province to be in a state of siege; and threatening with instant death "all rebels taken with arms in their hands—all who give assistance of any kind to Don Carlos—all magistrates, masters of families, &c. &c. in whose houses the rebels may take refuge, unless they can prove that they have only yielded to superior force, or that they have instantly given due notice to the proper authorities:" with a great deal more in the same tone. On similar occasions it has been usual to make such proclamations, but this fierce old man has proved, over and over again, that he is capable of carrying them into execution to the very letter, and even beyond the letter. The number of the disaffected has increased in Catalonia since he has had the command there.

New bands of Carlists have shown themselves in various parts of the kingdom; but for the present they seem to be weak and isolated. If the enlistment or conscription law be carried into effect with too much rigour, we fear the peasantry will increase these bands in every corner of Spain.

The Mendizabal Ministry has expressed a determination to make every exertion to put an end to this disgraceful war. The army in the north is to be reinforced by 25,000 men, which are to be concentrated at Santander and Burgos; while 10,000 more are to be marched into Catalonia, to support Mina. Intentions of the like nature have been expressed so often, by the different ministries at Madrid, that we cannot count on them until we see them executed. In the mean time we have got into the heart of another winter, which promises to be a severe one. To finish the war the Carlists must be followed into the mountains of Biscay and Navarre, and through the defiles of the Pyrenees, where the severity of winter, which will be more felt by the Queen's troops than by the insurgent mountaineers, is at times most excessive.

PORTUGAL.

Donna Maria has achieved something new in politics. She has dismissed and recalled a ministry, all in one day! In her note of recall, dated 13th of November, she was obliged to state, that after accepting the resignation of the Saldanha cabinet, she applied to some Members of the Legislative Chambers to form a new one, and that these gentlemen honourably declared to her, that all their endeavours to comply with her orders had failed, and that, consequently, she must take back her old servants. This was done, and the Cabinet remained as it was before; although it was pretty evident that Saldanha's party could not keep their place long. The ultra-liberal party is on the advance in Portugal, as well as in Spain.

It is said, that the auxiliary force appointed for the Queen of Spain expressed great unwillingness to march; and though its arrival at Zamora was announced last month, some people doubt whether it has yet crossed the Portuguese frontier.

Within a week, Saldanha was again dismissed, and the following Cabinet was formed by the advice and assistance of the Marquis Loule:—

Jose Jorge Loureiro, Minister of War.
Baron Sa da Bandeira, Interior.
F. A. de Campos, Finance.
Marquis Loule, Foreign Affairs (expected to take the Presidency)
Michael Antonio Vellez Caldeira, Justice.

The Lisbon mob received the news with enthusiastic joy. The National Guards went up to the palace to thank the Queen; and after their visit, Donna Maria imprudently drove in front of the different barracks where the regular troops, forming the garrison of Lisbon, are quartered, and received the cheers of the soldiers, whose discontents and clamours had contributed to the event. If Ministries are to be changed by such means, the constitutionalism of Portugal is in a very bad way.

It is said that the Duke of Terceira retains the command of the army; and that Palmella, though out of office, is on the most friendly footing with Loule and the young Queen.

The new Ministers, who start as reformers and economists, have agreed to do their work for one-half of the pay formerly attached to their offices. The Queen, the Duchess of Braganza, the Infanta Isabella Maria, Terceira, Palmella, Saldanha, and all the high officers of the Crown, have received hints that it will be fitting and proper in them to reduce their expenses and their expectations. They would have laid their hands on some 9600*l.* due to the Duke of Wellington for arrears of his *Portuguese pension*, but Silva Carvalho, late Minister of Finance, secured the sum to the Duke's agent a few hours before he gave up his post to De Campos. We fear that for the future the Duke of Wellington will receive but a Flemish account of this pension; but we hope he has been sufficiently well paid by his own country to be able to do without it.

Instead of the story we have heard so often about the prosperous condition of the Finances, it appears that the fact is they are in a state of complete dilapidation. De Campos is not the man likely to restore them, for it is said that his accession to office struck a panic among all the capitalists of Lisbon; and the Portuguese banking-agent in London is reported to have refused acceptance to a large amount of bills.

Among sundry reductions we observe that of the Royal Regiment of British Grenadiers. The young Queen, tormented and bullied from all sides, has been very ill, and her marriage is not yet settled. The matrimonial agent sent to Germany has encountered, on the part of the spouse elect, sundry difficulties, which are not likely to be speedily removed by the new Cabinet. De Campos will certainly expect a *cheap* husband for Donna Maria.

THE UNITED STATES AND MEXICO.

It was stated in the Journal of Mexico, of the 3rd of September, that an hostile collision had taken place between a schooner-of-war belonging to the Mexican Republic and an armed vessel of inferior force belonging to the United States; and it was added, that after a hard fight the latter was obliged to run ashore. The battle was said to have been commenced by the States' vessel, and was thus pretty generally considered as a provocation to war on the part of that power. We will endeavour to explain the real state of the case.

Some six months ago another insurrection broke out in Mexico, and the revolutionary party in the province of Texas, who were stimulated by a number of North Americans settled among them, demanded the assistance of the United States against Santa Anna, the President of the Mexican Republic. General Jackson, very properly, refused to enter into the views of the insurgents; but certain speculators and adventurers of New Orleans, who had a longing for the fertile plains of Texas, which lie conveniently near to their own city, thought they would undertake the business on their own account, and annex

a slice of Mexico to New Orleans. They accordingly inlisted men for what they called the cause of liberty, and smuggled in arms and ammunition for the insurgents of Texas; whose commander in chief, a certain Colonel Austin, a Kentucky man, put forth a manifesto, calling on all the people to arm against the new constitution and the Central Government of Santa Anna, and to throw themselves for protection on the United States. Affairs were in this condition when the Mexican man-of-war schooner fell in with the armed American craft, which did not belong to government but to private speculators in New Orleans, or some other of the United States' towns, and was actually engaged in smuggling on the Mexican coast when the collision took place.

A leading New York paper says, that the insurrection in Texas has been wholly brought about by citizens or natives of the United States settled there; and that their numbers, made up of a large population of Yankees from the Eastern States, backwoodsmen from Kentucky, Tennessee, and Mississippi, are so considerable, that they will be emboldened to resist and wage war with the Mexican government, with their own rifles. President Jackson, however, has not only disclaimed any part or connivance in the affair, but has recommended energetic measures for the purpose of preventing natives of the United States from enlisting in the service of the insurgents in Texas, who are declared to have inter-national law, justice, and reason against them.

If therefore hostilities take place, it will not be a war between Mexico and the States, but a very novel sort of war between Mexico and a set of Americans settled on her territory. But we must mention that these turbulent settlers have many friends at home, and that meetings have been held in several cities of the Union to encourage and support them. It is reported by those who wish it may be true, that in addition to Texas, four other Mexican provinces have risen against the Central Government. General Santa Anna, the president, was preparing to put down these movements with a division of 2000 infantry and 300 horse. The Archbishop of Mexico and the Bishop of Puebla had undertaken to contribute a large sum of money towards the expenses of the war.

After some opposition the new constitution was adopted by Congress and proclaimed. What this new constitution may be we confess we know not. The enlightened and profound statesmen in this part of the world make too many sudden changes for us to be able to keep up with them.

Venezuela and Peru are again the seats of civil warfare. It is rather a sad reflexion that now that these emancipated colonies of Old Spain are on the point of obtaining the recognition of their independence from the mother country, there is not one of them in possession of the semblance of a rational and fixed government.

CHRONICLE OF OCCURRENCES.

Nov. 27. In a fire which occurred at Hatfield House, the residence of the Marquess of Salisbury, the entire west wing of the mansion was destroyed, and the Dowager Marchioness was burned to death. The fire originated accidentally in the rooms of the Dowager Marchioness, early in the evening, and during the temporary absence of her attendant. It is conjectured that the Marchioness, while reading or writing, set fire to her dress, which communicated to the apartment. The body was completely consumed, the coroner's inquest being held on remains dug out of the ruins, which could only be assumed to be those of the Marchioness. She was upwards of eighty-four years of age.

— James Hogg, 'The Ettrick Shepherd,' died at his farm of Altrive, aged 63.

Dec. 1. On this evening a destructive fire occurred on the premises of an upholsterer in Tottenham Court Road, London, by which four individuals (three of them females) lost their lives.

2. A special meeting of the proprietors of the London University was held (Lord Brougham in the chair) to consider the proposition of Government respecting the grant of a charter. The plan proposed is, to incorporate the *University* as a *College*, to grant similar charters of incorporations to such other educational bodies as may hereafter be established in the metropolis, and to establish, by charter, a Board of men eminent in literature and science, to perform the functions of examiners, and who will be empowered to grant degrees (except degrees in divinity) to candidates educated at such chartered colleges; the Board to be termed 'The University of London.' After a debate of some length, resolutions were unanimously passed approving of the Government proposition.

3. A meeting was held at the Freemasons' Tavern for the purpose of raising funds for the support of such clergymen of the Established Church in Ireland as are distressed by the non-payment of their tithes. The Archbishop of Canterbury was in the chair, and the meeting was addressed by the Chairman, the Bishop of London, Lord Radstock, Sir R. Inglis, and others. The King sent a donation of 500*l.*; the Queen, 100*l*; and nearly 12,000*l.* were stated by the Bishop of London to have been subscribed up to the close of the meeting.

8. The Court of Aldermen of London having refused to admit Sheriff Salomons of their number, as Alderman of Aldgate, in consequence of his declining to subscribe the usual declaration, (which contains the words, "on the true faith of a Christian,") and, acting on the advice of the law advisers of the corporation and of the crown, having declared the election to be void, a new election took place this day, when J. Humphreys, Esq., M.P., was elected without opposition. Mr. Salomons protested against the proceedings, and intimated his intention of carrying the case into a court of law.

— In this day's Gazette a form of a declaration was published, to be used as a substitute for such oaths, affidavits, &c., as have been hitherto required in the transaction of the business of the public departments. [See the Abstract of the Act, 'Companion,' No. 36, p. 538.]

8. A public dinner was given at Edinburgh to Prince Czartoryski and Prince Zamoyski, and other Polish exiles, either resident in, or visiting that city. The Earl of Breadalbane was in the chair, and the meeting was attended by Lord Dudley Stuart, Lord Belhaven, the Earl of Buchan, the Lord Provost of Edinburgh, and a number of public functionaries and Members of Parliament. Warm sympathy was expressed in the various speeches for the sufferings which have been endured by the Poles, arising from their recent unfortunate effort to render Poland independent.

14. The Anniversary of the Smithfield Cattle Club was held at the Freemasons' Tavern, Earl Spencer in the chair.

15. A meeting was held at the same tavern this day for the purpose of forming a Central Agricultural Association. Deputies from various agricultural associations throughout England attended the meeting. Ormsby Gore, Esq., M.P., was in the chair, and the list of members of the association exhibits a considerable number of names of noblemen and gentlemen, many of them Members of Parliament. The object of the society is to endeavour to devise, and submit to Parliament, some plan for the relief of the agricultural interest.

— Mr. Barnett, a musical composer and performer, who had been indicted at the Middlesex Sessions for an assault upon his wife, and had been found guilty, was brought up for judgment. The circumstances attending this proceeding are a little remarkable. The assault does not appear to have been of an aggravated description—if indeed any assault had been committed—and a general impression prevailed amongst Mr. Barnett's friends that he would be discharged on payment of a nominal fine. He was, however, sentenced to pay a fine of 10*l*, to be imprisoned for three months, and to find securities to keep the peace for twelve months, and to be further imprisoned until the fine was paid and the securities entered into. His friends immediately interested themselves; the court was broken up, but Sir William Curtis, the chairman, was pursued into the city, where he had gone on business, and he promised to return at five o'clock in the afternoon to re-open the court. Accordingly, at that hour he appeared, and there being two other magistrates present, the court was opened in the usual manner. Mrs. Barnett was then brought forward to plead for the mitigation of the sentence pronounced upon her husband, when the chairman, without any allusion to the sentence pronounced in the morning, ordered Mr. Barnett to pay a fine of 10*l* to the King, which was immediately done, and he was discharged.

17. Parliament was prorogued this day, till the 4th of February, 1836. The Lords Commissioners present were Lord Denman, Viscount Melbourne, and Lord Glenelg.

— A meeting was held in the Mariners' Church, Wellclose Square, London, to take into consideration the best means of providing for the establishment of an hospital for aged, decayed, and disabled masters, mates, and seamen in the British merchant service. G. F. Young, Esq., M.P., was in the chair. It was stated that the shipowners intended to purchase ground and build the hospital at an expense of 150,000*l.*, and that it was afterwards to

be supported by contributions of 6d. a month from the pay of the seamen, for which latter purpose an Act of Parliament would be applied for. The meeting approved of the project.

Considerable interest has been excited during the month respecting eleven whaling ships reported to be enclosed in the ice in Davis' Straits. Various plans have been suggested by which relief might be afforded to the poor unfortunates, and Captain James Ross, nephew of Sir John Ross, has volunteered his services to head an expedition, to be sent out either by the merchants or by Government, or conjointly, for that purpose. One of the missing ships has since arrived, the captain of which reports that he was enabled to work out of the ice by the assistance of a strong gale, and that some of the other vessels might be enabled to escape in a similar way; but fears are entertained that the majority of the vessels will be ice-bound until the middle of next summer.

Intelligence from Tobago states, that a dispute had arisen between the Lieutenant-Governor and the House of Assembly. The Lieutenant-Governor insisted on his right to nominate to the office of Clerk to the House of Assembly, which being resisted by the House, two Clerks were appointed—one by each party—and a squabble ensued accordingly. In the midst of the scene the Lieutenant-Governor prorogued the legislature, and the question has been referred by him to the authorities at home.

The 'Hobart Town Courier' of July 3rd, gives the particulars of the melancholy wreck of a convict ship, the Neva, from Cork, with female convicts, having on board 150 female prisoners with 33 children, 9 free women with 22 children, and a crew of 26 persons. It struck on a reef at some distance from King's Island, and shortly after went to pieces. Out of the whole number on board only 22 saved themselves by clinging to fragments, and of these only 15 were able to reach King's Island, 7 of the 22 having died from fatigue. They were providentially discovered on the island, and brought in a small vessel to Launceston, Van Diemen's Land. This wreck occurring shortly after the wreck of another convict ship, the George the Third, by which a great number of lives were lost, considerable excitement was produced in the public mind, and a rigid scrutiny was in consequence ordered by Government into the condition and seaworthiness of the ships hired for the conveyance of convicts. The report of the Comptroller of the Transport Service has been published, in which it is stated that all the vessels before they are engaged for the service undergo a rigorous examination; the Neva underwent this scrutiny, and that the melancholy accident could not be attributed to the defective state of the ship, as she was perfectly seaworthy.

NOTICE.

THE next Number of the COMPANION TO THE NEWSPAPER, which commences another volume, will present the work in a new, and, it is believed, an improved form.

It is proper to state, in the first place, that although the work, for a publication at once confining itself to the single subject of politics, and not having the advantage of most other political publications, of being a party organ, enjoys now what may be called a large circulation, still the extent of the sale is not so great as fully to make up for the lowness of the price. This will not surprise the reader when it is stated that (as any person may easily ascertain for himself) the quantity of matter in each Number of the COMPANION TO THE NEWSPAPER, as at present printed, rather exceeds that contained in five sheets and a-half of any of the quarterly reviews; and these again are themselves cheap publications, as compared with the generality of books, and can only be supported by a comparatively large sale, which all of them aim at securing by taking in the whole field of literature in addition to that of politics, and also by availing themselves in their political disquisitions (very fairly for their particular purpose, which, however, is not ours) of all the fervour and excitement of party controversy. Yet, looking to the quantity of letter-press which they contain, most of them are more than six times as dear as the COMPANION. In truth, the price of the latter is lower than that at which any publication can be profitably carried on, excepting only such publications as the PENNY MAGAZINE, which, from the nature of their contents, may count upon a sale very greatly exceeding what a work like the COMPANION can ever expect to attain; and the Newspapers, scarcely any one of which, as is well known, could stand when the duty on stamps and all of which that are successful in a commercial sense, derive their profits from their advertisements.

Under these circumstances, it might not have been considered unreasonable to have raised the price of the COMPANION without offering any increased advantages to the purchaser. A middle course has been preferred. While it has been determined that in future the price of each Number of the COMPANION shall be SIXPENCE, instead of Fourpence, as at present, the Number will be enlarged by eight additional pages, or sixteen columns of letter-press, making the number of pages in each thirty-two, instead of twenty-four as at present. It will consist of two sheets, instead of, as now, of one and a-half.

With the additional space which will thus be obtained, it is proposed to comply to a limited extent with a recommendation which has been urged from various quarters, and to devote one or two pages of each Number to the reception of ADVERTISEMENTS connected with Literature and the Arts. Both from the extent of its sale, and from its circulation being principally among the more opulent classes, the publication undoubtedly presents very great advantages as a vehicle for the profitable diffusion of such advertisements.

Arrangements have also been made for effecting various improvements in the contents and conduct of the work; but these, of course, can only be here announced in very general terms, and must be chiefly left to be shown by our future Numbers themselves. We may state, however, that the publication will now present more regular and complete extracts and analyses than it has hitherto done of everything that is most material in the parliamentary and other official papers, of which it will serve at once as an index and a popular expositor. It will also be arranged in all its parts on an improved principle, which will fit it better in every respect both for reference and for perusal.

* * In answer to a Subscriber who wishes for an account of the changes that have been lately made in the constitution of Denmark, with a sketch of the past history and present financial condition of that country, we have to state that the subject will, if possible, be taken up in our next Number.

We regret that our limited space will not enable us to comply with the suggestion of another correspondent, to reprint the whole of the Treasury Minute of the 3rd of February last, on the subject of the pensions to be granted in consequence of the abolition of the late Exchequer Office.

Notices of the price of the Three per Cent. Consols, for one day in every week of the past month, will be given regularly in the future Numbers of the Companion.

THE FUNDS.

THE present and each future number of the "Companion" will contain a statement of the prices of the three per cent. consols, for one day in each week of the month preceding its publication; and we shall take this opportunity of giving a short account of what are commonly called the Public Funds, by way of introduction to these notices.

The term, Funds, is not a happy one for the thing which it is in this case employed to designate. What should we think of an individual in common life calling his debts his funds? This way of talking, has produced a strange delusion in some people's imaginations. There are persons who evidently cannot get rid of the feeling that what are called the public funds are somehow or other a species of public wealth. Perhaps, after a little reflection, such a person will admit that the wealth can hardly be wealth belonging to the state, which really seems to be the party that owes the money; for no man has imagination enough to continue long to believe seriously that either individual or community can be the richer for being very much in debt. Still, the notion that the funds are wealth has not yet been driven altogether out of his head. If they are not wealth to the state, he will tell you they are wealth to the creditors of the state—to the fundholders, as they are called—and these being nearly all part and parcel of the community, is not the community really richer because of this their wealth?

This is much the same as the reasoning of the Irishman whom the thought suddenly struck of reducing the labour of two persons performing a journey together on foot to half the usual amount, by mounting the one upon the other's back. "To be sure it won't relieve both of us at the same time," said he to his friend, "but one at least may give his legs a holiday, if the other must keep tramping; and we can take the ride by turns." The misfortune is that, in these cases, the holiday to the legs of the one partner in the project is anything but a holiday to the back of the other. Upon the whole, therefore, at the end of the experiment nothing is gained. As for the wealth of the fundholders, it consists entirely in a right which belongs to them of sharing, to a certain extent, in the annual proceeds of the wealth and labour of the rest of the community. It is simply the case of any other debtor and his creditor. The right of the latter (so long as his interest is duly paid, and his principal is considered to be safe) is, no doubt, so much wealth to him; but it is precisely an equal subtraction of wealth from the former. The two together are not richer on account of the peculiar relation in which they stand to each other. There is not more wealth between them, because there is a debt between them. So the nation, as a whole, is not richer for owing to a portion of its members several hundreds of millions of pounds sterling, notwithstanding that the said members are, no doubt, the richer for having this claim upon the nation. To the exact extent that they are richer, the rest of the community are poorer. Their incomes are simply an incumbrance or burthen upon the incomes of the rest of the community, as is shown in a way calculated to convince the most sceptical, by the fact that a sum of not much less than thirty millions of pounds sterling is every year exacted from the nation for no other purpose except to pay the interest upon this its just debt.

Well, then, our objector will perhaps still say, the money, at any rate, is neither thrown away, nor does it pass out of our own hands. At most there is merely a transference of a portion of the national income from one part of the community to another. Not a farthing is lost: if some are made poorer, others are made just as much richer than they otherwise would be, by what takes place. Where, then, lies the evil of the national debt when the whole case is taken into view?

The whole case is not taken into view in this reasoning. The evil of the national debt does not lie in its having produced a state of things in which one portion of the community is largely indebted to another, and is bound every year to pay to that other a share of its earnings or its income. For anything that appears, this may be in itself a perfectly unobjectionable or a very expedient state of things. It is what must exist to a large extent in every country abounding in capital; and among ourselves, out of the range of the national debt altogether, it is the express purpose and meaning of many of our commercial arrangements to bring about and to extend such a state of things; nor could many of our most important commercial speculations be carried on without it. Whenever any man in business has the use of any portion of capital which does not belong to himself, and for which he pays interest, he is contributing to uphold this state of things, and availing himself of its advantages. And it is, no doubt, generally speaking, in the highest degree beneficial for all parties that he should do so. Much capital would otherwise remain altogether unemployed and useless, both to its possessors and to the community; and not only much capital, but much also of the best ability, ingenuity, and capacity for active and efficient industry, that exists in the nation. All commercial associations, such as banking companies, insurance companies, canal and railroad companies, and others that either trade or carry on any particular undertaking with money subscribed or deposited in their hands by the public, afford instances of the operation of the same system. In all these cases the possessors of capital lend it to others, who in turn

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

pay them interest for the use of it; and the arrangement is manifestly both a convenient one for the two parties more immediately concerned, and also of great public advantage. How large an amount altogether may thus be paid in this country every year in the forms of interest upon loans, dividends upon shares, profits upon investments, annuities, and other returns for capital lent or subscribed, or, in other words, what portion of the annual earnings of those members of the community actively engaged in business is regularly transferred under the effect of such arrangements to those not so engaged, there are no means of ascertaining; but undoubtedly it must be very great; perhaps not less than the whole amount that is similarly transferred on account of the national debt.

In the mere state of things, therefore, we repeat, which occasions such a transference of income from one part of the community to another, there is not necessarily any evil. On the contrary, it may be the most advantageous and healthy state of things that can exist. The evil of the national debt lies in another consideration altogether. It lies in that peculiarity which, as already observed, is the essence of the funding system, and distinguishes it from all ordinary borrowing—*that the money borrowed has been all spent, and is gone.* A company associated for carrying on some commercial speculation pays dividends to its shareholders; but the capital which they have subscribed and contributed is actually in existence to enable it to do so; its productive powers are in constant operation for the supply of the demands the company has to meet. Were it otherwise the concern could not go on. But, of the immense amount of money borrowed by the nation, and for which it has to pay interest to the lenders, it retains not one farthing. It is paying all this interest out of other capital altogether—out of capital which it would have had as well if there had been no national debt, and which, in that case, it would have had free and unincumbered. On the other hand, if the national debt had never been created, the creditors of the state would have also had all the capital which they have lent to Government in their own hands, and it would of course have been productive to them invested in some other way.

The case would be a very different one if the money borrowed by the nation had really been turned into a fund, as the language commonly used would imply, contrary to the fact, that it has been. Then, no doubt, the interest might have been paid without the nation being thereby subjected to any real burthen. But fund there is none whatever. The money has always been spent as fast as it has been received, and frequently even before it has been actually collected. Whatever other useful or necessary ends it may have accomplished, it has no more gone to form anything like a fund, in the proper sense of that term, than if it had been cast into the sea, or dissipated, by some chemical process, in smoke.

There are, certainly, other considerations to be looked to besides those to which we have been adverting, before we are in a condition for finally pronouncing upon the whole question of the operation and effects, direct and indirect, in so far as regards the national wealth, or the existence of the national debt. There are, for instance, to be taken into account the amount and value of the employment given and the stimulus applied to the national industry, even by an expenditure on the part of the government which was in no degree regulated by any views of commercial profit. There is also to be determined the very difficult question of the whole effects upon prices, and upon the operations of trade and commerce generally, produced by the vast amount of government securities constantly circulating in the money market, and performing, at least to a certain extent, the functions of a common medium of exchange. These, however, are inquiries we have nothing to do with in the prosecution of our present design, which is merely to explain what the funds really are, and to clear away certain misconceptions or confused notions respecting their nature which the name they are usually called by has a tendency to generate, and which are perhaps more widely prevalent than many persons would suppose.

The national debt of this country dates from the Revolution of 1688, although what we now understand by the funding system did not take its commencement till a considerable time after that event. All our old kings had been in the habit of occasionally borrowing money at moments of exigency, but never with any view of creating a permanent national debt. They borrowed, as private individuals still do, with the purpose of repaying the money within a limited time, or as soon as they should be able to do so, and under an engagement to that effect. The loan indeed was commonly sought and obtained in express anticipation of certain revenues, which, as soon as they should have become due, and been collected, were to be applied to its discharge. King William likewise at first proceeded in the same manner. Sums of money were, from time to time, borrowed by the crown in anticipation of the produce of the taxes which had been voted by parliament; and several partial repayments of the sums thus borrowed were made. The transaction took place, as heretofore, under the sole authority of the crown. But even the first loans that were obtained for the national service under the sanction of parliament were of the same description. In the speech with which he opened his second parliament, in March 1690, King William said, "I have so great a confidence in you, that, if no quicker or more convenient way can be found for the raising of ready money (without which the service [of the war in Ireland] cannot be performed), I shall be very well content for the present to have it made such a *fund* of credit as may be useful to yourselves, as well as to me, in this conjuncture; not having the apprehension but that you will provide for the taking off all such *anticipations* as it shall happen to fall under." In conformity with this recommendation, the parliament very soon after passed two acts, by which they provided for the raising of two sums of £250,000 and £500,000 by loan; but it was also enacted that the money should be repaid within three years, and certain branches of revenue were expressly set apart for that purpose. It is worthy of remark that, at this time, the term funds was applied in its proper sense, not to the money borrowed, but to the revenues thus appropriated or mortgaged for its repayment.

"In these acts," says a Jacobite writer (Salmon, in his 'Chronological Historian'), "there were clauses empowering the king to anticipate and borrow money on his revenues, as he had desired in his speech, which was the first beginning of the funds, so destructive to the nation. The advice of his pretended friends was, *Borrow what you can; the more you borrow, the more friends you make; interest is a stronger tie than principle.* Accordingly, the ministry gave whatever interest and premiums were demanded for the loan of money; and naval stores and provisions were taken up at 30, 40, and sometimes 50 per cent. The monied men, and those that could bear stock, doubled and trebled their fortunes in a very short time."

Although the acts in question, however, no doubt, led to the adoption of the funding system, they cannot correctly be said to have begun that system. They did not provide for the funding of any debt, in the modern sense of that expression. Nor can even the subsequent act passed in 1693, for the establishment of the Bank

of England, by which it was enacted that the Bank should make an advance to Government of £1,200,000, at an interest of 8 per cent., without the power of ever demanding the money back, unless the charter should be withdrawn, be properly regarded as the commencement of the present mode of borrowing. The money thus obtained by the state was the price it received for the grant of certain privileges; and although the state retained the power of revoking the privileges so granted after a certain time, on repaying the money, it could hardly on that account be considered as constituting a debt. The same remark is applicable to the sum of two millions obtained, at the same rate of interest, from the East India Company, on the grant of a charter to it in 1698.

The war with France, which broke out in 1689, and did not terminate till 1697, made it necessary, in the course of this reign, to raise considerable supplies beyond the amount which it was found possible to raise by taxes; and various expedients were resorted to for this purpose. Sometimes recourse was had to lotteries; sometimes annuities for lives, or for terms of years, were granted; sometimes both plans were combined. At last, also, money began to be borrowed simply on the credit of certain taxes which were imposed or set apart for the payment of the interest and the eventual liquidation of the debt, and which it was enacted should continue until it should be wholly discharged. Even in this case, therefore, the principle of providing for the repayment of the money borrowed may be said to have been kept in view.

The burthen, however, which was thus entailed upon the income of the Government, soon became very considerable. The taxes which had been set apart for the payment of the interest on loans frequently failed in proving sufficient for that purpose; hence the necessity of new loans to meet the deficiency. Then the rate of interest at which—owing, in part, no doubt, to the yet unconfirmed stability of the new order of things—the Government was able to borrow money during the whole of this reign, was extremely high, never having been so low as 5 per cent. till the year 1699, till which date it was 6, 7, and even 8 per cent. The rate of annuities of course was exorbitant in a corresponding degree. But in addition to all this, owing to the high premiums with which it was necessary to tempt lenders, the money actually received by the Government was very much under the nominal amount of the loans. The total of the sums borrowed during this reign was £44,100,795; but of this amount all that found its way into the Exchequer was only £34,034,518. At the close of the reign (in 1702) the actual debt of the nation was £16,391,702, bearing an interest of £1,310,942; but of this by much the largest portion was in the course of repayment by terminable annuities, and its extinction was therefore provided for within a certain time.

The new war with France and Spain, which broke out immediately after the accession of Queen Anne, and lasted till 1713,—within about a year of the close of her reign,—again led to the raising of money by loans more constantly and on a larger scale than ever. During the whole of this reign the national finances were in a state of the greatest confusion. For some time money was principally obtained by annuities for a long term of years, and for one, two, or three lives, which were granted by the Government on the most ruinously disadvantageous terms. Lotteries were also occasionally had recourse to. At length, in the year 1711, all the proprietors of certain Government debts, amounting to £9,471,325, were, by Act of Parliament, incorporated for ever into a company for trading to the South Seas, and it was provided that their debts, which, from the irregularity of the Government payments, had fallen to a discount of 40 per cent. in the money market, should in future bear an annual interest of 6 per cent. Even in this arrangement, however, while various taxes were expressly set apart for the payment of the dividends, and were declared perpetual for that purpose, a power of redeeming the company's capital after the year 1716 was reserved by the Government; and it was provided that, if any surplus should accrue from the produce of the appropriated taxes, it should go to the liquidation of the debt. Still, as the stockholders retained no right of demanding their money back from the Government in any circumstances, and as the amount is too large to be considered, like the smaller sums subscribed by the East India Company and the Bank, as a mere payment for the privileges granted to the company, this transaction may be regarded as the first adoption of the funding system, or of that system by which the Government borrows money, not on any engagement to repay the sum borrowed, but by only engaging to pay a certain interest upon the debt until it shall be discharged; in other words, by granting the lender an interminable annuity.

Exchequer bills were also issued to a large extent during this reign. These are bills issued by the Treasury and bearing interest, which are always recalled, and their place, if necessary, supplied by a new issue, after short periods. They were first resorted to in the reign of King William during the scarcity of a circulating medium occasioned by the calling-in of all the silver money, preparatory to the great recoinage in 1696. "It was on this occasion," says Anderson, in his History of Commerce, "that Mr. Montague first set on foot a new circulating paper credit, by issuing bills from the Exchequer; at the same time contracting (as has ever since been done) for their being circulated for ready money on demand. And as many of those first Exchequer bills were for sums as low as £5 and £10, they were of very good use at this time, when there was so great a scarcity of silver money during this recoinage, as they were taken at the Exchequer for all payments of the revenue, and as, when re-issued, they were then allowed £7 12s. per cent. interest, they soon rose from a small discount to be better than par." The portion of the debt for which Exchequer bills are issued is called the floating or unfunded debt. This portion of the debt has in modern times occasionally risen to a great height; in 1815, when it was at the highest, it amounted to between £67,000,000 and £68,000,000. It has since, however, been greatly reduced, and is now usually kept at about £27,000,000 or £28,000,000. Exchequer bills are now issued only for sums varying between £100 and £1,000, and the interest they bear at present is only 1½*d.* per cent. per day, or 2½ per cent. per annum. Yet, as they are always received at the Treasury at par, in discharge of duties and taxes, and are consequently exempt from any risk of depreciation, they form an investment which, especially for capital that may require to be suddenly made available, is found to be very convenient.

At the close of the reign of Queen Anne (in 1714) the national debt had risen to the sum of £52,145,363, bearing an annual interest of £3,351,358. Of this sum the unfunded debts amounted to about £5,000,000, and the debts contracted on temporary annuities to about £26,000,000. The interest upon the remaining £21,000,000, constituting what might be called the permanent debt, as not being in a course of effecting its own extinction, was £1,288,600.

Throughout a great part of the reign of George I. (1714–1727) the country was also involved in continental wars. Additional loans to a considerable amount were accordingly resorted to. In 1717, also, £5,000,000

of Exchequer bills were funded, or made part of the permanent debt. As many temporary annuities, however, fell in, the total amount of the debt was not increased during this reign. Some relief was also obtained by the rate of interest having fallen, and the new loans being consequently effected by the Government on more advantageous terms. At the end of the reign the total amount of the debt was £52,092,238, bearing an interest of £2,217,551. Of this sum the funded debt exceeded £46,000,000, on which the interest was above £1,900,000. The temporary annuities now amounted only to between £2,000,000 and £3,000,000, bearing an interest of about £180,000.

For the present we have only space to subjoin a short statement of what the progress of the debt has been in each reign from this date. The following summary is taken from Mr. M'Culloch's 'Dictionary of Commerce,' second edition, p. 585:—

	Principal £	Interest. £
Debt at the accession of George II. in 1727	52,002,238	2,217,551
Debt contracted from the accession of George II. till the Peace of Paris in 1763, three years after the accession of George III.	86,773,192	2,634,500
Debt in 1763	138,865,430	4,852,051
Paid during peace	10,281,795	380,480
Debt at the commencement of the American war in 1775	128,583,635	4,471,571
Debt contracted during the American war	121,267,993	4,980,201
Debt at the conclusion of the American war in 1784	249,851,628	9,451,772
Paid during peace from 1784 to 1793	10,501,380	243,277
Debt at the commencement of the French war in 1793	239,350,148	9,208,495
Debt contracted during the French war	608,932,329	24,645,971
Total funded and unfunded debt, 5th of January, 1817, when the English and Irish Exchequers were consolidated	848,282,477	33,854,466

Since 1817 various loans have been contracted, amounting in the whole to above £30,000,000; but, on the other hand, a considerably larger amount of the debt has been paid off, and the interest on a great part of the remainder has also been reduced. On the 5th of January, 1834, the total amount of the funded debt was £751,658,883, on which the annual charge was £27,782,116; and that of the unfunded debt was £27,906,900, on which the annual charge was £779,769. Altogether, therefore, the amount of the debt then was £779,565,783, and of the interest £28,561,885.

The subject will be resumed in our next Number.

CHANGES OF ADMINISTRATION AND HISTORY OF PARTIES.

(Continued from No. 36.)

The next session opened on the 26th of October (1775). His Majesty began his Speech to the two Houses by referring to the affairs of America, the situation of which country, he said, had determined him to call them so early together. The whole of the Speech, indeed, and it considerably exceeded the usual length, was devoted to this one topic, which had been merely alluded to in that delivered about a year before, and which till then had not even been deemed worthy of an allusion.

The debate which took place on the Address in the Lords was chiefly remarkable for the speech delivered by the Duke of Grafton, who was at this time, it will be remembered, a Member of the Cabinet, holding the high office of Lord Privy Seal. It amounted to a complete separation of himself from his colleagues. His Grace "condemned the measures recommended in the Speech, and the conduct of Administration during the last twelve months. The amendment (which had been proposed by the Marquis of Rockingham, and went to pledge the House to review the whole of the late proceedings relating to American affairs) did not entirely meet his ideas; he therefore could not vote for it; but he should certainly give the Address itself a negative. . . . . It was true he had supported Administration, but it was upon a general idea that means of conciliation might be devised and adopted: he expressed his ignorance of the true state of America, and asserted he had been misled and deceived; for that reason chiefly he could not think of concurring any longer in measures of which he never really approved, but to which he lent his countenance, in expectation that the stronger Government was, the more likely matters were to be amicably adjusted." He then stated, that he had a proposition of his own to offer. "Perhaps," continued his Grace, "it will not gain your approbation entirely this night; but, believe me, you will like it better to-morrow, and still better in three days hence. It will daily grow in your esteem. In a fortnight, I promise you, it will have more friends, until at length it will gain universal assent and approbation. The proposition is only this; to bring in a Bill for repealing every Act, I think there are thirteen, which has been passed in this country since the year 1763, relative to America." He concluded as follows:—"If I were not truly touched by the present very critical situation of this country, I had a sufficient apology for absenting myself, on account of a very indifferent state of health, if I were not convinced that silence in my situation would be construed into acquiescence, if not direct approbation. But, I trust your Lordships will credit me, and I am convinced that my brethren in office are satisfied, that nothing but the most full and perfect conviction of my being in the right could prevail on me, under the circumstances before alluded to, to attend thus early in the session to give my vote; nor shall my indisposition prevent me from answering what I look upon as the strongest call of duty; for, should it continue to increase, I pledge myself to your Lordships and my country, that, if necessity should require it, and my health not otherwise permit it, I mean to come down to this House in a litter, in order to express my full and hearty disapprobation of the measures now pursuing, and, as I understand from the Noble Lords in office, meant to be pursued. I do protest to your Lordships, that if my brother, or my dearest friend, were to be affected by the vote I mean to give this evening, I could not possibly resist the faithful discharge of my conscience and my duty. Were I to lose my fortune, and every other thing I esteem; were I to be reduced to beggary itself, the strong conviction and compulsion, at once operating on my mind and conscience, would not permit me to take any other part on the present occasion than that I now mean to adopt." Lord Chatham was absent from this debate, being confined to his bed by a severe fit of illness; indeed, he does not appear to have been able to take his place during the session. The Ministerial Address was carried by a majority of 66 to 33, Lord Rockingham's amendment having been previously negatived by a majority of 69 to 29. Nineteen peers signed a protest against this rejection.

In the Commons the question gave rise to long and warm debates. An amendment in the same words with Lord Rockingham's having been proposed by Lord John Cavendish, the House did not come to a division upon it till four o'clock in the morning, when the numbers were found to be 108 for, and 278 against it.

The struggle was renewed next day, when the Address was reported, on a motion being made for its recommittal; but, whatever strength they may have shown in the debate, the opposition were again beaten by the usual overwhelming majority on the division. The numbers on a motion of equivalent import, which was submitted after that for recommitting the Address had been disposed of, were 176 for Ministers, and 72 against them. The point principally dwelt upon in this last discussion was the approbation expressed in the Address of the conduct of his Majesty in sending part of his electoral troops to garrison Gibraltar and Minorca, an act which was contended to be expressly repugnant to the Bill of Rights. Lord North took upon himself the whole responsibility of the measure, and declared himself to be fully persuaded of its legality, wisdom, and expediency, but he added that, if it was dreaded as a precedent, he should have no objection to a Bill of Indemnity. The subject was afterwards repeatedly brought forward by the opposition in both Houses; but always with the same result. Several other debates also occurred upon American affairs during the first three weeks of the session, which it is not necessary for us particularly to notice. Strong majorities continued to support the Ministry on every vote.

The line taken by the Duke of Grafton, however, rendered a partial reconstruction of the Cabinet indispensable. On the 10th of November, accordingly, his Grace was succeeded as Lord Privy Seal by the Earl of Dartmouth, who is supposed not to have entirely agreed with his colleagues in their policy on the American question, and whose removal, therefore, from the Secretaryship of the Colonies had come to be desired both by himself and them. His successor was Lord George Sackville Germaine, afterwards created Viscount Sackville, a younger son of the Duke of Dorset. Lord George Germaine is now best remembered for the censure passed upon him by a court-martial for his conduct at the battle of Minden, in 1759. "The principal attachment of that noble Lord," says the 'Annual Register,' "had been to Mr. Grenville. After Mr. Grenville's death, indeed, he continued for some time firm on his former ground, and did not join in that defection from the minority which immediately followed that event. But he began at length to slacken in opposition. He fell in with Administration in the proceedings against the East India Company in 1773, and took a full and decided part in all the coercive measures which had been pursued against the Americans during the present troubles. His connexions with Mr Grenville probably made him support with more zeal and steadiness the highest claims of parliamentary authority; and, as he was generally esteemed a man of business and an able debater, he was sought for at a time when the extraordinary powers in the same line upon the other side seemed, notwithstanding the superiority of numbers, not a little to distress Adminstration. It will not be conceived that this appointment strengthened the hope, or increased the satisfaction, of those who held the opinion that conciliatory measures could only bring the present troubles to a speedy and happy conclusion." Another change made at the same time was the restoration to the Cabinet of Lord Weymouth, who was made Secretary of State on the retirement of Lord Rochfort from public business. On the 18th of November, also, the office of one of the Chief Justices in Eyre was given to Thomas Lord Lyttelton, and his Lordship was at the same time made a Privy Counsellor, although so recently as the beginning of the present session he had been one of the warmest opponents of the Ministry. This was the second Lord Lyttelton, so remarkable both for his shining talents and the profligacy of his conduct. For Lord Pelham, whom he succeeded in his present place, a compensation was found in the household office of Keeper of the Great Wardrobe, from which Lord Ashburnham was promoted to that of Groom of the Stole. The last mentioned office had been held since the preceding March by Viscount Weymouth.

The sum of the present changes, therefore, in so far as respected the Cabinet, amounted to the substitution of Lord George Germaine and Lord Weymouth for the Duke of Grafton and Lord Rochfort. The resolution of pursuing an uncompromising policy in regard to America was also still further indicated by the transference of Lord Dartmouth from the Secretaryship of the Colonies to the Privy Seal. Before the new arrangements were yet completed, namely, on the 16th, Mr. Burke made another attempt to draw the House of Commons from the course upon which it had entered, in the form of a motion for leave "to bring in a Bill for composing the present troubles, and for quieting the minds of his Majesty's subjects in America." This Bill proposed to enact, that for the future no tax of any kind should be collected from the people of America by the authority of Parliament, or in any other manner than by the voluntary grant of the General Assembly or General Court of each Colony; and also that the said several assemblies should send deputies to a general meeting, with full powers to bind their said several provinces to all acts done by a majority of voices in the said meeting. The debate lasted till four o'clock in the morning, when the previous question was carried by a majority of exactly two to one, the numbers being for Ministers 210, and against them 105. On the 20th, Lord North obtained leave, by a majority of 192 to 64, to bring in a Bill for prohibiting all trade and intercourse whatever with each and all of the American Colonies, "during the continuance," as it was expressed, "of the present rebellion within the said Colonies respectively." In the debate which took place in the Lords on the 15th of December, on the motion for committing this Bill after the second reading, Lord Lyttelton maintained that, except as to certain minor points, the American policy of Ministers had always had his approbation. If he had ever on any occasion refused to assent to their propositions, he had so acted because he was not in possession of the information he had since obtained. "On that ground alone," he said, "I refused to co-operate with Administration. Here the matter rested, till his Majesty's servants thought proper to give me that kind of information I thought necessary to direct me in my future conduct. . . . . Thus convinced of the rectitude and wisdom of Administration, I accepted of the place I now enjoy. . . . . As to the place I have been appointed to, I received it as a mark of his Majesty's most gracious inclination towards me. I have always looked upon it, in point of emolument, to be a matter of very trivial consideration; my fortune is too considerable to regard it in any other light. I did not seek it. I did not act the servile part of a placeman or a pensioner, by meanly stooping to apply and beg for it; and I expect, and think I have a right, not to be included among those that do; for if it was an object of moment, which it is not, I never shall sacrifice my opinion to any personal or private consideration." His Lordship, however, having thus luckily obtained at length a position which suited his principles, was further fortunate enough to retain it till his death, which took place about four years after this time.

The recent acts of Ministers, and of Parliament, had proceeded avowedly on the ground that war had already commenced with America; and although no formal declaration of independence had yet issued from the Colonies, their attitude by this time had become distinctly that of an armed insurrection against the mother

country. The last eight or nine months of the year 1775 had been filled with a series of warlike operations in the province of Massachusetts and other parts of North America. On the 19th of April occurred the affair of Lexington, where the first blood was shed in a regular engagement between the two parties. This was immediately followed by the enrolment of militia in all the provinces, and the seizure, everywhere, of the King's stores. On the 10th of May the Continental Congress reassembled at Philadelphia, pursuant to the resolution passed at the close of its preceding session. This assembly once more, and for the last time, addressed the King in earnest and humble petition, but at the same time proceeded to take the necessary measures for the defence of that cause of liberty which its members had been commissioned to conduct and protect. They issued addresses in justification of their proceedings to the British nation, and others to the people of Canada and of Jamaica, calling upon them to join the great movement as their common cause. They gave orders for the raising and equipping of an army to oppose the King's troops; and licensed privateers to attack British vessels at sea. Meanwhile the forts of Ticonderoga and Crown Point had been surprised by Colonel Allen in the beginning of May. About the end of the same month additional troops arrived from Great Britain, under the command of Generals Howe, Burgoyne, and Clinton. By this time the town of Boston was blockaded by the insurgent militia. The battle of Bunker's Hill occurred on the 16th of June. Soon after, George Washington, destined to become so illustrious a name, was appointed Commander in-Chief of their forces by Congress. In the latter part of the year the invasion of Canada was undertaken by General Montgomery, who, after taking possession of Montreal, proceeded to Quebec, and lost his life in an unsuccessful attack upon that town on the 31st of December.

Such were, briefly, the principal operations of this eventful year on the theatre of action. We now return to that of the battle of parties at home.

After the Christmas recess, as before, nearly the whole attention of Parliament continued to be occupied by the affairs of America. On the 5th of March an interesting debate took place in the Lords, on a motion by the Duke of Richmond for an address to the Crown to suspend hostilities; the taunts, as to changes of opinion and conduct, that were thrown out in the course of which, drew forth explanations from various quarters. Among others, Lord Camden took occasion to state that, although he had been in office at the time when the American duties were first laid on in 1767, he had never approved of that measure. The Duke of Grafton afterwards made a similar statement in still more explicit terms:—"I confess," he said, "I occupied a very high and responsible post in the Administration" (he was First Lord of the Treasury) "when the duties, in 1767, were laid upon tea, paper, painters' colours, and glass. I am, however, extremely well pleased to have an opportunity of explaining what yet has not been effectually cleared up. In that year, when the extraordinary expenses incurred on account of America were laid before the House of Commons, the House rose as one man almost, and insisted that that country should contribute to the burdens brought on by the military establishment there; and a motion was made for bringing in a Bill for that purpose. I strenuously opposed the measure, as big with the consequences it has since unfortunately produced. I spoke to my friends upon the occasion, but they all united in opinion that the tide was too strong to expect to either stem or turn it, so as to prevent whatever might be offered in that shape from passing into a law. Finding that all my efforts would be vain, I was compelled to submit; but was resolved, as far as lay in my power, to prevent the effect; and, while I gave way, to do it in such a manner as would cause least harm. I accordingly proposed the tea-duty as the most palatable; because, though it answered the main purpose of those with whom taxation was a favourite measure, it was doing America an immediate benefit; for I procured the shilling a-pound duty to be taken off, and three-pence to be laid on in lieu thereof; so that, in fact, it was nine-pence a-pound saving to America. However, the attempt was received in America as I expected it would; it immediately caused disturbances and universal dissatisfaction. In 1769, therefore, I moved in the Cabinet for a repeal, and was outvoted (if I remember right) by a majority of one. This, therefore, was the part I took in this fatal business. When the partial repeal was agreed to in Council, I conjured my brethren in office to give up this paltry revenue; but, as I said before, I was overruled." We have quoted this speech at length, as containing some facts that have not been generally noticed, and that have a wider historical interest than they derive from their bearing upon the conduct of the Duke of Grafton. A part of his Grace's statement was afterwards corrected by Lord Weymouth, who reminded him that, on the occasion to which he had referred, of a division in the Cabinet, there was no majority or casting voice,—the numbers were equal. Lord Camden again said,—"For my part, I was not in Council, or did not attend in the Cabinet, at the time this fatal measure was contested; and, as soon as I was apprised of the tendency of it, I expressed my hearty disapprobation." This apology Lord Weymouth characterized as the most extraordinary he had ever heard. "Will the noble Lord," he exclaimed, "pretend to excuse himself as a Cabinet Counsellor on that ground? or, if he could, can he pretend to defend himself in giving his approbation, and putting the question in every successive stage of the Bill to a measure (sitting on that woolsack as president of this august assembly) which he has asserted, in the course of this night's debate, will be the certain destruction of this country?"

On the 14th of the same month another long and interesting debate took place in their Lordships' House, on a proposition submitted by the Duke of Grafton for the adoption of a conciliatory course in regard to America. On this occasion Lord Dartmouth defended his consistency by avowing that he ever had been of opinion that Great Britain could not, with propriety, make any concession to the Colonies until the latter had acknowledged the supreme authority of the former. His Lordship remarked besides, in reference to the charge that he had expressed himself differently from what he now did when he held the office of Secretary for the Colonies, that he did not hold it fair or parliamentary to bind a person to expressions and opinions given in one situation of affairs, when that situation came to be materially altered. He had been willing to suppose, at first, that the disturbances in America were merely local, and, as such, had been anxious to treat them with as much tenderness as possible; but, now that the resistance clearly appeared to be that of the whole country, he felt the necessity of vigorous measures for putting it down. The other ministers expressed themselves in the most resolute and confident terms; and, when the House divided, the numbers were found to be,—for the motion only 31, and 91 against it. "This day," says the Annual Register, "will perhaps hereafter be considered as one of the most important of the English history. It deeply fixed a new colour upon our public affairs. It was decisive on this side of the Atlantic with respect to America. . . . . The tone of the House of Lords was much higher than that of the House of Commons

had ever been, although the language was grown much more firm and determined there, also, than it had been at the beginning of the session."

Mr. Wilkes this session again brought forward the subject of his expulsion by moving, on the 30th of April, that the resolution of the 17th of February, 1769, should be expunged from the journals; but, after a short debate, the question was once more lost on a division, the numbers being 92 for and 186 against it.

The session closed on the 23d of May.

In America, in the mean time, hostile operations proceeded actively on both sides. On the 17th of March the British general, Howe, had been compelled by Washington to evacuate the town of Boston. In the course of the month of May, on the other hand, the American general, Arnold, had found it necessary to make his retreat from Canada; and a strong force which had been sent by Congress to guard their northern frontier, under the command of General Gates, was destroyed by General Carleton. Soon after this, however, an attempt upon the town of Charleston, in South Carolina, by the British general, Clinton, in conjunction with Admiral Sir Peter Parker, was signally defeated by a force stationed for the protection of the place, under the command of Colonel Moultrie. The British Commander-in-Chief, his plan of operations having thus succeeded in the North and failed in the South, now proceeded to bring up all his strength for an attack upon the centre of the Union. On the 10th of June, accordingly, he arrived at Staten Island, near New York, where, being soon after joined by his brother admiral, Sir William Howe, he found himself in command of a force of not less than 30,000 men. Such was the state of affairs when, on the ever-memorable 4th of July, the Congress voted their declaration of independence. The first fortunes of the young republic were eminently discouraging. On the 26th of August the American force, under General Sullivan, was driven from Long Island, after a sanguinary engagement, and possession of the island taken by General Howe. On the 15th of September Washington was compelled to evacuate the town of New York. Immediately after, Fort Washington was attacked and taken by Howe, and 2,700 men, by whom it was garrisoned, made prisoners. Fort Lee was also taken by Lord Cornwallis. These reverses were followed by the retreat of Washington across the province of New Jersey towards the Delaware, followed by his victorious enemy, and the adjournment of their sittings, by the Congress, from Philadelphia to Baltimore.

Parliament reassembled on the 31st of October. At this time the latest intelligence from America that had arrived in England appears to have come down only to Howe's first successful operations in the neighbourhood of New York. "Although," said his Majesty, in his Speech, "from unavoidable delays, the operations at New York could not begin before the month of August, the success in that province has been so important as to give the strongest hopes of the most decisive good consequences; but, notwithstanding this fair prospect, we must, at all events, prepare for another campaign." In the Lords an amendment to the address was moved by Lord Rockingham, and a long debate ensued, which ended, however, in the defeat of the opposition by a majority of 91 to 26. In the Commons an amendment to the ministerial Address, proposed by Lord John Cavendish, was also, after a protracted discussion, negatived on a division by an overwhelming majority, the numbers being only 87 for, and 242 against it. Another motion, made by the same noble lord, and seconded by Mr. Burke, on the 6th of November, (by which time the news had arrived of the capture of the town of New York,) that the House should resolve itself into a committee to consider of the revisal of all Acts of Parliament by which his Majesty's subjects in America think themselves aggrieved, was thrown out by a majority of 109 to 47. "From this time," says the Annual Register, "a great number of the minority, particularly of the Rockingham party, began to relax in their attendance upon Parliament in either House; or, rather, to withdraw themselves wholly and avowedly upon all questions which related to America, and only to attend upon such matters of private bills or business in which they had some particular concern or interest. This conduct was so marked that some of the principal leaders of opposition, after attending the House of Commons in the morning, upon private business, as soon as a public question was introduced, took a formal leave of the Speaker, and immediately withdrew."

HISTORICAL NOTICE ON MALT.

In a subsequent page we have given at considerable length an abstract of the recently published Report of the Commissioners of Excise Inquiry on the subject of the Malt Duty, in which will be found all the necessary information respecting the history of the duty and the present state of the excise regulations affecting the business of maltmaking. We throw together here a few notices relating to the history of malt liquors in this country.

Thomas Warton, in a note to his 'History of English Poetry' (vol. iii. pp. 412—414, edit. of 1824), has contended that the word *ale*, in old English, signifies properly a feast or merry-making, supporting his opinion by referring to the compounds leet-ale, lamb-ale, Whitsun-ale, clerk-ale, church-ale, &c., by which our ancestors designated certain festivals they were in the habit of holding. For instance, "Church-ale," he observes, "was a feast established for the repair of the church, or in honour of the church saint, &c. In 'Dodsworth's Manuscripts' there is an old indenture, made before the Reformation, which not only shows the design of the church-ale, but explains this particular use and application of the word ale. The parishioners of Elveston and Okebrook, in Derbyshire, agree jointly 'to brew four Ales, and every Ale of one quarter of malt, betwixt this and the feast of St John Baptist next coming; and that every inhabitant of the said town of Okebrook shall be at the several Ales. And every husband and his wife shall pay twopence, every stranger one penny; and all the inhabitants of Elveston shall have and receive all the profits and advantages coming of the said Ales, to the use and behoof of the said church of Elveston. And the inhabitants of Elveston shall brew eight Ales betwixt this and the feast of St. John Baptist, at the which Ales the inhabitants of Okebrook shall come and pay as before rehearsed.'" In this way he explains the not yet altogether disused *bridal*, that is, *bride-ale*, meaning a marriage feast, and its more forgotten synonyme, *wedding-ale*.

There can be no question, however, that these festivals were called Ales only by a natural transference of that term from its original meaning, which was, not the feast itself, but the particular kind of liquor drunk at it; that which, in the estimation of the guests, no doubt, principally constituted it a feast. Our Saxon ancestors, who delighted in the thing itself, brought the word Ale with them from their original seats in Scandinavia and the north of Germany, in the languages spoken in which parts it still remains.

The only grain that is now usually malted for the making of ale or beer in this country is barley; but it appears that anciently wheat was used for that purpose. Maitland, in his 'History of London,' under the year 1316, quoting the authority of Thomas of Wal-

singham, says, "Corn being very dear, 'twas judged in a great measure to be occasioned by the great quantities of wheat malted in London; for the remedying of which, and preventing the like for the future, 'twas by parliament enacted that thenceforth no wheat should be made into malt; and an order was published by the mayor and citizens for that purpose." Fleetwood, in his '*Chronicon Preciosum*,' gives the following account, which is very curious in several respects: "In 1314, upon the chancellor's and proctors' (of the university of Oxford) complaints to the king (Edward II.) that the market of Oxford ran unreasonably high, so that poor scholars could hardly live, the king sent down his mandate to regulate this affair. But, since the parliament took the same thing (with respect to the whole nation) into consideration, it will be better to give the rates they thought fit to set upon provisions, especially since there is no difference, or but a little, betwixt these two accounts. Thus, therefore, Mr. Stow sets it down:—A stalled or corn-fed ox, at £1 4*s.*; a grass-fed ox, 16*s.*; a fat stalled cow, 12*s.*; an ordinary cow, 10*s.*; a fat mutton unshorn, 1*s.* 8*d.*; a fat mutton shorn, 1*s.* 2*d.*; a fat hog of two years old, at 3*s.* 4*d.*; a fat goose, in the city, 3*d.*, but everywhere else at 2*d.*; a fat capon, in the city, 2½*d.*, elsewhere at 2*d.*; a fat hen, in the city, 1½*d.*, elsewhere at 1*d.*; two chickens, in the city, 1½*d.*, elsewhere at 1*d.*; four pigeons (in the city but three pigeons) for 1*d.*; 24 eggs (in the city but 20) for 1*d.* But, notwithstanding this Act of Parliament, things could not be purchased at these rates, for people would not bring them to market (and that is a thing that parliaments cannot remedy); and so the king was fain to revoke the former act, and leave people to sell as they could (for a trade will do as it can, and never be forced one way or other): and (as Walsingham tells us) in 1315 and 1316 the price of pease and beans, and of wheat, was, by the quarter, at £1; malt at 13*s.* 4*d.*; salt at £1 15*s.* Nay, by the rains in harvest, the dearth was such that wheat came to £1 10*s.* and £2 the quarter; and good ale was at the gallon (*per lagenam*, from whence the word *flaggon*, which used heretofore to hold four quarts, is derived) 2*d.*, the better sort at 3*d.*, and the best of all at 4*d.*; so that a proclamation was fain to be issued out, that a *lagena* of ale should be sold at 1*d.*, and that no wheat should be malted (*umbrasiatum*), which the Londoners had usually done, to the great consumption of corn, and sold it at (the flaggon) 1½*d.*, and the viler ale at 1*d.*"

Upon the subject of the different kinds of grain used for malting, Dr. Thomas Thomson, in an elaborate article on Brewing, in the Supplement to the Encyclopædia Britannica, gives the following statement: "Every kind of grain, with perhaps hardly an exception, may be employed for the purposes of the brewer. In America it is not uncommon to make beer with the seeds of Indian corn, or *Zea mais*. In order to convert it into malt, it is found necessary to bury it for some time under the ground, and when germination has made sufficient progress it is dug up and kiln-dried. (See *Philosophical Transactions*, xii. 1065.) Mr. Mungo Park informs us that in Africa the negroes make beer from the seeds of the *Holcus spicatus*, and the process employed, as he describes it, seems to differ but little from the one followed in this country. (See Park's *Travels*, p. 63, 8vo. edition.) Dioscorides assures us that in Spain and Britain wheat was employed for the manufacture of beer. And the writer of this article has been informed, by a gentleman in the service of the East India Company, that he has made beer from wheat at Madras. We have ourselves seen oats employed for the same purpose in Great Britain; and in Germany and the north of Europe we believe that it is not uncommon to apply rye to the same purpose. But the material which answers this purpose best, and which is almost solely used for this purpose in Great Britain, and we believe in every part of Europe where beer is manufactured, is barley."

The first act which now remains on the statute-book, establishing an assize of bread and ale, is that passed in 1266, the 51st year of Henry III. In the preamble, however, the king recites that he had seen certain ordinances of his predecessors on the same subject. One of the clauses of this act is as follows: "When a quarter of wheat is sold for three shillings or three shillings and four-pence, a quarter of barley for twenty pence or two shillings, and a quarter of oats for sixteen pence, then brewers in cities ought and may well afford to sell two gallons of beer or ale for a penny, and out of cities three or four gallons for a penny." At this time, it is to be remembered, the shilling was the 25th part of a pound Troy of silver, instead of the 66th, as it now is; that is to say, it was equal in intrinsic value to more than 2*s.* 6*d.* of our present money. It was not as yet a coin, but only a denomination of money, like the pound. The penny of those days, which was of silver, being, as it still is, the twelfth part of the shilling, was equal to rather more than 2½*d.* of our money; and the denomination of money called a pound, being twenty shillings, of course contained as much silver as fifty shillings, or, more nearly, as £2 12*s.* 6*d.*, of the money now in use. As for the market value of our old money, or the quantity of commodities it would exchange for, in comparison of what may be bought with similar denominations or similar weights of money at present, that is quite another question. In truth, for obvious reasons, no general comparison that is worth anything can be instituted between the value of money at one time, and its value at another, in this sense.

The proclamation alluded to by Fleetwood, by which the king revoked the ordinance establishing a certain price at which provisions should be sold, is worth quoting, as a striking illustration of the inevitable issue of all such attempts. It is given in full by Maitland, who continues his narrative as follows: "However, corn continued to advance in price till it got to forty shillings the quarter; but, according to another author, it rose to four pounds; whereby ensued the most dreadful famine and greatest misery that ever befel this nation, if our author's relation be true, that parents ate their own children, or those of others they could come at; as did the malefactors one another in prison. And here followed so terrible a mortality, that the living scarce sufficed to bury the dead. The ordinance made in the preceding year for regulating the prices of provisions being found of a very pernicious consequence, it preventing people from bringing necessaries to the city, was revoked by the following brief: 'The King to the Sheriffs of London, greeting: Although we lately commanded you that in each place of the foresaid city, where it should seem to you to be the best expedient, ye shall cause it to be publicly proclaimed that oxen, cows, hogs, sheep, geese, capons, hens, chickens, pigeons, and eggs, should be sold at a certain price; because, nevertheless, we have understood that such a proclamation, which at that time we believed would be for the profit of the people of our realm, redounds to their greater damage than profit, we command you that in the said several places ye cause publicly to be proclaimed that oxen, cows, hogs, sheep, geese, capons, hens, chickens, young pigeons, and eggs, be sold for a reasonable price, as was accustomed to be done before the said former proclamation; certifying, all and singular, that the former proclamation was not made by virtue of the ordinances late made by the prelates, earls, and barons, and nobles of the same realm, and by us accepted, nor was con-

tained in them. Witness myself at Lincoln, the twentieth of February, in the ninth year of our reign.'"

Harrison, in his Historical Description of the Island of Britain, part of whose account of the process of brewing, as managed in his day, we lately quoted (see 'Companion,' No. 35, 'The Excise on Hops),' gives some further curious details as to the ale or beer-drinking of our ancestors. In the sixth chapter of his second book, "Of the Food and Diet of the English," after having enumerated the various sorts of wines which were at the time when he wrote (the middle of the sixteenth century) usually to be seen at the tables of the wealthier classes, of which the French wines, he says, amounted to above fifty-six sorts, and the Italian, Grecian, Spanish, Canarian, &c., to about thirty,—he proceeds: "Furthermore, when these have had their course which nature yieldeth, sundry sorts of artificial stuff, as hippocras and wormwood wine, must in like manner succeed in their turns, beside stale ale and strong beer, which nevertheless bear the greatest brunt in drinking, and are of so many sorts and ages as it pleaseth the brewer to make them. The beer that is used at noblemen's tables, in their fixed and standing houses, is commonly of a year old, or peradventure of two years' tunning, or more; but this is not general. It is also brewed in March, and therefore called March beer; but for the household it is usually not under a month's age, each one coveting to have the same ale as he may, so that it be not sour, and his bread new as is possible, so that it be not hot."

Of the social meetings of the classes of tradesmen and artisans he afterwards remarks: "If they happen to stumble upon a piece of venison and a cup of wine or very strong beer or ale (which latter they commonly provide against their appointed days), they think their cheer so great, and themselves to have fared so well, as the Lord Mayor of London, with whom, when their bellies be full, they will not often stick to make comparison, because that of a subject there is no public officer of any city in Europe that may compare in port and countenance with him during the time of his office."

Harrison's description of the process of maltmaking may be compared with the method now followed: "Our malt is made all the year long in some great towns, but in gentlemen's and yeomen's houses, who commonly make sufficient for their own expenses only, the winter half is thought most meet for that commodity; howbeit, the malt that is made when the willow doth bud is commonly worst of all. Nevertheless, each one endeavoureth to make it of the best barley, which is steeped in a cistern of greater or less quantity, by the space of three days and three nights, until it be thoroughly soaked. This being done, the water is drained from it by little and little, till it be quite gone. Afterward they take it out, and, laying it upon the clean floor on a round heap, it resteth so until it be ready to shoot at the root end, which maltsters call *coming*. When it beginneth therefore to shoot in this manner, they say it is come, and then forthwith they spread it abroad, first thick, and afterward thinner and thinner, upon the said floor (as it cometh), and there it lyeth (with turning every day four or five times) by the space of one-and-twenty days at the least, the workman not suffering it in any wise to take any heat, whereby the bud end should spire, that bringeth forth the blade, and by which oversight or hurt of the stuff itself the malt would be spoiled, and turn small commodity to the brewer. When it hath gone or been turned so long upon the floor, they carry it to a kiln covered with hair-cloth, where they give it gentle heats (after they have spread it there very thin abroad) till it be dry, and in the mean while they turn it often, that it may be uniformly dried. For the more it be dried (yet must it be done with soft fire), the sweeter and better the malt is, and the longer it will continue; whereas, if it be not dried down (as they call it), but slackly handled, it will breed a kind of worm, called a weevil, which groweth in the flour of the corn, and in process of time will so eat out itself, that nothing shall remain of the grain but even the very rind or husk. The best malt is tried by the hardness and colour; for if it look fresh with a yellow hue, and thereto will write like a piece of chalk, after you have bitten a kernel in sunder in the middest, then you may assure yourself that it is dried down. In some places it is dried at leisure with wood alone, or straw alone; in other with wood and straw together; but, of all, the straw-dried is the most excellent. For the wood-dried malt, when it is brewed, beside that the drink is higher of colour, it doth hurt and annoy the head of him that is not used thereto, because of the smoke. Such also as use both indifferently do bark, cleave, and dry their wood in an oven, thereby to remove all moisture that should procure the fume, and this malt is in the second place; and the same likewise with that which is made with dried furze, broom, &c.; whereas, if they also be occupied green, they are in manner so prejudicial to the corn as is the moist wood. And thus much of our malts, in brewing whereof some grind the same somewhat grossly, and, in seething well the liquor that shall be put into it, they add to every nine quarters of malt one of head-corn, which consisteth of sundry grain, as wheat and oats, ground."

The mode of brewing in private families, which our author next proceeds to detail, is too long to be quoted at length; and we shall therefore only notice some of the more curious particulars. The process which he describes is that practised once a-month by his own wife and her maid-servants. Having first ground eight bushels of malt upon her quern at home, by which the toll was saved, she added to this half a bushel of wheat meal, and as much more of oats ground small, so tempering and mixing them with the malt, "that you cannot easily discern the one from the other; otherwise these latter would clunter, fall into lumps, and thereby become unprofitable." Another mixture, besides the hops, which she infused at a later part of the process, was half an ounce of arras, and half a quarter of an ounce of barberries, finely powdered. Some, instead of the arras and bays, added the same quantity of long pepper only; but Harrison intimates that the liquor so made was neither thought so good by his wife, nor liked so well by himself. He goes on: "In this trade also our brewers observe very diligently the nature of the water which they daily occupy, and soil through which it passeth; for all waters are not of like goodness, sith the fattest standing water is always the best; for although the waters that run by chalk or cledgy [fuller's earth] soils be good, and next unto the Thames water, which is the most excellent, yet the water that standeth in either of these is the best for us that dwell in the country, as whereon the sun lyeth longest, and fattest fish is bred. But of all other the fenny and moorish is the worst, and the clearest spring water next unto it. In this business, therefore, the skilful workman doth redeem the iniquity of that element, by changing of his proportions, which trouble in ale (sometime our only, but now taken with many for old and sick men's drink) is never seen nor heard of." From this and what immediately follows it appears that in Harrison's time the name Ale was used to designate a malt liquor in which there were no hops. This circumstance was not adverted to when the words were quoted in the article on the Excise on Hops (see 'Companion,' No. 35, p. 515), where the ale described by him as made without hops is spoken of as a particular sort of ale. The sentence in full is, "Howbeit, as the beer well sodden in the brewing, and stale, is clear and well

coloured as muscadell or malvesey [malmsey], or rather yellow, as the gold noble, as our pot-knights call it; so our ale, which is not at all or very little sodden, and without hops, is more thick, fulsome, and of no such continuance, which are three notable things to be considered in that liquor." What was meant by Ale, therefore, it seems, was a liquor brewed from malt, but without being so much sodden or boiled in the brewing as that called exclusively Beer, and also without having any hops put into it. It was undoubtedly the older sort of malt liquor of the two. The modern distinction betwixt Ale and Beer, both of which are now brewed with hops, is, it is unnecessary to remark, quite different from that which Harrison lays down. Dr. Thomson, in his article on Brewing, in the Supplement to the Encyclopædia Britannica, distinguishes Ale and Beer as follows: "Ale is light-coloured, brisk, and sweetish, or, at least, free from bitter; while beer is dark-coloured, bitter, and much less brisk." The statement he adds, however, is scarcely reconcileable with the account we have just quoted from Harrison: "The original difference between these two liquids was owing to the malt from which they were prepared. Ale malt was dried at a very low heat, and consequently was of a pale colour; while beer or porter malt was dried at a higher temperature, and had of consequence acquired a brown colour. This incipient charring had developed a peculiar and agreeable bitter taste, which was communicated to the beer along with the dark colour. This bitter taste rendered beer more agreeable to the palate; and less injurious to the constitution, than ale." The particulars here stated may have been those which at one time distinguished the one preparation from the other; but it is clear, from what Harrison says, that these were not the "original differences."

Notwithstanding its inferiority in the estimation of the better judges, what was then called ale appears to have been still a favourite liquor with many even among the lovers of deep potations. "But what for that?" he continues: "certes, I know some ale-knights, so much addicted thereunto, that they will not cease from morrow until even to visit the same, cleansing house after house, till they either fall quite under the board, or else, not daring to stir from their stools, sit still, winking with their narrow eyes, as half sleeping, till the fume of their adversary be digested, that he may go to it afresh." The art of adulteration also, of the practice of which in brewing ale and beer, and in almost all other preparations of meat and drink, we have heard so much in the present day, does not appear to be an invention of our more refined age. There was apt to be "death in the pot" even in the good old times of Queen Elizabeth. Harrison adds, "Such sleights also have the alewives for the utterance of this drink, that they will mire it with rosen and salt; but if you heat a knife red-hot, and quench it in the ale, so near the bottom of the pot as you can put it, you shall see the rosen come forth hanging on the knife. As for the force of salt, it is well known by the effect; for the more the drinker tippleth, the more he may, and so doth he carry off a dry drunken noll [pate] to bed with him, except his luck be the better." The hard ale and beer drinking of his day is one of the abuses against which our author inveighs with great zeal in another part of his work. In the 18th chapter of his second book, in which he treats of fairs and markets, he reproaches his countrymen for their indifference as to good bread, compared with the appetite they show for having their drink as strong as it can be made. Speaking of the country towns, "There is," he says, "such heady ale and beer in most of them, as for the mightiness thereof among such as seek it out is commonly called huff-cap, the mad dog, angels' food, dragons' milk, go-by-the-wall" (and one or two other more expressive than elegant epithets of endearment, which may remain unquoted). "It is," he proceeds, "incredible to say how our malt-bugs lug at this liquor, even as pigs should lie in a row lugging at their dame's teats, till they lie still again, and be not able to wag. Neither did Romulus and Remus suck their she-wolf, or shepherd's wife, Lupa, with such eager and sharp devotion as these men hale at huff-cap, till they be as red as cocks, and little wiser than their combs."

POLITICAL RETROSPECT FOR JANUARY, 1836.

GREAT BRITAIN.

The result of the first elections of Town Councils under the Municipal Reform Act throughout England and Wales, which took place on the 25th of December, has been a general ejection of the old borough magistrates, and the substitution of members of the liberal party. In a few of the smaller boroughs a majority of conservatives have been chosen; but in all the great towns, with scarcely an exception, the Reformers have obtained an ascendency, which places the management of affairs entirely in their hands.

A Lord Chancellor has at length been appointed in the person of Sir Charles Pepys, the late Master of the Rolls, who has at the same time been created a peer by the title of Baron Cottenham. Mr. Henry Bickersteth, the eminent Chancery barrister, has been made Master of the Rolls, and has also been called to the House of Lords, with the title of Baron Langdale.

FRANCE.

The Chambers, which were formally opened on the 29th of December, commenced their legislative labours on the 30th.

The military successes obtained in Africa, though to us they appear to have been dearly bought, and to be unlikely to lead to any decisive or lasting results, were considered as a sort of *prestige* by the government party, and indeed hailed with joy by the mass of the French people. After a short exordium of compliments, the King alluded to these affairs in the first clause of his opening speech in these brief words:

"An expedition, undertaken for the security of our African possessions, has been conducted and accomplished in a manner becoming the honour of France. I have, with feelings of pleasure, seen my eldest son there share in the fatigues and perils of our brave soldiers."

The next clause in Louis Philippe's speech alludes with equal brevity to the affairs of Spain. It purports that everything has been done on the frontiers that was best calculated to carry into effect the quadruple alliance, and that his Majesty most ardently wishes for the internal peace of Spain, and the consolidation of the throne of Queen Isabella II.

The next clause relates to the interminable quarrel with the United States. The King said, "I regret that the treaty of the 4th of July, 1831, with the United States of America, should not yet have been carried completely into execution. The King of Great Britain has offered his friendly mediation both to me and to the United States. I have accepted it, and you will share in my desire that this difference may terminate in a manner equally honourable to two great nations."

This is the very language of moderation, and we trust we shall soon see this tedious question set at rest for ever.

After stating that the finances were flourishing, and the revenues of France increasing;—that the finance plans would be presented in a few days to the Chamber of Deputies;—and that the laws which had been already presented or announced to the Chambers would be submitted to their examination, as well as those which had been reserved for the deliberations of the present session; his Majesty concluded his speech with the following words.

"I hope, gentlemen, that the moment is come when France is to gather the fruit of her prudence and courage. Enlightened by the past, let us profit by an experience so dearly acquired; let us apply ourselves to calming minds, perfecting our laws, and protecting, by judicious measures, all the interests of a nation which, after so many storms, sets to the civilized world the wholesome example of a noble moderation—the only pledge of durable success. The care of its repose, liberty, and grandeur, is my first duty; its happiness will be my sweetest reward."

There were long, loud, and pretty general cries of *Vive Le Roi!* both at the beginning and ending of the address.

On Wednesday, the 30th of December, M. Dupin was re-elected President of the Chamber of Deputies; and the election of Vice-Presidents being also proceeded with, M. Sauzet, who had recently come over to the ministerial side, was elected. His election was followed on the next day by those of Messieurs Martin du Nord, Passy, and Pettit. In these elections the movement, or ultra-liberal party, were in a sad minority, the sense of the house being most strongly declared in favour of those men who had shown themselves most anxious for the maintenance of peace, and the present order of things.

On the 1st or 2d of January, a report of President Jackson's Message to Congress reached Paris, where it was generally well received, and considered as a sure indication of a pacific and friendly spirit on the part of the American government. We never knew an apology (if the old president's speech can be called an apology at all) more readily received, but we are glad it is to be received any way. A conversation arose on the subject in the Bureau of the Chamber of Deputies, which was little more than an echo of what had appeared in the Ministerial or Doctrinaire Journals. M. Anulhan found the message perfectly satisfactory, and thought that the Chamber would do its duty by solemnly declaring that there no longer existed any ground of quarrel between France and the United States. M. Testé attempted to combat this proposition, but the president, M. Dupin, hinting that the discussion was premature, the subject was allowed to drop, although in the ninth Bureau a desultory debate again arose on it, having more particularly reference to the mediation of Great Britain.

The French funds rose immediately.

On the 6th of January, the address of the Chamber of Peers to the King of the French was voted without amendment by a majority of 99 against 8. The minority, who are all Carlists, under the leading of the Marquis de Dreux Breze, made a feeble stand on the objections taken against the policy adopted by Louis Philippe in regard to Spain. Some long and stormy debates on the address took place in the Chamber of Deputies. The two great topics of dissent and crimination were, the conduct of the French Government in relation to the affairs of Poland, and in the quarrel with President Jackson. On the Polish question ministers were outvoted by a large majority; but as this debate can be, for the present, nothing but an affair of words, without actual consequences, we need not go into it.

We have before us matter much more interesting to France than all this. On the 6th of January, the Minister of Commerce opened the Session of the Council of Agriculture, and of the general Councils of Manufactures and Commerce; and, in so doing, he delivered a speech on the present state and future prospects of France, which is as consoling as we believe it to be correct.

He began by saying that "the state of the country was more prosperous than at any former period. Agriculture was suffering, it was true, but this arose from the low price of grain; and, notwithstanding this, its progressive improvement was greater than it had hitherto been. New methods of cultivation were coming into use; and the growth of sugar was now disputed even with tropical countries. Manufactures, too, were rapidly improving, and foreign trade had taken a start which had hitherto been unexampled. In 1828 and 1829, the two most prosperous years under the Restoration, the average value of imports and exports amounted jointly to 1,220 millions, while in 1833 and 1834 they came to 1,447 millions. Although the documents for 1835 had not yet been officially published, he could state that the preceding years would be far surpassed by it. The condition of the working classes was also good, their wages were getting higher, work was abundant, and savings' banks were spreading throughout the country. He informed them that their opinions would always be well received by the government upon matters relating to the customs, and acknowledged that, had he to reconstitute society himself, he should proceed upon commercial liberty as a basis for legislation on such matters; but in the present state of society it was necessary to introduce only such commercial changes as were compatible with the maintenance and protection of the industry of the country. Railroads, he observed, were one of the most brilliant creations of genius that the age had witnessed. In all the countries surrounding France these new ways of communication were multiplying, and it was the duty of this country not to remain behind the general movement. This was a question that he recommended to them for deliberation. The introduction of premiums into commercial transactions, with the intention of replacing the lotteries, was also worthy of their notice. The government was going to bring forward the measures necessary to prevent the revival of the lotteries, which had been so prejudicial to the interests of the state."

In concluding his address, the Minister of Commerce dwelt on the advantages of national education, and the diffusion of knowledge.

"Instruction," he said, "was the most efficacious instrument for increasing the power of labour; and this the government, since 1830, was endeavouring to disseminate as widely as possible throughout the country. If there was any need of creating industrial schools in the centre of large manufacturing establishments, the councils would collect and communicate all the information they could obtain upon the subject. He had thus indicated the principal objects of their inquiries, and he called upon them to join with him in a tribute of praise to the Prince whose wisdom had caused so many benefits to be spread over the country."

We would gladly end our brief retrospect here, with words of peace, and peaceful speculations; but it is necessary to turn to a field of war and bloodshed, and to give a few details respecting the much-talked-of campaign of the French in the regency of Algiers.

It appears then, from the official *Moniteur*, that, on the 6th of December, the forces under Marshal Clauzel, who was accompanied by the Duke of Orleans, entered Mascara, which *they burned and razed to the ground.* Before effecting this entrance, however, they had twice

to give battle to the Emir Abdel Kader and his Arabs, who fought with determined bravery, and were routed only through the superiority of the French artillery.

In one of these obstinately-contested battles, which was fought at Ghosouf, between the small river Sig and the town, the Arabs had formed a sort of intrenched camp, which was not taken without considerable slaughter on both sides. With a little more artillery, and a few more Italian renegades or refugees to manage the guns for the Arabs, it seems pretty certain that it would not have been taken at all. It was in this contest that the Duke of Orleans and General Oudinot were wounded,—both slightly. The second affair took place at Habrah, a post a little in advance of the town of Mascara. If we are to give credit to the bulletins and the *Moniteur*, immediately after this second defeat the warlike Emir, being at length abandoned by all the Arab tribes upon whom he relied, retired to the mountains in the interior;—whither it is quite certain (nor is it even pretended to be denied) that the French could not follow him. It is even admitted that Marshal Clauzel never contemplated maintaining the advance he had made;—hence Mascara was cruelly burned, and after the two combats the French marched back on their former cantonments. Those who take the least favourable view of the case maintain that this retrograde march was not merely a retreat, but a positive flight, Clauzel's forces being incessantly harassed by the loose flying cavalry of the Arabs, who took many prisoners, together with the waggons, baggage-carts, and other carriages they were escorting.

The *Moniteur* says that the object of Clauzel's expedition "has been completely obtained, *but not without a hard struggle*." This object was to *refoulter*—to drive back the natives into the interior;—but wherever the French *are not*, the Arabs *will be* again; nor will anything keep them permanently back, except it be a line of well garrisoned forts, and a frontier corps d'armée, which, under present circumstances, it cannot suit the interests of France to establish.

Louis Philippe's heir, the Duke of Orleans, returned to Paris on the 30th of December: he was somewhat exhausted by the fatigues he had undergone, but otherwise in good health.

The *Moniteur* of the 21st December contained a royal ordinance, which authorizes and establishes the legal rate of interest in Algiers to be ten per cent., as well in civil as in commercial matters.

This ordinance has been derided by some of our own, and by many of the French papers; and it is evident that the arbitrary fixing of any rate of interest in commercial affairs is futile and ridiculous. We believe, however, that on this point the government of Louis Philippe has been desirous of falling in with the notions that obtain in the country. The Turks and other Mahomedan people have a strong predilection for the tithe, or decimal division. They are enjoined by the Koran to give a tenth of their substance to the poor; and hence they have adopted this scale of interest in the accumulation of capital—at least nominally. The prophet Mahomed, indeed, altogether prohibits the lending money on interest, which in the ignorance of his times he calls a wicked usury. "Those men," says the Koran, "who exercise usury, will arise from their graves at the day of judgment like miserable wretches possessed by the devil."

Still, however, the Turks do not scruple to receive interest at the rate of 10 per cent., while in their transactions with American, Jewish, and Greek bankers and merchants, they pay from 12 to 24 per cent., according to the risks incurred. The written letter of the law, based solely on the Koran, recognises no interest whatsoever; but in practice, between Mahomedan and Mahomedan, 10 per cent. is considered the fair thing all over the East. In meeting claims arising out of money contracts and agreements, creditors, by proving that a part of the debt claimed of them arose out of the practice of usury, or the exacting interest, would sometimes be exonerated from the debt altogether. This risk naturally contributed to raise the rate of interest on all moneys lent.

If the French had consulted Mahomedan notions, as they seem to have done on this occasion—if from their first landing at Algiers they had scrupulously respected their religious prejudices and the rights of property, it is just possible that by this time they would not have found themselves under the necessity of exchanging hard blows with the Arabs.

After several other amendments had been proposed but negatived or withdrawn without a division, the Address on the King's Speech was carried in the Chamber of Deputies by a majority of 179, 246 deputies voting for, and only 67 against it. On the next day (January 14), M. Dupin, as President, read the King's answer to the grand deputation which had presented the address to his Majesty. M. Humann, the Minister of Finance, then communicated his projects with regard to the budget of 1836, and, having restated the prosperous condition of the finances, he proceeded to enforce the expediency of immediately adopting his long-cherished plan of reducing the Government five per cents. to three per cents. This subject he appears to have introduced into his speech without the sanction of his colleagues, who accordingly heard him both with surprise and dissatisfaction. The consequence has been that he has since given in his resignation, which was at once accepted by the King, and Count d'Argout, the Governor of the Bank, appointed to the office of the finances in his stead. It is supposed, however, that this appointment is only temporary.

SPAIN.

The Carlists for some time obstinately prosecuted the siege of San Sebastian, which, by an inexcusable neglect, appears to have been badly provisioned.

On the 6th of December, General Cordova reviewed, near to Vittoria, thirty-one battalions of the Queen's troops, out of which number eleven were British auxiliaries. The condition, discipline, and spirit of these forces were described as admirable, and it was reported about the middle of December that Cordova had given battle with them, and defeated and killed Don Carlos. But this turned out to be only a Stock-exchange victory.

On the 18th of December an extraordinary Gazette was published, containing an official report, dated Molina, the 15th of December, from General Don Juan Palarea, who communicated that he had beaten, and completely routed on that day, the united Carlist bands of Cabrera, Forcadell, Quilez, and El Organista, amounting altogether to 7,000 men. They must have kept, as usual, at long shots, for the victorious General himself estimates the whole loss of his enemy only at "about 500."

On the 11th of December, the British auxiliaries succeeded in powerfully reinforcing the garrison of San Sebastian, which was by that time tottering. They landed from Santander a number of English artillerymen, and sent in a chasse-marée with two 32-pounders. The next morning the remainder of the detachment, consisting of about 400 picked men, under the command of Colonel Arbuthnot, Lieutenant-Colonel de Lancey, Majors the Honourable Fulke Greville, Mac-Duff, &c., were thrown into the besieged town, carrying with them two 32-pounders, two 24-pounders, howitzers, and a large quantity of rockets and ammunition.

On Sunday, the 13th of December, at twelve o'clock,

when a brief truce agreed upon by the Queenites and Carlists expired, at the last stroke of the bell that told the hour the British artillery opened on the enemy's works, and was well seconded by the Spanish guns from the heights. This continued for about an hour: a few rockets were thrown, and every British shot told, the Carlists batteries making no reply. About sun-set the Carlists fired two guns, which were speedily answered: they occasionally fired during the night, but threw no shells into the town. In the course of the 13th, the Ayuntamiento or municipal body of San Sebastian drew up an address of thanks to the British commander for his prompt arrival, and for that relief of which they had so urgent a need. At the same time, however, they begged for a further reinforcement of 300 British, "because their presence gives confidence, dispels the fears of the inhabitants, and is most useful to the service of the Queen Isabella II. and the good cause."

On the morning of the 14th, Colonel Arbuthnot sent out a flag of truce, to ascertain the truth of a report that had reached San Sebastian through France, and was in general circulation in that town, *i. e.*, that Don Carlos had rescinded his murderous decree of putting to death all the British or French prisoners, and all the Spanish militia that might fall into his hands. The flag of truce was admitted by General Sagastibelza, who was in command of the besieging forces, and who in reply requested a personal interview with Colonel Arbuthnot, at the Convent of San Bartolomeo, beyond the causeway.

The point is interesting, and the story is better told than is usually the case with our newspaper correspondents, by Mr. Fulke Greville, who was on the spot, and whose letter has been published in some of our journals. The following is an extract from it:—

"Colonel Arbuthnot immediately proceeded, with his interpreters, accompanied by a Spanish officer of the Urbanos, carrying a flag of truce. They were met half-way along the causeway by an aide-de-camp of General Sagastibelza, who was appointed to conduct him about half-way across to the Convent. The general himself appeared, and walked down the hill, attended by three officers of his staff, and there the conference took place through the interpreter. The colonel addressed him in these words:—'Having heard that his Royal Highness Don Carlos had rescinded his decree relative to the auxiliary troops in Spain, I wish to know if that report is correct?' The general's answer was given without hesitation—'The decree remains in full vigour: we have received no orders to discontinue not giving quarter; we do not consider you as regular troops come to support Spain, but as troops recruited to assist Christina.' He laid most particular emphasis on the words Spain and Christina; his behaviour was most polite and gentlemanlike; Montenegro was with him. The Spanish officers of the Urbanos asked one of the general's staff how the Urbanos were to be considered; he replied in the most decided manner—'The Urbanos and Chapelgories are considered on the same footing as the auxiliary troops in Spain.' The aide de-camp, in return, remarked to the colonel, 'You are very fortunate in having the weather so fine; we had hoped the sea would have been more boisterous, and could not have believed it possible you could have arrived from Santander in so short a time. They had calculated the garrison could not have been relieved in less than a fortnight.' He asked also if more of the legion was expected, but the colonel politely declined answering that question. At the expiration of one hour after the interview the fire was partially resumed, but through the night the batteries were silent, and, whilst the business was pending, there was occasional firing, to prevent the boats coming in, which were fired upon by the Carlists, as was also a boat from the Mazeppa steamer, outside."

This war therefore will continue to be prosecuted with its usual atrocities.

On the 15th a heavy firing was kept up on both sides, but by the 17th everything promised well for the town: the Queenites had recovered their spirits, and the people, leaving the shelter of the bomb-proofs, were going about the streets singing their national songs. A very considerable number of the citizens had fled before the siege began. Simultaneously with their proceedings at San Sebastian the Carlists were attacking Guetaria, a small fort defended by seven cannon, on the coast between San Sebastian and Bilboa. Here, after making a practicable breach, they were defeated by the garrison, who conducted themselves very bravely. The Spaniards, like the Turks, are always heroes behind stone walls, and will hold out a crumbling old fortress longer than almost any other troops. In spite of the heavy loss they sustained, the Carlists, commanded by the Infanta and General Eguia, determined to press the siege of Guetaria, and they also made demonstrations against Azpeitia, another small town at a very short distance. Some reinforcements to the Queen's soldiers in those two places were immediately sent off from San Sebastian and Santander.

On the 21st December the Carlists forced their way into the town of Guetaria, on which the Christino garrison withdrew into the fort, where they continued to defend themselves with great spirit. This fort, as it is called, appears to have fallen two days after, but we have seen no official notice to that effect. After this affair General Eguia is said to have returned to Navarre with five battalions, in order to cover the entrance of a Carlist Catalonian expedition into Aragon. A French frigate to avenge some insults received by the national flag, has been bombarding two or three small towns on the coast of Biscay and Guipuzcoa, that are in possession of the Carlists. We have seen sundry reports of Russian and Dutch ships landing stores and recruits for the Pretender on those same shores, but we cannot answer for their correctness.

General Cordova, and Count Almodovar, the new war minister, entered Pampeluna on the 20th of December, at the head of 6,000 men. On the same day the Queen's troops in Valencia gained an unimportant battle at a village close on the confines of Arragon. But we cannot follow up all these sorties and skirmishes.

On the 11th of December Mendizabal presented to the Proceres, or House of Lords, his Bill for the entire suppression of the slave trade. He also announced that he would, in a few days, propose to the Chambers the formal and unconditional recognition of the independence of all the new states in South America. We mentioned the presence, at the opening of the Cortes, of Senor Santa Maria, and General Soublette, the envoys from South America. Those gentlemen are still at Madrid, to press the execution of this long-delayed measure. One of the members for Taragona severely censured the cruel conduct and menaces of Mina, in Catalonia. Mendizabal attempted a justification under the plea of necessity, but he was obliged to pledge himself to institute inquiries into Mina's violent proceedings. On the same day it was stated in the Chambers that the levy *en masse*, in favour of the constitution, was proceeding well in all the provinces; always, we suppose, excepting the four northern ones.

On the 18th of December the Minister of the Interior read to the Procuradores the project of law adopted by Government with respect to the liberty of the press. By this law the censorship is for ever abolished, and all

Spaniards are declared possessed of the right of publishing their opinions freely on all subjects, *excepting religious dogmas, and the Holy Scriptures.* In the Peers, the Minister of Justice presented a Bill for fixing and defining the responsibility of ministers.

On the 22d of December, the Estate of Procuradores, or Commons, unanimously voted that the present Spanish ministry was entitled to the entire confidence of the nation; and Mendizabal, who is the head and heart of the Cabinet, received even greater assurances of support than he had counted on.

On the 28th of December the official Gazette published the returns of recruits raised in consequence of the decree we mentioned last month. The levy for all Spain was fixed at 100,000 men, but from this number were to be deducted 18,627, as the quota for Catalonia, Navarre, and the Basque provinces, which could not, under existing circumstances, be expected to furnish their contingents. There remained then, on paper, a total of 81,873 men. Of these, according to the showing of the Gazette, only 46,963 have been actually incorporated; 3,100 have paid the sum fixed for their exemption, making in all the important item of 15,474,000 reals; and 39,791 men have refused either to march or pay. Of the number raised the Gazette states that 22,120 brave men were already armed, drilled, and altogether in a condition to be immediately available.

Following the same official authority we may mention that a deputation from Alava had offered, under certain conditions that were likely to be complied with, to raise a corps of 15,000 infantry, and 1,000 cavalry. General Evans had roused the energies of the people of Alava by an eloquent address on the 15th of December, in which he called upon them to rise in arms, and form a battalion of volunteers to co-operate with the British auxiliaries under his command. The entire forces of Don Carlos in the four northern provinces are computed at 32,000 effective men, "well armed, clothed, and provisioned, and full of zeal for their cause." But we suspect only the regular troops are here set down, and that the most dangerous opponents of the Queen's forces—the peasants and mountaineers, who are shepherds, or husbandmen, or artisans to-day, and soldiers to-morrow, or whenever an opportunity to strike a blow or make a prize occurs—have not been taken into the account.

On the 27th of December Mendizabal announced in person, to the municipality of Madrid, a despatch from the Constitutional Governor of Ternal, which intimated that 3,000 Carlists in that district had laid down their arms. According to the Madrid papers, and such of the French journals as favour the Queen's cause, other detached bands have surrendered in different parts of the kingdom. In Catalonia the Christinos have made themselves masters of the town of San Lorenzo. Mina ordered his prisoner, General Camelot, to be shot! Will this old man never grow tired of blood? Can the Constitutionalists hope to check the cruelties of the Absolutists by constantly committing equal atrocities themselves?

On the 29th of December the ex-minister, Count Toreno, in the course of an animated debate, disclosed something of the plan of opposition he means to pursue in the Cortes. He attacked and derided Mendizabal's financial projects and Stock exchange finesse. The minister, in reply, merely quoted the vote of confidence with which he had been honoured by the House. Toreno also spoke of the danger and disgrace of a foreign intervention, from which it should appear that that notion has not yet been wholly abandoned.

On the 30th of December the question was put, whether Mendizabel should be intrusted with the power of changing the destination of the public monies, without making any addition to them. This was triumphantly carried in the affirmative by 135 voices to 3, Twelve members declined voting; among them was the ex-minister Martinez de la Rosa. In his financial explanations Mendizabal did not go into many details. He proposes to farm out the taxes and custom-house duties of the whole kingdom to individuals or companies; a system of the old times which we saw resuscitated a few years ago in the kingdom of Naples and Sicily, where, we can confidently say, from our own observation, it *did not* work well for the Government. He seems to entertain the hope of getting a large sum of money from the South American States as a price of Spain's condescension in recognizing them. *Nous verrons*, but at present we cannot believe he will get any money from that quarter, where dollars are rather scarce, and where independence has been virtually so long established, that its recognition by the Spanish Court is now little more than an empty form.

A frightful massacre has been perpetrated by the Liberals of Barcelona in cold blood. We shrink from the details, and give a short *resumé* of the affair, as we find it in one of our newspapers. The facts have not been contradicted, and admit of no more doubt than they do of excuse:—

"At Barcelona, on the 4th of January, a fearful commotion took place. More than 100 of the Carlist prisoners were massacred in the citadel by the populace. Among others, young Colonel O'Donnell, who commanded Guergue's cavalry, and was captured whilst bravely fighting at the head of his men, conveyed to Figueras, and since transferred to Barcelona, was included in this Ultra-Liberal carnage, and his corpse most shockingly mutilated. On the 5th the disturbance continued, and the lives of all persons suspected of Carlism were menaced. The *Moniteur*, which contains this official intelligence, adds, that on the 4th, on being apprised of the disturbance, Mina left St. Llorent, which he was besieging, for Barcelona."

The French, for a short time, seem to have taken an active part in the hostilities going on at San Sebastian. According to an official dispatch from Bayonne, on the 10th of January, the "Meteore" sloop of war went into the port of San Sebastian to take vengeance on the Carlists for injuries done to the French flag. After having waited for the first fire, the "Meteore" commenced a cannonading so strong and well directed, that, in order to stop it, the Carlists were fain to send off an assurance that for the future they would most religiously respect the French colours.

PORTUGAL.

Donna Maria was married by proxy in the Cathedral Church of Lisbon, on the 1st of January, to the Prince Ferdinand Augustus, Duke of Saxe Cobourg Gotha. The Duke of Terceira stood proxy for the young bridegroom, who was expected at Lisbon *in propriâ personâ* within a few weeks. The procession to the church was very magnificent; the young Queen looked very well, and the whole ceremony gave great satisfaction to sightseers. When it was over, her Majesty gave audience to the foreign ambassadors, and all the diplomatic body. At night Lisbon was illuminated.

The next morning, Donna Maria proceeded in state to open the session of the Cortes. Her speech was sufficiently unmeaning, the only clause in it of any significance being the following, wherein she alludes to the auxiliary force sent into Spain; the whole of which force, as it now appears, has really crossed the frontiers.

"The Portuguese arms, which have so lately succeeded in freeing this country from the fury of a civil war and the efforts of an usurping and liberticidal

faction, now contribute to sustain in a neighbouring kingdom the Crown of our august ally Donna Isabella II. against efforts not less hostile or adverse to the prosperity of Spain, the interests of which are at present so intimately connected with those of my kingdom, with the assurance that from our common efforts, and those of the intimate relations which bind us to Great Britain and France, peace and tranquillity will result to the whole Peninsula."

The politicians of Lisbon speculate on seeing a stormy session, and a speedy change of ministers. They seem to think that no cabinet ought to last longer than a moon. The finances are said to be in complete disorder—the Treasury in a state of exhaustion.

SOUTH AMERICA.

In this part of the world there have been sundry changes and rumours of changes, nor does anything seem more settled than it was ten years ago.

Our newspapers have recently given accounts from Rio Janeiro and Buenos Ayres, that extend to the middle of November last. At Rio they had elected a new Regent, one Senhor Diego Antonio Fiejo, who is considered a man of moderate politics. A party in the senate wanted to have a triumvirate, or three Regents instead of one, but this was rejected by the ministerial party, who, however, only carried this point by a majority of 17 to 16. The new Regent, who is in a bad state of health, adjourned the session on the 25th of October to next April. The news from the Brazilian provinces was very unfavourable. Para was still in the hands of the insurgent Indians and blacks, and there had been disturbances at Rio Grande. The Government had declared the ports of Para to be in a state of blockade, and had dispatched some ships of war to maintain it. The president of Pernambuco, in a letter to the Minister of Justice, had declared that *his* province was in a state of *perfect tranquillity*, only, "that cruel assassinations, robberies, and all sorts of crimes are committed in the interior with dreadful frequency, and the most scandalous impunity. Even the judges themselves do not escape." This very *naïve* confession reminds us of a well-known, sarcastic sentence of Gibbon, "The most heinous of his offences were suppressed, &c &c." In spite of treaties and solemn engagements the slave trade continues to be carried on with activity and impunity in every part of Brazil. The fact is, the Government has not the power of preventing it; but every African landed alive on those coasts will grow up a deadly enemy, and go to increase that host of blacks, who, sooner or later, will drive the degenerate whites from the country

The intelligence from Buenos Ayres is scarcely of a brighter hue. An armed force, commanded by Xavier Lopez, the former Governor of Tucuman, had marched from Bolivia to revolutionize Tucuman, and this enterprize was shared in and supported by the Governor of Catamarca, and the Commandant General of the country districts of that province. It appears, however, that the attempt failed, but probably before this time it has been made again and with success. The rest of the news relates to a certain Santos Perez, the chief of a band of assassins, who murdered the brave General Quiroga, and his retinue in May last, and who has now escaped from the territory of Cordova, only half-poisoned, the dose administered to him not being strong enough to produce death.

In the republic of Chili, a horrid civil war is raging, or was raging, when the last despatches left that country, *i. e.* on the 25th of September.

General Gamarra, the main stay and support of the new president, or, as one party call him the *intrusive* president, Salaverry, had been totally defeated, and had escaped as a fugitive with only a few officers. Santa Cruz was hastening to occupy the provinces evacuated by Gamarra, in order to convert them into dependencies of a new republic of his own.

In further intelligence from Lima, it was stated, that nobody knew what had become of the defeated General Gamarra; that Santa Cruz, at the head of 8,000 men, was in full march upon Lima, and that Salaverry the president declared, that before he evacuated that city he would render it a heap of ruins.

In the *ci-devant* Mexican province of Texas, to which we made some allusion last month, affairs have taken a very decided turn. The people have made a formal declaration of their independence, have taken up arms, and appointed one General Houston, who seems to be a native of the United States, as the Generalissimo of all their forces.

"*Declaration of the People of Texas, in General Convention assembled.*

"Whereas General Antonio Lopez de Santa Ana and other military chiefs [illegible]ve, by force of arms, overthrown the federal institutions [illegible]co, and dissolved the social compact which existed between Texas and the other members of the Mexican confederacy—now the good people of Texas, availing themselves of their natural rights, solemnly declare—

"1. That they have taken up arms in defence of their rights and liberties, which were threatened by the encroachments of military despots, and in defiance of the Republican principle of the federal constitution of 1824.

"2. That Texas is no longer morally or civilly bound by the compact of union; yet, stimulated by the generosity common to a free people, they offer their support and assistance to such of the members of the Mexican confederacy as will take up arms against military despotism.

"3. That they do not acknowledge that the present authorities of the nominal Mexican Republic have the right to govern within the limits of Texas.

"4. That they will not cease to carry on war against the said authorities whilst their troops are within the limits of Texas.

"5. That they hold it to be their right during the recognition of the federal system, and the reign of despotism, to withdraw from the Union, to establish the independent government, or to adopt such measures as they may deem best calculated to protect their rights and liberties; but that they will continue faithful to the Mexican government so long as that nation is governed by the constitution and laws that were formed for the government of the Political Association.

"6. That Texas is responsible for the expenses of her armies now in the field.

"7. That the public faith of Texas is pledged for the payment of any debts contracted by her agents.

"8. That she will reward, by donations of land, all who volunteer their services in her present struggle, and receive them as citizens

"These declarations we solemnly avow to the world, and call God to witness their truth and sincerity, and invoke defeat and disgrace upon our heads should we prove guilty of duplicity."

[Here follow the signatures.]

UNITED STATES.

On the 7th of December, President Jackson sent his message to Congress. This document, which was expected with some anxiety in England, and with great anxiety in France, reached us at the end of December. The message is precisely what we expected, very long, very emphatic, very firm, and on the question of the apology to France, inflexible.

After recapitulating all the tedious circumstances attending the 25,000,000 of francs, and the provoking delays made by the French in the payment of that just debt, the President alludes to the communication to Congress, in which he dwelt on the probable necessity of enforcing payment by cannon balls; which communication was not made to the French Government, but to one branch of the republican sovereignty by another branch. He goes on to say:—

"Admonished by the past of the difficulty of making even the simplest statement of our wrongs, without disturbing the sensibilities of those who had, by their posi-

tion, become responsible for their redress, and earnestly desirous of preventing further obstacles from that source, I went out of my way to preclude a construction of the message by which the recommendation that was made to Congress might be regarded as a menace to France, in not only disavowing such a design, but in declaring that her pride and her power were too well known to expect anything from her fears. The message did not reach Paris until more than a month after the Chambers had been in session; and such was the insensibility of the ministry to our rightful claims and just expectations, that our minister had been informed that the matter, when introduced, would not be pressed as a cabinet measure.

"Although the message was not officially communicated to the French government, and notwithstanding the declaration to the contrary which it contained, the French ministry decided to consider the conditional recommendation of reprisals a menace and an insult, which the honour of the nation made it incumbent on them to resent. The measures resorted to by them to evince their sense of the supposed indignity were the immediate recall of their minister at Washington, the offer of passports to the American minister at Paris, and a public notice to the Legislative Chambers that all diplomatic intercourse with the United States had been suspended.

"Having in this manner vindicated the dignity of France, they next proceeded to illustrate her justice. To this end, a bill was immediately introduced into the Chamber of Deputies, proposing to make the appropriations necessary to carry into effect the treaty. As this bill subsequently passed into a law, the provisions of which now constitute the main subject of difficulty between the two nations, it becomes my duty, in order to place the subject before you in a clear light, to trace the history of its passage, and to refer with some particularity to the proceedings and discussions in regard to it. The Minister of Finance in his opening speech alluded to the measures which had been adopted to resent the supposed indignity, and recommended the execution of the treaty as a measure required by the honour and justice of France. He, as the organ of the ministry, declared the message, so long as it had not received the sanction of Congress, a mere expression of the personal opinion of the President, for which neither the government nor people of the United States were responsible, and that an engagement had been entered into, for the fulfilment of which the honour of France was pledged."

He then goes through the transactions which followed in the French legislative assemblies, and takes up this strong position:—

"In any event, however, the principle involved in the aspect which has been given to the controversy, is so vitally important to the independent administration of the government, that it can neither be surrendered nor compromised without national degradation. I hope it is unnecessary for me to say that such a sacrifice will not be made through any agency of mine. The honour of my country shall never be stained by an apology from me, for the statement of truth and the performance of duty; nor can I give any explanation of my official acts, except such as is due to integrity and justice, and consistent with the principles on which our institutions have been framed. This determination will, I am confident, be approved by my constituents. I have, indeed, studied their character to but little purpose, if the sum of 25,000,000 francs will have the weight of a feather, in the estimation of what appertains to their national independence: and if, unhappily, a different impression should at any time obtain in any quarter, they will, I am sure, rally round the government of their choice with alacrity and unanimity, and silence for ever the degrading imputation."

In the progress of his address, General Jackson repeatedly appeals to the nature of his country's constitution, which imposes on the president a full and explicit disclosure of the state of affairs, together with his opinions thereon; and he properly insists that foreign states have no cognisance of, and therefore never ought to meddle with such revelations. He says, more than once, that in the message at which offence was taken, there was no intention, on his part, that offence should be given. This is certainly not an apology, but it is that sort of explanation which, between gentlemen and gentlemen, is always deemed satisfactory.

Some other clauses of the president's message are, to *us*, more interesting than this squabble which France has created. We subjoin a few of them:—

"In the settlement of the question of the North Eastern boundary little progress has been made. Great Britain has declined acceding to the proposition of the United States, presented in accordance with the resolution of the senate, unless certain preliminary conditions were admitted, which I deemed incompatible with a satisfactory and righful adjustment of the controversy."

"One of the articles of our treaty with Russia, in relation to the trade on the north-west coast of America, having expired, instructions have been given to our Minister at St. Petersburgh to negociate a renewal of it. The long and unbroken amity between the two governments gives every reason for supposing the article will be renewed, if stronger motives do not exist to prevent it than, with our view of the subject, can be anticipated here."

In the next clause a direct reference is made to the affairs of Texas, where, as we mentioned last month, the revolutionary party have been anxious to engage the United States in their quarrel.

"A convention with Mexico for extending the time for the appointment of commissioners to run the boundary line has been concluded, and will be submitted to the senate. Recent events in that country have awakened the liveliest solicitude in the United States. Aware of the strong temptations existing, and powerful inducements held out to the citizens of the United States, to mingle in the divisions of our immediate neighbours, instructions have been given to the district attornies of the United States, where indications warranted it, to prosecute, without respect to persons, all who might attempt to violate the obligations of our neutrality: while, at the same time, it has been thought necessary to apprise the government of Mexico that we should require the integrity of our territory to be scrupulously respected by both parties."

The last clause for which we can find room has reference to the new South American States generally, and is very striking.

"Unfortunately, many of the nations of this hemisphere are still self-tormented by domestic dissensions. Revolution succeeds revolution, injuries are committed upon foreigners engaged in lawful pursuits, much time elapses before a government sufficiently stable is erected to justify expectations of redress—ministers are sent out and received,—and before the discussions of past injuries are fairly begun, fresh troubles arise; but too frequently new injuries are added to the old, to be discussed together, with the existing government, after it has proved its ability to sustain the assaults made upon it, or with its successor is overthrown. If this unhappy condition of things continue much longer, other nations will be under the painful necessity of deciding whether justice to their suffering citizens does not require a prompt redress of injuries by their own power, without waiting for the establishment of a government competent and enduring enough to discuss and to make satisfaction for them.

DOCUMENTS AND ABSTRACTS.

OPERATION OF THE MEASURE OF NEGRO EMANCIPATION.

In the 'Companion' for June, an abstract was given of papers which had been presented to parliament, containing accounts of the operation of the measure of Negro Emancipation, from August 1st, 1834, to March, 1835. A second parliamentary document has since been issued, which brings down the details respecting the working of this great plan to a later period. It is entitled "Papers presented to Parliament by his Majesty's command, in explanation of the measures adopted by his Majesty's Government, for giving effect to the Act for the Abolition of Slavery throughout the British Colonies," and contains 'Circular Despatches' from the Secretaries of State for the Colonies (Mr. Stanley, Lord Aberdeen, and Lord Glenelg); other despatches addressed to individual governors, and not of a general character; and letters from the governors and lieutenant-governors of Jamaica, Barbadoes (including the Windward Islands), British Guiana and Mauritius.

Jamaica.—(Slave population 310,707).—The Marquess of Sligo, in a despatch, dated March 27th, says: "It is with considerable satisfaction that I am enabled to repeat the same favourable assurances as to 'the favourable state of the island,' that it has been hitherto in my power to transmit to you. The apprentices, generally speaking, are working very industriously; in many instances, where they are paid by the quantity of sugar made, they are in the habit of keeping up the boiling-house work for the whole first five days of the week uninterruptedly, though their bargain with their masters may have been to work for only eighteen hours per day. On many estates they work by spells, not having been offered wages, as the proprietors say they cannot afford to pay any in some cases; and in others, because the whole crop will be easily taken off without taking more than the legal time; the last instances are, however, rare. There are some few estates where they have refused to work at all for wages, but where they work very diligently during the legal hours. These refusals are here attributed to sectarian influence." p. 18. In his lordship's despatch, dated April 27, he states, that "the island still continues in the best possible state. My magisterial and other reports announce a great diminution of offence of every kind, except theft; but I am sorry to say that this crime reaches to a great extent now." An addition to this communication, written on the ensuing day, is as follows:—"Everything appears to be now going on perfectly well. The apprentices are also contented. The managers are relaxing down from their vexatious and teasing attacks upon the comforts of the negroes, finding from experience that they have not the same sort of people to deal with that they had before." p. 35. In the despatch for May, the parish of St. James's, which had been previously alluded to as the worst in the island, is stated to be improving.

May 24.—The marquess writes, "The reports from all the other districts are unanimous as to the good conduct of the negroes." On the 7th of June, his lordship's dispatches again confirm the accounts of the generally satisfactory state of the island. "In only one instance has the emancipation of the Caymanas and Maroon apprentices caused any unpleasant feeling * * *. I beg to inform you that, owing to the exertions of the special justices, crime has much diminished." The dispatch for June 21st, is devoted to some details respecting an inquiry into the reports on the sugar crops, which the opponents of the emancipation measure endeavoured to render as unfavourable as possible. By Lord Sligo's directions, 762 estates were visited by 39 special justices, and his lordship states that the survey proves the sugar crops to be in a forward state on all the properties under the charge of some of the great attornies, and that those under the charge of others are backward. Considerable exertion appears from the dispatches for June to have been made by some of the planters to produce an impression on this point. His lordship disposes of some of their complaints in the following manner:—"One of the complainants gone home, has taken off an enormous crop at his estate this year, as reported to me; another of the complainants, who states that the properties in St. Elizabeth's and Westmoreland will not pay their contingencies this year, and whose estate is reported by Mr. Bell to be so far behind this year, has taken a vast number of the German immigrants, and has had his whole gang building houses for them, instead of cultivating the land. This is a notoriously unhealthy estate; and finding that he lost so many from want of proper shelter and food, he was compelled to put his gang to provide them with houses. Surely the falling off of that estate can be no proof of the failure of the system. Mr. Gurley, one of the specials for St. Elizabeths', has reported to me that he went to visit the estates of Mr. Wildman, managed by Mr. Farquharson, who reported to him that his cultivation for next year was quite as forward as usual; when, however, he asked the same question of the overseer, his reply at once was:—'I know very well what you are about, you are trying to get up facts for the governor to send home to contradict the reports of the failure of the crops; but it won't do, you can't succeed.' This will serve as a sample of the feelings of the overseers at their loss of power."

His lordship remarks, that many of the unfavourable reports came from estates which were not situated within a sugar district: the produce being obtained by great labour and manure. The parish of St. Elizabeth's is, like many others, not a sugar parish, the soil being very bad. The report of one of the special justices to the Marquess of Sligo from this parish says:—"It has been tried by jobbing, and the least change on so artificial a property must produce a serious charge; but in the end, if the proceeds are less, the outlay will be proportionably smaller."

The accounts from Jamaica are brought down to the end of July, and those for June being accompanied by the reports of the special magistrates, our extracts, instead of being confined to the dispatch of the governor, will be taken also from these reports. They are dated July 1st, and relate to the proceedings of the previous month.

Surrey County.—Colonel Grigg, the special justice, had visited every part of his county during June, and was only once called upon to act as magistrate. So uniformly was everything doing well, that the apprenticeship system may be said not to have disappointed the most sanguine expectations. There is one thing greatly wanted, that is, national schools. "I trust (says Colonel Grigg) that the crops will again find their level: still, I say, *if* they formerly averaged 100,000 hogsheads, that now from 85,000 to 90,000 *can be* the nearest calculation; but this may be principally owing to the short-handed estates being obliged to be thrown up, for those estates only made sugar out of the very heart's gore of the former slave."

Palmetto River.—Mr. Lyon writes: "I hesitate not to say that the quantity of labour performed on the sugar estates around me quite equals the average of slave labour, and that the labour of apprentices, on particular estates, is in all kind of work much greater than was ever performed or expected to be by the slaves. * * * * There is in general a tolerably good understanding existing between both parties, master and labourers." Offences, he says, have apparently increased, though they are not more numerous in reality than under the old system. "Absence of fear, and the presence of perfect tranquillity induce strict and minute managers to take notice of every peccadillo. No community (7,000 population) has so little of atrocious or flagrant villany. There is an evident and increasing desire for instruction among the negro population, and almost all under 25 eagerly seek the opportunity of being taught to read. The means of education are exceedingly limited, the only establishment for the instruction of adults and infants being a Sunday school at Colly estate, conducted by the gratuitous teachers: it is situated from 12 to 14 miles from a large mountain population."

Chapelton District of Clarendon.—Mr. Haly reports:—"The disposition and conduct of the negroes are most promising, and will eventually prove beyond doubt, to any one who may still remain unconvinced, that the expense occasioned by the new system is more than covered by the unfrequency of desertion, and the improved state of health and strength enjoyed by the negroes. I never had the management (and I many years, as first lieutenant, directed the discipline on board of a man-of-war) of a people so

docile and ready to obey, more respectful to superiors, and submissive to their direction and advice. The predominant vices of idleness and petty thefts are clearly the offspring of a state from which they can only be said to be now emerging. The complaints against apprentices have diminished to almost one-half the amount; and I have few, indeed scarce any, against managers."

Trelawney.—Mr. Price reports "The apprentices generally appear desirous of having moral and religious instruction, and appear desirous to have their children educated. They express an anxiety about their houses and grounds; and on one occasion I was asked by an apprentice if he could legally purchase and own land. And I think the apprentices are becoming more and more sensible of the great boon that awaits them, as also of the necessity of the intermediate gradation of the term of apprenticeship. Several of the subordinate planters still cling to the old system, and cannot divest themselves of their old prejudices and arbitrary disposition towards the apprentices, who on their part have not had sufficient time to reconcile themselves to their former oppressors. The attornies and managers generally are showing a more ready disposition to meet the new system in an equitable and honourable manner."

Aylmer's, St. John's—Mr. Baynes reports—"I perceive no material alteration in the disposition of the negro population: they are undoubtedly in this district generally peaceable and orderly, but I regret to say there is little reciprocal good will subsisting between the apprentice and his manager. Whilst the latter endeavours to procure as large a quantum of labour as possible in the hours allotted to him by law, the former seems determined to afford him as little as a frequent recurrence to the magistrate will permit. With this interference, however, the apprentices in this district continue to perform a fair proportion of work; indeed, a total want of industry is not amongst them defects. With the exception of a few bad characters, they cultivate their provision-grounds with assiduity, attention, and profit. The negroes, perhaps from recollection of occurrences which may formerly have taken place, are extremely suspicious and distrustful of the good faith of those in authority over them: it is also a general complaint that they are growing from day to day more disrespectful and even insolent to their employers. * * * * The prominent features of the negro character remain unchanged, and although a twelvemonth has now nearly elapsed since the commencement of the present system, the negro has not, as far as he has come under my observation, made a corresponding progress in his fitness for total emancipation, and the new state in which he will have to enter in five years from the present time, a period rather short for any extended development of moral principle, or considerable amelioration of his former and present disposition. At home, in the negro villages, he is as licentious and unrestrained as ever; a Christian, perhaps, at least baptized, it does not appear that the efforts of his religious instructors of any sect have succeeded in preventing his indulgence in polygamy. The numerous cases in my diary show how general, notwithstanding frequent punishment, the crime of thieving still continues; the notion of the nature of an oath, as entertained by the negro, is rarely correct and adequate. * * * * The want of a fitting system of education for the youth, as well as the children of both sexes, is frightfully manifest; those of the latter, free under the Abolition Act, as less than six years of age on the 1st of August, 1834, are bred up in absolute idleness, untaught by their parents to perform the slightest service for them."

St. Elizabeth's.—Mr. Bett reports—"The negroes are rather whimsical about working in their own time for money."

Rio Bueno.—Mr. Pemsell reports—"The apprentices in this district I conceive to be generally well disposed, tractable, and easily managed: they cannot, however, be said to be an industrious people, although the love of money, in which they fully participate with Europeans, would lead one to hope that they will gradually become more so, seeing what high wages they are likely to obtain after their apprenticeship is out, 2*s.* 6*d.* each per day being even now obtainable for whole gangs, by such as let out jobbers. The only class who show the apprentices any unkindness, are small settlers, having eight, ten, or twenty blacks, often men of bad character."

St. Mary's District.—Mr. Lambert reports—"The apprentices generally, when any misunderstanding does exist, seem, on many points bearing on their supposed grievances, to be in total ignorance of the law, which I devote myself to explain to them."

Clarendon.—Mr. Dillon reports—"On every estate in this district the negroes have freely worked for hire. The hours they devote to extra labour are those generally given to sleep or recreation."

Manchioneal.—Mr. Dawson reports—"There is a great inclination to work for wages, and many estates have employed their apprentices during their own time to dig cane-holes, at the rate of twelve for 5*d.*, at which they make excellent hire, and in many instances the people apply for such employment. I fear, however, they are hoarding up their money for the purpose of purchasing lands after the apprenticeship."

Hampden.—"Mr. Cocking reports—"The usual indulgences have not been withheld, such as clothing, hospital attendants, cooks, nurses, watchmen for their grounds, rum, sugar, herrings, or salt fish. The apprentices are encouraged to attend any place of worship which they think proper; and a vast number of them have already been taught to read and write."

Retreat.—Mr. Blake reports—"I must say of the three characters, master, attorney, and overseer, that from the two former the apprentices generally receive many kindnesses; but in most instances the overseers appear to wish to put them in the cells for perhaps the most trifling circumstance, and nothing they appreciate so much in a special magistrate, as that of being fond of giving severe floggings. When I took charge of this district, the number of people who came here on a Saturday with complaints against their employers was generally from fifty to sixty; now I seldom have more than four or five."

New Rumble.—Mr Marlton reports—"On no one estate in my district is the Abolition Law strictly in force, but generally a medley of the old and new system. The want of uniformity in the regulation of the hours of labour is much felt, but there is now more confidence, on the part of the labourers, in their managers, than some months since. The only control in the hands of the managers over the apprentices, is 'salt,' so termed; where it is given freely the negroes work freely, and are not particular about an hour. I consider the disposition of the apprentices very good; for if they chose to abide by the law strictly, they would have it in their power to annoy the managers and spoil much sugar. There is, in my opinion, a much better feeling on the part of the apprentices, than on that of very many of the managers."

St. Dorothy.—Mr. Macleod reports—"The number of negroes, who since the 1st of August have been absent from their masters' properties as runaways, hardly exceeds one-sixth of the number that used to absent themselves in the time of slavery. The general indisposition of the negroes to work extra time for wages, proceeds from no sort of ill-feeling towards their employers, but from an impression that they can make more by the cultivation of their grounds. As soon as the compensation-money is paid, the masters will be able to offer such wages as will procure the employment of a very great quantity of extra labour."

Whitehall, St. Elizabeth's.—Mr. Daughtrey reports—"No charge perhaps has been of late more frequently urged in a loose and general way against the apprentices than neglect of their provision grounds. Whenever I hear such remarks made, I always say, 'Bring a specific charge; only satisfy me of the fact, and the law which provides so clearly and efficiently for the evil, shall take effect.' No such specific charge has, however, yet been brought forward. Some of the more worthless never worked grounds, and there are such still. * * * * In this neighbourhood the plough is now taking place of the barbarous unsightly hoe-gang, and with complete success. The introduction of the plough will be an immense economy of labour, and it is doubtless but one of many of which the drudgery of the old system abundantly admits. But I cannot conclude my remarks upon the negroes without noticing the effect which the apprentice-system has already had on their civilization. Here and there are to be discerned, I think, the obscure beginnings of a sense of moral obligation and of religion; but in general they are still without principle. I seldom see an instance now of

the wild and unreasonable behaviour so common about the time of the change. They listen calmly to anything I address to them; and, as one of the more sensible overseers said to me the other day, 'Sir, I declare they understand me better.' It is equally clear they can make themselves better understood. I have scarcely a doubt that they have learnt more English during the last year than the ten preceding. Multitudes are preparing to marry, and in by far the greater number of instances they unite themselves with the proper persons, the mothers of their children. The woman feels elevated when she is a wife, and the man has more respect for himself for having done what is right. Generally, I may add, the negroes are becoming to understand their exact position, and on the whole to be not dissatisfied with it. It was otherwise, to some extent, at first. The actual change did not by any means realize the expectations they had been led to form of it. Their radical improvement will be a work of slow degrees; it will require a generation or two, with all appliances and means to boot, to wear away the debasing effects of slavery from the negro mind. How deeply is it to be regretted that a valuable year of the apprenticeship period should have passed away without any attempt to improve the race by the long-talked-of system of education!"

Falmouth.—Mr. Davies reports—"If something is not done for the children declared free by law they will become an indolent race. It has been suggested to me that schools, combining instruction with agricultural pursuits, would be preferable to schools for instruction only; half the day given to instruction, and half to agricultural labour."

We have now made extracts from sixteen out of the fifty-two Reports which the Marquis of Sligo transmitted with his despatches of June 21st. On the 18th and 22d of July his Lordship again addressed the Home Government; but as the reports of the stipendiary magistrates are made up only at the end of the month, he had not then any to transmit. The despatches, however, furnish gratifying evidence of the favourable manner in which the process of emancipation is going on. Some misunderstanding which appears to have existed among the negroes, as to the 1st of August, 1835, being the period when the apprenticeship term would expire, rendered it necessary to adopt precautionary measures to avoid the possibility of disturbance; and it is satisfactory to learn from some recent accounts that Lord Sligo's vigilance had the effect desired, and that the negroes, on being better informed of the state of the law, had quietly pursued their labours. The following are extracts from the July despatches:—"On 296 estates or properties the apprentices have either at first or at last worked for hire; some, nay many, refused at first. None of those who have once worked for it have as yet retracted, if fairly dealt with and punctually paid, which has not been universally the practice. On ninety-eight estates no offer of wages for extra work has been made; and only on twenty-two estates have wages been actually and pertinaciously refused. Many causes for the refusal may be adduced:—want of confidence in their master, as a case is known to me where the negroes on two adjoining estates have refused respectively to work for their own masters, but have done so for the neighbouring property. An idea was at one time prevalent that, by working for hire, they were perpetuating their own slavery: this has been in a great measure got rid of, but not entirely; and it is my firm opinion that its prevalence still on those estates, where it yet has that baleful effect, is owing solely to the ignorance in which the slaves have been left, and that those who so neglected that part of their duty are now reaping the fruits of their own misconduct. * * * * It has reached my ears that many of the managers have, in consequence of the facility with which this crop has been got off, and the seeming satisfaction of the apprentices at the rates of wages hitherto paid to them, come to the resolution of refusing the terms they have this year given, in the hopes of getting them to accede to cheaper terms. They moreover have, as I understand, determined on attempting to procure, in consideration of the old allowances, or by some other means, not contemplating any payment, the labour of the children who have attained the age of six years since the 1st of August. This is very inexpedient; the parents naturally, on account of the deceptions and oppressions which have in many instances been inflicted on them, will suspect that this offer is connected with some scheme of protracted apprenticeship; and the effect, I fear, may be injurious to the elder gang undertaking labour for hire. I have, however, great confidence in the increasing desire for luxuries, and think that they will not like to relinquish the pleasures of money payments, having once tasted their advantages. * * * * An instance of the effect of a good understanding between master and apprentices was reported to me last week by Mr. Marlton, special justice. At Oxford estate they dug, in stiff unploughed land, 113 holes per day, not for hire, but on the estate's day, when 70 had always been the allotted task for a day on the same soil during slavery." July 18th. * * * * "The packet having arrived so much earlier than was expected I will complete the returns of estates where apprentices work for time by the next packet. I add a list of ninety-eight properties where wages have never been either offered or refused. I have heard some more rumours of discontents in St. John's parish. I trust that there will not be any disturbance; but I do think there is some expectation of freedom on the 1st of August among them: they certainly are much less contented in their minds than they have been, although no actual breach of the usual perfect tranquility now exists. I must say that I anticipated this result from the Caymanas' liberation." July 22.

Perhaps the part of this volume of papers and official correspondence, relative to the Abolition of Slavery, which will be read with the most satisfaction, is a communication from the Marquis of Sligo, transmitted with the despatches for June, and which is to be found at page 216, under the following head:—"A few Memoranda respecting Jamaica; the result of some Consideration and Observation, combined with the best Information that could be procured." Lord Sligo's observations have been made during the close and active performance of his duties. The exact and highly important information which they contain respecting the progress of the great experiment entrusted to his superintendence is therefore of the highest value. Every fact, it should be observed, rests on the authority of parties unbiassed by local interests, connections, or prejudices. The following is a verbatim copy of the "Memoranda:"—

"1. The quality of the sugar made this year is *bonâ fide* far superior to what has been heretofore made by night-work on the majority of estates in this island.

"2. There has been by far less stock lost in this year's crop than in that of preceding years; and in many places it has been taken off by a smaller number.

"3. The stocks are, generally speaking, in much better condition this year than they were at the close of any former year's crop, when they have been so weak that many of them have died in consequence.

"4. That the apprentices, generally, are evidently becoming more reconciled to the system, and work cheerfully for money-hire, both night and day, and that they are becoming better behaved every day.

"5. That they may be expected still further to improve as soon as they begin to feel the natural impetus of education and religion, and as they get rid of the system of deceit which slavery occasioned, in order to save them from oppression.

"6. That several estates will exceed the present crop in the next year, and the majority will equal it.

"7. That when this is not the case it can be traced to sufficient causes, independent of the loss of labour, which of course must have considerable effect when it is recollected that on many estates the slaves were compelled not only to work day and night, as long as nature would allow of it, and in such a manner as their bodily endurance would permit, for the six week days, but were often compelled to pot sugar on the Sunday.

"8. That a manifest supineness has been exhibited on several plantations by the fact that next year's crops are often estimated at much more than the present. I know of several individual instances of persons declining to put in plant-canes last year in consequence of the certainty, by anticipation, which they felt that the crop would not be taken off at all.

"9. The returns I send home herewith will show that the preparations for the next year's crop have not been so entirely neglected as has been asserted.

"10. That the 'new system' furnished a most admirable excuse for any failures and neglects which may have taken

place, and which will not therefore be attributed to their real cause.

"11. My conviction is, that in many instances the opinions of individuals are much more favourable as to future prospects than they choose to allow; and I offer, in proof of it, the reluctance which has been shown in but too many instances to my getting any information upon the subject.

"12. That the overseers in many, I will fearlessly say very many instances, have not given hearty co-operation to the new law, feeling themselves shorn of all their beams by its operation.

"13. That many of the attornies and managers have been so very loud in their assertions of the failure of the system, that they are now unwilling to admit the error of their opinions. The first prophecy was blood and destruction on the 1st of August; in this they were wrong. The second, that this scene would take place at Christmas, as it had not taken place in August: in this they were wrong. The third, that the apprentices would not work for wages; in this they were wrong, as I know of no instance where the usual wages were offered, and where they were refused. The fourth was, that this crop could not be taken off; in this they were wrong, as it has been taken off in many places much earlier than usual; and if protracted in others, it has been as much from the weather, and the refusal to give wages in many instances, as from any other cause affecting the success of the new system.

"14. Having been driven from all these points, they have now created for themselves a fresh object of terror, namely, the next year's crop. On this point I have had some doubts myself all along, and therefore send the information I have received, in order that judgment may be given by others. I freely confess that the report is, on the whole, much more favourable than I ever expected.

"15. That the manufacture and cultivation of sugar has been conducted on the most antiquated systems possible, and has received the least possible assistance from the modern improvements in machinery. The plough is hardly ever used: where adopted this year, from necessity, it has answered completely. The cattle mills, which are so general, must be abandoned, as they work so very slowly that they cannot meet the diminished hours of labour of the freed gangs.

"16. That the ginger, arrow root, and coffee plantations are as flourishing as ever they were known to be.

"17. That the negroes will improve, because they have done so since the 1st of August, gradually but certainly, in all parts where severity has not been practised. That they have had very little encouragement from many of the managers. That in the whole of the early part of this period, the number of especial magistrates was quite insufficient, and this affects them more than might be at first imagined, as they show unlimited confidence in those (the great majority, I am proud to say) who treat them with true kindness. That they passed their holidays at Christmas in an unusually orderly manner, and that there were, literally speaking, I verily believe, not 20 absentees from their labour on the 29th of December; and that they worked on New Year's Day without a murmur. That there has been as yet no increase of religious instruction or education, and very little of good example. That the crop this year has been taken off without a single instance of resistance, and of a superior quality to that heretofore made. That there has been less stock lost this year than usual. That they have in most instances worked cheerfully, day and night (when allowed to do so by night) for hire, on five days of the week. That they now dig cane holes in many parts of the island at ½d. per hill, earning a dollar a-day, digging 160 often in a day, when 70 to 80 was their task during slavery. That several planters reluctantly confess that more work has been done this year than the last, and that many objections have been made to my comparing this year's work to the last, because it was notorious they did not work at all the last year. That the amount of this year's work is not therefore to be attributed to the exertions of the last year of slavery, as has been asserted. That every one confesses that things are going on, though not at all well, much better than they expected. That there has been a singular want of uniformity in the administration of the law, which was not, and could not be got over till after some months' experience of it. That there has been a great variation in their allowances, indulgences, and rates of payment. That many have not been paid at all, but have been persuaded by the managers to give additional labour for their old allowances. That the planters looked upon the specials with great jealousy; and it was a struggle at first in many places to maintain as many of their old rights as possible. That many planters have openly and loudly expressed their conviction that the plan must be a perfect failure. That many of the managers, though, thank God, not all, still maintain their former habits towards them, as far as the law allows them. That there has been little time for the apprentices to reconcile their feelings to their former oppressors.

"When all these things are recollected, and it is seen that under all these advantages they have behaved so well, and shown such improvement, may it not naturally be inferred that they are in a state of progressive amendment?

"Thus much of the conduct of the apprentices,—what now has been that of the whites? Of some of the managers I cannot speak too highly; but then they have reaped the fruit of their wisdom in the remarkable success which has attended their efforts. A reference to the reports will show what success has attended the efforts of some, and how deplorable is the state of some of the properties under the management of others, though enjoying precisely similar advantages.

"On the whole, I come to the conclusion, that the perfect success of the new system, during the continuance of the apprenticeship, depends entirely on the conduct of the white people, and that, if it fails, on them will rest the entire blame."

Barbadoes, Grenada, and the Windward Islands.—(Slave population of Barbadoes 82,807; of Grenada 23,536.)—The following are extracts from the despatches of Governor Sir Lionel Smith:- "August 5th, 1834.—The apprenticeship commenced in this island on the 1st instant, the labourers throughout the country going to their usual occupations with obedience and cheerfulness." Jan. 3d, 1835.—"I have great pleasure in reporting general tranquility and industry amongst the apprenticed population of the Windward Islands."

British Guiana.—The slave population in 1833 amounted to 53,413. In this part of our West India possessions the 1st of August was set apart as a day of worship. The churches and chapels were crowded, and the addresses delivered were calculated to impress upon the minds of the apprenticed labourers the necessity of performing their diminished labour with zeal and alacrity. However, on Monday, the 4th of August, the labourers on many estates expressed a determination to do no more work than one-half of what they performed when slaves, asserting that they knew such to be the king's order. Sir J. C. Smyth immediately issued a proclamation explaining the law as follows:—"You, who are working on estates, must work for your employers 7½ hours per day, or 45 hours per week. If you prefer task-work, and the manager and you agree about the task-work, he and you are at liberty to make an agreement to that effect, which must be written in a book, and be seen and approved of by a special magistrate. You must labour the number of hours as settled by the law, or perform such a quantum of task-work as you agree to undertake: the law is clear and positive and must be obeyed." The prompt employment of judicious measures was attended with the desired effect: and in December, 1834, the Lieutenant-Governor states in his despatches, that "there cannot now be a reasonable doubt, in the minds of even the most determined opponents of the apprentice system, but that it does work, and will work, well to the end of the six years. Whether at the close of the apprenticeship the labourers will work on the several estates, depends entirely on the planters themselves. Anger and excitement have had their day: a feeling of self-interest cannot but introduce mild and conciliatory measures." Despatch of March 4, 1835.—"The most complete tranquility continues to prevail, and the industry and good will with which the apprenticed labourers perform their work is now pretty generally acknowledged, even by the planters themselves. On one estate the sea-dam gave way early on a Sunday morning; the negroes, without waiting to be summoned, ran down in a body with their tools, and instantly repaired the dam; thus preventing the estate from being ruined for several years. On another estate an extensive fire was extinguished by the exertions and good will of the negroes; the manager was compelled to order the labourers to

come down from the tops of the buildings, and not expose themselves to the very imminent danger they voluntarily encountered to preserve their master's property." The April despatches are accompanied by a return, showing the number of apprenticed labourers whose services have been transferred by sale since the 1st of August, 1834. It appears from this report that the average price of the services of an unattached prædial labourer, including the claim to compensation, has been rather more than 100*l.* sterling; and the average price of the same services, the vendor retaining the claim to compensation, has been more than 47*l.* sterling. The average price of the services of a non-prædial labourer, and which services will cease in three years and three months, have sold upon an average, when the claim to compensation was included, at about 39*l.* sterling each; and in those cases where the vendor has retained his claim to compensation, at about 29*l.* each. The Lieutenant-Governor remarks:—"This state of things does not show any depreciation of property, or a want of confidence in the benefit to be derived from the labour of the apprentices, whether in the field or in the house." The despatch for May notices the arrival of white immigrants. Sir J. Smyth writes, that he expects this circumstance will prove of the greatest advantage to British Guiana. "The apprenticed labourer (he says) will witness a number of freemen working willingly and cheerfully on the same estate with himself, and contented with a very moderate hire. The character of the freed labourer cannot but be raised in his own estimation, and in that of the negroes generally, when they witness free white men willingly submit to the same employment." July 6, the Lieutenant-Governor writes home as follows:—"I do not apprehend that there is any part of the King's dominions, in which the population is more tranquil and industrious than they are in this colony; the most perfect good order and regularity prevail."

Mauritius. The Abolition Act did not come into operation here until the 1st of February, 1835. A despatch of General Nicolay, the Governor, dated February 16, is the only one printed. It states, that "the new system works well; masters and apprentices appearing content." The slave population in 1832 amounted to 63,164.

PUBLIC WORKS IN IRELAND.

Two Reports have recently been issued by the Select Committee appointed to inquire into the amount of advances made by the Commissioners of Public Works in Ireland, the regulations under which they were made, the purposes to which they have been applied, and the amount of repayments. The Committee having directed its inquiries to the subject of reclaiming waste lands in Ireland, with a view of ascertaining to what extent the suggestions for effecting this object (which are contained in various reports made by committees and commissioners) have been complied with, the second Report is devoted to this part of their investigation. The constitution and functions of the Irish Board of Works, and its past proceedings, form the topics of the first Report.

The Irish Board of Public Works was constituted in 1831, by the Act 1st and 2d Will. IV., c. 33, and has been charged, by the provisions thereof, with the execution of the following objects:—1st. The management of a fund of 500,000*l.*, placed at its disposal, under the sanction of his Majesty's Treasury, for loans in aid of public works, and individual outlay, for the purposes mentioned in the Act. 2d. The management of a fund of 50,000*l.* for grants in aid of the formation of roads and bridges, and small piers and harbours along the sea-coast. 3d. Inland navigation. 4th. The fisheries of Ireland, formerly under the superintendence of the late Directors-General of Inland Navigation. 5th. Certain roads and bridges under the Act of the 6th Geo. IV., c. 101.

The following additional duties to those specified in the Act have been committed to the Board by the Lord-Lieutenant of Ireland, or by particular Acts:—The charge of the public buildings in Dublin and the Phœnix-park, Dunmore harbour, Kingstown harbour, Lunatic asylums, with many others of extensive, but more temporary nature.

The Board consists of a chairman and two commissioners, assisted by a secretary, an accountant, an engineer, and a very moderate establishment of clerks. The Board of Works superseded five different Boards, the annual expenses of which were nearly 10,000*l.* a-year, while the actual annual cost of the present Board is 5,500*l.* A part of this charge is defrayed out of the profit obtained by interest payable on loans beyond the cost of such loans to Government.

The Board is authorized to lend money, with the sanction of the Treasury, to grand juries, public bodies, companies, and individuals, for any of the following purposes:—Roads and bridges, harbours, piers, docks, canals and railways, mines and quarries, drainage and improvement of estates, buildings or other description of public works. By an Act passed in 1834, the Board advanced 100,000*l.* to the Commissioners for managing Church Temporalities in Ireland.

Loans to grand juries are made on the security of presentments for levying the amount by half-yearly instalments, of not less than 10*l.* per cent. per annum of the sums lent, with an annual interest not exceeding 5*l.* per cent. For public works, loans are made on the security of the "rates, rents, tolls, profits, and receipts." Loans to individuals, for drainage or other improvement of estates, (which are limited to cases where the value of the land will be increased at least 10*l.* per cent. on the sum proposed to be expended,) are required to be paid within three years after the expiration of the period fixed by the Board of Works for the completion of the improvement, with interest, payable half-yearly, of not less than 5*l.* per cent. per annum. In addition, the Board requires that an individual applying for a loan shall provide two sureties for the full and complete execution of the work within a period to be fixed by the Board, not exceeding seven years. The Board is authorized to take personal security as a collateral security, and also to make loans, not exceeding 1,000*l.* for one work, on personal security alone, provided the parties shall have previously expended or deposited a sum equal to one-half of the estimated cost of the proposed work; such loans to be repayable within five years, with interest of not less than 5*l.* per cent. per annum. The total of loans on personal security cannot exceed 50,000*l.* at any one time. The securities to the Board have priority over other securities, if four-fifths in value of the incumbrances agree, but not otherwise.

The amount of loans approved by the Board of Works, (some of which are not definitively sanctioned,) is 497,170*l.* 18*s.* The amount of the loans sanctioned is 351,770*l.* 18*s.* The amount of advances made on account of such loans is 195,250*l.*; and there is as yet to be lent, supposing all the loans approved of shall be sanctioned, and of which there is little doubt, only 2,829*l.* 2*s.* This residue is the sole amount for which the Board of Works can at present entertain applications.

The following is a statement of the objects for which loans have been made:—Roads, 79,698*l.*; bridges, 49,412*l.*; navigations, 29,160*l.*; harbours and quays, 111,950*l.*; railways, 80,000*l.*; quarries and culm-pit, 9,500*l.*; mine (machinery), 2,000*l.*; drainage, 2,200*l.*; court house, 5,000*l.*; hospital, 2,500*l.*; chapels, completing, 750*l.*; Dublin wide streets, 25,000*l.*; Ecclesiastical Commissioners, 100,000*l.*—Total, 497,170*l.* Of these loans 10,850*l.* has been appropriated to individuals; and of that sum 350*l.* has been appropriated on personal security only. The interest on all the loans has in general been regularly paid; and the securities taken for the principal are such as to give hopes, as far as can be at present foreseen, of the repayment of the whole sum appropriated. The sum of 20,796*l.* 19*s.* 10*d.* has been received in repayment of the principal, which is, as nearly as possible, all that has fallen due.

Out of the fund of 50,000*l.* which the Board of Works is empowered to grant in aid of the construction of roads and bridges, and of small harbours, piers, and quays on the sea-cost, 32,708*l.* 6*s.* 2*d.* has been appropriated; *viz.* for roads, 30,067*l.* 12*s.* 2*d.*; bridge, 2,222*l.* 14*s.*; piers and quay, 418*l.* An Act passed last session authorizes the Commissioners to expend 7,000*l.* and upwards in the rebuilding of Portumna bridge, on the Shannon; so that the sum remaining at the disposal of the Board is only about 10,000*l.*

The Committee remark—"There is every reason, in justice and policy, for extending in Ireland the public aid for such purposes as those above mentioned, in a degree that does not admit of comparison with the consideration that would be the guide of other parts of the United Kingdom. * * * * The experiment has so far succeeded, and the funds are nearly exhausted. Your Committee strongly recommend an extension of the measure, with such modifications as experience has pointed out to be desirable."

The Committee recommend, in case the powers of the Board of Works be continued, that no part of the expenses of the Board be charged on the loans. The Scotch Board of Public Works is defrayed by an annual appropriation of 6,000*l.* on the Scotch revenue, which defrays the expenses of management, and leaves a residue of 3,000*l.* in aid of the works. They also recommend that, under the direction of the Lords of the Treasury, the Board of Works should possess some degree of control over the county surveyors employed by the grand juries, and that the grand juries should report to the Board on the progress of all public works carrying on under their authority, for the purpose of enabling the Board of Works to ascertain the extent of all the operations of that kind going on throughout the county.

In the evidence of Colonel Burgoyne, Chairman of the Board of Public Works, it is stated that cases occur "where very useful lines of road would be carried through a country, but, for want of power to pass through some very small portion of an individual county which fancies its interests opposed to it, the whole measure has been defeated. I have known instances of two counties presenting for a bridge, and if the plans of the two engineers employed had been followed, the two halves of the bridges would have been of different constructions and at different parts of the river." To meet cases of this description, it is recommended that the Board of Works be empowered to carry improved lines of road through distinct counties, under regulations similar to those which are already in operation respecting the construction of bridges which unite distant counties. By an Act passed in 1834 the Postmaster-General has a power, for one year, of causing repairs to be made on railroads, through the Board of Public Works: and it appears to be the opinion of the Committee that this Act might be advantageously continued. Where the entire charge of constructing a road is borne by the Government, it is of course but right that the Board of Works should act without reference to the grand jury.

The Committee remark that a useful power may be given to the Board, acting under the direction of the Government, of causing surveys to be made of lines of road and other public works, for the purpose of suggesting improvements to grand juries and other public bodies.

By an Act of 1st and 2d Will. IV., c. 57, powers are given to grand juries and individuals, for the reclamation and protection of lands on the banks of rivers and lakes, by sinking, embanking, and removing obstructions; but these powers, though efficient and important, have not been carried into operation from the want of enterprise or want of confidence in persons to execute the works; but were they conferred on the Board of Works, the Committee are of opinion the beneficial objects of the law would be speedily and safely accomplished: the interference of the Board to be called into operation by a requisition from the majority in value of the landed proprietors interested: the works to be completed under the direction of the Board: the benefit derived to each estate to be ascertained by a jury, and the charge of the works to be allocated accordingly, becoming a lien on the land.

While a Board of Works for Scotland was constituted in 1803, under the control of which 874 miles of roads, and more than 1,000 bridges, have been constructed in the uncultivated districts of that country, the formation of roads in Ireland, with the aid of parliamentary grants, commenced only in 1822. In Scotland upwards of 5,000*l.* a-year is paid out of the public money, in aid of the sums raised by local taxation, for the purpose of repairing the roads thus formed, and of 300 miles of Government roads made in the same districts during the last century.

At present the Irish Board of Works is engaged in completing the construction of new roads in the districts of Mayo and Galway, but is not provided with funds for carrying them to an extent commensurate with the wants of the western districts of Ireland, and the importance of such lines of communication to the public, as they promote the improvement of the local population, and enhance the resources of the revenue. The Board is also charged with the superintendence of the repair of Government roads in the counties of Clare, Cork, Galway, Kerry, Leitrim, Limerick, Mayo, Roscommon, and Tipperary, extending in all to 581 miles; the expenditure on 334 of which, in 1834 amounted to 5,255*l.*: and the whole charge is levied off the counties.

The Committee, after pointing out the fact that scarcity and distress most frequently occur in those districts where there is a deficiency of roads, and alluding to the extraordinary advantages arising from an expenditure of public money in the carrying on of works through the remote districts of Ireland, state that, after mature deliberation on the evidence obtained, and four years' experience of the working of the present Board of Works, they are prepared to recommend to the consideration of the House,—1st. That the Loan-fund be increased by a power of issuing Exchequer bills for an additional sum, which, together with the 500,000*l.* already granted, shall be a revolving fund for annual outlay in loans. 2d. That the Lords of the Treasury shall have power to reduce the rate of interest payable upon the loans to any rate not lower than the cost to Government. 3d. That in respect of loans to individuals, except in case of a loan on personal security, the repayments be at periods of time varying from seven to fifteen years; the first repayment to commence, at the furthest, at the expiration of five years from the commencement of the loan. 4th. That in respect of loans for all public works, except loans to grand juries, the repayments be made by half-yearly instalments, at the annual rate of 6*l.* per cent. on the original amount, out of which the interest is to be deducted at the rate agreed upon. 5th. That the shares and stock of all such public companies as shall be approved by the Treasury may be taken as securities, as well as Government and Bank stock, Exchequer bills, and India bonds. 6th. That power be given to the Lords of the Treasury to enlarge the time for repayment on the agreement for the loan. 7th. That the writing obligatory required by the eighteenth section of the Act be given, at the discretion of the Lords of the Treasury, either to his Majesty, as thereby directed, or to the secretary of the Commissioners, so as to relieve the party from becoming a Crown debtor. 8th. That power be given to the Lords of the Treasury, if they shall think fit, to dispense, at the time of the contract for the loan, with the obligation contained in the forty-eighth section.

The 18th section, above alluded to, provides that all persons, public bodies or companies, (except grand juries,) who borrow money under the Act, or become security for others, shall, besides the securities in each case respectively directed to be taken, become bound to his Majesty, by writing obligatory, in such penal sum as shall be directed by the Commissioners. By the 18th section, power is given to the company to sue proprietors or shareholders of unfinished works for money to complete the same, in case the expense exceeds the estimate.

The following are among the suggestions made by the Committee:—That loans be made a first charge, if not on the whole of the estates improved, on the particular portion of the estate reclaimed or rendered more valuable by the outlay of them. That previous to the commencement of improvement of waste lands, such lands to be valued, and the claim of the mortgagee or incumbrancer on that portion of the estate to be limited to the amount of the valuation. Officers of the Irish courts, and of the Registry office, to make searches for incumbrances and settlements affecting the properties on which securities are offered, without fee or duty; the searches to be retained in the office of the Board of Works, and used only for official purposes. With the sanction of the Court of Chancery, to be obtained by petition in a summary way, tenants for life and other persons having particular estates to be allowed to charge the outlay on the inheritance, but the outlay in no case to exceed three years' annual value of the estate. On the repayment of loan, such persons to have a lien on the inheritance for the amount repaid out of the rents and profits accrued, due during the continuance of such life; according to the principle recognized by the law of Scotland; in England by the Inclosure Acts; and in Ireland by the Acts for encouraging the planting of trees. The committee strongly recommend that the maximum of interest should be no higher than 4*l.* per cent.

The Grant Fund of 50,000*l.* being nearly exhausted, the committee recommend an additional grant for similar objects, *viz.*—useful public works of any description, and as moiety grants in aid of undertakings by individuals, where no direct tolls or profits would arise; and also for the whole expense of works in remote poor districts, where a moiety of the expense could not be obtained either from individuals or public bodies, and in completing the roads already commenced by Government; and they suggest

that the terms on which such grants are made, should be rendered more favourable to individuals.

As to the execution of all works for which a grant shall be made, the Board of Works should undertake the sole direction in every case where it has supplied the whole of the necessary funds; and when a grand jury has contributed towards the expenses, a committee should be appointed to communicate with the Board before making a final presentment for the contribution.

Grants for small piers, quays, and harbours on the sea-coast are at present restricted to sums not exceeding 1,000*l.*, and it is suggested that it might prove advantageous were grants also made to similar works on navigable rivers and lakes, and that the grand juries should have the power of presenting for the moiety of the cost of such works to be levied off the district in which they would be situated. Small tolls, it appears to the committee, might be usefully levied, the rate to be fixed by the Board of Works, and the lessees of the tolls to be bound to protect the works.

The numerous eligible sites for safety harbours on the cost of Ireland are capable of being made, by an outlay of no very great amount, secure havens for commercial shipping, thus promoting the shipping interests of Great Britain, and conferring local benefits on Ireland, by affording employment, and encouraging the deep-sea fisheries.

Under the present Act, the Board of Works cannot make *Grants* for improving the navigation of rivers, but may lend for all public works. The committee, however, propose, that, for the purpose of improving the navigation of rivers and lakes, or extending canals, it would be politic, whenever individuals shall subscribe a contribution of *one-fourth* of the estimated charge, or the lands benefited shall be made liable to *one fourth* of this charge, that Government shall contribute another *fourth*, and that the remaining *half* shall be lent by the Board of Works, under certain limitations, which would, in the opinion of the Committee, prevent an improvident outlay of capital, while the communications so formed must become of great local or even national importance. The committee, however, do not feel assured that, looking at the present condition of Ireland, there would be found individuals, either as subscribers or proprietors, who would bear one-fourth of the cost of such internal improvements; they therefore recommend to the notice of the Government, as an object of sound policy, a liberal outlay of public money in effecting improvements in inland navigation, as the advantages to be obtained are in their opinion equal in importance to any for which the public money is applied. They recommend that it shall be the duty of the Board of Works, under the sanction of the Treasury in each case, to investigate the expediency and estimate the expense of improvements of the nature above mentioned, when called upon for that purpose by grand juries or baronial sessions, and that the probable cost of the required works be presented to Government, and laid before Parliament. The committee class railways with canals, as works of primary importance, and which should also be encouraged.

As one of the principal objects of the Board of Works is to encourage the application of private capital and enterprize, it was suggested to the committee that this object would be best effected by the following plan:—Where parties offer to advance one-third of the actual cost of an undertaking, the Board of Works should be authorized to advance the remaining two-thirds, one half of which proportion should be secured upon the work, to be paid by an annual charge of 5*l.* per cent. for 31 years, which is equivalent to paying 3*l.* per cent. interest, and investing 2*l.* per cent. as a sinking fund, and that whatever profit shall arise from the work over and above five per cent. per annum during the repayment of the first part of the loan, shall go to the Company, and that so soon as the first part of the public loan shall thus be paid off, the entire surplus, over and above five per cent. per annum on the private advance, shall then be applied to the repayment of the second part of the public loan, but without interest; after which the entire profit may be divided by the company. This plan, it is remarked, is deserving of attention, inasmuch as it establishes a mutual interest between the borrower and the lender.

The recommendations which the Committee found on the evidence they obtained relative to the reclaiming of the Irish Waste Lands are contained in the second Report, which it is proposed to notice at an early opportunity.

THE EXCISE ON MALT.

The Fifteenth Report of the Commissioners of Excise Inquiry relates to the Malt Duty, and the various regulations which have been devised for the collection thereof. The duty on malt was first imposed in England in 1697, and the earliest returns which can be obtained show that the quantity made in 1702 was 12,166,778 bushels, imperial measure, and the rate of duty being $6\frac{16}{31}d.$, the revenue thereon amounted to 313,907*l.* 5*s.* No alteration of the duty took place until 1760, but considerable variation seems to have occurred in the quantities charged with duty. In 1703 the duty was more than double the sum produced in the previous year, being 691,577*l.* 4*s.* 11*d.* We find the highest amount produced in 1722 and 1744, the duty in the former year being 855,860*l.* 18*s.* 7*d.*, and in the latter 822,943*l.* 12*s.* 5*d.* In 1701, 1706, 1709, 1710, 1711, 1712, 1714, 1728, 1729, 1740, 1741, and 1757, the duty collected each year was under 600,000*l.*, and was the lowest in the last mentioned year, when it only amounted to 457,719*l.* 16*s.* 8*d.* In 1760, the malt duty was increased from $6\frac{16}{31}d.$ per imperial bushel to $9\frac{3}{4}d.$: on an average of three years preceding this alteration the duty amounted to 611,017*l.* 8*s.* 11*d.*, and for the three subsequent years it averaged 963,760*l.* 9*s.* 1*d.* The quantity made, though varying considerably, was not less than before the additional duty had been imposed. An unimportant increase in the duty took place in 1779, but in 1780, it was raised from $9\frac{1}{4}d.$ to 1*s.* $4\frac{1}{4}d.$; but the total amount of revenue derived from malt still kept progressively increasing. For the three years preceding the year in which the duty was changed it averaged 1,018,361*l.* 6*s.*. 7*d.*, and for the three subsequent years 1,600,815*l.* 18*s.* 4*d.*; in the next ten years no great increase seems to have taken place in the consumption of malt; for the three years preceding 1791, the duty averaged only 1,614,172*l.*, being little more than the duty obtained in 1780, 1781, and 1782. In 1791, the duty was raised from 1*s.* $4\frac{1}{4}d.$ to 1*s.* $7\frac{1}{4}d.$, but in the following year it was again reduced to 1*s.* $4\frac{1}{4}d.$, notwithstanding which, the quantity of malt consumed during the years 1793, 1794, and 1795, was much less than it had been in 1791, when 27,070,363 bushels were charged with the duty, while in 1795, the quantity charged was somewhat under 24,000,000 bushels. In 1796, the quantity of malt charged with duty rose to 27,282,973 bushels; in 1800, when the crops had, to a large extent, failed, only 14,049,719 bushels were made; in 1802, the duty was increased, from 1*s.* $4\frac{1}{4}d.$ to 2*s.* 5*d.*; in the following year it was again increased, from 2*s.* 5*d.* to 4*s.* $5\frac{3}{4}d.$ The average amount of duty was 5,218,279*l.* 14*s.* 9*d.* for the three years subsequent to this last alteration: for the three years during which (with the exception of the short period when the duty was 2*s.* 5*d.*) 1*s.* $4\frac{1}{4}d.$ a bushel was charged, it produced 1,417,484*l.* 16*s.* 4*d.* The duty continued at 1*s.* $5\frac{1}{4}d.$ a bushel from 1804 to 1816; the years 1806, 1811, 1815, were those in which the duty yielded the largest amount, being for each year respectively: 5,955,716*l.*; 5,806,251*l.* 15*s.*; 5,865,606*l.* 18*s.* 8*d.*; in 1812, the duty only produced 4,042,716*l.* 16*s.* 4*d.*; for the three years preceding the reduction of the duty in 1816, from 4*s.* $5\frac{1}{4}d.$ to 2*s.* 5*d.*, the duty averaged 5,457,418*l.* 4*s.*, viz., in 1816, 4,217,259*l.* 13*s.* 1*d.*; in 1817, 2,509,817*l.* 18*s.* 4*d.*; in 1818, 2,964,021*l.* 12*s.* 10*d.*; in 1819 the duty was raised again, from 2*s.* 5*d* to 3*s.* $7\frac{1}{4}d.$; in 1822 it was again reduced, since which period no alteration has taken place, and it now remains at 2*s.* 7*d.* a bushel. For the last four years the quantity of malt charged with duty has been greater than at any period since the duty was first instituted. The following table of the highest and lowest numbers of bushels charged with duty in each of the decennial periods from 1700 to 1760, exhibits the trifling variation which has taken place in the consumption:—

At a Duty of $6\frac{16}{31}d.$ per Imperial Bushel.

1704	19,765,042	1705	27,120,982
1710	19,671,021	1717	28,859,926
1728	20,951,269	1722	32,999,688
1736	23,661,561	1733	29,795,100
1741	20,141,254	1744	31,776,789
1757	17,640,926	1750	29,284,786

At a Duty of 9¼ ½*d.* per Imperial Bushel, the highest and lowest amount charged with duty was as follows:—

1763	19,557,812	1761	28,928,960
1773	21,467,926	1772	27,538,150

At a Duty of 1*s.* 4¼*d.* per Imperial Bushel.

1783	16,712,114	1782	27,159,104
1793	23,706,765	1799	30,805,822

At a Duty of 4*s.*5¾*d.* per Imperial Bushel.

1805	21,665,204	1806	26,652,425
1812	18,092,965	1815	26,246,795

At a Duty of 2*s.* 7*d.* per Imperial Bushel.

1829	23,428,135	1828	30,517,819

Since 1830, the number of bushels charged, and the amount of duty collected in the United Kingdom have been as follows:—

	Bushels.	Amount of Duty.
1831	32,963,470	£4,257,781
1832	31,669,771	4,090,678
1833	33,789,010	4,364,413
1834	34,449,646	4,449,745

The prices of malt, per Winchester quarter, at Greenwich Hospital, at various periods from 1730 to 1833, have been as follows, according to the 'Official Tables of Revenue for 1835':—

	s.	*d.*		*s.*	*d.*
1730	20	6	1815	69	7½
1740	27	3½	1820	68	8¼
1750	24	0	1821	61	11
1760	21	9	1822	52	8½
1770	28	3	1825	71	10¼
1780	31	1	1826	65	1
1790	35	6	1830	56	1½
1800	84	0	1831	70	5¼
1805	85	7	1832	58	8
1810	81	5	1833	54	6

For the purpose of more conveniently managing the business connected with the Excise Department, England and Wales are subdivided into sixty districts, called "Collections." It is not stated what portion of the country each Collection comprises, but the ten following are those from which the largest amount of duty on malt is obtained:—

	Bushels	Duty
Leeds	1,543,035	£199.308
Suffolk	1,531,968	198,266
Bedford	1,455,984	188,061
Cambridge	1,290,437	166,681
Hertford	1,156,255	149,319
Surrey	1,057,030	136,533
Grantham	1,049,762	135,594
Norwich	1,046,085	135,119
Essex	1,030,268	133,076
Lincoln	1,023,679	132,225

In the remaining fifty "Collections," the amount of the malt duty varies from 1,206*l.* to 97,000*l.*: the amount in the London Collection is under 6,000*l.*; the Bath and Reading Collections are next in importance to those given above.

The Acts under which the malt duty is collected are the 7th and 8th Geo. IV., c. 52; 11th Geo. IV., c. 17; 8th Geo. IV., c. 81; 7th and 8th Geo. IV., c. 53. By the 7th and 8th Geo. IV., c. 52, every person making malt is required to make entry in writing, of the rooms, places, and utensils intended to be used for the purpose. An individual residing in a remote part of any Collection, and making malt solely for domestic use, may be entered as a *bye-maltster*, but the Excise officer must take a gauge of each steeping, in both cistern and couch, after which his surveys are not required to be made oftener than once a week, until the grain is dried off. Though the bye-maltster declare his intention to make no more malt for the season, and withdraw his entry, the officer does not entirely cease to visit him, but occasionally satisfies himself that he is not making privately. If malt be made for private use in considerable quantities, the person making it ceases to be considered a bye-maltster.

The regulations for charging and collecting the duties of Excise on malt are still severe, although they have in some degree been modified by the 11th Geo. IV. Permits, certificates, and surveys of stock, form no part of these regulations. The Commissioners enter into the following detail of some of the general regulations of the trade:—"The size and form of cisterns and couch-frames must be minutely specified. When a maltster has begun to wet grain, he must proceed to cover the whole with water, and continue to keep it so covered for the space of forty hours; he cannot wet grain, or take it from the cistern, except at certain prescribed hours. When corn is laid in the couch-frames, it must not be of any greater depth than thirty inches, and must be kept on them for thirty-six hours. No corn can be wetted and sprinkled after it has been thrown out of the cistern until the end of twelve days, except it has been kept fifty hours under water in the cistern, in which case it may be sprinkled at the end of eight days."

The Commissioners add:—"As making malt is a chemical process for converting raw grain into the saccharine substance of which malt consists; and, as, in conducting it, the application is required of moisture and heat in quantities which should vary according to the variations in the atmosphere and the changes in the seasons, it is obvious that the regulations, by laying down fixed rules for conducting the business, and preventing the use of the most scientific and economical modes of converting barley into malt, must be productive of injury to the manufacturers of malt, and, through them, of injury to the public."

Mr. Joseph Taylor, one of the largest maltsters in England, stated, in his examination by the Commissioners, some of the grievances under which the trade is carried on:—"We do not (he says) make malt according to our own views; but we are directed to make it under certain rules and regulations, all of which, in my opinion, or at least the greater part of them, are contrary to the good making of malt; for instance, by law, we are obliged to keep it under water so many hours, not less, and not more; all of which ought to vary as the season varies, whether it is a hard year or a soft year: but if it is the softest year that ever was, we are obliged to keep it forty hours under water, although it may injure the malt. The fact is, that we are not malt makers according to our own views of malt-making, but we are malt-makers according to the direction of the Excise." The witnesses in general complain that the regulations have been framed only to answer for making malt in winter; but some of them are as little adapted to warm weather. Mr. Barnard gives the following evidence:—"With respect to the couch, we are forced to keep it there thirty hours; it heats to such a degree in warm weather, that no after part of the process can remedy the injury it sustains. I should explain that we must not lay it more than thirty inches thick; then, in frosty weather, that couch is frozen through, in consequence of our not being able to lay it thick enough; and in warm weather it is spoiled the other way."

The regulations respecting the allowances necessary to be made for the increase in the several gauges, in consequence of the swell of the corn by the absorption of water and its subsequent vegetation on the floor, are generally complained of. These allowances were made by the Act 11th Geo. IV., c. 17, and are 17½ per cent. on the whole quantity in the cistern or couch; one-third part on the floor before the end of seventy-two hours, and one-half after. The allowances were formerly 20 per cent.; but the reduction to 17½ per cent., together with the changes that are at times made by the gauging upon the floor, operate, according to one witness, (Mr. Sayell, of Exeter,) as an additional duty, to the extent of 2*d.* a bushel on the quantity of barley put into steep.

The restrictions respecting sprinkling are at times felt to be injurious to the maltster. Under some circumstances, the germinating process which the barley undergoes requires to be stimulated. The present regulations, it is alleged, virtually amount to a prohibition of sprinkling; the malt becomes deteriorated, and the value of the maltster's property is lessened. In a letter from Messrs. Tasker and Fleet, brewers, the following plan, in regard to sprinkling, is suggested as likely to be effective, and not calculated to injure the Revenue:—"The maltster to be allowed to sprinkle when the corn is five days old from the cistern, (instead of eight, as at present,) or at any

time afterwards, such corn having been steeped in the cistern not less than forty-six hours."

The regulation compelling the barley to be steeped at least forty hours is considered to operate at times in an injurious manner. Mr. Taylor says,—"This year I consider that there is a very great deal of barley that might be made into very good malt, provided a less time than forty hours were allowed to steep; the reason for which is, that the greater part of the growth of this year's barley is very thin, and would not require, or perhaps would not bear, forty hours' water."

The fines, or compressed couches, are made a subject of complaint. Mr. John Young, in behalf of the maltsters of the Wakefield district, suggests a plan for doing away with the penalties on this head, and at the same time for securing the due collection of the revenue.

The number of malt-houses in England is 12,513; of these 7,294 are surveyed daily, 167 nine times in a fortnight, and 5,052 five times in a fortnight. In towns where the officers reside a malt-house is surveyed at least once a-day, and "twice when the best cistern or couch gauges are depending;" but the officer is not required to survey a malt-house in an out-walk, when the division can be rode in one day, oftener than nine times a fortnight; and when the circuit is so extensive that it cannot be made under two days, only five times in a fortnight. If it be considered absolutely necessary to visit a malt-house daily, as is done in the case of 7,294 such establishments, it is clear that a very unequal degree of vigilance is exercised over the trade, since 5,219 malt-houses established beyond the immediate reach of the surveyors are visited so seldom as to afford great encouragements to evade the payment of duties, the temptation being at the same time rendered very powerful by the heavy duty to which malt is subject. The Commissioners are of opinion that the duty is evaded; and this appears to be the general belief of many of the witnesses examined who are engaged in the malt-trade; but the Board of Excise do not appear to think that fraudulent practices are carried on to any considerable extent. The Commissioners come to the following conclusions, the accuracy of which is borne out by the evidence of most of the maltsters:—1. That malt is sold for a price that is insufficient to pay the expense of making it and duty. 2. That it is sold throughout the season, and in large quantities, at this price. 3. They are therefore of opinion that the duty is evaded to a great amount; and, 4. That the maltsters who pay the duty honestly are greatly injured by the competition of those who do not pay it.

The malt trade is most materially affected by the existing regulations for the payment of duties. By giving security, persons engaged in it are enabled to obtain five months' credit for the amount of duties to which they become liable, whatever may be the quantity of malt which they have made. The Commissioners point out the operation of this regulation:—"The five months' credit, in point of fact, has the effect of encouraging persons to become maltsters who possess little or no capital; for they convert barley into malt, and sell it, before the engagements they have made for paying for the barley, and for paying the expenses of malting it, fall due; and in this way they are able to carry on business with a decided advantage over those who employ large capitals. But this sort of competition deprives capital of its due remuneration, and must eventually have a considerable effect in driving out of the trade of malting those persons who, from their wealth and respectability, are the most disposed to conform to the law, and in contributing to substitute in their stead needy speculators, who, in consequence of being constantly liable to be involved in difficulties for want of capital, will be ready on all occasions to evade the regulations for collecting the duty." The Commissioners consider the system highly detrimental to the public interest, and as "giving a bonus of a five months' credit to persons without capital, to disturb and injure solid capitalists, whose welfare is identical with that of the public." The Commissioners, after having fully examined this question in all its details, conclude the discussion by saying, that, upon the fullest consideration of them, they feel themselves called upon strongly to recommend that this credit should be abolished.

The following is the total amount of penalties against maltsters, awarded, remitted, and recovered, in England, in the year ended January 5th, 1835:—Awarded 10,958*l.*, remitted 6,741*l.* 18*s.* 10*d.*, recovered 2,707*l.* 16*s.* 2*d.* The Commissioners remark:—"There certainly must be strong grounds for some change, when traders are so heavily amerced, with no other result than the remittance of the punishment to which they have made themselves legally liable." The Act 7th and 8th Geo. IV., c. 52, which the 11th Geo. IV., c. 17 modified to a considerable extent, contained regulations enforced by 106 penalties, amounting in all to the enormous sum of 13,500*l.*

On the ameliorations which it would be desirable to introduce in the practical part of the trade, we gather the following information from the Report. The Commissioners of Inquiry express their concurrence in the opinion of Mr. Young, one of the maltsters examined, that "the law is imperfect, inasmuch as it makes no distinction between winter and summer;" and they suggest that powers should be vested in the hands of the Board of Excise for making alterations in the regulations suitable to the respective seasons. They recommend, with the sanction of the Surveying-General-Examiner of the Board of Excise, that the law respecting the allowance on the couch-gauge and floor-gauges (at present 17½ per cent.) should be restored to what it was, respecting both these allowances, prior to the Act of 11th Geo. IV. On the subject of sprinkling, the Commissioners consider the maltsters entitled to indulgence. Mr. Hetherington, the Surveying-General-Examiner of the Board of Excise, does not object to an alteration, provided the grain has been in the cistern fifty hours, in six days instead of eight days, after removing the grain from the cistern.

In a communication to the Commissioners of Excise Inquiry the Board of Excise profess, in very satisfactory terms, their readiness to reconsider their various regulations, and to grant relief where it shall appear to be called for. They say,—"That there is no indisposition, on the part of this Board, to the removal of those restraints which are really injurious to the operations of the maltster must be well known to the trade from the attention which, particularly in the year 1828, was paid to their suggestions, and the readiness with which, after full discussion, they were adopted. The regulations, as established at that time, appeared to be entirely acquiesced in as necessary restraints upon the fraudulent trader, and, in that view, beneficial to the Revenue and to those who were disposed to carry on their business in a fair and lawful manner. If, however, experience shall have shown that the mode of working requires further relief, we should, with the same readiness, consider such specific objections as can be urged to any part of the present law."

Nor are the views of the Commissioners of Excise Inquiry less friendly and liberal towards the interests of the trade. They remark,—"With respect to the reasons which have been adduced by the maltsters for making changes, and those which have been given by the Commissioners of Excise against making them, we feel some difficulty in deciding upon their relative weight, for want of that degree of scientific and technical knowledge which is necessary for forming a correct judgment: but we strongly recommend that your Lordships* should give instructions to the Commissioners to take into their most attentive consideration all that the maltsters have stated in their examinations in the way of objection to the regulations under which they are compelled to carry on their trade, with the view of a revision of all the provisions contained in the malt laws. Such a course of proceeding will, we trust, lead to a more safe and satisfactory result, both with reference to the interests of the maltsters and the interests of the revenue, than if we were to attempt, even with the assistance of the extensive information we have received, to make a specific recommendation on each specific complaint."

The malt duty was first imposed in Scotland, in 1714. The number of bushels charged with the duty in 1834 was 4,491,292, and the amount of duty obtained 553,567*l.* In Ireland no duty was placed on malt before 1785. The duty in that part of the United Kingdom produced 272,291*l.* in 1834, and the number of bushels charged was 2,204,653. The duty, both in Scotland and Ireland, is 2*s.* 7*d.* per bushel on malt from barley, and 2*s.* on bere or bigg malt.

* The Report is addressed 'To the Right Honourable the Lords Commissioners of his Majesty's Treasury.'

NOTICES OF MOTIONS

Which now stand in the Order Book of the House of Commons for the next Session.

1. Mr. Wallace—Returns as to the Progress made in procuring a regular Communication by Steam Packets from Suez to Bombay and Calcutta, and in effecting a Communication with India by the Euphrates.
2. Mr. Hughes Hughes—Bill to exempt from Duty Legacies to Charitable Institutions.
3. Mr. S. Mackenzie—Select Committee on the present State of Education in Scotland.
4. Mr. Wallace—To move an amendment to the above motion.
5. Mr. Mullins—Select Committee on Irish Fisheries.
6. Mr. G. Berkeley—To move that Report of Committee on the Admission of Ladies into the Gallery be adopted, and that there be a call of the House on that occasion.
7. Mr. Bowring—Bill for the Establishment of Trade Councils for the Settlement of Disputes between Masters and Workmen; for the Security of the Copyrights of Patents, &c.
8. Mr. Wallace—Bill to repeal Augmentation of Stipends' Acts (Scotland.)
9. Mr. Wallace—Bill to empower Heritors at large to choose the Parish Schoolmasters (Scotland); and for their periodical Election.
10. Mr. Handley—Bill to take from the Corporation of London the Exclusive Privilege of holding Markets within seven miles thereof.
11. Mr Wallace—To move that on Select Committees the Names of the Members putting questions be printed with the Question.
12. Mr. Wallace—Committee on Toll Dues, Nature of Mail Contracts, State of Roads, &c on the Dublin and Naas, and Naas and Limerick Roads.
13. Mr. Wilks—For the Consideration and Redress of the practical Grievances of Protestant Dissenters.
14. Sir W. Brabazon—Select Committee on the present Irish Grand Jury Bill.
15. Mr. Wallace—Select Committee on the Practice of the Law in Scotland, and on the Means in progress for the better Administration of Justice; and on the present system of Conveyancing.
16. Mr. Wallace—Select Committee on the best Mode of manufacturing Rope for the Navy.
17. Mr. A. Chapman—Bill to render the Mortgagee of any Ship liable to her contract Debts equally with her Owners
18. Mr. Wallace—That Grants to the Harbours of Portpatrick and Donaghadee be suspended, until Surveys be made for the purpose of ascertaining whether these Harbours are superior to others adjacent.
19. Colonel Leith Hay—Bill to establish Town Councils in Towns in Scotland, not Royal or Parliamentary Burghs.
20. Colonel Leith Hay—Bill to amend Scottish Burgh Reform Act relating to Town Clerks.
21. Colonel Leith Hay—Bill to amend the Scottish Statute Labour Act.
22. Mr. Rippon—To move that Deans and Chapters not having Cure of Souls are useless; and that their Property be placed in the hands of Commissioners; regard being had to existing Interests, and the performance of Worship in the respective Cathedrals.
23. Mr. Rippon—Bill to remove the Archbishops and Bishops from the Upper House of Parliament.
24. Mr. G. F. Young—Committee on the present Construction of Ships for the Navy.
25. Mr. Aghonby—Committee to classify and arrange the Returns of Justices of Peace in England and Wales.
26. Mr. Freshfield—Bill to prevent Actions for Damages in cases of Libel, until after Notice in writing to the Party intended to be sued, and to enable such Party to tender Amends.
27. Mr. G. F. Young—Bill to repeal Duties on Goods imposed within the Limits of the exclusive Privileges of the South Sea Company.
28. Mr. C. Villiers—Bill for regulating Elections in the City of York.
29. Mr. Ruthven—Reports, Returns, and Accounts relating to the Post Office in Ireland.
30. Mr. Ruthven—Select Committee on the Law respecting Joint Stock Companies.
31. Mr. Ruthven—State of the Law respecting Salvage; and Proceedings of the Irish Admiralty Court.
32. Mr. Ruthven—To move for a more effectual Mode of enforcing, without unnecessary Delay, Returns ordered by the House.
33. Mr. W. Praed—Bill for preventing the Election of Insolvent Persons to Seats in Parliament; for causing the Seats of Insolvent Persons to be vacated; for giving Facilities to the Creditors of bankrupt Members; and for rendering the Property Qualification of Members more effectual.
34. Mr. T. Duncombe—Resolution for the Repeal of Clause in the Reform Bill, rendering the Payment of Rates and Taxes by a certain day one of the Qualifications for exercising the Elective Franchise.
35. Mr. T. Dundas—Bill relative to Seamen's Fund at Lerwick.
36. Sir A. Agnew—Bill or Bills to extend to all Classes the Privilege of Protection in the due Observance of the Lord's Day.
37. Sir A. Agnew—Address to his Majesty, praying him to command Governors, Ambassadors, Consuls, &c., to make all Arrangements with reference to the due Observance of the above Day.
38. Mr. E. L. Bulwer—Bill for the Admission of Dissenters to the Universities.
39. Mr. Maxwell—That Report on Hand-loom Weavers be referred to a Committee of the whole House.
40. Mr. Cayley—To bring under consideration Report on Mr. Gurney's Case.
41. Mr. Tooke—Sessional Committee for securing the more uniform and convenient Conduct through the House of Divorce Bills, Estate Bills, and Bills of Naturalization.
42. Sir R. Bateson—Bill to authorize Relief of Poor in Ireland in certain cases.
43. Sir R. Bateson—Bill for the Administration of certain Civil Affairs in Ireland.
44. Mr. Wilbraham—Committee on Salt Monopoly in India.
45. Mr. Maxwell—Bill to amend Statute Labour Act of Lanark.
46. Mr. Robinson—Bill to revise the Taxation of the Country.
47. Mr. Robinson—Bill to permit Foreign Grain to be taken out of Bond Duty free, under certain Restrictions, to be manufactured into Flour and Biscuit for exportation.
48. Mr. Elphinstone—Bill to disfranchise the Freemen of Great Yarmouth.
49. Mr W. S. O'Brien—Measures for Relief and Employment of Poor in Ireland.
50. Mr. Ewart—State of Malta.
51. Mr. Baring Wall—Committee on the Expediency of referring all Plans for Canals and Railroads to a Board appointed by and under the Control of Government.
52. Captain Pechell—Bill for regulating the Channel Fisheries.
53. Mr. O'Connel—Bill to repeal Act 4 and 5 Will. IV., for facilitating Loans on Landed Securities in Ireland.
54. Mr. Wyse—Bill for establishing a Board of Charities in Ireland.
55. Colonel Verner—Select Committee to continue the Inquiry into Orange Societies; and to extend it to all secret Societies in Ireland.
56. Mr. Bish—Address, praying his Majesty occasionally to hold his Court and Parliament in Ireland.
57. Mr. Robinson—Bill relating to Uncompensated Officers of the East India Company.
58. Sir W. Brabazon—Bill to amend the present Grand Jury Bill.
59. Mr. H. Fleetwood—Bill respecting Church Discipline.
60. Mr. Mullins—Select Committee on Irish Fisheries.
61. Mr. S. Crawford—Bill to amend the Law of Landlord and Tenant in Ireland.
62. Mr. S. Crawford—Committee to inquire into the Local Taxation of Ireland.

63. Mr. F. Buxton—Motion for the Extinction of the System of Apprenticeship in the Colonies.
64. Colonel Sibthorp—To move Reduction on all Official Salaries above 800*l.* a year.
65. Mr. Lawson—Return of Flax imported, with a view of showing the Expediency of Encouraging the Home-growth of Flax.
66. Mr. Roebuck—Bill to take away the Veto of the House of Lords, and to substitute a Suspensive Power; so that Bills passed twice during the same Session in the House of Commons shall become Law on receiving the Royal Assent.
67. Mr. Hume—Committee to inquire into the Qualifications and Privileges of Peers in Parliament; into the Constitution of that House, and to consider how far it has fulfilled the duties of a Legislative Body: also, into the manner in which Conferences and Communications with the House of Lords and Commons are held and made.
68. Mr. Poulett Scrope—Bill for Relief and Employment of Irish Poor.
69. Mr. Poulett Scrope—Bill for the Utilization of Waste Lands in Ireland.
70. Mr. Poulett Scrope—Bill for Levying Poor Rates on a Uniform System of Valuation.
71. Mr. Chalmers—Bill relating to Landlord's Right of Hypothec on Grain in Scotland.
72. Mr. W. S. O'Brien—To provide for the Slave Compensation Fund, Government to be authorized to issue Notes of One and Two Pounds, convertible into Gold on demand.
73. Mr. O'Connell—Bill to amend the Law of Libel.
74. Mr. O'Connell—Bill to restore Trial by Jury in Cases of Wilful Trespass in Ireland.
75. Mr. O'Connell—Bill to regulate Distresses for Rent in Ireland.
76. Mr. O'Connell—Committee on the Administration of Justice in Ireland.
77. Mr. O'Connell—Committee on the Introduction of the Principle of Representation into the Upper House.
78. Mr. O'Connell—Bill to ascertain and extend the Right of Parliamentary Suffrage in Ireland.
79. Mr. O'Connell—Renewal of Committee in the Case of the Baron de Bode.
80. Mr. Hume—Committee to inquire into the Interference of an Assistant Secretary of the Treasury in January, 1835, respecting the Exercise of the Elective Franchise by persons employed in the Coast Guard Service.
81. Mr. Hume—Bills for vesting Lighthouses in the Trinity-house; and making other provisons respecting the same.
82. Mr. Hume—Bill to regulate Election Expenses in England and Wales.
83. Mr. Ewart—Equalization of East and West India Sugar Duties; also, General Reduction of Duties on East India Produce.
84. Sir W. Molesworth—Bill to dispense with the Qualification of Members of Parliament.
85. Mr. Buckingham—Bill to enable Towns to provide Public Walks, Play-grounds, Baths, &c.
86. Mr. Buckingham—Bill to enable Towns to form Literary and Scientific Institutions, Museums, Libraries, and Halls of Entertainment and Instruction for the Labouring Classes.
87. Mr. Buckingham—Bill for Regulating and Restricting the Increase of Public Houses.
88. Mr. Buckingham—Committee on the Defective State of the Construction and Equipment of Merchant Shipping.
89. Mr. Buckingham—Committee to inquire into the Effect of the Merchant Seamen's Registration Bill.
90. Mr. Henry Grattan—That Tithes in Ireland be abolished, and that, in lieu thereof, a sum equal to a stated Amount of the Compositions be levied by a General Tax, to be imposed upon Property.
91. Mr. Hawes—Bill to amend the Gaol Act.
92. Mr. Wakley—Resolution for the Partial or Total Abolition of the Newspaper Stamp Duties.
93. Mr. Wakley—Bill for the Repeal of the Septennial Act.
94. Mr. Wakley—Bill for the Repeal of Sturges Bourne's Select Vestry Act.
95, 97. Mr. Wakley—To bring before the House the Cases of Two Military Officers, who complain of having been unjustly treated.
96. Mr. Wakley—To bring before the House the Case of R. G. Butt, who, in conjunction with Lord Cochrane, was prosecuted on a Charge of Conspiracy.
98. Mr. Ewart—To propose Resolutions relative to Select Committees.
99. Mr. Ewart—That none but Business of a formal and undisputed Nature be entered upon after Eleven at Night.
100. Mr. O'Connell—That the Rights of Parliamentary Suffrage be extended by Birth, Servitude, and Marriage, to the Sons, Apprentices, and Sons-in-law of the new Burgesses created by the Corporation Reform Bill.
101. Mr. Wallace—Committee on the Bonding System, and on the unequal Privileges enjoyed by different Ports.
102. Mr. Wallace—Case of the late Deputy Postmaster of Bath.
103. Mr. Wallace—Bill relating to the Scotch Oyster Fisheries.
104. Mr. Wallace—Bill to enable Towns to expend Statute Labour-money in improving the Streets of such Towns.
105. M. C. Buller—Committee on the Record Commission.
106. Mr. Pryme—Bill to abolish Grand Juries in England and Wales.
107. Mr. Pryme—Bill to repeal Stamp Duties on Arbitrations and Awards.
108. Mr. Pryme—Instructions to Committees on Enclosure Bills.
109. Mr. Wilks—Committee on the Expediency of establishing one or more National Universities.
110. Mr. Wilks—Address for Inquiry into the Universities of Oxford and Cambridge.
111. Mr. Wilks—Bill to amend the Law by which the Clergymen officially preside at Parish Vestries, and Persons have a Plurality of Votes.
112. Mr. Wilks—Committee on the present System as to Justices of the Peace.
113. Mr. Hume—Bill to Consolidate the Boards of Customs, Excise, Taxes, and Stamps.
114. Captain Alsager—To move that Persons making frivolous and vexatious Objections to the Revising Barristers against Persons claiming a Right to Vote shall be liable to an Award of Damages not exceeding the Expenses incurred by the Person claiming the Right to Vote.
115. Mr. Ewart—Address in favour of appointing Peers for Life.
116. Mr. Ewart—Bill providing that Land shall be equally divided amongst the Children, male and female, of the Family, in Cases of Intestacy or Absence of contrary Settlement.
117. Mr. Chalmers—Bill to alter the Powers of burthening Estates of Heirs of Entail in Scotland, for the purpose of making Turnpike roads.
118. Sir E. Codrington—Return of Naval Officers deprived of Half-pay since 1790.
119. Mr. Hume—That all Payments by Members for the Delivery of Sessional Papers, and all Gratuities to Door-keepers and Messengers, shall cease.
120. Mr. Wilks—For the Consideration and Redress of the practical Grievances of Protestant Dissenters.
121. Mr. Wilks—Bill for the better Registration of Births, Marriages, and Deaths in England and Wales.
122. Sir S. Whalley—Resolution for the Repeal of the Window-tax.
123. Mr. Grove Price—That the Notices, Nos. 66 and 67, be erased from the List.
124. Mr. Hume—Address praying his Majesty to remove from the Public Service, at home and abroad, every Officer and Public Functionary who shall be in any way connected with any Orange Lodge, Ribbon Lodge, or any Institution or Association (Freemason's excepted), having secret Forms of Initiation, and being bound together by any religious Sanction, and with secret Signs and Passwords for Recognition of Members of such Bodies, one Month after Proclamation forbidding such Lodges, Associations, and Clubs.

THE REVENUE.

ABSTRACT of the NET PRODUCE of the REVENUE of GREAT BRITAIN, in the Years and Quarters ended 5th of January 1835, and 5th of January 1836, showing the Increase or Decrease on each head thereof.

STATISTICAL ACCOUNT OF THE KINGDOM OF POLAND,

According to Returns made in 1833.

THE kingdom of Poland contains 453 towns, of which 212½ belong to the Crown, and 240½ are private property; 22,545 villages, of which 5,296 belong to the Crown, and 17,249 are private property. The kingdom is divided into 2,081 parishes and 5,607 communes, which contain 485,176 houses, of which 401,257 are in the country and 83,919 in the towns.

The male population amounts to 1,933,390, of whom 877,949 are under seventeen years of age, 175,764 between seventeen and thirty, and 879,677 above thirty. The female population is 1,981,275.—Total, 3,914,665. The population of the towns is 838,875. The rural population is 3,075,790.

The palatinate of Masovie, exclusive of Warsaw, contains 626,138 inhabitants; Kalisz, 587,805; Augustowo, 533,467; Lublin, 470,172; Plock, 445,867; Cracow, 409,193; Sandomir, 371,241; Podlachie, 346,916.

Warsaw contains 124,868 inhabitants (59,625 men, and 65,243 women); Lublin, 13,707; Kalisz, 11,694; Plock, 10,013; Czenstockow, 8,413. There are besides—1 town containing above 6,000 inhabitants, 3 above 5,000, 13 above 4,000, 37 above 3,000, 51 above 2,000, 185 above 1,000, and 157 under 1,000.

The number of Roman Catholics is 3,237,448; belonging to the Greek church, 106,936; Lutherans, 177,806; Reformed Calvinists, 3,815; Jews, 383,102; Mahometans, &c., 5,558.

The number of horses employed in agriculture is 268,373; for other purposes, 18,193.—Total, 286,566. Number of oxen, 282,545; cows, 456,158; bulls and calves, 203,764; pigs, 644,990; sheep, 2,187,133, of which 185,482 are pure Spanish, 970,921 mixed, and 1,030,720 of the common breed; goats, 8,875. The numbers here given are believed to be much too low.

The annual quantity of agricultural produce is as follows:—Wheat, 362,683; rye, 1,997,394; barley, 896,092; oats, 1,830,282; peas, 101,990; buckwheat, 167,532; millet, 46,996; beans, 18,210 quarters; flax, 30,823; hemp, 25,278; potatoes, 2,690,170.

The total value of the imports, in 1832, was 62,233,608 florins; in 1833 their total value amounted to 53,225,116 florins; or, as the florin is equivalent to 6*d.*, to 1,555,840*l.* 4*s.* in 1832, and 1,330,627*l.* 18*s.* in 1833. The value of the imports from Russia, in 1833, was 675,650*l.*; from Austria, 190,310*l.*; from Prussia, 441,890*l.* The value of each of the principal articles imported was as follows:—Oxen, sheep, &c., 311,690*l.*; hardware, 93,954*l.*; salt, 72,577*l.*; wine in casks, 60,617*l.*; in bottles, 11,828*l.*; liquors, &c., 17,503*l.*; silks, 60,500*l.*; wool, 55,065*l.*; fish, 50,956*l.*; flax and linen, 19,598*l.*, sugar, 44,859*l.*; coffee, 8,271*l.*; tea, 9,720*l.*; other colonial produce, 27,045*l.*; cotton stuffs, 38,892*l.*; corn, 37,132*l.*; skins, 31,579*l.*; tobacco and snuff, 31,150*l.*; cotton thread, 29,036*l.*; dye-woods, 26,692*l.*; prints, 25,538*l.*

In 1832 the value of the exports was 31,090,497 florins, or 852,262*l.*; in 1831, 27,084,839 florins, or 677,120*l.* The chief articles exported consist of wool, corn, woollen cloth, timber, cattle, sheep, &c., vegetables, and skins. The exports of wool, in 1833, amounted in value to 177,467*l.*, nearly the whole being purchased by Prussia; of corn, the value exported was, in 1832, 352,199*l.*; in 1833, 143,239*l.*; chiefly to Prussia in both years. Of the woollen cloth exported, amounting in value to 121,131*l.*, Russia took, in 1833, to the amount of 120,792*l.* The value of timber exported was 57,501*l.*; of cattle, sheep, &c., 44,582*l.*; of vegetables, 42,008*l.*, of skins, 24,333*l.*

The following articles are prohibited to be imported, except through Russia:—Hops, chicoree, tea, sweetmeats, all kinds of salted or preserved meats, confectionary, dried fruits, vinegar, beer, cider, liqueurs, all spirits except spirits of wine, tobacco and snuff, furniture, umbrellas, imitation of pearl, millinery, toys, lace, ornamental feathers, quills and pens, all sorts of embroidery, oil-cloth, men's and women's clothes, perfumery, essential oils, articles of papier-maché, coloured or printed paper, playing cards, plain or coloured worsted, soap, animal oils, cheese, skins and prepared leather, saddlery, gloves, boots and shoes, all articles made of leather, coral, mineral salts, bronzes, all iron, tin, plated and pinchbeck articles, picture and glass frames, watches and clocks, carriages, painted porcelain

and crockery ware, all plain and coloured glass except looking-glasses. These articles may be imported for private use on the payment of a duty called "Droit de Licence," which in many instances amounts to 400 per cent. on the value of the article.

The exportation of horses and asses, oak and other barks fit for tanning, acorns, all gold and silver Russian money, all minerals, and rags for making paper, is altogether prohibited.

The following is a list of articles which may be exported duty free:—Aniseed, cotton thread, deal and oak planks and beams, sheep, seeds, musical instruments, playing cards, soap, oils, blankets and rags, paper, feathers, picture-frames, potass, horns, candles, glass, tobacco and snuff, chalk, resin, hair and bristles, all kinds of grain and flour, and woollen goods.

Raw silk and cotton not dyed, fruit and other trees, mathematical, surgical, and other instruments of science, agricultural and other machinery and models, gold and silver in coin and bars, and optical and physical glasses, may be imported into Poland duty-free.

The customs' revenue, in 1832, amounted to 230,955*l.*; *viz.*—Import duty, 37,657*l.*; duty on consumption, 174,791*l.*; export duty, 6,617*l.*; tolls, &c., 11,884*l.*

The amount of customs collected, in 1832, on the frontiers, on articles coming from Russia, was 17,763*l.*; from Austria, 2,467*l.*; from Prussia, 4,503*l.*; from Cracow, 21,038*l.*

A comparison of the transit duties levied by Austria and Prussia on goods coming into Poland through those countries exhibits the following striking differences:—On hardware, hosiery, silks, cambric and linen, lawns, gauzes, calicoes, muslins, cambric-muslin, and woollen cloth, a duty of 2*s.* 4*d.* per quintal is imposed by the Austrian tariff, and 12*s.* by the Prussian; while the Austrian duty on coffee is 7*d.* per quintal, that imposed by Prussia amounts to 3*s.*; the Austrian duty on refined sugar is 7*d.*, on soft sugar 2½*d.* per quintal, and the same articles are respectively charged 3*s.* and 2*s.* at the Prussian custom-houses.

The transit duty on Russian and Polish produce, exported through Prussia by the ports of the Baltic, is so heavy on some articles as almost to amount to a prohibition. This is particularly the case with the duties on iron, zinc, pitch and tar, tobacco, spirits, sulphur, and bones, the last of which would become a considerable article of export were it not for the excessive duty. The rate of duty per cent. on the value of the article is—on cast iron, 50; zinc, 20; tobacco, 12; pitch and tar, 12; turpentine, 11; bleached linen, 12; bones, 100; wheat grown in Poland, 6; flour, 7. When the commercial treaty of Vienna was made, in 1825, the price of zinc was 45 florins per quintal, and the duty was rather more than 4 florins; whereas now it is difficult to obtain 10 florins per quintal, and it pays a transit duty of 2 florins per quintal.

About three-fourths of the artisans employed in Poland are Germans. They are, generally speaking, better workmen, and more industrious, than the natives. The rate of wages in the country towns varies very little from the capital, taking the average; it is higher or lower, according to the population. The number of holidays, when the men do not work, is very great, and the prices of coal, fuel, and lodgings, are high. The following is the average rate of journeymen's wages of some of the principal classes of artisans:—Carpenters, from 1*s.* 3*d.* to 3*s.* per day; masons, ditto; stocking makers, 1*s.* 3*d.* per day; cloth-workers, 1*s.* 3*d.* to 2*s.*; cotton-spinners, 1*s.* 3*d.* to 1*s.* 6*d.*; silk-weavers, 2*s.*; bakers, 1*s.* 6*d.*; copper-smiths, 1*s.* 6*d.* to 2*s.*; glovers, 1*s.* to 2*s.* 6*d.*; leather-dressers, 1*s.* 3*d.* to 2*s.*; mechanics, 4*s.* 6*d.* to 6*s.*; watchmakers, 2*s.* to 3*s.*; tanners, 1*s.* to 1*s.* 6*d.*; hatters, 9*d.* to 1*s.* 6*d.*; paper-makers, 1*s.* 3*d.* to 2*s.*; printers, 1*s.* 6*d.*, 2*s.*, and 2*s.* 6*d.*; shoemakers, 1*s.* to 2*s.*; tailors, 1*s.* 3*d.* to 2*s.* 6*d.*; miners, 1*s.* 3*d.*; blacksmiths, 1*s.* 9*d.*; saddlers, 1*s.* to 1*s.* 6*d.*

A Polish ell contains 2 feet, 4 quarters, 24 inches; the korzec contains 32 garniec, 128 kwarts; the pound is divided into 32 lots; 1,000 English yards are equal to 1,587·47 Polish ells; 1,000 feet to 1,058·30 Polish feet; 1,000 quarters to 2,271·00 korzec; 1,000 gallons to 1,135·49 garniec; 1,000 pounds troy to 920·34 Polish pounds; 1,000 pounds avoirdupois to 1,118·47 Polish pounds.

The currency consists of the ancient coin of the kingdom of Poland, the coin of the duchy of Warsaw, the new coinage established in 1815, and bank-notes of 100, 50, 10, and 5 florins. The coinage of 1815 consists of pieces of 50 and 25 florins in gold; pieces of 10, 5, and 2 florins, and pieces of one florin, in silver; pieces of 10 and 5 groschen of the same metal; and copper coins of the value of 3 and 1 groschen. A Polish florin is equivalent to 6*d.*, and 5 groschen to 1*d.*

MISCELLANEOUS.

Bank of England.—Account of the Liabilities and Assets of the Bank of England, from Oct. 20, 1835, to January 12, 1836:—

Liabilities.		Assets.	
Circulation	£17,262,000	Securities	£31,954,000
Deposits	19,169,000	Bullion	7,076,000
	£36,431,000		£39,030,000

Price of Consols.—The following are the closing prices of the Three per Cent. Consols for Account on each of the following days:—

Jan. 2.	Jan. 9.	Jan. 16.	Jan. 23.
92⅝	92¾	91⅛	91⅜

Sugar.—Average price of Brown or Muscovado Sugar per cwt., computed from the returns published in the London Gazette:—

Week ending December 29,	39*s.*	4*d.*
,, January 5,	39*s.*	4*d.*
,, January 12,	40*s.*	3½*d.*
,, January 19,	38*s.*	11½*d.*

Corn and Grain.—Average prices per quarter in England and Wales, from the London Gazette of Friday, January 22:—

	Wheat.		Barley.		Oats.		Rye.		Beans.		Peas.	
	s.	*d.*	*s.*	*d.*	*s.*	*d.*	*s.*	*d.*	*s.*	*d.*	*s.*	*d.*

Average of last six weeks .	36	5	27	8	18	7	27	0	33	9	34	9
Duty on foreign corn.....	50	8	19	10	19	9	28	9	19	9	18	3

Bankruptcy Analysis from Dec. 28 to Jan. 27.

Auctioneer, 1; baker, 1; boarding-house keeper, 1; brewer, 1; builder, 1; cabinet-maker, 1; calico-printer, 1; carpenter, 1; cattle-dealers, 2; coachmakers, 2; coachmasters, 2; coach-smith, 1; coal-merchants, 2; commission-agent, 1; corn-factors, 2; curriers, 2; dealer, 1; dealer in gold watches, 1; drapers, 6; earthenware-manufacturer, 1; farmer, 1; glover, 1; grocers, 8; iron-founder, 1; laceman, 1; livery-stable keepers, 2; maltster, 1; manufacturer and merchant, 1; manufacturer of Epsom salts, 1; master mariner, 1; merchants, 3; money-scriveners, 2; saddler, 1; shopkeeper, 1; surgeon, 1; stationer, 1; tailors, 2; timber-merchant, 1; wine and spirit merchants, 2; woollen-manufacturer, 1; victuallers, 7. Total, 71.

PARLIAMENT.

New Member for West Gloucestershire.—Robert Blagden Hale, returned without opposition.

The following Members have been returned within the last five months:—

Belfast.—George Dunbar, vice John M'Cance.

Cashel.—Sergeant Woulfe, vice Sergeant Perrin.

Waterford County.—W. Villiers Stuart, vice P. Power.

Devizes.—T. E. Estcourt, vice Wadham Locke.

North Northamptonshire.—T. P. Maunsell, vice Lord Milton.

North Leicestershire.—Lord Charles Manners, vice Lord Robert Manners.

West Gloucestershire.—R. B. Hale, vice the Marquis of Worcester.

The representation of Clonmell is vacant by the death of Dominic Ronayne.

The elevation of Sir C. C. Pepys to the Woolsack, occasions a vacancy in the representation of Malton.

New Peers.—The dignity of a Baron of the United Kingdom of Great Britain and Ireland has been conferred on the Right Honourable Sir Charles Christopher Pepys, Knight, Chancellor of that part of the said United Kingdom called Great Britain, by the name, style, and title of Baron Cottenham, of Cottenham, of the county of Cambridge.—*London Gazette*, January 19th.

The same Gazette announces that a similar honour has been conferred on the Right Honourable Henry Bickersteth, Master or Keeper of the Rolls and Records in Chancery, by the title of Baron Langdale, of Langdale, Westmoreland.

Irish Representative Peer.—Lord Dunsany, in the room of the Earl of Charleville.

Russian Weights and Measures.—According to the Report of a Board, appointed for the purpose at St. Petersburg, it appears that the Russian *sashene* is 7 English feet in length. The sashene (Anglicè 'thread') contains 3 *arshines;* and the arshine is therefore 28 English inches in length, and contains 16 *wershaks;* hence the wershak measures 1¾ inch. With regard to weight, the Board adopted the model of a pound which they found in the St. Petersburg mint; it was made in the year 1747, and plated with gold. This pound they report as containing 96 *solotniks*, and each solotnik 96 *doli*: the pound consists, therefore, of 9,216 doli. A *Russian*, like an English, *cubic inch* of distilled water, at a temperature of 13¼ degrees of heat (Réaumur), weighs, *in vacuo*, 368 $\frac{304}{1000}$ doli; and 25 $\frac{13}{16}$ cubic inches of water, at that temperature, are equal to 1 Russian pound. The *apothecaries' pound* is equivalent to 8,064 doli. In liquid measure the *vedro*, or Russian hogshead, is adopted as a standard; it contains 30 pounds' weight of distilled water, or 750 $\frac{37}{100}$ cubic inches. The *vedro* contains also 10 cans or gallons. In corn-measure the *tshetvert*, equal to 64 pounds of distilled water, or 1,601 $\frac{33}{100}$ cubic inches, and the *garnetz*, equal to 8 pounds, or 200 $\frac{132}{1000}$ cubic inches, are adopted as a standard. The Board has been instructed to have model weights and measures of a sashene and a pound, made of platina, and preserved in some suitable place; and duplicates of them are to be prepared for the use of the public authorities and national establishments.—(St. Petersburg, 17th December.)

London Bill of Mortality for 1833.—The following is a general bill of the Christenings and Burials within the City of London and Bills of Mortality, from December 9, 1834, to December 15, 1835:—

	Chr.	Bur.
In the 97 parishes within the walls - -	963	970
,, 17 parishes without the walls - -	4,654	3,568
,, 24 out-parishes in Middlesex and Surrey - - - - - - - -	17,019	13,376
,, 10 parishes in the City and Liberties of Westminster - - -	3,492	3,411
	26,128	21,325

	Christenings.		Burials
Total {	Males 13,152	Males	10,964
	Females 12,976	Females	10,451

Of the number buried were:—

Still-born - - - - - -	966
Under two years of age - - - -	5,416
Two and under five years - - - -	2,319
Five and under ten - - - - -	1,011

Auctioneers. The number of Auctioneers in the United Kingdom in the year 1833, is stated in the Reports of the Commissioners of Excise Inquiry to have been as follows:—In England, 3,040; Scotland, 378; Ireland, 278.—Total, 3,686. The number of licences granted for the year ending 5th January, 1835, was 3,604.

CHRONICLE OF OCCURRENCES.

Jan. 5. Meeting of bankers, merchants, and shipowners of London, at the Mansion House, to consider the best means of promoting the success of the Arctic expedition sent out under Captain J. C. Ross to the relief of the ice bound whale-ships. Captain Ross sailed from Hull on the 6th of January. Since the expedition has been fitting out several of the whalers have reached this country; but the crews were in an exhausted condition, owing to their provisions having fallen short.

— A meeting of the committee of the whole Court of Common Council of the City of London was held for considering the steps which it would be desirable to take with reference to the proposed reform of the Corporation. A communication was read from Mr. Parkes, the Secretary to the Municipal Corporation Commissioners, which stated that the draft of the Report on the City of London Corporation was finished, and merely required revision in print. Mr. Parkes said that he was directed by Lord John Russell to announce the intention of the Government to introduce a measure of reform next session, as soon as the Report had been sufficiently considered. It was then determined by the committee that some of the members should be appointed to confer with Government and the Corporation Commissioners on the details of the proposed reforms.

— A Reform Association has been established in Dublin, which, in the course of two or three weeks, has been joined by 17 peers and sons of peers, 12 baronets, 48 members of parliament, 3 lieutenants of counties, 45 deputy-lieutenants, 145 justices of the peace, and nearly 1,000 individuals of the highest respectability.

8. Intelligence received of a most destructive fire which occurred at New York on the night of the 16th of December, by which 674 buildings, situated in the centre of commerce, and containing more valuable merchandise and property than any other part of the city, were burnt down. New York contains about 25,000 houses, and the number of those destroyed comprises therefore 2¾ per cent. of the whole. They were chiefly occupied by importers of foreign goods, and had been rebuilt within the last six years with brick in a handsome and substantial manner, and were, most of them, five or six stories in height. The ruins cover 52 acres, and, for several days after the fire, presented a most remarkable spectacle. Miserable wretches of both sexes were to be seen digging among the still-heated bricks and rubbish for articles, about which they often fought. The place was crowded also by idle spectators and by the sufferers and their families, who came to witness the scene of desolation. It appears certain that the disastrous event was the result of accident. A private letter which we have seen says:—

"All business has been suspended by it, as nearly *all* our insurance companies are ruined. We, who are not burnt up, have had to watch over our own property night and day, as our policies are worth nothing. Out of 50,000 dollars, the amount of my insurance, only one policy, of 2,500 dollars, is good; and, as there can be no doubt that there is a set of incendiaries amongst us, you may imagine the weight and trouble I have on my mind. Since the burning of Moscow there is not on record such a destructive fire. The weather was very cold—below zero; and the water was frozen in the engines and hose. It blew a heavy gale from the north-west. The fire was only subdued at last by gunpowder, by which the houses and stores, at every point where it was extending, were blown up. You may form some idea of the extent of the fire by the fact that it was visible eighty miles off, and fragments of ledgers and other account-books have been brought in from seven miles down Long Island."

Later accounts state that, though many insurance companies would pay nothing, yet that the whole collectively would pay 70 per cent. The damage is estimated at 15,000,000 dollars. The chief evil resulting from the calamity is the temporary interruption of business. A Bill has been introduced in Congress, extending credit to the merchants for a period of three, four, or five years, for the payment of duties; and also for remitting the duty on goods destroyed in original packets. The authorities of New York have issued scrip for a loan of 3,000,000 dollars; and the United States' bank has offered a loan of 2,000,000 dollars. The banks generally have agreed to renew, for a certain time, all paper engagements. Measures have also been taken to alleviate the distress of those who are thrown out of employment, amounting, it is computed, to 2,000 individuals, and having not less than 3,000 dependents on their industry.

16. The Marquis of Chandos, who dined at the farmers' ordinary at Buckingham, intimated to the company his plan of operations respecting the interests of agriculture during the next session. It is his Lordship's intention to move as early as possible for the appointment of a select

committee to inquire into all the causes of agricultural distress. He wishes every man to be examined who can throw any light upon the subject; and he intends calling upon those who attribute agricultural distress to the currency, or other causes, to come forward and prove their case before the committee.

18. Three glee-singers, whom Mr. Laing, the police magistrate, had committed to the House of Correction for pursuing their avocation in the streets, were ordered to be released by direction of the Secretary of State for the Home Department.

21. The foundation-stone of the new Licensed Victuallers' School in Kennington-lane was laid by Lord Melbourne, at the request of his Majesty, who is patron of the charity. After the performance of the usual ceremonies Lord Melbourne delivered a short address, in which he expressed his most fervent hope that the charity might be as prosperous as its most anxious friends could desire. He added that his Majesty, the patron of the school, was most anxious for its success, and that, although ever alive to the welfare of his subjects, there was nothing in which the King felt a deeper interest than in institutions of this description, which were intended for the diffusion of the blessings of education, and the principles of morality and true religion. The friends of the charity dined together in the evening, and contributed nearly 1,000*l.* in aid of the building fund.

22. The election of Thomas Hovell, Esq., the first Mayor of Cambridge chosen under the provisions of the Municipal Reform Act, was celebrated by a grand dinner, at which upwards of 240 of the most distinguished reformers of the borough and county were present. Mr. Spring Rice was amongst the guests invited, and, on the health of his Majesty's Ministers being given by the Mayor, the Right Honourable Gentleman rose to acknowledge the compliment, and in the course of his address pointed out in a forcible manner the new duties which devolve upon the municipal representatives of boroughs, and touched upon a variety of other topics of great public interest. Alluding to the coming session he said:—"We have to remedy the still-existing grievances to which the dissenting bodies of this country are now subject. We must proceed to consider also, on the same principle of firmness, and decision grounded in justice, the question of tithes in England. We must proceed in the great work of reform of our Courts of Equity. We must give to the people of England a better, a cheaper, and a more effectual administration of justice. We must, as far as it is in our power to do so, improve and tranquillize Ireland. The object which we had in view, in our measure of last session, was no less the tranquillity of that country than to make an adequate provision for the Irish Protestant Church. While we wish to cut off all that is unnecessary in the temporal wealth of the Irish Church, we most carefully, most sedulously, and, I will say, most effectually make a provision for the adequate instruction of the Protestant communion of Ireland. Unless these two principles can be reconciled I am no Church reformer in Ireland. These (he added) are a few of the measures to which the earliest attention of the Government will be directed; and we shall deal with them carefully, deliberately, and by degrees."

The Commissioners of Danish Claims have commenced liquidating the claims of parties whose book debts were confiscated by the King of Denmark in 1807.

A Canterbury newspaper states that the Lords Commissioners of the Admiralty have directed that the apprentices of shipwrights employed in the dock-yards shall henceforth be instructed every Saturday in the art of drawing.

During the month there has been more than one tithe affray in Ireland, attended with loss of life. The Rev. W. Beresford had employed his usual process-server, a man named Hudson, to serve tithe notices on the peasantry. Hudson was accompanied by five or six armed bailiffs, and the motions of the party quickly attracted the country people, who hooted them as they passed along. This provoked Hudson to such a degree that he threatened to shoot any of those whom he discovered annoying him in his avocations. This threat excited a fresh outpouring of contempt from the peasantry; upon which Hudson fired, and shot one of their number. The people rushed upon Hudson, and despatched him instantly. The other bailiffs made their escape from the infuriated people while they were engaged with the unfortunate server. The pistols had been loaded by the Rev. Mr. Beresford, who appeared at the inquest in tears, and offered to provide for the family of Mahony, the man whom Hudson shot. Another fatal tithe affray occurred at Newton, near Charleville, county Limerick. It is stated that the Rev. Mr. Bunbury was proceeding with thirty-two policemen, two sheriffs'-men, and four drivers, to make a seizure for tithes. They were pelted with stones by the peasantry, when some shots were fired by the police and several persons were wounded; a man, named Sweeney mortally.

A great number of the new Municipal Corporations have forwarded addresses for presentation to his Majesty, thanking him for the Municipal Reform Act, and expressive of confidence in his Ministers.

ADVERTISEMENTS.

On the 5th of February will be published, price 6*d.*, to be continued Weekly,

THE FIRST NUMBER OF

THE PICTORIAL BIBLE:

BEING

The Old and New Testaments

ACCORDING TO THE AUTHORIZED VERSION,

ILLUSTRATED WITH MANY HUNDRED WOOD-CUTS,

Representing the Historical Events, after the most celebrated Pictures; the Landscape Scenes, from Original Drawings or from Authentic Engravings; and the Subjects of Natural History, of Costume, and of Antiquities, from the best Sources.

TO WHICH ARE ADDED,

Original Notes,

Chiefly Explanatory of the Engravings, and of such Passages connected with the History, Geography, Natural History, and Antiquities of the Sacred Scriptures as require Observation.

*** The principal feature of 'The Pictorial Bible' is defined by its Title. It is to make the *Objects* described or referred to in the Holy Scriptures familiar to the eye of the general Reader. At the present time a 'Picture-Bible' (Bilder Bibel) is publishing in Germany with remarkable success. The present work, however, differs considerably in its plan from that and other illustrated Bibles. The immense treasures of Art which the great Painters have bequeathed to us on Sacred Subjects will be here opened to all, as far as they are capable of being diffused through the medium of wood-engraving: the Landscape Scenes will be represented with that fidelity which we are now able to realize through the labours of recent Travellers; and the other objects, whether of Natural History, of Costume, or of Antiquities, will be delineated with equal accuracy. These Illustrations will of themselves be as *Notes* of the most interesting and important character. The *printed* Notes will have precisely the same principle in view; they will be chiefly devoted to an explanation of the *objects* mentioned in the Sacred Text. It is the wish of the conductors of this 'Pictorial Bible' to render it a work universally acceptable to all denominations of Christians. While, therefore, the critical reader of the Scriptures will have to seek in other editions for comment of a theological nature,—and such editions are as numerous as they are admirable,—the notes of the 'Pictorial Bible' will be limited as we have already described. That such explanations, conceived in a spirit of sincere piety, and with due reference to their connexion with the higher allusions of the Inspired Writers, may lead many readers to a more diligent perusal of the Scriptures, there can be no doubt, and some of the labours of the most learned commentators have been accordingly devoted to such points. The Notes to the 'Pictorial Bible' will be written by several persons, each well acquainted with the branch which he undertakes; and the whole will undergo the most careful editorial revision. The Illustrations of the Book of GENESIS are about Forty in number. On the 1st of March the First *Part* will be published, price TWO SHILLINGS. The Work will be completed in Eighteen or, at most, Twenty Parts, forming three handsome *Super-Royal Octavo* Volumes. It will be printed on fine thick Paper, with a new Type.

London: CHARLES KNIGHT, 22, Ludgate Street.

NEW WORKS, PUBLISHED BY JACKSON AND WALFORD,

18, ST. PAUL'S CHURCH-YARD.

In the Press,

A MEMOIR of the REV. WILLIAM CAREY, D.D., more than Forty Years Missionary in India, Professor of Oriental Languages in the College of Fort William; Translator of the Sacred Scriptures into the Sanscrit, the Bengalee, and many other Eastern Tongues

By EUSTACE CAREY, several years Missionary in Calcutta.

The above "Memoir" will comprehend—1. A Review of his Early Life and Entrance upon the Christian Ministry, by himself.—2. A Recollection of his Early Life, by a beloved Sister.—3. "An Attempt at a Memoir," &c., by the Reverend Andrew Fuller.—4 A Critique upon his Character and Labours, as an Oriental scholar and translator, by Dr. Wilson, Professor of Oriental Literature in the University of Oxford, &c. &c.

In Two Vols. 8vo., with Lithographic Views and Wood Cuts, 24s. cloth,

A NARRATIVE of the VISIT to the AMERICAN CHURCHES,

By the Deputation from the Congregational Union of England and Wales—By ANDREW REED, D.D., and JAMES MATHESON, D.D.

"Contains not a few descriptive episodes, which, had we room to extract them, would gratify all our readers."—*Quarterly Review.*

"They are intelligent and acute observers, and singularly candid and dispassionate. No one, we are satisfied, who reads this book with an honest desire for information, will withhold his conviction from the statements it contains, or will fail to be gratified with the picture which it gives of the social state of our American brethren."—*Morning Chronicle.*

In Post 8vo., with a full-length Portrait from an Original Painting in possession of the family, 10s. 6d. cloth,

MEMOIRS of the LIFE, CHARACTER, and WRITINGS of SIR MATTHEW HALE, KNIGHT,

Lord Chief Justice of England—By J. B. WILLIAMS, Esq., LL.D. F.S.A.

"Dr. Williams has, we think, conferred an essential benefit on the profession, and especially on its younger members, by the production of this volume."—*Legal Observer.*

"We cordially recommend this memoir of a great and good man, a sincere Christian and a paragon Judge, as a book eminently fitted to make the reader wiser, better, and happier."—*Tait's Magazine*

COUNTY REFORM

This day is published, price 4d., for distribution,

THE MAGISTRACY of ENGLAND, its Abuses, and their Remedy in Popular Election.—By J. HINDE PALMER, Esq.

Second Edition, with Additions.

Price Sixpence each,

THOUGHTS UPON THE ARISTOCRACY OF ENGLAND, Parts I. and II.—By ISAAC TOMKINS, Gent.

H. HOOPER, 13, Pall-mall East

Second Edition, price 1s.,

LETTERS ON THE CORN LAWS, and on the Rights of the Working Classes, originally inserted in the "Morning Chronicle;" showing the injustice, and also the impolicy, of empowering those among a people, who have obtained the proprietary possession of the lands of a country, to increase, artificially, the money value of their exclusive estates, by means of arbitrary charges, made on the rest of the people, for the necessaries of life.—By H. B. T.

HENRY HOOPER, 13, Pall-mall East.

HISTORICAL RECORDS OF THE YEAR 1835,

Embracing the Features of

AN ANNUAL REGISTER

THE ATLAS WEEKLY NEWSPAPER of 3d January, and the Three succeeding Weeks, contains a HISTORY OF THE YEAR 1835, divided into sections, agreeably to the nature of the subjects it embraces. It is separated into the following heads:—

FOREIGN POLITICAL HISTORY.
DOMESTIC POLITICAL HISTORY
HISTORICAL RETROSPECT OF ENGLISH LITERATURE
THE LITERATURE OF ART.
THE PHYSICAL ASPECT OF THE YEAR.

These Essays, historical, literary, and scientific, upon which considerable industry and research have been bestowed, will exhibit all the more important features of an Annual Register. They have been prepared with great care, and reference has been made in their production to a variety of sources of information, amongst which are some authorities not accessible to general inquiry.

The ATLAS Newspaper is divided into two principal departments, NEWS and LITERATURE. These are carefully subdivided into heads of easy reference, so that each subject is kept distinct and entire, and an historical continuity preserved from week to week. The great dimensions of the sheet, which folds into sixteen pages, containing forty-eight columns, enable this publication to combine the peculiar features of a Newspaper, and the Monthly and Quarterly Journals of Literature, and to embrace every topic interesting to the Politician, the Merchant, the Dramatist, the Artist, the Poet, the Musician, and the Philosopher. Amongst the most prominent features is an elaborate criticism upon musical performers, compositions, and publications, with current Notices of all novelties in Music on the Continent. The ATLAS also possesses exclusive sources of intelligence on the affairs of India and the Colonies, to which it devotes a greater space than any other Journal.

Advertisements for the Atlas are received at the Office, Beaufort House, Strand.

NEW SYSTEM AT BULL'S LIBRARY,

19, Holles street,

Four doors from Cavendish-square.

THE NEW SYSTEM now adopted by EDWARD BULL, at his extensive Library, is not only to insure more immediate supplies of all the New Publications and Standard Works for perusal, in the English and Foreign Languages, 24 volumes at a time, for £6 6s. the year, but to allow Subscribers to have, gratis, any of the New Works they wish to possess to the amount of Two Guineas, and Catalogues, Boxes, &c., free of expense. Societies also supplied in all parts of the kingdom.—Address to Edward Bull, Librarian, 19, Holles-street.

In 32mo, price 5s.,

THE ASSEMBLED COMMONS, 1836.—Comprising a personal account of each Member of Parliament and his Family—the Political Party to which he now belongs, and to which his predecessors have hitherto belonged—his Rank, Station, and Influence in his County—how elected—state of the Poll at the last Election—nature of his Votes upon important Questions, &c.

E. CHURTON, Public Library, 26, Holles-street.

MICROCOSM,

24, REGENT-STREET, LONDON.

CARPENTER'S IMPROVED PHANTASMAGORIA LANTERN

This Lantern is now so much improved, and is used with such increased facility, that it may be recommended with the greatest confidence as being the best that is made, giving the most perfectly defined figure, with a brilliant and well-illuminated field of view, from 6 to 14 feet in diameter. Combined with the Copper-plate Sliders, it presents a novel and delightful mode of Instruction and Amusement. TO INFANT SCHOOLS, PUBLIC SEMINARIES, MECHANICS' INSTITUTES, &c., it offers peculiar advantages, and is much used by the Conductors of these Institutions, both in this Country and America, in aiding the Progress of Education. The Natural-History Subjects and Astronomical Diagrams are painted in the very best style, and can be depended upon for accuracy and fidelity.

	£	s.	d.
Carpenter's Improved Phantasmagoria Lantern, with Patent Lamp and Spring Holder, complete, in a Box, which will contain 24 Sliders	2	12	6
Ditto as above, with the addition of a Microscope for exhibiting Transparent Objects in the same manner as the Hydro Oxygen Microscope. The Microscope, with 6 Sliders and Aquatic Slider, in Box	4	4	0
Copper-plate Sliders, Natural History Subjects, comprised in 56 Sliders, each	0	4	6
Improved Set of Astronomical Diagrams, in a Box, with Description, in 11 Sliders	2	6	0
Movable Humorous Sliders, &c., 150 Subjects, from 4s. each to	0	10	0

*** A Liberal Allowance to Schools, Institutions, &c.

POWERFUL MUSICAL BOXES, in wood cases, 12 inches long, by 5 inches wide, each playing Four Airs, with the music finished in a very superior manner, are offered for Five Guineas each. Also a few of the same description, with Six Airs, price Seven Guineas each, at T. COX SAVORY'S, Working Silversmith, Goldsmith, and Watchmaker, 47, Cornhill, London.

N.B.—The small Musical Boxes, 3¼ inches long, continue selling in tin cases, price 19s. each, or in composition shell cases, at 25s. each

ELEGANCE AND ECONOMY AT THE CITY CLOTHING ESTABLISHMENT.

A GOOD FIT, Good Workmanship, and Good Materials, having gained for E. P. DOUDNEY and SON a Good Name and extensive patronage for upwards of half a century, in presenting their unparalleled Low Prices for Public Inspection they beg to state that the three essentials to a Good Garment shall still have their unremitting attention, it being their ambition to insure an increasing business, and merit the appellation of being "The Best, as well as the Cheapest, Tailors!"

CASH PRICES

	£	s.	d.
A super Cloth Coat, Trousers, and Waistcoat, fashionably made, per suit	3	3	0
Ditto Spanish Superfine, ditto	4	4	0
Ditto extra Imperial Saxony, the best that is made, ditto	4	15	0
Superfine Frock Coats, Silk Facings	2	10	0
Summer Waistcoats, beautiful patterns, 7s. each, or three for	1	0	0
Cantoon Drill (Sac) Trousers, 10s. 6d. per pair, or three pair for	1	10	0
Morning Coats and Dressing Gowns	0	15	0
Cloth Travelling Trousers	0	13	6
Footman's Suit of Livery, complete	3	3	0

CONTRACT PRICES,
(The old suits to be returned.)

	£	s.	d.
Two Suits per year	7	7	0
The best that is made	8	6	0
Three Suits per year	10	17	0
The best that is made	12	5	0
Four Suits per year	14	6	0
The best that is made	15	18	0

BOYS' CLOTHES (tastefully and fashionably made) SURPRISINGLY LOW!—Skeleton Suits, 18s.; Tunic Dresses, 25s.; Hussar Suits, 30s.

The "City Clothing Establishment" has long been celebrated for having the Best and Cheapest Assortment of Shooting Jackets and Fishing Coats, Great Coats and Cloaks of every make, all sorts of Gaiters, Mud boots, and Gambadoes; India-rubber Waterproof Cloaks, Capes, Air Cushions, Travelling Bags, &c. &c.

Gentlemen requiring Outfits, on a comparison with the Style, Qualities, and Prices of other Houses, will prove the advantages to be derived from giving their Orders to

E. P. DOUDNEY and SON, 49, Lombard street.
Established Fifty Years.

THE FUNDS.

(*Continued from No.* 38.)

WITHOUT entering further than we have done into the history of the progress and accumulation of the National Debt, we shall now proceed to give an account of various operations and other particulars connected with it, which are frequently mentioned, or referred to.

1. We shall state, in the first place, the manner in which money is borrowed by the Government. All loans, as it has been already observed, are now effected under the authority of Parliament—that is to say, an Act of Parliament, sanctioning the transaction, must be passed, whenever any money is borrowed. In practice, however, it is usual for the Chancellor of the Exchequer to arrange the terms of the loan with the contractors, in the manner to be afterwards stated, *before* the Act of Parliament has been obtained, the negociation being subject, of course, to the ratification of the legislature.

Loans, as we have had occasion to state in our historical deduction, have, in the different stages of the funding system, been effected in various forms. Originally money was borrowed by the State in the same manner in which it is still usually borrowed by private parties—that is to say, the lender was understood to retain the power of demanding back his money when he chose. The money remained his property, the State only purchasing the use of it by the payment of an annual interest. Eventually, however, loans came to be usually made upon the condition that the State should never be called upon to repay the money. The most remarkable, if not the only exception, in recent times, is the Loyalty Loan (as it was called) of 18,000,000*l.*, contracted in 1796, which it was agreed should be repaid, if the subscribers chose to demand their money, two years after the conclusion of the war in which the country was then engaged. The money came accordingly to be payable two years after the peace of Amiens; but most of the subscribers agreed to accept, in exchange, of an equivalent amount of capital in other government funds, and money was raised by a new loan, on the usual principle, to pay off the few who held out.

It may be observed, that when the use of money is thus obtained for an indefinite time, simply on the condition that an annual interest shall be paid for it, the transaction can hardly be properly called borrowing or contracting a loan; it more nearly resembles the taking a farm on a perpetual lease, or, which is the same thing, the purchase of a piece of landed property, on condition of the payment of a perpetual quit-rent to the seller; and it would be more correct to say that the money is hired or rented, than that it is borrowed. The position in which the State is placed by the arrangement even possesses an important advantage, as compared with that of the lessee or purchaser in the case we have supposed, in the power which is retained by it of at any time throwing up the bargain, or returning the property, and thus getting rid, for ever after, of the annual rent or payment. In regard to a very few loans, this power has been in a slight degree limited; but in so far as the great mass of the debt is concerned, it has been reserved entire and without restriction.

It may now, therefore, be stated generally, that all money raised in the way of what is called loan by the State is, in fact, obtained in perpetuity, or for any period, however long, during which the State may choose to retain it. The subscriber to the loan does not really lend his money, but gives it away altogether in exchange for a certain equivalent. If that equivalent be a certain rate of annual interest so long as the money shall be retained, he, in fact, purchases a perpetual annuity (subject to the bargain being reversed, or the contract broken off, at any time it may suit the convenience of the other party to return him his money); and this is the species of equivalent which the State has agreed to give for by far the greater part of the money which it has borrowed. But it has frequently also offered other conditions. Instead of perpetual annuities, terminable annuities, of different descriptions have been sometimes granted—that is to say, the subscriber to the loan has agreed to give his money, on the State engaging, in return, to pay him an annuity either for a specified term of years, or for his life, or for a term depending upon some other similar contingency. Formerly such annuities used sometimes to be granted upon schemes called *Tontines;* by which the subscribers were divided into classes, according to their ages, or were allowed to appoint nominees who were so divided, and a proportionate annuity being assigned to each class, those who lived longest had the benefit of their survivorship, by the whole annuity being still divided among the diminished number. "Tontines," observes Dr. Hamilton (Inquiry concerning the National Debt) "seem adapted to the passions of human nature, from the hope every man entertains of longevity, and the desire of ease and affluence in old age; and they are beneficial to the public, as affording a discharge of the debt, although a distant one, without any payment. They have been extensively adopted in some foreign countries, but seldom in Britain." All the annuities for fixed terms (called Long Annuities) now existing, terminate in 1860.

In former times it was likewise customary to grant the subscribers to loans tickets in the state lottery, as an advantage in addition to their temporary or perpetual annuities. Sometimes the prizes which these tickets might bring were to be converted into stock, sometimes they were to be paid in money. Of course this species of premium can never be again resorted to.

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

Another inducement to subscribers, however, has been largely applied in modern times—that of assigning to the creditor a much greater nominal amount of stock than the money actually received from him. Thus, to take the example cited by Mr. M'Culloch (Dictionary of Commerce, 2nd edition, p. 585), "Suppose Government were anxious to borrow, that they preferred borrowing in a 3 per cent. stock, and that they could not negotiate a loan for less than 4½ per cent.: they effected their object by giving the lender, in return for every 100*l.* advanced, 150*l.* 3 per cent. stock; that is, they bound the country to pay him or his assignees 4*l.* 10*s.* a-year in all time to come, or, otherwise, to extinguish the debt by a payment of 150*l.*" This practice was little known till towards the close of the American war; but since about the year 1780 it has been carried to a great extent. Dr. Hamilton observes, that if the funded debt, contracted from the commencement of the American war to the year 1812, were paid off at par (that is, at its nominal amount) the nation would pay about 135,000,000*l.* more than it ever received. The effect upon the whole debt has been to increase its amount to not much less than two-fifths beyond the sum actually advanced by the lenders. In other words, while the debt is nominally about 750,000,000*l.*, the amount really borrowed has been only about 535,000,000*l.*

For a considerable time, no competition in bidding for loans took place. Certain terms were merely proposed, at which persons were invited to subscribe their money. These terms were in general liberal enough to ensure a ready subscription, and, indeed, to make it be considered a favour by capitalists to obtain a share of the loan; and if, on any occasion, the terms first proposed were found not to be sufficiently tempting, a new scheme was announced, offering greater advantages to lenders. This method of proceeding, however, manifestly so prejudicial to the interests of the public, as well as opening a door to many abuses, has been long abandoned. Now, when a new loan is to be made, it is always thrown open to competition. We cannot give a shorter or plainer account of the course usually followed, than is conveyed in the following passage from Dr. Hamilton's excellent work:—"The Chancellor of the Exchequer fixes upon the funds in which the loan is to be made. These are often of different kinds, and not unfrequently a long annuity forms part of the emolument. He then gives public intimation that he is ready, on a certain day, to receive offers, and assign the loan to those who are willing to accept of the lowest terms. If a long annuity be a part of the proposed emolument, the other funds to be assigned to the lenders are fixed at a rate somewhat lower than the estimated value for each 100*l.* borrowed, and the bidding is on the long annuity, the loan being granted to those who will accept of the least annuity in addition to the capital offered. If the loan be in different funds, but without an annuity, the capitals in all the funds except one are previously fixed; and the bidding is on that fund, the loan being granted to those who will accept of the lowest capital. The Chancellor of the Exchequer is generally attended, at the time appointed, by several of the principal bankers in London, who deliver their offers, having previously made up a list of persons who are willing to share with them, to a certain extent, in case their offer be accepted; and the loan is assigned to the offerer who proposes the lowest terms." Of course, the terms upon which a new loan is contracted for, must always be such as to afford the parties who advance the money a greater amount of stock upon the whole, than they could obtain by making purchases with the same capital in the money market, for otherwise there would be no inducement for them to incur the greater risk, responsibility, and trouble of contracting for the loan.

II. We shall next notice some of the other operations of the Government in the management of the debt.

Of these the most remarkable are the various plans that have been adopted with the view of paying off or reducing the principal of the debt, by means of what have been called *Sinking Funds*. The first sinking fund was that established by Sir Robert Walpole (but suggested by Earl Stanhope) in 1716. At this time the taxes the produce of which had been assigned to pay the interest on the several portions into which the debt was divided, and which had also been made perpetual for that purpose, yielded a somewhat larger revenue than was absorbed by the dividends; and the scheme in question was, that the surplus thus accruing should be formed into a fund for the discharge of the debt. Various sums, otherwise obtained, were afterwards added to this fund. On the other hand, the taxes, which had at first yielded a surplus, very soon ceased to do so; but the sinking fund was still kept up by new loans being contracted to supply its annual demands. This system commenced in 1718. In 1733, again, the sum of half a million was taken from the sinking fund towards the national expenses of the year; and the same violation of the principle of the scheme being afterwards annually repeated, the fund eventually almost ceased to produce any effect in the reduction of the debt. It appears that, in fifty-six years—namely, from its institution till 1772—it had only, after deducting the amount of the new loans that had been made for its support, yielded something above 11,000,000*l.* in all for that purpose.

The next sinking fund was that established by Mr. Pitt in 1786. It was to be supported by 1,000,000*l.* taken annually from the national revenue—the various branches of which were at the same time united, under the name of the consolidated fund. The sums thus obtained were vested in the hands of Commissioners for the Redemption of the National Debt, to be applied by them, as they should judge expedient, in the purchase of stock at the market prices. The hopes of this scheme rested in a great degree upon the supposed efficacy of the principle of compound interest, to which attention had some years before been strongly called by Dr. Price. Into any detail of the various modifications which the plan of the sinking fund subsequently underwent, it is impossible for us here to enter. Suffice it to observe, that, after having had its form repeatedly changed, and having been supported for many years, as that of Sir Robert Walpole had been, by loans annually raised expressly to supply the sums necessary for keeping it up, it was finally abolished, in 1830, by the Act 10 Geo. IV., chap. 37, which enacted that the sums thenceforth annually applicable to the reduction of the national debt should consist simply of the actual surplus revenue beyond the expenditure.

It is obvious to common sense, without going into any minute calculation, or other deduction, that the principle here declared is really the only one on which a sinking fund can be rationally established. A person in debt (and the case is precisely the same with a nation) will manifestly never make any progress in relieving himself from his encumbrances, if, as fast as he pays his creditors with the one hand, he borrows with the other. Even if he could always borrow on the same terms on which he makes his payments, he would only be putting himself to a great deal of trouble for no purpose whatever. In the case of the national debt, the apparatus of commissioners, and other public functionaries, by which the redemption of the debt was carried on, was, of course, maintained at a very considerable annual cost. But this was by no means the whole expense. From what has been already stated as to the manner in which loans are negotiated, it may be perceived that the nation can seldom borrow money except at some advance upon

the market price of stocks at the time. It is true that the effect of a new loan being announced is usually, for the moment, to depress the price of stocks; and, on that account, the whole of the advantages accorded to the subscribers, is not to be set down as a loss to the nation; but still there is necessarily, in general, a sacrifice to some extent. Hence the improvidence of such a transaction whenever it is needlessly resorted to.

Dr. Price was so enamoured of his project of a sinking fund accumulating at compound interest, as to recommend that it ought to be, in all circumstances, kept in operation, even if new loans were necessary for that purpose. But, in truth, this notion of any wonder being to be worked, or any benefit to be obtained, even in the most favourable case, by allowing the funds appropriated for the extinction of the debt to accumulate at compound interest, instead of applying them at once, whenever they become available, is a mere delusion—as a very few figures will at once make clear. Let us suppose an individual to be indebted to the amount of a hundred pounds, and to have an income exceeding his expenditure by the annual sum of fifteen pounds. There are three ways in which he may apply this surplus to the discharge of his debts. First, he may, every year, pay the interest regularly, and also devote the whole remainder of the fifteen pounds to the reduction of the principal. The result of this will be, that (supposing the rate of interest to be 5 per cent.) at the end of the

1st year his debts will be reduced to			£90	0	0
2nd	,,	,,	79	10	0
3rd	,,	,,	68	9	6
4th	,,	,,	56	17	$11\frac{7}{10}$
5th	,,	,,	44	14	$10\frac{97}{100}$

Or, secondly, he may, every year, pay the interest only, and allow the remainder of the surplus to accumulate at compound interest. But is anything gained by this arrangement? The amount of the debt, of course, now remains unaffected; and it will be found that the sinking-fund, by which it is to be eventually discharged, arising from a yearly payment of ten pounds, and the accumulations of interest upon preceding deposits, will increase as follows:—

At the end of the 1st year, it will be		£10	0	0
2nd	,,	20	10	0
3rd	,,	31	10	6
4th	,,	43	2	$0\frac{9}{10}$
5th	,,	55	5	$1\frac{125}{400}$

Now these sums, if severally subtracted from 100*l*., the constant amount of the debt, would leave precisely the same series of balances exhibited in the former table; that is to say, at whatever time the accumulations might be applied to the reduction of the debt, they would just reduce it as much as it would have been reduced by the first mode of operating upon it, and not a fraction of a farthing more. For example, the sum of 31*l*. 10*s*. 6*d*., which has accumulated by the end of the third year, being applied to the reduction of the debt, would bring it down to exactly 68*l*. 9*s*. 6*d*.; and the sum of 55*l*. 5*s*. $1\frac{125}{400}d$., which has accumulated by the end of the fifth year, being so applied, would bring it down to 44*l*. 14*s*. $10\frac{97}{100}d$. In each case the reduction is the very same, as appears by the first table, which would have been effected by the simple and more direct process of applying the whole surplus regularly every year to the extinction of the debt, without any attempt being made to take advantage of the principle of compound interest at all.

But, thirdly, and lastly, this vaunted principle may be applied to a still greater extent, by the entire annual surplus being allowed to accumulate, without any deduction being made from it, even to pay the interest of the debt. In that case, of course, the amount of the debt will be every year increased by the interest upon its original amount, and also by the interest upon the additions thus made to it; that is to say, it will accumulate at compound interest as well as the sinking fund. Let us see what will be the race between the two. It is exhibited in the following statement:—

	Debt. £.	s.	d.	Sinking Fund. £.	s.	d.
At the end of the 1st year,	105	0	0	15	0	0
2nd ,,	110	5	0	30	15	0
3rd ,,	115	15	3	47	5	9
4th ,,	121	11	$0\frac{81}{100}$	64	13	$0\frac{90}{100}$
5th ,,	127	12	$6\frac{2004}{400}$	82	17	$8\frac{180}{400}$

Here, again, the balance obtained at the end of any one of the years in the series, by subtracting from the debt the amount of the fund that has accumulated for its discharge, will be found to be precisely the same as before. At the end of the fifth year, for instance, if the sinking fund were to be applied to the reduction of the debt, the 127*l*. 12*s*. $6\frac{2004}{400}d$. would, by the sum of 82*l*. 17*s*. $8\frac{180}{400}d$. being paid off, be reduced just to 44*l*. 14*s*. $10\frac{97}{100}d$., as it would equally have been, although the principle of compound interest had never been brought into operation in the case.

It is unnecessary to carry the calculation farther; but to whatever extent it might be carried out, the result would be found to be the same. In no length of time would a fund, accumulating by compound interest, get ahead by the smallest degree in the redemption of the debt, of the process of applying the entire annual payments by which the sinking fund was supported to the reduction of the debt directly, and without allowing them to accumulate at all. And this holds equally true whatever may be the amount of the debt, or of the surplus available for its redemption, or of the prevalent rate of interest: the case is the same whether the debt be a hundred pounds, or a hundred or a thousand millions.

Indeed, were it not for the wild notions that have so generally taken hold of people's imaginations upon this subject, the question would neither require nor bear even the examination we have bestowed upon it. It is decided by a single consideration. The wonders of compound interest have been paraded as if the principle were one, of the operation of which no experience had ever been had till it was proposed to make it available in the project of the sinking fund. But, in truth, its operation is the most common of all incidents in money transactions, and has been so ever since the lending and borrowing of money on interest has come to be practised among men. Compound interest means nothing more than the augmentation of a debt by the addition to its sum of the annual interest due upon it. The English nation had known enough of this process long before the date either of Mr. Pitt's sinking fund or of Dr. Price's pamphlets. Whenever the national debt had been increased by the borrowing, within the year, of a sum of money equal to the annual interest paid upon its previous amount, the principle of compound interest had been called into action upon the whole debt; and, whenever a smaller sum than this had been borrowed, the same principle had been allowed to come into partial operation. So also in reducing the debt, any sum of money that may be directly applied to that purpose cuts away a portion of the debt equivalent to itself in amount, and which, unless so discharged, would have either continued to increase at compound interest, or could have only been kept stationary by the annual application to it of the whole interest of the sum by the outlay of which it has been discharged. That sum, therefore, if reserved in the hands of the State, never could have increased by a single farthing. In being used at once to discharge its own amount of the debt, it is laid out with the full effect with which, if

allowed to accumulate at compound interest, it could possibly have acted. It does not provide a constantly augmenting fund to meet the augmentation of the debt, but it does the same thing,—it prevents (what could in no other way be prevented) the augmentation of its corresponding portion of the debt at the same rate with itself. It sweeps away at once as much of the present debt as it ever could extinguish were its accumulation as a sinking fund, at compound interest, to be allowed to go on without interruption for twenty centuries.

In short, as Dr. Hamilton has laid down the general principle, "the excess of revenue above expenditure is the only real sinking fund by which public debt can be discharged. The increase of the revenue, and the diminution of expense, are the only means by which this sinking fund can be enlarged, and its operations rendered more effectual; and all schemes for discharging the national debt, by sinking funds operating by compound interest, or in any other manner, unless so far as they are founded upon this principle, are illusory."

It is never to be forgotten, however, in considering this subject, that it is always the duty of the State to make every effort in its power for the discharge of the principal of its debts, as well as for the regular payment of the interest. It ought, whenever it is possible to do so, to devote a part of its income to the one purpose as well as to the other; and it ought to find an income sufficient to answer both purposes, by either a diminution of its expenditure upon other objects, or an increase of taxation, if the one or the other of these two methods is at all practicable. In so far, therefore, as the original scheme of Mr. Pitt's sinking fund proceeded upon the principle of providing for the repayment of every loan that was raised by setting apart annually for that end a certain amount of actual surplus revenue, its design was deserving of all commendation. Nay, further, it appears impossible to deny that injustice was done to the holders of all the stock that had been borrowed on condition of the means for its redemption being thus provided, when the scheme was departed from, and such provision no longer made.

There is another operation of the Government by which the burden of the national debt has frequently been materially diminished,—namely, the reduction of the interest of certain portions of it. This reduction the State is enabled to effect by the power which it usually retains in negotiating a loan of paying off its creditors at any time it may find convenient. The operation may be resorted to whenever the actual rate of interest in the country falls in any considerable degree below the nominal rate of any particular species of stock. This state of things is indicated by the stock in question being above par, or at a premium, in the money-market; that is to say, by a hundred pounds of it selling for more than that sum of money. In such circumstances Government may safely offer to the holders of the stock the repayment of their money, unless they will accept of a diminished rate of interest. Thus, suppose the common rate of interest in the country to be 4 per cent., the real value of 100*l.* in a 5 per cent. stock will be 125*l.*, that being the sum required to yield five pounds annually in any other investment. The price of the stock, therefore, will rise towards this point in the market, although it may very probably be prevented from quite reaching it, by the apprehension of the very reduction of interest to which the stock is in danger of being subjected. Let us suppose that the price actually rises to 110*l.* In that case the possessor of 1000*l.* in stock has actually 1100*l.* worth of property in the funds. Still, if the Government should determine to pay off the stock, he will not be entitled to receive more than 1000*l.* for his share. Now, as he has not sold out when he might have done so any day for 1100*l.*, it is not probable that he will prefer accepting the 1000*l.* thus offered by Government, if he shall have the option of remaining a creditor of the State on terms which, although less advantageous than those he has hitherto had the benefit of, shall yet afford him a better return for his capital than he could obtain for it by laying it out at interest in any other form. His capital, be it remembered, is now only 1000*l.*; and for that, according to our supposition, he could obtain from any other ordinary investment only 40*l.* per annum. If the Government, therefore, should offer him 4 per cent. interest, he would make as much of his money by allowing it to remain in the hands of the State, as he would do by carrying it elsewhere. But the Government might probably offer him 4½ per cent., which would produce 45*l.* per annum instead of 40*l.*, which he would make of it otherwise. In that case he would have little or no inducement to transfer it. If, however, he should insist upon having his money, the State would be a gainer by paying him off rather than continuing to allow him the high rate of interest of which he had been heretofore in the receipt, even although it should be necessary to resort to a new loan for that purpose; for, in consequence of the reduction in the current rate of interest, the new loan could be obtained on terms which would entail a less burden upon the public than the present dividends occasion.

In all the instances, accordingly, in which the operation we are here considering has been carried into effect, the number of holders of stock who have dissented from the Government proposals, and preferred being paid in money, has been very small. The offer of the Government, however, it is to be observed, has not always been in the simple form of a proposal to convert the stock bearing a high rate of interest into the same quantity of stock bearing a lower rate. It has sometimes been attempted to reduce the capital as well as the annual amount of the interest of the debt, by giving the holders of the stock to be operated upon the option of continuing to receive the same rate of interest as before, but of having a certain portion of their stock extinguished. Even a higher than the former rate of interest has sometimes been offered, on condition that a larger should be exchanged for a smaller quantity of stock. For instance, when in May, 1830, it was determined to reduce the burden of a certain amount of stock which bore an interest of 4 per cent., the option was given to the holders of receiving for every 100*l.* of the 4 per cent. stock, either 100*l.* of 3½ per cent. stock, or 70*l.* of a new stock to be created with an interest of 5 per cent. The interest on 100*l.* at 3½ per cent. is the same as the interest on 70*l.* at 5 per cent.; and, therefore, the stockholder would have been, in so far as regards the annual benefit derived from his capital, just as well off with the one investment as with the other, while the nation, by his acceptance of the 5 per cent stock would have gained the advantage of having the capital of the debt lessened at the same time that its annual burden was lightened. The danger, however, of accepting the 5 per cent. stock would have been, that this stock might have been paid off as soon as it was created; in which case the holders would have received 100*l.* in the 3½ per cents., not for every 70*l.* of stock which they possessed, but only for every 100*l*; an amount for which they would have exchanged about 143*l.* of their former stock. To obviate this objection, therefore, the proposal was accompanied by an engagement on the part of the Government that the new 5 per cent. stock should not be subject to a reduction of interest for forty-five years. Still, even this security was not sufficient to induce many persons to prefer the new stock: the investments in it did not amount to quite half a million.

On other occasions the operation of reducing the in-

terest on a particular description of stock, has been so managed as to be attended with an augmentation of the capital of the debt. Thus, in 1822, the holders of about 140,000,000*l.* of 5 per cent. stock were converted into holders of 4 per cent. stock, by being allowed 105*l.* of the latter for every 100*l.* they had possessed of the former. The effect of this arrangement was to diminish the annual charge on the debt by 1,222,000*l.*, but at the same time to increase the capital of the debt by the sum of about 7,000,000*l.*

An augmentation of the capital of the debt, however, even although unattended by any augmentation of the annual charge, is very far from being a matter of no importance. The practice, as already observed, that has been for a long period pursued by the Government of this country in the negotiation of loans and the general management of the debt, has been to prefer paying a low rate of interest upon a larger capital to paying an equivalent amount of interest at a higher rate upon the money it has actually borrowed. If this reduction of the rate of interest had been only carried a little further, and the plan had been followed universally, it would have entirely prevented any diminution being effected in the burden of the debt by the process we have just been explaining, down to the present hour. If no stock of a higher denomination, for instance, than 3 per cent. stock had ever been created, the large savings that have from time to time been obtained by the reduction of the interest, would have been rendered altogether impracticable. It is only upon stock of the higher denominations that the interest has been, or in the nature of things can be, reduced. Thus if the money be funded in stock bearing an interest of 5 per cent., the annual charge may be reduced as soon as the common rate of interest in the country shall fall below 5 per cent. But if it be funded in stock bearing an interest of only 3, or 2, or 1 per cent., no such reduction will be practicable until the common rate of interest in the country shall have fallen below 3, or 2, or 1 per cent.

It is, however, to be remembered that Government never really can borrow money in a stock bearing a high rate of interest so cheaply as in a stock bearing a lower rate of interest, for the obvious reason that, in the latter case, the lender has to count, among his advantages, his much greater security from being paid off at the nominal value of his stock. Thus, we have just seen that, on the conversion of the Four per Cent. Annuities, in 1830, very few of the holders could be prevailed upon to accept of 5 per cent. stock in preference to as much 3½ per cent. stock as would have yielded only the same annual return, notwithstanding even the guarantee from the Government with which the offer was accompanied. There can be no doubt, therefore, that much of the money borrowed by the nation has been obtained on easier terms than it otherwise would have been, in consequence of the particular mode of funding that has been adopted; and this gain is to be set against the disadvantages attending the practice, as just explained.

Another government operation in the management of the debt, is the consolidation which has at different times been effected, of several stocks into one. When the stocks thus united have borne different rates of interest, they have, of course, been reduced to a uniform rate, by an alteration, where necessary, of the amount of the capital corresponding to the alteration made in the rate of interest. The most remarkable attempt of this kind, in the history of English finance, is that which was made in 1720, when, with the object of reducing the whole of the public debts then existing under one head of account, the South Sea Company was authorized to buy them all up. This scheme, however, wholly failed. In 1751 the present fund called the Three per Cents. Consolidated Annuities, was formed by the union of various funds which had till then been kept separate; but in this case no new arrangement was made as to the interest, all the several portions of the consolidated stock having previously borne interest at 3 per cent.

The raising of money by loans is not the only way in which the National Debt has been increased. Exchequer and Navy bills, and other similar government securities, originally issued for a temporary purpose, have frequently been funded, or converted into a portion of the permanent debt. Of course, this is done by an arrangement with the holders of the bills. The first operation of this kind took place in 1717, when 2,000,000*l.* of Exchequer bills were converted into stock, bearing interest at 5 per cent. During the latter part of the last war, Exchequer bills were usually funded to a considerable amount every year.

In another, and concluding paper, we shall give an account of the different funds or descriptions of stock now existing, of the payment of the dividends, of the mode of transferring stock, and of the transactions of the money-market generally.

[Errata in last Number p. 2, col. 1, lines 22 and 23, dele "as already observed," and lines 61, &c., read "the operation and effects, direct and indirect, in so far as regards the national wealth, of (not or) the existence of the National Debt." In p. 3, col. 2, it was incorrectly stated that Exchequer bills are exempt from all risk of depreciation. This is not the case, as they are only received at par by the Treasury, after the lapse of a certain time from their issue.]

CHANGES OF ADMINISTRATION AND HISTORY OF PARTIES.

(Continued from No. 38).

The first great subject of discussion that arose after the Christmas recess was a Bill brought forward by Ministers, in the Commons, on the 6th of February (1777), for suspending the Habeas Corpus Act, in regard to "persons charged with, or suspected of, the crime of high treason committed in North America, or on the high seas, or the crime of piracy." The second reading of this Bill was carried on the 10th, by a majority of 195 to 43, after a debate, in which we find Mr. Dunning, Mr. Fox, Colonel Barré, and other leaders of the opposition, taking part. The Bill was also vigorously opposed at every subsequent stage; and the third reading in particular, on the 17th, gave rise to a warm and long debate. On this occasion Mr. Fox excited a considerable sensation in the House by some statements which he made with regard to the intentions of the Court of France. He affirmed, from his own knowledge, that we had been on the eve of a war with that country in the preceding month of October, immediately before the meeting of Parliament; and he severely censured Administration for neglecting, in such circumstances, the necessary preparations for national defence. He allowed that, for the present, the Courts both of Versailles and Madrid had found it necessary to postpone their hostile intentions; but he had no doubt, from various facts in his possession, either of what these intentions really were, or that they would be carried into execution at the first moment that was deemed suitable for that purpose. He referred, in particular, to the conduct of the French Ministry to two of the members of the American Congress, now resident in Paris, Dr. Franklin and Mr. Silas Deane. "He was warranted," we have just affirming, from his own knowledge, that peared publicly at Paris and Versailles h had hitherto known to hold conferences with the Kin now disgusted treat and negotiate with them, and the Bills would

them substantially on the same footing as the representatives of any independent power in Christendom." Apprehensions of the hostility of France had frequently, before this time, been expressed in Parliament, but had always been met by assurances from Ministers that no danger existed. On the present occasion Lord North does not appear to have taken any notice of the information communicated by Mr. Fox. The third reading of the Bill was carried by a majority of 112 to 33. In the course of the debate Mr. Temple Luttrel, the barrister, spoke on the ministerial side, and was answered at great length by his younger brother, James, a lieutenant in the navy, who had recently taken the place of Captain John Luttrell, already mentioned (See *Companion*, No. xxxvi., p. 538) as one of the members for Stockbridge.

On the 29th of April, Mr. Wilkes made his annual motion for expunging the resolution by which he had been declared incapable of sitting in the last Parliament. He introduced the motion with a speech of some length; but there was no other delivered on either side; and the question being immediately called for, the numbers on a division were found to be, Ayes 64, and Noes 140.

Towards the end of this session, Lord Chatham, after his long absence, again made his appearance in the House of Lords. On the 30th of May, he came down wrapt in flannel, and, in a speech full of his usual energy and rapid eloquence, moved that an address should be presented to his Majesty, imploring him to take the most speedy and effectual measures for putting a stop to hostilities in America, upon the only just and solid foundation, namely, the removal of accumulated grievances. Referring to the expectations which were entertained of success in the present campaign, he remarked, that, as for the conquest of America, the gaining of ten pitched battles would do nothing towards it. "You talk," he exclaimed, "of your numerous friends to annihilate the Congress, and of your powerful forces to disperse their army; I might as well talk of driving them before me with this crutch." The motion was warmly supported by the Dukes of Grafton and Manchester, the Bishop of Peterborough (Dr. John Hinchcliffe), and Lord Camden; but was rejected on a division by a majority of 99 to 28. Lord Chatham's return to the House appears to have awakened much public curiosity and interest. The Duke of Grafton began his speech by congratulating their Lordships and the nation at large on the reappearance of the noble Earl among them. "He contemplated," his Grace said, "with heartfelt pleasure, the revival of that spirit, which could collect so very respectable an appearance below the bar of gentlemen of all parties, which could crowd the avenues leading to the House, so as not to leave sufficient room for their Lordships to come to their seats, unless with the utmost difficulty." At this time strangers were admitted to hear the debates in the Lords, though excluded from the Commons, where a motion for the opening of the gallery had shortly before been thrown out by a majority of 83 to 16. The above is the last which has been reported of the debates of this session, which was closed by a speech from the throne on the 6th of June.

The first check to the progress of the British troops under General Howe and Lord Cornwallis, on their march to Philadelphia, had been given on the 28th of December, 1776, when a division of the forces, under the command of the latter, was surprised by Washington at Trenton, on the left bank of the Delaware, and must should double loss compelled to abandon its position entitled to real effect of this exploit in reviving the Now, as he has Americans, and exciting them to new to any day for very great. It did not, however, in the advance of the British army, though, in consequence of the more effective opposition which was encountered from this date, it became necessary for General Howe to change considerably his plan of operations. But, having at length, after many delays, come to an engagement with Washington on the 11th of September, 1777, at Chadd's Ford, on the Brandywine, he succeeded in gaining a decisive victory over the American general; and, on the 26th, he entered Philadelphia in triumph, the Congress, who had a short time before returned to that capital, again taking flight at his approach. Meanwhile, also, General Burgoyne, who commanded the British forces in the North, had been carrying everything before him in that quarter. Having set out from Quebec, at the head of an admirably appointed body of troops, on the 6th of May, with the intention of effecting a junction with another force, to be sent up the Hudson, from New York, by General Howe, he had forced General St. Clair to evacuate the important fort of Ticonderoga, had destroyed the American flotilla stationed for the occupation of Lake George, beaten the enemy in the field at Hubberdton, taken Fort Anne by assault, and, in short, for some time pursued his way without ever meeting with any effective resistance. Partly, however, through an unfortunate movement on his own part, but much more in consequence of the non-arrival at the proper time of the reinforcements upon which he had relied, his good fortune at first was suddenly succeeded by a series of the most ruinous reverses. On the 13th of September he fought with General Gates the battle of Stillwater, on the banks of the Hudson, in which, although he was not beaten, he received a severe check. From this moment his Indian allies began to desert him, and his men lost heart. He was eventually driven into a position in which, left without assistance, and with only two or three days' provisions in store, while the rapidly increasing forces of the enemy surrounded him on all sides, he was compelled to open a negociation with General Gates, and eventually to surrender himself and his whole army prisoners of war, by the famous Convention of Saratoga, on the 16th of October.

Neither the surrender of General Burgoyne nor the capture of Philadelphia had been heard of in England, at least publicly, when Parliament reassembled on the 18th of November. The Royal Speech now, for the first time, intimated some suspicion of the designs of France and Spain, in the ports of both of which kingdoms hostile preparations were well known to be going on. The Address gave rise to long and animated debates in both Houses. In the Lords the Earl of Chatham distinguished himself by one of the most powerful speeches he had ever delivered, in the course of which he mentioned as an event that had probably already taken place that total loss of General Burgoyne's army, the intelligence of which arrived about a fortnight after. His Lordship concluded by moving an amendment, which, however, was rejected on a division by a majority of 97 to 28. In the Commons the amendment was moved by the young Marquis of Granby, afterwards Duke of Rutland. It was negatived by a majority of 243 to 86.

It has been suspected that secret intelligence of the Convention of Saratoga had reached Ministers even before the opening of Parliament, but it seems scarcely probable that they would in that case have ventured to put into his Majesty's mouth the expressions of hope and encouragement which pervaded the Royal Speech. It is certain, however, that rumours of the event were spread for some days before any acknowledgment of it was obtained from Ministers. It appears to have been first admitted by Lords North and George Germaine, in the House of Commons, on the 3rd of December.

The announcement spread the deepest dissatisfaction and gloom over the nation. On the 5th Lord Chatham brought the subject before the House of Lords by moving an Address to his Majesty for copies of General Burgoyne's orders and instructions. The motion was opposed by Lord Lyttelton, Lord Suffolk, and other noble Lords, who, strange as it may appear, all contended that the assumed fact of the capitulation, though probably true, was as yet a mere report, and therefore could not with propriety be noticed by the House. On a division the numbers appeared to be 19 for the motion, and 40 for the previous question. On the 10th the Commons, by a majority of 155 to 68, agreed to adjourn on the proposition of Ministers to the 20th of January, after a short debate. The same motion made the following day in the Lords was more keenly opposed; but it was eventually carried by a majority of 47 to 17.

The situation of the Ministry at this moment was one of extreme embarrassment as well as humiliation. The whole course of their policy had turned out a failure, every measure they had adopted, every hope they had encouraged, had ended in discomfiture and disappointment. Their schemes for drawing a revenue from America had produced, instead of a revenue, a rebellion. Their Acts of Parliament for putting down the resistance of the Colonists had every one of them, without any exception, exasperated, strengthened, and extended that resistance. It was all the same whether they employed threats or promises, whether they attempted coercion or reconciliation. Their application of force had always proved impotent to attain its object; their concessions had never come till the time when they could do no good, after any disposition to accept them which might ever have existed had been destroyed. After nearly three years' fighting, their military position in the country they aimed at conquering was much worse than it was at the close of their first campaign. Their armies were for the most part either destroyed, or cooped up, like General Howe and his men at Philadelphia, in spots where they could not act, and from which they durst scarcely stir. The few towns and forts which they had taken were useless to them. On the other hand, every day was adding to the available strength, to the resources, to the organization, and to the confidence of the enemy. The insurgents had now sprung up into a state, wielding a formidable power, and all but officially recognised by other nations. They had established for themselves a firm and efficient government; they had agents at the principal courts of Europe, they raised and equipped and maintained armies, and commissioned officers to command them; they issued letters of marque and reprisal, licensed privateers, and had their own flag, which made itself respected wherever it appeared. Not only were the high seas thus made dangerous to British commerce; even the coasts of Ireland and of Great Britain could not be navigated with safety by unarmed vessels. In these circumstances of loss and disgrace, the public discontent, and especially that of the commercial part of the community, began every where to grow clamorous. The spirit of the nation was not broken, but it was fretted and disgusted, and the great body of the people of all classes, although scarcely yet disposed to give up the contest, were fast giving way to dissatisfaction and anger, both at the counsels which had provoked it, and at the manner in which it had been carried on. "When it was attempted about this time to raise additional troops by the exertions of individuals, of 15,000 men that were eventually obtained, not 5,000 were raised in England; above two-thirds of the whole number were procured from Scotland, and mostly from among the Highland clans. In London, Bristol, and many other parts of England, the public meetings that were called all scouted the proposal of encouraging the scheme. Even the country gentlemen now showed a disposition to turn upon the Minister, when, instead of a revenue from America, which he had promised them, they found the course into which he had led them productive only of an increased taxation, from which there appeared no prospect of speedy relief. The parliamentary majorities which had long carried everything so triumphantly began now perceptibly to decline; nor did the steadiest and most zealous of the ministerial champions in debate longer exhibit the zeal or the intrepid front they had been wont to show. Lord North himself, though he sustained his difficult position, upon the whole, with wonderful equanimity, appeared at times to quail under the eloquent exposures and denouncements of the Opposition, and hardly to be able to muster up spirit to reply either to their invectives or their arguments. The public had for some time past, as we have mentioned, been wholly excluded from the House of Commons; but even the close deliberations of that assembly must often, at this crisis, have been felt by his Lordship and his colleagues to be a severe trial.

One of the most mortifying appearances ever made by a Minister was that for which the English Premier now found it necessary to make up his mind. On the 17th of February, 1778, Lord North rose in the House of Commons, and in a long speech announced the resolution to which the Government had come of yielding everything for which the Americans contended, excepting only their nominal independence of the Crown. He proposed to bring in immediately two Bills, the first of which should repeal all the obnoxious Acts which had been passed since 1763, should bind Parliament never again to impose any taxes upon the Colonists, should secure to them for ever in future the appointment of their own governors and magistrates, and should provide that no military force should be kept up in any of the provinces without the consent of its representatives met in provincial assembly; and the second of which should empower the Crown to appoint Commissioners to negociate with Congress on the basis of these propositions. Even amidst the gloom of the moment this sudden and complete abandonment of every point which had been till now insisted upon as vital to the national interests and honour seems to have surprised and confounded all present. "A dull melancholy silence," says the Annual Register, "for some time succeeded to this speech. It had been heard with profound attention, but without a single mark of approbation to any part, from any description of men, or any particular man in the House. Astonishment, dejection, and fear, overclouded the whole assembly. Although the Minister had declared that the sentiments he expressed that day had been those which he always entertained, it is certain that few or none had understood him in that manner; and he had been represented to the nation at large as the person in it the most tenacious of those parliamentary rights which he now proposed to resign, and the most remote from the submissions which he now proposed to make. It was generally, therefore, concluded that something more extraordinary and alarming had happened than yet appeared, which was of force to produce such an apparent change in measures, principles, and arguments." Mr. Fox and other Members afterwards addressed the House, but no opposition was offered to the motions for leave to bring in the Bills. "It was thought by many at that time," continues the writer we have just quoted, "that if the Opposition had then pressed him, and joined with the warm party which had hitherto supported the Minister, but which was now disgusted and mortified in the highest degree, the Bills would

have been lost; but, in fact, they took such a hearty part with the Minister, only endeavouring to make such alterations in, or additions to, the Bills, as might increase their eligibility, or extend their effect, that no appearance of party remained; and some of his complaining friends vexatiously congratulated him on his new allies. These new allies, however, though they supported his measures, showed no mercy to his conduct."

In the course of his speech this night, Mr. Fox declared that he had information, upon which he could rely, to the effect that France had concluded a treaty of alliance with the Independent States of America. "He said he could answer with certainty for the truth of his information; it was no light matter, and came from no contemptible authority; he, therefore, wished that the Ministry would give the House satisfaction on this interesting point, whether they knew anything of this treaty, and whether they had not been informed, previously to the making of their proposition, of a treaty which would make that proposition as useless to the peace as it was humiliating to the dignity of Great Britain?" No reply was given to this question by Ministers, till the subject was again mentioned towards the close of the debate by Mr. James Grenville (the eldest son of the Right Honourable James Grenville, and one of the Members for the town of Buckingham, afterwards created Baron Glastonbury). Mr. Grenville, referring to what had been said by Mr. Fox, called upon Lord North either to admit or deny the fact stated. "The information," he said, "tallied with what he himself had heard from undoubted authority." He added, "that from the same authority he knew a very considerable body of forces had marched, within this fortnight, from the interior provinces of France, and that the language held by that Power was of the most offensive nature; he, therefore, insisted on having these facts answered." On this Lord North at length replied, "that he could not say from authority that the treaty alluded to was signed; that, indeed, it was possible, nay, too probable, but not authenticated by the Ambassador."

In point of fact the French King had formally acknowledged and guaranteed the independence of the United States, and entered into a treaty of alliance and commerce with them, on the 6th of the present month. On the 5th of March, however, when the two conciliatory Bills came to be debated for the first time in the Lords, Viscount Weymouth, in reply to a question as to the existence of the treaty put by the Duke of Grafton, said emphatically, "that he did in the plainest and most precise manner assure their Lordships that he knew not of any such treaty having been signed or entered into between the Court of France and the deputies of the Congress, and he hoped their Lordships would not fail to remember that it was on the 5th of March likewise that he stood up in his place and declared he knew nothing of any such treaty, nor had any authentic information of any such treaty being either in contemplation or existence." These last words were in allusion to those with which the Duke of Grafton had concluded his speech, in which his Grace "desired the House to recollect that it was on the 5th of March he put this question to the King's Ministers." He had previously said that the information which had been communicated to him by his Honourable kinsman (Mr. Fox), and which that gentleman had not made known to any other person, "had made so strong an impression on his mind, from the channel through which it came, that, if the two Secretaries of State and the whole Cabinet Council were to declare the contrary, they could not do away that conviction which he felt of its being matter of fact." In the latter part of the debate Lord Camden returned to the subject, and bluntly observed that "the King's servants could not be ignorant of the truth of the business." "It had come out," he proceeded, "in the lower House of Parliament three weeks since; there had been time, and time enough, for them to have ascertained the fact; nay, report said that they not only knew it, but that they had sent emissaries to tamper with Dr. Franklin and Mr. Deane, the Congress's deputies to the Court of France, to whom they had offered the terms which these Bills on the table went to authorize, and the terms had been rejected with contempt." No further answer, however, appears to have been extorted from Ministers. But the treaty having been officially intimated by the French Ambassador on the 13th, the fact was at length communicated to both Houses on the 17th, in a message from the King. On the preceding day, in the Commons, Mr. Grenville had moved an Address to his Majesty for copies of all communications that might have been received from the English Ambassador at Paris, or the French Ambassador in London, touching any treaty concluded between France and the Americans. On this occasion Lord North said, "if a resignation of his place could in any wise tend to extricate the nation from its present difficulties, he had often declared, and then repeated the declaration, that he would most willingly resign; but as it would be cowardly to give up in the hour of danger, and as resignation at that crisis would create confusion in the Ministry, his pride, his duty to his country, convinced him that he ought not to go out of office." He afterwards repeated that "it was his firm unalterable resolution to keep his place." The previous question was carried against Mr. Grenville's motion by a majority of 231 to 146.

An Address, in answer to the royal message, assuring his Majesty of the support of Parliament in repelling the aggressions and insults of the French King, was carried in the Lords by a majority of 68 to 25, and in the Commons by a majority of 263 to 113. The amendments moved in both Houses went to qualify the pledge of support by expressing the hope and confidence of the House that his Majesty, in the momentous situation to which public affairs had been brought, would dismiss his present advisers. In the Lords the Ministers preserved an obstinate silence, answering neither the taunts nor the arguments, nor even the direct questions of their opponents. In the Commons Lord North again declared his resolution not to resign, adding, "that as the interest of the empire, no less than his own pride, required his continuance in office, he was determined not to quit the helm while the ship of the State was tossed about in a storm, until he should have brought her safe into port."

Meanwhile the two conciliatory Bills, as they were called, had been rapidly carried through both Houses. They were both read a third time and passed, in the Lords, on the 9th of March. It was on this occasion that Dr. Beilby Porteus, who had shortly before been made Bishop of Chester, concluded a maiden speech with the words,— "Some think the Bills offer too much, others say they offer too little; therefore I think they contain just enough." On which the Duke of Richmond retorted that "the Right Reverend Prelate had found out a new mode of reasoning; namely, that that must be right which pleased nobody."

The only other debate of this busy and important session which it is necessary for us to notice is that which took place in the House of Lords on the 7th of April, on the motion of the Duke of Richmond for an Address to the King on the state of the nation, and which was rendered so memorable by the last public appearance of Lord Chatham, and the sudden attack

of illness, which ended in his death. It is to be observed, that the state at which American affairs had now arrived had again brought the two great sections of the Opposition to a point at which their opinions began to diverge and separate. The Rockingham party had now become convinced that any issue of the contest short of the acknowledgment of the independence of America was no longer to be hoped for; and they were therefore prepared to yield to that necessity. These views were supported in the House of Lords both by Lord Rockingham and the Duke of Richmond. Other leaders of the opposition, however, in both Houses, though wholly opposed to the policy by which the contest had been forced on, and anxious to grant America every right it could claim while remaining a portion of the empire, (exemption from taxation by the Imperial Parliament included,) still stood out against a separation of the Colonies from the parent state. This was the ground taken by Lord Chatham, and his friends, Lords Shelburne, Temple, and Camden, in the Lords, and Mr. Dunning, Colonel Barré, and those who acted with them, in the Commons. A strange attempt, it may be added, was made about this time to bring about the recall of Lord Chatham to office, by two personages who, in so interfering, would seem to have busied themselves about a matter that lay very much out of their line. These were Sir James Wright, physician to Lord Bute, and Dr. Addington (father of the present Lord Sidmouth), who was in the habit of attending Lord Chatham in the same capacity. Their scheme was also in itself a very odd one, being nothing less than to get a Cabinet constructed, in which Lord Bute and Lord Chatham should act together. With this object they set themselves, in the first place, to establish a sort of round-about communication between these two noble Lords, so long divided and opposed, by each reporting to his patron certain expressions of good will and compliment, which it appears had occasionally been dropped by the one in regard to the other. In their zeal in the business upon which they had entered, and their conviction that the union of their two noble friends could alone save the country, they were probably led to add occasionally something of their own to the little they could really get to fetch and carry; at least, when the affair came to be cleared up, they contradicted each other as to various expressions which had been alleged to have been used. Lord Chatham seems to have been, for a short time, to a certain extent taken in by the project; but, of course, it ended in smoke. A quantity of correspondence upon the subject was published in the newspapers a short time after Lord Chatham's death, some passages in which are curious. Among other things, Dr. Addington says, in his narrative, that Sir James Wright had told him that Bute and Chatham were "two of the men the King hated most." Sir James, however, in his account, denies that he ever made any such statement.

The Address moved by the Duke of Richmond, on the 7th of April, was of great length; and, after recapitulating the whole history of the war, concluded by expressing a conviction that the reduction of America by force of arms was impossible, and by advising his Majesty, under these circumstances, instantly to withdraw his fleets and armies from the thirteen revolted provinces, and to make peace with them on such terms as might preserve their good will. The Address also prayed his Majesty to dismiss the Ministers, whose counsels had involved the country in its present calamities. The Duke was answered by Viscount Weymouth in a short speech. Lord Chatham, who had come into the House wrapped up in flannel, and leaning upon two friends, then rose slowly and with difficulty from his seat; and while the same two friends supported him, and his hands also rested on his crutches, proceeded to address the House. "He appeared," says a report of the debate in the London Magazine, "to be extremely feeble, and spoke with that difficulty of utterance which is the characteristic of severe indisposition." A friend who was present, however, and whose account of the scene was first published in Seward's "Anecdotes of Distinguished Persons," adds that, "as he grew warm, his voice rose, and was as harmonious as ever,—oratorical and affecting, perhaps more than at any former period, both from his own situation and from the importance of the subject on which he spoke." "The reverence," the same authority states, "the attention, the stillness of the House, was most affecting; if any one had dropt a handkerchief the noise would have been heard." "He had come down to the House," his Lordship said, "on that day (perhaps the last time he should ever be able to enter its walls), to express the indignation he felt at an idea, which he understood was gone forth, of yielding up the sovereignty of America." "My Lords," he continued, "I rejoice that the grave has not closed upon me, that I am still alive to lift up my voice against the dismemberment of this ancient and most noble Monarchy!" He then went on to contend that neither the resources nor the spirit of the country could possibly be reduced so low as to make the proposition which had been that night submitted to the House endurable. When he sat down the Duke of Richmond again rose. In the course of an address of some length his Grace declared that there was not a person present who more sincerely wished that the people of America should remain dependent on this country than he did; but, being convinced that that was now totally impossible, he desired, if they were to be lost as fellow subjects, to retain them as allies, and to prevent them throwing themselves into the hands of France. While the Duke was speaking Lord Chatham looked at him with attention and composure; he then rose to reply, but in evident agitation; and, after two or three unsuccessful attempts to stand, fell back, before he had uttered a word, in a state of insensibility. Having partially recovered after being taken out of the House, he was carried home to Hayes; but he never again rose from his bed. He breathed his last on the 11th of May.

The debate, which had been interrupted by this affecting event, was, as soon as the confusion had subsided, adjourned, on the motion of the Duke of Richmond, till the next day. On that day Lord Shelburne, at great length, enforced the same views which had been advanced by Lord Chatham, treating the notion of surrendering the sovereignty of America as a humiliation not to be thought of. In his strictures upon Ministers, however, he was as severe as the Duke of Richmond. "Nothing," said his Lordship, "will succeed under the direction of the present Administration; they are despised or execrated without doors; they have lost the public confidence; the system of government must be changed, and established upon a stronger basis. I repeat again, the lawyers and *Commis*, the present conductors of public business, must be sent back to their proper vocations, or their original obscurity." None of the Ministers took any part in the discussion, which terminated in the rejection of the motion by a majority of 50 to 33. An extraordinary proposition was then made by the Earl of Abingdon, who, rising in great heat, and declaring that these dead majorities would be the ruin of the nation, proceeded as follows:—"My Lords, we are told by Ministers that this is the only way in which his Majesty will receive our counsel. It may, indeed, my Lords, be the only way in which his Majesty will receive our counsel, but it is not the only way in which we have a right to give our counsel to his

Majesty. My Lords, we are the hereditary counsellors of the Crown, and have a right to an audience of his Majesty at all times, to lay our humble services before him. I therefore move, my Lords, that we of the minority do, in a body, wait upon his Majesty with the Address that has been proposed by the noble Duke: it contains information worthy the Royal ear; what effect it may produce is not for me to forejudge." The Duke of Richmond expressed his assent to this proposition; but the measure was not carried into execution. Of course the House was not the proper place in which to make such a motion.

On the 2d of June attempts were made in both Houses to carry addresses, humbly imploring his Majesty to defer the prorogation of the Parliament until the present very dangerous crisis in the national affairs might be happily terminated; but the motion was thrown out in the Lords by a majority of 42 to 20, and in the Commons by a majority of 94 to 54. The prorogation took place the following day.

Immediately after the close of the session, Earl Bathurst resigned the Great Seal, and the Attorney-General, Edward Thurlow, Esq., was appointed Lord Chancellor, and at the same time raised to the Peerage by the title of Baron Thurlow. The Solicitor-General, Mr. Wedderburn, succeeded to the office of Attorney-General; and James Wallace, Esq., (father of the present Lord Wallace,) became Solicitor-General.

POLITICAL RETROSPECT FOR FEBRUARY, 1836.

GREAT BRITAIN.

PARLIAMENT re-assembled on Thursday, the 4th, when the Session was opened by his Majesty, in a Speech from the Throne, which we have given at length in another place. In the number, variety, and importance of its announcements, this Speech was one of the most remarkable ever delivered on such an occasion, and would seem to prognosticate a legislative year, unusually busy and interesting.

The question of the Address gave rise to a short debate in the Lords, and to a somewhat longer, and considerably more animated, one in the Commons. The Address proposed by Ministers, being, as usual, an echo of the Speech, was nearly without any expression committing Parliament to a particular course in regard to any of the matters on which it touched; and, especially with the explanations which were given in both Houses, it certainly might have been, conscientiously enough, concurred in by Members of all parties and shades of opinion. The Opposition leaders, however, seem to have considered the opportunity a good one for a display of their strength. They accordingly proposed, in both Houses, an amendment, neutralizing the passage in the Ministerial Address, which expressed a hope that Parliament would find itself able to apply to the defects and evils of the Irish Municipal Corporations "a remedy founded upon the same principles as those of the Acts which have been already passed for England and Scotland." In the Upper House, where a contest of numbers would have been quite vain and hopeless, Ministers acquiesced in the amendment; but in the Commons they declined to do so, when invited by Sir Robert Peel to follow the example of the Peers. Having advanced thus far, however, the Right Honourable Baronet could scarcely now retreat. A division, therefore, took place, when the original Address was carried, in a very full House, by the unexpectedly large majority of 41, the numbers being for the amendment, 243—against it, 284. In this division Sir Robert Peel was joined by Lord Stanley, who had taken his place on the same Bench, and contended side by side with him in the debate.

The only other division of any consequence which took place, in the first week of the Session, was that in the Commons on Friday evening, on a Resolution proposed by Mr. Ewart, that no business, except of a merely formal nature, should be entered on after half-past eleven at night. It seemed to be felt by the House that, even if the principle of abstaining from midnight legislation should be conceded, a regulation so imperfectly defined would have no chance of working well; and the proposition was thrown out by a majority of 233 to 51.

On Monday, the 9th, the subject of what the King's Speech had called "the difficulties which continue to be felt in important branches of agriculture" was brought before the House of Commons by Lord John Russell, in a motion for the appointment of a Select Committee to inquire into it. His Lordship, however, frankly stated that he did not expect the Committee would make much of the matter. It appears that the principal problem they will be expected to solve is, why the price of wheat is at present so much lower than it used to be, in relation to the price of barley; but if this be an evil, which it is not easy to understand how it should be, it is one which we may venture to say it will puzzle Parliament to cure. The landed interest, however, are likely to be left to solve the difficulty in their own way, for the proportion of county to town Members in the Committee is nearly four to one. The strength of the agricultural interest in the House (where it is often said not to be sufficiently represented) was strikingly shown by a division which took place, on a motion by the Marquess of Chandos, for increasing this already overwhelming preponderance, by the addition to the list of the names of three more representatives of counties. The motion, which was resisted by Ministers, was only defeated by the narrow majority of 149 to 142.

This Committee is not to be restrained from taking as extensive a range as it may think fit, in inquiring into the state of agriculture—even the whole wide sea of the currency question being left open to it, if it should resolve to adventure upon that navigation in search of the secret for re-adjusting the prices of wheat and barley. The inquiry, at any rate, will probably last for some time, which is not to be regretted, for various reasons. If this Committee would address itself to an investigation of the statistics of agriculture, it might render a valuable public service.

On Tuesday the 9th, Lord John Russell announced in the House of Commons the ministerial plan for the commutation of tithes in England and Wales. The leading features of this important measure are—the appointment of a Central Board of Commissioners, consisting of three persons, two to be named by Government and one by the Archbishop of Canterbury, with power to appoint Assistant Commissioners; the authorizing of the parties, in the first instance, to make a permanent arrangement for the commutation, by agreement among themselves, the consent of three-fourths of the owners of the land in any parish, making the agreement binding upon the rest; and finally, the empowering of the Commissioners to proceed to a valuation of the tithe, with the view of effecting a compulsory settlement, on the requisition of any single landholder or titheowner, where no voluntary agreement shall have been entered into at the expiration of six months after the passing of the Act. It is also proposed, that the titheowner shall, in no case

receive in future less than 60 or more than 75 per cent. of the gross value of the tithe in kind on the average of the last seven years.

A debate, followed by a division, took place this evening, on a resolution proposed by Mr. Hume, that all fees for the delivery of sessional papers, to messengers, door-keepers, and the keeper of the Members' waiting-room, should be discontinued. The resolution was carried by a majority of 171 to 93. The present officers of the House are to have full compensation for the loss of the gratuities they have been accustomed to receive; so that, as many members will probably continue to pay —some of them at least—as before, they are likely to flourish on this piece of national economy.

The same evening, Mr. Hume also divided the House on a motion that it should be an instruction to the Committee on the new Houses of Parliament to consider the propriety of having them erected on the site of St. James's Palace. The motion was negatived by a majority of 141 to 42.

On Friday the 12th, two measures of great importance, and which had been anxiously expected from the Government, were submitted to the House of Commons by Lord John Russell—the first, a Bill for a General Registration of Births, Marriages, and Deaths; the second, a Bill for Amending the Laws relative to the celebration of Marriages. It is proposed that the registration shall be conducted in the first instance by registrars for each parish, or for each union of parishes, formed under the late Poor-Law Amendment Act; that there shall be a superior registrar for each county; and that a central office for superintending the whole system shall be established in London. This machinery may possibly be altered, in some respects, before the proposed measure shall become a law, but there is now every prospect that the important and too-long neglected object, contemplated by the measure, will no longer remain unprovided for by the Legislature. Registration ought to be considered the first and fundamental process in all law-making. It is the process of ascertaining and collecting the facts of the case to which the law is to apply—which, otherwise, can only be guessed at, and sometimes hardly even that. National registries, therefore, should be kept of all matters which are of a nature to be interfered with by legislation. This general consideration, however, would not have produced the present proposition for a registry of births, deaths, and marriages, had not the measure been forced on by its being indispensable (in part, at least,) as a preliminary arrangement for the amendment of the law with regard to the celebration of marriage. The second of Lord John Russell's Bills, which is directed to this latter object, provides that the publication of bans shall be abolished; and that the notice, to be henceforth given of all marriages, shall be by the parties giving in their names to the district registrar, to be inserted by him in a book that shall be open to public inspection. With a license, the parties may be married in eight days after this notice; otherwise, not till after the expiration of twenty-one days. There can be no doubt, in the first place, that this will be a much more effectual publication of the marriage than the present practice; and if the new Bill went no farther, it would be a valuable amendment of the existing law. Then, instead of all persons being obliged, as at present, to be married in one of the churches or chapels of the Establishment, and according to the rites, and by a clergyman, of the Church of England, parties are to be allowed to have the ceremony performed, at their own choice, either in this customary mode, or by a clergyman of any dissenting communion, in a chapel duly licensed for that purpose, on the application of twenty householders, and in the presence of the registrar, or simply before the registrar, according to a form prescribed by the Bill. Provision is thus made for the case of each of the three classes of persons into which, in so far as this matter is concerned, the population is divided,—namely, first, the members of the Church of England; second, those Dissenters who prefer the religious ceremony; and, last, those who consider marriage to be merely a civil contract, and object to its being entered into with any religious solemnization. No objections were stated to the principle of the measure in the House, and it will probably prove generally satisfactory. While it preserves and accords its sanction to the ancient forms for those who may voluntarily adhere to them, it makes the law, in fact, as liberal as it well can be made for the rest of the community. It does not do violence to the opinions of any class, by declaring marriage either to be or not to be essentially a religious institution; but, omitting any declaration upon that point, ratifies equally the religious and the civil ceremony, according as parties may make their choice of either. In this way, in fact, it really demands no more than the civil ceremony; but it accepts of a religious solemnization as its substitute from those who deem such essential. The religious solemnization, as it must be conducted, actually involves in it the equivalent of the civil contract. To have gone further than this, and to have insisted in all cases upon a civil form entirely separated from any religious ceremony, would certainly have outraged public feeling as it at present exists in this country. It has, indeed, been recently observed, in regard to the contract of marriage, that "few rational men think that the religious ceremony is of any importance:" but, however this may be, it is unquestionable that the great majority of our countrymen and our countrywomen are not yet converts to the doctrine here stated. Its proclamation, by the law, would probably shock the generality of Dissenters quite as much as it would the adherents of the Established Church; nor would any object of practical importance be thereby gained that is not as effectually secured by the measure as it stands. From the diversity of feelings and opinions on the subject, absolute uniformity of procedure cannot be enforced. But although there is a diversity, there need be no conflict of opinions and feelings. The Bill has been framed on the fair principle of leaving every man to his choice of the manner in which he will himself be married, but at the same time of not permitting him to force his own preference upon others. It has been framed, as it might have been if each of the three classes we have indicated had been left to draw up the part of it affecting themselves, and the three schemes had then been embodied. In that case, the churchman would have said,—I am, for my own part, contented with the present law; I wish the mode of celebrating marriage to remain, for myself, the same as it now is. The new law permits it so to remain, in so far as he is concerned. The case of the person who considers a religious ceremony of any kind unnecessary, is likewise a very simple case. He demands to have a mode of marrying appointed for his use, in which the contract shall be reduced to a mere civil act. Such a mode is appointed for him, and is made as good in law as any other mode. The case of the Dissenter who, while objecting to the religious form of the Established Church, would still be married according to another religious form of his own, is somewhat more difficult to deal with. But still it is, we think, completely met by the present Bill. Such a Dissenter wishes the Legislature, in fact, to recognise and sanction any religious form of the celebration of marriage whatever. To this demand the former Bill proposed by Sir Robert Peel replied—"No; there can be no such indiscriminate re-

cognition of all sorts of forms by the Legislature; but no form at all will be either recognised or insisted upon, if you object to the form of the Established Church." The present measure offers this alternative also to the Dissenter; but it offers him another, and one which undoubtedly will be more generally accepted of, along with it. It meets the demand just stated by saying, "Yes, you shall have a recognition by the State of any form you please; only let the ceremony, be it what it may, be performed in such a manner as to satisfy the State that it has actually been performed, and that it is a ceremony really approved of by some religious congregation." To ensure these two objects it is provided in the Bill that such marriages shall take place in a chapel which twenty householders shall have recommended to be licensed for that purpose; and that they shall take place in the presence of the registrar as a public functionary. These restrictions are no greater than those imposed upon persons choosing to be married according to the forms of the Established Church. The marriage of a churchman can take place only in a parish church or chapel; and the ceremony can be performed only by a clergyman of the Church.

A Bill was this day brought into the Upper House, by the Lord Chancellor, for the reform and consolidation of the Ecclesiastical Courts, the number of which throughout the country was stated to amount to no fewer than 386. It is proposed that the local courts of this description shall be all abolished, and their place supplied by one general Court in London. The ecclesiastical jurisdiction is also to be altered in various respects. This is a very important and valuable measure of reform, and we shall take an early opportunity of giving a detailed account of it.

On Monday, the 15th, the House of Commons was occupied during the greater part of the sitting in discussing a motion, submitted by Mr. Roebuck, for the appointment of a Select Committee to inquire into the administration of justice in the Mauritius. The Honourable and Learned Gentleman introduced his proposition by a forcible statement of abuses which he asserted to prevail in that colony; and few, if any, of his allegations appear to have been contradicted by Ministers. But it was urged that the transactions upon which he had dilated had all taken place some time back, and that an examination into them now would be attended by mischief rather than good. Mr. Roebuck was supported by Dr. Lushington and Mr. Buxton; but the motion was negatived by a majority of 227 to 69.

On Tuesday, the 16th, the case of Mr. O'Connell, as implicated in an alleged engagement with Mr. Alexander Raphael, to procure the election of that gentleman, in June last, as one of the representatives for the county of Carlow, in consideration of his paying the sum of 2000*l.*, was, after various preliminary proceedings on previous days, at length regularly brought before the House of Commons by Mr. Hardy, the Member for Bradford, who proposed that a Select Committee should be appointed to inquire into the transaction. No opposition being made to the motion, the debate was scarcely extended beyond Mr. Hardy's opening speech and Mr. O'Connell's reply. Eleven Members were appointed to compose the Committee, along with Sir Frederick Pollock and Mr. Serjeant Wilde, who were nominated, the former on the side of the accusation, the latter on that of the defence, to conduct the examination of the witnesses, but without having the right to vote.

This evening, also, the Ministerial Bill for the reform of municipal corporations in Ireland was brought in by Mr. Serjeant O'Loghlen, the Irish Attorney-General, and read a first time; but it was agreed that the discussion of the measure should be postponed to the second reading.

On Wednesday, the 17th, an important principle was recognized by the House of Commons in a vote upon Mr. Ewart's motion for the second reading of his Bill for allowing the assistance of counsel in addressing the jury to prisoners tried on criminal charges, in the same manner as that assistance has always been allowed to defendants in civil actions. Although the motion was warmly opposed by some Honourable Members, it was supported by the most distinguished authorities on both sides of the House, including the Attorney-General, Sir Frederick Pollock, Dr. Lushington, Mr. O'Connell, and Mr. Lynch; and, when the division took place, there were 179 votes for the second reading of the Bill, and only 35 against it. It was then agreed that the measure should be referred to a Select Committee for the arrangement of its details.

Another division took place in a later part of the evening on a motion submitted by Mr. Hawes, that it should be an instruction to the Committee on the new Houses of Parliament to inspect all the plans that have been submitted to his Majesty's Commissioners, and to receive the estimates of the said plans from such architects as might be willing to furnish them. The motion, after a short conversation, was rejected by a majority of 120 to 48.

On Thursday, the 18th, a multiplicity of subjects engaged the attention of the two Houses. A Select Committee to inquire into the state of agriculture was, on the motion of Lord Wynford, appointed by the Lords, in imitation of what had been done by the Commons, Ministers engaging to give every assistance in their power to facilitate the inquiry. Lord Ashburton well remarked that the farmer, at the present moment, possessed a monopoly, and Parliament could do nothing more for him. The Earl of Winchilsea declined to allow his name to be placed on the Committee, if it was to be understood that the currency question should be excluded from consideration.

In the Commons, Lord Morpeth submitted the new Ministerial Bill for the establishment of a constabulary force in Ireland, being very nearly the same measure which was last Session thrown out by the Lords. The Bill proposes to take the appointment of petty constables out of the hands of the local magistracy, and to place it in those of the Lord-Lieutenant; and this change was warmly condemned by various Opposition Members in the debate that followed, until Sir Robert Peel rose and declared that, looking to the peculiar state of Ireland, he thought it the best arrangement. After this a Committee was appointed, on the motion of Mr. C. Buller, to inquire into the conduct of the Commissioners of Public Records, and into the state of those records; and certain Resolutions were moved by Mr. Ward, and agreed to, for taking down the names of Members on divisions. The most animated debate of the evening, however, was that which arose on the motion submitted by Mr. Sheil, for a Return "of all processes which have lately issued out of the Court of Exchequer in Ireland, in causes for the recovery of tithes; and also for copies of any orders made by the Irish Government in 1823, 1825, and 1833, respecting the employment of the police in the service and execution of suits." The legality of the proceedings of the "Lay Association for the Protection of the Property of the Established Church," which has for some time been in active operation in Ireland—the right of the Court of Exchequer to issue, as it has been lately doing, commissions of rebellion against all persons whatsoever refusing to assist in the service of its suits—and the conduct of the Irish Government in setting the Court at defiance in regard to this exercise of its authority,—all these, and several other minor points, drew forth much keen and some vehement oratory from both sides of the House. The Return was ordered, as

amended on the motion of Mr. Serjeant Jackson, after the discussion had lasted till near two o'clock in the morning.

On Friday the 19th, in the Commons, a motion by Lord Dudley Stuart, for the production of the Treaty of Hoonkiar Skelessi, concluded at Constantinople 8th July, 1833, and of other papers connected with Russian and Turkish affairs, gave rise to a debate of considerable interest. The object of his Lordship's address was, to impress upon the House a sense of the dangers to be apprehended from the encroaching spirit of Russian policy; among the past achievements of which he reckoned the formation, or instigation at least, of the new German Commercial League; and whose ultimate designs he considered as comprehending not only the conquest of Turkey, of Persia, and of India, but the acquisition, also, of further influence and dominion towards the west, by the gradual envelopment of Austria, of Prussia, and of Italy. Lord Palmerston and Mr. Poulett Thomson, who replied to his Lordship, treated these speculations as wholly visionary, and expressed their conviction that there was nothing in the conduct or intentions of the Czar to excite either hostility or alarm on the part of this country. The German Commercial League they spoke of as more likely to be beneficial than injurious to our commerce and manufactures. We may also notice that Mr. Thomson, in the course of his speech, took occasion to characterise the alleged Russian State Papers, that have recently been published under the title of the 'Portfolio,' as absurd impositions. The authenticity of these documents, however, is still, we believe, strongly maintained in quarters where good means of forming a judgment on the matter ought to exist. Only a part of the papers moved for by Lord Dudley Stuart was granted.

FRANCE.

The *Moniteur* of the 18th of January contained a royal Ordinance, stating that the King had accepted the resignation of M. Humann as Minister of Finance, and that the Count D'Argout had been appointed to succeed him. On the same day, in the Chamber of Deputies, M. Humann explained the motives of his conduct and resignation. The latter, as was foreseen, arose out of the question of reducing the 5 per cents. to 3 per cents. He said that the explanations demanded from him, as Finance Minister, could not now be given, and that he must, therefore, express himself merely as a Member of the Chamber. His conviction had always been the same upon the necessity of a measure for the reduction of the *Rentes*, for he believed that such a reduction would be the best means of equalizing the national receipts and expenses. His conscience had prompted him to use every effort to bring about that result. He hoped he should not be accused of a breach of propriety in the line of conduct he had adopted; his resignation was not meant to interfere with any of the plans of Government—the sentiments of respect he entertained for his late Colleagues were in no respect altered. As far back as 1832 his opinions touching the *Rentes* were the same as now; and when the King placed him in the Ministry he maintained the same ideas, and hoped to get them adopted by the rest of the Cabinet. No later than last year he expressed the same wish in the Chamber. When he had finally made up his mind on the project of reducing the *Rentes*, he encountered a number of objections on the part of his Colleagues, who proposed to adjourn the question for a whole year; but when, at last, he came to speak about the Budget for 1837, he thought he was bound to prepare the public mind, beforehand, for the important financial changes he contemplated. In all his conduct he had done nothing inconsistent with honour; in leaving the Ministry, he still entertained the same good opinion of his Colleagues, and felt convinced that they were *all* men of honourable principles who had acted to the best of their power for the defence of a constitutional monarchic Government.

It was soon seen, however, that the causes which had produced M. Humann's resignation would bring about an entire dissolution of the Cabinet, as the Opposition seized upon the conversion of the 5 per cents. as their grand point of attack, and gained over on that particular question many Members who were otherwise disposed to vote with Ministers. Of the nine Bureaux into which the Chamber was divided for the consideration of the project, six pronounced in favour of the conversion, and three adjourned the consideration of the question to the end of the Session. The practice of the French Chambers, with respect to Bills that are to be taken into consideration is this:—The Bills, as soon as received, are referred to the Bureaux, or Standing Committees up-stairs, which Bureaux or Committees are fixed by ballot at the beginning of every month, and the total number of which is nine. The whole Chamber is divided in equal numbers into these nine Bureaux, and the business of each Bureaux is to examine the Bill received, and then name one of its own number to form part of a Special Committee, consisting thus of nine Members, whose duty then is to discuss the merits of the Bill, and report upon it to the Chamber at a public sitting.

M. Gouin, in the seventh Bureau, was the most energetic and successful champion for the conversion. In the ninth Bureau, M. Humann, the ex-minister, expressed his opinion with much freedom. "He showed that, since 1830, France had been obliged by circumstances to increase her debt by about 800,000,000 of francs, or 40,000,000 per annum; that every year there was a deficit in her finances which, in 1834, had amounted to 167,000,000; in 1835 to 38,000,000; and in 1836 to 21,000,000. The budget of 1837 presented, he said, an apparent *bonus* of more than 2,000,000; but the Ministry would, nevertheless, be under the necessity of demanding of the Chamber an extraordinary supply of 17,000,000 of francs for that year. The 30,000,000 taken off the tax on liquors was sorely felt by the Treasury, and the manufacture of the beet-root sugar, which, in 1835, had occasioned a diminution of 15,000,000 in the duties on that of colonial produce, would, in all probability, deprive it, in 1836, of 20,000,000 more. A minister who felt his responsibility, and was at all aware of his situation, could not, he said, remain indifferent in the presence of such facts. He should at once come to a resolution; and as an increase of the taxes would be an unpopular mode of remedying the evil, he preferred reducing the interest of the public debt, which constituted the principal burden of the State. The minister then pointed out the immense profits the *rentiers* had so long enjoyed, to the prejudice of the taxpayers. 'We still pay some of them,' he said, '6 francs 80 centimes for 100 francs. Would they be ruined, I ask, if we were now to pay them but 5 francs 80 centimes?' M. Humann then observed, that he had often warned his colleagues of the imminent necessity of the measure he had recommended to the Chamber; and that, two months ago, he had handed to the President of the Council a project of law, accompanied by considerations much more positive, much more energetical, than the few guarded words that had fallen from him on presenting the budget. Hence, he concluded, his opinion on the subject was well known to the members of the Cabinet; and what had occurred some days ago could not have been so unexpected as was said. He would

only add that, when he made that communication to M. de Broglie, the latter did not entertain the same opinion on the subject as he had expressed from the tribune. He merely remarked that that grand operation did not coincide well with the difficulties of the American question; and that reason, he said, would have had sufficient weight to prevent his bringing it forward, if he had not conceived those difficulties to have been nearly set at rest." He added, that several of his colleagues in office had, at first, approved of his plan, and he pointed out, as one of its beneficial results, the immense advantages to be derived from it by enterprises of public utility, such as canals, bridges, railways, &c. He then explained how he had proposed to pay off the 5 per cents. His plan was approved by the whole Bureau, who agreed to appoint him Commissioner of the Budget.

On the 4th of February, M. Gouin formally presented to the Chambers a Bill for reducing the interest of the 5 per cents. The debate lasted two whole days, and on coming to a division there was a majority of two against Ministers, 192 voting for the adjournment of the proposition as they recommended, and 194 opposing it. As soon as this result was known, Ministers went in a body to the Tuileries, and tendered their resignations, which Louis Philippe was obliged to accept for the present, though his embarrassment as to how he should replace them is said to have been very great. The next day Messieurs Dupin, Montalivet, Humann, and the Duke Decazes visited the King, but they came to no arrangement.

The defeated Ministry, [illegible] various [illegible] sure of reform, and we [illegible] make [illegible] to hold their portfolios [illegible], and as yet (Feb. 23rd) no official announcement of the formation of a new Cabinet has reached this country. It is understood, however, that the task of reconstructing the administration has been entrusted to M. Thiers, who will be placed at the head of it, with the portfolio of Foreign Affairs, and will be associated with MM. de Montalivet, Passy, and Sauzet.

These events have had an unfavourable effect on the French funds.

Some minor decisions of the Chambers are worth a brief notice.

On the 19th of January the Chamber of Deputies, on the score of the expense it would occasion, rejected a proposition for repairing the roads in France, and the discussion was adjourned *sine die*. Surely the expense would soon be made up to the nation at large by the saving in the wear-and-tear of vehicles and horses, to say nothing of the increase of comfort and of speed. The main roads are rough and bad enough, but the cross country roads, which are now so excellent all over England and Scotland, are utterly detestable in nearly every province in France, without even excepting the neighbourhood of the capital. We cannot help thinking that some millions of francs annually would be better spent in making good roads at home, than in making and maintaining unprofitable conquests in Algiers.

A few days after, the Deputies rejected by a majority of 176 to 96, a vote of about 3000*l.* sterling to the survivors of the soldiers and officers who returned with Napoleon from Elba in 1815. Considering the mischief these men helped to do to France and all Europe, we are not surprised at this rejection.

The Chamber of Peers have been occupied with the state trials. The long process of the Paris republicans and conspirators was concluded on the 20th of January. No single sentence of capital punishment was passed. Two of the prisoners only were acquitted, and some nineteen or twenty were condemned to transportation for life or to different terms of imprisonment. The prisoners who escaped from Paris were condemned *en contumace*.

On the 30th of January, the Peers began the trial of the assassin Fieschi; who appears to be a low-minded, dissolute ruffian, carried away by no enthusiasm or political predilection of any kind, but actuated by a mere desire of making so many francs by a job of murder, the result of which was, to kill or cruelly maim about forty individuals. He has, however, an eye to dramatic effect, and a passion for notoriety, exaggerating, no doubt, to that end his own detestable crimes. Some parts of his examination remind us of Holloway the butcher, who murdered his wife, some three years ago, near Brighton, and afterwards cut her up as he would have done an ox. When that wretch was lying in prison with no hope of escaping the law's severity, one of those artists who cater for the taste for the horrible so largely spread among certain classes of the English people, went to draw his portrait; on which Holloway eagerly applied to have the clothes in which he was dressed when he "did the thing," as that would make his picture so much more interesting and striking! This made a worthy phrenologist remark,—that Holloway had the bump of the love of approbation largely developed! In the same way, Fieschi has shown much anxiety about having his portrait painted, and has studied the part he had to play in court, like an actor. During the two first days of his trial, he laboured to make it appear that he had aimed at the King's life from no private motive—from no political hatred, or any kind of animosity against Louis Philippe, but merely because his Lords and [illegible] had hired him to do it. His accomplices, Pepin and Morey, [illegible] to be depended upon, as his vanity seems nearly allied to madness. The manner in which he absorbed the attention of the press gave him great satisfaction.

The defence of Fieschi and his fellow-prisoners was concluded on the 14th of February. The Procureur-General called upon the Peers to award sentence of death to Fieschi, Morey, Pepin, and Boireau. As regarded the fifth prisoner, Bescher, the Crown called for no particular judgment, but, abandoning the capital part of the charge,—namely, that of his being a principal accessory, it left his case to the discretion of the Court. Lastly, Boireau was recommended to mercy.

On the 15th the Court sentenced Fieschi to be put to death as a parricide—that is, to be conducted to the scaffold barefooted, and covered with a shroud, and Pepin and Morey to be guillotined in the usual way. Boireau was sentenced to twenty years' imprisonment, and Bescher was acquitted. The three executions took place at the Place St. Jacques on the morning of the 19th, in the presence of a vast multitude of spectators, but without any disturbance.

No discoveries of any general importance have been obtained in the course of this trial. It appears, however, that Morey, who is a staunch republican—a member of the Society of the Rights of Man, &c. &c., was the contriver of the whole plot, and that Fieschi was engaged in it, on account of his mechanical ingenuity and knowledge of the use of fire-arms.

SPAIN.

Finding himself unable to manage the turbulent opposition party in the Cortes, Mendizabal offered to the Queen Regent the alternative, that she should either accept his resignation, or dissolve the present Chambers. On the 27th of December her Majesty announced, by a decree, the dissolution of the Cortes. This measure seems to have taken the good people of Madrid by surprise; and it is said that the Queen's best friends were made very uneasy by so decisive a step. The imme-

diate motive that actuated Mendizabal when he proposed the dissolution, was the vote of the Cortes upon an article of the electoral law—a vote most hostile to his cabinet. As far as we are informed, this minister has not yet revealed his grand financial plan by which he is to rescue Spain, and restore her to her rank among the prosperous and powerful nations of Europe. In the absence of the real thing, many speculations are in circulation as to what this plan will be. We have, among others, the following—

I. England is to advance 3,000,000*l.* sterling; for which she is to have an advantageous commercial treaty, and possession of the Balearic Islands as security for the debt.

II.—In 1823, the annual amount of tithes collected in Spain was estimated at 500,000,000 of reals. It is proposed to capitalize this revenue, by relieving property from its payment at the rate of ten years' purchase.

III.—The home debt, without interest, amounts to nearly eight milliards, or billions, of reals; and the foreign debt to three milliards without interest, making, together, eleven milliards, or billions, of reals. (These seem fearfully long numbers, but our readers must recollect that reals are only fourpenny pieces). It is proposed to convert these into active debts; and in order to obtain an inscription of this nature, each of the old creditors will have to deliver one-third in securities, without interest, and two-thirds in money.

The two last of these arrangements seem to us very probable. It is asserted, however, in other quarters, that Mendizabal's predominant idea is to provide Spain with resources from her own bosom,—to meet all present exigences, and lay up stock for future demands, by means of the domains which formerly belonged to the monks, but which have now become the property of the State. "To form an idea of the extent of this monastic property," say these reasoners, "we have only to look at that which formerly belonged to the monks of the Escurial. The domains of the Escurial itself are worth 22,940,000 reals: in the valley of the Baroma they have property worth 6,000 000 reals; at Avila, 4,000,000; in Estremadura, 5,000,000; at Segovia, 4,000,000; in Madrid, 10,700,000; *and the buildings of the Escurial* are estimated at 70,000,000, making a grand total of 122,640,000 reals. This is sufficient to show the extent of wealth in land, &c., still possessed by Spain." But we would ask,—where are the purchasers to come from? What host of individuals, or associated companies are there in Spain rich enough to pay a tenth of this amount? Where is there a full confidence in the right of the sudden seizure of this property, and in the security of its tenure? Perhaps Mendizabal's party look to foreigners; but, at all events, they are obliged to make the following admission:—

"This landed property, *at present in small request*, because affairs do not appear to be sufficiently stable, will rise considerably in value, as soon as the Government is firmly established."

This is rather awkward. The Government can have no stability until the civil war is terminated, and the national debts are wholly, or in good part, paid off; but the war cannot be terminated, the debts cannot be paid, until the monastic property is sold, and that property cannot find purchasers until the war is terminated, &c.!!

The buildings of the Escurial form a curious item in this thorough-going revolutionary account. Is the value calculated upon the materials? Is this immense, imposing, though not throughout tasteful palace,—this boast of the Spaniards, who hold it to be one of the world's wonders,—to be knocked down for the sake of the mountains of stone, marble of all dies, timber of all qualities up to the richest that ever grew in the forest, —for the sake of the iron, brass, copper, and lead that may be included in its construction? A Madrid paper that does not like this notion, and yet cannot see any probability of finding a purchaser for such an enormous edifice, says it may very nicely be converted into a vast series of manufactories, *Spain being such a very manufacturing country!* We can scarcely imagine a more violent antithesis than a steam-engine and spinning-jennies in the glorious Pantheon of the Escurial, a complete congeries of exquisite marble and jasper, crystal and wrought silver; which is lined all over with jasper curiously carved in figures, and flowers, and imagery; and which contains the awe-inspiring tombs of the Emperor Charles V. and Donna Isabella his queen, with a long succession of Spanish sovereigns.

The operations in the field have not been very brilliant or successful on either side. In Catalonia old Mina has been shooting more prisoners, but he has not been able to suppress the Carlist insurrection there. Towards the middle of January, General Evans stormed and took the castle of Guebara in advance of Vittoria; and General Palaran gained some successes over the Carlists of Quilez and Cabrera, taking from them 400 men and 180 horses. On the 16th and 17th of January there was some hard fighting at Arlaban, a place about two leagues from Vittoria; but a plan of joint attack failed, and the combats were attended by no important results. The plan was this: Generals Cordova, Espartero, and Evans were to advance from Vittoria in three separate columns, and upon three different points of attack; they were to keep up communications, to *appuyer* each other in case of need, and to concentrate at a given point. Had this triple movement been well executed, it appears probable that the country would have been cleared of the Carlists, who must have taken refuge across the frontier; but all such combined movements, where a want of precision in one column endangers all the army, require great skill in their execution, and are seldom safely intrusted to raw troops. As well as we can make out from the account of the operations, the communication between the three corps was lost; General Evans's English column advanced too rapidly, and came into action a little too soon on the right, while the Spanish columns in the centre and on the left advanced a little too slowly, and were not at hand to support the British. Even when Cordova heard a heavy firing to the right, he did not march in that direction, but commenced an attack in the centre. This is attributed by some people to the rash impetuosity of his troops, but others openly accuse him of jealousy and of a desire of ruining the British auxiliaries and their unquestionably brave General. The British came into action on Friday, the 15th of January, at 2 P.M.; they drove back the Carlists, and continued to advance, taking position after position, and keeping up a brisk fire on the enemies' columns till night-fall. The cavalry and artillery had little to do, on account of the mountainous nature of the ground. The whole column bivouacked on the field in the midst of snow and in a dreadfully cold night, the effect of which has been a great deal of sickness among them. On the next day, while Evans was continuing his advance, he learned, *by chance*, that Cordova was in full retreat upon Vittoria. This left him in a very critical position, for, during two days, the enemy gathered round him in force four times greater than his own. According to an officer of the British Legion, who was with him, "Cordova had taken no pains to communicate with General Evans, who, having no orders, knew not what to do." After keeping the ground he had gained for three whole days, and seeing nothing of Cordova or Espartero, Evans turned the head of his column towards Vittoria. He broke

through the Carlist bands, and then retreating in beautiful order he reached that ancient city, scarcely losing a man on the way.

We see another explanation is given of Cordova's very mysterious conduct. It is said he is afflicted with a cancer in the mouth, and that during his movement he was suffering such intense agony, that, instead of attending to the business of the field, he was frequently seen rolling on the ground. It appears the Government have since recalled him from the supreme command, and Cordova (to use their own favourite expression) makes the seventh bull the Carlists of the North have baited, and foiled, and then driven from the blood-stained arena.

As we hear no more about it, we conclude the insurgents have given up the siege of Bilboa.

By the last accounts, Madrid was tolerably tranquil, but in the religious world there was much agitation from the following circumstances.

The Archbishopric of Toledo has become vacant, and in consequence of the violent measures against the Monks and the Carlist clergy, many of whom have fled to Rome, it is apprehended that the Pope will not fill the archbishopric, or sanction its being filled by the Queen Regent.

GERMANY.

ON the 4th of February, an official document was issued by the Burgomaster and Senate of Frankfort, declaring that henceforth the foreign imports into that free city and its territory are to be subjected to the same Tariff as has been adopted by the great German or Prussian commercial league. Thus, one after the other, all the States of Germany seem to be joining this league, which, eventually, by checking the freedom of trade, must prove injurious to themselves as well as to foreign nations. Even Hamburg has followed the general example; and there is now a talk of obtaining the accession of Holland to this jealous and exclusive system. On the other hand, it is said that France is negotiating with Belgium to get up an analogous system of their own. The Americans finding their trade checked in northern Germany by these new devices which originated in, and are intended for the special advantage of Prussia, are said to have remonstrated in strong terms, but what they can do in the matter further than remonstrate we are at a loss to conceive. According to an article in *The Times* newspaper of the 11th of February, "Mr. Wheaton, their active and intelligent envoy at Berlin, has intimated to the Leaguers that their Tariff, on the principal productions of the United States, such as rice and tobacco, *will be tolerated no longer.*"

In the present condition of the Continent we are sure of our Sovereign's hereditary dominions of Hanover; and Brunswick firmly rejects the Prussian system; but with the exception of these two States, all northern Germany may be said to be arrayed against us.

UNITED STATES.

ON the 18th of January the President sent a special message to Congress on the subject of the never-ending dispute with France. He recommended, in energetic language, that the States should close their ports against the flag of France, and prohibit the further introduction of her manufactures. He stated his determination positively to refuse a word of retractation or explanation with respect to anything he may have said about the French; and he suggested that reprisals should be made on French property, to be kept in payment of the debt and interest owing by France. He expressed indignation and contempt at the crooked, mean conduct of the French diplomatists, and ended by defying the power of France.

In the debate, however, which ensued in the Senate, M. Calhoun warmly opposed the project, and all notions of a war with the French. He asked what would be the result of extreme measures. "We go to war," said he "for these 5,000,000 of dollars; the first discharge of cannon will be a receipt in full for the debt,—and to whom will the greatest injury result? The commerce of France betters ours—her means of annoyance are greater than ours—it will cost her little to prepare for war, whilst to us the cost will be immense. We can inflict no injury on France, but she can inflict tremendous injury on us: we should suffer more in a war with France than even in a war with England; *and a war with France will throw into the hands of England all those commercial advantages which we have hitherto enjoyed.*"

Mr. Cuthbert asked if the States were to refrain from arms, through a dread of the enemy? Were they to submit to wrongs and insults, and remain with their arms folded? The language of Mr. Calhoun was enough to make every American's blood boil in his veins.

This special message was ordered by the Senate to be referred to the Committee on Foreign Affairs, and printed. Three thousand extra copies of the message, with official documents bearing upon the subject-matter, were printed forthwith.

As sincere lovers of peace, and well-wishers to both nations, we rejoice that the mediation of Great Britain has been accepted by France; and we still cling to the hope that this quarrel may be settled, without recurring to the logic of cannon-balls.

Meanwhile the Americans are making preparations for the worst. On the 21st of January the Senate voted 600,000 dollars for the construction and equipment of floating steam-batteries, and passed a Bill for the increase of the corps of engineers. They resolved, moreover, that whatsoever sums may be judged necessary for the defence of the country, shall be placed at the disposition of the Executive. On the French question, Mr. John Quincy Adams goes hand in hand with the President. The tone of the majority of the American papers is, however, pacific.

TEXAS.

THE insurgents of this vast and fertile province of the Mexican Republic are making head; the information which follows is extracted from several United States journals. The Texians, after some hard fighting with the troops of the Republic, took Sant Antonio de Bexar by storm, and drove all that were left of its Mexican defenders to the other side of the river. General Cos is said to have been among the slain. Nearly every Mexican officer was killed. Colonel Mac Comb, who arrived at New Orleans from Texas on the 28th of December last, brought the news that not one armed Mexican remained on the Texian territory. The loss of the Texians appears to have been considerable, and the name of Colonel Halam (a citizen of the United States) is given as one of the killed. In some subsequent movement of the Texians twenty-eight of them were made prisoners by the Mexicans, who immediately shot them all. How deep is the spirit of revenge—how large the thirst for blood—among all these people of Spanish and Portuguese race!

DOCUMENTS AND ABSTRACTS.

OPENING OF THE SESSION OF PARLIAMENT.

The session of Parliament was opened on Thursday, 4th February, by the King in person. His Majesty entered the House of Lords about two o'clock. The number of peers and peeresses and of the foreign ambassadors who were present was unusually large.

The Commons, having been summoned, appeared at the Bar; and the King then delivered the following Speech:—

"My Lords and Gentlemen,

"It is with much satisfaction that I again meet the great Council of the Nation assembled in Parliament. I am ever anxious to avail myself of your advice and assistance, and I rejoice that the present state of public affairs, both at home and abroad, is such as to permit you to proceed without delay or interruption to the calm examination of those measures which will be submitted to your consideration.

"I continue to receive from my Allies, and generally from all Foreign Powers, assurances of their unaltered desire to cultivate with me those friendly relations which it is equally my wish to maintain with them; and the intimate union which happily subsists between this country and France is a pledge to Europe of the continuance of the general peace.

"Desirous on all occasions to use my friendly endeavours to remove causes of disagreement between other Powers, I have offered my mediation to compose the difference which has arisen between France and the United States. This offer has been accepted by the King of the French. The answer of the President of the United States has not yet been received; but I entertain a confident hope that a misunderstanding between two nations so enlightened and high-minded, will be settled in a manner satisfactory to the feelings and consistent with the honour of both.

"I have still to lament the continuance of the civil contest in the Northern Provinces of Spain. The measures which I have taken, and the engagements into which I have entered, sufficiently prove my deep anxiety for its termination; and the prudent and vigorous conduct of the present Government of Spain inspires me with the hope that the authority of the Queen will soon be established in every part of her dominions; and that the Spanish Nation, so long connected by friendship with Great Britain, will again enjoy the blessings of internal tranquillity and union.

"I have given directions that there be laid before you the Treaty which I have concluded with the Queen of Spain for the suppression of the slave-trade.

"Gentlemen of the House of Commons,

"I have directed the Estimates of the year to be prepared and laid before you without delay. They have been framed with the strictest regard to a well-considered economy.

"The necessity of maintaining the maritime strength of the country, and of giving adequate protection to the extended commerce of my subjects, has occasioned some increase in the Estimates of the naval branch of the public service.

"The state of the commerce and manufactures of the United Kingdom is highly satisfactory.

"I lament that any class of my subjects should still suffer distress; and the difficulties which continue to be felt in important branches of agriculture may deserve your inquiry, with a view of ascertaining whether there are any measures which Parliament can advantageously adopt for the alleviation of this pressure.

"My Lords and Gentlemen,

"I have not yet received the further Report of the Commission appointed to consider the state of the several dioceses of England and Wales; but I have reason to believe that their recommendations upon most of the important subjects submitted to them are nearly prepared. They shall be laid before you without delay, and you will direct your early attention to the Ecclesiastical Establishment, with the intention of rendering it more efficient for the holy purposes for which it has been instituted.

"Another subject which will naturally occupy you, is the state of the tithes in England and Wales; and a measure will be submitted to you, having for its end the rendering this mode of providing for the clergy more fixed and certain, and calculated to relieve it from that fluctuation and from those objections to which it has hitherto been subject.

"The principles of toleration by which I have been invariably guided, must render me desirous of removing any cause of offence or trouble to the consciences of any portion of my subjects; and I am, therefore anxious that you should consider whether measures may not be framed, which, whilst they remedy any grievances which affect those who dissent from the doctrine or discipline of the Established Church, will also be of general advantage to the whole body of the community.

"The speedy and satisfactory administration of justice is the first and most sacred duty of a Sovereign; and I earnestly recommend you to consider whether better provisions may not be made for this great purpose, in some of the departments of the law, and more particularly in the Court of Chancery.

"I trust that you will be able to effect a just settlement of the question of Tithes in Ireland, upon such principles as will tend, at length, to establish harmony and peace in that country.

"You are already in possession of the Report of the Commission appointed to inquire into the state of the Municipal Corporations in Ireland; and I entertain the hope that it will be in your power to apply to any defects and evils which may have been shown to exist in those institutions, a remedy founded upon the same principles as those of the Acts which have been already passed for England and Scotland.

"A further Report of the Commission of Inquiry into the condition of the poorer classes of my subjects in Ireland will speedily be laid before you. You will approach this subject with the caution due to its importance and difficulty, and the experience of the salutary effect of the Act for the Amendment of the Laws relating to the Poor in England and Wales, may in many respects assist your deliberations.

"I rely upon your prudence and wisdom, and upon your determination to maintain, as well as to amend, the laws and institutions of the country; and I commit these questions of domestic policy, to which I have deemed it my duty to direct your attention, into your hands, persuaded that you will so treat them, as to increase the happiness and prosperity, by promoting the religion and morality, of my people."

ANALYSIS OF THE BILL FOR THE COMMUTATION OF TITHE IN ENGLAND.

The Bill provides three methods of commutation:—1. By individual voluntary agreements; 2. By parochial agreements, voluntary in the majority, but binding on the minority, if unappealed against; 3. By compulsory awards.

1. *Individual voluntary Agreements.*

This part of the Bill enables any individual tithe-owner to contract with any individual land-owner for the conversion of tithe into a rent-charge.

Several owners may concur in the same contract, and the guardians of minors and other representatives of persons under legal disability may contract in their names.

The terms of such contracts are left entirely free to the contracting parties, except that the rent-charge is to be estimated in grain, as provided in a later part of the Bill, and is to be liable to all county and parish rates as the tithe was which it supersedes.

Such contracts (in the case of ecclesiastical tithe) are to expire with the incumbency of the tithe-owner, unless confirmed by the patron and Bishop, or by the Commissioners provided in the Bill, to whom an appeal is to be given from objections raised by the patron or bishop against the agreement. If so confirmed, the conversion is to be perpetual.

The farmer may become a party to the contract, and in that case is to be bound to pay the amount agreed to be

paid to the tithe-owner by the landlord as an addition to his rent. If the farmer refuse to join in the contract, his landlord is to succeed to the rights of the tithe-owner during his tenancy, either of taking tithe in kind, or any composition into which he may have entered, as the case may be.

All these voluntary agreements are to be authenticated by the Commissioners, who are to satisfy themselves that the parties had a right to contract, and the recitals in agreement so authenticated are to be legal evidence of the facts stated therein.

The rent-charges are to be recoverable by distress and entry only: any lands in the benefice which are occupied by the owner, or under one landlord, may be distrained upon to recover arrears due on account of any other lands occupied by the same owner, or under the same landlord; but no distress shall be taken for more than two years' arrears.

The rent-charges are to be converted into equal value of wheat, barley, and oats, at the time of the commutation, on an average of the prices of the seven previous years.

The Comptroller of Corn Returns is to publish annually a similar average of the seven preceding years, and the value of the estimated quantities of grain to be payable every year.

All these provisions of a general nature apply to every commutation under the Act, whether voluntary or compulsory.

2.—*Parochial agreements, partly voluntary, partly compulsory.*

Instead of attempting individual agreements, or simultaneously with them, the tithe-owners may attempt to procure parochial agreements.

With this view, the owner of at least one-fourth part of the tithes may call a meeting of land-owners by public notice and advertisement, and an agreement executed by three-fourths in point of value of the tithe-owners and three-fourths in point of value of the land-owners or their proxies to be binding on the whole parish, if approved by the patron and bishop, or commissioners, as in the case of individual agreements, and if not appealed from within three months. Parochial agreements, though appealed from, to be still good as to the remainder not appealing. Costs of appeal to be paid as the Commissioners to whom the appeal lies may direct. In case of unreasonable appeal, the appellant to pay all the costs. Parochial agreements to be authenticated by Commissioners, and their recitals to be evidence. Powers are to be given to ecclesiastical persons, and others having estates less than the fee-simple, to charge their benefice or estate with the costs of commutation, to be paid off by instalments. The proceedings of the Commissioners on appeal will be precisely the same as in the case of a compulsory award, except that they may prepare to adjudicate on appeal immediately after a parochial meeting, but are not to proceed in an original compulsory award, until after six months after the passing of the Act.

3.—*Compulsory Awards (including also similar proceedings on appeals).*

If six months elapse without any individual or parochial agreement, either land-owner or tithe-owner may apply to the Commissioners for an award. The principles on which such awards are to be made, constitute the distinctive features of the Bill, as it may be expected that they will guide the parties in their individual and parochial agreements.

The Commissioners are to value the tithes or compositions received during the last seven years, making a proper deduction for the expenses of collection where they have been taken in kind, and adding the amount of local rates and charges, if they have been compounded for, on the principle of the composition being paid clear of all such charges. The average sum so ascertained to be the money-rent that is to be turned into grain as before mentioned, at the average prices of the same seven years, one-third in wheat, one-third in barley, one-third in oats. In every case of awards, public meetings will be held under the authority of the Commissioners, to dispose of objections to them.

If either party give notice to the Commissioners that this average is an unfair one, they are to value the gross amount of the tithes, as if they had been taken in kind during the whole period of seven years, without making any deduction on account of the expenses of collection or any other; and whenever the sum which has been actually received (with the addition of local charges, if paid free from them) shall exceed 75*l.* per cent. of the gross value so ascertained, the commutation is to be brought down to that proportion; if it fall short of 60*l.* per cent., it is to be raised to it; if it fall between these proportions, it will, of course, continue unchanged.

Hop-grounds, orchards, and market-gardens are excepted out of this clause, and are specially provided for as follows:—

With respect to the hop-grounds, orchards, and gardens now in cultivation, if notice to that effect is given to the Commissioners, they are to estimate the commutation according to that which appears to them to have been the average rate of composition during seven years for similar lands in the same district.

The limits of the district to be fixed in each case by the Commissioners. This appears a large power; but any attempt to define the limits would be mischievous, from the very various character of this sort of cultivation in districts often little separated from each other.

Hop-grounds brought into cultivation after the commutation, to be charged with 15*s.* an acre above the rent-charge fixed on them in their previous state; but this addition not to be made during the first year, and only half during the second. Hop-grounds going out of cultivation to be charged as other lands of like quality appear to be in the neighbourhood; the amount to be determined prospectively by the Commissioners at the time of the commutation, if not agreed between the parties.

A change of cultivation of orchards and gardens offers more difficulty, because of the variable nature of their cultivation, and consequently the varying periods at which new grounds would come into bearing. No good expedient offers itself on this part of the subject.

The provision for a change of cultivation of hop-grounds is, in fact, at variance with the spirit of the Bill, which professes to effect a commutation on the basis of the present state of agriculture; but the extraordinary capital laid out in these cultivations is thought to justify the exception. The hop-growers are alarmed least they should be saddled with the extra tax on their hop-grounds after they have ceased to bear hops; and if relieved from this on the one hand, provision must be made on the other for new plantations.

The only point remaining is the constitution of the Board of Commissioners. They are to be three, two appointed by the Secretary of State, one by the Archbishop of Canterbury, and all three removeable only at the joint pleasure of the Secretary and Archbishop. They are to be a body corporate, but to be appointed only for five years. They may appoint any number of Assistant-Commissioners, not exceeding nine, without the consent of the Treasury, and may delegate any of their powers to their assistants, except the acts required to be under their seal, such as confirming and authenticating agreements and awards, &c. The Commissioners are to report to the Secretary of State, and to lay an annual account of their progress before Parliament.

The Assistant-Commissioners may attend parochial meetings, if requested, (on the plan suggested by Sir Robert Peel, last Session), merely to give advice, and explain the proper principles of agreement. When appealed to, or applied to for an original award, they may hear and determine all disputes between the parties, but either party may appeal from their decision to a court of law or equity on a feigned issue, or case stated, or the parties may agree to refer their difference to other arbitrament.

Clauses have been prepared for the redemption of the rent-charges so created; but as these belong to a distinct branch of the subject, it has been judged better to separate them from the commuting part, and they will be brought forward at such time and in such manner as may appear most advisable.

MUNICIPAL REFORM ACT AMENDMENT BILL.

THE following is an abstract of the Bill which the Attorney-General has brought in for the purpose of amending the Municipal Reform Act:—

Elections not to be set aside because held on the wrong day; nor in consequence of defects in the title of presiding officer; and the election of aldermen and councillors to be good, though the whole number may not have been elected at one time.

If no mayor, the councillor elected by the greatest number of votes to convene a meeting for supplying vacancies among the councillors. Mayor or councillor to convene a meeting of the council to supply vacancies in the office of alderman or mayor. If the council fail to elect, the burgesses to elect the mayor and aldermen.

Elections before mayor or councillor alone, until election of assessors, to be valid. Clause 8 in part repeals 5 and 6 Will. IV., c. 76, s. 43; two revising assessors to be chosen as the burgesses' two auditors are.

If councillors were elected without contest, the council to decide who are first to go out of office. Corporate offices may be resigned on payment of the fine for non-acceptance. Power to the council to remit such fines.

Sessions of the peace rightly holden until 1st of May, 1836, although no justices of the quorum present. The provisions of the 12th clause will enable the council to try prisoners at borough sessions, notwithstanding that the gaol, in which such prisoners shall have been confined previous to trial, be situate more than two miles from the borough. There will not, therefore, be any necessity for erecting gaols in the new boroughs at a cost of from 20,000*l.* to 30,000*l.* Proceedings on *quo warranto* and *mandamus* may be discontinued on payment of costs.

IMPORTANT INFORMATION TO PERSONS DESIROUS OF EMIGRATING.

UPPER AND LOWER CANADA.

The following information is chiefly extracted from letters which have been recently received from A. C. Buchanan, Esq., his Majesty's Chief-Agent, resident at Quebec, for directing and superintending emigration in Upper and Lower Canada.

"At present I could provide immediate employment for 20,000 persons of the working classes. Public improvements are much retarded for want of hands. The rate of wages, particularly in Upper Canada, are unusually high, and progressively advancing as settlement increases; and I do not anticipate, for very many years to come, the probability of the Canadas being overstocked with agricultural labourers, domestic servants, and tradesmen of all denominations. Farm labourers readily obtain in the Upper Province from 25*l.* to 30*l.* per annum, with board, lodgings and washing; and day-labourers, during the summer, get from 3*s.* to 4*s.* Labourers, also working about the wharfs and timber-yards, and on board the shipping in Quebec, obtain from 3*s.* 6*d.* to 5*s.* a-day, with provisions. The class of persons chiefly required in the Canadas are farm and common labourers to any extent, small capitalists, mechanics, and domestic servants—female as well as male."

The opportunities for emigrants obtaining suitable locations, if they are possessed of means to go upon lands, are considerable;—either by purchase from the Crown, the land companies, or private proprietors.

All monies intended for the use of emigrants in the colonies, should be transmitted through the medium of the Government Agent-General in London, subject to the cognizance and control of the Government Emigration Agents in the colony to which they may proceed; and the amount, or any portion of it, will be paid to the person for whom it may be intended, in any part of the provinces of Upper or Lower Canada free of expense;—thereby ensuring them the full benefit of the aid intended, free from the temptation of improperly expending it during the voyage, and from the risk of loss after arrival in the colony.

The operation of the new "Passengers Act," for ensuring proper regulations at sea, and the great increase in the facilities of conveyance which exist in the colonies—particularly from Quebec and Montreal, have greatly increased the convenience and economy of transport.

Emigrants dependant on immediate employment for support, should be possessed, on landing at Quebec, of at least from 20*s.* to 25*s.* in money, to defray their conveyance to those districts where their services are in demand.

The season for emigration to Canada commences in April; and it is expedient that the emigrant should embark as early as possible, that he may have the summer before him, and leisure to settle his family comfortably before the winter sets in. Emigrants on arrival at Quebec, should immediately apply to A. C. Buchanan, Esq., chief agent for emigration in that city, from whom they may rely on obtaining the most accurate information and protection.

His Majesty's Government, have appointed agents for emigration at Liverpool, Bristol, Dublin, Cork, Sligo, Belfast, Limerick, Leith, and Greenock. J. Denham Pinnock, Esq., has been appointed the Government Agent-General, (resident in London,) for the furtherance of emigration from England to any of the British colonies, by affording all facilities and information. All letters on this subject should be addressed to Mr. Pinnock, under cover to the Colonial Secretary of State.

The price of conveyance from England to Quebec, including maintenance and medical attendance during the voyage, is for an adult 5*l.*, children under fourteen about half that sum, and for those under one year no charge is made;—so that, inclusive of the expenses from Quebec to that part of the province where they may be located, a sum of 7*l.* will defray the expense of an adult emigrant from England to any part of the provinces of Upper or Lower Canada."

VAN DIEMEN'S LAND AND NEW SOUTH WALES.

The following document has just been issued by the "Emigration Department, Colonial Office":—

"In consequence of the great demand for mechanics and agricultural labourers in the Australian Colonies, the following statement (obtained from Returns, transmitted from the respective districts of the colony to the Governor, and by him forwarded to this office), shewing the average wages of mechanics and others in the Island of Van Diemen's Land, together with the aggregate number of each description required, is laid before the public for general information. No statement upon this subject has been received from the Governor of New South Wales; but it may be fairly inferred that a corresponding demand for labour exists in that colony, and a proportionate remuneration afforded for it."

With a view to enable such persons, provided they are of industrious and steady characters, to emigrate to the Australian Colonies, His Majesty's Government are granting a bounty of 20*l.* to those who intend taking their wives and families with them; but in order to supply the great demand which more immediately exists, arrangements have been made, by which a limited number of families will be conveyed to each of the Australian Colonies, in ships engaged by the Government for that purpose, at a charge of 10*l.* only for a man and his wife, beyond the aid afforded by Government. Children under five years old will be charged 5*l.* each, and those above that age, 1*l.* for each additional year. Infants under one year will not be charged for.

ECCLESIASTICAL STATISTICS (IRELAND).

THE following summary is taken from the Appendix to the First Report of the Commissioners of Public Instruction (Ireland). The total population of Ireland in 1834, was 7,954,100; of which 6,436,060 were Roman Catholics, 853,160 members of the Established Church, 643,058 Presbyterians, and 21,882 belonged to other religious denominations. It results from this statement, that the proportion per cent. of each denomination to the total population is as follows:—Roman Catholics, $80\frac{9}{10}\frac{1}{0}\frac{5}{0}$; Members of the Established Church, $10\frac{7}{10}\frac{8}{0}\frac{6}{0}$; Presbyterians, $\frac{8}{10}\frac{4}{0}$; other Protestant Dissenters, $\frac{2}{10}\frac{7}{0}\frac{5}{0}$.

The number of places of worship in Ireland is 4502; of which 2109 belong to Roman Catholics, 1537 to the Established Church, 452 to the Presbyterians, and 404 to various other sects.

The total number of parishes or ecclesiastical districts is 2408, and of this number 2351 possess a provision for the cure of souls, and 57, containing 3030 members of the Established Church, are without any such provision.

The total number of benefices is 1387, viz., 908 consisting of single parishes, and 479 being unions of two or more parishes. In 87 of these unions the parishes are not contiguous. A glebe-house is attached to 851 benefices; to the other 536 no glebe-house is attached.

The number of benefices in which there is more than one church is 118; in which there is only one church, 1059; in which there is no church, 210.

The incumbent is resident on 890 benefices; in 310 the incumbent is non-resident, but divine service is performed by him or a curate in a place of worship; and there are 157 benefices in which the incumbent is non-resident, and no divine service is performed.

In 5 benefices the population is not more than 100; in 7, is between 100 and 200; in 36, between 200 and 500; in 94, between 500 and 1000; in 368, between 1000 and 3000; in 278, between 3000 and 5000; in 106, between 5000 and 10,000; in 125, between 10,000 and 15,000; in 39, between 15,000 and 20,000; in 21, between 20,000 and 30,000; and in 8 the population exceeds 30,000.

In 41 benefices there is not a single member of the Established Church; in 99, the number is under 20; in 124, there are more than 20 and not more than 50; in 161, there are between 50 and 100; in 224, between 100 and 200; in 286, between 200 and 500; in 210, between 500 and 1000; in 139, between 1000 and 2000; in 91, between 2000 and 5000; and there are 12 benefices in which the number of members belonging to the Established Church exceeds 5000.

EXCISE ESTABLISHMENT OF THE UNITED KINGDOM.

AN account was presented to Parliament during the last Session exhibiting the state of the establishment of Excise of the United Kingdom, together with the reductions and alterations which had been effected in the department since 1831. The following is an abstract of the most interesting portion of this document:—

The expenditure of the Establishment for the year ending January 5th, 1831, amounted to 1,212,161*l.*, and the amount charged on the financial accounts for the year ending January 5th, 1834, was reduced to the sum of 1,078,902*l.* The Parliamentary Paper gives the items on which reductions and alterations were effected.

In 1830, the "Board" was composed of 13 Commissioners, whose yearly salaries amounted to 18,778*l.* Six Commissionerships have been since abolished, and the salary of the remainder having been reduced, with the exception of the Chairman's, the annual cost of the Board is now only 10,606*l.*

The expense of the Secretary's department, which formerly comprised 37 individuals, viz., for England 21, Scotland 9, and Ireland 7, has been reduced from 9038*l.* to 7248*l.* by the abolition of the Irish and Scotch departments, and the reduction of 1 clerkship in England.

In 1830 there were employed 14 correspondents in England, and 12 in Ireland. On the alterations in the Secretary's department being made, a portion of the persons formerly employed therein were removed to London, and retained to conduct the correspondence with Ireland and Scotland. The cost of the Corresponding department, in 1833, was 6147*l.*, being about 500*l.* more than in 1830.

The services of 27 solicitors were required by the Board in 1830, when the salaries of the English branch of this

department was revised, and fixed by the Lords of the Treasury. The department cost 11,718*l.* in 1833, and the reduction which is apparent under this head is chiefly occasioned by the solicitors receiving half a-year's salary in advance at the period of the revision. In the following departments the cost does not materially differ from the year 1830, when it stood as follows:—15 Receiver-Generals, 6 Commissioners of Appeals, and 3 clerks in the Registrar's office, the salaries for 1833 being respectively 3787*l.*, 922*l.*, and 667*l.*

The number of clerks in the Accountant's Department, in 1830, was 96; but in consequence of the repeal of duties, 13 clerkships have been abolished in the English branch, though, on the other hand, the salaries of the Scotch and Irish branches have been increased.

The Comptrollers' Department comprised 46 individuals in 1830; the Scotch branch has been abolished, and also the Comptroller-Generalship of England, and two clerks have been reduced.

There were 12 persons employed in the Auditor's office in 1830, since which period the Auditor's office in Scotland has been abolished: it consisted of an auditor, an assistant-auditor, and 2 clerks.

In 1830, there were employed 3 Comptrollers of the Cash; 8 individuals in the Security Office; 19 in Storekeeper's Office; 6 in the Diary Office; 26 permit examiners; 2 housekeepers; 7 doorkeepers; 10 messengers; 26 watchmen and fire-lighters; 3 warehouse-keepers for seized goods; 1 register of seized goods; 1 engineer at the revenue distillery; 2 inspectors of the Permit Department; and 86 persons in the Tea Department.

The reductions and alterations effected with regard to these services have been unimportant. The Surveyorship of Stationery in Ireland, and the Storekeeper's Department in Scotland have been abolished; also the office of Clerk of the Diaries in Scotland: and the abolition of the Irish Board has caused the number of messengers to be reduced.

The Surveying Department, London, consisted, in 1830, of 10 general surveyors, 48 surveyors, 8 examiners, 363 surveying officers, 18 expectants, and 1 sorter of old books; 1 general surveyor, and 6 surveyors have been reduced. There have been 12 principal surveying officers at 115*l.* each, and 48 officers at 100*l.* a-year each, reduced since 1830. There has also been a gradual diminution of the allowances of 10*l.* a-year to officers of this department, after ten years' service.

In 1830, the Import and Export Department consisted of 11 surveyors, 4 gaugers, 108 officers, 3 tidesmen and boatsmen, 17 watchmen, 60 surveying-general examiners, 96 collectors, 103 collectors' clerks, 477 supervisors, 62 examiners, 3919 officers, 242 hop assistants, 579 expectants, 5 warehouse-keepers for bonded spirits; 3 assistants to ditto, 313 permit-writers, 141 dropt officers, 3 commanders of revenue cruizers, 3 mates of ditto, 79 seamen, and others employed on board, and watchmen, tidesmen, and persons occasionally employed.

The reductions effected in the above department are—4 surveyors and 22 officers discontinued; the salaries of those remaining of the latter class have been reduced; a boatman employed at Bristol discontinued; 2 watchmen employed at the Import Office, Tower Hill, discontinued; the salaries of the fourth class of surveying-general examiners reduced on vacancies from 300*l.* to 250*l.* per annum; 4 collections abolished, and the salaries of 9 collectors reduced; 3 collectors' clerkships discontinued; 10 supervisorships discontinued; a reduction of about 244 officers occasioned by repeals of duties; and 6 permit-writerships have been discontinued. The salaries of collectors' clerks in Scotland have been assimilated to the rate of payment for the same class in England.

Considerable reductions have taken place since 1830 on the miscellaneous expenditure of the establishment. The allowances for special services and travelling charges have been reduced from 22,009*l.* to 14,260*l.*, chiefly in consequence of the allowances to resident Commissioners at the Local Boards having been discontinued. On the other hand, the expenses attending the revenue police in Ireland has increased from 27,502*l.* to 35,010*l.*, owing to attempts being made to effect the suppression of smuggling.

PUBLIC INSTRUCTION (IRELAND.)

The Second Report of the Commissioners of Public Instruction is, like the first, purely of a statistical nature. The Commissioners state they did not consider that it fell within the scope of their inquiry to investigate the character or competence of the teachers, their manner of imparting what they professed to teach, the treatment of the children, and their general proficiency, and such other minute inquiries as would alone enable them to pronounce an opinion upon the comparative effectiveness of each school, and the manner in which it is administered. They observe, that the due execution of such an inquiry into each of the 9657 schools on which they have reported, would have occupied many years; and besides, an inquiry of this extensive nature was not called for by the Commission under which they acted. The results of the inquiry are presented in a condensed form in the following summary:—

Total number of daily schools in Ireland . . .	9,657
Number of daily schools supported wholly by payments from the children	5,653
Number of daily schools supported wholly, or in part, by endowment or subscription	4,004
Number of daily schools, of which the books, containing lists of the children, were produced . .	8,886

The number of schools in connexion with, or receiving support from, the National Board is 892; in connexion with the Association for Discountenancing Vice, 203; Erasmus Smith's Fund, 115; Kildare-street Society, 235; London Hibernian Society, 618.

Number of male scholars on the books of those schools which produced lists of the children . .	353,809
Number of female scholars	223,900
Number of scholars, sexes not specified . . .	5,700
The total number of scholars is therefore . .	583,413
The number of schools of which no lists were produced is 771; and the computed number of children under daily instruction in such schools .	50,886
making the computed total number of children in Ireland under daily instruction	633,946

The total population of Ireland in 1834 was estimated at 7,954,100. The proportion of daily schools to the population is, therefore, as 1 to 824. In the ecclesiastical province of Armagh it is as 1 to 698; province of Dublin, 1 to 774; province of Cashel, 1 to 1008; province of Tuam, 1 to 994.

The proportion per cent. of children under daily instruction, to the total population, is, according to the total on the books, $7\frac{4}{10}$; to the population of the province of Armagh, $8\frac{6}{10}$; province of Dublin, $7\frac{3}{10}$; Cashel, $5\frac{8}{10}$; Tuam, $6\frac{1}{10}$.

The "computed total" is made by multiplying the number of schools in which no list was produced by the average of children on the books of each of the other schools. Taking, therefore, this computed total, the proportion per cent. of children under daily instruction, to the total population, is somewhat higher than the above, viz.—$7\frac{7}{10}$. In the province of Armagh it is 1 in $9\frac{3}{10}$; Dublin, $8\frac{7}{10}$; Cashel, $6\frac{4}{10}$; Tuam, $6\frac{8}{10}$.

The Commissioners remark, that in applying these proportions, it must be borne in mind that probably about a seventh part of the whole population (or 14 per cent.) are of the age of from 7 to 13 inclusive, and that this may, therefore, be assumed to be the utmost number for the education of whom provision is required; and that the number possessing the means of education (as collected from the entries in the books of the daily schools) must be deemed ample or deficient with reference to this proportion.

The number of children in Ireland between the age of seven and thirteen, taking the above returns for the calculation is 1,136,300; the number of children under instruction 633,946.

It appears from the Report that there are many benefices in which there is no evidence of the existence of such parochial schools as were provided to be kept under the Acts 28 Henry VIII. and 7 Will. III. The Commissioners remark,—"We must at the same time state, that the parochial schools have by no means a distinct character; many which are so called, being in connexion with various societies, and the correctness of the designation

being frequently uncertain. Wherever the incumbent is found to contribute pecuniary aid in support of a school, to the amount of not less than 2*l.* per annum, it may be presumed that such school is a parochial school, under the meaning of the above-mentioned Acts; but this is by no means sufficiently certain to enable us to enumerate such schools with the requisite accuracy in our summary." The Commissioners advert with satisfaction to the numerous instances of contributions from individuals in support of schools, of which evidence is afforded in the Special Reports inserted in the Appendix.

The result of a comparison of the number of daily schools with the total population in the several dioceses, exhibits the following diversity:—In the diocese of Down there is 1 school to 594 persons; in the diocese of Ardfert and Aghadhoe there is only 1 school to 1342 persons; and in the dioceses of Emly, Limerick, Killalla, and Clonfert, the proportion is scarcely more favourable. There is a diversity equally to be deplored in the number of children on the books of the daily schools in the different dioceses. Compared with the number having the means of instruction in the dioceses of Leighlin, Kilmore, Down, and Ardagh, the proportion in the dioceses of Emly, Limerick, Ardfert and Aghadoe, and Killalla, appears to be deficient.

It is much to be lamented that there are 419 parishes in Ireland, the aggregate population of which amounts to 342,198 persons, in which there is no school; and although many of these parishes are small, yet there are among them 122 containing each a population of not less than 1000. The population of the parishes in the province of Armagh, in which there is no school is 34,859; of those in the province of Dublin, 92,363; in Cashel, 186,862; in Tuam, 28,114.

The following Returns relate exclusively to the *National* system of Education in Ireland, and have been laid before the House of Commons in pursuance of a motion of Mr. Andrew Johnston, the member for St. Andrew's:—

1. A return of the particulars of the 789 schools to which the Commissioners have granted aid; specifying where such schools are situated; the number of scholars in each; the names of the patrons, managers, and visitors; the sums granted to each; the person or persons to whom paid; and whether any, and what, sum has been paid or expended on account of any or which of said schools, by local subscription or contribution. The detail of these particulars occupies twenty-six pages. The certificate of the local manager is the voucher for each sum expended, and the Commissioners remark that they cannot set forth the number of subscribers in each case, and consequently the amount of each individual subscription is not given in the return. The column headed 'Local Contributions' shows that 326 schools have been aided by this means. These local subscriptions amount, in a great number of cases, to sums under 5*l.* The subscriptions in support of twelve schools are from 50*l.* to 100*l.*; six schools have been similarly aided by sums of from 100*l.* to 200*l.* The subscriptions in support of the Baldoyle school amount to 235*l.*; Dundalk boys' and girls' schools to 275*l.*; Aitane school to 498*l.*; two schools at Sligo, which are attended by nearly 400 scholars, have been aided by private subscriptions to the extent of 848*l.*; and one at Drumcliffe, county Clare, to the amount of 603*l.*

2. Return of the Reports of the Commissioners' inspectors, relative to fifty-two schools to which the Commissioners had discontinued their assistance. The grounds on which the Commissioners acted were, in four cases, that the school was held in a house of worship; in several others, that the school was held in the teacher's dwelling-house; in some, that the school was in connexion with other societies, and the managers refused to comply with the regulations of the national system; in one school the master was irregular in his attendance; in another the teachers were insubordinate; in three the masters were incompetent; in one the teacher was a man of immoral conduct; and in one or two others the school had been disgracefully neglected. The assistance of the Commissioners was refused, in several instances, owing to the school being held in unsuitable places,—in "a wretched cabin," in "a barn," in "a granary," in the "kitchen apartment of a small cabin," and also in consequence of the school being in the immediate vicinity of other schools.

3. Return of the names of 199 schools to which the Commissioners have promised assistance, and the amount of local subscriptions promised for each. The local contributions, which are chiefly towards a building-fund, appear in general to be on a liberal scale; in one case amounting to 400*l.*; in two from 300*l.* to 400*l.*; in seven others others from 200*l.* to 300*l.*; in eleven from 100*l.* to 200*l.*; in thirty-six from 50*l.* to 100*l.*; and in twenty-nine from 25*l.* to 50*l.*

4. A return stating how and in what manner the number of scholars (107,042) mentioned in the Report of the Commissioners as in attendance at their schools has been ascertained, whether by inspection or by any other, and what check; whether this is the actual attendance or the number on the school-rolls. It appears from the statements of the Commissioners, that the number of scholars was originally ascertained by replies in the query-sheet to the following questions:—

How many scholars are there usually in attendance—in summer, males, females—in winter, males, females?

Is a register kept in the school, recording the daily attendance of the children, and the average attendance of each week and each quarter?

How many children have been present on the average every week of the last quarter of a year— males, females?

The numbers thus ascertained were, with regard to the large proportion of the schools, in making up the Report, corrected by the reports of the inspectors, who gave the numbers on the school-roll; but a direction had previously been issued by the Commissioners, that all children who may have been withdrawn from any school during the past or second half-year, should be struck off the roll at the end of that half-year. Thus, in the greater proportion of the schools, the number of children reported by the Commissioners, was the number on the school-rolls, subject to the directions previously given to correct the school-rolls, so as to make them, as far as possible, correspond with the number in actual attendance.

5. Return of the particulars of the expenditure of the sum of 28,842*l.*, mentioned in the Report of the Commissioners. The following is an abstract of the accounts:—

Model School and Training Department.

	£.	s.	d.
Salary to Superintendent, at 300*l.* per annum	543	1	3½
1st assistant in boys' school, at 90*l.* do.	75	0	0
2nd ditto ditto at 70*l.* do.	12	0	0
3rd ditto ditto at 24*l.* do.	4	0	0
Mistress of female school at 90*l.* do.	67	10	0
Attendant of ditto at 20*l.* do.	19	13	4
Female servant at per week, 5*s.*	2	0	0
Travelling expenses of superintendent while on inspection	40	0	0
Lodging allowance to mistress of female school	31	13	4
Alterations, repairs, and fitting up of schools	1044	6	8
Mathematical instruments, philosophical apparatus, maps, &c.	170	10	6½
Books, paper, and other school requisities	150	15	9
Working materials for girls' school	32	16	6½
Brushes, rubbers, &c., for servant	3	1	8
	£2196	9	1½

Grants of Aids to Schools, viz.

Towards building school-houses	3,850	14	9½
Towards fitting up schools	2,835	8	0
Towards salaries of teachers	7,391	11	0
School requisites at half-price	2,011	4	8
	£16,088	18	6

Inspection Department, viz.

Salary and travelling allowance to eight inspectors of national schools, at rate of 300*l.* per annum	2160	14	0
Travelling expenses of additional inspector	5	4	2½
	£2165	18	2½

Printing and Publishing School Books, viz.

Salary to literary assistant, at rate of 120*l.* per annum	204	16	6
Compilation	296	11	8
Books for library	217	15	4
Paper, printing, and binding	2525	13	4
	£3244	15	10
Rev. James Carlisle, per Treasury Minute	225	0	0

General Expenditure connected with all the Departments.

Rent and taxes, 432*l.* 5*s.* 6*d.*; salary to secretary, at the rate of 500*l.* per annum, 1013*l.* 0*s.* 5½*d.*; five clerks in secretaries (three at 100*l.* a-year, and two at 80*l.*) 599*l.* 6*s.* 8*d.*; and sundry items detailed in the return £4921 0 0

6. This return contains the names of schools to which the sum of 12,664*l.* 2*s.* 4*d.* was granted, and distinguishes the sums paid to each.

7. Is a similar return of the sum of 3110*l.* 11*s.* 8*d.* granted for the fitting up of schools. It appears that the number of schools benefited by this grant was 195, and the sum which each received, therefore, averages about 16*l.* The lowest sum granted was 14*s.* and the highest 147*l.*

8. Return explanatory of an item, for which it appeared by the Report the Commissioners were liable.

9 Copy of Correspondence of the Commissioners of Education with the Synod of Ulster, or persons on behalf of that body. This correspondence does not appear to have terminated satisfactorily, as the last letter from the Secretary of the Board, to the moderator of the Synod of Ulster after referring to a previous minute of the Board in which their views were fully expressed, "says that the Board decline further correspondence on the subject." The Secretary states that the Commissioners "must decide upon the applications of members of your body, as they do upon those of all others, according to the merits of each case, and the principles of the regulations under which they act."

10. Return of the names of such clergymen of the Established Church, and of such Presbyterian and Roman Catholic clergymen as have received grants from the Board in aid of schools, and the names of such schools, and where situate, and whether such schools, and which of them, are now in connexion with the Board, and if not, why not. This return occupies nearly twenty eight pages, but no summary is given showing the relative proportion of applications from each religious denomination.

11. A list of all such books as are distributed or used under the direction of the Commissioners of Education, with the full titles thereof. Three school books contain 'Scripture Lessons' from the Old and New Testament; six are 'Books of Lessons,' adapted for various stages of the pupil's proficiency; one 'Elements of Geometry; one 'Treatise on Practical Geometry, Mensuration, Conic Sections, Gauging, Land Surveying,' &c.; one 'Treatise on Arithmetic, in theory and practice; one 'Key to Ditto;' one 'Elements of Book-keeping, in a series of short examples;' one 'Key to Ditto;' one 'Murray's Abridgment of English Grammar, greatly enlarged, with an Appendix containing Rules for Composition,' &c.; one 'Concise Introduction to Geography;' with spelling and arithmetical tablets and copy lines. Every school is now supplied with a stock of the above works, to be used as class-works.

12. Return of the denominations of the children in the schools under the superintendence of the Board. The Secretary of the Board states, that "it forms no part of the duties of the Board to inquire into the religion of the children in attendance upon the schools under their superintendence; nor have they any information upon the subject, which would enable them to give the Return above required."

13. A Return of the amount and particulars of any grant to schools connected with, or under the superintendence of any nunnery, monastery, or other religious institutions or houses*; and also of any grants to schools kept in Roman Catholic chapels or buildings, forming part thereof, or contiguous thereto, or within the precincts of said chapels, with the places where such schools are situate.*

* The number of grants to such schools is twenty-five.

* Twenty grants have been made to schools of this class.

IRISH WASTE LANDS.

THE Second Report of the Select Committee on Public Works (Ireland) is chiefly devoted to the subject of waste lands, and the policy and practicability of reclaiming them. According to the Report of the Emigration Committee in 1827, the quantity of land in cultivation in Ireland is 12,000,000 acres; and the population being nearly 8,000,000, there is a proportion of one acre and a half to each person. The export of agricultural produce from England exceeds 8,000,000*l.* per annum. It appears, also, that Ireland contains about 5,000,000 acres of waste land, capable of being improved. Their improvement has already occupied the attention of Committees of the House of Commons, and Commissioners appointed by the Crown. In 1809 a Commission was appointed to inquire into the nature and extent of the several bogs in Ireland; and though various Reports have pointed out the advantages which the state, the community, and particularly the labouring classes, both in England and Ireland, would derive from reclaiming so much land, at present of no advantage to any class, yet little effort has been made to realize these advantages, notwithstanding it has been clearly demonstrated that no obstacles, of a nature which may not be readily overcome, stand in the way of such desirable improvements. The Bog Commissioners made four separate Reports, from which it appears that this description of waste land comprises 1,576,000 acres of flat bogs, and 1,254,000 mountain bogs, being a total of 2,830,000 acres of bogs capable of improvement. Since these Reports were made, the population of Ireland has increased 33 per cent.

DIXON HOLMES, Esq., in his examination by the Committee (p. 108), remarks:—"Ireland is in a singular situation; her nobility and gentry have no ready money to aid in the colonization of the unreclaimed lands, and which are fettered by entails and settlements. The farmers who have money cannot employ it, because the landlords cannot give them a sufficient interest in the soil, and, consequently, the mere labourer finds no employment; hence the extensive misery which pervades that country. The principal cause of all the disturbances in Ireland is the difficulty of obtaining land whereon to employ their energies and support their families. Thus, here is rich land without occupation—a large diffused capital without employment—and a starving population in misery for want of combining the best elements of a nation's wealth and prosperity by productive labour."

The waste lands of Ireland are of four kinds—viz., the red bog, the black bog, mountain land, and land inundated by rivers.

The Report states that the utmost expense of reclaiming the red bog, according to the best evidence which the Committee could obtain, is 13*l.* an acre; and one of the witnesses examined valued land which he had reclaimed at an expenditure to that amount, as being worth a rent of 1*l.* an acre. To relieve the low black bog has required an outlay of 6*l.* an acre; and the same individual (Mr. Fetherstone) considers it worth a rent of 2*l.* an acre for meadow, or 3*l.*, if in a district requiring much meadow land. The expense of reclaiming mountain bog consists principally in the charge for cutting drains, the expense of which is inconsiderable. When the drains are formed, the soil is at once brought into cultivation by burning the surface peat. The cost of reclaiming flooded lands must depend on the extent of the river causing the inundations, or of the value of the mill or fish-weirs by which the overflow is occasioned. One of the witnesses (Mr. Griffith) states—"I know instances where several hundred acres of valuable meadow land are rendered almost a waste in consequence of a common mill-weir, which mill is not worth 20*l.* a-year; eel-weirs also present impediments that should be removed." Immense tracts are wasted by inundations of the Shannon and its tributary rivers; but the expense of reclaiming them depends on the extent of natural obstructions to be removed for the purpose of giving a free flow to the rivers. Colonel Conolly, a member of the Committee, stated that,

by an outlay of only 27*l.*, a drainage had been effected on his estate in the county of Donegal, which had enabled the grand-jury to form a new and level line of mail-coach road through a mountain district; that "the climate had been much improved, and a great quantity of land brought into cultivation by deepening, straightening, and discharging the small lakes and rivers."

The Committee remark that they have already recommended (in their First Report) the adoption of measures for extending lines of road through uncultivated tracts, and the erection of piers and quays for promoting industry permanently, and providing immediate employment for the peasantry of the remote districts; but they observe that these works would not lead to the complete accomplishment of their object, without being accompanied or succeeded by very extensive operations for reclaiming waste lands. It may also be noticed that these operations would employ the peasantry without drawing them far from their present habitations, or unduly augmenting the population of any one district, which has often been the result of ordinary public works.

The Committee adduce many reasons to shew the advantage of increasing the quantity of arable land. One effect of this increase would be, the breaking up of the densely-populated cottier settlements on the lands now in use, and of abating those fatal contentions which have been incited among the peasantry by competition for land. The increased demand for labourers would induce a large number to abandon the cottier holdings—preferring to work for hire, with a reasonable certainty of continuous employment, rather than be subject to a rent which leaves them only a scanty subsistence as their compensation for a year's labour.

The Committee do not concur in the opinion that the social disease of Ireland is produced by a real excess of population. They doubt rather whether the country contains a sufficient quantity of labour to develop its resources. In 1728, when the number of the people did not exceed a fourth of the total now existing, there appears to have been, comparatively, as much distress, occasioned by want of employment, as there is now. Primate Boulter, in his published Correspondence with the British Government, as one of the Lords-Justices during the absence of the Lord-Lieutenant, made the following Report on the state of the peasantry at that period:—"When I went my visitation last year, barley, in some inland places, sold for 6*s.* a bushel to make the bread of; and oatmeal, which is used for the bread of the North, sold for twice or thrice the usual price; and we met all the roads full of whole families that had left their homes to beg abroad, since their neighbours had nothing to relieve them with. I fear many hundreds parished by famine. Now, the occasion of this evil is, that many persons have hired large tracts of land, of 3000 or 4000 acres, and have stocked them with cattle, and have no other inhabitants on their land than so many cottiers as are necessary to look after their sheep and black cattle; so that, in some of the finest counties, in many places there is neither house nor corn-field to be seen in ten or fifteen miles' travelling; and daily, in some counties, many gentlemen (as their leases fall into their hands) tie up their tenants from tillage."

The Committee point out the important fact, that an extraordinary increase of the population is evident in those districts where most poverty exists, as compared with the increase in parts of the country where the peasantry are in improved circumstances, and proportionably provident. Between the years 1821 and 1831 the population of Mayo, Galway, and Clare, increased 24 and 25 per cent., notwithstanding an extensive emigration to America; while, during the same period, the population of the better-conditioned counties of Down and Wexford increased only 7 and 8 per cent., although there had been less emigration from these latter counties than from the others. The peasantry of the eastern districts do not migrate to England, although they are much nearer than the peasantry of the counties of Mayo, Galway, and other poor western districts, which annually supply England with labourers in such numbers. The Committee are of opinion that a comparatively trifling increase in remunerative employment would detain them at home. Mr. Griffith stated, in his examination, that he was enabled to stop five hundred labourers in the preceding year, who were on their way to England, by giving them employment on public works. If the labourers were provided with employment at home, by the cultivation of the waste lands being encouraged, settled habits of industry would be promoted among them, and local trade would be enlarged, creating new sources of profitable labour. At present, the greater part of the peasantry in the western districts acquire their annual stock of subsistence by working in the summer. Their earnings in England, and in the eastern Irish counties, enable them to procure some clothing, and to pay the rent of their cabins and potato land; but if the potato crop be a failure, its produce is consumed long before they can acquire new means of subsistence, and then a famine ensues. Thus, the present system not only creates poverty, and rapidly augments the population, but also entails on the country all the horrors of famine. It is also a fertile producer of crime, by giving to a large portion of the population months of idleness in every year, which cannot possibly be well spent by an uneducated, miserable, and excitable peasantry. The evidence, appended to the Report, contains abundant testimony of the happy change effected in the habits of these poor people when provided with regular employment. Mr. Fetherstone says,—"My property became safe when I commenced these large works. I never had a sheep taken from me, or suffered any of those trifling thefts which they were in the habit of committing when unemployed."

After lamenting the indifference with which the majority of Irish landlords regard the question of developing the sources of public and private wealth, by bringing the waste lands into cultivation, the Committee express their fears that *the greater part of these lands will remain neglected, if left entirely to private enterprise and the disposition of landowners.* The Committee also allude to other causes which obstruct improvements,—the want of experienced undertakers in whom landowners and leaseholders could confide, both as to their skill and their estimates of the outlay; the want of co-operation among the owners and holders of adjoining properties, occasioned by disparity of interests, and the apprehension of difficulties and litigation in ultimately adjusting them and allocating the outlay; and the very general existence of encumbrances, which prevent borrowing for the purposes of improvement.

On a mature consideration of these and other difficulties, the Committee submit the following propositions for enabling the Legislature to deal with the question in a practical manner:—1. The Board of Public Works in Ireland to have power to undertake, on the requisition of the proprietors of two-thirds of the property to be improved, drainages of bogs, embankments, and the removal of obstructions which cause inundations in rivers. 2. Juries to be formed for valuing mill-sites and fish-weirs, and also to ascertain the increased value of the lands drained, freed from inundations, or otherwise improved, and apportion the outlay to the several properties, according to the benefit derived to each estate or interest. 3. The outlay apportioned to be a charge upon the estate or interest benefited. 4. The Board of Works to be compensated in money, or a sufficient portion of the waste land improved, and powers to be given for that purpose; and, also, either to sell or mortgage a sufficient part of the whole estate, any portion of which shall be benefited. 5. Tenants for life to have power to charge the inheritance with an outlay, to the amount of three years' value, under the directions of the Board of Works, for the drainage, embankment, or other permanent improvement, save buildings; the Board, in the first instance, to make a Report, in which the feasibility of the improvement, when projected, shall be certified; this Report to be laid before a Master in Chancery, with an application from the party to the Court, and the Master to make due investigation, and if he approve of the project, as being of such utility to the estate that the inheritance should bear the charge authorized to be placed on it, then to certify the same to the Court, and the certificate to be enrolled for the purposes of title; and the tenants for life to have power to sell or mortgage, to the amount of such outlay, any part of the estate which, or any portion of which, is to be improved. 6. Tenants for life, paying any portion of the outlay with their own monies, or out of the rents and profits, to be entitled to a charge of that amount on the inheritance, but to be bound to keep down the interest of such charge. 7. Where lands are mortgaged, the wastes to be valued, and the encum-

brances to have operation on such portions, as liens to the amount only of the value ascertained anterior to the improvement; that is, if the wastes prove worth £90, the mortgagee to have a lien on them only to that amount, and the enhanced value to be susceptible of new encumbrance for the purpose of improvement. 8. Mortgaged lands, where the rent to be received in respect of which will not exceed 2*s.* 6*d.* an acre, to be let by the proprietor under the approval of two arbitrators, one named by him, and the other by the mortgagee; and in case of default of naming such arbitrator by the mortgagee, then to let under approval of the Court of Chancery, to be obtained in a summary way by petition. 9. Enlarged powers of leasing to be given to the Board of Trinity College, Dublin, and the Board of Commissioners of the Schools founded in Ireland by Erasmus Smith. 10. Reclaimed wastes, which shall be conveyed to the Board of Works, to be sold in small lots of not less than ten acres, or more than two hundred acres, Statute measure.

Under the above regulations an important change would gradually be brought about in the number of persons possessing land. Mr. R. Griffith, civil engineer, who is most intimately acquainted with the condition of Ireland, in reply to the question,—"Generally speaking, there is scarcely such a thing as a proprietor in fee, among the poor or middling classes, in that part of Ireland?" said—"I am not aware of any instance of a man having an estate of forty acres, or anything so small, who lives solely by the cultivation of his estate."

The Appendix to the Report contains "Observations on the Reclamation of Waste Lands in Ireland," by Mr. Poulett Scrope, who thus alludes to the benefits, moral and political, which would be occasioned by any measure that would raise up a numerous class of small landowners or independent yeomen:—"In Ireland (he remarks) the number of landed proprietors is smaller than in any other country in the world. In France more than twenty millions, or near two-thirds of the entire population, belong to the class of landed proprietors; in Norway and Sweden about one-third; while in Ireland, with a population of eight millions, there are considered to be under 10,000 landowners; and a considerable number of these are neither natives of, nor resident in, the country. The absolute prostration to which the law of Ireland condemns the cultivators of its soil beneath the irresponsible and unconditional power of its proprietors, I believe to be at the bottom of all the misery, turbulence, and disorganization which desolate that unhappy country. Concede the just claims of the mass of the people to maintain themselves by the cultivation of the fertile soil of their country on equitable and reasonable terms, and their religious differences will be no more likely to create political or social dissension among them, than is to be found between Protestant and Catholic fellow-subjects of Prussia, Belgium, Austria, and other States of the Continent."

Mr. Poulett Scrope has announced his intention of introducing a Bill "to provide for the utilization of the Waste Lands of Ireland." The 'Observations' from which we have already made extracts contain, we should suppose, the principles of the proposed measure. The first principle on which he proceeds is, that the waste land of any country, upon the soundest views of natural rights, is the property of the people collectively, *i.e.*, of the State; and that the State is not justified in conferring upon or continuing to any individuals an exclusive property in extensive tracts of waste lands, which they are neither willing nor able to reclaim or cultivate, whilst there are other individual members of the community in a state of destitution from the want of employment, who might maintain themselves upon such lands, if permitted to reclaim and cultivate them upon their own account. He would propose the appointment, by Government, of a "Waste Land Commission" for Ireland, which, after making compensation to the owners of such lands on some defined plan,—such, for instance, as that contained in the ten propositions already noticed,—should, on the reclamation being effected, offer the land for sale on the following terms:—"The Commissioners to proceed to divide the land into lots of not less than five, nor more than 100 acres, of which they shall offer, in the open market, perpetuity leases to such persons as shall undertake their further reclamation and cultivation; engaging to fence them and erect a house and proper farm buildings on each, and to pay an annual quit-rent, which shall be sufficient, at the least, to cover the interest of the sums expended by the Commission,—to pay the landowner's rent-charge, if any,—and to maintain, for ever, the roads, main drains, and other necessary works of public benefit upon the land. The lots would, I imagine, be eagerly taken by those of the peasantry and middle classes who are possessed of little capital, which they now have no means of employing safely and productively,—the excessive competition for land, at present, placing tenants at the mercy of their landlords, who, after squeezing out their little capital from them, may, and very frequently do, oust them, to put in another competitor, who is treated in turn in the same manner. Where capital is wanting, it would be supplied rapidly from the economy which would be called forth by the opportunity thus held out of obtaining that most generally-desired of all objects of human longings—*a farm of one's own*; or it would be supplied by loan from loan-funds, or by individual capitalists in towns, or from England, upon the security of the lease."

Mr. Poulett Scrope concludes his observations on this interesting subject by a glance at the benefits which this plan would secure to every portion of the community:—"The double object would be obtained of profitable employment for both the capital which is now lying idle, or at very low interest throughout the country, and the labourers, of whom such numbers are in a state of extreme and almost constant suffering, entailing a heavy burden upon the industry of the country through their want of work. Those who know with what extraordinary ardour and energy an Irish peasant will labour when working on *his own account* in the improvement of land in which he possesses a durable and permanent interest, what extreme industry and economy is everywhere exhibited by him under such circumstances, will appreciate the extent to which these qualities and their valuable results must be developed by a measure which will place in this most desirable position a body of very many thousand persons, who are now leading a life of constrained idleness and poverty, probably accompanied by their usual followers,—discontent, insubordination, and crime. The entire class of tenantry throughout Ireland must share in the advantages derivable from an enlargement of the field of agricultural industry, and a diminution of the excessive and cruel competition which now prevails for even the insecure and temporary occupation, on the most extortionate terms, of any acre of cultivable soil that may be in the market."

To return to the Report, which closes with the following suggestions:—That the Reports of the Irish Bog Commissioners appointed in 1809, and the maps belonging to them, be deposited in the British Museum and several public libraries for general reference; and that such of the maps as have not been published be prepared for publication. The Committee recommend to the notice of the House a suggestion made to them by Mr. Griffith, for transferring the fiscal functions of grand juries to Barony Boards, for the purpose of promoting measures to secure employment to the peasantry on roads and other public works, when farming employment is diminished.

OPERATION OF THE FACTORIES' REGULATION ACT.

By the 45th section of the Act, the inspectors of factories are required to make yearly Reports to the Secretary of State, which are afterwards laid before Parliament. The chief objects requiring the exercise of the Inspector's authority and vigilance are as follows:—1. To prevent the employment, in mills, of children under nine years of age. 2. To prevent the employment of children under eleven years of age, and in subsequent years (commencing March, 1835) of those under twelve, and afterwards of those under thirteen, for more than nine hours in any one day, or forty-eight hours in any one week. 3. To require the aforesaid class of children to attend a school for two hours in each day. 4. To prevent young persons, between eleven and eighteen years of age, being employed in mills more than twelve hours in any one day, or sixty-nine hours in any one week. 5. To take care that the time for meals be duly granted; 6, and that the required number of holidays in each year be observed. 7. That the ages of the children and young persons above re-

ferred to are properly certified. 8. To cause the adoption of the certificate system. 9. To see that the permission to work up lost time, under certain regulations, be not abused. 10. To see that the interior walls of mills be regularly whitewashed. 11. To require an abstract of the Act to be hung up in mills; and 12, to attend particularly to the time-books of each mill. The following are extracts from the Reports last presented:—

Report of Leonard Horner, Esq.—Towards the end of September (1834) I returned to Glasgow, which, together with the adjoining neighbourhood, is the principal seat of manufactures in my district. From thence I went to Dunfermline, Kirkcaldy, Dundee, Arbroath, Montrose, and Aberdeen; Mr. James, the superintendent, who acts under my directions, visiting, at the same time, other factories in the counties of Fife, Perth, and Forfar. Early in September I sent Mr. James to Galashiels, Hawick, and Jedburgh, and to different places in the counties of Dumfries, Wigton, Cumberland, Northumberland, Durham, and the north-eastern part of Yorkshire. In December he went to Belfast, and to nearly all the other places in the north of Ireland where factories, subject to this Act, are situated. The result of his observations are included in the following statements:—"With the exceptions which I shall presently notice, I did not find any factory working a greater number of hours in the day than the law allows; but Mr. James met with one instance, near Belfast, where a mill had been working seventy-two, in place of sixty-nine hours in the week, with young persons under eighteen years of age: the proprietor promised that he would forthwith conform to the law. The exceptions to which I allude were cases of making up lost time irregularly, by working more than eighteen hours in the day, when the time lost had amounted to less than three hours. As far as I have been able to ascertain, I believe that working in the night with young persons under twelve years of age, has been wholly given up in my district." Mr. Horner reports that the relay system is found to work well, when a fair trial is afforded it; but, in other instances, where it has been partially tried, without any properly-arranged plan, with the master not only taking little or no charge of it, but on the contrary, suffering the dislike of it on the part of the adult spinners, who employ the children, to counteract it in every way, it is not surprising that it should have been represented as unsuccessful, and even impracticable. The relay system is regarded, both by masters and adult operatives, as interfering with the clauses respecting school attendance. Mr. Horner adds—"I am sorry to say that, from very recent inquiries, I have reason to fear that even in those places where the want of suitable schools is most complained of, such as Glasgow and Dundee, and where, by a little co-operation on the part of the mill-owners, this obstacle to the relay system could be easily overcome; very little has yet been done, either upon the plan I suggested, or upon any other."

Report of R. J. Saunders, Esq.—Mr. Saunders inspected the several mills in the counties of Hants, Devon, Somerset, Wilts, Berks, Bucks, Herts, Northampton, Leicester, Derby, and Stafford, and some in London and the neighbourhood. Mr. Muggeridge, the superintendent employed under Mr. Saunders, visited the mills in Nottinghamshire, part of Derbyshire; and at Louth in Lincolnshire, and Hull in Yorkshire, and also the mills in Essex, Norfolk, and Suffolk. The Report remarks that but little care appears to be taken by the mill-owners to protect persons from injury by the machinery, and notices the effect of the education clauses and of the relay system, which contribute practically to exclude from factory employment all children under eleven years of age, whenever a sufficient supply of older hands can be obtained.

Report of T. J. Howell, Esq.—At Newtown, Montgomeryshire, the principal seat of the Welsh flannel manufacture, it became necessary, from repeated and general infractions of the law, to proceed against various mill-owners, and seventeen convictions were the result. In Mr. Howell's district the project of working by relays of children (upon the feasibility of which the plan of uniting daily employment in a factory with daily tuition in a school, is founded) is generally pronounced impracticable by the mill-owners. In only two mills in this district has the plan been attempted, and in one it has been subsequently abandoned; the other is a flax mill at Shrewsbury, belonging to Messrs. Marshall and Co., of Leeds, and the school is in the factory. In the town of Trowbridge (Wilts) are several woollen factories, and (their machinery being impelled by steam) these are not situated at inconvenient distances from each other, as is the case where the moving power is water. In this town an excellent school has been established, and when the Factories' Regulation Act had passed the Committee, it afforded the most cordial aid in attaining the objects to which the enactments of the Legislature had been directed. This will appear, from the following extract from the Committee's printed Report for the year 1834:—"The Legislature having provided, that all children who work in factories, under eleven years of age, shall be educated, your Committee have endeavoured to promote that object, by admitting such children to attend half time at half price—namely 1½*d.* a-week; and they trust this arrangement will induce many parents, who cannot afford to lose the whole of their children's earnings, to give them some education, by sacrificing a part. The particular attention of manufacturers, also, is called to this new plan, as, by using relays of children, they may afford an opportunity to all such as work in factories, and whose minds have hitherto been too much neglected, to avail themselves of the benefit of education." But notwithstanding the lowness of the price, the excellence of the school, and its vicinity to the factories, Mr. Howell states that out of 435 scholars, only two were employed in factories, and that these were brothers, working with and for their father. The experiment of combining employment in a factory with attendance at a school has here, it is remarked, been tried under the most favourable circumstances, and yet without success. At Frome, however, Mr. Howell visited a large and very good national school, the master of which had found that the number of his scholars had been increased by the operation of the education clauses of the Factory Act. The Report concludes, by noticing that, more particularly in the smaller and older mills, the machinery is by no means sufficiently guarded to prevent the danger of serious accidents.

Report of R. Rickards, Esq.—Mr. Rickards exposes the frauds and abuses practised in the procuring and use of certificates, and shews that still greater frauds would be practised, but for the present regulations under which certificates are granted. In support of this opinion, he states the following facts:—1. Of children employed in mills, I have found many under nine years of age working, contrary to law, twelve hours per day: these, of course, I have caused to be discharged. 2. I have obtained various convictions against mill-owners for working children without certificates, and in other respects contrary to law. 3. At Skipton, a young girl of fifteen years of age, was proved to have been worked from ten minutes before five in the morning till nine o'clock at night, and obliged to take her meals in the mill this was a common practice in that quarter, until corrected. 4. A mother, in Manchester, got employment for a sickly child of nine years of age to work in a mill for twelve hours per day, under a false certificate, which she got, by sending a fine healthy child of suitable age to a doctor's house to procure it. 5. In some instances false baptismal registers have been produced: in many others, mothers would readily forswear, to get their children to work in mills longer hours than allowed by law. 6. Before the appointment of surgeons to grant certificates, I found them given, in one instance, by a drunken ale-house keeper, who, in addition to his proper calling, had set himself up as a medical practitioner; and, in another instance, by a person who had been brought up as a druggist's apprentice. 7. In Huddersfield, I discovered a large mill, where the children had once been certified by the appointed surgeon, but, whether from ignorance or neglect, the certificates had been given up to the children. When the certificates were called for, none were forthcoming; and as changes frequently took place in this mill, and no one could tell whether the new hands were certified or not, it became doubly impossible for the inspector to ascertain who, among these children, were working according to law, and who were not. 8. I have now before me a certificate-book belonging to a mill in Glossop (well known for working fourteen and fifteen hours per day), from whence I have extracted upwards of sixty cases of young persons, certified in February 1834, to be twelve, and from that to sixteen years of age, to be up-

wards of eighteen in a twelvemonth, and some less than a twelvemonth afterwards. By means of the certificate system, therefore, these and various other abuses have been detected, and children are in many instances protected. Mr. Rickards strongly recommends the mill-owners to take upon themselves the charge of paying for the children's certificates. In some towns—in Leeds, more especially—many mill-owners have agreed to give the surgeon who attends their mill an annual stipend, for which the surgeon not only certifies the children, but attends to the health of the workers generally.

The Reports of the Inspectors were prepared early in 1835, and previously to the Act coming into more complete operation. They were not, however, ordered to be printed until towards the close of the last Session.

STATISTICS OF THE REPUBLIC OF CENTRAL AMERICA.

The republic of Central America, formerly called Guatemala, is situated in the Isthmus, which connects North with South America, and extends from 8 to 16 degrees of N. Lat., varying in breadth from 120 to 250 miles: it is bounded on the North by Mexico, and on the South by New Granada, possessing a line of coast upwards of 600 miles in length, washed on the western side by the Pacific Ocean, and on the eastern by the Atlantic.

These States are at present divided into six Provinces, namely Guatemala and San Salvador, on the Pacific side, Vera Paz, Honduras, Nicaragua, and Costa Rica on that of the Atlantic, comprising a territory of upwards of 26,000 square leagues, with a population of nearly two millions of inhabitants. Chiapa also formerly belonged to Guatemala, but is now claimed by Mexico.

Central America is watered by several large rivers, some of which are partially navigable, besides lakes of considerable size and depth, particularly that of Nicaragua. A chain of the Andes traverses the country, and amongst these mountains are upwards of 20 volcanoes, many of which are in constant action.

The present capital of these States is New Guatemala, situated on the river Vaca, in Lat. 14°. 28′. North, a short distance from the Port of La Independencia, on the Pacific Ocean: the population of Guatemala amounts to about 20,000 individuals.

There are five ports of entry on the Pacific side, namely La Independencia, Acajutla, La Libertad, Conchagua, Realejo, and San Juan del Sur: the bay of Conchagua forms a safe and commodious harbour. The ports in the Atlantic are Isabel, Omoa, Truxillo, San Juan, and Cartago. Isabel is situated in Golfo Dulce, a safe and good harbour.

The grand project of uniting the Pacific Ocean with the Atlantic, by rendering the River San Juan on the Atlantic side navigable into the Lake of Nicaragua, requiring a lockage of 200 feet in about 17 miles, and cutting a canal from the lake into the Pacific Ocean, a distance of barely 20 miles, has been several times under contemplation by the government of Guatemala: but the magnitude of the undertaking, added to the disturbed state of the country, have hitherto prevented this important project from being seriously gone into; and it still remains for individual enterprise to carry into effect this magnificent work for the future benefit of the commercial world at large.

Guatemala is placed in a most favourable position for commerce, possessing a soil admirably adapted for the more valuable products, with a regular degree of temperature as regards climate, particularly so on the western side. The principal articles, the produce of her soil, are cochineal, indigo, dye-wood, and medicinal drugs, besides cocoa and tobacco, whilst her coasts afford mother-of-pearl and tortoise-shell, and her mountains abound with the precious metals.

The largest plantations of Nopal trees, on which the cochineal insect subsists, are met with in the plains near the city of Guatemala, where the quantity of cochineal collected in favourable seasons has amounted from 200 to 250,000 lbs. weight, worth on the spot from two to three dollars a pound. Guatemala cochineal is considered larger and superior in quality to the Mexican. The crops of indigo may be estimated at from 500 to 750,000 lbs. weight, worth from one to two dollars a pound.

The mines of Guatemala were but little encouraged under the Spanish dominion, and although adventurers occasionally realized handsome profits, they were generally obliged to give up working so soon as water made its appearance in the mine. The silver mines are mostly situated in the province of San Miguel, and are easy of access, being only a short distance from the Pacific. Gold is chiefly found in the province of Costa Rica.

Finances.—The ordinary expenditure of the government of Guatemala has of late years not exceeded 850,000 dollars a-year, (170,000*l.* sterling,) exclusive, however, of any reserve for the interest due on her debt. The domestic debt entitled to interest, amounts to somewhere above 2½ millions of dollars, besides upwards of a million of unliquidated claims. In the year 1825, the Government, in order to meet the deficiency in the revenue without recurring to new taxes, contracted a loan in England for seven millions of dollars, at the rate of 7 per cent.; not more, however, than 167,000*l.* sterling of these bonds were issued to the public, the interest on which up to August, 1828, was advanced in this country, since when the arrears have accumulated to the extent of 80,000*l.* In the year 1825, the expenses of the army amounted to nearly one million of dollars, but they have since been reduced to about 650,000 dollars, whilst the other expenses of the government do not exceed 250,000 dollars a-year; notwithstanding this apparently trifling charge, the expenditure of Guatemala has exceeded her revenues to the extent of 200,000 to 300,000 dollars a-year, and the government has consequently been unable to remit anything on account of the interest due on her foreign debt, although it does not require more than 50,000 dollars (or 10,000*l.*) a-year.

The duties levied on imports and exports in Guatemala are more moderate than those of any other of the new States of America, not exceeding 14 per cent. on cotton goods, and 10 per cent. on most other articles, whilst the produce of the soil only pays 2 per cent. on importation, notwithstanding which, the whole amount of duties collected at the various custom-houses does not exceed 350,000 dollars (75,000*l.*) a-year. The next chief source of revenue arises from the monopoly on the sale of tobacco, which yields a gross return of 450,000 dollars a-year; nearly half this sum is however absorbed in the expenses of administration.

Guatemala is a federative and representative state, governed by a president, vice-president, 11 senators, and 42 representatives—the executive power being intrusted to three persons. Each province defrays the expenses of its local administration, having a provincial assembly of its own, and which sends members to the general congress

PARLIAMENTARY REGISTER.

LIST OF BILLS BROUGHT IN.

(*Exclusive of Private Bills.*)

HOUSE OF LORDS.

Feb. 5. Bill "to amend an Act for abolishing capital punishments in the cases of letter-stealing and sacrilege."—*Earl of Shaftesbury.*

— 12. Bill "to consolidate the jurisdiction of the several Ecclesiastical Courts in England and Wales into one Court, and to enlarge the powers and authorities of such Court; and to alter and amend the law in certain matters ecclesiastical."—*The Lord Chancellor.*

PRIVATE BILLS.

Feb. 9. Petitions for, not to be received after the 26th of February instant; nor any Report from the Judges thereon after the 20th of April next.

15. Time for receiving petitions for, enlarged to Friday, March 11.

HOUSE OF COMMONS.

Feb. 8. Lighthouses Bill, "for vesting lighthouses and lights on the coasts of England in the Corporation of Trinity House of Deptford Strond, and for making provisions respecting lighthouses, lights, buoys, beacons, and sea-marks, and the tolls and duties payable in respect thereof."—*Mr. Hume.*

— Election Expenses Bill, "to regulate the expenses at elections of Members to serve in Parliament for England and Wales."—*Mr. Hume.*

Feb. 9. Bill "for the registration of electors in England and Wales."—*Mr. Hume.*
— Bill "to render the register of electors final."—*Mr Hume.*
— Bill "to exclude the borough of Stafford from sending burgesses to serve in Parliament."—*Mr. Divett.*
— Bill "to authorize the consolidation of trusts of turnpike roads in England."—*Mr. Fox Maule.*
— Bill "for vesting certain offices in the Forest of Dean in the Commissioners of Woods and Forests."—*Mr. R. Gordon.*
— 11. Bill "for the commutation of tithes in England." *Lord John Russell.*
— Bill "for the more effectual registration of persons entitled to vote in the election of Members to serve in Parliament in England and Wales."—*The Attorney-General.*
12. Bill "for enabling prisoners to make their defence by counsel or attorney."—*Mr. Ewart.*
15. Bill "for the better regulation of hackney-carriages and of omnibuses used in and near the metropolis, and of the drivers and attendants thereof."—*Mr. Alderman Wood.*
16. Bill "for the regulation of municipal corporations and borough towns in Ireland."—*The Attorney-General for Ireland.*
17. Bill "for registering births, deaths, and marriages in England."—*Lord John Russell.*
— Bill "to amend the laws relating to the celebration of marriages in England and Wales."—*Lord John Russell.*
18. Bill "to consolidate and amend the laws relating to the constabulary force in Ireland."—*Lord Morpeth.*
— Bill "to provide for the relief and employment of the destitute poor in Ireland."—*Mr. Poulett Scrope.*
20. Bill "for the appointment of overseers and maintenance of the poor in extra-parochial places."—*Mr. Jervis.*
— Bill "for facilitating the distribution and payment of compensation for slaves."—*The Chancellor of the Exchequer.*

PRIVATE BILLS.

Standing Order (18th June, 1811) read.

Resolved,—"That no Private Bill be read the first time after Monday, the 28th day of March next."

Resolved,—"That this House will not receive any Report of such Private Bill after Monday, the 6th day of June next."

Feb. 18.—DIVISIONS OF THE HOUSE.

1. *Resolved*, That, upon every Division, the House be entirely cleared; the Ayes and the Noes being sent forth into two separate Lobbies.

2. That four Tellers and four Clerks be appointed; two of each to be stationed at the entrance of the respective Lobbies.

3. That the doors being simultaneously opened by the Speaker's order, the names of the Members be taken down by the Clerks on ruled paper, with numbered lines (or marked off upon a printed list), as they re-enter the House by the opposite doors; the Tellers counting and announcing the result at the Table, as at present.

4. That the Lists of the Division be then brought up to the Table by the Tellers, and deposited there for insertion in alphabetical order in the Votes.

LIST OF COMMITTEES APPOINTED.

(Exclusive of Committees to consider Bills.)

HOUSE OF LORDS.

Feb. 12. Committee "to inquire into the state of agriculture, and into the causes and extent of the distress which still presses upon some important branches thereof, and to report their observations and opinions thereon to the House."

HOUSE OF COMMONS.

Feb. 5. Committee "to take into consideration the best means of appointing, and transacting business in, Select Committees."

8. Committee "to inquire into the state of agriculture, and into the causes and extent of the distress which still presses upon some important branches thereof, and to report their observations and opinions thereupon to the House."

[Names of the members of this Committee:—Lord John Russell, Sir Robert Peel, Sir James Graham, Mr. S. Lefevre, Marquis of Chandos, Mr. Cayley, Mr. G. Heathcote, Mr. A. Sanford, Mr. E. Denison, Sir E. Knatchbull, Lord Stanley, Mr. Miles (Somerset), Earl of Lincoln, Mr. C. A. Pelham, Sir R. Price, Mr. R. Clive, Lord Francis Egerton, Sir W. Molesworth, Lord Howick, Mr. Evans (Dublin), Mr. Cooper (Sligo), Mr. W. Gordon, Mr. S. Herbert, Mr. B. Baring, Mr. Poulett Thomson, Mr. Ord (Newcastle), Mr. Clay, Mr. Handley, Mr. Morrison, Mr. James Lock, Mr. Dunlop (Ayr), Mr. Young (Cavan), The O'Conor Don, and Mr. M. Attwood. Sir C. Burrell and Mr. Wodehouse added to the Committee.]

9. Committee "to classify petitions."
— Committee "to assist the Speaker in all matters which relate to the printing executed by order of this House, and for the purpose of selecting and arranging for printing Returns and Papers."
— Committee "to inquire into the best means of extending a knowledge of the arts and of the principles of design among the people (especially the manufacturing population) of the country: also, to inquire into the constitution, management, and effects of institutions connected with the arts."
— Committee "to consider what measures ought to be adopted with regard to the native inhabitants of countries where British settlements are made; and to the neighbouring tribes, in order to secure to them the due observance of justice, and the protection of their rights; to promote the spread of civilization among them, and to lead them to the peaceful and voluntary reception of the Christian religion."
— Committee "to consider and report on such plan as may be most fitting and convenient for the permanent accommodation of the Houses of Parliament."
— Committee "on expiring laws, for the purpose of inquiring what temporary laws of a public and general nature are about to expire during the present Session, or at any period intervening between the termination of the present Session, or on or before the 1st of August, 1837."
— Standing Committee of sixteen members renewed to assist Mr. Speaker in the direction of the Library.
10. Committee "to inquire into the changes that have been recommended by the Select Committee on Printed Papers, and to consider what compensation shall be given to certain officers of this House."
— Committee "to inquire into the condition, management, and affairs of the British Museum."
15. Committee "to inquire into the state of the port of London."
— Committee "to examine into the state, funds, and management of the diocesan, royal, and other schools of public foundation in Ireland, as also into the system of education pursued therein, with a view to increasing their utility, and to inquire how far it may be practicable and expedient, and in what manner, and from what resources, to improve, extend, and permanently maintain, academical education in that country, and to report their opinion thereon to the House."
16. Motion made, and question proposed—"That a Select Committee be appointed to inquire into the circumstances of the traffic and agreement alleged to have taken place between Daniel O'Connell, and Alexander Raphael, Esqrs., touching the nomination and return of the said Alexander Raphael for the county of Carlow, at the last election for that county, and to report the minutes of evidence taken before them, with their observations thereon."—Amendment proposed, after the word 'county,' to insert the words—"and the application of the monies said to have been received, and the circumstances under which the same were received and expended."—Question, "that these words be there inserted," put, and agreed to.—Main question, as amended, put, and agreed to.—Mr. Ridley Colborne, Lord Francis

Egerton, Mr. Bannerman, Mr. Barneby, Sir Ronald Ferguson, Sir J. Y. Buller, Mr. Ord, (Newcastle), Sir C. B. Vere, Mr. Warburton, Sir Eardley Wilmot, Mr. H. G. Ward, were appointed Members of the Committee; and Sir F. Pollock, and Mr. Sergeant Wilde, were nominated to serve on the said Committee, to examine witnesses, without the power of voting.—Power to send for persons, papers, and records.

18. Committee "to inquire into the management and affairs of the Record Commission, and the present state of the Records of the United Kingdom."

20. Committee "to consider the most effectual means of preventing bribery, corruption, and intimidation, in the election of Members to serve in Parliament."

— Committee "to inquire into the total amount of all fees, gratuities, perquisites, and emoluments of every kind, not fixed salary, which are now received in the several public offices, (courts of law excepted), and by all public officers in the United Kingdom, for any service done, on every appointment or commission, and to ascertain the expense of collecting, and the authority under which those fees are paid, how much to each, and for what purpose; also the amount of fixed salary to every person receiving any portion of fees, and charged in person and in duty: also to report what measures have been adopted in the several offices respecting the reduction or abolition of fees since 25 Geo. III. c. 19, and to report evidence, and their observations thereon."

NEW MEMBERS.

Devizes.—James Deans Dundas, Esq., vice Sir P. C. H. Durham, accepted Chiltern Hundreds.

Stoke-upon-Trent.—The Hon. George Anson, vice R. Heathcote, Esq., ditto.

Cockermouth.—Edward Horsman, Esq., vice F. Dykes, Esq., ditto.

Malton.—John Walbanke Childers, Esq., vice Sir C. C. Pepys.

Glasgow.—Lord William Bentinck, vice Colin Dunlop, Esq., accepted Chiltern Hundreds. The election was contested. Lord William Bentinck polled 1995 voters; Mr. Mills, 903—Majority, 1092.

Writs have been issued for Clonmel vacant by the death of Dominick Ronayne, Esq.; and for Leicester county (southern division), vacant by the resignation of Thomas Frewen Turner, Esq.

MISCELLANEOUS.

Bankruptcy Analysis from Jan. 23 to Feb. 20.

Boarding-house keeper, 1; bookbinder, 1; bookseller, 1; boot and shoe dealer, 1; bread and biscuit maker, 1; brewer, 1; builders, 2; cabinet-maker, 1; carpenters, 3; carpet-manufacturer, 1; cattle-salesmen, 2; cheesemonger, 1; chemist, 1; clothier, 1; cloth (fancy) manufacturer, 1; coach-proprietor, 1; coal-merchants, 4; corn-merchant, 1; cotton cloth manufacturer, 1; dealer, 1; dressmaker, 1; druggist, 1; factor, 1; flour-dealer, 1; grocers, 6; hatter, 1; horse-dealer, 1; house-painter, 1; ironmasters, 2; lamp (carriage) manufacturer, 1; lime-burner, 1; linen-drapers, 7; merchants, 6; miller, 1; music-seller, 1; paper-manufacturer, 1; provision-dealers, 2; printer (furniture), 1; scrivener, 1; ship owner, 1; shopkeeper, 1; spirit-dealer, 1; victuallers, 8; warehouseman, 1; watchmaker, 1; wine-merchant, 1; woollen-draper, 1; wool-stapler, 1.—Total, 78; from the 28th of December, 149.

Corn and Grain.—Average prices per quarter in England and Wales, from 'The London Gazette,' of Friday, Feb. 19:—

	Wheat.	Barley.	Oats.	Rye.	Beans.	Peas.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Week ending Feb 13.....	39 7	29 0	19 8	27 6	34 7	33 2
Average of last six weeks.	38 4	28 4	19 2	26 11	33 9	33 9
Duty on foreign corn.....	48 8	19 10	18 3	30 3	19 8	18 3

Price of Consols.—The following are the closing prices of the Three per Cent. Consols for Account on each of the following days:—

Jan. 30.	Feb. 6.	Feb. 13.	Feb. 20.
91¼	91½	91½	91½

Sugar.—The average prices of Brown or Muscovado Sugar per cwt., computed from the Returns published in 'The London Gazette,' have been as follows for the Weeks ending

Jan 26.	Feb. 2.	Feb. 9.	Feb. 16.
39s. 9½d.	39s. 2d.	38s. 5d.	37s. 10½d.

Private Banks and Joint-Stock Banks.—The aggregate amount of notes circulated in England and Wales, by private banks, for the quarters ending September 27th, 1834, December 28th, March 28th, 1835, June 27, and September 26th, was respectively as follows:—8,370,423*l.*; 8,537,655*l.*; 8,231,206*l.*: 8,455,114*l*; 7,912,587*l.* By Joint-Stock Banks for the same periods:—1,783,689*l.*; 2,122,173*l.*; 2,188,934*l.*; 2,484,687*l.*: 2,508,036. Total of notes circulated by Private and Joint-Stock Banks:—10,154,112*l.*; 10,659,828*l.* 10,420,160*l.*; 10,939,801; 10,420,623.

CHRONICLE OF OCCURRENCES.

Mr. Aldam, of Trinity College, fourth on the list of wranglers in the Cambridge Bachelor's Commencement, being a member of the Society of Friends, is debarred from taking a degree, and also from competing for the Smith's prizes, to which the taking of a B.A. degree is a requisite preliminary.

Pensions granted by Lord Melbourne to Mr. Banim, author of "Tales of the O'Hara Family," of 150*l.* a-year; and to Mr. B. Thorpe, the translator of Rask's Anglo-Saxon Grammar, of 100*l.* a-year. Lord Melbourne has also directed 150*l.* to be paid out of the Royal Bounty Fund to the widow of the Ettrick Shepherd.

Jan. 29.—Lord Stowell, elder brother of the Earl of Eldon, died at Early Court, Reading, in his 91st year. He presided for many years over the Consistory and Admiralty Courts.

— Mr. Montefiore, a highly respectable Jew, elected a governor of Christ's Hospital, by a majority of 32 to 20.

30. Mr. Sidney Taylor moved that the rule for a criminal information against Mr. Haywood, of Sheffield, for a libel on Colonel Fairman, should be made absolute. Mr. Austin and Mr. C. Buller stated that ample affidavits had been prepared to shew cause against the rule, but that, owing to Mr. Haywood's death, it must drop as a matter of course.

31. The young Queen of Naples, after giving birth to a son on the 16th of January, died of a bilious fever.

The Dublin Society, which is supported by a Parliamentary grant, some time ago refused to admit Dr. Murray, the Roman Catholic Archbishop of Dublin, as a member. Lord Morpeth, in an official letter addressed to the members of the society, called their attention, in the first place, to the opinion of a Select Committee of the House of Commons in 1829, to the effect that the "principle of admission by ballot in a society mainly supported by the public purse is objectionable, and ought to be discontinued;" and secondly, to a Treasury Minute of November the 11th, 1831, expressive of their Lordships' concurrence in the above opinion. Lord Morpeth proceeded to state that the lord-lieutenant could not recommend the Government to continue the grant to the society, unless some modifications were introduced into its rules; and his Lordship being "anxious to carry along with him, in any projected remedies, the assent and assistance of the members," suggested that the society should appoint a Committee to confer with the Irish Government on the subject.

Feb. 2. Died, at Rome, Madame Maria Laetitia Bonaparte, mother of the Emperor Napoleon. She was born at Ajaccio, Corsica, August 24th, 1750.

— At a numerous meeting held at Guildford, which was attended by Lord Albert Conyngham, M.P., W. J. Denison, Esq., M.P., J. Mangles, Esq., M.P., W. Crawford, Esq., M.P., an association was formed for the protection of the liberal interest in the western division of Surrey.

3. At a Court held at St. James's a proclamation was ordered for the issue of a new silver coin of the value of fourpence.

— The western roads rendered impassable for several hours in consequence of a heavy fall of snow, which pre-

vented several Members reaching London in time for the opening of Parliament.

5. Cleave, a publisher of London, convicted on the suit of the Crown in penalties of 600*l.* for issuing a newspaper without a stamp. The venders of unstamped newspapers in several of the large provincial towns have also been subjected to legal proceedings.

— *The Gazette* contained the appointments of Lord Segrave as lord-lieutenant and *custos rotulorum* of the county of Gloucester; of Capel Hanbury Leigh, Esq., as lord-lieutenant and *custos rotulorum* of the county of Monmouth; and of Henry Williams, Esq., as lord-lieutenant of the county of Brecon.

11. A deputation waited upon Lord Melbourne to ask for the entire abolition of the newspaper stamp. Dr. Birkbeck, Mr. Hume, Colonel Thompson, Mr. O'Connell, Mr. Grote, Mr. Roebuck, Mr. Brotherton, Mr. Wallace, and Mr. Buckingham spoke in favour of the measure, and Lord Melbourne, after alluding to the importance of the question as it affected the pursuits, habits, feelings, and opinions of the people, said that the reasons adduced in favour of abolition should meet with that serious and anxious attention which they certainly deserved.

12. An order of the Speaker of the House of Commons appeared in *The Gazette*, directing the re-assembling of the Dublin Election Committee on the 29th of February, to take into consideration the Report of the Commissioners appointed to examine evidence in Ireland.

15. The Court of Peers passed sentence of death on Fieschi, Pepin, and Morey; Boireau was condemned to twenty years' imprisonment, and Bescher was acquitted. Fieschi and his two accomplices were executed on Friday February 19.

17. A fire which broke out in the spire or belfry of Spitalfields church occasioned the destruction of the interior of those portions of the edifice. The woodwork which supported the peal of twelve bells, one of which weighed 44 cwt., having been consumed, they fell one by one with a tremendous crash. The damage is estimated at 4000*l.* The organ, which cost 1800*l.*, was injured by the water thrown by the engines, and narrowly escaped destruction.

— At a Court of Common Council 200 guineas were voted towards the expenses of the expedition for rescuing the ice-bound whalers. The sum of 100 guineas was afterwards proposed to be voted to the Irish clergy, and an amendment being made to increase the sum to 200 guineas, it was carried by 57 to 47. The grant was accompanied by a Resolution, regretting that the resistance of one branch of the Legislature had placed the Irish clergy under the necessity of appealing to private benevolence; which was carried by 60 to 53.

— The claims of the maritime officers of the East India Company, who, not having been on actual service within five years prior to the month of August, 1833, were excluded from compensation by the Board of Directors,—were this day negatived in a Court of Proprietors, by a majority of 25. About 500 proprietors voted.

18. The *Jane*, one of the missing whalers, reached Hull, having got clear of the ice on the 31st of January, in lat 58° N. long. 56° 40″ W. The captain reports that the *Middleton*, of Aberdeen, was lost on the 15th of November, and the crew, 49 in number, were taken on board the *Jane*, which then contained 98 men: 22 of the *Middleton's* crew were afterwards put on board the *Viewforth*, of Aberdeen. The men on board the *Jane* were placed on short allowance on the 2nd of November. The *Viewforth* reached Stromness the day after the *Jane*, the crew having endured great sufferings, and 14 of them had been buried at sea. There are now only two vessels detained in the ice, and it is hoped that Captain Ross will be enabled to afford them timely relief.

19. Rev. R. D. Hampden, D.D. appointed to the Regius Professorship of Divinity in the University of Oxford.

21. Death of Dr. Van Mildert, Bishop of Durham.

The following paragraphs respecting the state of trade are taken from provincial papers:—"The silk trade in Lancashire was never so brisk at present. Manufacturers are seeking weavers in the country every day."—"With a few exceptions, the linen manufacturers of Barnsley have cheerfully agreed to a new list of prices which the weavers had presented to them."—*Leeds Mercury*,—"Two hundred tons of flax were lately brought to market in Londonderry from the country, and sold for exportation to England and Scotland, at 3*l.* per cwt., thus realizing 12,000*l.*"—*Irish Paper*.——"We have heard that an eminent master in Glamorganshire has an order for 2000 tons of iron for Africa."—*Sheffield Mercury*.——"The iron works in the neighbourhood of Bradford are in a state of almost unexampled activity. An additional blast has lately been erected at Bowling; and the supply of workmen is not adequate to the demand. Orders are, in consequence, accumulating."—*Leeds Mercury*.——"A considerable advance has taken place in the wages of journeymen nail-makers in all the villages in the neighbourhood of Rotherham and Barnsley"—*Sheffield Mercury*.——"The whole of the Belper (Derbyshire) horse-nail-makers are now in work, at an advance of 4*d.* per thousand, after having been out on a strike for six weeks."—*Sheffield Mercury*.——"We hear that the price of iron was raised 2*l.* per ton, at the Low Moor and Bowling iron works on Monday last."—*Leeds Mercury, Feb.* 6.——"The file-makers in this town, with some exceptions, last week gave over working, *en masse*, in order to compel the masters to give an advance of wages."—*Sheffield Mercury. Feb.* 13.——One of the manufacturers of Sheffield has issued an address in which it is stated that the advance claimed by the men is equivalent to 20 per cent. on the present wages, which are already higher than was ever given in Sheffield, while the prices of food, &c. are remarkably low. It is conceived by many that some of the processes of file-making might be completed by mechanical means, in which case the men would, for a time, assuredly be losers. The present strike is calculated to bring about this change, as the masters assert that they are undersold by the file-makers of Wolverhampton and Birmingham. On Friday, Feb. 12, several disputed cases of file-makers' wages were brought before the magistrates, and after an excellent address from the bench by Mr. Parker, they were, with one exception, remanded, in the hope that an amicable settlement of the differences between the masters and men would be effected. The case on which the magistrates adjudicated, was a summons by one of the file-makers for his week's wages, amounting to 22*s.*; and to witness the decision the Sessions-room was attended by hundreds of men who might have been taking advantage of the present flourishing state of the trade. The *Sheffield Mercury* states that "the Sessions-room was crowded to excess in every part. In fact, we never saw it more full either on the occasion of a public meeting or a quarter-sessions."—"The mining districts of Derbyshire are in a complete state of activity. Lead has advanced from 9*l.* per ton to upwards of 18*l.* and there is a steady demand. Fresh ground is fixed upon ready to be broken into.—*Sheffield Mercury, Jan.* 30.——"British pig-lead at this moment bears the high price of 21*l.* per ton, being an advance of nearly 100 per cent. on that article within the space of twelve months, and with the prospect of the price increasing."—*Leeds Mercury, Feb.* 6.——"At Rochdale, manufacturers have great difficulty in getting workmen to supply their orders, and if the demand continues, an advance of wages is almost certain."—*Leeds Mercury*——"There has been another brisk market at Bradford to-day (Feb. 11). The stocks in the manufacturers' hands are small; some have none beyond the produce of their looms for the week. The farmers are beginning to demand extravagant prices for wool."—*Leeds Mercury*.——"The cotton trade of Scotland continues to increase every year. Last year the increase was more than 3800 bags. Total consumption, nearly 100,000 bags, 32,000,000lbs. at 9*d.*; value of yarn spun, 2,130,000*l.*; of which above one-half was exported. Left for manufacturing, 1,600,000*l.*; expense and profit of manufacturing, 1,200,000*l.*, making the value of manufactured goods, 2,800,000*l.*"—*Glasgow Chronicle*.——"The increase of Customs' duties at this port for the past year, as compared with the preceding, has been 105,580*l.*"—*Bristol Journal*.——"The corn trade, which has been so long depressed, has at last begun to look up again. Since the rise in prices commenced, there has been an advance of about 1*s.* a bushel on wheat in the Liverpool market."—*Liverpool Times*, Feb. 16.——"Corn has taken an advance in Selby market of 2*s.* per quarter."—*Leeds Mercury*, Feb. 20.——A reference to the returns from 'The London Gazette,' in another column, will show that this rise of prices is general.

THE METROPOLITAN BRITISH & FOREIGN CLOTHING ESTABLISHMENT,

LONDON. 97, FLEET-ST.

GEORGE DAVID BOUDRET.

In remarking on his
FIRST-RATE QUALITIES,
G. D. D. respectfully addresses Gentlemen who have hitherto found it necessary to pay extravagantly high prices for really First-rate Clothes, to such he guarantees a **DRESS COAT** of any colour—as stylish in make, as tasteful and talented in cut, and as good in quality, as any bearing the names of the most expensive and favourite Fashionable Houses, for.... £3 0
Surtouts, including, of course, Silk linings 3 10
Black and Blue 10s extra on each
Buckskin Trousers, on G D D's new principles of Measurement, 1 8
Waistcoats 14
Ladies' Riding Habits..... 6 6
These will be found of that character which has raised this Establishment to such eminence in the estimation of the higher circles, where nothing, short of **easy gentlemanly elegance** could be tolerated

THE SECOND-RATE QUALITIES
Are especially recommended for Business and Travelling Clothes, also, to the **ECONOMIST** they are found preferable to the first on account of their Superior Durability, while in appearance none but the Connoisseur could discover a difference, excepting by comparison, in short, they are frequently substituted at other Houses for the Best The Prices are, for **DRESS COATS**, of any colour (Style and 1st Fit rate) £2 5
Surtouts, including Silk linings, 2 10
Black or Blue, 5s each extra
Trousers 1 1
Waistcoats 10
The Army Blue Spanish Cloak, forming a circle of 9 yards round the bottom—the best Travelling Cloak that is made 2 10
A good Cloth ditto with Fur Collar and Cape—9 yds round 3 3
Milled Petersham Great Coat 2 2

CONTRACTS FOR FIRST-QUALITY CLOTHES
As generally adopted, are objectionable, because they confine Gentlemen to one particular Dress, or subject them to considerable Extra Charges. G. D. D.'s system removes this difficulty by leaving at the option of the Customer what he chooses to wear, whether Surtouts or Dress Coats, either Coloured or Black, his Prices, including all extras (excepting Velvet Collars), being for:
Two Suits per Annum..... £10 0
Three ditto ditto 14 10
Four ditto ditto 19 12
and so on in proportion to the number of Suits. Each Suit to be returned on the delivery of its successor Gentlemen who take three or more Suits per Annum are allowed two Suits in wear during the whole term; thus in a contract for three Suits a Dress Suit and an Undress Suit are supplied together. The Dress Suit to be kept for twelve months, and, at the expiration of six months, the Undress Suit is returned, and another supplied to continue to the end of the term, the contract amount for each Suit being paid on delivery. Contracts for the second quality would be much lower.

A Suit of first rate Liveries £3 18 6
For **WASHING TROWSERS** and **WAISTCOATS** definite prices cannot be stated, on account of the variety of Materials but a very superior article for **SUMMER TROWSERS** are charged **10s.** per pair, and **WAISTCOATS, 6s.** each

G D D respectfully informs **COUNTRY GENTLEMEN,** that, on account of the numerous invitations he has received to make Periodical Circuits through England, his Traveller will wait on them occasionally, or will proceed direct to any part where three or more Gents (according to the distance) favour him with their Addresses.

TERMS—Cash on Delivery, without Discount Country Orders must be accompanied by a Reference in Town.

THE FIRST HOUSE IN ENGLAND FOR DRESS WAISTCOATS.

TO THE NOBILITY, GENTRY AND PUBLIC

Junction 1836

FAMILIES OF DISTINCTION, and Visiters to the Metropolis who at this Season frequently experience great difficulty in suiting themselves with Furnished or Unfurnished Houses, owing to the great demand are respectfully informed that every assistance will be afforded in the HOUSE AND ESTATE AGENCY DEPARTMENT of HENRY L. COOPER in obtaining or disposing of the same on the Selling, Letting, or Valuing any description of Property in Town or Country

From the central situations of the Establishments in their respective commanding localities every facility is rendered to Families honouring his House with their instructions, and offering the advantage of a double Register, usually replete with eligible properties

The general introduction of Plate Glass for Windows, Carriages, Conservatories, Internal Decorations &c., has induced H. L. C. to annex a Tariff of Sizes adapted to those uses, with Prices exceedingly moderate but of a Quality not to be excelled An outline of his general business also is added, comprising the Cabinet Upholstery, and Decorative Departments, in each of which the most careful attention is paid both to Quality and Cost.

HENRY L. COOPER,

Plate Glass and Furniture Warehouses,
93, BISHOPSGATE STREET WITHIN,
AND
WESTERN BRANCH 57, CONDUIT STREET
(NINE DOORS FROM REGENT STREET, LEFT HAND SIDE)

Among the variety of Articles above referred to, will be found LOOKING GLASSES of every denomination and size, varying from one foot to eighty feet and upwards PLATE-GLASS for Windows, Carriages, &c., which possess great advantages over crown, and when required for exportation, a considerable drawback of tax!

Annexed are the Prices of Current Sizes of Plate glass, for Sashes, &c.

40	1 17 6	2 5 0	2 9 11	2 15 0	3 2 6	3 10 0	3 16 5

Or any sizes containing from 3 feet to 8 feet, at 9s. per foot, thus a plate being 30 inches by 18 inches contains 3 feet 9 inches superficial measure, and costs 1l 13s. 9d., as per above tariff. All under 3 feet superficial at a reduction.

SECOND HAND LOOKING-GLASSES.

Several superb Glasses, varying in size 8 feet, 9 feet, 10 feet, and upwards in length, by 5 feet and 5 feet 6 inches in width, at a considerable reduction from the present tariff prices. Or lent on Hire by the month or season.

CARVING AND GILDING IN ALL ITS BRANCHES.

In this department will be found a very elegant and extensive variety of Chimney and Pier Glass Frames, Cornices for Windows, Ornamental Tables and Furniture and richly Ornamented Frames in various sizes for Portraits, Paintings, &c Paintings and Prints mounted, framed, and re-gilt.

PAPER HANGING AND INTERIOR DECORATIONS,

in all its Branches, from the most simple to the first Style of Elegance. A rich variety of new Patterns on show

IN THE UPHOLSTERY ARRANGEMENT

the greatest attention is paid to unite elegance with economy in character for the Drawing room, Boudoir Dining room Library, and Bed chamber, from the most quiet to the most costly style In the various articles of Chintzes, Moreens Damask &c., &c., a great variety of the most splendid and novel styles are constantly on view, of those qualities which can alone ensure permanent satisfaction the extreme disparity of prices in these articles, mainly arises from the inferiority of the fabric

CABINET, CHAIR, AND SOFA WORK

manufactured of the most seasoned materials In the finish of Chairs, Sofas, &c much depends on the quality of the materials used and the workmanship It may not be unworthy of remark, that a similar effect may be produced at a saving of nearly one half But which in the wear must eventually prove a serious disappointment to the purchaser This applies also to the manufacture of Cabinet Goods, which, from being made of unseasoned materials and unsound work (that cannot be detected by the casual observer) cannot be of that service and durability so essential H. L. C. begs to add that he manufactures them on his own premises and has always on hand a large stock of well-seasoned materials, which enables him to produce work at the lowest possible rate, and of a superior quality

STEAM AND SAILING VESSELS PROMPTLY FITTED UP.

Cabin Furniture and Passengers Requisites Solid and Portable Furniture, Bedding, Musquito Hangings &c for Foreign Climates Families going abroad will receive every information respecting the Articles best adapted for their particular destination Merchants, Captains and Dealers supplied with the utmost despatch on the most reasonable terms

CARPETING

of the fabric especially made for the first upholstery houses viz—Brussels, Kidderminster and Venetian, also a view of the much admired Velvet Pile Carpets, Hearth Rugs Druggets, Baize, Floor Cloths, &c

BEDDING, BLANKETS &c,

well seasoned real Dantzic Feathers, also equally prepared light downy Feathers for Foreign and Bed Beds, Elastic Spring Hair and Wool Mattresses, real Witney, fine Bath and York Blankets Marseilles Quilts and Counterpanes In the articles of Bedding, Blankets &c so essentially important to all, H. L. C. is determined that no trader shall supply them on better terms.

HOUSE AGENCY.

A Register is kept at both Establishments for the disposal or procuring of every description of Houses, Furnished or Unfurnished, Estates, &c. Properties surveyed, and Fixtures appraised

FUNERALS

furnished and conducted with the greatest propriety, and with every consistent regard to economy

Families in the Country may command the most approved Taste, by being waited on at Home with Patterns—and Designs made on the spot, calculated to harmonize with the plans, proportions, and decorations of the rooms; and their Orders delivered, and fixed on terms forming a very small addition to the first cost by the system adopted by this Concern.

With this short enumeration of the leading articles of his trade, and the very favourable terms on which he undertakes to supply them, Henry L. Cooper appeals to all classes for a continuation of that flattering preference hitherto afforded to his House, 93, BISHOPSGATE-STREET WITHIN; WESTERN BRANCH, 57, CONDUIT-STREET, nine doors from REGENT-STREET.

H. L. C. begs respectfully to solicit particular attention to the Address

N.B. Any Article will be exchanged should a fair objection arise, thus securing the public from imposition.

PARTICULARS
OF

Address to EDWARD BULL, Librarian, 19, Holles street.

COUNTY REFORM
This day is published, price 4d., for distribution,
THE MAGISTRACY of ENGLAND, its Abuses, and their Remedy in Popular Election.—By J. HINDE PALMER, Esq
Second Edition, with Additions.

Price Sixpence each,
THOUGHTS UPON THE ARISTOCRACY OF ENGLAND, Parts I. and II.—By ISAAC TOMKINS, Gent.
H. HOOPER, 13, Pall-mall East.

Second Edition, price 1s.,
LETTERS on the CORN LAWS, and on the Rights of the Working Classes, originally inserted in the "Morning Chronicle;" showing the injustice, and also the impolicy, of empowering those among a people, who have obtained the proprietary possession of the lands of a country, to increase, artificially, the money value of their exclusive estates, by means of arbitrary charges, made on the rest of the people, for the necessaries of life.—By H. B. T.
HENRY HOOPER, 13, Pall-mall East.

Second Edition, price 9s.,
THE HISTORY and PRINCIPLES of BANKING. By JAMES WILLIAM GILBART, General Manager of the London and Westminster Bank.

"Combining a clear appreciation of the science of Banking with the best practical knowledge of his business, we have seen no work on this subject which better deserves to be consulted and studied than Mr. Gilbart's volume."—Literary Gazette.

"He is fully master of the details, and ascends with equal ease to the examination of the elementary principles."—Atlas.

"This subject, which is generally considered abstruse and recondite, has been by the pen of Mr. Gilbart rendered so plain that the most ordinary capacity may easily comprehend it. The 'History and Principles of Banking' should be in the hands of every man who wishes to be acquainted with the manner in which the money transactions of this great country are carried on."—Waterford Chronicle.

"His work may be advantageously consulted for a practical knowledge of banking in all shapes, from the Bank of England down to loan banks, and the new law to facilitate the purchase of small annuities."—Spectator.

"We have been highly pleased with its agreeable and instructive character, and we think that no man connected with trade should be without this book."—Monthly Review.

"It is a clear well-written work, and must have been written by a person endowed with a liberal and an impartial mind."—Metropolitan Magazine.

"A more complete and accurate work, with less irrelevant matter, we never read."—Gentleman's Magazine.

Also, by the same Author, "A Practical Treatise on Banking." Third edition, price 8s.—"A valuable and useful little work."—M'Culloch's Smith's Wealth of Nations.

London:—LONGMAN and Co., 39, Paternoster-row.

SECOND EDITION of FRASER'S MAGAZINE for JANUARY is now ready. This Number has been reprinted to enable new Subscribers to commence the Volume which began with the year 1836. The cost is only half-a-crown monthly. 215, Regent-street, London.

THE NEW FLAT GOLD WATCHES.—The price in gold cases, with accurately-finished vertical movements, 7l. 7s. Ditto, with the well-finished horizontal movements, in double-bottomed engine-turned cases, jewelled in four holes, with silver dial, 9l. 9s.—T. COX SAVORY'S Working Silversmith and Jeweller, 47, Cornhill, London.

N.B. A variety of second-hand Silver Watches may be selected from, all at Two Guineas each, warranted.

HISTORY, CONSTITUTION, AND STATISTICS OF DENMARK.

THERE is scarcely another country in Europe which, for many years past, has been so little interesting in a political point of view as Denmark. Since the curtailment of the dominions of his Danish Majesty about twenty years ago, first by the separation of Norway, and soon after by the exchange with Prussia of Pomerania for Lauenburg, the name of the country has scarcely been mentioned in an English newspaper. The spirit of constitutional reform, however, which has sprung up since the termination of the war in so many other states, including some of the foremost as well as some of the most subordinate in the European confederacy, has at length awakened also in Denmark, the government of which has for nearly two centuries had the distinction of being theoretically the only perfectly absolute monarchy in Christendom. A short sketch, therefore, of the past history and existing condition of this kingdom, may be acceptable at the present moment. The historical and statistical details which we shall now present, will be followed in our next Number by an account of the recent changes which have been adopted in the constitution.

The peninsula of Jutland, which forms in point of extent the principal part of modern Denmark, was known to the Ancients by the name of the Cimbric Chersonese, that is, the peninsula of the Cimbri The Cimbri are famous in Roman history for their invasion of Italy about a century before the commencement of our era, after they had already repeatedly defeated the Roman armies in Gaul, on one occasion, it is said, with the slaughter of 80,000 soldiers, and about half that number of followers of the camp. They had even, in conjunction with their allies, the Teutoni, advanced nearly to the Po before their further progress was put a stop to by the great victory obtained over them by Marius. Who the Cimbri were, or whence they originally came, is a question that must be left almost to mere conjecture, although several probabilities may seem to support the common traditionary account, that they and all the other German tribes were of Asiatic descent. Tacitus mentions the Cimbri in his 'Germany,' as living adjacent to the ocean, and as of great renown for their former power, although reduced to a small state in his time. As for the name Jutland, which the district where the Cimbri dwelt afterwards obtained, it means the land of the *Jutes*, which appears to be only another form of the name *Getae*, or *Goths*. The Goths and other tribes seem to have eventually supplanted the Cimbri in these regions, or at least to have established a name there which left that of more ancient renown in the shade. Sweden, also, or at least a large part of that country, came to be called Gothland, and retains the name to this day.

Among the tribes whose residence he seems to place near the Elbe, Tacitus mentions the Angli. Enumerating them along with various neighbouring tribes, he describes the entire cluster as encompassed with the natural defences of rivers and forests, and as chiefly distinguished for their common worship of the goddess *Herthum*, or Mother Earth. The Angli, along with the Saxons and the Jutes, formed the combination of invaders who conquered South Britain in the fifth century, and from whom the English people of the present day are chiefly descended. It is from the Angles that England takes its name, and with some reason; since, although the Saxon kingdom of Wessex eventually obtained the ascendancy among the states of the Heptarchy, the portion of the country originally overrun and settled by the Angles was greatly more extensive than that taken possession of by the Saxons. All England to the north of the Thames, with the exception only of the county of Essex, was peopled in the Anglo-Saxon times by the Angles. Bede records, that the original seat of the Angles lay between the districts inhabited by the Jutes and the Saxons; and he adds, that it was in his time (the early part of the eighth century) still called *Angulus*, and that it was said to have remained waste or uninhabited ever since the time it had poured its entire population into Britain. "Seeing," says Camden, "between Juitland and Holsatia, the ancient seat of the Saxons, there is a small province of the kingdom of Denmark, under the city of *Flensburg*, called at this day *Angel*, which Lindebergius, in his Epistles, terms *Little* England, I am pretty well assured that I have found the ancient seat of our forefathers, and that from this very place the Angles came into our island." "The famous tract of land called *Angeln*," says Busching, "which is five Danish miles in length and four in breadth, (about twenty miles English by sixteen) lies between the gulf of *Flensburg* and that called the *Sley*. It includes the *Hardes* of *Huesby*, *Nie*, with a great part of that of *Uggel* in the prefecture of *Flensburg*; part of the territory of *Glucksburg*, the provostship of *Gettingen*, and the *Hardes* of *Sturdorf* and *Schluss*, in the prefecture of *Gottorf*." The following notice of the modern state of this district is given by Dr. Edward Clarke, who passed through Jutland in 1799 ('Travels, Part 3rd, 4to. London, 1819'):—"The part of the Duchy of Sleswick which a traveller must pass in his route from Flensburg to Apenrade is particularly interesting to Englishmen, because the very name of their country, the features of its inhabitants, and many of its manners were hence derived. It is called ANGELN; but this word is pronounced exactly as we pronounce *England*, or *Angelonde*. We were surprised at the number of English faces we met; and resemblance is not confined to features. Many articles of dress and many customs are common to the two countries. The method of cultivating and dividing the land is the same in both; the

 [Printed by WILLIAM CLOWES and SONS, Stamford Street.]

meadows bounded by quickset hedges, or by fences made of intertwisted boughs, reminded us of Kent, Surrey, and Sussex. The natural appearance of the country is also like the south of England, being diversified by numerous hills and valleys, adorned with flourishing woods and fertile fields." The Angli, however, it may be added, are believed to have been originally a colony of the Angrivarii, a nation who occupied modern Holstein and a part of Westphalia, and who were themselves a branch of the Saxons. They are also mentioned by Tacitus.

It is now generally agreed that the term Denmark is a compound of *Daim*, signifying *Low*, and *Mark*, signifying *Fields*—two words still in use in the dialect of Holstein. The name, therefore, means the low or flat country. The Danes begin first to be heard of, under that name, in the ninth century; but it does not appear to have been applied with much precision; the bands of pirates, from the whole of the north-east of Germany and Scandinavia, who then commenced making descents upon the coasts both of France and England, and who eventually effected extensive settlements in both, being indiscriminately called either Danes, or Lombards, (that is, men wearing long beards) or, generally, Normans—that is, men from the north.

The early part of the history of Denmark is exceedingly obscure, and one or two events make up all that it contains of much interest or importance in more recent times. The Danes remained Pagans till the tenth century; but their old chroniclers give the country a succession of kings from some time before the commencement of the Christian era; the first of these being Skiold, the son of Odin, from whom the succeeding kings took the name of Skioldungs. At the same time, it is very uncertain over what extent of territory these ancient sovereigns held sway; and, even, whether the royal dignity was hereditary or elective. It appears to have at last become the custom to elect to the vacant throne the son, or other near relation of the deceased king, who was thought fittest to succeed. Margaret, the daughter of Waldemar III., ascended the throne on the death of her father in 1375. This princess had been previously married to Haquin, King of Norway, and by him had a son, Olaf, or Olaus, who on the death of Haquin succeeded to that kingdom. Olaus, however, died in early youth in 1387; upon which the crown of Norway fell to his mother. Two years after, she also obtained that of Sweden, on Albert, the king of that country, being deposed by his subjects. The three kingdoms were afterwards formally united by the Act of the States assembled at Calmar, in Sweden, on the 17th of June, 1397. By this arrangement, it was agreed that the three kingdoms should choose the king in succession; that if the last king should have left only one son, he should be elected; if several sons, any one of them might be fixed upon; if only daughters, "the States," said the Act, "will follow in this respect what the law ordains" Finally, if the former king should have died childless, "then," it was declared, "the Senators and the States-deputies of the three kingdoms in concert, with the Divine assistance, shall elect him whom they believe before God to be the most worthy, as most capable of the Government." The king, it was moreover decreed, should govern according to the laws and customs of each kingdom.

Margaret, at her death in 1412, left her triple crown to Eric, Duke of Pomerania, a grandson of her sister. The union of Calmar, however, was at length dissolved in 1523, when the Swedes, having expelled Christian II., chose a king for themselves in the person of their countryman, the famous Gustavus Vasa.

For more than a century after this time, the royal authority in Denmark continued to be subject, as it had always been, to the control of the States of the kingdom, composed of the Nobles, the Clergy, and the Commons. But in 1660, in the reign of Frederick III., the clergy and the commons having united with the king against the nobles, who had come to exercise by far the greatest sway in the state, and had long irritated the other classes by their insolence and oppression, the old constitution was wholly abrogated, and in its place was established a monarchy, hereditary both in the male and female line, and invested with absolute power. From this time, down to the late change, the whole constitution of Denmark was contained in a *Lex Regia*, or royal law, which was drawn up and subscribed by Frederick III. on the 14th of November, 1665, and was first published by Frederick IV. on the 4th of September, 1709. It consists of forty articles, which are wholly occupied with the rules to be observed in the descent of the crown, and with an exposition of the unlimited character of the royal authority.

Norway remained united with Denmark till 1814, when, by the arrangements of the general peace, it was made over to Sweden, his Danish Majesty being obliged to accept of the very inadequate compensation of Swedish Pomerania in exchange for it. Swedish Pomerania was subsequently exchanged with Prussia for the duchy of Lauenburg and a sum of money.

In their present state, the dominions of the King of Denmark consist of Jutland, the duchy of Sleswick or South Jutland, the duchy of Holstein, the duchy of Lauenburg, the islands of Zealand, Funen, Langeland, Falster, Laaland, Bornholm, and others, in the Baltic, and on the west coast of Jutland, the island of Iceland, the Feroe Islands, West Greenland; the islands of St. Thomas, St. John, and St. Croix, in the West Indies; the settlements of Tranquebar and Serampore in the East Indies; and the forts of Christianborg, Fredericksborg, and a few others, on the west coast of Africa.

According to the last census, taken in 1827, the population of the Danish dominions in Europe was as follows:—

Denmark Proper, including Sleswick	1,521,270
Duchy of Holstein	374,740
Duchy of Lauenburg	35,640
Feroe Isles	5,500
Total	1,937,150
To which may be added—	
Iceland	49,820
Greenland	5,740
West India Islands	46,290
African Possessions	25,000
Tranquebar and Serampore	61,000
Total	2,125,000

According to the English translation of Malte Brun's Universal Geography (Vol. VIII, Edinburgh, 1833), from which we take these details of the population, the Danish army amounted, in 1825, to 60,000 men, and the navy consisted of four ships of the line, seven frigates, and eighteen vessels of inferior size. The same authority states the public revenue at 40,000,000 francs, and the debt at 270,000,000.

From a Report addressed to the King by the Copenhagen Society for Elementary Instruction, an extract from which was published in the 'Revue Encyclopedique' for April, 1828, it appears that the number of primary schools in the country at that time was not less than 4500. The instruction afforded by these schools comprehends not only reading and writing, and instruction in religion, but also history, geography, and natural history. Popular education may, probably, be considered to be in as advanced a state in Denmark as in any country of Europe.

The most ample details we have met with respecting the present condition of Danish commerce are those given in the Official Tables of the Board of Trade, as

abstracted from the communications of the British Consul at Elsineur (Folio, 1834, pp. 556—561). We shall subjoin a few particulars selected from these Tables.

The number of vessels, from all countries, which entered the port of Copenhagen in 1826 was 1266; in 1827, 1280; in 1828, 1227; in 1829, 1465; in 1830. 1608; and in 1831, 1505. Of the 1505 in 1831, 309 were from Sweden, 305 from Prussia, 208 from Norway, 160 from Great Britain, 137 from Russia, and 90 from Finland. From China and the East Indies only one ship annually appears to have arrived throughout the period over which the statement extends; and from Africa not one all the time. We gather, indeed, from another Table, that the entire tonnage employed in the colonial trade of Denmark in 1831, as estimated by the vessels that entered the port of Copenhagen, was only, with Iceland, 6052 tons; with the Feroe Islands, 678; with Greenland, 1002; and with the West Indies, 5772: in all 13,504 tons, divided among 81 vessels.

The total number of Danish vessels that departed for foreign parts from all the ports in the kingdom, in the year 1830, was 4044; of which the total tonnage was 225,344. The principal importations were coals, salt, piece goods, and colonial produce from Great Britain; piece goods, tobacco, and colonial produce from Hamburg and Bremen; linen, flax, wood, staves and timber from Prussia; iron, tar, deals, timber, fish, herrings, and train-oil from Sweden and Norway; hemp, flax, ashes, tallow, seeds, and timber from Russia; piece-goods and colonial produce from the Netherlands; and wine, salt, and piece-goods from France. The exports in 1831 consisted of grain, malt, meal, peas, and beans, to the value of 446,037*l.*; rape-seed to that of 157,430*l.*; butter to that of 268,076*l.*; cheese to that of 6131*l.*; brandy, salted and smoked beef and pork, skins, ox and horse hides, wool, horses and cattle, and herrings, to that of 324,598*l.*; Eider-down, feathers, swan quills, lub [tub?] fish, dried fish, sheep and lamb skins, reindeer hides, seal skins, train oil, whale oil, tallow, woollen stockings, gloves, jackets, and Iceland wool to that of 50,648*l.*; and sugar and rum to that of 43,091*l.* Total value of the exports, 1,295,011*l.*

The declared value of British and Irish produce and manufactures exported from this country to Denmark in the year 1827, was 104,916*l.*; in 1828, 111,880*l.*; in 1829, 95,247; in 1830, 118,813; in 1831, 92,294*l.*; in 1832, 93,396*l.*; and in 1833, 99,951*l.* For the sake of comparison, we may mention that the declared value of British and Irish produce, exported in 1832, to the United States of America, was 5,468,272*l.*; to Germany, 5,068,997*l.*; to the Netherlands, 2,789,398*l.*; to Italy, 2,361,772*l.*; to Turkey, 915,319*l.*; to France, 674,791*l.*; to Portugal, 540,792*l.*; to Spain, 442,926*l.*; and to Russia, 1,587,250*l.* With the exception of Sweden and Norway, there is no country in the world to which the United Kingdom sends so small a quantity of its produce and manufactures as to Denmark. In 1832, the declared value of our exports of domestic produce to Sweden was 64,932*l.*, and to Norway, 34,528*l.*

The articles of British and Irish produce which were exported in most considerable quantities to Denmark, in 1832, were the following:—coals, culm, and cinders, 62,786 tons, of the declared value of 17,753*l.*; cotton manufactures, 295,658 yards, value 5702*l.* (the smallest quantity imported to any country in the world, with the exception of Sweden and Norway); cotton twist and yarn, 71,680 lbs., value 2320*l.*; earthenware, 592,924 pieces, value 4920*l.*; glass, 1008 cwts., value 4490*l.*; hardware and cutlery, 765 cwts., value 3988*l.*; iron and steel, wrought and unwrought, 1850 tons, value 14,664*l.*; and salt, 1,003,776 bushels, value 12,784*l.*

The following is an account of the quantities of all the foreign and colonial merchandize exported from the United Kingdom to Denmark in 1832:—cassia lignea, 22,668 lbs.; cochineal, 2029 lbs.; cocoa, 13,145 lbs.; coffee, 106,493 lbs.; ginger, 61 cwts.; shellac (gum), 2930 lbs.; indigo, 17,248 lbs.; mace, 374 lbs.; nutmegs, 710 lbs.; pepper, 5144 lbs.; pimento, 12,022 lbs.; rice, 313 cwts.; saltpetre unrefined, 869 cwts.; rum, 64,422 gallons; brandy, 1671 gallons; Geneva, 62 gallons; sugar unrefined, 7524 cwts.; tin, 13 cwts.; tobacco unmanufactured, 94,929 lbs.; wines of all sorts (principally Portugal and Spanish), 5141 gallons; and raw cotton, 45,881 lbs.

The quantities of the different articles imported from Denmark into the United Kingdom, in 1832, as compared with the quantities imported from all parts of the world, were as follows:—

Articles.	Imported from Denmark.		Total Imports.
Barks for tanning or dyeing	8,000 cwts.	out of	774,417
Butter	8,012 cwts.	„	130,925
Wheat	33,548 qrs.	„	391,646
Barley	54,859 qrs.	„	95,839
Oats	7,992 qrs.	„	28,858
Peas and Beans	7,044 qrs.	„	41,625
Flax and Tow	23 cwts.	„	982,516
Bear Furs	6 furs	„	21,565
Hides, untanned	7,256 cwts.	„	186,680
Pig Lead	29 tons	„	1,090
Clover Seed	1,271 cwts.	„	64,601
Flaxseed and Linseed	252 bushels	„	1,995,072
Rape Seed	415,729 bushels	„	582,145
Tare Seed	28,107 bushels	„	68,274
Skins, Calf and Kip, untanned	323 cwts.	„	50,042
—— Goat, untanned	513 skins	„	246,028
—— Kid, undressed.	17 skins	„	91,442
—— Seal, undressed.	10 skins	„	280,673
Brandy	6 gallons	„	2,671,828
Geneva	10 gallons	„	270,580
Tallow	1,947 cwts.	„	1,177,814
Tar	401 lasts	„	9,899
Timber, battens, and batten ends	6 gt. hds.	„	11,118
—— Deals, and deal ends	1 qr.	„ gt. hds.	51,263
—— Fir, Oak, and unenumerated 8 inch square, and upwards	346 loads	„	567,428
Bees' Wax	9 cwts.	„	4,349
Wool	302,818 lbs.	„	28,128,973
Wine	35 gallons	„	6,018,480
Linen Yarn, raw	268 cwts.	„	13,593

There was also imported about 20*l.* of linen cloth out of 447,049 lbs., 36,519 pieces, 48,781 square yards, and 10,737*l.* worth entered at value.

These statements sufficiently show the insignificance of our commercial intercourse with Denmark. From the last table it appears that there is not one article of which we receive the bulk of our imports from that country, with the single exception of rape seed; and even for that we are not dependent upon Denmark; the cultivation of rape being now carried on to a considerable extent in England. The only other articles of which Denmark sends us any considerable portion of the whole quantities that we obtain from abroad, are tare seed, wheat, and barley; but of all these our entire importations are quite unimportant.

Altogether the manufactures and commerce of Denmark are in a very backward and stationary condition, nor have the natural advantages of the country, which consist, however, not so much in its productive powers, as in its favourable position and its extent of sea-coast, been turned to anything like the account they might have been in the creation of national wealth. For a very long period the Danish Government has pursued the mistaken policy of endeavouring to call forth and stimu-

late the national industry by means of a forcing system, and seeking to plant and rear up particular arts and manufactures, not with any regard to their adaptation to the nature and resources of the country, but by fighting against nature with all sorts of restrictions and prohibitions. King Frederick IV., and his son and successor Christian VI., styled the Solomon of the North, whose reigns occupied the first forty-six years of the eighteenth century, have the credit of being the fathers of this system. "In the last century," says Busching, writing nearly a hundred years ago, "there were scarce any manufactures carried on in Denmark; for they were first introduced by Frederick IV. and Christian VI., and may possibly, in time, be farther improved. Here are artists of extraordinary skill at Copenhagen; and at present every branch of the mechanic arts is well executed in Denmark. Gold and silver lace, silk stuffs, and velvets, cloths, cotton and woollen stuffs, stockings, tapestry, hats, bastard and genuine porcelain, and fire-arms, are also manufactured in this kingdom. Here are, besides, paper and copper-mills, different sorts of iron wares made, one silk and two cotton printing-houses, with manufactories of soap, steel, starch, glue, lacker, tobacco, sugar, &c. The lace of Tondern and the gloves of Randers and Odensee are well known to be excellent in their kind. No foreign manufactures are allowed to be imported into Denmark; and, since the year 1736, the wearing of jewels, gold and silver stuffs, and foreign lace, has been prohibited. In 1738 a general warehouse, or magazine, was opened at the Exchange in Copenhagen, to which manufacturers bring all the wares which they cannot dispose of in other towns, and are paid ready money for them; and from this warehouse the goods are delivered out on credit to retailers."

Whatever expectations may have been entertained in Busching's time of the benefits likely to arise from this system, its mischievous effects were not long in becoming evident to intelligent and impartial observers. For instance, in a volume entitled "Observations on the present State of Denmark, Russia, and Switzerland," published in London in 1781, and the letters composing which are dated 1777, the writer, after describing the wretched state, both of the manufactures and agriculture of the country, and the slow progress they had made, notwithstanding the many laws and regulations that had been enacted during the late reigns for their encouragement, proceeds to remark—"But amidst all their systems of policy, the absolute prohibition of foreign manufactures seems to be a totally mistaken one; it has forced the industry of the country into channels it is unfit to pursue, and various articles, from different countries, only come loaded with the additional expense of smuggling. I need only instance their manufacture of superfine cloth, and that of silk. Owing to the necessity they are under of purchasing all the materials from foreign parts, and high wages paid to foreigners for their superintendence, the goods cannot be sold in the country under 50 per cent. dearer than the same manufactured goods from other nations, charged even with the risk of smuggling. The effect is the same with regard to articles of watchmaking, Birmingham goods, paper, leather, &c."

In recent times, however, the prohibitory system appears to have been occasionally relaxed, and again resorted to. According to the English edition of "Malte Brun's Geography," published at Edinburgh in 1831, there were, in 1826, in Copenhagen, 240 distilleries, 50 brewhouses, 30 manufactories of tobacco, 20 of woollen cloth, 15 of cotton goods, 18 of hats, 24 of gloves, 30 of linen, 29 tan works, and other establishments of a similar kind, employing in all more than 11,000 workmen. Since then, however, it is stated a system of new restrictions and prohibitions has laid prostrate all this activity and prosperity. The manufacture of brandy, in particular, and the commerce with India, both of which had been in a flourishing condition, are represented as having greatly fallen off. It is added that there is no longer almost any foreign trade—that all business has been concentrated at the free port of Altona—and that, at Copenhagen, houses have come down to so low a value that the proprietors are forced to sell them from inability to pay the taxes.

Under the present law, as stated by Mr. M'Culloch ("Dictionary of Commerce," second edition, article *Copenhagen*), foreign woollens and cottons "are not absolutely prohibited, but are admitted on condition of their being stamped, and put up to auction by the Custom House, which, after retaining 30 per cent. of the gross produce of the sale, pays over the residue to the importer, who is generally the purchaser. This oppressive regulation reduces the legitimate importation of these articles to next to nothing; but the illicit importation is very considerable, principally by the Elbe and the Holstein frontier." Mr. M'Culloch afterwards observes—"All, or nearly all, the branches of industry carried on in the kingdom are subjected to the government of guilds or corporations; no person can engage in any line of business until he has been authorized by its peculiar guild; and as the sanction of this body is rarely obtained without a considerable sacrifice, the real effect of the system is to fetter competition and improvement, and to perpetuate monopoly and routine. . . . . It would be idle to imagine that a country which has to import coal, should, however favourably situated in other respects, be able to manufacture cottons, woollens, &c., at so cheap a rate as they may be imported from others enjoying greater natural facilities for their production. But when, to the physical obstacles in the way of manufactures, we add others, not less formidable, of a political nature, the attempt to force them into existence by dint of Customs' duties and regulations, becomes absolutely ludicrous. The port charges and transit duties are also exceedingly heavy; and the Sound duties, being charged on native as well as foreign ships, operate as an inland duty on the trade between different parts of the country. We are glad, however, to be able to state that the more intelligent portion of the Danish people are quite aware of the mistaken policy on which they are now proceeding; and there is reason to believe that it will, at no distant period, be rendered more in accordance with the spirit of the age, and more conducive to the improvement of the people. In 1832 a petition, signed by almost all the merchants of Copenhagen, was addressed to the King, containing an able and distinct exposition of the circumstances which depress Danish commerce. The petitioners pray for the emancipation of commercial pursuits from all the restrictions laid upon them by guilds and corporations; or, in other words, for the freedom of industry, for a revision and reduction of the transit duties, and a change in the mode of charging the Sound duties; for a reduction of the tonnage duties, and a remission of the charge on account of light-money on ships arriving at Copenhagen that have already paid for the lights at Elsineur: they further pray for the abolition of the East India Company's monopoly, and the freedom of trade to the East Indies and China; and for a reduction of the duties on several articles of domestic produce when exported, and of foreign produce when imported. What is here asked is so reasonable, and, if granted, would add so much to the real prosperity of the country, that we trust the government will earn for itself a new title to the public esteem, by honestly endeavouring to meet the wishes of the petitioners."

The treaties of alliance and commerce between Denmark and England, in old times, were very nume-

rous; and, from the middle of the fifteenth century, many of them are still on record. One which was agreed upon in 1490, between our Henry VII. and John, King of Denmark, is remarkable on account of the provisions it contains for the security of the possessions and property of Englishmen residing in Denmark, while no allusion is made to the circumstance of any Danes being resident in England. The fifth article declares that the English may freely possess and enjoy all their lands, places, and tenements, at Bergen, in Norway; at Lunden and Landskroon, in Schonen; and in the Isle of Zealand; also in Loysa, in Sweden, and other parts of the Danish King's territories; and that they may freely repair the same, and alienate them at pleasure. The sixth article is as follows:—"The English residing at Bergen, and other parts of the Danish monarchy, shall be at full liberty, according to custom, to erect themselves into societies, and elect governors or aldermen amongst themselves, for governing all the English there, and for determining all controversies amongst themselves. And if any Englishman there shall refuse to submit to the determinations of those governors, or aldermen, he shall forfeit all the English privileges there." Other articles provide for the nearest of kin, or in his absence the aldermen, administering to the effects of Englishmen dying intestate in Denmark, and for English merchants bringing packs of woollen cloth, or other merchandise, into the Danish territories, having liberty freely to unpack, sell, and exchange their goods at pleasure, without the presence of a Danish officer. "And the said merchants," it is added, "may, in the Ports of Copenhagen, Malmoe, and Landskroom, appoint their agent and factors for their benefit when absent, who may sell their cloth either in entire pieces, or by retail. The ninth article provides that the English residing or being in Denmark, shall not be arrested nor sued for any debt for which they are neither principals nor bail, nor for any transgression done by others; and that even in cases where they are principals, neither their persons nor goods shall be arrested or detained, provided they give security to stand to justice. Finally, it is declared that this present Treaty is not to derogate from any of the privileges and immunities granted by former Treaties to the English in the Danish territories.

Another of these Treaties is curious for the terms in which it adverts to a claim on the part of the King of Denmark, which is generally supposed to have been long before abandoned; for few people, probably, are aware that there was any doubt about Orkney and Shetland belonging to Great Britain in the year 1639. Yet, in a Treaty of Peace and commerce between Charles I. and his Danish Majesty, Christian IV., concluded in that year by Sir Thomas Rowe, at Gluckstad, the nineteenth article runs as follows:—And because the Isles of Orkney and of Shetland cannot well be omitted to be mentioned in this Treaty, it is now agreed that, during the lives of both Kings, and the life of the longest liver of them, nothing shall be moved or treated of concerning them: saving always, nevertheless, the rights or pretensions of their Majesties' successors." We are not aware that the quiescence to which the matter was thus solemnly consigned was ever broken, or that this strange claim has been hinted at on any more recent occasion. The Orkney and Shetland Isles, which were in the actual and uninterrupted possession of Scotland, from the date of the battle of Largs, in 1263, in the reign of Alexander III., are commonly stated to have been expressly made over to Alexander by Magnus IV., King of Norway in 1266, for a perpetual annuity of 100 marks. This annuity (which appears never to have been paid) was, with all arrears, resigned by Eric X. to James I., of Scotland, in 1426, and again, in more express terms, in 1468, in the contract of marriage between James III. and Margaret, only daughter of Christian I., King of Norway, Denmark, and Sweden.

THE FUNDS.

(*Continued from No.* 39.)

The fundholder, or the national creditor, as he is sometimes called, is differently placed from an ordinary creditor in this respect—that he has given up the right of ever demanding the repayment of his money from his debtor. In fact, he has, properly speaking, not lent his money, but invested it—he has purchased with it a perpetual (in some cases, indeed, only a terminable) annuity, which annuity, moreover, is subject to the peculiar condition that it may be redeemed on certain terms specified at the time of granting it, whenever the party it has been originally purchased from shall think fit.

The person, however, who has thus advanced his money to the State may sell to another person what he has purchased from the State—namely, his perpetual or terminable annuity; and this he might do at any time, even were there no particular arrangements made by the State to facilitate such transactions. The State, however, will, it is obvious, find its own operations in raising money in the way of loan, by providing some simple, easy, and unexpensive method of recording and legalizing transfers of stock. The annuity is made more valuable, or, in other words, will obtain a larger sum for the State, by its being made thus readily negotiable. Accordingly, the arrangements established for the general management of the national debt comprehend both the regular payment of the dividends, and the maintenance of an apparatus by which sales and purchases of stock may be always effected with the utmost possible expedition and security.

The management of the national debt is partly conducted at the Bank of England, and partly at the South Sea House, which last establishment is now kept up solely for that purpose. For this service the Bank of England has, since 1808, been paid at the rate of 340*l.* a million on 600,000,000*l.* of the debt, and of 300*l.* a million on the remainder; but by the late charter, granted in 1833, it was enacted that 120,000*l.* per annum should in future be deducted from the amount of these allowances. The entire cost of managing the national debt for the year 1833 was 271,352*l.* 14*s.* 10½*d.*; at present, therefore, it is about 150,000*l.*

We shall now give a list of the different funds, or descriptions of stock, at present existing, with the amount of each on the 5th of January, 1834:—

1. *South Sea Stock*, divided into the Company's Stock, or trading capital, amounting to 3,662,784*l.* 8*s.* 6½*d.*; Old South Sea Annuities, 3,497,870*l.* 2*s.* 7*d.*; New South Sea Annuities, 2,460,830*l.* 2*s.* 10*d.*; and South Sea Annuities of 1751, 523,100*l.* These different descriptions of stock have all been created out of the capital of the famous South Sea Company, by successive Parliamentary arrangements, which it is unnecessary for our present purpose to detail. It is sufficient to state that the interest paid by the State upon the whole amount of this stock is now 3 per cent., although the dividends received by the proprietors of the 3,662,784*l.* 8*s.* 6½*d.* of Company's trading stock is 3½ per cent. The additional half per cent. is obtained from certain fines to which the Company are entitled from ships trading within the bounds of their charter, and from the allowances made by Government for the management of this portion of the public debt.

2. *Debt due to the Bank of England*, amounting to

14,686,800*l.* This is money which has been advanced at different times by the Bank to the public; the Bank receives interest on it at the rate of 3 per cent.

3. *Bank Annuities, created in* 1726, amounting to 849,144*l.* This stock was originally 1,000,000*l.*, which was raised in 1726, by lottery, to pay off arrears that had accumulated on the Civil List, and for which Exchequer bills had been previously issued: it bears interest at 3 per cent.

4. *Consolidated Annuities*, commonly called *Three per Cent. Consols.* This is by far the largest of the public funds, its amount, in January 1834 having been 347,389,429*l.* 3*s.* 0¼*d.* It was originally formed by the union of several funds which had before been kept separate, in the year 1751. At this its commencement it amounted only to a little above 9,000,000*l.* The interest paid upon this stock, as its name imports, is also 3 per cent.

5. *Three per Cent. Reduced Annuities*, amounting to 123,664,029*l.* 3*s.* 6*d.*. This stock consists of various sums which have been originally borrowed at a higher rate of interest, but on which the interest has been afterwards reduced at different times to 3 per cent., which it now is. The first of these reductions as made by an Act of Parliament passed in 1749, and the several funds so reduced were consolidated into one capital in 1757, at which time they amounted altogether only to 17,571,574*l.*

These are all the funds (exclusive of the Irish stock, to be afterwards noticed) which at present bear an interest of only 3 per cent., the lowest that is paid upon any portion of the public debt. Their total amount on the 5th of January 1834 was 496,733,987*l.* 0*s.* 5¾*d.*

6. *Annuities at* 3½ *per Cent.*, 1818, amounting to 12,218,850*l.* 12*s.* 1*d.* This stock was formed in 1818, partly by the funding of a quantity of Exchequer bills, and partly by the conversion of certain 3 per cent. consolidated and 3 per cent. reduced annuities; the holders purchasing the additional half per cent. by a money subscription, which was paid over in aid of the Sinking Fund. To this extent, in point of fact, the transaction amounted to the raising of a new loan.

7. *Reduced* 3½ *per Cent. Annuities*, amounting to 62,851,418*l.* 1*s.* 4*d.* This stock was formed in 1821, by the conversion of a former stock called the Old Four per Cents.

8. *New* 3½ *per Cent. Annuities*, amounting to 137,488,501*l.* 10*s.* 3*d.* This stock was formed in 1830 out of the former stock called the New Four per Cents. —(See "Companion," No 39, p 36, col. 2).

These three are the only British funds at present bearing an interest of 3½ per cent.

9. *Four per Cent. Annuities, created* 1826, amounting to 10,708,961*l.* This stock was formed by the funding of Exchequer bills in 1826 and 1829. It is the only British stock at present bearing an interest of 4 per cent.

10. *New* 5 *per Cent. Annuities*, amounting to 462,736*l.* 13*s.* 4*d.* This stock was formed in 1830, by the same arrangement out of which the New 3½ per Cent. Annuities then arose.—(See "Companion," No. 39, as above referred to).

The following are the descriptions of Irish Stock at present existing, with the amount of each on the 5th of January, 1834:—

1. Bearing interest at 3 per cent.:—*The Irish Consolidated* 3 *per Cent. Annuities*, amounting to 2,847,917*l.* 10*s.* 7*d.*; and the *Irish* 3 *per Cent. Reduced Annuities*, amounting to 149,255*l.* 0*s.* 2*d.*

2. Bearing interest at 3½ per cent.:—*The* 3½ *per Cent. Debentures and Stock*, amounting to 14,407,957*l.* a system; the *Reduced* 3½ *per Cent. Annuities*, amounting to 1,173,346*l.* 0*s.* 8*d.*; and the *New* 3½ *per Cent. Annuities*, amounting to 11,558,389*l.* 2*s.* 6*d.*

3. The only 4 per Cent. Irish stock is *The* 4 *per Cent. Debt due to the Bank of Ireland*, amounting to 1,615,384*l.* 12*s.* 4*d.*

4. Bearing interest at 5 per cent:—the *New* 5 *per Cent. Annuities*, amounting to 6661*l.* 1*s.* 0*d.*; and the 5 *per cent. Debt due to the Bank of Ireland*, amounting to 1,015,384*l.* 12*s.* 4*d.*

The total amount of the Irish debt on the 5th of January, 1834, was 32,774,295*l.* 12*s.* 8*d.*

Besides these several stocks, there are the different descriptions of terminable annuities, all of which are also matter of purchase and sale in the money market. These, with the charges upon each for the year 1833, are—

1. *The Long Annuities*, occasioning an annual charge of 1,192,666*l.* 4*s.* 0*d.* These have been granted, at different times, chiefly as premiums or douceurs to the subscribers to loans, and all expire on the 5th of January, 1860.

2. *The Annuities per* 4 *Geo. IV. ch.* 22, commonly called *The Dead Weight Annuity.* This is an annuity of 585,740*l.* paid every year by the public to the Bank of England, and to be so paid till the year 1867, in consideration of advances to the amount of 13,089,419*l.* made by that establishment between the years 1823 and 1828, both inclusive, for the payment of the pensions to naval and military officers which had become due at the close of the war in 1814. By this arrangement a portion of the burden of these pensions—which, in 1814, amounted to nearly 5,000,000*l.* per annum—is spread out over a considerably longer period than that to which it would otherwise naturally have been confined, and its pressure upon the more limited space lightened accordingly.

3. *Life Annuities per* 10 *Geo. IV., ch.* 24, occasioning a charge of 790,125*l.* 13*s.* These are annuities upon the lives of individuals, which the Commissioners for the redemption of the National Debt were originally empowered to grant by an Act passed in 1808, in exchange for so much stock in interminable annuities as was calculated to be of equivalent value, according to a scale varying with the fluctuations in the prices of stocks. In 1829, however, Mr. Finlaison, the Government actuary, discovered that the tables which had been all along used in these calculations were so erroneous, at the present improved value of human life, as actually to be occasioning an annual loss to the public of not much under 100,000*l.* On this the Act of 1808, and other Acts which had been subsequently passed on the same principle, were immediately repealed, and the Act upon which the annuities are now granted substituted for them.

4. *Annuities for terms of years, under the same Act*, of which the present charge is 960,012*l.* 12*s.* These annuities are granted for various terms of ten years and upwards.

5. There are certain Tontines, and other Life Annuities granted by various Acts, of which those forming part of the English debt occasioned, in 1833, a charge of 22,043*l.* 7*s.* 3¾*d.*, and those forming part of the Irish debt, a charge of 34,230*l.* 8*s.* 7*d.*

To this list we may add the two following descriptions of stock, as, although not forming portions of the public debt, being yet funds or capitals which are constantly operated upon by the sale and purchase of shares, in the transactions of the money market:—

1. *Bank Stock*, being the trading capital of the Bank of England, or that upon which interest is paid to the proprietors, amounting formerly to 14,553,000*l.*, but since the last renewal of the charter, in 1833, to only 10,914,250*l.* The interest paid upon this capital to the

shareholders was for some time—namely, from 1807 to 1823—as high as 10 per cent., and it is still 8 per cent. Extra distributions of profits have also been occasionally made.

2. *East India Stock*, or the capital belonging to the East India Company, amounting to 6,000,000*l.* Ever since 1793 the interest upon this stock has been 10½ per cent.

Besides these English funds, shares in many descriptions of foreign stocks, which have been created by loans raised in this country, are constantly for sale in the money-market, as are also shares in railway, canal, mining, and numerous other similar speculations. But to these it does not belong to our present purpose more particularly to advert.

The several establishments at which the different parts of the national debt are managed are the Bank of England, the South Sea House, the Bank of Ireland, and the National Debt Office in the Old Jewry. At the Bank of Ireland are paid all the dividends on Irish stock; and at the National Debt Office are paid the life annuities granted under 10th Geo. IV., and also the English and Irish tontines and other life annuities granted under various Acts; the dividends on the different descriptions of South Sea Stock at the South Sea House; and those on all the remaining descriptions of public stock at the Bank of England. The dividends on India stock are paid at the India House.

The dividends on all descriptions of stock are paid half yearly, either on the 5th of January and the 5th of July, or on the 5th of April and the 10th of October.

For each description of stock also are appointed certain days of the week, on which only transfers may be recorded in the books kept at the different establishments where the dividends are paid.

The following is a list of the Stocks managed at the Bank of England, the South Sea House, and the India House, with the transfer days for each; and also the days on which the dividends are used:—

BANK OF ENGLAND.

Name of Stock	Dividends Payable.	Transfer Days.
3 per Cent. Consols	5th Jan. & 5th July	Tues. Wed. Thurs. Frid.
New 3½ per Cents.	,,	Tues. Wed. Thurs. Frid.
New 5 per Cents.	,,	Tues Wed. Frid.
Bank Annuities, 1726	,,	Tues. Thurs.
Bank Stock	5th April & 10th Oct.	Tues. Thurs. Frid.
3 per Cents. Reduced	,,	Tues Wed. Thurs. Frid.
3½ per Cents. 1818	,,	Tues. Thurs. Frid.
3½ per Cents. Reduced	,,	Tues, Wed. Thurs. Frid.
4 per Cent. 1826	,,	Mon. Wed. Frid.
Long Annuities	,,	Mon. Wed. Sat.

SOUTH SEA HOUSE.

South Sea Company's Stock	5th Jan. & 5th July	Mon. Wed. Frid.
New South Sea Annuities	,,	Tues. Thurs. Sat.
South Sea Annuities, 1751	,,	Tues. Thurs.
Old South Sea Annuities	5th April & 10th Oct.	Mon. Wed. Frid.

EAST INDIA HOUSE.

India Stock	5th Jan. & 5th July	Mon. Tues. Sat.

Generally speaking, the price of a certain nominal amount of stock in any particular fund will bear to its price in any other fund the same relation which subsists between the rates of interest in the two funds. For example, if 100*l.* in a 3 per cent. stock cost 90*l.*, the same amount will cost 105*l.* in a 3½ per cent. stock, and 120*l.* in a 4 per cent. stock; for each of these investments will yield the same interest—namely 3*l.* 6*s.* 8*d.* per cent. The price of any one description of stock, therefore, may be usually taken as a pretty sufficient indication of the prices of the rest.

There are peculiar circumstances, however, which sometimes do elevate or depress the market prices of certain kinds of stock beyond the degree to which they ought to be affected merely by the unequal rates of interest. Thus, a stock, the interest of which is likely to be reduced, either immediately, or sooner than the same operation will probably be attempted on any other stock, will not generally bear the same price in the market with another stock as to which such an apprehension is not entertained. Hence, stock of a high denomination may usually be bought cheaper than that of which the nominal interest is lower. Again, stock in which, either from its small amount, or some other cause, there is comparatively but little speculation, will not in general sell at so high a price as that in which more frequent fluctuations offer a greater lure to the gambling propensity. Thus the stock called the Three per Cent. Bank Annuities of 1726, the entire amount of which is considerably under 1,000,000*l.*, has usually been at least 1 per cent. lower in price than the Three per Cent. Consols. In other cases, however, it is extremely difficult to assign any cause, beyond the mere caprice of the public mind, for the preference given to one species of stock over another.

As for the causes which affect the price of stocks generally, the leading and most permanently influential must, of course, always be the current rate of interest, which again is determined by the common rate of profits; if, indeed, we should not rather say, that the rate of profit, wherever it arises from the employment of capital, is dependent upon the rate of interest, and that upon the proportion between the supply of capital and the demand for it, the action of the great principle of supply and demand thus regulating the price of money as it regulates all other prices. In ordinary times, the public funds, from the certainty and regularity in the payment of the dividends, and the great facility with which transfers may be made, offer as advantageous an investment as any other which is open to capitalists; and the price of stocks, accordingly, will commonly be so high as not to afford the purchaser more than the current rate of interest for money lent upon good security. The chances of fluctuation, however, will, in general, prevent the price from rising much beyond this point. On the other hand, it will be apt to be depressed to a lower level, not only by any actual derangement in the public finances, but also by whatever may be supposed to have ever so indirect or remote a tendency to affect the ability of the State to fulfil its pecuniary engagements. Whenever a new loan is raised, inasmuch as the burden of the debt is thereby increased, the price of stock is generally lowered for the moment. Again, it is usually lower in time of war than in time of peace; and during an unfortunate than during a successful war. It is often affected by the apparent stability of the administration as dependent upon the issue of the party contests in Parliament. Sometimes the price of the funds has been brought down by the imposition of a tax, sometimes by the repeal of one. In the former case, the delicate and apprehensive pulse of the money-market may be supposed to have been acted upon, commonly, either by a dread of the public impatience under a new burden, or by the view taken of the measure as an indication of increased financial difficulties on the part of the State; in the latter, by a feeling of the security of the fundholder being in some degree diminished, in consequence of the extinction of one of the usual sources from which the dividends, together with the other expenses of the Government, have been paid. But it would be scarcely possible to arrange, under any number of general heads, all "the skyey influences" that are capable of elevating or depressing this most sensitive barometer, the nature of which is to be agitated by

every breeze of popular exhilaration or nervous despondency, by every fit of suspicion or confidence, by every hope and fear, almost by every passion, imagination, and caprice of the human breast. It may be observed, however, that in the fluctuations of the funds, a fall of prices by what we may call a start or a leap, has been a much more frequent phenomenon than an equally sudden rise to any considerable extent. The depression which is at once produced by a panic is generally recovered from only by degrees.

Mr. M'Culloch ("Dictionary of Commerce," 2nd Edit., p. 589) has given the following summary of the history of the fluctuations of the stock forming the principal part of the public debt:—"From 1730, till the rebellion of 1745, the Three per Cents. were never under 89, and were once, in June, 1737, as high as 107. During the rebellion they sunk to 76; but in 1749, rose again to 100. In the interval between the peace of Paris, in 1763, and the breaking out of the American war, they averaged from 80 to 90; but, towards the close of the war they sunk to 54. In 1792, they were, at one time, as high as 96. In 1797, the prospects of the country, owing to the successes of the French, the mutiny in the fleet, and other adverse circumstances, were by no means favourable; and, in consequence, the price of Three per Cents. sunk, on the 20th of September, on the intelligence transpiring of an attempt to negotiate with the French Republic having failed, to 47⅜, being the lowest price to which they have ever fallen."

Dr. Hamilton quotes the following statement as that which has been given of the highest and lowest prices of the stocks since 1720:—

HIGHEST PRICES.

Three per Cents.	June,	1739	£107
Four per Cents.	August,	1791	107½
Five per Cents.	August,	1791	122¼
Bank Stock	February,	1792	219
South Sea Stock	May,	1768	111
India Stock	December,	1768	276¼

LOWEST PRICES.

Three per Cent. Consols	January,	1798	47⅜
Three per Cent. Reduced	June,	1797	47
Four per Cents.	January,	1798	59⅛
Five per Cent. Navy	January,	1798	69⅜
Bank Stock	January,	1782	91
South Sea Stock	February,	1782	62
India Stock	January,	1784	118½

The following is an account of the average prices of the Three per Cent. Consols in the months of February and August of each year since 1820, inclusive:—

1820.	February	68¼	1828.	August	87½
	August	67⅜	1829.	February	86⅜
1821.	February	73⅛		August	88½
	August	76⅛	1830.	February	91⅛
1822.	February	78⅜		August	90¼
	August	80	1831.	February	77⅜
1823.	February	73		August	81⅛
	August	82¾	1832.	February	82½
1824.	February	92⅛		August	83⅞
	August	93⅜	1833.	February	87½
1825.	February	93¾		August	88⅛
	August	87⅛	1834.	February	89⅞
1826.	February	77⅛		August	90
	August	79¼	1835.	February	91¾
1827.	February	82½		August	90
	August	86½	1836.	February	91⅛
1828.	February	83⅞			

The number of individuals directly interested in the public funds as proprietors of stock is very considerable, as the following statement, which was laid before the House of Commons in the Session of 1833, will shew. It is entitled "An Account of the total number of persons to whom a half-year's dividend was due at the last half-yearly payment thereof on each description of public stock, and on each description of terminable annuities; distinguishing the numbers respectively of those whose dividends for the half year did not exceed 5*l*., 10*l*., 50*l*., 100*l*., 200*l*., 300*l*., 500*l*., 1000*l*., 2000*l*., 3000*l*., 4000*l*., 5000*l*., and the number of those whose dividends exceed 5000*l*.; distinguishing also in those above 1000*l*., the dividends due to any public Company, or to more than a single name."

NUMBER OF PERSONS TO WHOM DIVIDENDS WERE PAYABLE.

Not exceeding	£5.	£10.	£50	£100	£200	£300	£500.	£1000	£2000	Co. and Joint Accounts £2000.	£3000.	Co. and Joint Accounts £3000.	£4000.	Co. and Joint Accounts £4000.	£5000 and upwards.	TOTAL.
Dividends Payable 10th of October.																
On 5 per Cent. Reduced Annuities	10,347	4,745	11,681	3,473	2,175	742	453	231	53	24	9	5	5	3	12	33,958
On 3½ per Cent. Reduced Annuities	7,019	4,362	10,173	2,909	1,561	411	251	112	15	21	5	4	nil	1	5	26,849
On 3½ per Cent. Annuities, 1818	198	162	399	211	127	57	38	30	3	3	nil	nil	nil	1	3	1,232
On 4 per Cent. Ann., 1826	1,601	993	2,044	512	314	92	59	15	4	1	2	1	nil	nil	nil	5,636
On Long Annuities	9,078	4,212	8,361	1,516	725	187	99	34	4	1	1	1	1	1	nil	24,221
On Annuities for terms of years	1,519	787	1,632	351	178	56	32	20	4	nil	2	nil	nil	nil	2	4,583
Dividends Payable 5th of January.																
On 3 per Cent. Consolidated Annuities	28,722	13,749	32,601	9,612	6,286	2,141	1,424	709	153	18	16	20	7	13	21	95,555
On 3 per Cent. Annuities, 1726	120	74	180	40	27	4	2	nil	nil	nil	nil	nil	nil	nil	nil	447
On New 3½ per Cent. Annuities	26,881	14,698	29,370	6,648	3,129	765	431	204	28	20	4	1	2	4	9	82,194
On New 5 per Cent. Annuities	35	31	107	36	20	3	4	nil	1	nil	nil	nil	nil	nil	nil	237
On Annuities for terms of years	1,656	833	1,757	333	161	37	34	12	1	nil	1	3	nil	1	8	4,839
Total	87,176	44,648	98,305	25,641	14,701	4,495	2,827	1,367	266	151	40	35	15	24	60	279,751

The most remarkable feature in this statement is the large proportion which it shews the holders of stock to a comparatively small amount to bear to the whole number of persons having money invested in the funds.

Instead of the fundholders, as is popularly imagined, being generally persons of great wealth, it appears that the yearly dividends of about a third of them do not exceed 10*l.* for each person, and that those of very nearly five-sixths of them do not yield more than 100*l.* a-year to each. But further, as Mr. M'Culloch has remarked, "it is evident from this account, that the number of persons having a direct interest in the funds is much greater than it represents. The dividends upon the funded property belonging to the Equitable and other insurance Companies, the different banking Companies, &c., are paid upon single warrants, as if they were due to so many private individuals; whereas, they are really paid to these individuals only because they act as factors or trustees for a vast number more. It is consequently quite absurd to pretend, as is sometimes done, that any interference with funded property would affect only 280,000 individuals out of a population of 25,000,000. Any attack upon the dividends would really be destructive, not merely of the interests of those to whom dividend warrants are issued, but of *all* who depend upon them; it would destroy our whole system of insurance and banking, and overspread the country with bankruptcy and ruin. Not only, therefore, is every proposal for an invasion of the property of the fundholders bottomed on injustice and robbery, but it would, were it acted upon, be little less ruinous to the community than to the peculiar class intended to be plundered."

(*To be concluded in next Number*).

POLITICAL RETROSPECT FOR MARCH, 1836.

GREAT BRITAIN.

The second month of the parliamentary Session has not produced so many announcements of new measures as the first; nor has any considerable progress been made in the course of it even in the discussion and settlement of those measures which had been previously introduced. It has been marked, however, by some interesting debates, and votes.

On Monday, the 22nd of February, in the Lords, the Bill for the Abolition of the Local Ecclesiastical Courts was read a second time, and then referred, on the motion of Lord Ellenborough, to a Select Committee. The principal, and, indeed, almost the only, opposition that has been made to this measure, is directed to the single point of its interference with the arrangement at present subsisting, by which wills are allowed to be registered, and probates to be taken out, in the counties as well as in London. A good many petitions have been presented, praying for the preservation of these local facilities.

In the Commons, this evening, it was agreed, on the motion of Mr. Poulett Thomson, that the second reading of every railway Bill before the House should be deferred for a week; and that, in the meantime, a Select Committee should be appointed to report what rules it would be desirable to lay down for the guidance of the House in dealing with such Bills. The unprecedented number of railroad Bills introduced in the present Session—more than one, in some instances, being for the establishment of railroads between the same places—was conceived to render this course necessary. Lord George Lennox opposed Mr. Thomson's proposition, and moved that the Bill for the London and Brighton Railroad, upon Mr. Stevenson's line, should be then read a second time; but, on a division, the motion was negatived by a majority of 271 to 75. The Tithes Commutation Bill was then, on the motion of Lord John Russell, read a second time, after a debate of some length; in the course of which some Members complained of the measure as giving an unfair advantage to the clergy at the expense of the landed interest, while the deduction proposed to be made from the present legal amount of the tithe-owner's claim was objected to from other quarters, as a transference to the owners of the soil of what properly belonged to the public. It was agreed that the more particular discussion of the provisions of the Bill should be deferred till it reached the Committee.

On Tuesday, the 23rd, the Lords were occupied, during the greater part of the sitting, by a debate on the subject of the late appointments of borough magistrates by Lord John Russell, on the recommendation of the new town-councils, to which the attention of the House was called by Lord Wharncliffe. As was naturally to be expected, and as, indeed, may be considered to have been unavoidable in the circumstances, the names submitted to Government by the town-councils, for appointments to the magistracy, have, in general, been exclusively those of persons belonging to the party of the majority of the council; there have been a few cases of exception, in which the majority has not exercised its powers to the full extent, but there can be no doubt that, for the most part, the opposite course has been taken. In various instances, it appears that the controlling authority of the Home Secretary has been applied to liberalize, in some degree, this rigorous partisanship, by the substitution of other names for some of those in the lists. Usually, however, in conformity with the pledge he gave publicly last Session in Parliament, the Noble Lord has adopted, without any alteration, the names submitted by the council. It certainly is not desirable that the functionaries intrusted with any part of the business of administering the law, and dispensing justice, should be selected for their important office with a reference chiefly to their party opinions in politics; but, as was urged by Ministers in the present debate, this is a state of things which it may be hoped will not continue long, but, in all probability, give place to the operation of a more salutary principle, when the excitement occasioned by the struggle between the old and the new systems of municipal government, and by the recent victory of the latter, shall have passed away. It is clearly, at all events, quite in vain to expect that that tranquillity and general contentment, which are the best fruits of good government, as they are its truest signs, will ever be produced in our boroughs, so long as the numerical minority of the inhabitants shall find their feelings and voices entirely overborne and disregarded by the majority, in regard either to this particular matter or in the general management of public affairs. It is of the very essence of the representative principle in politics, that a due representation should always be secured of the minority as well as of the majority. Of course, in the final decision on any disputed point, the majority must prevail; but the minority are equally well entitled to be heard in the discussion of it. Where, therefore, the deliberative and executive departments of government are separated, the executive is properly left in the hands of the majority exclusively; but, in the deliberative, the minority also is entitled to a share.

The House of Commons, for instance, would not deserve the name of a representative assembly, if it did not represent the minority in the nation as well as the majority. It would be very easy to construct such a system of

representation as should not leave the minority the power of returning to the House a single Member: all that would be necessary would be to enact that the 658 Members should be all elected by the whole community acting only as one constituency. But would the House in that case really represent the country? Would it be that, on being which it has been affirmed that its "virtue, spirit, and essence depends,"—namely, "the express image of the feelings of the nation?" An image of anything is the representation, not of a part of it, not even of the larger part, but of the whole of it, and of all its parts. Now, the town-councils, under the new constitution, partake of the deliberative character of the House of Commons. The great measure by which they were established recognized the principle, that they should represent the whole community—the minority as well as the majority—by the division of all the larger boroughs into wards, for the purpose of the municipal elections. And surely this was, in every point of view, a fair and wise arrangement: it was surely right and proper thus to provide against a mere majority of the inhabitants, however narrow, monopolizing the entire management of affairs. If a minority, respectable either from its numbers, its property, or its intelligence, could, by being kept out of the town-council and the magistracy, be wholly silenced and politically annihilated, although we think that would be a result grievously to be deplored in its bearing upon all the interests of social liberty and good government, still the attempt to exclude them might be defended on intelligible grounds; it would be an attempt having, at least, a practicable object in view, whether it was a desirable one or not. But a minority is not to be so silenced and disarmed; it is only by such treatment exasperated and made dangerous. You cannot destroy the native elements of strength, belonging to any political party, by depriving it of a legal political *status* or place in the artificial edifice of the Constitution: this is the sure way, as has often been exemplified, of turning a minority into a majority—of nourishing and rearing up a party that will eventually triumph over and throw down all your artificial arrangements. It has been sometimes contended, that the minority has nothing to do with the management of public affairs. A falser or more pernicious doctrine, in our opinion, never was maintained. In so far, especially, as the general government of the country is concerned, the representation of the minority is, we think, just as essential as the representation of the majority. We can conceive no source of disease which might be expected to act with more speedy or more fatal effect upon the vitals of a State than the existence in it of a naturally powerful party, whether Tory, Whig, or Radical, or of whatever denomination, which, having freedom of the press and of speech, and the command of all the other ordinary means of swaying public opinion, should yet be deprived of its fair share in the Legislature. The rule of the dominant party, be it either aristocratical or popular, is not made better by this absence of opposition. The tyranny of a majority is as oppressive and as hateful as any other tyranny. And severe laws and a harsh government are, besides, made necessary by the discontent and disaffection which the exclusive character of the constitution generates. In fact, we believe that, under such a system, anything like freedom could not long exist. The Constitution could only be maintained by the liberty of the press, and the right of holding public meetings, and all other such rights and liberties being extinguished. While these survived, that contest of parties, which had been banished from the floor of the House of Commons, would find on the hustings, in club-rooms, in debating societies, in the halls of political unions, a thousand large or arenas [illegible] there be any question, whether it is safer and fitter that the battle should be fairly fought out on the free and elevated stage of Parliament, or that, confined to these lower platforms, it should become a vulgar warfare of noise and violence, only serving, with its incessant din and fierce exasperation, to disturb, inflame, torment, and corrupt society?

In the House of Commons this evening, after the Bill for compensating Mr. Buckingham for the losses sustained by him in India had been thrown out, on the second reading, by a majority of 125 to 81, a series of Resolutions were submitted by Mr. Hume, condemnatory of the system of Orange Lodges, and proposing an Address to the King for the removal of every Orangeman, and every member of Riband Lodges or other Secret Associations, from the army, the navy, the courts of justice, and every branch of the public service. In the course of the speech with which he introduced his motion, the Honourable Member read a number of private letters from Colonel Fairman, Lord Kenyon, Lord Wynford, and other individuals connected with Orange Lodges, which were in all respects of the most extraordinary character, and certainly displayed on the part of the writers the most marvellous folly, if nothing worse. Mr. Hume did not state how he obtained possession of these communications, but their authenticity has not since been denied or called in question. The effect produced by them in the debate was such, that no speaker either ventured to defend the writers, or attempted to avert the verdict of unqualified condemnation which it was proposed to pass on the system which appeared to nourish, and to be supported by such fanaticism and madness. Even the Orangemen in the House, admitted that it could not any longer be maintained; and while they expressed their own intention of withdrawing from the Society, called upon their brethren throughout the empire to follow their example. Eventually an amendment, modifying the terms of Mr. Hume's Resolutions, but nearly the same in substance and effect, was unanimously agreed to. The Duke of Cumberland has since resigned his office of Grand Master of the Orange Lodges of Great Britain and Ireland; and although the governing bodies of the Society have not yet met, little doubt can be entertained that it will not survive the secession of his Royal Highness and all its other most distinguished leaders.

On Thursday, the 25th, among a multiplicity of matters brought before the House of Commons, the most important was the defective and objectionable nature of the present mode of settling disputed elections. The appointment of a Select Committee to inquire into this subject was moved by Mr. Charles Buller, in a speech of distinguished ability, and unanimously agreed to. In the course of the debate, all parties admitted the evils of the present practice. The House was afterwards kept sitting till a quarter past four in the morning, in consequence of the opposition made by the minority, by repeated motions for adjournment, to the discussion of a motion submitted by Mr. Blackburne for the appointment of a Select Committee to inquire into the circumstances attending the late election of the municipal council of the borough of Poole. From the divisions, the strength of the majority in the House seems to have been three times that of their opponents. The former, however, at last gave way to a resistance, which neither strength of numbers, nor strength of argument, could beat down.

A discussion on the policy of Ministers, with regard to the civil war in Spain, was brought on in the House of Commons, on Friday, the 26th, by Mr. Maclean, but led to nothing.

On Monday, the 29th, in the Commons Mr. Sergeant O'Loghlen moved the second reading of the Irish Municipal Reform Bill, and explained at length the

provisions of that measure, the principal feature of which is, that in the seven large towns of Dublin, Limerick, Belfast, Kilkenny, Waterford, Cork, and Galway, the constituency for electing the members of the municipal council is to consist of the inhabitants occupying houses of the annual value of 10*l.*, and in all the other boroughs, of those occupying houses of the annual value of 5*l.* In the debate which followed, Sir Robert Peel stated that he did not mean to go to a division on the question then before the House, but that he should, on a future day, move an instruction to the Committee, the effect of which, if adopted, would be to substitute for the provisions of the Bill as it at present stood, a general enactment, extinguishing the Irish municipal corporations altogether. The announcement of this sweeping measure of destruction from the Conservative leader was heard with no small amazement by the House.

On Wednesday, the 2nd of March, the Bill for allowing prisoners to be defended by counsel on trials for felony, was discussed in Committee in the Commons, when divisions took place on several of the clauses. The second clause, allowing the prisoner's counsel the right of final reply, was opposed by the Attorney-General, but was carried by a majority of 134 to 50. The third, which proposed to allow defence by counsel to persons accused before justices of the peace, was negatived by a majority of 110 to 93. The fifth, giving to prisoners the right of inspecting, without payment of fees, the depositions against them, was carried by a majority of 158 to 51. After this, the adjourned debate on the Poole municipal election was resumed, and the motion for the appointment of a Committee of Inquiry carried by a majority of 188 to 70.

On Thursday, the 3rd, the Bill for the disfranchisement of the borough of Stafford was read a second time in the House of Commons, after a division, on which the numbers were, 53 for the motion and 6 against it.

On Friday, the 4th, the Navy Estimates were laid before the House by Mr. Charles Wood. They exhibited an increase of expenditure, as compared with those of the last year, of 287,000*l.*, occasioned by the employment of 5000 additional seamen. The Resolutions gave rise to a debate of some length, but no opposition was made to them, although Mr Hume and other Members expressed their dissent from the proposition that there was any necessity for the contemplated augmentation of the naval force. Ministers, in the first instance, professed to ask the vote almost exclusively on the ground of the inadequacy of the present force to protect the foreign commerce of the country; but it appeared to be afterwards admitted, that it was also deemed proper to be fully prepared to meet any designs of hostility or encroachment which other Powers might entertain. The menacing or ambiguous attitude of Russia was particularly pointed to by different Members in the course of the debate.

On Monday, the 7th, in the Commons, the plan for abolishing Irish municipal corporations, which had been announced by Sir Robert Peel, was moved, in the form of an instruction to the Committee on the Ministerial Bill by Lord Francis Egerton. The debate which arose was continued by adjournment to the following evening, and terminated at four o'clock on the morning of Wednesday by a division, when the numbers were found to be, 213 for Lord Francis Egerton's motion, and 307 against it. This is the greatest parliamentary victory which the present Administration has gained since it came into office.

On Thursday, the 10th, the Second Report of his Majesty's Commissioners appointed to consider the state of the Established Church in England and Wales, with reference to ecclesiastical duties and revenues, was laid on the table of the House of Lords by Viscount Melbourne, and on that of the Commons by Lord John Russell. We have given an abstract of this important document in another place. In the Lords, after Lord Melbourne had given a summary of the recommendations of the Commissioners, the Archbishop of Canterbury, who is one of the Commissioners, shortly addressed the House; but the debate was not further prolonged. In the Commons, a short conversation followed Lord John Russell's explanation, when Members from both sides of the House expressed in warm terms their approbation of the proposed reforms. In the latter part of the evening a division took place on a motion by Mr. Divett, that the House should resolve itself into a Committee on the Act of last Session, imposing an additional duty of 54 per cent. on retail spirit-licenses, with the view of repealing the duty; when the motion was rejected by a majority of 165 to 155.

On Friday, the 11th, a Bill, which had been brought into the House of Lords by Lord Glenelg, for improving the administration of justice in the West Indies, was read a second time, after its provisions had been explained by his Lordship. In the Commons, the Report of the Committee on the affair of the Carlow election was brought up by Mr. Ridley Colborne, who stated that it expressed the unanimous opinion of the Committee. It was a complete acquittal of Mr. O'Connell. After this, the Army Estimates were brought forward by Lord Howick. They exhibited, as compared with those of last year, a saving of 93,000*l.*; but attempts were made by different Members to reduce them to a still greater extent. Mr. Hume first proposed to reduce the number of men to be voted by 5000; but only 43 Members supported his proposition against a majority of 136. Sir William Molesworth then moved that the foot-guards should be put, in respect of pay, upon the same footing with the infantry of the line, which would effect a saving of 9000*l.*; but this amendment, after a debate of some length, was also lost on a division, the numbers being 46 for, and 217 against it.

On Monday, the 14th, the Irish Municipal Reform Bill was considered in Committee in the House of Commons, and the first forty clauses were agreed to.

On Tuesday, the 15th, in the Lords, the Bishop of Exeter moved, according to a notice which he had given, some days before, that a Select Committee should be appointed to inquire into the whole subject of the practical operation of the new system of education in Ireland, of the conduct of the Commissioners in the administration of their funds, and of the expediency of adopting their recommendation for the extension of the system. The Right Reverend Prelate prefaced his motion with a long speech, and a debate of considerable animation followed, but it ended in the motion being withdrawn.

This evening, in the Commons, after the House had resolved itself into a Committee of Supply, the Chancellor of the Exchequer proceeded to announce what the intentions of the Government were on the important subject of the newspaper stamp duty, which had, for some time past, excited so strong an interest in the public mind, and also in regard to the stamp duties generally. It was proposed, he stated, to revise the whole of the present law respecting stamp duties, first by consolidating into one statute the hundred and fifty Acts of Parliaments over which the law was at present distributed; secondly, by the apportionment of the various rates on a new principle—namely, by the simple and uniform rule of making the price of the stamp in every case correspond to the pecuniary value involved in the transaction for which it is required. The effect of this change would be to reduce the stamp duty upon indentures of apprentice-

ship, bills of lading, and many others of the more common instruments, and to increase it somewhat upon mortgages and conveyances of large amounts of property; but it was not thought that it would make much difference upon the entire produce of the duties. The Consolidation Act which was in preparation, it was intimated, would contain no fewer than 330 sections; but it was suggested by some Honourable Members, that it might probably be found a more convenient plan to divide all this matter into a short series of Acts, one for each class of stamp duties.

With regard to the stamp duty on newspapers, Mr. Rice stated that it was proposed to reduce it from its present amount of 4*d.*, with the discount, to 1*d.* without discount. This is a reduction of exactly $2\frac{1}{2}d.$ on all newspapers sold for 7*d.* or less, and of $2\frac{2}{5}d.$, or rather more than $2\frac{1}{2}d.$ on all sold for more than 7*d.* A portion varying between two-thirds and three-fourths of the whole tax is thus at once swept away.

There are, we believe, a few of the more zealous friends of the diffusion of knowledge, who, resolved to be satisfied with nothing less than the total abolition of the stamp duty upon newspapers, regard this concession by the government of so large a portion of their demand as a loss rather than a gain—as less and worse than *nothing*, because it is not everything. This seems to us, we must confess, carrying a dislike to halting by the way very far indeed. However, we can understand, though we may not agree with the man who is really for an utter abolition of all taxes upon newspapers—not a mere commutation of the stamp duty into a tax of only another form and another name, but a complete removal and extinction of all government imposts affecting either the publication of the newspaper, or, what is indispensable to its usefulness and to its very existence, its transmission by the post through all parts of the country. We can understand the argument by which it is contended that it is the duty and interest of the State thus to afford every possible facility for the dissemination of political intelligence. Even if this principle were to be admitted, however, we think that there are difficulties in the way of its application which could hardly be overcome.

But, as yet, it has scarcely been proposed that the Government should go thus length. Almost all those who object to the ...ention of the penny stamp duty are ..., subjecting newspapers to the payment of a postage ... of the stamp. Now, for preferring this scheme ... that announced by Mr. Rice we can see no reason ... whatever.

It is admitted that the penny stamp duty may be considered as really a postage—a payment for the privilege enjoyed by newspapers of being transmitted by the post. The difference between the penny stamp and a postage, then, is simply, that papers which did not pass through the Post-Office at all would be exempted from the latter charge. On the other hand, it is not attempted to be denied that, as a graduated postage is manifestly quite out of the question, the gross inequality would still remain, of the paper that is sent a distance of fifty miles, through the post-office, being charged as much as that which is sent five hundred—of as large an addition being made to the price of a London paper, for instance, by being transmitted to Windsor, as by being conveyed all the way to the Land's End.

This last consideration puts down at once the pretensions of the postage scheme to superior fairness or justice. On grounds of expediency, it seems to be quite as much without any claims to preference.

At present, to a person residing in any of our provincial districts, a London paper is as cheap as a merely local paper; and it will be the same under the reduction of the stamp duty as proposed by Government. It is desirable that this should be the case for various reasons. On the one hand, there is thereby preserved a constant circulation of public feeling between the heart of the State and its remotest extremities. On the other hand, the newspapers of the metropolis, by thus having the whole of the kingdom thrown open to them, are kept up, in respect of their quality, at a point at which they could not be sustained with a more circumscribed sale. These two invaluable advantages, it appears to us, would both be destroyed by the scheme of a postage, which would tend to localize every paper published throughout the kingdom, those published in the metropolis not excepted; that is to say, to confine the range or sale of each of them principally to the immediate neighbourhood of the place in which it was printed. The London newspapers, which at present are the newspapers of the whole empire, would, under this system, be reduced to something little better than what country newspapers are now; they would become to a great extent the newspapers only of a district; they would be deprived of a large portion of the advantages of their present commanding position, which advantages are what enable them to be papers of the superior kind which they now are, and without which, also, they would cease to perform one of the most important of their present functions. A full exposition of this view of the subject will be found in the pamphlet, entitled "The Newspaper Stamp and the Duty on Paper viewed in relation to their effects upon the Diffusion of Knowledge."

The objection to the stamp duty, grounded on the alleged unfairness of making the people of London pay a part of the cost of transmitting newspapers to the country is, as already observed, sufficiently disposed of by the fact that the postage plan is liable to an objection of precisely the same kind. But we deny that there is any unfairness in making the people of London contribute to the expense in question. We might contend that the principle of every national establishment necessarily is, not that each particular branch shall be supported by the locality where it is placed, or where it is most directly beneficial; but that the whole shall be regarded as a common concern, and be maintained by a general tax. Otherwise we might have district or parish institutions, but no national institutions. Take the case of the Post-Office itself, in its chief capacity as an establishment for the transmission of letters; is it to be insisted either that the rate put upon every letter shall be exactly proportioned to the actual expense of conveying it, or even that every station where an office for the receipt and delivery of letters is opened, shall contribute an annual revenue corresponding to the annual cost at which it is kept up? In point of fact, we believe there are many stations in remote and thinly-peopled parts of the country which do not pay their expenses; on principle, we are sure there are cases in which such an objection ought not to prevent the station from being maintained. If, then, it is desirable that the business of conveying newspapers from one part of the country to another should be left to a public establishment at all, why should not the expense be assessed in the same manner as that of every other public establishment, that is to say, upon the whole public? But in this particular case, the proposed exemption of the metropolis from its share of the burden would seem to be especially unreasonable. Surely the share which, by means of the stamp duty, purchasers and readers of newspapers in London are made to contribute to the expense of their transmission to the remote parts of the kingdom, is a small consideration to pay for the advantages London enjoys over the provinces in this very matter of access to public intelligence, as the constant

seat of Government and of the Legislature, and the centre of the whole political system of the country. The acquiescence of the rest of the country in the preference thus shewn to London, would seem to be cheaply purchased by the inhabitants of the Metropolis being merely called upon to bear their fair proportion of the expense of diffusing that intelligence throughout the community, to which they themselves are always the first and most abundantly served.

The difficulties belonging to the practical application of even the simplest plan of a postage upon newspapers appear to us to be very great. If stamped wrappers were to be issued, they could not be provided in the quantity that would be required without considerable expense. Then, how much would the necessity of procuring one of these wrappers on every occasion in which a newspaper was to be transmitted to the country, embarrass all such transmissions, especially such as would be made only occasionally and by private individuals! Every man having at any time occasion to send off a newspaper to a friend by the post, would have to keep a supply of wrappers always by him. Besides, with the stamp, a newspaper may be sent through the Post Office as often as any person pleases, and, in point of fact, the same newspaper is often repeatedly so transmitted; is it proposed, on the plan of a postage, that there shall be a distinct postage paid for every such transmission? Is the reader of a London daily paper, in Edinburgh, to pay a penny on receiving it there, and then is his friend, at Aberdeen, to whom he sends it forward the next day, to pay a second postage for it? Can there be any comparison between the perfect facilities afforded by the stamp duty, and the clumsiness and manifold inconvenience of such a system as this? It would be very much better, in our opinion, that the Legislature should be called upon at once to make provision for the free conveyance of newspapers throughout the country, without either postage or stamp duty.

At the same time, we should hardly think this last a fair demand, even if there were any chance of its being acceded to, and although all the difficulties could be got rid of that stand in the way of carrying the plan into effect. We do not see that all the favour and facilities accorded by the State to the diffusion of knowledge should be monopolized by the newspapers. We would relieve as far as possible not newspaper knowledge only, but all other knowledge, from the taxes that impede its dissemination among the people. Now, of these taxes, the duty upon paper is one much more extensively injurious than even the present stamp duty upon newspapers, since it affects not newspapers only, but all literary works whatsoever; and therefore we would look to the repeal or reduction of that duty as the removal of one of the most serious impediments that exist to the diffusion of knowledge, and as an object to which the first and most strenuous efforts of those who desire the intellectual improvement of the people ought to be directed. This part of the subject, also, will be found fully discussed and illustrated in the pamphlet on "The Newspaper Stamp and the Duty on Paper," to which we have already referred.

Neither the House of Lords nor the House of Commons met on Wednesday, the 16th, and on Thursday, the 17th, nothing of public importance occurred in either.

On Friday, the 18th, in the House of Commons the subject of the recent military occupation of Cracow by Russia, Austria, and Prussia, was brought forward by Sir Stratford Canning, on a motion for the House going into a Committee of Supply, and gave rise to an animated debate. No new facts, however, were elicited; Lord Palmerston stating that Ministers had not yet received any official information on the subject. After this, the Irish Municipal Corporations Bill was further considered in Committee, and the clauses from 43 to 81, inclusive, were agreed to.

FRANCE.

The *Moniteur* of the 22nd of February contained the long-expected list of the new Cabinet. It stood thus—

M. Thiers, President of the Council, and Minister of Foreign Affairs.

M. Sauzet, Keeper of the Great Seal, and Minister of Justice and Religion.

M. Montalivet, Minister of the Interior.

M. Passy, Minister of Commerce and Public Works.

M. Pelet, Minister of Public Instruction.

The former Ministers of Marine, Finance, and War, —namely, Admiral Duperre, M. d'Argout, and Marshal Mauson, retain their offices.

On the day in which these changes were announced to the public, M. Thiers, as Premier, made what the French call his "profession of faith" to the Chamber of Deputies. He frankly confessed that the new Cabinet, of which he was the head, had been formed for the express purpose of conciliating the majority of the Chamber; and, in fact, this Cabinet includes three of the Vice-Presidents of that Assembly—Messrs. Pelet de Lozere, Sauzet, and Passy.

M. Thiers then expressed his regret at the retirement of his late colleagues from office, and declared he would not have separated from them but on the grounds of an absolute necessity. He had full confidence in his new associates, and they in him: they all perfectly agreed as to the leading points and principles of government. Without giving the Chamber any more specific pledge, he wished it to understand that no change would be made in the policy which the French Cabinet has followed since the death of M. Casimir Perrier. He said he wished to be judged by his acts, and not by his professions or promises; and he pledged himself to resign whenever his Administration should be found in a minority in the Chamber.

The cold manner in which M. Thiers' address was received by the Chambers, was neither very flattering to him nor indicative of the durability of his Cabinet.

On the 21th, M Thiers repeated in the Chamber of Peers a speech which scarcely differed in anything from his address to the Chamber of Deputies. The Peers are said to have received him even more coldly than the Deputies.

A few days after this, in discussing a question in the Chamber of Deputies, it was observed that some of the members formerly on the Ministerial side spoke against the Ministers of the day, while some of those usually in opposition supported Ministers. It appears, however, to us, that the question, though important, was not one to try party strength upon, but rather a matter on which every member might be desirous of expressing freely his individual opinion, without offending or committing the party whose general line of policy he adhered to. It regarded a proposition for the clearing of woods and forests, and diminishing their number.

The *Moniteur* of the 28th of February contained the following communication, received by telegraph from Toulon:—"Marshal Clausel reached Algiers on the 20th, after having again defeated Abdel Kadir. This Emir had with him 3000 auxiliaries from Morocco, who fought with some degree of order. He had proceeded in person to attack the people of the desert of Angara, and had vanquished and stripped them. The Bey Ibrahim (a partisan of the French) took possession of the camp at Tremesen, marched towards the desert, met Abdel Kadir coming back loaded with spoils, beat him, and gave him chase for a long time, without, however,

being able to come up with him. Two very active and influential lieutenants of the Emir have been killed."

We derive two facts (both unfavourable to the French interests at Algiers) from this brief bulletin,—1st, that the victory over Abdel Kadir, at Mascara, where the Duke of Orleans was present, and of which so much talk was made at Paris, was not at all the decisive affair it was represented, seeing that the Emir was able to take the field again a few weeks after it; 2ndly, that the subjects of the Emperor of Morocco, a fierce and brave people, are making common cause with the Arabs of Algiers. The next very probable event is, that the hardy Kabyles, descending from their mountains in the rear of Algiers, will fall *en masse* on the French, who will, in that case, certainly have their hands full.

According to later accounts, which are not altogether official, the French army marched from Tremesen on the 9th of February, and reached Oran on the 12th; Clausel having left 500 French, and 1500 mixed Mahomedan troops, with provisions for seven months, to garrison Tremesen. During their short campaign the French had had two serious engagements with the Arabs; Abdel Kadir, in one instance, attacking with 7000 men, and bravely maintaining the fight for seven hours.

At present the whole aspect of affairs on the north African coast is as unpromising as it well can be. The *Moniteur* of the 14th of March contained a sad despatch from Algiers of the 6th inst. It announced that a rebellion had been attempted at Bona, the object of which was to seize upon the public money amidst the tumult and confusion to be created. Unofficial accounts, however, state, on the contrary, that the object of the conspirators, who were chiefly officers and non-commissioned officers, was of a higher and more political nature — being, in short, nothing less than to proclaim the independence of Bona, and to hold that fraction of the Algerine territory until the proclamation and establishment of a Republic in France. The plot broke out on the night of the 27th of February, but was instantly put down. Some of the ringleaders were placed under arrest, and one of them, a certain Bmard, sub-lieutenant of the African chasseurs, is said to have been shot while galloping through the streets and shouting "*Vive la Republique!*"

On the 27th of February, Ministers attended the Committee appointed to deliberate on M. Gouin's proposition for converting the Five per Cents. They maintained that the present was an awkward moment for effecting it, but agreed in the utility of the measure. M. Thiers, moreover, pledged himself to introduce, next Session, a Bill for the reduction of interest to 4½ per cent.

The elections in the Chambers of presidents and vice-presidents seem to have gone on in favour of Ministers.

On the 9th of March, a debate on supplies obliged Ministers to give some explanations as to their foreign policy. They had asked for a supplementary credit of 7,500,000 francs, or about 300,000*l.* sterling, to be applied to the naval department. M. Salverte opposed the grant, merely for the purpose of eliciting explanations. In replying to him M. Thiers said, "that he thought such explanations would be more seasonable and productive of more utility when the discussion of the budget of foreign affairs should be brought forward. (Hear! Hear!) But at the same time, he did not mean to withhold certain explanations relating to the motives which led to the necessity for these demands of credit. France and the whole world were aware of the unfortunate misunderstanding which had arisen between this country and the United States of America; the apprehension of a collision had rendered it indispensably necessary to increase the armaments in the ports, so as to be prepared to protect the commercial interests of France against all casualties; such was the object of fitting out a certain number of vessels, which had been placed under the command of one of the most distinguished officers in the service. The most of those vessels had already proceeded to their destination, and there was no longer a possibility of stopping the expenses required for this purpose. Several were still in port, particularly at Brest; but, as the policy of France was a policy of observation, the government, under the present state of the affairs of nations, had thought it advisable to maintain the armaments upon the present footing. On a future occasion—namely, upon the discussion of the budget of the navy, the Ministers would prove the necessity for giving a greater development to this branch of public force; the train of events evidently showed that it was for the advantage of France to adopt an imposing attitude, not only upon the Continent, but also to hoist its standard at all points of the globe, in conjunction with that of Great Britain. He was, therefore, of opinion that the Chamber could not do better than to accede to the grant of credit now required for the service of the navy. As to the general question, it might be carefully examined when the budget of the navy should be discussed."

In another reply (made to M. Mauguin) the Minister for Foreign Affairs stated, that the dispute of France with the United States was the immediate cause of the extraordinary increase of her navy; but that now that unfortunate misunderstanding was drawing amicably towards a close, so much so indeed, that he believed there only remained certain questions of mere form to be disposed of.

The money demanded by Ministers was voted by a majority of 260 against 11.

All this, we are glad to say, looks very pacific.

On Saturday, March the 12th, a somewhat stormy debate took place in the Chamber of Deputies upon a motion for receiving a number of petitions in favour of a general amnesty for political offenders—an amnesty to include Prince Polignac and the other Ministers of Charles X., now prisoners in the Castle of Ham, as well as the republicans lately tried and condemned. M. Sauzet, the new Minister of Justice, opposed the motion, upon the ground that in the prerogative of the Crown alone lay the right of taking the initiative in acts of amnesty. The Chamber decided in favour of Government by a large majority. Only some fifty or sixty of the Ultra-Liberal party voted in favour of the question.

The seizure, by the police, of some arms and gunpowder in Paris, has led to the report that another plot against the King has been a-foot there. A good many arrests have been made "on suspicion," but only half-a-dozen vagabond students have been directly inculpated.

SPAIN.

In the middle of February the Carlists, who were still besieging St. Sebastian, were driven off by a tremendous fire opened upon them by the garrison. They retired in the direction of Ernani. In the direction of Bilboa the Carlists were more successful, having taken the town and castle of Balmaceda, wherein there were above 400 Christino soldiers. This great achievement was performed under the orders of General Eguia. At the same time, though utterly incapable of sitting down before that city, or prosecuting a regular siege, the Carlists continued to infest the environs of Bilboa.

A certain Carlist priest-soldier, the Canon Batañeros, who is, no doubt, a great hero and commander in this

despicable warfare, was defeated on the 19th of February, at Trillo, within eighteen leagues of Madrid, and his band, in which were many unhoused monks and beggared priests, was dispersed with great slaughter. Such is the Government account of this great affair, in which, in real truth, there were probably about two or three killed, and about twice as many wounded. These bulletins remind us of the Irish officer during the American war who, having to report some trifling skirmish to his superior, said—"It was a very bloody battle while it lasted, and our serjeant of marines lost his left arm." We should rejoice if this game of war could be carried on, and brought to a decision with so little expenditure of human blood; but that cannot be, and unfortunately these Spaniards are in the habit of destroying as many lives in a town broil, or in the place of confinement of their prisoners, as might suffice for a gallant onset, and good stand-up fight in the field.

The Queen's army in the north, being sorely in want of money, received from the Government, some time in February, about 240,000*l.* sterling; and Ministers announced their *hopes* of "raising money on the confiscated Church property and the revenue of tobacco."

Towards the end of February the Canon Bataneros, of whom we have just spoken, reappeared in the neighbourhood of Madrid, where he succeeded in intercepting despatches, and making some prisoners. Among his captives was an Honourable Member—one of the Lower Chamber, or Procuradores—a Señor Maurique, whom he sent from Guadalaxara to the head-quarters of Don Carlos in Navarre. As the Señor was one of the very large majority that voted the perpetual exclusion of Don Carlos and his heirs and successors from the throne of Spain, we are afraid that, before this time, matters have gone hard with him.

The negotiations for recognising the independence of those precious off shoots of Spain, the South American States, have been going on, but they cannot be brought to issue before the meeting of the Cortes.

The Government Gazette of the 5th of February informed the good people of Madrid that M. Mendizabal, whose regenerating process remains so long *in petto*, hoped to be able, within the month, to satisfy the wishes and the wants of the nation; but, as if this were saying too much, the same organ of government carefully explained what we suppose was a hidden truth to the Spaniards, that there was a great difference between *hoping* and *promising*, and that "men and things are all liable to accidents."

The Gazette of the 17th of February contained a decree, appointing a Commission to consolidate and liquidate the home debts of Spain. The Committee was to consist of three persons, who were forthwith to examine the state of the claims made upon the Government, and to correspond with Committees in the provinces that have been appointed to forward monthly Reports to the Minister of Finance at Madrid. According to the decree, all these claims must be sent in on or before the last day of the current year, when the accounts will be closed. Mendizabal did not think it necessary to state whence the funds for the liquidation of this home debt are to proceed; but, according to the *Revista*, or Madrid Review, the debt is to be paid out of the property of the monks.

A second decree, a *pendant* to the first, appeared on the 21st of February. It authorizes the immediate sale of church, or monastic property, and all other property whatsoever that may fall into the hands of the State.

The first and capital article of this decree is as follows:—"From this day all properties, of whatever kind, are declared for sale which may have belonged to religious corporations extinguished, and all others that may have been adjudged to the nation, by whatever title or motive, as well as all those that may belong to it hereafter by the act of adjudication."

From this sweeping annihilating decree are specifically exempted all buildings destined for the public service, all monuments of art, or others raised to commemorate the national glory. These two decrees are said to have given great satisfaction to a large, and now predominant party in Madrid, and especially to the gentlemen of the press and of the stock-exchange there established.

The elections of Members for the new Cortes are said to be, in general, favourable to the present Government. But, in no inconsiderable portion of Spain, the mere name of a free election is a thing to laugh at. Mina, for example, is to be returned for Navarre, a province out of which he was beaten by the Carlists, not many months ago, and in which he could not show himself in the manner a candidate ought, without meeting with that death he so liberally deals to others.

Out of a series of reverses which the Queen's troops are said to have suffered in the north, we extract the following, which seem to be well authenticated:—

On the last day of February 600 of them were surprised by 3000 Carlists in the defiles of Olaña, and either killed or made prisoners. On the 1st of March another corps was beaten by the Carlist Generals Brujo and Tristani, near Ripoll. On the 5th of March 4000 Carlist foot, with 100 horse, were pressing on the town of Reycerda. The poor peasants of the plain were flying in consternation and confusion to seek safety across the French frontier. About this date General Evans stated to the Government, that through sickness and other casualties he could not bring above 6000 of his auxiliary force into the field. General Cordova, on whose conduct we reflected last month, had not been removed from the command, though strongly suspected of Carlism, or miserable incapacity, or both: it appears, however, he has since been recalled.

The most disgusting atrocities have been committed in Catalonia, where that man of blood, the gross and brutal old Mina, is Captain-General for the Queen. A Carlist partisan named Cabrera, had taken prisoners and shot two constitutional alcaldes, or magistrates, and committed other acts of vengeance of the same kind. Unable to catch this insurgent, the Brigadier Commandant General of Lower Arragon ordered the execution of his mother, and the arrest of his three sisters who were living quietly in the town of Tortosa. The Governor of Tortosa, revolting at the idea of shooting a poor, defenceless old woman to expiate atrocities committed by her son, delayed the execution, until positive orders came from old Mina that the deed should be done. Accordingly, at nine o'clock on the morning of the 16th of February, the Senora Cabrera was shot! Her three daughters, with their husbands, and many near relations were detained in close confinement.

As soon as intelligence of this murder reached Madrid, the Queen-Regent and the Ministers hastened to convince the public that they had had no hand in it; and the whole weight of the infamy was laid upon Mina, who we believe deserves it, notwithstanding the exertions made by some of the Spanish journalists and reviewers to prove that Mendizabal has approved of his system of rigour and extermination.

A savage before, the insurgent Cabrera became mad with a thirst for blood when he heard of his parent's death, and he issued a decree of retaliation, by which the wife of one of the Queen's colonels, and thirty other ladies, were ordered to be shot! In fact, we believe that four ladies, whose husbands belonged to the Constitutional party, were at once led forth and executed.

We see it is now confidently stated that the plenipo-

tentiaries of the South American States have left Madrid, the negotiations in which they were engaged having fallen to the ground, on their positive and definitive refusal to make Spain any compensation for her acknowledgment of their independence. The needy Spanish Government wanted large amounts of gold and of silver for what would now be a mere formality—a piece of paper or parchment; and the turbulent States of South America have very little money to spare even for things more intrinsically valuable.

One of the grand financial projects of M. Mendizabal was produced early in March. Our newspapers have summed it up as follows:—"The Government will consolidate, in 5 per cent stock,

The paper debt, with interest, at 3 1 per cent.
The vales, not consolidated .... 33 „
And the debt without interest .. 25 „

in portions of one-sixth part for the next six years, according to the rate at which the 5 per stock may be in the Madrid market in the month of June of each year; so that, taking an average of three years for the whole, a person holding to-day two bonds of debt without interest, value each 15, will, at the end of three years, receive a 5 per cent stock value to-day 50. Thus the two former will cost 30, and the latter 50; but at the end of three years 15 interest will be received, 5 per cent. for each year, which will reduce the 50 to 35 This project has been unfavourably received at Madrid."

PORTUGAL.

The prominent subject at Lisbon for some time has been the new tariff of Customs The Committee, early in February, introduced an important change which went to reduce the valuation. The Finance Minister obtained a vote of confidence, authorizing him to issue Exchequer bills to the amount of about 500,000*l*.—a sum absolutely required to meet the immediate exigencies of the Government. A Report, signed by the Marquis of Loulé, which announced the adjustment of the differences that had arisen between the Courts of Lisbon and Turin, through the friendly mediation of his Britannic Majesty, was published officially in February. Lisbon was then calm, but the Chamber of Deputies very stormy. More than once the President of the Chamber, having rung his bell in vain, and being unable to restore order, adjourned the debate. In other respects than in noise, a debate in the Portuguese Commons bears a close resemblance to a debate at Billingsgate.

Towards the end of February they were discussing a project for the re-modelling and re-organizing the army, and they much annoyed the young Queen by passing a law that no such office as that of Commander-in-Chief should exist in time of peace; and that when it became necessary, in case of war, the office should be filled by a person responsible to the nation. Now, Donna Maria had, by a regular contract, given the rank of Commander-in-Chief of the armies of Portugal to her new husband.

Petitions were pouring in from the officers of the navy, who complained of not having been paid for the last six months.

THE AFFAIR OF CRACOW.

The ancient Polish city of Cracow, with a strip of surrounding territory, was erected into an independent state by the Congress of Vienna in 1815, all the Allied Powers, among which England was one, guaranteeing its rights and independence. Cracow is *enclavé*, or shut in on all sides by territories, once part of the kingdom of Poland, but now belonging to the great Powers of Russia, Austria, and Prussia. As such a tiny state was scarcely sufficient to support a King and Court, Cracow was allowed to govern herself according to Republican forms, and in this mode matters proceeded very well, until the Revolution at Warsaw in 1830, or rather, we may say, until the total overthrow of that Revolution, and the wholesale proscriptions of Poles of the Duchy of Warsaw and elsewhere by the Russians in 1832. Since that time the miniature Republic has been kept in a state of constant uneasiness by the turbulence of strangers resorting to her, and by the jealous fears of the three great Powers that hem her in. As an independent State, many of the Polish refugees thought she could extend protection to them, and they therefore took up their residence in the city of Cracow. The number of these men irritated suspicion, and it was soon said, with more or less, but always with a good deal of truth, that the refugees, availing themselves of its geographical position, made Cracow the centre of a great conspiracy, the object of which was (and were it only feasible it were praiseworthy) to renew the revolution in Poland, and recover all that partitioned country from the grasp of Russia, Prussia, and Austria. The three great co-partitioners say that these refugees not only committed the tranquillity of their Polish provinces, but were guilty of many outrages and disorders in Cracow itself. They therefore demanded their expulsion from the territories of the Republic. They go on to allege that the President was slow in complying with their demands, and that this laid them under the necessity, as *protectors* (by the Treaties of Vienna) of the Republic of Cracow, to march troops into its territory. Accordingly, in the month of February troops were sent by them into a State that had a formal guarantee from the Congress of Vienna, that no foreign armament should ever molest, or interfere with her. The troops that have taken possession of Cracow are chiefly Austrian.

UNITED STATES OF AMERICA.

President Jackson has accepted the mediation of Great Britain in the question at issue between France and the United States. The President's decision was made known to Congress on the 8th of February, in a Message from which we extract the principal clauses:—

"To the Senate and House of Representatives.

"The Government of Great Britain has offered its mediation for the adjustment of the dispute between the United States and France. Carefully guarding that point in the controversy which, as it involves our honour and independence, admits of no compromise, I have cheerfully accepted the offer. It would be obviously improper to resort even to the mildest measures of a compulsory character until it is ascertained whether France has declined or accepted the mediation. I, therefore, recommend a suspension of all proceedings on that part of my Special Message of the 15th of January last, which proposes a partial non-intercourse with France. While we cannot too highly appreciate the elevated and disinterested motives of the offer of Great Britain, and have a just reliance upon the great influence of that Power to restore the relations of ancient friendship between the United States and France, and know, too, that our own pacific policy will be strictly adhered to until the national honour compels us to depart from it, we should be insensible to the exposed condition of our country, and forget the lessons of experience, if we did not efficiently and sedulously prepare for an adverse result."

The Message concludes by repeating the recommendation already made, to place the seaboard in a proper state for defence, and to provide full means for the protection of navigation and commerce.

DOCUMENTS AND ABSTRACTS.

STATE OF THE ESTABLISHED CHURCH IN ENGLAND AND WALES WITH REFERENCE TO ECCLESIASTICAL DUTIES AND REVENUES.

THE principal portion of the First Report of the Ecclesiastical Commissioners was given in No. 28 of the "Companion;" and the Second Report, having been just laid before Parliament, we present the following abstract of it, making use, for the most part, of the words of the Report. The Report is arranged under the heads of Territory and Revenue; but for the purposes of distinctness we have increased the number of subdivisions. The intricate question of church patronage will be made the subject of a separate Report. The measures recommended in this and the First Report, which it may be determined to adopt, will doubtless be carried into effect by Commissioners constituted for that purpose.

Territory.—The Commissioners recommended that the city and suburbs of Bristol should be united to the diocese of Bath and Wells, and that the remaining part of the diocese of Bristol, situate in the county of Gloucester, should be added to the diocese of Gloucester. That part of the county of Glamorgan, which is now in the diocese of St. David's, may properly be added to that of Llandaff; as well as those parts of the counties of Monmouth and Brecon which are specified in their First Report. The transfer of certain parishes in the county of Surrey from the diocese of Winchester to that of London is recommended; also the union of the bishopric of Sodor and Man to that of Carlisle. The Isle of Man contains only eighteen parishes, over which the archdeacon, who is resident, and has a respectable income, can exercise an effectual superintendence.

The new division of dioceses will render necessary a corresponding change in the arrangement of archdeaconries. The Commissioners propose to create six additional archdeacons, which will involve a change in the limits of some of the archdeaconries already existing. Jurisdiction should be given to such of the archdeacons as are at present merely nominal officers.

If the rural deans are to be made efficient officers, as it is conceived they ought to be, it will be desirable that they should receive some small annual payments, sufficient to defray the expenses incurred by them in their visitations. The future arrangement of rural deaneries will be most advantageously settled by the bishops of the several dioceses.

Some of the proposed territorial changes may be effected immediately, with the consent of the bishops concerned; others only as particular vacancies occur, or until the funds necessary for carrying them into execution shall become available.

Revenue.—According to the most recent Returns the annual revenue of all the sees is about 148,875*l.*; a sum sufficient to provide incomes for all the bishops, including those of the two new sees, without the addition of any preferment *in commendam*. But the peculiar manner of leasing the episcopal estates occasions great variations of incomes from year to year, according as a greater or less amount of fines is received. There would be an obvious difficulty, therefore, upon the occurrence of a vacancy in one of the richer sees, to require the future bishop to pay a certain annual sum towards the augmentation of the poorer see. One mode of rendering those incomes less uncertain would be, to allow the existing leases, both for lives and for terms of years, to expire. But this would involve the necessity of borrowing money upon the security of the episcopal estates, the practical result of which would be, to transfer to the parties lending their money, that interest in the episcopal estates which is now possessed by the lessees. The Commissioners do not propose any general measure to meet the difficulties of the case, but recommend that facilities should be afforded for the conversion of leases for lives into leases for terms of years.

The following statement shows the present amount of the income of the larger sees, and the reduction which it is proposed to make in them:—

	Estimated Income according to the First Report.	Future proposed Income.	Excess.
	£	£	£
Canterbury ...	17,000	15,000	2,000
London	12,200	10,000	2,200
Durham	17,800	8,000	9,800
Winchester ...	10,700	7,000	3,700
Ely	11,000	5,500	5,500
Worcester	6,500	5,000	1,500
St. Asaph	5,200	5,200	3,800
Bangor	3,800		
	84,200	55,700	28,500

This reduction, when carried into effect, will furnish annually a sum of 28,500*l.*, to which is to be added the income of the see of Bristol, amounting to 2300*l.* The total sum thus obtained, of 30,800*l.*, being divided amongst the thirteen bishopries, which require an addition to their present revenues, and the two new sees will provide an income for each, varying from 4000*l.* to 5000*l.* per annum, according to the circumstances of the different sees. The sums to be apportioned to each cannot yet be determined. In the sees of York, Bath and Wells, Norwich, and Salisbury, it is not proposed to make any alteration.

For the purpose of ensuring the regular payment of the sums which may be allotted to the poorer sees, it may be expedient to provide a fund, by allowing the sums which are to be deducted from the incomes of the richer bishopries, to accumulate for a certain time. There are estates belonging to some sees, which may, perhaps, be advantageously sold, under certain restrictions. The produce of such sales may constitute a fund, out of which the bishop may receive compensation, either for foregoing a fine, in order to facilitate the conversion of a lease for lives into one for a term of years, or for waving his right of granting a concurrent lease, when a lessee will not renew.

The Commissioners approve of the plan of detaching secular functions from the bishopric of Durham, and recommend that a similar separation of civil jurisdiction should be effected in the province of York and in the see of Ely.

It will be necessary to provide residences for the bishops of Manchester, Ripon, Lincoln, Llandaff, and Rochester.

Cathedrals and Collegiate Churches.—Keeping in view the recommendation of the Crown, to approach this branch of the inquiry with a view to give increased efficiency and usefulness to the Established Church, the Commissioners have endeavoured to accomplish two objects:—one is, to improve the condition of those benefices, the population of which is of considerable amount, but which are now so scantily endowed as not to yield a competent maintenance for a clergyman; the other is, to add to the numbers of clergymen and churches, and so to make a more adequate provision for the religious instruction of a rapidly increased and increasing population.

It appears, from the Report of the Ecclesiastical Revenues Commission, that there are no less than 3528 benefices under 150*l.* per annum. Of this number 13 contain each a population of more than 10,000; 51 a population of from 5000 to 10,000; 251 a population of between 2000 and 5000; and 1125 have each a population of between 500 and 2000. On every one of these benefices it is desirable that that there should be a resident clergyman; but unless their value be augmented, it will in many cases be impossible to secure this advantage. The necessity of such augmentation will be greatly increased by the changes recommended in the laws relating to pluralities and residence. The means which can be applied to effect the improvement are very far short of the amount required. Even were no addition to be made to the income of benefices having a population below 500, it would take no less a sum than 235,000*l.* per annum, to raise all benefices having a population of between 500 and 2000 to the annual value of 200*l.*; those having a population of 2000 and upwards, to 300*l.*, and those having 5000 and upwards,

to 400*l.* per annum. Of the benefices included in this enumeration, there are 1052 in private patronage, and 1258 in public patronage. The latter are, in the first instance, the preferable objects of assistance from the funds to be rendered available to the purposes of augmentation; and those funds will be very far from adequate to the improvement even of this class of preferments.

The most prominent, indeed, of those defects, which cripple the energies of the Established Church, and circumscribe its usefulness, is the want of churches and ministers in the large towns and populous districts of the kingdom. The growth of the population has been so rapid as to outrun the means possessed by the establishment of meeting its spiritual wants; and the result has been, that a vast proportion of the people are left destitute of the opportunities of public worship and Christian instruction, even when every allowance is made for the exertions of those religious bodies which are not in connexion with the Established Church.

Looking to those parishes only which contain each a population exceeding 10,000, it is found that in London and its suburbs, including the parishes on either bank of the Thames, there are four parishes or districts, each having a population exceeding 20,000, and containing an aggregate of 166,000 persons, with church-room for 8200 (not quite one-twentieth of the whole), and only eleven clergymen.

There are twenty-one others, the aggregate population of which is 739,000, while the church-room is for 66,155 (not one-tenth of the whole), and only forty-five clergymen.

There are nine others, with an aggregate population of 232,000, and church-room for 27,327 (not one-eighth of the whole, and only nineteen clergymen.

The entire population of these thirty-four parishes, amounts to 1,137,000, while there is church-room only for 101,682. Supposing that church-room is required for one-third, there ought to be sittings for 379,000 persons. There is, therefore, a deficiency of 277,318 sittings—or, if we allow 25,000 for the number of sittings in proprietary chapels, the deficiency will be 252,318.

Allowing one church for a population of 3000, there would be required, in these parishes, 379 churches, whereas there are, in fact only 69, or if proprietary chapels be added, about 100, leaving a deficiency of 279, while there are only 139 clergymen in a population exceeding a million.

In the diocese of Chester, there are thirty-eight parishes or districts in Lancashire, each with a population exceeding 10,000, containing an aggregate of 816,000 souls, with church-room for 97,700, or about one-eighth, the proportions varying in the different parishes from one-sixth to one-twenty-third.

In the diocese of York, there are twenty parishes or districts, each with a population exceeding 10,000, and with an aggregate of 402,000, while the church accommodation is for 48,000, the proportions varying from one-sixth to one-thirtieth.

In the diocese of Lichfield and Coventry, there are sixteen parishes or districts, each having a population above 10,000, the aggregate being 235,000, with church-room for about 29,000, the proportions varying from one-sixth to one-fourteenth.

Many of the chapels which contribute to swell the actual amount of church-room have no particular districts assigned to them. The Commissioners consider the assignment of a district to each church or chapel to be necessary to the ends of pastoral instruction, and to carrying into full effect the parochial economy of the Established Church. While the evils which flow from a deficiency in the means of religious instruction and pastoral superintendence are the most urgent of all, they are precisely those for which a remedy can be least easily found. The resources which the Established Church possesses are evidently quite inadequate to the exigencies of the case. All that can be done is gradually to diminish the intensity of the evil.

Partly by the application of first fruits and tenths, partly by the aid of liberal Parliamentary grants, and partly by the exertions of individual beneficence, additional church-room has been secured within the last twenty years, for at least 600,000 persons, and some hundreds of additional clergymen have been stationed in populous districts, which were before destitute of the advantages of pastoral care and instruction. But all that has been hitherto done in this way falls very short of the necessity of the case.

If the endowments of cathedral and collegiate churches should appear to be larger than is requisite for the purposes of their institution, the surplus ought, in the opinion of the Commissioners, to be made available for the augmentation of poor benefices, and the creation of new ones. No large immediate accession of funds is likely to be obtained from the above source; but it is hoped that the sacrifices which the cathedral and collegiate churches will be required to make will have the effect of stimulating individual benevolence to contribute towards the funds for improving and creating benefices.

The cathedral chapters are divided into two classes—first, the deans and chapters of the old foundation; secondly, those of the new foundation. The former term comprehends all those cathedral establishments which were founded at different periods before the reign of King Henry VIII.; the latter, those which were founded by letters patent from the Crown, confirmed by Parliament, about the time of the Reformation.

The old foundations comprise, not only the dean and canons residentiary, who compose the chapters of each, but various other prebendaries, who are not required to keep any residence at the cathedral, nor to perform any other duty, except that of preaching one or two sermons in each year. The dean, and each of the residentaries has, besides a separate endowment and a small fixed stipend, a share of that portion of the corporate revenues which remains after the payment of those stipends and other general expenses. Of this portion, which is called dividend, the dean receives no larger share than any other member of the chapter: except at Lichfield, where a different scale of division is prescribed by a local Act of Parliament. The prebendaries, who are not residentiaries have no share of the corporate revenues, except in some cases, small fixed payments, but in most instances possess each a separate endowment.

In the chapters of the new foundation, on the contrary, there are no prebendaries besides the residentiaries; and except at Durham and Ely, they have no separate estates. The dean, independently of statutable allowances, upon a materially larger scale than those of the prebendaries, receives on the division of fines a twofold share.

The churches to which the measures now about to be recommended will apply, are—

Of the old foundation—The cathedrals of York, London, Chichester, Exeter, Hereford, Lichfield, Lincoln, Salisbury, and Wells, and St. George's chapel at Windsor.

Of the new—The cathedrals of Canterbury, Durham, Winchester, Bristol, Carlisle, Chester, Ely, Gloucester, Norwich, Oxford, Peterborough, Rochester, and Worcester, and the collegiate church of Westminster.

In all these churches the daily performance of the choral service is maintained out of the revenues of the dean and chapter, who also, in most instances, sustain and repair the fabric; and many of these bodies have of late years devoted very large sums out of those revenues to the reparation and improvement of the buildings intrusted to their care. But in the opinion of the Commissioners, the most important objects of these institutions may be secured, and continued consistently with a reduction of the present cathedral preferments, and the appropriation of a considerable portion of the revenues towards making a better provision for the cure of souls.

With these views, the Commissioners recommend that no new appointments shall in future be made to any of the stalls of the old foundation, which are not residentiary; with the exception of some, the income of which is little more than nominal, and which, perhaps, it may be deemed expedient to retain, as marks of distinction to be bestowed on deserving clergymen.

The number of prebends affected by this recommendation is about 368. In a few cases the income is regulated by some local custom or statute; but the greater part are endowed with a separate property under lease, either for twenty-one years, or (as more frequently happens) for three lives.

The proceeds of estates with which the deans and residentiaries of the old foundations, and those of Durham

and Ely, are endowed, separately from the corporate property of the chapters, should, as vacancies shall occur, be received and dealt with in the same manner as is proposed with regard to the property attached to the prebends last mentioned.

The chapter, in each of the churches enumerated, both of the old and new foundation, should consist hereafter of a dean and four canons, the establishment at present actually existing in the cathedrals of York, Chichester, and Carlisle; that one, at least, of these canonries, where they may be in the patronage of the Bishop, should be made available towards a better provision for the office of archdeacon; that until the existing chapter shall be reduced to the proposed number, no new election nor appointments take place; and that the income resulting from stipends, dividends, or other sources, which would have been payable to each residentiary exceeding the number of four, should, as the stalls become vacant, be paid by the chapter clerk to the treasurer of Queen Anne's bounty, as in the case of the separate estates.

An exception to this rule might with propriety be made in the case of Chester, where the income of each of the six prebendaries does not exceed 125*l.* on an average of the last seven years.

The Commissioners are of opinion that the term of residence of each dean should be nine months, and of each canon three months; and that the residentiaries, instead of being elected by the chapter from among the other prebendaries, should be appointed directly by the Bishop, except in the case of the Cathedral of St. Paul's, where three out of the four canonries should be in the nomination of the Crown.

If the recommendation of the Commissioners for the erection of two new sees be adopted, the two collegiate churches of Manchester and Ripon, which already possess an establishment nearly similar to that proposed for the cathedrals of the new foundation, may be made the cathedrals of the two new sees. The endowments belonging to the collegiate establishments of Heytesbury and Middleham should be applied for the purpose of providing for the parochial clergy in the places with which those establishments are connected.

Office of Archdeacon.—The remuneration of these offices arises principally from small payments made to them at their visitations, under the name of procurations; the amount of which is the same as it was several centuries ago. The total of their emoluments is, in most cases, not adequate to defray the necessary expenses even of their ordinary visitations, still less those of their parochial circuits, the regular performance of which is the most essential of their duties. In each cathedral, where such an arrangement is practicable, one at least of the stalls should be applied to the purpose of making a better provision for this important office. An instance of such an arrangement already exists in the cathedral of Rochester.

As it is desirable that dignities in cathedral and collegiate churches should be bestowed upon those only whose qualifications have been proved by a certain period of service in the ministry of the church, the Commissioners recommend that no person be hereafter capable of receiving the appointment of dean, archdeacon, or canon, until he shall have been six years complete in priest's orders.

Minor Canons, Vicars Choral, Priest-Vicars or Chaplains.—These are the ministers of the cathedral and collegiate churches. The service is performed by them, or some of them, in all these churches twice, and in some three times a day, throughout the year. The number in St. Paul's Cathedral is twelve; in others there are eight, six, four, and in the collegiate church of Manchester two. The emoluments are almost as various as the numbers. At Durham some of the minor canons receive as much as 170*l.* a-year; in some churches they have not more than 30*l.*; but the majority receive from 50*l.* to 70*l.* In consequence of the smallness of their salaries in almost all the cathedrals, there is a prevalent custom of giving to these ministers chapter livings, which they hold together with their places in the cathedral. The Commissioners are of opinion that the interests both of the cathedrals and of the parishes would be consulted by retaining only so many of these ministers as are sufficient for the service of the cathedrals, and giving them such salaries as may preclude the necessity of their holding benefices together with their offices in the cathedral.

In most of the cathedrals of the old foundation, these subordinate ministers form a distinct corporation, subsist upon the separate funds thereto belonging, and exert the same power of leasing their property as other ecclesiastical bodies. The consequent fluctuation and uncertainty of income, arising from fines received upon renewal of leases, in different years, which is found very inconvenient by the holders of larger preferment, must occasionally become a source of distress to those whose average subsistence is very slender. The Commissioners allude to the expediency of making some arrangement for placing the property of these minor corporations upon a better footing.

Deans and Chapters.—The Commissioners recommend that such regulations should be adopted as may leave it in the power of deans and chapters, under certain restrictions, to give preferment to the members of their own body, and to the minor canons, who may reasonably look to them for reward after a certain period of service; and that where the presentation to any benefice in their gift is not required for these purposes, it should pass, in some cases to the Crown, and in others to the Bishop of the diocese in which either the cathedral or the benefice may be respectively situate. This recommendation is not to be regarded as extending to Christchurch, and must, of course, be considered as subject to modification in particular cases.

The Commissioners recommend that, in general, the livings, the patronage of which belongs to the prebends which are to cease, and those of the deans and residentiaries, in right of their separate estates, shall, after the present incumbencies, fall to the presentation of the respective Bishops.

The ordinary expenditure of the corporate revenues of deans and chapters, the Commissioners find to be in general economical and moderate, and such as is required for the due performance of choral service, the care and maintenance of the fabric, and the decent propriety of a cathedral establishment; but they point out some differences in the scale of this expenditure in different places.

Sinecure Rectories.—The total number of these preferments is seventy-one, of which above thirty are in the patronage of the Crown or of ecclesiastical corporations. These should be suppressed, and the resources arising from them should be applied towards augmenting the existing provision for the cure of souls; due regard being had, in the first instance, to the wants of those dioceses in which the sinecure rectories are situate.

With respect to the probable extent of the fund applicable to the purpose of increasing the present provision for the parochial clergy, which may be derived from the different sources pointed out in this Report, although it is not possible to form an accurate estimate until the points which are reserved for further consideration shall have been finally settled, the Commissioners entertain a confident expectation that the amount will ultimately not be less than 130,000*l.* per annum.

It appears by the Liber Regis, compiled in the reign of King Henry VIII., that in several parts of England there are hospitals of ancient foundation which were at that time deemed promotions spiritual, and as such were charged with first fruits and tenths; although partaking also of an eleemosynary character. These establishments are, from the increase in the value of their possessions, capable of affording, in some instances, after amply satisfying the objects of the founders' bounty, the means of making a better provision for the cure of souls, in the parishes with which they are connected. The attention of the Commissioners, however, having but recently been called to them, they have no precise information either of their number, of the value of their possessions, or of the expenditure necessary for their proper maintenance.

Pluralities.—It appears that of 10,478 benefices, from which returns have been received, 297 are under 50*l.* per annum; 1629 are between 50*l.* and 100*l.* per annum; and 1602 are between 100*l.* and 150*l.*: so that there are 1926 benefices under 100*l.* per annum, and 3528 under 150*l.*, not taking account of the reductions even of these small values which have taken place since the returns were made.

On many of these benefices there is no glebe-house, nor do they furnish the means of erecting any. It is difficult, in many cases, to provide for the performance of the spiritual duties of very poor livings, except by entrusting them to the clergyman of some neighbouring parish. With

the evils, however, which may be supposed to result from such a state of things, there is this advantage—that it furnishes employment for young men, upon their first entering into the ministry, in the character of stipendiary curates; a regular supply of whom is indispensable to the efficiency and good order of the Established Church. Nevertheless, it has long been admitted that pluralities, if not wholly abolished, should be restricted within as narrow limits as the actual state of the Church will permit; and it is not unreasonable to expect that such restriction may lead to the augmentation of many of the poorer benefices, partly from private resources, and partly from the funds, which the operation of measures proposed by the Commissioners may render available to that purpose.

In determining the principles upon which the holding of benefices in plurality should in future be regulated, the Commissioners have had respect partly to distance and partly to value. With respect to distance, they are of opinion, that if an incumbent be permitted to hold two benefices, distant from each other not more than ten miles, he will be able, without inconvenience, to exercise an occasional superintendence and control over the benefice upon which he does not reside; the regular duties of which will be performed by his curate. With respect to value, the Commissioners recommend that no benefice of greater annual value than 500*l.* should be held in plurality with any other benefice, except in cases where the small value or large population of some neighbouring benefice may render it advisable that it should be held by the incumbent of a better endowed living. In such cases they recommend, that upon a statement made by the Bishop of the diocese to the Archbishop, and transmitted, with the sanction of his approval, to the Privy Council, it shall be lawful for the King in Council to allow such plurality.

The Commissioners recommend, that not more than two preferments of any description be held by the same person, except in the case of an archdeacon, who may be permitted to hold one benefice with cure of souls, and one canonry. They are of opinion, that the operation of a law, embodying these provisions, will, at no very distant period, have so far reduced the number of pluralities, as to leave no just ground of complaint on that score.

Union of Small Livings; Dissolution of existing Unions.—Where two benefices are contiguous to each other, each being of small value and population, the Commissioners think that it may, in many cases, be expedient to unite them, so as to form one benefice. This may now be done, under certain restrictions, by the Bishop, with the consent of the patron; but there exists a degree of uncertainty as to the circumstances under which it can be legally done, which it is desirable to remove by a more strict and precise limitation. On the other hand, some instances are to be found of unions, the constituent members of which are so circumstanced, with respect to value or population, as to render it desirable that they should be separated from each other, and made independent benefices. The Commissioners think that the King in Council, upon the recommendation of the Bishop, certified to his Majesty by such Commissioners as may be appointed for the purposes connected with the objects of this Report, should have the power of declaring that such separation shall take place, either immediately with consent of the incumbent, or if such consent be not given, upon the first avoidance of the benefice.

Power should be given to the King in certain cases, with the advice of the Privy Council, and with the consent of the Bishop and patrons, to alter the boundaries of parishes contiguous to each other.

Residence.—With respect to residence, the Commissioners are of opinion that it is not necessary to depart from the general principles of the statute 57 Geo. III., c. 99, which consolidated all the previous Acts relating to residence, and the employment of stipendiary curates by non-resident incumbents. But they think it expedient to make further provision for the enforcing of residence, by diminishing the number of exemptions, and the grounds of license of non-residence, which the Act in question allows; by limiting the period of legal absence in certain cases, and by giving additional powers to the Bishops, with respect to the appointment and payment of curates, and the repairs and erection of glebe-houses.

With reference to these subjects, pluralities, residence, and the employment of stipendiary curates, the Commissioners have prepared a Bill embodying the suggestions alluded to; repealing the present statute-law, and re-enacting its principal provisions, with such alterations and additions as appear necessary to carry those suggestions into effect. But they think it right to state explicitly their opinion, that the residence of the parochial clergy, to the extent which the interests of religion require, can only be secured by providing the means of augmenting poor benefices, and erecting glebe-houses. There are not less than 2878 benefices on which there is no house of residence, and 1728, the houses upon which are unfit for residence.

The Commissioners deem it right respectfully to repeat the observation made in their first Report, that in all their proposals they assume that vested interests will be respected, so far as regards the revenues and profits of persons actually holding any of the offices which will be affected by those proposals.

MILITARY PUNISHMENTS.

The Commissioners have presented their Report on the subject of military punishment, which has been ordered to be printed. The Commissioners directed their attention to the following points:—

"1. The regulations which have been adopted of late years in order to render the infliction of that punishment more rare than at former periods, and to diminish the extent to which it may be carried by the sentences of courts-martial.

"2. Whether some alteration in regard to the minor punishments now inflicted by the authority of the commanding-officers of regiments, both as respects the summary and effectual application of those punishments, and their power of submitting a wider range of offences to the judgment of a regimental court-martial than is at present permitted, might not tend to diminish the supposed necessity of recurring to corporal punishment in many instances, without endangering the maintenance of proper discipline.

"3. Whether the punishments that are now resorted to as substitutes for corporal punishment appear to have been effectual, and whether their substitution is likely to render an immediate and entire abolition of that punishment practicable and safe, or to hold out a hope that by a more stringent application of them, the necessity of its continuance may be gradually removed.

"4. Whether the infliction of corporal punishment may not be confined within still narrower limits than at present, both as to the number of lashes in the power of courts-martial to award, and as to the offences to which it may be applied; whether those offences may not be more clearly defined than they now are, and, also, whether the power of inflicting that punishment may not be limited to cases where the culprit has, for some previous misconduct, been in some way publicly degraded.

"5. Whether some system of rewards to the good and well-behaved soldier while in the service, either by promotion to commissions, by honorary distinctions, or otherwise, or by the prospect of some civil advantages combined with pension, or all of these, might not have the effect of inducing the parents and friends of the young men, of a better and more educated class of life than that of which the army is now composed, not only to consent to, but even to encourage their enlistment, and of thus improving the moral character of the army, so as to render the use of corporal punishment unnecessary."

The Committee conclude their Report in the following terms:—

"There now only remains for us to submit to your Majesty the conclusions which, in our judgment, are the results of the whole evidence.

"1. That it is the opinion of almost every witness whom we have examined, that the substitution of other punishments for corporal punishment in the British army, upon actual service and in the field, is impracticable, and if practicable, would be insufficient for the maintenance of proper discipline in your Majesty's service.

"2. That the abolition of the power of awarding corporal punishment, by sentence of court-martial in the British islands and the colonies, and during peace, and the retention of the power of inflicting that punishment when the army is on service and in the field, appears to us, for the reasons we have stated, manifestly unjust.

"3. That it does not appear to us that the punishments which have been resorted to as substitutes have hitherto had such an effect as to render it safe to abolish altogether that power in Great Britain or the colonies, nor have any other punishments been suggested to us that appear to promise a more favourable result.

"4. That it appears to us, that even supposing that some effectual substitute might be devised, or that those now in use might be made more effectual, so as to render corporal punishment ultimately unnecessary, it would be unsafe to proceed at once to abolish it entirely, and that even in that case its abolition should be gradual.

"5. That in order to give full effect to the punishments now in use as substitutes for corporal punishment, considerable alteration must be made in the means of rendering solitary confinement in the several barracks more effective, and that a certain number of prisons exclusively for military offenders should be provided as soon as possible.

"6. That, although we have been unwillingly convinced of the necessity of still retaining the power of corporal punishment, and in proportion to our conviction of that necessity, we earnestly recommend that no pains may be spared to endeavour to make its infliction less frequent.

"7. That, with the view of diminishing the frequency of this punishment, the offences to which it is limited, and the occasions upon which it should be resorted to, should be more clearly defined.

"8. That, with the same view, more discretion should be vested in commanding officers, as to the power of making use of minor punishments; and in determining on the offences which shall, under their orders, be tried by a regimental court-martial.

"9. That it appears to us that the extent of the sentences in the power of the several descriptions of courts-martial to award may, without danger, be more limited than at present.

"10. That encouragement should be given in the way of honorary reward and distinction, both to the gallant and to the well-conducted soldier.

"11. That no consideration of expense within reasonable bounds should be allowed to stand in the way of attending to the comforts of the soldier while in the service, and of a sufficient pension for the good and deserving man after that service has been performed.

"We cannot close our Report without assuring your Majesty that we find ample evidence of the earnest desire, and the most strenuous efforts, upon the part not only of the superior officers, but of officers of all ranks, so to conduct the discipline of the army as to render corporal punishment as rare as possible; and more especially we observe that the commanding officers are fully aware of your Majesty's gracious wishes in that respect, and we are satisfied that they will persevere in giving the fullest effect, by the strictest attention to the moral discipline of their regiments, to those wishes.

"How far the result of the inquiry in which we have, by your Majesty's command, been so long engaged, will tend to remove or mitigate the feeling which now prevails against the use of corporal punishment in the army, we know not; but we can assure your Majesty that we have endeavoured to sift the questions submitted to our inquiry fully and fairly, and without prejudice, and that we have formed our opinions upon the result of the very best evidence that could have been obtained upon the question.

"Finally, we feel it to be our duty to your Majesty to state our conviction, that if it were possible to introduce such a system of discipline as that of France into your Majesty's army (a system which in its effects we believe to be far from being as successful as that of Great Britain), it could only be by the establishment of such a rigorous conscription of all ranks as we believe would not be endured, and by a change in the whole tone of this country, as to the military service, such as we have no expectation of seeing effected.

"We humbly submit this, our unanimous Report, to your Majesty's royal consideration.

"WHARNCLIFFE. R. C. FERGUSSON.
"JAMES KEMPT. E. BARNES, Lieut.-General.
"SANDON. T. REYNELL.
"E. HYDE EAST.

"India Board, March 15, 1836."

REPORT OF THE CARLOW ELECTION COMMITTEE.

The following Report was presented to the House of Commons on Friday, March 11:—

"It appears to your Committee that the subject may be arranged under two heads, the first as relating to any traffic or agreement between Mr. Raphael and Mr. O'Connell for a seat in Parliament, and the second as to the application of the sum said to have been given.

"It does not appear to your Committee to be necessary for them to enter upon any detailed summary of the evidence, but they feel it their duty to draw the attention of the House very briefly to the main points as they bear upon the question.

"It appears that Mr. O'Connell addressed a letter, bearing date the 1st of June 1835, in which the agreement for Mr. Raphael's return for the county of Carlow for 2000*l.* was concluded; the Committee cannot help observing that the whole tone and tenor of this letter was calculated to excite much suspicion and grave animadversion, but they must add, that upon a very careful investigation, it appeared that previous conferences and communications had taken place between Mr. Raphael, Mr. Vigors, and other persons connected with the county of Carlow, and that Mr. O'Connell was acting on this occasion at the express direction of Mr. Raphael, and was only the medium between Mr. R. and Mr. V. and the political club at Carlow.

"It appears that the money was placed to Mr. O'Connell's general account at his banker's in London. It was, however, advanced, the moment it was called for, to Mr. Vigors; and though some of it was paid in bills, the discount was allowed; the amount, therefore, was available whenever wanted, and no charge of pecuniary interest can be attached to Mr. O'Connell.

"It appears also that this money had been expended under the immediate direction of Mr. Vigors, and others connected with the county of Carlow, in what may be called legal expenses, or so unavoidable, that your Committee see no reason to question their legality; and that the balance was absorbed in defending the return of Mr. Raphael and Mr. Vigors before the Committee appointed to investigate, on the 28th of July, 1835."

RESOLUTIONS OF THE HOUSE OF COMMONS ON RAILWAY BILLS.

ON the 22nd of February, a Select Committee was appointed "to inquire into the best modes by which information can be afforded to the House on the different Railway Bills;" and, on the 29th of February, the Committee presented its Report. It appears that there have been presented to the House fifty-seven petitions for railways, involving an estimated outlay of upwards of 28,000,000*l.*, and most probably an actual expenditure of many millions beyond this sum. To these petitions there appear 36,978 assents, 6575 dissents, and 7475 neuters. The Committee observes, that "the immense amount of national capital which is thus proposed to be embarked, as well as the great sacrifices which various landed proprietors, or occupiers, whose property may be affected by the proposed schemes, must be called upon to make, render the decision which Parliament may ultimately take upon these various Bills a matter of the utmost national importance." The calculations upon which it has been determined to apply to the Legislature may turn out to be fallacious, or the capitals subscribed, when called for, may not be forthcoming. The Committee remark that "it seems to be absolutely necessary that the House of Commons should, either by itself or through its Committees, institute a more rigid inquiry, than has hitherto prevailed, into the different plans; and that whilst no discouragement should be cast upon enterprise, which, if properly directed, cannot fail to be beneficial to the nation, the character of these undertakings should not be permitted to be sacrificed, nor the national capital thrown away, under the temporary excitement of the public mind which appears to prevail at this moment, through any want of due attention by the Committees, or of information in the House." Upon these principles the Committee framed a series of Resolutions, which were adopted by the House on the 1st of March, and will henceforth form the groundwork of legislating upon Railways. The resolution of the House was to the following effect:—"That Committees

on Railway Bills do inquire into the following matters, and report specially thereupon, when they report the respective Bills to the House." Then follow the Resolutions of the Committee, which we subjoin:—

1. As to the proposed capital of the Company formed for the execution of the project, and the amount of any loans which they may be empowered to raise by the Bill; the amount of shares subscribed for, and the deposits paid thereon, the names and places of residence of the directors or provisional Committee, with the amount of shares taken by each; the number of shareholders who may be considered as having a local interest in the line, and the amount of capital subscribed for by them, and the number of other parties, and the capital taken by them; a statement of the number of shareholders subscribing for 2000*l.* and upwards, with their names and residences, and the amount for which they have subscribed.

2. The sufficiency or insufficiency for agricultural, commercial, manufacturing or other purposes, of the present means of conveyance and of communication between the proposed *termini*, stating the present amount of traffic by land or water, the average charges made for passengers and goods, and time occupied.

3. The number of passengers, and the weight and description of the goods expected upon the proposed railway.

4. The amount of income expected to arise from the conveyance of passengers and goods, and in what proportion; stating also generally the description of goods from which the largest revenue is anticipated.

5. Whether the proposed railroad be a complete and integral line between the *termini* specified, or a part of a more extended plan now in contemplation, and likely to be hereafter submitted to Parliament, and to what extent the calculations of remuneration depend on such contemplated extension of the line.

6. Whether any, and what, competing lines of railroad there are existing, and whether any, and what, are in progress or contemplation, and to state, so far as circumstances will permit, in what respects the proposed line is superior or inferior to the other lines, if there be any.

7. To state what planes on the railway are proposed to be worked, either by assistant engines, stationary or locomotive, with the respective lengths and inclinations of such planes.

8. To advert to any peculiar engineering difficulties in the proposed line, and to report the manner in which it is intended they should be overcome.

9. To state the length, breadth and height, and means of ventilation, of any proposed tunnels, and whether the strata through which they are to pass are favourable or otherwise.

10. To state whether, in the lines proposed, the gradients and curves are generally favourable or otherwise, and the steepest gradient, exclusive of the inclined planes above referred to, and the smallest radius of a curve.

11. To state the length of the main line of the proposed line of the railroad, and of its branches respectively.

12. To state generally the fitness, in an engineering point of view, of the projected line of railroad.

13. If it be intended that the railroad should pass on a level any turnpike-road or highway, to call the particular attention of the House to that circumstance.

14. To state the amount of the estimates of the cost or other expenses to be incurred up to the time of the completion of the railway, and whether they appear to be supported by evidence, and to be fully adequate for the purpose.

15. To state what is the estimated charge of the annual expenses of the railroad when completed, and how far the calculations on which the charge is estimated, have been sufficiently proved.

16. Whether the calculations proved in evidence before the Committee have satisfactorily established that the revenue is likely to be sufficient to support the annual charges of the maintenance of the railroad, and still allow profit to the projectors.

17. The number of assents, dissents, and neuters upon the line, and the length and amount of property belonging to each class traversed by the said railroad, distinguishing owners from occupiers; and in the case of any Bill to vary the original line, stating the above particulars with reference to such parties only as may be affected by the proposed variation.

18. To state the name or names of the engineers examined in support of the Bill, and of those, if any, examined in opposition to it.

19. To state the main allegation of any petition or petitions which may have been referred to the Committee in opposition to the preamble of the Bill, or to any of its clauses; and whether the allegations have been considered by the Committee, and if not considered, the cause of their not having been so.

20. To state, in addition, any circumstances which, in the opinion of the Committee, it is desirable the House should be informed of.

"Unless specific replies be received to each of the foregoing questions, the House of Commons will not enter upon the consideration of any Railway Bill. The Clerks of Railway Bills are in future to take down the name of every Member attending the Committee on each day, and the name of every Member voting on any division of such Committee, distinguishing the side of the question on which the vote is recorded. The result is to be given in with the Report on the Bill.

The following is a list of Railway Bills for which petitions have been presented during the present Session, with the amount of capital proposed to be embarked in each:—

Title of Bill.	Capital.
Arbroath and Forfar	£600,400
Aylesbury	50,000
Birmingham, Bristol, and Thames Junction	150,000
Birmingham and Derby	530,000
Birmingham and Gloucester	945,000
Bolton and Leigh	3,400
Brandling	97,000
Bristol and Exeter	1,400,800
Chelmsford and Great Northern	200,000
Cheltenham and Great Western	750,000
Deptford	60,000
Dublin and Drogheda	600,000
Dublin and Kilkenny	710,000
Dundee and Arbroath	99,800
Dundee and Newtyle	
Durham Junction	50,000
Durham South-West Railway	
Edinburgh, Leith, and Newhaven	99,700
Festiniog	1,500
Garthernie and Coatbridge	6,000
Gateshead and Durham (or Great North of England)	660,000
Gateshead and Monkwearmouth	186,300
Glasgow and Airdrie	68,300
Glasgow and Falkirk Junction	138,000
Great Northern	3,000,000
Great Western (No. 1)	
Great Western (No. 2)	
Hayle	93,000
Hull and Selby	485,000
Leeds and Derby (or North Midland)	1,500,000
London and Blackwall	600,000
London and Blackwall (Commercial)	100,000
London and Brighton	1,000,000
London and Brighton (direct)	1,200,000
London and Cambridge	1,200,000
London and Croydon	
London and Dover (South-Eastern)	1,400,000
London and Gravesend	600,000
London and Norwich (Eastern Counties)	1,500,000
London Grand Junction	600,000
London, Shoreham, and Brighton	804,600
Manchester and Cheshire	700,000
Manchester and Leeds	1,300,000
Merthyr Tydfil and Cardiff	300,000
Midland Counties	1,200,000
Monkland and Falkirk	200,000
Newcastle and North Shields	120,000
Northfleet and Dover	1,000,000
Polloc and Govan	
Preston and Longridge	30,000
Sheffield and Rotherham	90,000
South Durham	150,000
Stockport and Manchester	230,000
Stonebridge Junction	100,000
Thames Haven	450,000
Ulster	496,000
York and North Midland	370,000
Total	£28,224,000

A Select Committee has been appointed "to consider the Standing Orders for Railroad Bills, and the conditions which it may be advisable to recommend for introduction into such Bills, with a view to a future Session of Parliament."

PAST AND PRESENT STATE OF CEYLON.

UNDER the auspices of the present Governor of Ceylon, a series of ameliorations have been introduced into the government of that colony, which are calculated, at no distant period, to produce results of the most gratifying description. A few years ago, almost every circumstance which can depress a nation, and stifle the germs of its prosperity, existed in Ceylon in all the vigour of unrestrained abuse. These evils have subsequently been attacked at their root; and a very brief interval has served to bring into gratifying contrast the former and present condition of the Cingalese. The change has simply been effected by a wise application of enlightened principles to the sources of mismanagement and injustice; and a political and social lesson of no small value may be learned by investigating the recent history of the island. From a pamphlet, entitled 'An Appeal in behalf of the Inhabitants of Ceylon,' written some time since, we gather the following details of the circumstances under which they were entitled to claim the beneficent sympathy of the mother-country. The facts we have selected are not extracted in the order in which they stand in the 'Appeal,' but are obtained from different portions of the pamphlet.

The island of Ceylon is situate at the western extremity of the Bay of Bengal. Its extreme length from north to south, is 270 miles; its average breadth about 100, and its greatest breadth 145 miles. The superficial area of the island is 24,664 square miles, and it is therefore nearly half the size of England. The number of inhabitants is under one million, the proportion to each square mile being about 40. The most rapid increase of population takes place in the maritime districts, in which the number of inhabitants was:— in 1814, above 475,000; in 1824, 595,105; and in 1831, 661,906.

Ceylon is described by the writer of the 'Appeal,' as endowed "with a great and more than ordinary portion of natural advantages,—with infinite varieties of soil, climate, and situation,—with vegetable and other indigenous productions, excellent in quality,—with navigable rivers, safe harbours, and every facility of internal and foreign communication." All the sources of a widely-extended prosperity were at hand, but they remained incapable of good. In the 'Appeal' it is earnestly asked, "How comes it to pass that Ceylon should continue poor? that its population should be so scanty? its commerce so contracted? its agriculture so depressed?" The reply is, that misgovernment, a long-continued system of blind monopoly, and arbitrary exaction, have caused these evils.

The revenue for 1831 amounted to 381,142*l.*, and the following were among the taxes composing it:—Salt, 27,891*l.*; land rents, 25,807*l.*; fish ditto, 7,773*l.*, sea customs, 64,102*l.*; cinnamon, 106,131*l.*

The tax on salt was from 500 to 1000 per cent. above the cost of its production. The land assessments and fish rent were farmed out to speculators, and by them collected in kind. High export duties were imposed on various articles of native growth and manufacture; heavy taxes on the importation of food and clothing; harassing tolls on all goods transported from one part of the island to another; capitation taxes; licenses for carrying on particular trades; licenses for gambling, &c. &c.

The operation of the salt-tax was particularly injurious; it interfered with the free enjoyments of the people, with the employment of many, and with the subsistence or comforts of all; it checked the fisheries, burdened agriculture, and dried up a rich source of commercial enterprise and public revenue. We learn from the report of Colonel Colebrook, that "in the salt districts of Ceylon the formation is most abundant in the driest seasons, when the crops are most liable to failure." At the period to which the writer of the 'Appeal' alludes, some districts which were once populous and thriving had been nearly deserted, owing to the restrictions on the salt trade. Ceylon abounds with salt, and these restrictions were, therefore, peculiarly unjust and impolitic. "Almost everywhere along the coasts, owing to the peculiar dryness of the atmosphere at certain seasons, and the rapid evaporation which always takes place after rain, formations of salt abound. From the deposits or "leways" of Hambantotte alone, where it crystallizes spontaneously, and is of the purest quality, any quantities might be collected, sufficient to supply not only the whole of Ceylon, but (as, indeed, is supposed to have been formerly the case) the greater part of the Malay Islands. Not is the cost of collecting and storing it great. In the Tangalle district it is only 1½*d.* a parrah (54 lbs.), and with attendant expenses does not exceed 4*d.*; at Colombo the united charges amount to 6*d.*; at Trincomalee, to 11*d.*; and at Jaffna to only 3*d.*

The land-rents were, in fact, a tithe or tenth of the gross produce, assessed on all lands in *grain*, and were annually farmed out to the highest bidder, by whom they were collected in kind, and often in a most oppressive manner. Some idea may be formed of the injurious operation of this impost, by the fact, that on its being commuted into a fixed payment in the provinces of Bahar and Orissa, in Bengal, the result was the doubling of the revenue, the increase of the indirect taxes nearly twelve-fold; and private property, which has been previously unsaleable, became worth sixteen years' purchase. This beneficial change was effected in 1793; the population, which was then 24,000,000, had increased to 34,000,000 in 1822.

The fish-rents were also a tithe, and were farmed out in the same manner as the land-rents. From the perishable nature of the article, and from the fishermen being forbidden to dispose of, or cure, their fish, until the farmer had taken his part, this tax was also a most oppressive one.

In 1831 the Customs amounted to 64,102*l.*; about two-thirds of which arose from imports, and the remainder from goods carried coastways or exported. Of the imports more than three-fourths consisted of grain and cotton cloths; and the duties levied on them amounted to about 14½ per cent. The exports, subject to duty, consisted of articles of native growth and manufacture, and had to pay a duty of about 35 per cent. One product, however, Areka nuts, was charged as high as 75 per cent.

The various monopolies established by the Dutch had been most prejudicial to the real interests of the Cingalese, as the following facts, adduced by the writer of the 'Appeal,' will show. The cost of producing cinnamon is about 6*d.* per lb. The Dutch were accustomed to purchase it at this price, and sell it for 11*s.* per lb. in the European markets. Competition, in spite of every effort to preclude or restrain its growth, increased. Malabar cinnamon and cassia, from their superior cheapness, began to vie, and at length supplant, the finer products of Ceylon; and the annual quantity exported from that island was, by degrees, reduced from upwards of 1,000,000 lbs. to less than 500,000 lbs. The high duty on Areka nuts had also driven the trade in this article from the island; and they were procured in great quantities from Sumatra, though of an inferior quality. The revenue levied on them in Ceylon declined, in consequence, from 10,329*l.* to 5301*l.* From the same cause, the revenue on the export of Chawa roots (a sort of dye) fell from 2000*l.* to 200*l.*; and that on the Chank fisheries, which formerly amounted to 6700*l.*, became reduced to 37*l.* a-year.

Among other causes which contributed to depress the interests of Ceylon may be named the following:—Injudicious regulations imposed on its ports and productions by Orders in Council and Acts of Parliament in the mother-country; and also the high duty imposed on every species of the produce of Ceylon when imported into Great Britain.

To these fatal checks to the progress of industry may be superadded the existence of a system of personal exaction amounting in its consequences to evils nearly as great as those resulting from complete slavery. The natives were subject to be called upon to contribute their services, almost gratuitously, for the construction of public works, to assist in transporting the baggage of any civil or military authority who might happen to be travelling; and, generally, to serve at the caprice of any native chief invested with authority, through whom alone the orders for compulsory labour could be distributed. Mr. Tufnell, who has recently noticed, in an incidental manner,* the

* Lecture at the Colchester Mechanics' Institute, by Henry Tufnell, Esq., pp. 32. Ridgway.

state of Ceylon, says,—"It is hardly possible for you, who live in this free country, to conceive the horrible oppressions to which this system of petty tyranny gave rise. It might be the time of harvest, when a short absence from the fields would cause the failure of the crops; yet this very reason might, perhaps, induce a chief to gratify some grudge against an unhappy labourer, by commanding his attendance, and thus destroying the fruits of a hard season of toil. Could it be wondered at (Mr. Tufnell asks) that a people who had no security for enjoying the reward of their industry, and were thus deprived of the chief motive for exertion, should relapse into a state of thoughtless indolence, and look forward to nothing beyond providing for the means of daily support?"

The present Governor of Ceylon, Sir Robert Wilmot Horton, was appointed to that office in 1831. Many abuses have been removed since his arrival, and many wise reforms introduced. Justice is better administered, and the laws have been improved. The law no longer recognises distinctions amongst the different classes of subjects. The cinnamon monopoly has been abolished, and, perhaps, the most important change of all, *compulsory labour* was abolished by an Order in Council, dated September 28, 1832. The natives are now eager to improve their numerous resources, and to follow in the track of civilization. Mr. Tufnell says, "Roads have been no sooner opened than they were crowded with the vehicles of commerce. The establishment of a savings' bank, although an institution of an entirely novel nature, was soon found out to be a safe and ready deposit for the savings of industry. The serf no sooner felt himself a *freeman*, than cultivation rapidly spread through the different districts: and, unless checked by some misfortune beyond human calculation, it is not too much to predict, that the once despised inhabitants of Ceylon will, in the course of a few years, attain a pitch of prosperity, which the most sanguine philanthropist could hardly have dared to anticipate."

ACCIDENTS IN MINES.

In the last session of Parliament a Select Committee was appointed to inquire into the nature, causes, and extent of the lamentable catastrophes which have occurred in the mines of Great Britain, with the view of ascertaining and suggesting means for preventing the recurrence of similar fatal accidents. It appears that the Committee did not obtain complete returns of inquests held by the Coroners on parties who had met with untimely deaths in the mines of England and Wales, but such as were laid before them gave a total of 954 persons who had perished by accidents in mines during the last twenty-five years. In the county of Chester there had been 7 lives lost by fire-damp and choke-damp; in Cumberland, 140; in Derby, 19; in Gloucester, 3; in Monmouth, 3; in Notts, 18; in Salop, 89; in Somerset, 1; in Stafford (one district), 104; in Warwick, 3; in York, North-Riding, 29; York, West-Riding, 23 by choke-damp, 93 by fire-damp; 230 other accidents not specified; in Brecon 15 ditto, 3 by explosions; in Flint, 39 by choke-damp and fire-damp; in Lancashire (no returns for several districts), 135, by choke-damp and fire-damp.—Total 954. The counties of Durham and Northumberland, it will be observed, are omitted in these returns, although they have been the scene of some of the most disastrous mine accidents. Indeed, while the Committee was sitting, a catastrophe of this kind took place at Walls-end colliery, between Newcastle-on-Tyne and Shields, by which, in an instant, 101 men and boys were killed. It appears, from "Local Records," a work published by Mr. John Sykes, of Newcastle, and which, it is believed, does not contain any overcharged statement, that, in the mines on the Wear and Tyne alone, there have perished, since 1710, not fewer than 1,600 persons, *viz.*—1,479 by explosions of fire-damp; 84 by inundations; 37 by other casualties. Of these, 1,125 lives have been lost since 1810; which, added to the previous list obtained from the Coroners, defective as it confessedly is, shows that the number of fatal accidents during a period of twenty-five years has been 2,070.

It is computed that, during a period of eighteen years previous to the introduction of Sir Humphry Davy's safety-lamp, 447 individuals lost their lives in the counties of Northumberland and Durham. The safety-lamp came into use in 1816; and, during a term of eighteen years since 1816, the number of fatal accidents in the above-mentioned district is stated to have been 538. The increase is accounted for in the following manner in the Report:—"The quantity of coal raised in the said counties has greatly increased; seams of coal, so fiery as to have lain unwrought, have been approached and worked by the aid of the safety-lamp. Many dangerous mines were successfully carried on, though in a most inflammable state, and without injury to the general health of the people employed in them. Add to this the idea entertained, that on the introduction of that lamp the necessity for former precautions and vigilance, in a great measure, ceased."

While fully recognising the rights of property, enterprise and labour, and confessing that the public interest has been served by the opening of the more dangerous mines, and the competition their working has created, the Committee ask the owners of these mines how far any object of pecuniary interest or personal gain can justify the continued exposure of men and boys in situations where science and mechanical skill have failed in providing anything like adequate protection? They suggest the expediency, in cases of accidents attended by the death of a large number of individuals, of a fit person or persons being selected by the chief justice of England, His Majesty's Coroner, in order to attend at the investigation. "From such a proceeding (the Report adds) results the most valuable to science and humanity might be obtained; the aim of justice would be still better secured; and to the public (particularly the relations of the deceased) the verdict would be delivered under the best possible recommendation, and with the highest sanction."

The means of preventing accidents arising in mines from the presence of noxious gases may be divided into three heads:—1. Ventilation; 2. Safety-lamps; 3. Maps or Plans.

1. Ventilation, by which is meant an adequate supply of atmospherical air, sufficient as an active agent to displace or change the character of deleterious gases. On ventilation, and the daily, unceasing, strict discharge of duty by every person engaged about the mines, from the scientific professional viewer down to the 'trapper,' (often a boy too young and thoughtless, who manages the air-door,) depends the safety of hundreds of men and boys, from minute to minute. One act of omission of assigned duty, one solitary, momentary neglect, may cause the instant destruction of life and property to an indefinite extent. The Committee reprobate the practice of placing wooden partitions or brattices in the ventilating shafts, as the slightest explosion may remove them, and destroy the whole system of ventilation. In pits where the seams of coal lie horizontally, or nearly so, a greater number of shafts for the injection of pure air, and the rejection of foul air, are required. It appears from the evidence that the foul and free air courses are frequently too near together; the communications not adequately protected; and the lengths of air-coursing being excessive, give opportunities for leakage, interruption, and contamination. The temporary and imperfect nature of the stoppings, sometimes mere heaps of small coal, inevitably produce dangerous consequences.

2. Safety-lamps; by the aid of which the miner is enabled to pursue his operations in situations where no naked light could be used. Many invaluable seams of coal never could have been worked without the aid of such an instrument. An ignorant and improper reliance, however, upon the safety-lamp, in cases attended with unwarrantable risk, has, it is believed, led to disastrous consequences. The miners do not doubt its protective character, but complaints are made that it affords too little light. The use of the lamp ought, in all cases, to be compelled by owners of coal-mines. Many improvements have been suggested calculated to extend the principle of the safety-lamp. One of these improved lamps, by Mr. Ayres, contains a suspended extinguisher, which descends on the flame immediately the gas inside the gauze is ignited. This lamp cannot be opened or interfered with without producing extinction. Another lamp, by Messrs. Upton and Roberts, appears, says the Report, to provide against all or nearly all the contingencies attending the Davy lamp. The novelties in this lamp are—the shape of the glass, the collar which regu-

lates the admission of air or gas to the cotton wick, and the double tissue of gauze beneath the wick, which prevents firing backwards.

3. Maps or Plans, accurately defining not only the mode of constructing the air-courses, but the entire of the workings; pointing out also the position of adjacent abandoned mines, which may have become reservoirs of gas or of water.

In addition, 'Roberts's safety-hood' may be mentioned as a means of preventing the loss of life in some cases of explosion. This instrument is made of wash leather, and stuffed with wool and horse-hair, so as to make it pliable round the neck, and impervious to the foul air from underneath. From the mouth there is an elastic pipe which comes a little way down, and at the end of the pipe a vessel containing a chemical preparation, calculated to neutralize even carbonic acid gas, so that a person might live for a whole day in an atmosphere which, without such apparatus, would be fatal to him in a couple of minutes. The practicability of saving life by this instrument, after explosions, when no hope remained, has been, says the Report, fully demonstrated.

The Committee confess that they have, in a great measure, failed in devising adequate remedies for the painful calamities they have had to investigate. They abstain at present from giving an opinion on the suggestions which were made to them on the expediency of continuing their inquiry in mining districts, by competent individuals, acting under authority. Although their Report does not suggest any particular plan by which the accidents in question may be avoided with certainty, great advantages will, no doubt, result from the circulation of the mass of evidence they have collected. The difficulty of making any legislative enactments for the protection of the miner is very great. The Committee express an opinion that "the great dissimilarity of the mineral stratifications of the kingdom, the constantly varying circumstances of particular mines, render it impossible, at present, to lay down any precise directions, or to form any rules of universal application."

The following extracts are from the concluding paragraphs of the Report:—"Your Committee are glad to find that increasing attention is paid to the moral culture and education of the mining population. From the establishment of associations similar to the Polytechnic School recently formed in Cornwall, as named by one or more witnesses, and the opportunity thus afforded of cultivating native talents, great advantages may be anticipated. * * * The Committee cannot express the sense they entertain of the responsibility incurred by the owners of mines generally: in their hands are the lives of a vast multitude of their fellow-creatures, industriously contributing to their personal, and our national, aggrandizement. It is the bounden duty of owners carefully and constantly to examine into the state of their mines: if this is not personally practicable, they ought to call for written daily reports from their subalterns, of every circumstance and event connected with the proper ventilation of the mine. * * * * * Every possible exertion should be made, every effort employed, to bring the workmen acquainted with their individual responsibilities, and those theories and principles, both as regards the lamps and proper ventilation, upon the observance of which their personal existence and that of their comrades are at stake."

MEDICAL EDUCATION.

In compliance with an Order of the House of Commons, a Return has recently been made of all the instructions which have been issued by the Company of Apothecaries in London, from the year 1815 to 1835 inclusive, for the observance of those students in medicine who have been, or may become, candidates for the license of the Company. It will be seen that the regulations have gradually become more strict, and that much has been done towards improving and rendering more perfect the education of medical men.

The first Regulation noticed in the Return is dated July 31st, 1815, and requires evidence of candidates having served an apprenticeship; also testimonials of good moral character, and of having attained the age of twenty-one years. Testimonials of having gone through the following course of theoretical and practical instruction were henceforth to be required of candidates presenting themselves for examination:—one course of lectures on chemistry, one on materia medica, two on anatomy and physiology, two on the theory and practice of medicine; six months' attendance on the medical practice of a hospital or infirmary, or nine months on that of a dispensary.

A resolution of the Court of Examiners, passed in September, 1827, regulated the order in which attendance should be given to the above courses of instruction, and prescribed, in addition, an extra course of lectures on chemistry, and the introduction of botany in the course on materia medica.

A resolution passed in September, 1828, increased the number of lectures both in chemistry, and materia medica with botany to two courses on each. The attendance required to be given on the physician's practice at a hospital was increased to nine months, and at a dispensary to twelve months; and two new courses of lectures were instituted,—on midwifery, and the diseases of women and children.

In October, 1830, the Court directed that candidates should produce proof of having devoted at least two years to an attendance on lectures and hospital practice. The following changes and additions in the courses were made:—one course was instituted on forensic medicine, one distinct course on botany, and therapeutics was included in the two courses on materia medica. The number of lectures which each course should include was defined, and students were earnestly advised to avail themselves of instruction in morbid anatomy. The Resolution of the Examiners also declared that candidates must also have attended for twelve months at least, the physician's practice, at a hospital containing not less than sixty beds, and where a course of clinical lectures is given; or for fifteen months at a dispensary connected with some medical school recognised by the Court.

In April, 1835, the Court of Examiners issued the following regulations:—That students whose attendance on lectures shall commence on or after the 1st of October, 1835, will be required to produce proof of having attended during three winter and two summer sessions, lectures in the following order, and medical practice from the commencement of the second to the termination of the third winter session. The winter medical session commences on the 1st of October, and terminates in the middle of April, with a recess of fourteen days at Christmas; the summer session commences on the 1st of May, and ends on the 31st of July. The course of the first winter session must be devoted to chemistry, anatomy and physiology, anatomical demonstrations, materia medica, and therapeutics. First summer session—botany, and such other branches of study as may improve the student's general education: second winter session—anatomy and physiology, anatomical demonstrations, dissections, principles and practice of medicine, medical practice of a hospital: second summer session—botany (if not attended during the first summer session), midwifery and diseases of women and children, forensic medicine, medical practice of a hospital: third winter session—dissections, principles and practice of medicine, midwifery with attendance on cases, medical practice of a hospital or dispensary. The sessional course of instruction in each respective subject of study is to consist of not less than the following number of lectures; namely,—100 on chemistry, 100 on materia medica and therapeutics, 100 on the principles and practice of medicine, 60 on midwifery and the diseases of women and children, 50 on forensic medicine, 50 on botany. The number of lectures on anatomy and physiology, and of anatomical demonstrations, must be in conformity with the regulations of the Royal College of Surgeons. The lectures required in each course respectively must be given on separate days. Students must present testimonials of having received instruction in practical chemistry during their attendance upon lectures on chemistry, materia medica, or forensic medicine, and also of having attended a full course of clinical lectures, and such instructions in morbid anatomy as may be afforded them during their attendance at a hospital. Students are required to attend the medical practice of a recognised hospital from the commencement of the second winter session to the termination of the second summer session, and from that time to the end of the third winter session at a hospital or recognised dispen-

sary. Every student henceforth to be required to produce proof of having dissected the whole body once at least.

On the 10th of November, 1830, very strict rules were issued respecting the registration of lectures, and hospital or dispensary attendance. The student is required to register every course of lectures he attends, until he has attended the required number. The registrar is to see the student write his own name in the proper space; he then examines the tickets which the student offers for registration, and enters the name of each lecturer in the column assigned to the branch of medical science on which he lectures, as well as the date of tickets, and the day of registration, each in its appropriated place.

EDUCATION AND LEGISLATIVE PROVISIONS FOR EDUCATION IN THE UNITED STATES.

The Appendix to Mr. Crawford's valuable Report on the Penitentiaries of the United States contains some interesting notes relative to education, and the public provision made for the support of common schools in that portion of America. The following are extracts:—

"There are three distinct kinds of legislative provision for the support of common schools in the United States, first, by taxation; secondly, by appropriation; and, thirdly, by the combination of both those resources.

"The plan of taxation has been adopted from the commencement by the Legislatures of New Hampshire, Massachusetts, and Vermont. In New Hampshire, the governor states, that 'the effect has been very salutary. Scarcely a single native citizen under forty years of age, of either sex, can be found, who has not been taught to read and write his native language. It has (he says) elevated the character of our population in point of intelligence and moral habits.' These remarks equally apply to the State of Vermont. Of the common schools in Massachusetts, Governor Lincoln reports, 'that the practical operation of the laws has been to secure, in every district and village of the commonwealth, the means of regular instruction to children in the elementary branches of learning; and where there was wealth and population to justify the occasion, the establishment and support of schools of competent character to prepare youth for admission to college, or to enter upon the active business of life. Certain it is (he adds) that there has never been any want of interest manifested here, either in raising a sufficient amount of money, or in attending to its most useful application.'

"Connecticut and Rhode Island present illustrations of the second plan, the effect of which has been thus described by Dr. Wayland, the respected president of Brown University, Providence:—'It is generally supposed that legislative effort should be directed to the accumulation and distribution of large funds to be appropriated for this object. I am disposed to believe that this opinion is erroneous. Funds are valuable in this case, as a condiment, not as an aliment. They should never be so large as to render a considerable degree of personal effort on the part of the parent unnecessary. The universal law of Divine Providence in the distribution of its favours is the *quid pro quo*. The adoption of any other, except in the case of absolute helplessness, is, so far as I have observed, pernicious. A fund is only useful in this sort of case, in so far as it induces men to help themselves. If they will help themselves without it, so much the better. As soon as they are aware of the value of education, and it has elevated them to a certain point of moral acquisition, they will not want it; nay, if it be continued after they have arrived at this point, I think it may be injurious in its effects.' This view of the effect produced by the establishment of permanent funds for the support of schools is also confirmed by the experience derived in Connecticut. 'A public fund (observes a distinguished member of the Legislature—the Hon. R. M. Sherman) for the instruction of youth in common schools, is of no comparative worth as a means of relieving want. A higher value would consist in its being made an instrument for exciting general exertion for the attainment of that important end. In proportion as it excites and fosters a salutary zeal it is a public blessing. It may have, on any other principle of application, a contrary tendency, and become worse than useless. It has been seriously questioned whether the school fund has been a curse in Connecticut. It has furnished a supply where there was no deficiency. Content with the ancient standard of school instruction, the people have permitted the expense of sustaining it to be taken off their hands, and have aimed at nothing higher.' They expended about an equal sum before the school fund existed.'

"New York, by the combination of both plans, has advanced more rapidly in education than any other State in the Union. This system aids those who tax themselves, exactly in proportion to their contributions.

"The plan of providing for education by means of funds or annual grants from the treasury has been adopted by several States. In the west, a section of land in each township is appropriated to the support of schools, either by the State or by the United States.

"Pennsylvania, Virginia, South Carolina, and Louisiana have made annual grants for the instruction of the 'poor.' This distinction in favour of the 'poor' has been considered invidious and fatal to the success of the system. On this point the superintendent of common schools in the State of New York observes, 'the radical difference between our school system and the provisions for instruction in Pennsylvania and Virginia is, that ours embraces the whole population, and theirs only the 'poor.' To this, more than to any single cause, may be subscribed the success of our plan, and the failure of theirs.'

"Mr. Mercer, of Virginia, in a discourse on popular education, delivered at Princetown, New Jersey, states, that Virginia and New York almost at the same moment provided and set apart a permanent fund for primary or common schools. In Virginia, a sum of 45,000 dollars is annually appropriated to the counties, and a portion for each county is placed at the disposal of the commissioners, annually appointed by the respective courts, and charged with the application of the sum received by each, to the education, by such schools as may be found to exist, of the children of those parents who are unable to pay for their instruction. The entire number of children benefited by the fund, during certain portions of the last year, is but about 10,000, being less than a moiety of the total number reported to be in a condition to require, for their education, public aid.' In New York, with only double the sum, education is provided for 500,000 children.

"The success of the New York system is in no small degree to be attributed to the appointment, by the government, of an officer to attend to the management and distribution of the fund. The example of New York has, in this respect, been followed by the State of Maryland, with every prospect of success.

"Although in every State some legislative provision exists for elementary instruction, its extent is, with the exception of New England and New York, far from being adequate to the wants of the population, and even where schools abound, their usefulness is not unfrequently impaired by defective management and the incompetence of teachers."

The following facts, taken from the detailed reports of the educational system pursued in each State, illustrate the truth of the above remarks on the operation of each of the three different modes of instituting a provision for the purposes of education. In 1833, public opinion becoming dissatisfied with the existing system of education in Pennsylvania, a joint Committee of the two Houses of Legislature was appointed to investigate the question. In the Report which they published, the Committee stated that the number of voters in the State unable to read had been computed at 100,000, and that about 2500 persons become voters annually, who were equally ignorant. Assuming the census of 1830 as a basis, they say—"We have 635,849 children under twenty years of age; between 400,000 and 500,000 of these are by the constitution placed under the guardianship of the Legislature. Of these, by official returns made last year to the secretary of the commonwealth, only 17,462 are now receiving (and that nominally perhaps) instruction *gratis*." The cause of this was the invidious distinction between rich and poor. The feelings of the poorer classes would not permit them to enrol themselves as *paupers*, in order that their children might receive their education from the charity of the State. The average number of children at all the schools in the State in any one year was only about one in three.

In the State of Kentucky, a thirty-sixth part of each township has been granted for school purposes by the United States' government, by the sale of which a consi-

derable fund has been accumulated, but no part either of the capital or interest has been applied in promoting the education of the poor. In 1830 there were 143,738 children in this State between the ages of five and fifteen, and 103,337 of them did not attend any school; and according to tables drawn up from official sources by President Peers, of Lexington, it appears that in ten counties of this State, containing about 10,000 children of the above-mentioned ages, the proportion at school was as follows:—Morgan county, none in 893; Russell, 10 in 300; Clay, 10 in 180; Perry, 10 in 180; Pike, 10 in 140; Laurel, 10 in 140; Harlam, 10 in 130; Knox, 10 in 100; Cumberland, 10 in 90; Carcy, 10 in 95. In ten other counties of the same State, containing about 28,000 children, aged from five to fifteen, the proportion was as follows—10 in 23, 26, 28, 30, 34, 34, 36, 36, 40, and 10 in 42. These counties contained the largest proportion of children at schools.

Mr. Crawford repeats, on the authority of the American School Agents' Society, that in five States, viz., Pennsylvania and Kentucky (the two above-mentioned), with Tenessee, Indiana, and Illinois, there are at least 600,000 children who have no ordinary means of elementary instruction, making, on the average, nearly one-fifth of the whole population of these States. The adolescent population of Maryland, Virginia, North and South Carolina, and Ohio amounts to 803,219, and it is believed that the numbers instructed in these States do not exceed the average proportion of those in Pennsylvania and Kentucky, and this would leave two-thirds, or 462,000 children, without schools. Mr. Crawford remarks:—"How far the employment of private instruction among the higher classes of some of these States may vary this estimate, it is impossible to judge." "The remainder of the Western States and territories," he continues, "cannot be supposed to be better supplied than Tenessee and Indiana: of 190,000 children in these States, above 150,000 are stated to be destitute of elementary instruction. According to this principle of calculation, there is reason to believe that there were in 1830, in the States south and west of New York, 1,210,000 children without the benefits of education. With the rapid increase of those States, amounting to 45 or 50 per cent. in ten years, the amount cannot be correctly estimated at less than 1,400,000 in the whole United States."

The children of the coloured population are not included in this estimate. In Georgia, where the slave population amounts to nearly a quarter of a million, they are prohibited by law from receiving any degree of education; and it is not more than three or four years since a few clergymen were committed to the penitentiary, for endeavouring to impart religious instruction to people of colour. The slave population of South Carolina is 315,665, and the number of children under ten years of age above 100,000, who are precluded by the law from participating in the benefits of education. Mr. Crawford states, in his Report, that—"A law has recently passed, even in Connecticut, discouraging the instruction of coloured children introduced from other States; and in the course of last year (1834) a lady, who had with this view established a school for such children, was prosecuted and committed to prison."

The slave population amounted, six years ago, to upwards of 2,000,000; and Mr. Crawford computes the number of their children, and those of free persons of colour, at about 500,000. If this number be added to the 1,400,000 children already mentioned, it will be found that the youth entirely destitute of instruction in the States south and west of New York, do not amount to less than 1,900,000. While, therefore, in the six New England States the benefits of elementary education are universally diffused, in the other parts of the American Union, scarcely more than one-fifth of the rising generation, of a suitable age, have the opportunity of attending schools.

PARLIAMENTARY REGISTER.

LIST OF BILLS BROUGHT IN.

(Exclusive of Private Bills.)

HOUSE OF LORDS.

Bills which have received the Royal Assent:—

1. Exchequer Bills.
2. Transfer of Aids.
3. Dean Forest.
4. Tchitchagoff's Naturalization.
5. Slaves' Compensation.
6. Capital Punishments Amendment Act.
7. Farnborough Road.
8. [illegible] Union Gas.
9. [illegible] Inclosure.
10. Steph[illegible] Naturalization.

Bills brought in:—

March 1. Bill for imposing certain restrictions on the renewal of leases by ecclesiastical persons.—*The Archbishop of Canterbury.*

— 4. Bill to make provision for the better administration of justice in certain of his Majesty's West India Colonies.—*Lord Glenelg.*

— 17. Bill to simplify the transfer of property.—*Lord Lyndhurst.*

ing to persons dying intestate and without kindred, and for rendering alienable at law copyhold lands severed from a manor, and for enabling his Majesty to make grants of lands and chattels in certain cases.—*The Attorney-General.*

LIST OR COMMITTEES APPOINTED.

(Exclusive of Committees to consider Bills).

HOUSE OF COMMONS.

Feb. 22. Committee "to inquire into the best modes by which information can be afforded to the House on the different Railway Bills."

— 25. Committee "on the law relating to the determination of the right of voting, and the trial of controverted elections."

March 1. Committee "to consider the Standing Orders for Railroad Bills, and the conditions which it may be advisable to recommend for introduction into such Bills, with a view to a future Session of Parliament."

— Committee "to investigate the subject of tolls and turnpike trusts in Great Britain and Ireland."

— 3. Committee "to inquire into the supply of salt for British India."

— 11. Committee "to consider of the expediency of amending the laws relating to prisons, and to report their opinion thereupon to the House."

— 22. Committee "to inquire into the working of the apprenticeship system in the colonies, the condition of the apprentices, and the laws and regulations affecting them which have been passed."

— Committee "to inquire into the alleged deficiency of protection for ships on the north-eastern coast of England, and the propriety of admitting of contribution of passing tolls for the maintenance of harbours of refuge on that coast."

NEW MEMBERS.

South Leicestershire.—C. W. Packe, Esq, in the room of T. F. Turner, Esq.

Clonmel.—N. Ball, Esq., in the room of J. D. Ronayne, Esq.

Paisley.— — Hastie, Esq., in the room of Captain A. G. Spiers, accepted Chiltern Hundreds. The election was contested, and the poll closed as follows:—Mr. Hastie, 680; Mr. Aytoun, 529: majority, 151.

ABSTRACTS OF RETURNS PRESENTED TO PARLIAMENT.

State of the Inquiry into Public Charities.—The following is an abstract of a Return relative to the Public Charities' Inquiry in England and Wales, dated May, 1835, which was ordered to be printed on the day previous to the close of the last session:—The total amount of the money which has been paid by the Treasury, on account of the Inquiry, from 1818 to 1835, is 208,527*l.* 13*s.* The proceedings under the Commission have terminated in twenty-eight counties of England, and six of Wales. In the counties of Berks, Dorset, Essex, Kent, Middlesex, and Sussex, the Inquiry is not yet completed. In Berkshire, Kent, and Sussex, the charities for education only have been investigated. In Dorsetshire, 56 parishes, townships, and chapelries have been investigated; in Essex, 52; and in Middlesex, 88. The Return states that there are no means of forming a definite opinion as to the extent to which these counties are unfinished. In addition to the above-mentioned six counties, the cities of London and Westminster, and the charities under the management of the chartered companies of London, are not finished. In the city of London, the charities of 140 parishes, and the education charities in two others; and in the city of Westminster, the charities of three parishes, and the education charities of four others, have been investigated The charities under the management of the corporation of London, and of thirty-nine chartered companies, have been investigated. In the following counties the Inquiry is not yet commenced:—in England,—Cambridge, Chester, Cornwall, Hereford, Leicester, Lincoln; in Wales,—Brecon, Denbigh, Flint, Glamorgan, Montgomery, Radnor. The number of charities investigated in each county in England is as follows:—Bedford, 270; Berks, 89; Bucks, 700; Cumberland, 311; Derby, 1,053; Devon, 1,736; Dorset, 172; Durham, 345; Essex, 324; Gloucester, 996; Hereford, 17; Hertford, 698; Huntingdon, 226; Kent, 139; Lancaster, 1,181; London—parishes, 947; also charities under the management of the corporation of London, and of the chartered companies, 665; and in Middlesex, including the city of Westminster, 925; Monmouth, 235; Norfolk, 1,710; Northampton, 721; Northumberland, 170; Nottingham, 567; Oxford, 849; Rutland, 70; Salop, 743; Somerset, including Bristol, 1,621; Southampton, 553; Stafford, 1,124; Suffolk, 986; Surrey, including Southwark, 837; Sussex, 90; Warwick, 1,030; Westmoreland, 355; Wilts, 750; Worcester, 930; York, 2,603; general charities, 13.—Total, 20,751. In Wales—Anglesey, 277; Cardigan, 36; Carmarthen, 139; Carnarvon, 192; Merioneth, 140; Pembroke, 196.—Total, 890.

National Vaccine Institution.—The last report from this establishment contains the following information:—The deaths from small-pox within the Bills of Mortality were only 334 in the preceding year; a number considerably less than any year since the introduction of vaccination, and falling short, by at least 4,000, of the average of deaths annually by small-pox before the protecting influence of the cow-pox was promulgated, even when the population of London was at least one-fourth less than its present amount.

Exports of British Produce and Manufactures from the United Kingdom.—An Account of the Exports of the principal Articles of British and Irish produce and Manufactures, in the Year ended 5th January, 1836, compared with the Exports of the preceding Year, ended 5th January, 1835:—

ARTICLES.	Declared Value of the Exportations in the years ended 5th Jan. 1835. £	1836. £
Coals and culm	220,746	212,369
Cotton Manufactures	15,302,571	16,394,590
—— Yarn	5,211,015	5,709,044

Military Discipline.—A "confidential circular" was issued from the Horse Guards, in August, 1833, to all officers commanding regiments, calling their attention to the subject of corporal punishment. The circular was to the following effect:—"His Majesty's Government having signified to the General commanding in chief the King's commands, that, until further orders, corporal punishment may be applied to the following offences only. I have the honour to express Lord Hill's desire that you guide yourself accordingly, taking care that, except in the instances herein specified, the said punishment shall on no account be inflicted,—namely, 1st For mutiny, insubordination and violence, or using or offering violence to superior officers, 2nd Drunkenness on duty, 3rd Sale of, or making away with arms, ammunition, accoutrements, or necessaries, stealing from comrades, or other disgraceful conduct." The circular added "It will, doubtless, occur to you, that the object of these instructions is not to render the infliction of corporal punishment, for the future, more frequent or more certain than it is at present, even in the cases to which it is now to be restricted, but, on the contrary, that the intention is to restrain it as much as it may be possible to do so with safety to the discipline of the army." The above circular was laid before the House of Commons, on the motion of Mr Bradshaw, the Member for Berwick, who at the same time moved for a Return of the number of courts martial which had taken place for eighteen months previous to its being issued, and a like return for the eighteen months subsequent thereto, also for a Return of the number of non commissioned officers and soldiers confined in gaols and houses of correction for each of the aforesaid periods. The following is an abstract of these Returns.—Number of courts-martial in the eighteen months preceding the month of August, 1833, 7027, in the eighteen months subsequent thereto, 7639. Number of non commissioned officers and soldiers confined in gaols and houses of correction during the former period, 1935; during the eighteen months subsequent to the circular being issued, 3018.

Attestation of Wills.—A Parliamentary Return has been printed, exhibiting the number—first, of unattested wills, second, of wills attested by one witness only, which were proved in the several Provincial Diocesan and Archidiaconal Courts of England and Wales, in the years 1832 and 1833. The following abstract comprises the number of both classes for the two years:—St. Asaph, 3; Bangor, 3; Bath and Wells, 3; Bristol, 9; Canterbury, 1,156; Carlisle, 3; Chester, 49; Chichester, 7; St. David's, 6; Durham, 16; Exeter, 51; Gloucester, 7; Hereford, 8; Llandaff, 2, Lichfield and Coventry, 30, Lincoln, 11; London, 58, Norfolk, 1, Northampton, 1; Norwich, 14; Oxford, 1; Peterborough, none, Rochester, 1; Salisbury, 7, Suffolk, 8; Winchester, 5; Worcester, 2; York, 51.—Total, 1,513; or 756 for each year. The unattested wills to those attested by one person only, are, in the Prerogative Court of Canterbury, in the proportion of about 2 to 1; *viz.*, in 1833, 399 of the former, and 202 of the latter.

English Aid to Spain.—The stores, &c, furnished by the English Government to that of Spain consist of 220,200 muskets, 10,000 swords, 10,000 carbines, 3000 rifles, 3600 pistols, and 8,000,000 small arm cartridges; 900,000 lbs. powder in 27,783 chests and barrels, one 18-pounder iron gun, six 18 pounder carronades, 30 muskets, 40 pistols, 10 swords, ammunition, shot, &c, for the schooner *Isabella*; two 18 pounder iron guns, four 32 pounder carronades, 24 muskets, 24 pistols, 24 swords, ammunition, shot, &c, for the steam-ship *City of Edinburgh*, six 32-pounder iron guns, 80 muskets, 10 pistols, 100 swords, 40 pikes, with ammunition, shot, &c., for the steam ship *Isabella II.* The stores, &c, furnished to the Auxiliary Legion are—15,000 muskets, 1200 carbines, 850 pistols, 1000 swords, 600 rifles, 5,280,000 small arm cartridges; 16,720 cannon cartridges, 18 brass guns, 936 rockets, 10,892 fusees, 12,106 shot and shells, 54 carriages for guns and rockets, 28 waggons and carts, 392 sets of harness, 15 tents, with bedding, &c. The value of these articles is 386,777*l*., no part of the payment of which has been received by the Ordnance Department.

Coasting Trade of the United Kingdom.—The number of vessels employed in the intercourse between Great Britain and Ireland, entered inwards in 1834, was 10,0[illegible]6; tonnage, 1,100,389: in 1835 there were 10,116 vessels; tonnage, 1,138,147. The number of vessels cleared outwards in 1834 was 14,560, tonnage, 1,140,617: in 1835 there were 14,608 vessels, tonnage, 1,473,255. Of other coasting vessels, 112,114 entered inwards in 1834; tonnage, 9,050,769. In 1835 the number of vessels entered inwards was 111,213, tonnage, 9,050,769. Coasting vessels cleared outwards in 1834, 116,131 vessels; tonnage, 8,892,632; in 1835, 115,144 vessels; tonnage, 9,187,075. Total of the coasting trade of the United Kingdom:—in 1834, entered inwards 122,440 vessels; tonnage, 9,874,715: and in 1835, 121,329 vessels; tonnage, 10,188,916. Cleared outwards in 1834,—vessels, 130,691; tonnage, 10,333,249: in 1835, 129,752 vessels; tonnage, 10,660,330.

Spirit Dealers.—The [illegible] Return of the number of retail spirit [illegible] benefited

by the Act of last Session:—Total number of dealers benefited in the United Kingdom, 21,635; total amount of relief, 33,187*l.* 12*s.*; namely, in England, 17,423 dealers relieved to the amount of 28,172*l.* 16*s.*; in Scotland, 1596 dealers relieved—1853*l.* 15*s.* 6*d.*; and in Ireland, 2616 dealers—3161*l.* 0*s.* 6*d.* The number of dealers in the United Kingdom whose licenses have been charged 2*l.* 2*s.* instead of 3*l.* 3*s.*, is 13,562; 4*l.* 4*s.* instead of 6*l.* 6*s.*, 6853; 6*l.* 6*s.* instead of 9*l.* 9*s.*, 598; 7*l.* 7*s.* instead of 11*l.* 0*s.* 6*d.*, 207; 8*l.* 8*s.* instead of 12*s.* 12*s.*, 216; 9*l.* 9*s.* instead of 14*l.* 3*s.* 6*d.*, 77; and 10*l.* 10*s.* instead of 15*l.* 12*s.*

MISCELLANEOUS.

Bankruptcy Analysis from Feb. 20 to March 20.

Banker, 1; bill-broker, 1; boarding-house keeper, 1; bookseller, 1; boot and shoe maker, 1; brewers, 3; brick-maker, 1; builders, 2; butchers, 4; button-maker, 1; carpenters, 2; carrier, 1; cattle-dealer, 1; clock-maker, 1; clothiers, 2; coach-maker, 1; coal-merchant, 1; collier, 1; corn-dealers and merchants, 4; corn and coal merchant, 1; corn-miller, 1; draper, 1; druggist, 1; drysalter, 1; eating-house keeper, 1; factor (Birmingham), 1; factor (Blackwell Hall), 1; furrier, 1; glass-manufacturer, 1; glass and earthenware dealer, 1; grocers, 2; hatters, 3; hemp and flax dealer, 1; horse-dealer, 1; iron-founder, 1; iron-monger, 1; lamp-dealer, 1; linen factor, 1; livery-stable keeper, 1; linen-factor, 1; merchants, 2; millwright 1; oilmen, 2; plumber, 1; rope-maker, 1; sacking-manufacturer, 1; scrivener, 1; seed-merchant, 1; ship-agent, 1; shipwright, 1; sugar-refiner, 1; surgeon, 1; tailor, 1; tanner, 1; tobacconist, 1; wine-merchants, 5; wine and porter merchant, 1; woolstapler, 1; victuallers, 4.—Total, 86; from the 28th of December, 235.

Corn and Grain.—Average prices per quarter in England and Wales, from 'The London Gazette,' of Friday, March 18:-

	Wheat.	Barley.	Oats.	Rye.	Beans.	Peas.
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*
Week ending March 11 ...	45 0	29 4	21 5	32 5	35 5	33 11
Average of last six weeks .	42 0	29 2	20 7	29 0	34 8	33 8
Duty on foreign corn.....	44 8	18 4	16 9	25 9	18 3	19 9

In the last 'Companion' the rise in the prices of corn was briefly alluded to. A comparison of the average prices published during the present year will show, that since the 1st of January, a rise of 9*s.* per Imperial quarter, or 25 per per cent., has taken place in wheat. The weekly averages published in the 'Gazette' of Jan. 1, were 36*s.* per quarter; Jan. 22, 37*s.*; Feb. 19, 39*s.* 7*d.*; and March 18, 45*s.*

Bank of England.—Account of the Liabilities and Assets of the Bank of England, from the 15th December, 1835, to the 8th March, 1836, inclusive:—

Liabilities.		Assets.	
Circulation	£17,739,000	Securities	£29,806,000
Deposits	16,966,000	Bullion	7,701,000
	£34,705,000		£37,507,000

Price of Consols.—The following are the closing prices of the Three per Cent. Consols for Account on each of the undermentioned days:—

Feb. 27.	March 5.	March 12.	March 19.
92	91⅞	91⅛	91⅞

Sugar.—Average price of Brown or Muscovado Sugar per cwt., computed from the returns published in the *London Gazette*:—

Weeks ending	February 23,	38*s.* 7½*d.*
„	March 1,	40*s.* 8½*d.*
„	March 8,	40*s.* 3¾*d.*
„	March 15,	39*s.* 2½*d.*

CHRONICLE OF OCCURRENCES.

Feb. 4.—Death of Sir William Gell, the classic antiquary and topographer, at Naples, aged 59.

24.—At the annual general meeting of the proprietors of the London University, it was stated, that the delay of the proposed charter had been solely occasioned by the desire of Ministers to arrange the details with the requisite degree of care. It was announced for the first time since the formation of the Institution, that the receipts for the past year were more than sufficient to cover the expenses both ordinary and extraordinary. A second donation of 1000*l.* had been presented by an unknown friend of the University, to be employed, as the preceding one, in accordance with the suggestions of Lord Brougham.

March 3.—The propositions of the Lord-Lieutenant for a modification of the rules of the Dublin Society were taken into consideration at a general meeting of the members. The proposal that a majority of members, instead of two-thirds, should be sufficient for the admission of candidates, was rejected; and the proposition for a "governing council," instead of "house committees," was also rejected by a majority of 61—the numbers being 79 to 18. All the other material propositions of the Government were likewise rejected. In the House of Commons, on Wednesday, March 23, a Select Committee was appointed to "inquire into the administration of the Royal Dublin Society, with a view to a wider extension of the advantages of the annual Parliamentary grant to that Institution."

4.—At a meeting of 150 of the principal newspaper dealers in London, the following, among other resolutions, were agreed upon:—That if the stamp-duty were totally repealed, it would be necessary either to create a new and expensive machinery for circulating newspapers throughout the kingdom, or to charge a postage for their transmission through the Post-Office. That from a long practical acquaintance with all the details connected with the transmission of newspapers, this meeting is of opinion that any plan of charging postage upon a newspaper, except through the medium of a stamp upon the newspaper itself, will shackle and injure the free circulation, and will lead to many evasions of the postage; while, on the other hand, if the postage be included in the stamp, so that a stamped newspaper may be sent postage free to every part of the British dominions, the circulation of newspapers will be unshackled, and the Treasury will be protected from loss. The last resolution stated, that of those newspapers, delivered in the towns where they are printed, a very large proportion are sent by post from one friend to another; and it is conceived, that as a public measure, it would not be just, by imposing a postage on newspapers, to sacrifice the convenience of many for the benefit of a few.

7.—A highly-respectable meeting, composed of about 4000 individuals, was held at the Guildhall, for the purpose of petitioning Parliament for the repeal of the newspaper stamp-duty. The platform was occupied by the four City Members, Mr. O'Connell, Mr. Hume, Mr. Roebuck, Mr. Wallace, Mr. Buckingham, Mr. T. Duncombe, Colonel Thompson, Mr. Scholefield, Sir William Molesworth, Mr. Humphery, Mr. Wilks, Dr. Bowring, and Mr. Wakley, all Members of Parliament.

11.—At the licensing meeting for Marylebone, the magistrates refused to grant licenses to all dram-shops within the parish not having tap rooms.

12.—A public meeting, expressive of sympathy for the late conflagration at New York, was held at the Freemason's Hall. The meeting was addressed by Lord Dudley Stuart, Colonel L. Stanhope, Messrs. O'Connell, Buckingham, Ewart, Dr. Bowring, and Mr. Sheridan Knowles.

13.—The *Lady Jane*, one of the missing whalers, arrived at Stromness, having on board the crew of the *Mary Frances*. The crews of the two vessels, which consisted in December of 64 individuals, had been reduced by death to 42, of whom 30 were in a condition of utter helplessness. The *William Tow* is the only vessel now unaccounted for.

15.—The appointment of Dr. Hampden to the Regius Professorship of Divinity in the University of Oxford, having excited an unusual degree of feeling among a portion of the resident members, a convocation was summoned for the purpose of procuring the adoption of a resolution, suspending, during the pleasure of the academic body, the privilege of the Regius Professor to form one of the Select Board for appointing University preachers, and examining into the opinions expressed in the University pulpit. The charge alleged against Dr. Hampden was, that he entertained heterodox principles, but his inaugural address on Thursday, March 17, contained ample proof of the fallacy of such notion. Moreover, the proctors of the University have put their *veto* on the proceedings of convocation, and thus the strong opposition which the appointment had excited in the minds of some members of the University has not been productive of any practical result, so far as Dr. Hampden is concerned.

THE METROPOLITAN BRITISH & FOREIGN CLOTHING ESTABLISHMENT,

LONDON. 97, FLEET-ST.

GEORGE DAVIS' BOUDNEY.

In remarking on his FIRST-RATE QUALITIES,

G. D. D. respectfully addresses Gentlemen who have hitherto found it necessary to pay extravagantly high prices for really First-rate Clothes; to such he guarantees a **DRESS COAT** of any colour—as stylish in make, as tasteful and talented in cut, and as good in quality, as any bearing the names of the most expensive and favourite Fashionable Houses, for £3 0
Surtouts, including, of course, Silk linings 3 10
Black and Blue, 10s. extra on each
Buckskin Trousers, on G. D. D.'s new principles of Measurement, 1 8
Waistcoats 14
Ladies' Riding Habits... ..... 6 6

These will be found of that character which has raised this Establishment to such eminence in the estimation of the higher circles, where nothing short of **easy gentlemanly elegance** could be tolerated.

THE SECOND-RATE QUALITIES

Are especially recommended for Business and Travelling Clothes; also, to the **ECONOMIST** they are found preferable to the first on account of their Superior Durability, while in appearance none but the Connoisseur could discover a difference, excepting by comparison, in short, they are frequently substituted at other Houses for the Best. The Prices are, for **DRESS COATS**, of any colour (Style and Fit First-rate) £2 5
Surtouts, including Silk linings, 2 10
Black or Blue, 5s. each extra
Trousers 1 1
Waistcoats 10
The Army Blue Spanish Cloak, forming a circle of 9 yards round the bottom—the best Travelling Cloak that is made 2 10
A good Cloth ditto, with Fur Collar, and Cape—9 yds round 3 3
Milled Petersham Great Coat.. 2 2

CONTRACTS FOR FIRST-QUALITY CLOTHES

As generally adopted, are objectionable, because they confine Gentlemen to one particular Dress, or subject them to considerable Extra Charges: G. D. D.'s system removes this difficulty by leaving at the option of the Customer what he chooses to wear, whether Surtouts or Dress Coats, either Coloured or Black; his Prices, including all extras (excepting Velvet Collars), being for

Two Suits per Annum.....£10 0
Three ditto ditto 14 18
Four ditto ditto 19 12

and so on in proportion to the number of Suits. Each Suit to be returned on the delivery of its successor. Gentlemen who take three or more Suits per Annum are allowed two Suits in wear during the whole term; thus in a contract for three Suits a Dress Suit and an Undress Suit are supplied together. The Dress Suit to be kept for twelve months, and, at the expiration of six months, the Undress Suit is returned, and another supplied to continue to the end of the term, the contract amount for each Suit being paid on delivery. Contracts for the second quality would be much lower.

A Suit of First-rate Liveries..... ..... £3 18 6

For **WASHING TROUSERS** and **WAISTCOATS** definite prices cannot be stated, on account of the variety of Materials, but a very superior article for **SUMMER TROUSERS** are charged **10s.** per pair, and **WAISTCOATS, 6s.** each.

G. D. D respectfully informs **COUNTRY GENTLEMEN**, that, on account of the numerous invitations he has received to make Periodical Circuits through England, his Traveller will wait on them occasionally, or will proceed direct to any part where three or more Gents. (according to the distance) favour him with their Addresses.

TERMS.—Cash on Delivery, without Discount. Country Orders must be accompanied by a Reference in Town.

THE FIRST HOUSE IN ENGLAND FOR DRESS WAISTCOATS.

CHILDREN'S CARRIAGES, Light, Easy, Safe, Strong and Durable; a large Assortment ready for Inspection and Sale.—INVALID WHEEL CHAIRS, for in and out doors, in great Varieties, for Sale or Hire.—FLOWER STANDS, and GARDEN SEATS and CHAIRS, in profusion of Shapes and innumerable in Quantity, selling very cheap at INGRAM and SONS Manufactory and General Furniture Warehouse, No 29, City-road, near Finsbury square, London.

THE NEW FLAT GOLD WATCHES.—The price in gold cases, with accurately-finished vertical movements, 7*l* 7*s*. Ditto, with the well-finished horizontal movements, in double bottomed engine turned cases, jewelled in four holes, with silver dial, 9*l* 9*s*.—T. COX SAVORY'S Working Silversmith and Jeweller, 47, Cornhill, London.

N B A variety of second-hand Silver Watches may be selected from, all at Two Guineas each, warranted.

TO THE NOBILITY, GENTRY, AND PUBLIC

London, 1836.

FAMILIES OF DISTINCTION, and Visiters to the Metropolis at this Season, who frequently experience great difficulty in suiting themselves with Furnished or Unfurnished Houses, owing to the great demand, are respectfully informed every attention will be afforded in the HOUSE AND ESTATE AGENCY DEPARTMENT of HENRY L. COOPER in obtaining or disposing of the same, or in the Selling, Letting, or Valuing any description of Property in Town or Country.

From the central situations of the Establishments in their respective commanding localities, every facility is rendered to Families honouring his House with their instructions, and offering the advantage of a double Register, usually replete with eligible properties.

The general introduction of Plate Glass for Windows, Carriages, Conservatories, Internal Decorations, &c., has induced H. L. C to annex a Tariff of Sizes adapted to those uses, with Prices exceedingly moderate, but of a Quality not to be excelled; also is added, an outline of his general business comprising the Cabinet, Upholstery, and Decorative Departments, in each of which the most careful attention is paid both to Quality and Cost.

HENRY L. COOPER,

Plate Glass and Furniture Warehouses.

93, BISHOPSGATE STREET WITHIN,

AND

WESTERN BRANCH, 57, CONDUIT STREET,

(NINE DOORS FROM REGENT STREET, LEFT HAND SIDE.)

Among the variety of Articles above referred to, will be found LOOKING-GLASSES of every denomination and size, varying from one foot to eighty feet and upwards. PLATE-GLASS for Windows, Carriages, &c., which possess great advantages over crown, and when required for exportation, a considerable drawback obtained.

Annexed are the Prices of Current Sizes of Plate glass, for Sashes, &c.

In.	Inches. 15	Inches. 18	Inches. 20	Inches. 22	Inches. 25	Inches 28	Inches. 30

Or any sizes containing from 3 feet to 8 feet, at 9*s*. per foot; thus a plate being 30 inches by 18 inches contains 3 feet 9 inches superficial measure, and costs 1*l*. 13*s*. 9*d*., as per above tariff. All under 3 feet superficial at a reduction.

CARVING AND GILDING IN ALL ITS BRANCHES.

In this department will be found a very elegant and extensive variety of Chimney and Pier Glass Frames, Cornices for Windows, Ornamental Tables and Furniture, and richly mounted Frames in various sizes for Portraits, Paintings, &c. Paintings and Prints mounted, framed, and re-gilt.

PAPER-HANGING AND INTERIOR DECORATIONS,

in all its Branches, from the most simple to the first Style of Elegance. A rich variety of new Patterns on show

IN THE UPHOLSTERY ARRANGEMENT

the greatest attention is paid to unite elegance with economy in character for the Drawing room, Boudoir, Dining-room, Library, and Bed-chambers, from the most quiet to the most costly styles. In the various articles of Chintzes, Moreens, Damask Silks, &c. a great variety of the most splendid and novel styles are constantly on view, of those qualities which can alone ensure permanent satisfaction, the extreme disparity of prices in these articles, mainly arises from the inferiority of the fabric.

CABINET, CHAIR, AND SOFA WORK

manufactured of the most seasoned materials. In the finish of Chairs, Sofas, &c., much depends on the quality of the materials used and the workmanship. It may not be unworthy of remark, that a similar effect may be produced at a saving of nearly one half, but which in the wear must eventually prove a serious disappointment to the purchaser. This applies also to the manufacture of Cabinet Goods, which, from being made of unseasoned materials and unsound work (that cannot be detected by the casual observer), can never be of that service and durability so essential. H. L. C begs to add, that he manufactures them on his own premises, and has always on hand a large stock of well-seasoned materials, which enables him to produce work at the lowest possible rate, and of a superior quality.

STEAM AND SAILING VESSELS PROMPTLY FITTED UP

with Cabin Furniture and Passengers' Requisites.

SOLID AND PORTABLE FURNITURE,

Bedding, Musquito Hangings, &c. for Foreign Climates. Families going abroad will receive every information respecting the Articles best adapted for their particular destination. Merchants, Captains, and Dealers supplied with the utmost despatch, on the most liberal terms.

CARPETING

of the fabric especially made for the first upholstery houses, viz.—Brussels, Kidderminster, and Venetian, also a few of the much-admired Velvet Pile Carpets, Hearth Rugs, Druggets, Baize, Floor Cloths, &c.

BEDDING, BLANKETS, &c.,

well seasoned, real Dantzic Feathers, also equally prepared light downy Feathers for second and third-rate Beds, Elastic Spring Hair and Wool Mattresses, real Witney, fine Bath, and York Blankets, Marseilles Quilts and Counterpanes. In the articles of Bedding, Blankets, &c., so essentially important to all, H. L. C is determined that no trader shall supply them on better terms.

Families in the Country may command the most approved Taste, by being waited on at Home with Patterns—and Designs made on the spot, calculated to harmonize with the plans, proportions, and decorations of the rooms, and their Orders delivered, and fixed on terms forming a very small addition to the first cost by the system adopted in this Concern.

With this short enumeration of the leading articles of his trade, and the very favourable terms on which he undertakes to supply them, Henry L. Cooper appeals to all classes for a continuation of that flattering preference hitherto afforded to his House, 93, BISHOPSGATE-STREET WITHIN; WESTERN BRANCH, 57, CONDUIT-STREET, nine doors from REGENT-STREET.

H. L. C. begs respectfully to solicit particular attention to the Address; also that any Article will be exchanged should it not please, thus securing the public from risk.

This day is published, bound in cloth,

NATIONAL EDUCATION; its Present State and Prospects. By FREDERIC HILL.

Price 3s 6d. bound in cloth.

London: CHARLES KNIGHT, 22, Ludgate-street.

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.

In a few days will be published,

THE CHINESE: a General Description of the EMPIRE of CHINA and ITS INHABITANTS.

By JOHN FRANCIS DAVIS, Esq F.R.S., late His Majesty's Chief Superintendent in China,

In Two Volumes Post Octavo, with numerous Woodcuts.

"The following Work owes its origin to a collection of notes which the author made while resident in China. A residence of more than twenty years (which terminated in the author succeeding, for some months previous to his final retirement, the late amiable and unfortunate Lord Napier as his Majesty's chief authority in China) has perhaps been calculated to mature and correct those opinions of the country and people which he had formed, as a very young man, in accompanying Lord Amherst on the Embassy to Peking in 1816. If some acquaintance, besides, with the language and literature of the Chinese empire has not been of considerable assistance to him in increasing the extent and accuracy of his information, it must have been his own fault entirely, and not any want of opportunities and means."—Extract from Introduction.

London: CHARLES KNIGHT, 22, Ludgate-street.

This day is published, Part I, price 2s., of an entire new Work, entitled

THE ENGINEER'S AND MECHANIC'S ENCYCLOPÆDIA, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture in the British Empire. With nearly 2000 Engravings. By LUKE HERBERT, Civil Engineer, Editor of the History and Progress of the Steam-Engine, Register of Arts, and Journal of Patent Inventions, &c.

To be completed in Sixteen Monthly Parts, price 2s. each, or Sixty four Sixpenny Numbers, forming two thick 8vo volumes, beautifully and closely printed, with a Type cast on purpose for this Work. The Engravings on Wood (about 2000) will be interspersed with the descriptive Letter-press.

London: THOMAS KELLY, 17, Paternoster row, sold by all Booksellers.

THE PENNY SUNDAY READER. Edited by the Rev. J. E. N. MOLESWORTH, Rector of St. Martin's, and one of the Six Preachers of the Cathedral, Canterbury.

Vols. I. and II. of the above Work, for 1835, treating of the Collects, Epistles, and Gospels, also containing various Subjects adapted to the perusal of all Ages and Classes on the Lord's Day, are now completed, and may be had, price 2s. 9d. each, neatly bound in cloth.

The Work, for 1836, will be continued in Weekly Numbers, having as the leading Subject the Proper Lessons for each Sunday, of which not only a plain and practical but an original view will be taken, showing the Reasons of their Selection, and their Harmony with the Service of the Day.

Sold by RIVINGTONS, St Paul's Church yard and Waterloo place, London; and all other Booksellers.

are regularly supplied with WORKS for PERUSAL, including all the NEW and STANDARD PUBLICATIONS, MAGAZINES, &c., upon the most Advantageous Terms to them, according to the New System just planned and conducted by EDWARD BULL, Librarian, 19, Holles-street, four doors from Cavendish-square.

Full particulars can be had on application, or sent by post.

Second Edition, price 9s.,

THE HISTORY and PRINCIPLES of BANKING. By JAMES WILLIAM GILBART, General Manager of the London and Westminster Bank.

"Combining a clear appreciation of the science of Banking with the best practical knowledge of his business, we have seen no work on this subject which better deserves to be consulted and studied than Mr. Gilbart's volume."—Literary Gazette.

"He is fully master of the details, and ascends with equal ease to the examination of the elementary principles."—Atlas.

"This subject, which is generally considered abstruse and recondite, has been by the pen of Mr. Gilbart rendered so plain that the most ordinary capacity may easily comprehend it. The 'History and Principles of Banking' should be in the hands of every man who wishes to be acquainted with the manner in which the money transactions of this great country are carried on."—Waterford Chronicle.

"His work may be advantageously consulted for a practical knowledge of banking in all shapes, from the Bank of England down to loan banks, and the new law to facilitate the purchase of small annuities."—Spectator.

"We have been highly pleased with its agreeable and instructive character, and we think that no man connected with trade should be without this book."—Monthly Review.

"It is a clear well-written work, and must have been written by a person endowed with a lucid head and an impartial mind."—Metropolitan Magazine.

"A more complete and accurate work, with less irrelevant matter, we never read."—Gentleman's Magazine.

Also, by the same Author, "A Practical Treatise on Banking." Third edition, price 3s.—"A valuable and useful little work."—M'Culloch's Smith's Wealth of Nations.

London;—LONGMAN and Co., 39, Paternoster-row.

PLATED HASH DISHES, with strong Silver Edges and Handles. A Set of four Plated Hash Dishes and Covers are offered for Ten Guineas. The Handles take off the Covers, so as to form eight Dishes, when required.

PROPOSED REMEDIES FOR IRISH POVERTY.

THIRD REPORT OF THE COMMISSIONERS FOR INQUIRING INTO THE CONDITION OF THE POORER CLASSES IN IRELAND.

THERE can be no question that the root of the rottenness which there is in the state of Ireland is the poverty of the great mass of the people. However much the irritation of political grievances may have frequently inflamed the disease, this is the poison-spring which has fed it, and kept it alive. And if all the constitutional reforms that have yet been proposed were carried into effect, without something being done to diminish this evil which is spread over the land, we might possibly have some abatement of speechifying, and of what is called agitation in Ireland; but we should have no less either of misery, or of crime, or of turbulence in that unfortunate country than we now have.

In England, before the late Poor Laws Amendment Act came into operation, the support of our poor swallowed up an annual revenue of about 7,000,000*l.* sterling; and the number of persons wholly or partially relieved by their parishes has been reckoned, we believe, to amount to one-tenth of the entire population. When this calculation of the extent of pauperism in England was first laid before the public, it was very generally received with incredulity and derision. Persons who had not inquired into the matter could not be persuaded that it was anything else than an exaggeration of the most wildly extravagant description, to say that every tenth individual in the country was a pauper. They maintained that an error of a cipher, at least, must have been made in casting up the numbers, and that one pauper in every hundred of the population must be much nearer the truth. But that calculation would have allowed about 50*l.* a-year from the rates to every individual—man, woman, and child—receiving parish relief. The first announcement, however, of the real state of the case—that the parish paupers formed a full tithe of the population of the country,—was sufficiently fitted to astound and stagger belief. But this is nothing to the state of pauperism in Ireland. In the Third Report of the Commissioners for Inquiry into the state of the poor in that part of the kingdom, which is now before us, the number of labourers out of employment there during thirty weeks of the year, and of those dependent upon them, is set down at not less than 2,385,000. This is not much under a third of the whole population of Ireland; so that in that country not every tenth, but every third individual, is a pauper or a beggar.

But further, if English pauperism, in its widest prevalence, affords no idea of the extent of Irish poverty, still more imperfectly does it shadow forth, by its character and degree, the extremity of destitution and wretchedness which is endured by a large portion of the labouring population of Ireland. The earnings of an English agricultural labourer average from 8*s.* to 10*s.* a-week. Whenever his income is below that amount he has been accustomed to apply for assistance to the parish. This, then, may be considered to be the lowest rate to which the expenditure of the poorest class of families is ever, except in extraordinary cases, depressed among ourselves.

In Ireland, the earnings of an agricultural labourer are stated in the present Report to average only from 2*s.* to 2*s.* 6*d.*, or thereabouts, if spread over the year. That is the common rate of living of about two-thirds of the whole population; for the whole number of agricultural labourers in Ireland is 1,131,715,—the whole number of families in the country being only about 1,600,000. Some of these families of labourers, no doubt, are better off than others; but by how much the incomes of some exceed the average, by so much do those of others fall below it; so that, on the whole, even supposing some addition to be made to the gains of the family, in a few cases, by the labours of the mother or of its younger branches, we may venture to affirm that there are probably 500,000 Irish families, the entire earnings of each of which do not amount to more than 2*s.* in the week. Here, then, are about two millions and a half of the population constantly sunk in the most abject destitution which it is possible to conceive as forming the lot of human beings, with no more than three farthings a day for each to subsist upon, beside what they receive in alms. There are probably as many more all below the lowest grade of our common English pauperism. So that, out of eight millions of individuals, which is the entire population of the island, we may set down five millions as living in a state of poverty which is unknown in England, as a common condition, even among our parish poor and our beggars.

The following is the description, given in the Report, of the privations to which the able-bodied population are habituated:—"A great portion of them are insufficiently provided at any time with the common necessaries of life. Their habitations are wretched hovels; several of a family sleep together upon straw or upon the bare ground, sometimes with a blanket, sometimes even without so much to cover them; their food commonly consists of dry potatoes, and with these they are at times so scantily supplied as to be obliged to stint themselves to one spare meal in the day. There are even instances of persons being driven by hunger to seek sustenance in wild herbs. They sometimes get a herring or a little milk, but they never get meat, except at Christmas, Easter, and Shrovetide."

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

While such continues to be the condition of the people, it will produce, we may be assured, its annual harvest of crime and turbulence as regularly as any other harvest springs from its proper seed. The grand remedy, therefore, that is wanted for the distractions of Ireland is the relief of the poverty of Ireland. Where is such a remedy to be found?—and how is it to be applied?

If the poverty of Ireland is the grand exciting cause of its turbulence, it is equally evident that the root of its poverty is to be found in the character and habits of the people. The country itself, in natural resources is one of the most favoured under Heaven. But this is nothing. So long as a people are contented to multiply their species in the midst of such miserable destitution as has just been described, all the bounties of nature are showered upon them in vain. This is the plain and incontrovertible truth, to which there is no use in shutting our eyes. Ireland may be the finest country the sun looks down upon, to be "first flower of the earth, and first gem of the sea," is merely to be a convenient figure of speech for poets and orators, without a standard of comfort in the inhabitants, which shall make it impossible for them to live on, without obtaining to themselves a proper share of the wealth which their native land is capable of yielding. It is this that chiefly determines the degree of the civilization and happiness of every people. If the people of England, for instance, had no higher standard of comfort than the people of Ireland, there is nothing which could prevent them,—neither climate, nor soil, nor mineral wealth, nor all the artificial accommodations with which the country is furnished, nor its abundant capital, nor any lands and institutions,—from falling into the same depth of abject poverty. All these advantages would go for nothing, if the people were only generally willing to subsist on a single meal a day of dry potatoes. The decrease of their industry and the increase of their numbers, which would go on together under such a relaxation of what we may call the main-spring of civilization, would, in time, overcome all the forces that could be set in motion to produce plenty of employment and of bread. The social machine, with all its wheels, would come at length to move slowly and with laborious straining, as if weights were hung upon it, or the air through which it had to make its way had been changed into some denser element."

The thing, therefore, which is most of all required to be done for Ireland, and that without which every effort that may be made to call forth the resources of the country will be valueless, is to elevate the habits of the people, and their notions of what human beings require for their proper accommodation and comfort. Unless this be effected, there is no sound foundation on which the prosperity of the country can be placed, and all reforms are built upon the loose sand. This alone can brace up and sustain any other improvement, whether institutional or economical, that may be introduced, and make it something more than a mere temporary benefit. Even a river of gold poured into the country would not permanently enrich it, and establish a superior social condition throughout its bounds, if a low estimate of the necessaries and decencies of social life should continue to prevail among the people.

But much, undoubtedly, may be done to raise the popular standard of enjoyment by the very expedients which are applied to relieve the pressure of the existing distress. In their efficiency in the former respect consists the chief value of such expedients. For example, the natural encouragements held out by the circumstances of the country being found to be insufficient to attract to it as much capital as is considered desirable, it may be proposed to direct in the first instance a certain quantity of capital into it by a sort of forcing process. If the effect were to end with the mere amount of improvement which might be accomplished by the actual application of this capital, little good, comparatively, would be done; no permanent benefit would be conferred upon the country, and it may even be doubted if the particular schemes which were set on foot with the money so obtained would in general turn out profitable speculations, seeing that if they had been likely to do so, it would scarcely have been necessary to resort to any extraordinary method, in order to divert capital towards them, and considering, also, the imperfect economy with which such public projects are commonly managed. But if the greater quantity of employment, and increased rate of wages afforded to the people by the capital brought into operation among them should introduce and habituate them to a better mode of living than that to which they had previously been accustomed, and should implant in them the ambition of transmitting the advantages with which they had thus become acquainted to their children, the result would be a decided advance in the civilization and real welfare of the country. In this way it is that a judiciously-arranged plan for carrying on agricultural and other improvements on a considerable scale, by means either of compulsory assessments on the land, or of loans from the public Treasury, might probably be made to contribute materially, along with education and good government, to the regeneration of Ireland.

A full detail of the particular measures recommended by the Commissioners will be found in the abstract of their Report, which we have given in another place. We shall here confine ourselves to a few observations on some of the general principles involved in their propositions.

Their plans for the direct relief of the poor, it will be perceived, are wholly dissimilar to the English system, the fundamental principle of which is the support of the poor in workhouses, when they are supported by the rates at all. The reasons arising out of the state of Ireland, which are brought forward to shew the inapplicability of the same principle to that country, appear to be of great weight; but if you have a poor-law at all, it seems difficult to understand how you are to do without workhouses. From some of the expressions in the Report, we are not sure that we perfectly understand the extent to which it is proposed to carry the relief of helplessness and destitution under the plan which it recommends. In the leading statement, in Section 16, the cases enumerated as those for which it is considered that a legal provision should be made, and rates levied, are—1. The relief and support of incurable, as well as curable lunatics; of idiots, epileptic persons, cripples, deaf and dumb, and blind poor, and all who labour under permanent bodily infirmities; such relief and support to be afforded within the walls of public institutions. 2. The relief of the sick poor in hospitals, infirmaries, and convalescent establishments, or by extern attendance, and a supply of food, as well as medicine, where the persons to be relieved are not in a state to be removed from home. 3. The enabling of poor persons, who are willing to do so, to emigrate to the colonies. 4. The support of penitentiaries, to which vagrants may be sent. 5. The maintenance of deserted children. 6. The relief of aged and infirm persons. 7. The relief of orphans, of helpless widows with young children, and of the families of sick persons; and 8, the relief of casual destitution. Afterwards, under Section 27, it is recommended "that provision should be made, by law, towards the relief of the aged and infirm, orphans, helpless widows with young children, *and destitute persons in general.*" This last expression, especially, is a very comprehensive one; it would seem, indeed, to take in all cases whatever of poverty

or want not included under the preceding heads. If so, the poor-law established in Ireland will apparently be merely a copy of the English, with the omission of the great principle of recent introduction, which alone counteracts the mischievous tendencies of the English law. It will be the English poor-law as it stood before the passing of the late Amendment Act. If the right to relief is to be extended to destitute persons in general, without the check of workhouses, the expense, calculated in the Report at 4,000,000*l.*, of building and fitting up workhouses, will indeed be saved; but all the rest of the burden will have to be borne which it is shewn would be imposed upon the country by the introduction of the English system. Will not the 585,000 persons who are stated to be without employment for thirty weeks of the year, with the 1,800,000 more dependent upon them, be entitled to support as "destitute" for the whole of that period? And without workhouses they will scarcely be supported at the small expense of 2½*d.* a-day for each person, which is assumed, in the Report, as the cost at which they might be maintained, on the experience of the Mendicity Establishment of Dublin. The 5,000,000*l.* a-year, at which the burden is calculated in the Report, will not suffice. All the effect which might be produced by workhouses, besides, in keeping down the number of applicants for relief, will be lost; and the number will be left free to grow to any height to which it may be forced by the stimulus, now to be for the first time applied, of a legal right to support. It may swell, in these circumstances, even very far beyond its present amount.

It is true that other recommendations of the Commissioners may operate in checking the growth of pauperism, and diminishing the numbers of those who will have to be supported by the rates. But this does not bear upon the point we are at present considering. What we mean to state is, that the provision giving a legal right of relief to destitute persons in general, without the check of workhouses, may be expected, in so far as its operation merely is concerned, to augment the number of paupers; and, therefore, that provision remaining, we doubt if anything will be gained by avoiding the expense of erecting workhouses, by which alone the pernicious tendency in question can be counteracted.

We have observed, however, that we are not certain what it is exactly that the Commissioners mean by their proposal of extending relief to destitute persons in general; and possibly they may intend by it nothing more than the relief of what they have before called cases of casual destitution. But whatever their meaning be, the real and only important question is, what do they contemplate doing, in their scheme for the relief of the Irish poor, with the 2,500,000, or thereabout, of persons whom they describe in their Report as at present without employment for thirty weeks in the year, or with so many of them as their plans for increasing the quantity of employment in the country, and for promoting emigration, may not absorb? What are they to do with the man who is neither a lunatic nor an idiot, nor deaf and dumb, nor blind, nor a cripple, nor sick, nor aged, nor a vagrant, nor willing to emigrate, and who yet has no work; and with the woman who has a family of children which she cannot support, and yet is no widow; and with the young children who are neither orphans nor foundlings, and yet have no means of subsistence? Are such persons to have a legal claim to be supported out of the rates, or are they not? Whatever it may be intended that we should understand by the language used in the Report as to this all-important matter, we would state frankly, that in our apprehension, no scheme for the direct relief of the poor can be attempted to be set in operation in Ireland with any chance of success, which shall leave the descriptions of persons in question without any right to relief. Such able-bodied men without employment, and those dependant upon them, constitute the great mass of the Irish poor; and notwithstanding all that emigration and agricultural improvements together may be able to accomplish for many years, they will continue to form a numerous class. A plan for the relief of Irish poverty, in which they should be left out, would indeed be the play of Hamlet, with the part of Hamlet omitted. But a plan, on the other hand, comprehending their case, and like the English poor-law giving a legal title to relief to all who, from whatever cause, are in want, would seem, from all theory and all experience, to require the accompaniment of the workhouse system as its indispensable balance and corrective.

One thing is very remarkable in the measures of direct relief proposed by the Commissioners—the absence of any recommendation on the subject of bastardy, which gave rise to so much discussion in the arrangement of the English law. For anything that is said in the Report we are left to conclude, that it is intended to allow the burden of supporting her illegitimate offspring to remain with the mother, except only in the case of her actual desertion of them, when they will be sent to nurse by the Board of Guardians of the district, "to some remote place, under such regulations as Parliament may think proper to appoint, and when of a suitable age removed to an emigration depôt, from whence they may be sent to an institution in some British colony, which shall be appointed for receiving such children, and training or apprenticing them to useful trades or occupations." Here, again, the want of the workhouse, which in England is open to receive both the mother and her child in every case in which the former chooses to resort to it, seems to afford no alternative to the woman who may be unable to support her child, except to leave it in the streets.

All this seems forcibly to shew that the only scientific poor-law, if we may so express ourselves, is that which has the workhouse system for its basis and governing principle. With that grand instrument of protection, a legal right to support may with little risk be freely accorded to all who choose to declare themselves to be in want; without it, the right to relief can hardly be extended to any description of mere poverty or destitution, without more misery being created than is relieved.

We are disposed, we confess, to expect the most benefit from some of the measures suggested in the Report for the indirect mitigation of poverty in Ireland, by the general improvement of the country. In the first place, the aim of the curative process here goes much nearer to the source of the disease than any application can be said to do which attempts merely to relieve actual cases of want. It takes in hand the morbid constitution of society, in so far, at least, as that is dependent upon physical causes. It seeks not to throw in the disease, but to throw it off.

The character of the whole scheme, however, we are well aware is such as will cause it to be looked upon with considerable jealousy by a large class of politicians. It is a system of interference on the part of the Government, in its compulsory capacity, with many matters which are generally considered to be best left to the voluntary exertions and care of individuals, acted upon only by their own views of their own interest.

Undoubtedly, the feeling of self-interest is the most efficient of all the motives by which men can be influenced, and where it is sufficiently enlightened, much may be trusted to it. But if it could accomplish everything in the regulation of social economy, any government at all would be unnecessary. Even in the most liberal scheme of a national government that has ever been devised, and where the most complete supremacy

is given to the popular will, it has been found necessary to assume that nearly one-half of the people may sometimes be blind to their true interests, and to make provision for such a case whenever it may occur. The most popular of all possible governments is, after all, but the government of the majority of the people—it may be of the bare majority. Even under such a government the people may be divided into two parties of nearly equal numerical strength; and then the rule which declares that the opinion of the majority shall prevail does, in effect, declare, at the same time, that the view of the national interest taken by the minority has been a mistaken one. This amounts to an admission, if not that an absolute majority of the people may take a wrong view of their own interests, at least that a portion of them constituting all but a majority may do so. This much we say the theory of the Government itself expressly admits and avows; a larger philosophy might go somewhat further. Since nearly half the people may be sometimes in the wrong, it seems hard to conceive that a full half of them may not be so on some occasions—that, in short, the majority may not possibly take the erroneous view, and the minority the correct one, when the two parties are pretty clearly poised. We venture not upon that more daring line of speculation which would lead to question the perfect certainty, in the most advanced state of society to which any people has yet attained, even of a very large majority being always in the right. It is indisputable, at any rate, that even in the most civilized of existing communities right convictions upon political subjects always begin among the few, and do not become the faith of the many till after a long struggle; so that, if the majority becomes the wisest part of the nation at last, it has very often been taught its wisdom by the minority.

These considerations ought, perhaps, somewhat to abate or temper the over-confidence we are apt to place in what is commonly laid down as an axiom or first principle in politics—namely, that the people are always sufficient, of themselves, to take care of the whole of their own social interests. The people here meant are merely a majority of the people; and their voice, although it determines the matter, is often opposed by another voice which it is neither impossible, nor very improbable, may frequently be the sounder of the two.

But something also must surely be allowed in the application of this maxim for the degree of intelligence and social advancement to which the people have attained. It cannot be pretended, with any semblance of reason, to be applicable alike to all communities, —highly civilized, or only imperfectly civilized, or not civilized at all. The view of the general interest taken by the majority will not be the same in these different conditions. If it is a true view in one case, it will be a false view, or a less correct view, in another. One people, therefore, may be fitted to govern itself, while another may not; one people may be better fitted to govern itself than another. Although the people of England, or of America, for instance, may be capable enough of managing their own affairs, the people of Ireland may not be so capable. In the Report before us, that country is broadly affirmed to be still "in a state of semi-barbarism."

Perhaps, however, even in the general case, we are apt to be somewhat too jealous of the Government stepping beyond the narrow province of a mere controlling power. Undoubtedly, much mischief has been done by interference, on the part of Governments, with matters better left to take care of themselves; in affairs of trade this interference has been especially pernicious. But it does not follow, because it has been thus abused by misapplication, that the protective system, properly guarded, and carried out in other directions, might not be made essentially to advance national prosperity and civilization. The government of a community, in its purest form, is a grand system of co-operation; it is the co-operative principle brought into action on the largest possible scale. Why might not the vast powers obtained by this, the only union which comprehends the whole people, be taken advantage of for effecting some other ends, besides simply those of preventing one man from cutting another's throat, or putting his hand into another's pocket? For our own parts, we hold a great state to be essentially something more and higher than a mere establishment of police. Applying to this mighty association of men the same rule that measures the duties of every individual man, we would seek the limit of its obligations and uses only in the limit of its powers. Whatever good it can do it is bound to do. Shew us, clearly, in any particular case of proposed interference, that a national benefit is likely to be the result which would not be otherwise obtained; and we certainly should not be disposed to forego the real advantage within our reach out of deference to any abstract dogma.

We cannot here go over and examine, one by one, the particular measures recommended by the Commissioners; a detail of them will be found in our abridgment of the Report. There is one other point, however, on which we will add a few words.

The proposal of forcing the general cultivation of waste lands by public authority, and by advances of public money, may be expected to be looked upon with considerable suspicion. To a certain extent this measure may be regarded as having merely the character of a general inclosure Act, and as being called for by the same considerations on which such an Act has been often recommended Much of the land is held by such conflicting or diverse rights of proprietorship as, whatever may be its capabilities, must continue to lock it up from cultivation, without some such interference of the Legislature. In other cases, the proprietors both of waste and of imperfectly cultivated land cannot themselves command the capital necessary for its improvement, even although it would in all probability well repay whatever might be laid out on it. This arises partly from the state of the country, and partly from the involved circumstances of individual landlords. The public aid here will clearly accomplish an important public and private good, which would not be accomplished without it. But it may very reasonably be apprehended that, of all the land thus to be farmed, as it were, by the Government, a considerable portion may not be cultivated at the usual profit. In ordinary circumstances, it would be unadvisable to attempt the cultivation of such land at all. But in the peculiar circumstances of the present case, there may still be a gain even in this expenditure of labour. If, in any country, the able-bodied poor who cannot find employment under the operation of the natural demand for labour, are to be entitled by law to be supported at the public expense, it is better that they should be kept doing any work, however small the return, than doing nothing at all. You have, we will suppose, on the one hand, ten thousand paupers to feed throughout the year, and, on the other, ten thousand acres of land. Let the quality of the land be so indifferent as that a year's labour on it of each man shall not produce a return in value sufficient for the maintenance of the labourer for more than six months. Still, by the paupers being set to cultivate it, the public saves half the cost of maintaining them in idleness. It is the same thing as if half the sum necessary for the support of the poor, instead of being raised by the rates were to come down in a

shower from heaven. In fact, if not drawn from the sky, it might be literally said to be dug out of the earth, which is the same thing.

IMPROVEMENTS IN THE KINGDOM OF THE TWO SICILIES.

Our attention has been drawn to this rich and beautiful country, by a very interesting statistical work, which, though published some time ago at Naples, has only just reached us in London.* The production of such a book as the Commander Afan di Rivera's in such a place is, in itself, a very favourable indication; for though abounding in talent and quickness of perception, the Neapolitans, in the absence of all wholesome stimulus, and in presence of that incubus, a censorship of the press, have not, of late years, been accustomed to do much in any of the serious departments of literature, while they have especially stood in awe of subjects of public economy that might commit them with a Government, which, however mildly administered at present, is still an absolute monarchy. Something of this fear and reserve peeps out in our Commander's volumes, but less than might be expected; and he deals fairly with large facts, and with figures, that, after all, are the things that convince and decide. The Neapolitans may almost be called the fathers of political economy, for their Serras, and Turbolos, who wrote on subjects connected with that science about the year 1615, and the Broggias, Galianis, and Genovesis, who wrote from 1743 to 1760, preceded our Adam Smith and the French Economists, and actually came to many of the conclusions which are now admitted as bases and corner-stones of the science. This is an honour of which they ought not to be deprived; and we indulge in the hope that the Neapolitans, following out the researches of their predecessors, may soon take their place with the distinguished economists of Europe and America. The materials and the capability exist among them, and in no country that we know of is there a finer field for carrying enlightened theory into practice, which very practice, being carried on on a large scale, may gradually rectify what is wrong or deficient in theory.

The greater part of Afan di Rivera's book is occupied by suggestions of improvements, and plans to be undertaken *in futuro*. All this is very interesting, and the projects, from what we know of the country, we should generally call judicious; but as we must set ourselves limits in an article like this, we prefer confining our attention to works already executed, or at least actually commenced, and in progress.

We rejoice to be able to say that the general *coup-d'œil* we have taken of the condition of the country gives a favourable and consoling result; and that though still much behind some of the most civilized of European nations, and though occasionally checked and driven from its course by revolutions, counter-revolutions, and wars, in which Italian blood was shed for the ambition of foreigners, the kingdom of the two Sicilies has made a prodigious step in advance during the last hundred years, and is still moving forward slowly but surely.

Not to go further back, or touch upon the bloody reigns of the sovereigns of the Aragonese and Angevin dynasties, from the year 1501 to 1734, Naples and Sicily were the worst governed and most wretched countries in Europe. We shall probably explain everything, by merely saying that for more than two centuries of that time they belonged to Spain, and were governed by bigoted, ignorant, indolent, and rapacious Spanish viceroys, who drained the heart's blood of the nation, and gave it absolutely nothing in return save religious intolerance, a degrading superstition, convents, monasteries, disease, and the plague.

In 1734, better times came with Prince Charles of Bourbon, who took and kept possession of the United Kingdom of Naples and Sicily. When this prince, who is known in history by the name of Charles III., ascended the throne, the population of the continental dominions had dwindled down to 2,100,000, and a large proportion of this number were friars, nuns, priests, beggars, and brigands, who, committing every atrocity, over-ran the country in all directions, infesting even the suburbs of the capital. The feudal system existed in all its rigour—the peasants were serfs to their ignorant, tyrannical barons, who had the power of life and death over them. Nearly all the landed property that did not belong to the barons belonged to the Church, which is said to have possessed, in 1734, nearly a half of the whole kingdom. Charles began, by making many wise, but moderate and slow reforms, both in Church and State. Had he attempted too much at once, he would have plunged the country into a civil war, and, in all probability, lost his throne. He, however, put strong legal checks on the tyranny of the aristocracy, prevented the constant flow of property into the hands of the Church, limited the number of monks and priests, and eventually contrived to put much of their lands in possession of laymen and plebeians. He, in short, laid the foundation of a *tiers etat*, a third estate, or middle class of society, of which there scarcely existed a single element before his time.

The sea-ports, the arsenals, the fortresses had been permitted to fall into ruin, and in the course of two centuries the Spaniards had hardly made a road. The mountainous provinces of Naples could scarcely communicate with each other, or with the capital; and the island of Sicily, in this respect, as in all others, was in an infinitely worse condition than her continental neighbours. Charles III. made fine carriage-roads from the capital to Capua, Caserta, Venafro, Persano, and the Bridge of Bovino, a most important point, and the key to the provinces of Apulia and the Terra d'Otranto. All these roads are excellent, and those to Persano and Bovino, which cross the Apennine Chain, are truly magnificent works. Charles also restored several of the sea-ports and fortresses, furnished the arsenals and dock-yards, and even built a small fleet to protect his coasts and the trade of his subjects from the Algerine and other pirates. Besides all this, he built several splendid palaces, aqueducts, and public edifices. His numerous works gave constant employment to a valuable part of the nation, among whom money obtained by their industry and ingenuity now began to circulate copiously.

In 1759 Charles ascended the throne of Spain, and was succeeded on that of the two Sicilies by his young son Ferdinand IV. The spirit Charles had awakened among the Neapolitans survived his reign, and during the first quarter of a century that Ferdinand reigned, improvements were carried on with more or less activity. This latter prince, as the world well knows, was neither distinguished by ability nor by application to business; still, however, he had a good sort of rude common sense, he let cleverer and more industrious people work for him, and his love of agriculture and domestic animals was really of important service to the State.

Let us say a word more in favour of an unlucky king, of whom few have spoken well, and who is not likely to go down to posterity with a very brilliant reputation. From all that we could glean in the country

* Considerazioni su i Mezzi da Restituire il valor proprio a' Doni che ha la natura largamente conceduto al Regno delle due Sicilie; del Commendatore Carlo Afan de Rivera.

from men who had been his contemporaries, we feel convinced that, until his head was confounded by the dreadful events of the French Revolution, and his heart acted upon by his vindictive queen, Caroline of Austria, sister to the murdered Queen of France, he sincerely loved his country, and desired the good of his subjects. In all the earlier part of his reign, he was frank, open-hearted, accessible, and jovial with all classes.

Under the guidance of Bernardo Tanucci, the old and favourite minister of his father Don Carlo, he abolished some humiliating concessions and ceremonies paid to the Court of Rome, and he still further restricted the power and influence of the nobility. In this last direction he went almost far enough. The spoliation and degradation exercised, at a later period, by the French on the Barons was at once a moral crime and a political blunder. The great want of the fertile Campagna Felice, around the city of Naples, was water: the government of Ferdinand turned its attention in this direction, and set a good example. Waterworks erected on the river Volturno raised a great volume of the precious fluid, which was conveyed, by means of a canal, to irrigate the royal park, farms, and grounds of Carditello, between Aversa and Capua. The waters of the royal canal of Sarno were also employed in extensive irrigations. To improve the breed of sheep the king imported a large number of the best merinos from Spain; and cows of the finest quality were purchased for him in Switzerland, Holland, and England.

Between the epoch of Ferdinand's accession in 1759, and the troublous date of 1798, a most important progress was made in road-making. The route which Charles III. left short at Capua was carried on to the frontiers of the Roman States; the road that ended at Venafro was carried on to Iserna, and thence boldly over a lofty ridge of the Apennines, through the table-land pass, called *Il piano di cinque miglia* (the plain of five miles), to the city of Solmona, the birth-place of the poet Ovid, in the very heart of the Abruzzi—the Highlands of Southern Italy. We have travelled this particular road more than once;—it is magnificent. In other directions an old road that had stopped at Sora and Ceprano was rendered practicable for carriages as far as Arce; the road which Charles III. had carried to the bridge of Bovino was prolonged to the important city of Bari; that which he left at Persano was continued to Bosco, and even beyond Lagonero in Calabria; the old road of Auletta was continued as far as Potenza; that of Evoli as far as Lavello; and a fine route through the country of the ancient Samnites was cut from Maddaloni as far as Ferrarise. A glance at the map will show the extent and importance of these routes; but no map can explain the immense physical difficulties that were encountered in most of the lines of road. Following the traces of an ancient Roman road, which seventeen centuries had not wholly destroyed, the engineers of King Ferdinand opened long tracts of a carriage-road between the city of Benevento, on the rivers Sabato and Calore, and the city of Troja, in Apulia, near to the shores of the Adriatic Sea.

In Sicily less was done, even in proportion to its minor importance and extent; but, there, a good road was cut from Palermo to Termini, and several others, leading into the interior of the island, were begun.

The government of Ferdinand also attended to the draining of those marshes and bogs, near to the sea-coasts, that are an annual source of malaria fevers and mortality. The neighbourhood of Baja, though far from being thoroughly drained, was much improved; and the case was the same with the low, swampy grounds near Fondi, Pescara, and Brindisi, and in the valley of the Tanagro. Attention was paid at the same time to the dock-yards and sea-ports of the kingdom. In Castellamare was established the fine yard for the construction of ships-of-war. The port of Naples was enlarged and improved, and spacious magazines were added to the arsenal. Both at Palermo and Messina arsenals and ship-yards were established for the repairs and arming of men-of-war. In Calabria, on the shores of the Ionian Sea, additions were made to the port of Cotrone; and, on the shores of the Adriatic, considerable repairs and additions were made to the harbours of Bari, Trani, Barletta, Molfetta, Giovenazza, and Bisceglia—six beautiful maritime cities, that succeed each other at very short intervals along the smiling coast of Apulia. At the very mouth of the Adriatic Gulf considerable sums were spent in clearing out the ancient port of Brindisi (Brundusium), whence the military expeditions of the Roman Empire sailed for Asia, and, in later times, those of the Crusaders for the Holy Land.

This celebrated port consists of two basins or harbours, connected with one another by a short and narrow passage. The general form may be compared to an hour-glass. Strabo, and other ancient writers, have minutely described it. In depth, capaciousness, and security, the basins remain unaltered; but the shallowness of the entrances render these advantages of almost no avail. In ancient times there was only one entrance, and this, in the course of centuries had become completely blocked up with sand and mud. Ferdinand, in the year 1776, began to cut a new entrance, which was completed in two years at a heavy expense. The old Roman passage ran in an oblique direction, which made Pratilli, the engineer, think he could avoid the evils of a rapid accumulation of sand by cutting his canal quite straight. The new passage, however, was soon blocked up like the old one; and when we were last on the spot (1824), this truly magnificent harbour was accessible only to vessels of very small tonnage.

On the southern coast of Sicily, which faces Africa, a strong mole was thrown out to protect the road-stead of Girgenti; and on both sides of the Faro a considerable number of bridges were built and some roads begun. Contemporaneously with these operations, the excavations of Herculaneum and Pompeii, begun by Charles III., were continued by Ferdinand. The little royal navy which had been created was quite sufficient to protect the coasts and trading vessels; and the light Neapolitan frigates and gun-boats, under the command of the brave Caraccioli, beat the Algerines and Tunisisen whenever they met them. An indubitable proof of the rapid progress made in public prosperity was the prodigious increase of the population, which had more than doubled in sixty-two years. In 1734, as we have stated on the authority of Afan di Rivera, it stood at 2,100,000—in 1796 it had ascended to 4,850,000. These were the golden days of Naples: all classes were prosperous; and if education did not make all the progress it ought to have done, there was gathered in the capital a brilliant little knot of men of science and letters, such as the kingdom has never seen since. But the sun of these days was about to suffer a long and terrific eclipse. In 1796 Ferdinand got involved in the war with the French, who, in 1798, drove him out of Naples to Sicily. The king had nearly drained the country of its money—the Republicans completed that operation. Then followed internal warfare—a dislocation of society, a counter-revolution, the return of the Bourbons, and the executions on the scaffold of 1799. Under this anarchy, and the state of weakness and despondence that followed it, every improvement was stopped. Naples was a party to the peace of 1801; but she was obliged to submit to have a French army stationed along her coasts on the Adriatic, and even to pay for the support

of these her oppressors. In 1806 Ferdinand was again driven to Sicily, when Joseph Bonaparte ascended the Neapolitan throne. During the short, stormy, and yet voluptuous reign of Joseph, very little progress was made in public works of any kind. In July, 1808, he left Italy to take possession of the Spanish throne, and was succeeded on that of Naples by his brother-in-law, Joachim Murat. Murat, though an uninstructed soldier of fortune, had a taste for grand civil undertakings; and we may safely assert he contracted a love for his beautiful kingdom, and a strong desire to render the people happy. But Napoleon kept him continually in the camp, away from his proper post; he exacted from him immense sacrifices both in men and money; while his precious continental system was a complete millstone round the neck of Naples.* Still, however, and in spite of all these adverse circumstances, Joachim actually did a good deal in the way of works of public utility; and in his omitting to make any mention of these, we must accuse the Commander Afan de Rivera of timidity, servility, and injustice. Old King Ferdinand himself was more just to his enemy; for, on his second return from Sicily, in 1815, on seeing the improvements that had been made, the excellent condition of the palaces, &c., he said, with a smile, "Well, it must be confessed that I have had a good steward in Mr. Murat during my absence!"

But Afan di Rivera's silence cannot make his fellow-citizens forget that to Murat they were indebted for the completion of the beautiful promenade of the Villa Reale, for the magnificent roads of Posilippo, Capo di Monte, and the Campo di Marte; all three in the immediate neighbourhood of the capital, and in beauty and convenience not to be surpassed by any country in the world. These, indeed, were large contributions to the comfort, amusement, and well-being of all classes of Neapolitan citizens, and the way in which these roads are crowded on holidays by people in carriages, on horseback, and by light-hearted pedestrians, is a constant tribute to the man who planned and executed the works. But in other respects, too many to enumerate, Murat improved the city, and rendered Naples both more beautiful and more salubrious. Under him the excavations of Pompeii were carried on with a spirit and activity that had never been known before. In the provinces several works were executed. The road of Apulia, which Ferdinand had left at Bari, was cut as far as Molo di Bari, and works were in progress to extend it by Ostuni as far as the city of Lecce, and thence to the important oil mart and port of Gallipoli, with branches from this main route, extending in one direction to Otranto and Brindisi, and in another to Taranto. The Abruzzi road, which stopped at Solmona, was carried on by Popoli to the populous city of Chieti. The almost constant presence of English cruizers obliged him to put his sea-board in a state of defence; and in building Martello towers and forts, Murat spent much money that would have been more profitably employed in road-making and draining.

The general peace of 1815 was a prodigious and an immediate benefit to the city and to most of the provinces of Naples, where, notwithstanding numerous errors of government, a mistaken system of political economy, and the presence of a strong Austrian army which was paid for enormously, prosperity again began to appear. We attentively watched on the spot the progress made between the years 1816 and 1820, and can affirm that it was very considerable. The government which, from the King downwards, was composed of old and indolent men, did not perform much, but the people began to do for themselves, which is always a better thing. In the capital, and in some of the chief provincial towns, as Santa Maria di Capua, Avellino, Salerno, Foggia, Chieti, &c., new houses were built, or old uncouth edifices converted into comfortable well-looking ones. The immense influx of English travellers, from which the Neapolitans reaped a fine harvest year after year, introduced the knowledge and the use of many English domestic comforts. In 1816 it was difficult to find a house with a fire-place;—it would be now difficult to find a house of the better class without one; and the disagreeable and pernicious practice of heating the rooms in winter by means of copper pans of ignited charcoal is falling rapidly into desuetude among respectable Neapolitans.

King Ferdinand had carried the Abruzzi road from Chieti nearly as far as Pescara, on the Adriatic shore; he had made the branch from the Apulia road passable for carriages all the way from Bari to Taranto, and he was slowly proceeding with other works of the kind, when the revolution of July, 1820, and the events that followed it, paralyzed all efforts, and threw everything into confusion. On the eve of their ill-augured, insane Spanish constitution, which lasted just nine months, and then expired, the laughing-stock of Europe, the Neapolitans were in a happier condition than they had known for many years. The aged absolutism of Ferdinand was not oppressive; on the contrary, much liberty of action and license of tongue were allowed; and as Don Luigi Medici, the Finance Minister, had liquidated nearly the whole of the national debt, there was a reasonable hope that government would soon be enabled to reduce the rate of taxation. But the Austrian army, that upset the constitution and restored Ferdinand in 1821, had to be paid an enormous price for its services, which were not dispensed with until they had fattened on the country for more than five years. To meet these and other *more secret obligations* that had all arisen out of the revolution, the Neapolitan government was obliged to contract loan after loan, until (considering her size and immediate resources) the nation was saddled with a very heavy debt. Old Ferdinand escaped out of these troubles by dying suddenly at the beginning of January, 1825. He was succeeded by his son, Francis I., who, in spite of his financial difficulties, contrived to employ considerable sums annually in road-making. On the royal road of Calabria alone he expended, from the beginning of 1825 to the beginning of 1828, about 1,200,000 Neapolitan ducats, or 200,000*l.* sterling, being nearly at the rate of 70,000*l.* per annum. In the immediate neighbourhood of the capital he finished Murat's beautiful Strada Nuova di Posilippo, carrying it down the precipitous face of a high hill to the plain of the Bagnuoli, opposite to the island of Nisita, so that timid travellers can now go to Pozzuoli, Baja, and the interesting scenes and antiquities there situated, without passing through the long, dark, subterranean tunnel, called the Grotta di Posilippo. Francis also brought to a termination an immense pile of buildings, destined for the reception of all the ministerial residencies, and public offices of the kingdom, and finished some other edifices begun by his father. Francis I. died in November, 1830. His son and successor, Ferdinand II. (the present King), was not quite twenty-one years when he ascended the throne. The young Prince's education had been confided to priests and monks, who seldom turn out a good king, but his natural ability and disposition are well spoken of; and if he has the inexperience of youth, he has also its ardour and sanguine hopes. Soon after his accession he directed his attention to the two capital wants of his states—roads, and the draining of marshy lands. In April, 1832, he ordered the "General Direction of Roads and Bridges," at the head of which Afan di Rivera is placed, to draw up and present to him a series of projects bearing on draining. At the same time he ordered works to be begun for the restoration of the ancient port at the island of Nisita

which is to be converted into a lazzaretto—an accommodation which, strange to say, the maritime and commercial city of Naples did not possess before. Ships arriving from plague countries were not admitted at all, but obliged to go to Leghorn, or some other distant port out of the kingdom that had a lazzaretto, and there perform their quarantine, after which they could be received at Naples. The inconvenience, delay, and experience resulting from this strange system, had long been very serious evils.

(To be continued.)

PRESENT STATE OF THE DANISH CLAIMS.

IN the 31st Number of the *Companion* (for July last) we stated, at some length, the origin and nature of these claims, and recounted the history of the successive attempts that have been made by the claimants to obtain compensation for their losses. A very short recapitulation will be sufficient to introduce a notice of the position in which the case now stands.

What are called the Danish Claims are the claims made by British subjects on account of losses sustained by them through the measures resorted to by the Danish Government in retaliation for our sudden attack upon Copenhagen in 1807, when, without any declaration of war, or other announcement of our intentions, the two countries being at peace at the time, we bombarded that city, and seized the Danish fleet, having previously also laid an embargo on all the Danish vessels in the Thames, which, to the number of three hundred, were afterwards sold by us with their cargoes, and produced to the Treasury a sum of nearly 1,200,000*l.* sterling. We have here nothing to do with the question of the right of the British Government, in the circumstances, to make that attack, which was justified by Ministers, on the ground that the Danish fleet would otherwise have been delivered over to, or would have fallen into the hands of, the French. It is perfectly clear that, if this danger made so unprecedented a measure necessary, it did not entitle the country to pursue its own objects, either of safety or convenience, at the expense of any particular class of individuals. Whatever loss or damage was occasioned by the extraordinary character of the proceeding fell in all fairness to be borne by the whole community.

The Danish Government, in point of fact, endeavoured to avenge the attack on Copenhagen, by seizing the property of British subjects wherever they could lay their hands on it. To adopt the classification given in a Report of the Commissioners for investigating the claims, which the House of Commons ordered to be printed on the 3rd of April, 1835, they first gave discharges to their subjects for all book-debts owing to British creditors; secondly, they seized and confiscated all goods belonging to the subjects of Great Britain, which were found anywhere on the soil of Denmark; and, thirdly, they did the same with all British ships and cargoes which they could find, either in port or at sea. The whole property of which British subjects were deprived, in these several ways, appears to have amounted to above 546,000*l.*, belonging to some hundreds of individuals.

We are here also relieved altogether from the consideration of another question—the right which Denmark had to act in this manner, in the circumstances in which she was placed. Whether she was or was not entitled, by the law of nations, to make all those seizures, in the predicament into which she was thrown by the aggression on the part of the British Government, in the first place, the principle of justice and of common sense which we have already stated again interposes to protect individuals from suffering any part of the loss arising out of the unusual and irregular nature of the proceedings, and to throw the whole upon the public; and, secondly, the dispute that might have existed between the English and the Danish Governments as to the legality, in certain respects, of the conduct of the latter, has been settled by a treaty of peace, concluded in 1814, between the two, in which it was not stipulated that Denmark should either restore, or make compensation for any property belonging to British subjects which she might have improperly confiscated. After this, the British Government must, of course, be considered as having taken upon itself the obligation of satisfying all just claims by its own subjects, on account of injuries sustained through the acts, however irregular, of the Danish Government, which were provoked by our attack on Copenhagen.

We contend, indeed, that these claims ought, in the first instance, to have been immediately satisfied by the British Government, whatever was the opinion entertained as to the eventual responsibility of Denmark. That responsibility remained to be enforced, if it was thought proper or found convenient to do so, at the termination of the war; the claimants, as such, had no concern with its enforcement or non-enforcement whatever. In the case, indeed, of an injury sustained by individuals from the act of a foreign Power, which had been provoked by no previous proceeding on the part of their own government, they would in general, we believe, according to the practice of nations, have to wait for redress until it could be either gained from the author of the wrong by negotiation, or extorted from him by force of arms, or, if neither of these results should be obtained, until the demand had been abandoned, by the conclusion of a treaty of amity and oblivion with the offending country, how long soever it might be before the matter should be arranged in any of these ways.

Much might be said on the hardship and unfairness of such a delay, even in these circumstances; and it might be very plausibly contended that, whenever a government sees fit to resort either to force or to negotiation, on account of a wrong done to any of its subjects by a foreign Power, it should begin by at once making full compensation to the sufferers, and thus taking upon itself their rights, as entitling it to act in the case. The protection of its subjects is the duty of the government, and this is admitted by its interfering at all: it would seem, therefore, that the protection ought to be accorded in a complete form; which it only can be by the compensation being made certain and instant, and not dependent upon the issue of a protracted attempt to extort it from the foreign Power. But whatever it may be thought the rule ought to be when the subject to whom the wrong has been done has merely a general claim upon his government for protection, we conceive there can be no doubt as to what justice demands in a case in which he has actually been exposed to the wrong by his government, for the sake of some important public object which could not have been attained except through the sacrifice of his property. Shall it be said that he is to be called upon to make this sacrifice without compensation? It would be quite as fair, it appears to us, to insist, when an armament is to be fitted out, that the merchants and manufacturers from whom the materials are obtained should furnish them for nothing.

In the present case, it appears that some of the ships seized by the Danes may be said to have been actually thrown into their hands by the British Government. Licences were granted to vessels about to proceed to the Danish dominions by the Lords of the Admiralty, after the expedition against Copenhagen was in preparation; and in other instances, in reply to inquiries

formally addressed to the same government board, merchants were distinctly assured that their ships might go to Denmark with perfect safety. All this concealment might have been necessary for the success of the expedition; it might have been necessary that the Danes should be thrown off their guard by the maintenance, on the part of the British Government, of this shew of friendly intentions, up to the moment when the blow was struck; but if the deception itself may be thus justified, that is surely the utmost length to which the justification can be carried. It never can be argued, on any grounds of equity or of reason, that the private individuals, through whose compulsory, or at least unconscious, instrumentality the public object was attained, should be denied any compensation for so much of their property as was in this way made a sacrifice of to the public convenience.

These persons would have had a right to be repaid their losses in any event—even if the attempt, in the prosecution of which they were sacrificed, had wholly failed. But, as is well known, so far from having failed, it succeeded completely. What is more, the British Government actually obtained by its seizures and confiscations of Danish property a very much larger sum of money than would have been required for the full satisfaction of all the claims in question. The value of the British property seized by the Danes amounted, as we have already mentioned, only to between four and five hundred thousand pounds sterling; but the Danish property seized by us produced, on being sold, very nearly twelve hundred thousand pounds. And it is very remarkable that, instead of this money being allowed to fall to the Crown as droits of Admiralty, which is the common and regular destination of revenue so acquired, it was thought proper, by the Government of that day, that it should be paid over to the public service, on the ground, as was expressly stated by Mr. Perceval, in his place in Parliament, on the 30th of May, 1810, that "there were certain merchants who claimed compensation out of it for the losses they had sustained, arising from the manner in which the war had broken out." In these words we have a distinct admission that "the manner in which the war broke out" makes all the difference in the world between the present case and that of merchants whose property has been seized by an enemy, after the breaking out of a war which has been preceded by the customary announcements and warnings. Here the British merchants who lost their property were nothing less than decoyed into the sacrifice of it by their own Government; and on this ground stands the whole of their case. They ask compensation for losses sustained, not by any negligence, or rashness, or other imprudence of their own, but through the credit they gave to the solemn assurances of the Government, and the absence they evinced of all suspicion or apprehension of being deceived in acting under its express licence and authority.

In fact, the Government has at length partially made compensation to what are called the first class of the claimants, those, namely, who claim for book debts that were due to them by subjects of Denmark, and which were confiscated by the Danish government. These have obtained the principal of the debts of which they were thus deprived, after a deduction of 2 per cent. for the expenses of the Commission for the settlement of the affair. No interest has been allowed for the period of between twenty and thirty years, during which the money, now acknowledged to be justly due, has been withheld. It is also understood that the case of the second class of claimants—those who claim for goods seized on shore—will probably receive the like measure of favourable consideration.

In this long-deferred concession, however, it does not appear that the government has in any degree given in to the view of the subject which we have here adopted. The claimants on account of book-debts are to be compensated, because the confiscation of these debts is held to have been an illegal act on the part of the Danish government; and it is for the same reason that those who claim on account of goods seized on shore may expect to be remunerated for their losses. It is considered that, according to the usual practice of nations, these confiscations never ought to have taken place; and, therefore, the two classes of claimants in question were entitled either to have their claims enforced against Denmark at the peace, or, that not having been done, to have them satisfied by their own Government, which had so chosen to conclude a treaty of peace with Denmark, without insisting upon their acknowledgment by that power.

Efforts are still making to obtain at least the same imperfect justice for the third class of claimants—those who claim on account of ships and cargoes taken at sea—which has been, or is about to be, accorded to the rest; and the subject, we believe, will be again brought before Parliament in the course of the present Session. The entire amount of this last description of claims does not exceed 150,000*l*. The ground upon which they stand appears to us to be at least as strong as that on which the others have been placed, although it may not, perhaps, be so easy to find any express *dictum* in the books which meets the circumstances. But this, it is to be remembered, is not a case to be decided by any of the rules commonly laid down as constituting what is called the law of nations. The whole affair of the attack upon Copenhagen was one of a peculiar and novel character, the circumstances arising out of which that code, as usually deduced and stated, might very well be excused for not contemplating or providing for. But the law of nations professes to have for its principle and foundation not usage merely, but also reason and justice; and in these last its decision must be sought for whenever usage offers no guide. In so far as the recognized practice of nations is concerned, all that it is here necessary to show is, that the claims are not opposed to that practice; and that follows from the fact, which will scarcely be controverted, that the case is altogether without any precedent among those transactions from which what is commonly designated the law of nations has been extracted and compiled. But, in truth, the law of nations has comparatively little to do with the question. Whether Denmark, in the circumstances in which she was placed by our attack on Copenhagen, had or had not a right immediately to seize and confiscate, as she did, all British ships and cargoes at sea upon which she could lay her hands, the justice of the present claims appears to us to be exactly the same. If Denmark acted illegally, she ought to have been called to account for her conduct by the British Government at the peace; or if good reasons were thought to exist against pressing the point, the persons who had been unwarrantably deprived of their property ought to have been compensated for their losses by their own Government, which had thus thought fit to release the party that had inflicted the injury. If on the other hand, Denmark, as can hardly be doubted, was quite justified in making the seizures, the claimants come at once upon their own Government, which induced and enticed them, for the sake of an important public end, to place their property in circumstances insuring its destruction; and it would surely be in violent opposition to all our established notions of right and wrong, and of the duties which a government owes to its subjects, if, after having thus had their private means, as it were, taken from them for the public service, they should not be repaid the full amount of their losses.

THE FUNDS.

(Concluded from No. 40.)

We shall now conclude what we had to say upon this subject by a short account of the mode of transacting business in the Fund-Market.

In former times all transactions in the sale and purchase of stock used to take place in Change Alley, or THE ALLEY, as it was commonly called. This was the centre of the excitement and bustle of the famous South Sea bubble in the year 1720. Afterwards, these bargains came to be made in the room in the Bank of England buildings, called the Rotunda; and some business is still done here by a certain description of persons. Bargains in stock by the regular brokers, however, are now transacted in the building called the New Stock Exchange, at the upper end of Capel Court, which was erected by the Committee in 1804. Brokers and jobbers, who are not members of the Stock Exchange, assemble in the open court in front of the buildding. A jobber is a person whose business it is to accommodate buyers and sellers with the exact sums they want. The jobbers are, in general, possessed of considerable property in the funds.

Almost all transfers of stock are effected through the agency of brokers, all the more respectable of whom are members of the Stock Exchange, into which association they are elected annually by ballot. The Committee of the Stock Exchange is the governing body of the establishment, and consists of twenty-four members, elected by ballot. A broker acting for another party must be authorised to do so by a power of attorney granted by his principal. This warrant, which is on a stamp that costs 1*l.* 1*s.* 6*d*, may be so drawn as to empower the broker both to buy and sell stock, and also to receive the dividends for the person by whom he is commissioned. Many persons, however, who would not venture to sell or purchase stock except through the medium of a broker, are in the habit of calling at the Bank for their dividends themselves.

In the money-market, as in any other market, there are, of course, always one set of persons inclined to buy, and another to sell, the commodity dealt in, whatever may be its price at the moment. The very meaning of a market price is, a rate at which there are both buyers and sellers; it is a point up to which the value of the commodity is forced by the demand for it, but beyond which it cannot rise without the sale of the commodity being put a stop to altogether. This is the only price, properly so called; for a price at which there are no dealings is no price at all, for any practical end, and it matters not what may be its nominal amount —whether it be any particular sum, or a hundred or a thousand times as much. At whatever point, then, to which the price of stock is brought by this balance between the supply and the demand, if there be any business done in the article at all, there will be in the market both parties ready to buy, and other parties desirous to sell. The business of the broker consists in selecting the particular moment at which it is most advantageous to buy or sell. This, of course, he has to do, by exercising his judgment both upon the probable movement of the price of the stocks, and upon the particular circumstances and exigencies of the case in which he acts.

When a bargain in stock has been arranged between two parties in the market, they must resort to the Bank or the South Sea House (according to the fund) for the ratification of their agreement and the actual transference of the stock. "For this purpose," to quote the detail of the forms as given by Dr. Hamilton, "the seller makes out a note in writing, which contains the name and designation of the seller and purchaser, and the sum and description of the stock to be transferred. He delivers this to the proper clerk,* and then fills up a receipt, a printed form of which, with blanks, is obtained at the office. The clerk, in the mean time, examines the seller's accounts; and if he find him possessed of the stock proposed to be sold, he makes out the transfer. This is signed in the books by the seller, who delivers the receipt to the clerk; and upon the purchaser's signing his acceptance in the book, the clerk signs the receipt as witness. It is then delivered to the purchaser upon payment of the money, and thus the business is completed."

The established rate of brokerage is one-eighth per cent. (or 2*s.* 6*d.* in the 100*l.*) upon the amount of stock transferred. There is no stamp duty, or tax of any kind, upon transfers of Government Stock; but the transfer of Bank Stock under 25*l.* costs 9*s.*, above that amount, 12*s.*; of South Sea Stock under 100*l.*, 10*s.*, above it, 12*s.*; and of India Stock, of any amount, 1*l.* 12*s.*

The dividends, it is to be observed, are not actually paid till some days (usually about a week) after they have become due; and the books at the Transfer Offices are always shut for about six weeks previous to the days of payment, during which period no transfers can be regularly made. Good Friday, Christmas Day, and the 1st of May and 1st of November, (or the Monday following either of these two last-mentioned days, if it should fall on a Sunday), are also kept as holidays at the South Sea House and the Transfer Office in the Bank. The holidays in these establishments formerly amounted to forty-four in the year. At the India House the only holidays are Good Friday and Christmas Day.

In every sale of stock, the purchaser, at whatever time the sale may be made, purchases, along with the stock, the dividends upon it for the current half-year. In consequence of this, every description of stock, whatever other circumstances may affect its actual price in the market, rises in real value every day from term to term; and, if the action of all other circumstances were to be excluded, its price would, in point of fact, continue so to ascend. A person purchasing 100*l.* 3 per cent. consols, immediately before the shutting of the books for the dividends in July, acquires precisely the same amount of property as if he had made a similar purchase at the opening of the books immediately after the payment of the dividends in the preceding January; but as he has saved nearly half-a-year's interest upon his money by so deferring his investment, he will be willing, of course, to pay a correspondingly higher price for the stock at the one date than he would have paid at the other. Supposing the interval between the two dates to be four months, and the current rate of interest to be 3½ per cent., the Three per Cent. Consols, when that stock is at 90, should be worth about 1 per cent. more at the shutting than at the opening of the books.

In addition, however, to the actual transfers negotiated in the manner we have just explained, a vast deal of business is done in the money-market, both when the books are open and when they are shut, in what are called bargains *for time*. In these transactions one party engages to sell to another for a certain sum a certain amount of stock on a certain future day, the calculation of the seller being that by the day in question the market price of stock will be lower, that of the buyer that it will be higher, than the price agreed upon. If the bargain thus made were to be actually carried into effect, the seller, in case of the price turning out to be below that stipulated for, could purchase the requisite quantity of stock in the open market for a less sum than

* The letters of the alphabet are placed round the room, and the seller must apply to the clerk, who has his station under the initial of his name. In all the offices there are supervising clerks who join in witnessing the transfer.

he would have to receive for it, and would, therefore, be a gainer by the difference between the two sums, while the buyer would be a loser by the same difference: in case of the price rising above that stipulated for, exactly the reverse would happen. The matter, however, is usually settled without any actual delivery of the stock, but simply by the losing party paying the difference. "These bargains," says Dr. Hamilton, "are usually made for certain days fixed by a Committee of the Stock Exchange, called *settling days*, of which there are about eight in the year,—viz., one in each of the months of January, February, April, May, July, August, October, and November; and they are always on Tuesday, Wednesday, Thursday, or Friday, being the days on which the Commissioners for the reduction of the National Debt make purchases. The settling days in January and July are always the first days of the opening of the Bank books for public transfer; and these days are notified at the Bank, when the books are shut to prepare for the dividend. The price at which stock is sold to be transferred on the next settling day, is called the price *on account*. Sometimes, instead of closing the account on the settling day, the stock is carried on to a future day, on such terms as the parties agree on. This is called a *continuation*."

These practices are evidently nothing else than a sort of betting, or gambling in the public funds; and as such, they have been discountenanced by the Legislature, and endeavours have been made to repress them by means of prohibitions and penalties. As these attempts, however, have wholly failed of their design, it may be questioned if there be any wisdom in persisting in them. Besides, it is by no means clear that any mischief is really done by this kind of speculation in the funds. The consequence, however, of the denouncement of such transactions by the law is, that bargains for time cannot be enforced in the courts, and the parties, therefore, are only to be held to them by a sense of honour, and by such restraints in the way of exposure and degradation as a private society like the Committee of the Stock Exchange may apply to its members. Parties not fulfilling their engagements cease to be members of the society, and are incapable of being re-admitted; their names are also posted up for a certain time in the Great Room. In this way their credit on 'Change is, of course, effectually destroyed. Such defaulters, in the language of the Stock Exchange, are called *Lame Ducks*. In the same technical dialect the seller, in a bargain for time, is termed a *Bear*, and the buyer a *Bull*—in allusion, it is commonly said, to the nature of the opposite interests of the two parties—that of the seller being to beat down prices, as the bear tramples anything under its feet—that of the buyer, to elevate them, as the bull is accustomed to toss the object of its attack into the air.

POLITICAL RETROSPECT FOR APRIL, 1836.

GREAT BRITAIN.

Both Houses of Parliament met on Monday the 21st of March, when the Lords sat in Committee on the Bill for the better administration of justice in the West Indies; and the Commons in a Committee of Supply, in which various grants for the service of the navy were agreed to.

On Tuesday, the 22nd, in the Commons, on the motion of Mr Buxton, a Committee was appointed to inquire into the working of the apprenticeship system in the colonies, into the condition of the apprentices, and the laws and regulations respecting them. The motion gave rise to a short debate, in the course of which it appeared to be generally admitted that the working of the great measure for the emancipation of the negroes had been in the highest degree satisfactory. It was contended by Mr. Buxton that it had improved the circumstances of the planters as much as the condition of the negroes; but he complained that the former, though many of them had been saved from ruin by the money which it put into their pockets, had by no means shown any strong inclination to perform their part of the bargain. In this view of the conduct of the planters Sir George Grey concurred. A motion, brought forward by Mr. Peter Borthwick, for the appointment of a Select Committee to inquire how far the planters of the Mauritius had entitled themselves to compensation by their treatment of the negroes, was eventually withdrawn, in favour of an amendment moved by Sir George Grey, "for an Address to the Crown for copies or extracts of any despatch or document respecting the measures adopted by his Majesty's Government, since the Report of the Commission of Eastern Inquiry, in 1828, on the subject of slavery in the Mauritius." The House afterwards went into Committee on the Irish Municipal Corporations' Bill, when the clauses from 82 to 140 were agreed to.

On Wednesday, the 23rd, the House was occupied with one Irish subject after another, to the exclusion of almost all other business. A petition, from 350 of the tenants of Colonel Bruen, the Member for Carlow, contradicting certain allegations against the conduct of that gentleman, contained in a previous petition from Mr. Vigors, led to a somewhat violent altercation between Colonel Bruen and Mr. O'Connell. In the end, Mr. Wallace, the Member for Greenock, by whom the subject was first brought before the House, engaged to fix an early day for its full and final discussion. The House then resolved itself into Committee on the Irish Municipal Corporations' Bill, when the postponed clauses and the schedules were agreed to. After this, the Irish County Boards' Bill, and the Irish Civil Courts' Bill, were both read a second time. The Irish Constabulary Bill was also read a third time and passed. Mr. W. S. O'Brien then moved for a Select Committee to inquire into the administration of the Royal Dublin Society; when, after a short debate, the motion, which was supported by Lord Morpeth, was carried by a majority of 49 to 13. In the course of the same evening, the English Municipal Corporations' Act Amendment Bill was read a third time and passed.

On Thursday, the 24th, the Todmorden Inclosure Bill was, after a short debate, rejected on the third reading by a majority of 77 to 38. The opposition to the measure was grounded on its alleged sacrifice of the interests of the poor to those of the lord of the manor. Mr. Robinson then brought forward his motion for a new scheme of taxation, including a property-tax, in a series of eight Resolutions, which, after some debate, were all negatived without a division.

On Friday, the 25th, the Report on the Tithes' Commutation Bill was taken into further consideration, when the House agreed to the first twelve clauses of the Bill, which, however, do not affect the principle of the measure. In the course of the discussion which arose, a suggestion was thrown out by Mr. Blamire, the Member for East Cumberland, which drew much attention, as an efficient and practicable medium between the two schemes of a compulsory and voluntary commutation. The Honourable Member said, he would recommend that they should fairly ascertain the value of the tithes in each particular parish, or benefice, or tithing district, as the

case might be; and having ascertained the reasonable and fair amount on which to assess the tithe, he would leave it to the parish, benefice, or tithing district, to apportion or applot the amount of rent-charge among themselves. This mode, he added, was frequently adopted in the North of England, and by means of it the matter was, in general, arranged without difficulty.

On Monday, the 28th, the third reading of the Irish Municipal Corporation Reform Bill was moved by Lord John Russell. Mr. Shaw moved, as an amendment, that the Bill be read a third time that day six months, on which a long and animated debate arose. The most remarkable speech delivered was that of Mr. Sheil, the brilliant eloquence of which appeared to make an extraordinary impression on the House. A division at length took place at nearly two o'clock in the morning, when the numbers were found to be for the original motion 260, for the amendment 199. This is a still greater victory than that which Ministers obtained on Lord Francis Egerton's motion for strangling the Bill in Committee, although that, as we remarked last month, was the greatest they had till then obtained from the commencement of the Session. In the present division, when only 459 Members were present, instead of the actual majority of 61, a majority of 54 would have been as large a proportional majority as that of 64 was in the House of 550 Members, which divided on Lord F. Egerton's motion.

On Tuesday, the 29th, another long debate took place on the subject of the conduct of the Home Secretary in the late appointments of magistrates for the new municipal boroughs, which was brought before the House by Sir Robert Peel. The discussion, however, which was enlivened by two successive episodes of personality, in which the first figures were Sir Richard Vyvyan and Mr. Richards, led to no result.

On Wednesday, the 30th, two divisions worth recording took place, on the motion for the third reading of the Hull and Selby Railway. The first was on Colonel Sibthorp's motion, that the Bill should be read a third time that day six months, which was negatived by a majority of 128 to 9. Mr. Lawson afterwards, on the question "that the Bill do pass," moved the insertion of a clause, prohibiting all travelling on the railway on Sundays. After a conversation of some length, this motion was also rejected by a majority of 101 to 11. The subject of the appointment of Lord Brudenell to the lieutenant-colonelcy of the 11th Light Dragoons, after his removal two years ago from the command of the 15th Hussars, was then brought before the House by Sir William Molesworth, when Lord Howick and Lord John Russell explained, that individual appointments in the army must be considered to be made on the responsibility of the Commander-in-Chief alone; Ministers were only responsible for retaining the Commander-in-Chief in office. At the same time both Noble Lords stated, that as to the particular appointment in question, they saw no grounds on which it could be objected to. Admitting Lord Brudenell to have been properly removed from his command, it did not follow that he should never again serve his Majesty in a military capacity. On the contrary, it was distinctly understood from the first that he should, after some time, be restored. Sir William Molesworth, however, gave notice, that he should move an Address to his Majesty on the subject, shortly after the recess. Various questions on foreign affairs were then put to Lord Palmerston by different Members. In his answers the Noble Lord stated, among other things, that he had as yet had no communication with the authorities of Cracow on the recent military occupation of that State by Russia, Austria, and Prussia; that he had received no official information of the new quarantine said by the public journals to have been recently enforced by Russia at the mouth of the Danube; that the negotiations for a new commercial treaty with Portugal were not yet brought to a satisfactory termination; that a new convention, which would shortly be laid on the table of the House, had been made with Frankfort, permitting that town, as it had requested, to join the great German commercial union; and that no loan had been negotiated with the Queen of Spain which had been guaranteed by the Government of this country. The Prisoners' Counsel Bill was then read a third time and passed; and the Roman Catholic Marriages Bill went through Committee.

This day the two Houses adjourned for the Easter recess, the Lords till Tuesday the 12th, and the Commons till Monday the 11th of April.

On the last-mentioned day, the Ordnance Estimates, which exhibited a diminution of 52,610*l.*, as compared with those of the preceding year, were voted in a Committee of Supply without opposition. On the Army Estimates, however, being afterwards taken into consideration, Mr. Hume opposed the motion for a grant of 106,211*l.* 6*s.* 8*d.* to defray the charge of the volunteer corps; but the amendment was rejected, on a division, by a majority of 53 to 9. The Stamp Duties Bill was then read a second time.

On Tuesday, the 12th, a debate of some length took place in the Lords, on the second reading of the Irish Constabulary Force Bill, which was moved by Lord Duncannon. The opponents of the Bill, however, did not divide the House, although some Noble Lords expressed their intention to oppose certain clauses in the Committee.

In the Commons, a debate of considerable interest arose on Mr. Ewart's motion, for leave to bring in a Bill, providing, that in cases of intestacy, and the absence of any settlement to the contrary, landed property should, like personal property, be equally divided among the children, or other next of kin of the deceased. The motion was opposed by Ministers, and lost on a division, the numbers being 29 for, and 45 against it. It is obvious that the true question to be considered here, was that of the propriety of the aid given by the law, sought to be abolished, to the preservation of landed property in considerable masses. This is a question, in the first place, of constitutional policy; and, secondly, of political economy. In other words, the law in question is to be looked to, first, in reference to its effects upon the working of the Government; secondly, in reference to whether it promotes or retards the creation of national wealth. Without at all adverting to these larger views, however, the change of the law is frequently urged upon certain sentimental considerations, better fitted for furnishing one a flourish of rhetoric, than for satisfying an understanding at all capable of surveying the subject in its whole extent. "If the possessor of landed property die without making a will," says a weekly newspaper of distinguished ability, in an article in defence of Mr. Ewart's motion, "and there be no settlement, the eldest son inherits the property, *and the other children are beggars, or dependents on his bounty.* Mr. Ewart has proposed to remedy this *cruel injustice*, &c." As for the injustice, we really cannot see that anything of the kind is chargeable on the present law, any more than it would be upon the proposed new scheme. The only case in which it can be pretended that injustice is done by the law as it now stands, is when a landed proprietor who *intended* to divide his property equally among his next of kin, is cut off by death before he has carried his intention into effect. But, if the law were altered, precisely the same injustice would be done whenever it happened that a person who intended to leave his whole landed property to his eldest son, died suddenly without having made his will. So that, in

regard to this point, the existing law and its proposed alteration are on a par. They may both occasionally lead to the defeat of the possessor of the property's intentions. But the injustice spoken of is, perhaps, an injustice assumed to be inflicted by the present law upon the younger brothers and sisters of the person who inherits. Now, we could understand the principle of a law which, out of a proposed regard to justice, should in all cases compel an equal division of the landed property of a person deceased among his children or other nearest relatives. This would be for the law distinctly to say that a man's property was his own only while he lived, and that it belonged to his children or next of kin after his death. It would be to affirm that his children or next of kin had, as such, a right to his property after his death. But the proposed new law does not lay down this doctrine, or anything like it. It in no respect denies the actual possessor of the property the right of devising it in any way he chooses. It asserts or recognises no right in his children or other next of kin to a single farthing's worth of it. It allows him to leave the whole of it, if he please, to a stranger, or to make any other disposition of it that may suit his humour. It acknowledges, in short, just as completely as the present law does, that no part of it belongs, in reversion, either to his eldest son, or to his younger children, or to any of his other relations. It maintains, just as the present law does, that the property which a man has earned, or otherwise come legally into the possession of, is his own, to dispose of as he pleases after his death as during his life, and that no other person whatever has anything to do with it. How can it be said, then, that the proposed law would remedy the cruel injustice alleged to be perpetrated by the existing law? If what is meant be the disposition by a father of his whole property, or the bulk of it, to his eldest son, it does not regard that as an injustice, for it does not, in the least degree, attempt to prevent it. The principle, whether sound or the reverse, that a father ought to be compelled, in all cases, to make all his children equal sharers in his property after his death, is not asserted by it. It does not pretend to maintain that there is, necessarily, any injustice in a distinction being made by a father, as to this matter, between one child and another. The *injustice* of the existing law, therefore, cannot, in any view, be admitted as an argument for the proposed change; for that change would leave the injustice, if injustice there be, the same as ever. Whether the change might or might not be advisable on other grounds, we shall not, at present, stop to inquire; it is a very large and complex question. But upon the point of the alleged injustice and cruelty of the whole estate of a landed proprietor going after his death to his eldest son, we may observe that it has been somewhat strongly stated. All people, whose fathers die without leaving them anything, are not necessarily left beggars. This is, in fact, the case of by far the larger portion of the community. Probably not one individual in fifty of the present population of the kingdom has derived, or will derive, any pecuniary benefit on his father's decease. The younger children of the landed proprietor, therefore, where the whole estate goes to his eldest son, are really no worse off than the great body of their fellow-citizens; and it might be difficult to make out any right they have to be better off.

On Wednesday, the 13th, the Tithe Commutation Bill was re-committed, on the motion of Lord John Russell, in order that certain alterations might be made in it. "The Bill," his Lordship said "originally proceeded upon the principle, that individuals, in the first instance, would have to make voluntary arrangements, which afterwards were to be combined in one general arrangement for the parish, and that, failing such voluntary arrangements being made, compulsory regulations were, in the same way, to be applied to the property of each particular person, and afterwards to whole parishes. But in consequence of the difficulties to which it was found this would give rise, and owing, also, very much to what had been stated by Mr. Blamire, he should propose that a certain number of landowners—say two-thirds—should be empowered to propose a voluntary arrangement. The Bill would provide that this should be binding on the parish afterwards, but that that should not take place before the 1st of October, 1837. The Commissioners might then, if they thought fit, order a like commutation for the whole parish. In either case the landowners would appoint two valuers, one to be appointed by a majority of the property, the other by a majority of the numbers, to applot or apportion the whole sum to be paid by the parish, according to the extent of particular farms."

Major Fancourt, then, on the Order of the Day being moved for the House to resolve itself into a Committee on the Mutiny Bill, moved, as an amendment—"That it is the opinion of this House that the punishment of flogging should be entirely abolished in the British army." A long debate followed, in which the motion was opposed by Ministers, and which ended in its rejection, on a division, by a majority of 212 to 95. Several Members who expressed themselves as opposed to the punishment in question, and of opinion that it might be got rid of in course of time, declined to vote for its entire abolition immediately; others thought that it might be dispensed with in time of peace, but not during war. Sir Ronald Ferguson is reported to have declared that, after forty years' service, he could not agree to the entire abolition of military flogging, though he would say the less of it the better. This seems to have been the sentiment of the majority of the House. Since the debate, an order is stated to have been issued from the Horse-Guards, by which the number of lashes that may in future be inflicted is restricted to 200 by a general court-martial, and to 150 by a district court-martial.

Whatever objection may lie against the punishment of flogging on other grounds, it must be admitted, at least, to answer its main end—that of maintaining the discipline of the army. And this, be it remembered, does not mean merely the preservation of an important instrument of national strength in a serviceable condition—the maintenance of the army in such a state as that it may at all times be ready to act with the greatest effect against an enemy in the field. What is much more essential than that is, that the army should be kept in order and subjection, when it is not engaged with an enemy; that it should be effectually restrained from turning its strength against the peace and security of society at home. This perfect subordination is necessary to prevent it from being a curse to the country instead of a protection.

Until, therefore, some other means shall be discovered, which can be perfectly depended upon as equally efficient with the present system for this great end, to abolish flogging would certainly be an experiment of the utmost hazard. The advocates of the abolition do not seem to have yet worked out this essential point of their case in a satisfactory manner. No other punishment has been pointed out which appears, on examination, to be, in all circumstances, an adequate and practically applicable substitute for flogging. Attempts, indeed, have been made to shew that the necessity for corporal punishment might be got rid of by such a complete change in the constitution of the army as would both fill its ranks with a wholly different description of men

from that of which they now consist, and would also place its officers in a very different relation to their fellow-citizens from that in which they actually stand. Such an organic revolution as this, however, will scarcely be resolved upon, unless it be held to be called for by much weightier considerations than any that belong to the present question; nor can the proposition be examined, to any useful purpose, by being looked to merely with reference to the desirableness of getting rid of the punishment of the lash.

On Thursday, the 14th, Mr. Robinson moved the appointment of a Select Committee to consider the practicability of admitting foreign corn and flour in bond to entry for manufacture, on condition that it should be afterwards exported. The motion, however, was opposed by Ministers, on the ground that the thing proposed could not be allowed without risk to the revenue; and, on a division, it was negatived by a majority of 77 to 40. After this, on the bringing up of the Report on the Mutiny Bill, Mr. Lennard revived the discussion of the preceding evening, by moving—"That no court-martial held in the United Kingdom shall be authorized to award the infliction of corporal punishment, except in time of war;" but this motion, also, after another debate, was rejected by a large majority, the numbers being 62 for it, and 135 against it.

On Friday, the 15th, in the Lords, on the Marquess of Clanricarde moving the second reading of the Stafford Disfranchisement Bill, Lord Lyndhurst moved, as an amendment, that the Bill should not be read a second time till witnesses had been examined in proof of its preamble, and till, also, the electors of the borough, who had petitioned against it, should be heard by themselves, their counsel, or their agents, on the matters contained in their petition. This amendment was carried, without a division.

In the Commons, the Dissenters' Marriages Bill, and the Bill for the regulation of the bishopric of Durham were both read a second time.

On Monday the 18th, the second reading of the Irish Municipal Reform Bill was moved in the House of Lords by Viscount Melbourne, when, although the measure was allowed to pass through that stage without opposition, Lord Lyndhurst, speaking as the leader of the Opposition, announced, that when it should come into Committee, he intended to move an amendment similar to that which had been proposed by Lord Francis Egerton in the Commons. In other words, the Opposition have made up their minds to brave all the consequences of refusing to pass the measure, at least for the present Session.

In the Commons, Lord John Russell, in answer to a question from Mr. Poulett Scrope, stated, that it was not thought expedient by the Government to bring in a series of measures in the present Session, embracing all the recommendations contained in the last Report of the Irish Poor Law Commissioners; but it was possible that parts of the Report might be taken into consideration, with a view to some practical measure. The Registration of Voters Bill then passed through Committee, after a motion by Mr. T. Duncombe, that the Committee should be instructed to introduce a clause, repealing that part of the Reform Bill which requires the payment of poor-rates and assessed taxes as a qualification for voting in boroughs, had been negatived by a majority of 154 to 51.

On Tuesday, the 19th, in the Lords, the Bill for regulating plurality of benefices in the Church and residence of the clergy was read a second time. In the Commons, Mr. Harvey's motion for the appointment of a Select Committee to revise the Pension List, with a view to ascertain, in the case of each pension, whether its continued payment is justified by the circumstances of the original grant, or the present condition of the party, gave rise to a long debate. The motion was resisted by Ministers, chiefly on the ground that to assent to it would be a breach of the compact made with the Crown at the last settlement of the Civil List; and it was negatived on a division by a majority of 216 to 146.

On Wednesday, the 20th, Mr. P. Stewart brought again before the House the subject of the alleged aggressive policy of Russia, in a motion for an Address to his Majesty, praying him to send a diplomatic agent forthwith to Cracow; and also to take such steps as may seem best adapted to protect and extend the commercial interests of Great Britain in Turkey and the Euxine. In the course of an interesting debate that followed, Lord Palmerston stated, that it was the intention of Government to send out a consular agent to Cracow immediately; and feeling, as he stated, that his object was substantially attained by this and other assurances of the Noble Lord, Mr. Stewart, in the end, withdrew his motion.

The only event of the month in domestic politics, apart from the proceedings of Parliament, that requires notice, is the vote to which the Grand Orange Lodge of Ireland came, after a debate of two days, on Friday, the 14th. The Society has agreed to dissolve itself by a majority of 82 to 62. At the same time, it is stated that many of the district Lodges have since held their meetings as usual; and that the minority of the association generally deny that they are to be considered as bound by the decision of the majority, and threaten that nothing short of an Act of Parliament shall put them down.

FRANCE.

The debate on the question of the reduction of the Five per Cents. commenced in the Chamber of Deputies on the 21st of March, and was resumed the next day. Ministers consented to a reduction at some future, fitting period, but they claimed to be the sole judges as to which should be the most fit moment. They also proposed to change the original scheme of a reduction of one per cent. into one of a half per cent.; so that at some definite period the French Five per Cent. Stock will be converted into Four and a Half per Cent. Stock. What the new Ministry wanted was, to put off the decision, and gain time; and in this they completely succeeded, having obtained a triumphant majority in their favour. The Chamber of Deputies adjourned all further consideration of the question until next year; and even M. Goum, the champion for the reduction, agreed in this decision, on the condition that the principle should be established. The Chamber has thus borne out M. Thiers in doing very nearly the same thing for the attempting of which they drove the Duke de Broglie from office; but, as we have frequently had occasion to remark, there is no safe speculating on the votes of French Deputies, or judging by what they do to-day what they will do next month.

Some interesting debates followed on the Ministerial demand for secret service money, which led to a declaration of principles on the part of the new Cabinet. M. Sauzet declared officially, for M. Thiers, that the existing Ministry was neither that of the 11th of October, nor that of the 13th of March,—but the Ministry of its own date, with its own views, and standing upon its own merits. M. Guizot delivered a good speech in defence of the *juste milieu* principle, which he maintained would not go backward with the ultra-Royalists, nor rush madly forward with the Jacobins and Republicans. He insisted that neither of those extreme parties were wholly suppressed. "Those who assert the contrary,"

said he, "might as well say a man was dead because he had fallen to the ground."

M. Sauzet, the Minister of Justice, is reported to have promised to submit a request for commuting to banishment for life, the perpetual imprisonment of the four Ministers of Charles the Tenth, now in the Castle of Ham.

The trial of the low ruffians for an attempt to assassinate Louis Philippe on his road to Neuilly, in June last, came on before the Court of Assizes at the end of March. Boireaux, already condemned to twenty years' imprisonment for the Fieschi affair, is also foremost in the Neuilly plot. The trial occupied several days. Some of the accused were convicted, and sentenced to long imprisonment, but Boireau was acquitted.

Long discussions have taken place in the Chamber on the new tariff and the beet-root sugar manufacture.

On the 9th of April certain petitions for the recall of the proscribed members of the Bonaparte family, and the removal to France, from St. Helena, of Napoleon's remains, gave rise to much animated discussion. It was the prayer of the petitioners that the ashes of the man who had conferred so much glory on France should repose under his own bronze pillar of victory and of triumph in the Place Vendome. All parties seem to have been convinced that the British Government would readily open the alien tomb near the willow, and give up its contents to the French people. Ministers evaded the decision of this part of the prayer with their usual address; and the other petitions for the recall of the Bonaparte family were disposed of by the Chamber's passing the Order of the Day. The following is an extract from a speech delivered on the occasion by M. Thiers:—

"Gentlemen, the explanations I am about to submit to you shall be short and frank, and shall express the feeling of the Cabinet No one more than myself can sympathize with the feelings of the petitioners. I partake them without any mental reserve, leaving to history the painful task of finding out what there may be of weakness and of error, by the side of grandeur and of genius. But there is something more elevated and important than even glory or misfortune, and that is, the country and its interest—that which governs all other interests. As far as I am concerned, may I live to see the day when all who bear a French name may return to the French soil!—I desire it with ardour. But, Gentlemen, you cannot push forward time;—time marches as God tells it to march It is for time to restore to France the family of the great man who adopted it. Hasty, imprudent measures, such as those proposed, may revive troubles which are calmed, and culpable hopes which should be stifled. The name of this family—this name so sympathized with and so often abused—might furnish new pretexts for bad-intentioned persons. I do not think that France is at all disgraced, and I protest against any such expressions. France has no occasion for shame, and is disgraced nowhere. France is glorious and respected, as she ought to be."

The preparations in the naval arsenal of Toulon are still proceeding. Unluckily, the Trocadero, a hundred and twenty gun ship, that had recently entered the basin to be fitted for sea, has been burned by accident.

The Paris papers have published a letter purporting to be from Marshal Clausel, who complains that the difficulties of his position at Algiers are not properly understood at Paris, and that he does not obtain from Government the assistance he has a right to expect in his perilous enterprises. We can readily believe that the Marshal has just grounds for such complaints; but, even at their present rate of supply and assistance, the French pay dearly for this Algiers whistle. The natural effect of Clausel's recent expedition up the country has been to unite against him most of those tribes who were formerly in a constant state of hostility with one another.

According to the "Journal du Commerce," the French Cabinet has agreed to make an advance of 1,000,000 francs (about 40,000*l.*) on the instalment of the loan about to fall due to the Government of Greece, which seems to be in a deplorable state of poverty, while a considerable part of the Morea is again in insurrection against it.

The "Moniteur," of the 5th of April, stated that the new arrangement entered into between the French and English Postmasters-General was signed in Paris, on the 29th of March, by the French Minister of Foreign Affairs and Lord Granville. The stipulations included in this convention form a supplement to a former convention signed on the 14th of June, 1833.

Louis Philippe has lately despatched the Baron de Mortier to the Hague, to press the King of Holland (once more!) into a final settlement of the Belgian disputes.

SPAIN.

The affairs of this unhappy country are still in an unsettled and doubtful state. In the seat of war in the North none but paltry affairs have taken place, and they seem to have been as often in favour of the Carlists as of the Christinos. The cruelties we have so often shuddered at have been continued by both parties, who have shewn themselves more brutal and sanguinary than the Moors and Kabyles of the African coast. Here is a proof:—The Carlist chief, Tristany, made prisoner a National Guardsman, from whom he demanded 600 gold ounces as a ransom; and the unfortunate man not being able to comply with such a demand, was shot on the spot! In atrocious retaliation, the Christinos seized and put to death Tristany's father and brother! It has, however, we are happy to add, within these few days, been stated on the highest authority, that the Convention effected last year between the two parties by the mediation of this country has been observed in that part of the scene of the war to which it originally had reference, and also that it has been recently extended to Catalonia and other parts not at first contemplated.

In the capital Mendizabal has had the greatest difficulties to contend with. Isturiz and Ferrer, with whom he opened negotiations, showed a determination not to accept office under him or with him. When this was known at Madrid, it was expected that Mendizabal would be obliged to resign, and make way for the ultra-liberals, with Isturiz as their head. Some of the members of the new Cortes began to arrive at the capital about the middle of March; these were mostly ultra-liberals—men who do not conceal their preference of the democratic constitution of 1812 to the one they now enjoy. A change, however, came over the dreams of Isturiz, who, a few days after, was said to be ready to accept office as Minister for Foreign Affairs. On the 17th of March the Cortes held their preparatory meeting when Isturiz was elected temporary President of the Chamber of Procuradores, by a majority of 73 to 1. The temper of the Chamber, at this time, seemed hostile to Mendizabal. The following individuals were spoken of as members of the Cabinet yet to be composed:—Rodil, war; Ballesa, justice; Solarte, finance; Galiano, public instruction.

On the 22nd of March her Majesty delivered her Speech for the opening of the Cortes. The two first causes of the Address are of no importance: in the third is the following passage:—"Your attention will be particularly called to the negotiations set on foot

with the States of Spanish America. It is high time that two countries, sisters by nature, should become eternal friends, and that milder and more lasting ties, grounded on reciprocal advantage, should succeed those of subordination and dependence." In the fourth clause her Majesty said that both France and England continued to afford Spain all the aid the country required, and mentioned the entrance into Castile, of the Portuguese division, which was joining her own troops, and co-operating with them. The sixth clause attributes the want of complete success in Biscay and Navarre to the extraordinarily hard and long winter; and speaks of the triumphs which must ensue when the 70,000 recruits, said to be already levied, shall be clothed, armed, drilled, and sent into the field. The eighth clause is curious and important. "The former Cortes granted with perfect frankness the vote of confidence demanded by my Government. The Government, in demanding it, had in view the object of strengthening itself in the public opinion by a manifest harmony amongst the powers of the State, thereby to smooth the difficult task it had in hand. It also depended on not having recourse to this great confidence but in the sight, with the support, and under the influence of the Cortes. This failed it, and it was obliged to resolve not to make use of its extraordinary powers but with the greatest caution and reserve. The promise of ameliorating the condition of the State creditors was received by the public with enthusiasm, and its fulfilment was looked upon by my Government as one of its most sacred obligations. Such was the origin of the decrees published from the middle of February to the commencement of the present month; they all led to this important end, and some of them to the advantage of increasing guarantees to the public debt, besides satisfying a national wish. There is no doubt that the monastic institutions have, in former times, rendered great services to the Church and to the State, but as they are not now in harmony with the progress of civilization, nor with the want of the age, the public voice demanded their suppression, and it was neither just nor convenient to resist it."

In the next clause the Regent enlarged on the subject of reforms and improvements in the different branches of the Finance department.

A day or two after the opening of Cortes, an address, expressing entire approbation of Mendizabal, was presented to the Queen Regent: it bore the signatures of 500 of the principal and most respectable inhabitants of Madrid. If this class were to decide, that Minister would remain in power; but though we earnestly hope it may turn out otherwise, we are not without our fears that the decision may rest with those who are respectable only in numbers. To the surprise of most people, however, when it was known that Isturiz had again changed his mind, and definitely refused to join the Cabinet, Mendizabal contrived to prevail over him in the Procuradores, where, in spite of the immense majority which had elected him temporary president, in the election for the permanent presidency, he was the last of five candidates. Gonzales was elected president, and Arguelles vice-president. Both these señors are said to have been very instrumental in conciliating the House in favour of Mendizabal. The address to the Queen Regent was afterwards passed, in terms decidedly favourable to Mendizabal. The Proceres, or Peers, however, in their address, very properly stigmatized the detestable cruelties that had been committed, and were still committing in the Queen's name in the northern provinces. The Procuradores had omitted this clause, and Arguelles and Count Almodovar defended the execution of Cabrera's old mother, on the ground that she was engaged in a conspiracy to deliver up Tortosa to the Carlists. When Spaniards of this quality can talk in this manner, we need not be surprised at the atrocities of the rabble. On the 5th of April, Mendizabal frankly avowed to the Chamber, that he had sought, in vain, for persons in whom he could trust, to co-operate and form a Cabinet with him; and that his only reliance was on the support of the Cortes.

Fresh riots and assassinations have been perpetrated at Saragossa and elsewhere. On the 6th of March some shameful disorders took place at Valencia. The Carlist partisan, Cabrera, with a numerous and resolute band, had approached, or was said to have approached that city; and this news had such an effect on the Valencians, that, with the usual wisdom of Spanish mobs, they cried "treachery," and rose against their own governors. The national guards took part with the populace, who demanded the head of Caratela, the Captain-General of the province. The civil Government and the officers of the national guards in vain attempted to quiet the tumult, and in the end Caratela was obliged to resign his command and fly for his life. About the middle of March, Mina marched from Barcelona with vaunting promises, of which not one has been kept.

The letter of the British commodore, Lord John Hay, and the co-operation it distinctly promises on the part of England, is likely to benefit the cause of the Queen much more than anything Mina is capable of doing. This letter, which is printed in the Government Gazette of Madrid, and the authenticity of which has been acknowledged by Ministers in both our Houses of Parliament, is to the following effect:—

"Head-quarters, Vittoria, March 24.

"On board his Britannic Majesty's ship Castor, Santander, March 22.

"Excellency,—I hasten to announce to you that his Britannic Majesty's Government has just ordered me to afford your Excellency and the troops under your command the most efficient assistance, in order to prevent the Pretender's troops from taking possession of the fortified points on the coast still displaying the flag of Queen Isabella the Second, and to wrest from those rebels such of those fortified points of which they may have already obtained possession.

"His Britannic Majesty's squadron has received a considerable reinforcement of ships and troops that have come from England with a view of seconding and protecting all such operations as your Excellency may deem proper to undertake on this part of the coast. I likewise inform your Excellency that all the ships of my Government are instructed to receive on board of them the troops of her Majesty the Queen, and to convey them on such part of the coast as may be designated.

"I have delivered to the bearer of this despatch the most detailed information respecting the number of troops that each ship can receive. Your Excellency may rest assured that the forces composing my squadron will actively co-operate in the movements of the Spanish army, and that I shall personally feel much pleasure in fulfilling the wishes that your Excellency may convey to me.

"I have the honour to be, &c.

(Signed) "HAY,

"Captain of his Majesty's ship Castor, and Commander of the squadron stationed on the northern coast of Spain.

"To General Cordova."

The object of General Alava's recent mission to Paris is said on all sides to have been to request the armed interference of France, and it is pretty generally reported and believed that this kind of assistance has been decidedly refused by Louis Philippe.

DOCUMENTS AND ABSTRACTS.

RELIEF OF THE IRISH POOR.

THE Commission appointed to inquire into the condition of the poorer classes in Ireland, have presented their third Report, in which they point out the remedial measures which appear to be required in the case of the Irish poor. The evidence on which the Commissioners have formed their opinions is contained in several bulky volumes, and constitutes a mass of information such as was, perhaps, never before brought to bear upon any question of social interest. It is needless to say that the existence of deep-seated distress in all parts of Ireland is amply proved

In the introductory part of the Report some important positions are established which render the consideration of the whole question much more clear and distinct. It is stated that there is not in Ireland the division of labour that exists in Great Britain; the body of the labouring class look to agricultural employment, and to it only, for support; the supply of agricultural labour is thus so considerable, as greatly to exceed the demand for it: hence come small earnings and wide-spread misery. The Commissioners further remark, that while in Great Britain the agricultural families constitute little more than a fourth, in Ireland they constitute about two-thirds of the whole population; that there were, in 1831, 1,055,982 agricultural labourers in Great Britain; and in Ireland, 1,131,715, while the cultivated land of Great Britain amounts to about 31,250,000 acres, and that of Ireland only to about 14,600,000. There are in Ireland, therefore, about five agricultural labourers for every two that there are for the same quantity of land in Great Britain.

It is stated by the Commissioners, with respect to actual produce, that the agricultural produce of Great Britain is more than four times greater than that of Ireland; that agricultural wages vary from 6*d.* to 1*s.* a-day; that the average of the country in general is about 8½*d.*: and that the earnings of the labourers do not amount, on an average of the whole class, to more than from 2*s.* to 2*s.* 6*d.* a-week, or thereabouts, for the year round.

It is not possible, under such circumstances, for the able-bodied in general, to provide against sickness, or the temporary absence of employment, or against old age, or the destitution of their widows and children in the contingent event of their own premature decease.

The application of remedial measures to such a state of things is not less necessary than difficult of introduction. Wretched as are the wages of the Irish labourer, they yet seem to afford to him as great a share of the produce he raises as falls in Great Britain to the labourer there. For as the Irish labourers exceed the British in number, and the produce of Great Britain exceeds that of Ireland by three-fourths, if a proportional share of the produce of each country were given to the labourers of each, there would be more than four-times as much for the British labourer as for the Irish. The earnings of an agricultural labourer in Great Britain average from 8*s.* to 10*s.* a week, while in Ireland they average from 2*s.* to 2*s.* 6*d.* only, if spread over the year. If it were attempted to give the Irish labourer a larger share of the produce of the land than he at present receives, without, at the same time, its productive powers being increased, the land might be thrown out of cultivation, and not only the landlords and tenants, but the labourers and the whole community be involved in general destruction.

The English poor-laws are shown to be inapplicable to the circumstances of Ireland. Workhouses could not in Ireland contribute to the same ends as these institutions do in England; for the difficulty in Ireland is not to make the able-bodied look for employment, but to find profitable employment for the many who seek it. It is necessary again to consider, that there are in Ireland a greater number of labourers absolutely than in the whole of Great Britain, more than double the number relatively to cultivated land, and more than four times the number relatively to produce. The number of persons in Ireland out of work and in distress during thirty weeks of the year, is estimated by the Commissioners at not less than 585,000, and the number of persons dependant upon them at not less than 1,800,000, making in the whole 2,385,000. This, therefore, is about the number for which it would be necessary to provide accommodation in workhouses, if all who require relief were there to be relieved. The Commissioners consider it morally and physically impossible so to provide for such a multitude, or even to attempt it with safety. The expense of erecting and fitting up the necessary buildings would come to about 4,000,000*l.*, and allowing for the maintenance of each person only 2½*d.* a-day, the cost of supporting the whole 2,385,000 for thirty weeks annually would be something more than 5,000,000*l.* a-year; whereas the gross rental of Ireland (exclusive of towns) is estimated at less than 10,000,000*l.* a-year; the net income of the landlord at less than 6,000,000*l.*; and the public revenue is only about 4,000,000*l.* In other respects, the state of things in Ireland is just that in which the workhouse system is not applicable; for though the regulations of a workhouse would be especially irksome, yet in Ireland the labouring class are eager for work, which they cannot obtain, and they are therefore, not from any fault of their own, in permanent want. If, on the contrary, work was easily to be obtained, and the repugnance to workhouses continued general, then in-door relief could be afforded to the few who might from time to time fall into distress, and yet no temptation be offered to idleness or improvidence. The Commissioners come to the conclusion, that if workhouses were established, and want should send some of the labouring class into them, the strict discipline which, as in England, it would be needful to enforce—separation of families and so forth—would produce resistance; that tumults would ensue: and that after much trouble, expense, and mischief, the system would necessarily be abandoned altogether.

Relief, coupled with out-door employment, would scarcely be attended with fewer difficulties. The number of persons for whom work must be provided is immense, and the experience of England is against such a mode of relief. If the farmers were compelled to take more men than they chose, or thought they wanted, they would reduce the wages of all to a *minimum*. On the other hand, wages or allowances, if framed by magistrates or local authorities could not be fixed at a lower rate than the *bonâ fide* wages of the district; nor would anything less enable the labourer to support himself in such a manner as any person, undertaking to provide permanently for human beings in a civilized country, could say they ought to be satisfied with. Acting upon this principle, it would be necessary to fix different scales of wages, or allowances, which would average for the whole of Ireland about 4*s.* 6*d.* a-week. This would be to double the present earnings of the body of labourers, and these appear to amount to about 6,800,000*l.* a-year. The additional charge for labour would, therefore, come to about that sum. The tenantry are not in a condition to bear this burden, even if the labour so employed were likely to make a profitable return, which the Commissioners are of opinion would not be the case, as there would be five labourers for every two employed on the same extent of cultivated land in Great Britain; and the labourers not being freely chosen by their employers, and not being found to give satisfaction, or lose their employment, would lessen the productiveness of his exertions. The charge must therefore come upon the landlords. To this the objections are of the most weighty character. At present the rental of the country goes to feed commerce, to give employment directly or indirectly to profitable labourers, and to keep society in a healthy state. If any considerable portion of it were devoted to the support of unproductive labourers, it would be in a great degree consumed without being reproduced; commerce must decay, and the demand for agricultural produce and all commodities (save potatoes and coarse clothing) must immediately contract; rents must therefore diminish, while the number of persons out of employment and in need of support must increase, and general ruin be the result. The whole of Ireland would soon have to lean on Great Britain for support. The experience which England has had of the ill effects of the allowance system will not sanction its introduction into Ireland, where its evil would probably operate even on a more extensive scale. It is said that England has flourished with poor-laws, while

Ireland, without them, is in a state of semi-barbarism. But because extraordinary strength has withstood poison, it does not follow that poison should be prescribed as a remedy for weakness. The object is not to guarantee to the labourer pauper support, but to render him independent of it.

With this view the Commissioners call for enactments calculated to promote the improvement of the country, which, by extending the demand for free and profitable labour, should form an essential part of any law for ameliorating the condition of the poor. And, for the same reasons, while they feel that relief should be provided for the impotent, they consider it due to the whole community, and to the labouring class in particular, that such of the able-bodied as may still be unable to find free and profitable employment in Ireland should be secured support only through emigration, or as a preliminary to it—*i. e.*, those who desire to emigrate should be furnished with the means of doing so in safety, and with immediate support, when they stand in need of it, at emigration depôts. It is thus, and thus only, that the market of labour in Ireland can be relieved from the weight that is now upon it, or the labourer be raised from his present prostrate state. Until this is effected there cannot be such a degree of content, or of peace and order, established, as can alone encourage enterprise, or draw the overflowing capital of England to those commercial undertakings in Ireland for which the country in general, if pacified, would afford so wide and so promising a field. It is only in the degree in which there is a demand for profitable labour by those to whom, in the natural course of things, the labourer looks for employment, that he can have security even for such support as may prevent the extremity of want. In England itself, when a pressure of distress comes—when there is a supply of labour for which there is not a demand, the poor laws afford no guarantee against misery of the most dreadful description. As to emigration, the feelings of the suffering agricultural labourers in Ireland are most decidedly in favour of it. They do not desire workhouses, but they do desire a free passage to a colony where they may have the means of living by their industry. The Reports of the Assistant-Commissioners abundantly confirm this fact The Commissioners observe that they do not look to emigration as an object to be pursued upon any extensive scale, nor by any means as the main relief for the evils of Ireland, but, for the present, as an auxiliary essential to a commencing course of amelioration.

Having thus explained the general views of the Commissioners, we shall now enumerate the recommendations which they submit for the improvement of Ireland, and the relief of the poor there.

It is chiefly through their occupation as agriculturists that a general improvement can be primarily wrought in the great mass of the Irish people. But, in proportion as the earnings of the agricultural labourer extend, so will his consumption of commodities produced by persons in other occupations. Trades of different arts will thus be encouraged; and in the natural, and therefore certain, course of things, that division of labour may be expected to take place in Ireland which exists in England, and which is at once an acting and reacting cause and consequence of the wealth of nations.

The laws which form the constitution of the Bedford Level Corporation in England afford principles of legislation directly suited to the purpose which the Commissioners have in view in reference to improvements in the lands of Ireland. These laws enforce improvements in property at the expense of the proprietors improved. In order to accomplish the same end in Ireland, the Commissioners recommend that a Board shall be appointed, with the necessary powers for carrying into effect a comprehensive system of national improvement; and that it shall consist of a president and vice president, having suitable salaries, and of such other members as shall be named with them. The president and vice-president, with two of the Judges, in order that all legal questions which may be raised by the proceedings of the Board shall be promptly and justly decided, are recommended to be constituted a court of review and record, with power to hear and determine certain matters laid before them with or without a jury, or to direct issues of fact where it may think proper. The Board of Improvement shall be authorized to appoint Commissioners, from time to time, to make a survey, valuation, and partition of any waste lands in Ireland. The Board of Improvement will be vested with powers for bringing these lands into cultivation; and considering the embarrassed state of landed property in Ireland, the extent to which it is in the hands of creditors and courts of justice, and the difficulties which would arise from confusion of rights, if any particular assent were required before a commission of partition could issue, the Commissioners further recommend that the Board shall be authorized to issue a commission of its own motion in any case in which it may think proper, provided due notice be given of its intention to the parties interested, who may file objections to the same, which will be heard and disposed of by the Court of Review.

The Report proposes that main drains and roads which may be required in or through lands partitioned by the Commissioners of Partitions, for the purpose of being brought into immediate cultivation by the Board of Works, which, in consideration thereof, shall have an allotment of a certain part of each waste made to it in trust for the public; the extent to be proportioned to the charges incurred in making the survey, partition, drainage, and roads. The annual acreable value of the land comprised in each allotment made by the Commissioners of Partition is to be stated in their award; and it is recommended that each proprietor, whether he have a limited estate only, or hold subject to charges or incumbrances, shall have a right to make a lease of the share assigned to him, or of any portion of it, at a rent equal to the annual value so fixed, for a term of sixty-one years, to a tenant undertaking to inclose and cultivate the premises in such manner as shall be approved of by the Board of Improvement; and each party authorized to make such lease shall also be authorized to contract for the transfer in fee of part of the allotment made to him, to any person or company that shall undertake to inclose and bring the residue into good cultivation, provided the contract be made with the approbation of the Board of Improvement; and, when the work is satisfactorily perfected, a proper deed of transfer shall be executed, which shall be good against all parties whatever.

The Commissioners also recommend that the Board of Works be authorized and required to cause each allotment made to it to be fenced as well as drained, and to sell or let it in such portions, and subject to such conditions, as the Board of Improvement shall think expedient; and, when required so to do so by the said Board, to cause any part of such allotment to be improved, and hamlets to be built thereupon as model-hamlets, and to effect any other improvement thereupon that the Board of Improvement may think proper.

The Commissioners propose that the provisions of Mr. More O'Ferrall's Act, which empowers landed proprietors in Ireland to embank and remove obstructions in rivers; and also the provisions of the English Sewers Act, which is one of the laws of the Bedford Level, but is applicable to the whole of England, should be modified, incorporated, and extended, so as to cause all lands to be kept duly fenced and drained. They recommend that both draining and fencing, wherever necessary, shall be enforced by law, and that the Board of Improvement shall be authorized to appoint Local Commissioners for any district they may think proper for the purpose,—such Commissioners to be a Court of Record for their district; and that an engineer shall be named for each district by the Board of Works, who shall inspect all parts of the district before the periodical meetings of the Commissioners, and make a report upon the works which are required, such Report to be printed, and circulated throughout the district. The presentments made in open Court by the Local Commissioners, with the aid of a jury, to be carried into execution by rates levied for the purpose, but not before the time for making objections against them has expired. As the presentments might require a sum which it would not be possible to raise by a single rate, it is suggested that if rates beyond a certain amount per cent. were made payable to the Board of Works, and the Board, in consideration thereof, were authorized to advance the requisite sum at once, the Board of Improvement would be kept in funds for continuing operations. Powers are proposed to be given for enforcing the rate by entry and distress; but the rate may

be redeemed by the proprietor paying off, within a certain time, the sum in respect of which it had been laid on, and when redeemed it may be transferred.

As every outlay of money that has taken place in the making of roads, facilitating intercourse, and opening remote districts in Ireland, has not only tended to great local advantages, but, by improving the condition of the people, to a very great increase of the public revenue, the Commissioners recommend that the fund placed at the disposal of the Board of Works, to be employed for these and similar purposes, be considerably increased.

The Commissioners consider it advisable that the Board of Improvement should be enabled, as far as possible, to make provision for the occupants of cabins which may be nuisances, and, when such provision is made, to cause the cabins to be taken down; and that landlords should be required to contribute towards the expense of removing the occupants and providing for them. It is therefore recommended that, at the instance of the Board of Improvement, the Local Commissioners and jury shall present as nuisances any cabins within the district which may appear unwholesome, or calculated to generate or continue disease, and to present a certain sum for each; and that a portion thereof shall be raised off the property of the immediate landlord of the tenant, and the residue off the district at large; that it be paid to the Board of Works, and that the said Board, under the directions of the Board of Improvement, do let to each tenant whose cabin shall be so presented, a certain quantity of land out of some of the allotments to be made to it as aforesaid, for such term, and at such rent, and subject to such conditions as the Board of Improvement shall approve of; and that it shall assist him, to the extent at least of the sum presented for his use, in erecting a cottage thereupon, and shall cause the presented cabins to be taken down.

The occupiers of land who do the work of it themselves amount to about one-half of the whole class of labourers; they are at times employed on their own holdings – at others, they work for hire. At present, they are so utterly unacquainted with any good course of cultivation, that it is supposed they do not make the land they hold yield one-third of the produce it might, under proper management. They have no notion of alternate cropping, nor of house-feeding, nor of the value of manure, except as applied to a potato-garden. The Commissioners observe that the extraordinary improvement that has been wrought in their holdings, where proper attention has been paid to them, affords the hope that, by bringing agricultural instruction home to their doors, and affording them examples of order and cleanliness, and good cottier-husbandry, a general change will be effected in their habits and circumstances, and the whole of Ireland be essentially improved. They therefore propose, that an agricultural model-school shall be established for Ireland, and that a school, having four or five acres of land annexed to it, shall be established in each parish or other district that may be appointed by the Board of Improvement; that the master shall give instruction in letters and in agriculture; that he undergo due examination as to both before he be appointed, and that he be required to pursue an approved course of cropping on the land annexed to the school. The local Commissioners and jury shall present it, at the instance of the Board of Improvement for a site for the erection of a school with the requisite quantity of land, with the rent to be paid for the same in perpetuity.

The Commissioners are of opinion that improvements may be very extensively, though indirectly, promoted by all proprietors of lands who are tenants for life, or *quasi* tenants for life, being authorized to grant leases for thirty-one years thereof at the improved rent, and without fine, provided each lease be made with the approbation of the Board of Improvement, and contains covenants for due management; and they propose that proprietors, as above-mentioned, shall be permitted to charge the inheritance to a certain extent, with any sum which they may expend on lasting improvements, provided the expenditure be made with the approbation of the Board of Improvement, and that it do not exceed the amount of three years' annual value of land; and that it do not extend to ornamental works, or any buildings, save farm-houses and such out-offices and homesteads as may be required for them.

The Commissioners recommend that the fiscal powers of grand-juries be transferred to county Boards, the members of which should be chosen by those whom they shall be authorized to tax. They therefore propose that a fiscal Board shall be established in every county; that the number of the Board shall not exceed thirty-one; and that each county be divided into as many districts as there are quarter-session towns therein, and that a certain number of the Board be chosen from each district. The provisions for the constitution of the Board, and the mode in which its operations are to be conducted, are detailed in the Report, and appear to be of a liberal and comprehensive character. The Board, when constituted, is to exercise the power of making presentments for public works which is now possessed by grand-juries, and to be invested with the power of enforcing its presentments, subject to the revision of the Court of Review. A certain number of the Board to go out each year in rotation, and to be replaced, by election, as in the first instance. The proceeds of the county Boards are to be laid before Parliament, and due provision is made to ensure the just and equitable exercise of their functions.

The Commissioners, before entering upon the consideration of the measure necessary to be adopted for affording direct relief to the poor, notice two widely-diffused notions as to the injurious effects produced in England by the introduction of Irish corn, or other agricultural produce, and the migration of Irish labourers. They shew that, as the import of Irish produce in England has increased, so has the import of English manufactures into Ireland; and in reference to the other point, they direct attention to the valuable Report of G. C. Lewis, Esq., on the state of the Irish poor in Great Britain, which shews that the Irish labourers, who settle in towns in England, and other parts of Great Britain, do not cause a redundancy, but supply a deficiency of labour; that they keep work going, not wages down; and that without them, capital could not increase and fluctify as it does to the general good of the community. Where the Irish are most numerous there wages are highest. Then, as to the labourers who arrive in Great Britain at the time of harvest, it is notorious that the crops, in many places, could not be saved without their aid.

Measures of direct Relief for the Poor.—After great consideration, the Commissioners adopt the opinion, that a legal provision should be made, and rates levied as hereinafter mentioned, for the relief and support of incurable, as well as curable lunatics, of idiots, epileptic persons, cripples, deaf and dumb, and blind poor, and all who labour under permanent bodily infirmities, such relief and support to be afforded within the walls of public institutions; also for the relief of the sick poor in hospitals, infirmaries, or convalescent establishments, or by extern attendance, and a supply of food as well as medicine, where the persons relieved are not in a state to be removed from home; also for the purpose of emigration, for the support of penitentiaries to which vagrants may be sent, and for the maintenance of deserted children; also toward the relief of aged and infirm persons; of orphans, of helpless widows with young children, of the families of sick persons, and of casual destitution.

To effect the several purposes above stated, the establishment of a Board, consisting of Commissioners, with power to appoint Assistant-Commissioners, is recommended, the said Board to carry into execution all such provisions as shall be made by law for the relief of the poor in Ireland.

After the country has been partitioned into relief districts, the lands in each are to be surveyed and valued, and lists prepared of the names of all proprietors of houses or lands within the district, and of all lessees and occupiers thereof, with full particulars of the nature of their respective tenures, and the annual value of such houses and lands respectively; and such lists are to be placed in some public office within the district; and objections to the list shall be heard before an assistant-barrister, whose decision shall be final, if not appealed against within a certain period.

The Local Board of Guardians for each district is recommended to be elected by the rate-payers, who are proprietors, lessees, and occupiers. A certain number of the Board to go out each year, and other persons to be elected in their stead, and the list of rate-payers to be altered

from year to year. The Board of Guardians to have the direction of all institutions for the relief of the poor which are supported by local rates, and it shall be their duty to cause them to be upheld and maintained.

National establishments are proposed to be formed of the following description:—Asylums for the relief and support of lunatics and idiots, and for the support and instruction of the deaf and dumb and blind poor; depôts for receiving persons willing to emigrate, and penitentiaries for vagrants; for the maintenance of which the Commissioners shall be authorized to assess a national rate upon the whole of Ireland, and to require the Board of Guardians of each district to raise a proportional share thereof,—regard being had to the annual value of each district.

The formation of institutions in each district is recommended for the support and relief of cripples and persons afflicted with epilepsy, or other permanent disease; also an infirmary, hospital, and convalescent establishment, and such number of dispensaries as may be necessary; each district being bound to provide for those institutions by local enactments.

On the principle that the United Kingdom must be benefited in a very great degree, and particularly in point of revenue, by the improvement which extensive emigration, coming in aid of a general course of amelioration, cannot fail to produce in Ireland, the Commissioners propose that one half of the expense should be borne by the general funds of the empire. And, considering the particular benefit which Ireland will derive from it, and especially those landlords who may thus be relieved from a starving population, they propose that the other half be defrayed partly by the national rate, and partly by the owners of the lands from which the emigrants remove, or from which they have been ejected within the preceding twelve months, provided that they previously resided thereupon for a period of three years.

Lessees who have sub-let to the emigrants shall be considered the landlords liable to the charge: the contribution thus payable to be added to the portion of the national rate allocated to each district; and the district at large, in case of non-payment by the landlord, to be answerable for it. Landlords of the rural districts only to contribute in the aforesaid manner.

It is proposed that, for the purposes of emigration, the Poor Law Commissioners shall have the power of borrowing monies from the Exchequer Bill Commissioners; and that arrangements be made between the Commissioners of Poor-Laws and the Colonial Office, by which all poor persons, whose circumstances shall require it, shall be furnished with a free passage, and with the means of settling themselves in an approved British colony to which convicts are *not* sent.

The Commissioners likewise propose that the means of emigration shall be provided for the destitute of every class and description who are fit subjects for emigration; that depôts shall be established, where all who desire to emigrate may be received; that those who are fit for emigration be there selected for the purpose, and that those who are not, be provided for under the directions of the Poor-Law Commissioners.

The Commissioners recommend the establishment of penitentiaries to which vagrants may be sent, and instead of being liable to transportation, as at present, that they shall be removed as free labourers to some colony; but that the wages of all able-bodied adults amongst them shall be attached in the colony until the expenses of their passage be defrayed, and that those who may be unfit for removal to a colony shall remain for a certain time in the penitentiary, and be there kept to such work as may hereafter be determined upon. Thus, by means of the provisions respecting emigration and vagrancy, all poor persons who cannot find the means of support at home, and who are willing to live by their labour abroad, will be furnished with the means of doing so, and with intermediate support, if fit to emigrate,—and if not, will be otherwise provided for; while the idle, who would rather beg than labour, will be taken up, and the evil of vagrancy suppressed.

The establishment of loan funds is recommended, to be administered under the direction of the Poor-Law Commissioners. The operation of these institutions will be exceedingly beneficial, as the poor, when compelled to purchase on credit, are frequently compelled to pay double, or nearly double, the market price.

A revision of the Act establishing regulations for preventing contagious diseases in Ireland is recommended, and the transfer of the powers which it confers to the Board of Guardians of each district, who shall elect officers of health for every parish within their jurisdiction. The officers of health are to be authorized to grant tickets of admission to the next emigration depôt to any poor inhabitants of their parish who may, on behalf of themselves, or of themselves and their families, demand such tickets from them, and also, where necessary, to procure means for passing such persons to the depôt; and it shall, also, form part of their duty to pass all persons, whom they may take up under the provisions of the Act already referred to, to a penitentiary; also to cause all foundlings to be sent to nurse to some remote place, under regulations to be hereafter determined upon by Parliament; such foundlings, when of a suitable age, to be removed to an emigration depôt, from whence they may be sent to an institution in some British colony, where they shall be trained and apprenticed to useful trades or occupations; orphan children to be provided for in like manner; and the funds for each of the above purposes to be raised by local assessments.

The rates for the relief of the poor are proposed to be levied in the following manner,—that is to say, one-third on the occupier of each house or tenement of land above the value of 5*l.* in respect of his occupation, and the remaining two-thirds in respect of the beneficial interest therein; the whole to be paid, in the first instance, by the occupier, who, if he be not the proprietor, shall be reprised as to the two-thirds payable in respect of the beneficial interest as follows,—that is to say, if the rate be 1*s.* in the pound on the annual value, he shall be entitled to deduct 8*d* in the pound from whatever rent he pays to his immediate landlord; and if such landlord be a lessee, he shall be entitled to deduct the like poundage from any rent which may be payable by him, and so upward, where there are several lessees. The Commissioners further recommend, that if the immediate occupier be a tenant-at-will, or from year to year, and hold a tenement of less value than 5*l.* a-year, he shall be entitled to deduct the whole rate from his own immediate landlord, who shall not be entitled to deduct the 4*d.* in the pound payable in respect of the occupation from the person, if any, under whom he may hold.

The Commissioners endeavoured to ascertain if it were not practicable to render the rate payable out of every description of property; but the difficulty of effecting this, except through very inquisitorial proceedings, compelled them to recommend that the land should be the fund charged in the first instance with it. The gross landed rental of Ireland amounts to less than 10,000,000*l.*; expenses and losses not less than 10*l.* per cent., 1,000,000*l.*; annuities and the interest of charges payable out of land, 3,000,000*l.* per annum; so that the total net income is less than 6,000,000*l.* The landed property of Ireland being deeply incumbered, the Commissioners think that the incumbrancers should be called upon to bear a proportional share of the burden, the security of their investments being bound up with the productiveness of the land and the well-being of its inhabitants. The individual who receives but a minute portion of the rent is not to be made liable for taxation as affecting the whole. A person paying any annual charge in respect of any beneficial interest in land, is to be authorized to deduct the same sum in the pound thereout that he pays to the poor-rate, as in the case already put of successive lessees.

The Commissioners recommend that the original rate shall never be raised by more than one-fifth, unless for the purpose of emigration, save by the authority of Parliament.

The Commissioners, at the conclusion of their Report, advert to some general matters connected with the objects of their Commission. In the first place, they allude to the baneful effects experienced by every class in consequence of the inordinate use of ardent spirits; and as such a barrier to improvement, both moral and physical, cannot be removed by direct legislative enactments, they state that the chief hope of amendment lies in the improved state of moral feeling which may be expected to grow out of the improved condition of the people. The Commissioners

strongly deprecate the mischiefs arising from the two licences of publican and grocer being combined; and trust that no question of merely fiscal policy will be suffered to interfere with the great and paramount object of reforming the moral habits of the country, and thus affording the best guarantee for its future prosperity.

The Commissioners suggest the following plan for creating a national fund that might be made available towards the charitable purposes for which a national rate must be raised, and which would render such a rate much less burdensome than it would otherwise be to the country This plan is founded upon the contingent settlement of the tithe question. The Commissioners observe, that the tithe composition payable for the whole titheable land of Ireland amounts to about 665,000*l.* a-year: of this about 555,000*l.* is for ecclesiastical, and 110,000*l.* for lay tithe. The highest value set upon tithe composition has been sixteen years' purchase. The whole tithe composition, purchased at sixteen years' purchase, would amount to 10,640,000*l.* A government annuity of 352,000*l.*, sold at the present price of three per cent. consols., would produce something more than 10,640,000*l.* Thus, if the Government purchased up the tithe composition, it would pay for it 10,640,000*l.*, and it could raise this sum by the sale of a perpetual annuity of 352,000*l.* Therefore, if the State purchased the tithe composition, and then vested it in the Poor-Law Commissioners as a fund for the relief of the poor, charged with an annuity equal to that which the State had to grant in order to raise the money for purchasing it, there would be a surplus of 313,000*l.* a-year applicable to the purposes of the national rate; while the 10,640,000*l.* might be invested in the purchase of rent-charges in Ireland, which would tend to reduce the interest of money, and enable landlords advantageously to pay off incumbrances upon their estates. The gain would result entirely from the difference in value between a government annuity and tithe composition; the former being worth thirty years' purchase and the latter sixteen.

The Report of G. C. Lewis, Esq., on the Irish Poor in Great Britain, is quoted in proof of the happy effects that may be produced upon the Irish of the labouring class by treating them kindly. There are, in Ireland, landlords who think of their tenants, and whose estates appear as green spots in a desert. The Commissioners observe that absentee landlords may, in some degree, compensate for their non-residence by putting in their place and stead active agents, who will feel that it is their duty, not merely to compel the tenant to pay his rent, but to take care that he may be enabled to make it. There are such agents in Ireland, and where these are, the tenants are comfortable and the landlord's rent is secure.

The employment of agricultural stewards, too, is now becoming general; they mix continually with the tenantry, and reform both their cottage economy and their husbandry. This is a most beneficial practice, and infinite good may be augured from it.

The following are among the concluding paragraphs of the Report:—

"We have now proposed such remedial measures as we hope will tend to ameliorate the general condition of the Irish poor: but, whatever may be their tendency, their efficacy, under Providence, must depend mainly upon those who possess power and influence in the country. It is only through these that the poor can be put into proper courses of industry, taught the value of comforts, or animated to exertions to procure them. In proportion as such persons are raised high, they have high duties to perform; they are endowed with wealth and intelligence, not as means of self-indulgence, or for effecting any sordid object of ambition, but as trusts for the good of their fellow-creatures, and which they administer under an awful responsibility. We earnestly hope that this may be felt and remembered by all who are elevated above the poor, and that they may act accordingly. Those who are uncivilized cannot civilize themselves; it requires external aid to enable them to improve. . . . . Upon the whole, we think there is a rising spirit of improvement in Ireland; but it must be stimulated by sound legislation, or it cannot speedily relieve the country from the lingering effects of the evil system of former times. What ought to be done, we trust will be done; the improvement of Ireland is of the deepest importance to every part of the United Kingdom; at present, with a population nearly equal to half that of Great Britain, she yields only about a twelfth of the revenue to the State that Great Britain does; nor can she yield more until more she has to yield. Increased means must precede increased contribution; and to supply Ireland with these is the great object of our recommendations. We anxiously hope that they may conduce to it, and that Ireland may at length become what Sir William Temple so long ago stated, that under good government she might be made 'one of the richest countries in Europe, and a mighty increase both of strength and revenue to the Crown of England.'

EVIDENCE REPORTED BY THE COMMITTEE ON THE STATE OF AGRICULTURE.

The appointment of a Committee to inquire into the state of Agriculture, and into the causes and extent of the distress which affects some of its interests, was noticed in the "Companion" for March, and at the same time a list was given of the Members composing the Committee. Fifteen witnesses, conversant with the affairs of agriculture, had been examined up to the period at which the Committee reported the progress they had made in the inquiry, which is still pending. In giving publicity to the minutes of evidence already taken, the Committee do not, of course, express any opinion on the subject to which it refers, but postpone their Report until the investigation is brought to a close. The following is an abstract of portions of the evidence:—

W. Jacob, Esq., Comptroller of Corn Returns, examined.—Mr. Jacob advances the opinion that the consumption of wheat, relative to population, has been gradually declining for the last twenty years. The extent of land planted with potatoes has been gradually increasing, and within the last seven years to an astonishing extent; and the low price of wheat, to what extent it is impossible to say, may be partly attributed to the increased consumption of potatoes. This view is not the result of any accurate calculation—it is a matter of uncertainty and guess. Looking at the population in the northern districts, which are the most densely peopled, and the extent of potatoes cultivated in those counties, Mr. Jacob imagines there must be at least 2,000,000 of the inhabitants of England whose chief vegetable food is potatoes. He is acquainted with land cultivated formerly to wheat and beans, which is now cultivated to potatoes, especially in the vicinity of towns; but he is not able to state that the number of acres under cultivation to wheat is less than it was some years ago. There is a practice lately introduced of sowing wheat after potatoes where manure is plentiful, so that the same piece of land produces food for three people which formerly was only capable of affording sustenance for two. Within his recollection the labouring class, as well as every other, has improved in a most remarkable degree as compared with other countries. The higher classes certainly live more luxuriously, but the lower classes live much more luxuriously, according to their rank in life. Their circumstances are better, their food is better, and they live in houses of a different description. There never was a period, for any length of time, when a labourer with employment could command more of the comfort and conveniences of life, in respect of dwelling and clothing, and provisions and fuel, than at the present time. Employment is more abundant than it ever was, and there has been less fluctuation in the last ten years than formerly. In respect to agriculture there has, on the whole, been an improvement. An improved system, called the four course husbandry, places the interests of a farmer on a more enlarged basis. Mr. Jacob, being asked if the four-course husbandry could be maintained if wheat continued at its present low price? replied—That must depend upon other circumstances. In the four-course system the turnips are converted into mutton and wool, and much will therefore depend upon the price of mutton and wool for the first year. The second year comes the barley; the profits of that year depend upon what the brewers and distillers give for the barley. The third year comes clover; if it be used for fattening bullocks or sheep, farmers will look to the

price of beef, butter, or cheese for their profit. Then the fourth year comes wheat, to which, in former times, the former looked for his remuneration; and if he gets but half the price for the wheat, and gets an additional price on barley or oats, and a high price for meat, wool, butter, cheese and bacon, the farmers could still go on with a low price for wheat, seeing that the wheat occupies but one year in four.

Mr. John Brickwell, of Leckhampstead, Bucks, examined.—Mr. Brickwell occupies 700 acres of land, 150 of which are arable, and the remaining portion grass. He gave in a statement of the expense of growing wheat per acre on strong clay land, and shewed that, under the price which he was then receiving for the produce, a loss of 2*l.* 17*s.* an acre was sustained. The cultivation of stiff clay land is much more expensive than a lighter soil. Four horses are required to break it up from the stubble against a hill, and the second and third ploughings in the summer are performed by three horses. The cost of cultivating poor land, which produces only 20 bushels an acre, is the same as good land which produces 30 bushels. Where the land is all arable the low prices of wheat are the most ruinous. Only 150 acres of Mr. Brickwell's is under the plough, and it remains fallow one year out of four: the remaining 550 being grass land, and more remunerative, enables him to pay a fair rent. He occupies a larger portion of grass land than farmers generally. Since the depreciation in the prices of agricultural produce, many farmers have driven their farms to carry wheat, to make money to pay their rent, because wheat was selling higher. They grew wheat when barley ought to have been grown, and thus impoverished the soil. Mr. Brickwell attributed the recent advance in the price of wheat to the fact that it had been used for feeding cattle to a great extent. Within the last twelve months wheat has been lower than beans, in fact about 2*s.* a bushel cheaper, and hence it has been cheaper to give horses wheat than to give them beans. The price of beans is stated by this witness to be too high.

Mr. John Houghton, an extensive farmer in Berks and Bucks, a receiver of rents and land valuer, states that on the heavy clay lands the distress of the farmers is very great more than it is on the turnip and barley lands or grass land. The cultivator of light lands, having an opportunity of growing stock and wool, which obtain better prices than wheat, is in a much more comfortable condition. Wheat can be grown at a much lower price now than it used to be when it was grown on the heavy soils. On the whole of the lands from Louth to Boston in Lincolnshire, where, thirty or forty years ago, wheat was scarcely known, it is now extensively cultivated There have been improvements by drainage on the heavy soils, but not to the extent to which they have been carried on light soils. In cases where money has been borrowed on the heavy lands, the farmers have, in many instances, been swept away. This witness is of opinion that the effect of the rot in sheep, which was so disastrously experienced a few years ago, is now got over; and that the present high price of wool is owing to the prosperous state of the manufacturers. He suggests that relief might be afforded to the agriculturists, and without injury to the West India interests, by allowing a liberal drawback on the exportation of spirits distilled from British grain. The prices of barley, oats, and beans, are considered remunerating at the present time, taking them all together. In the witness's case he makes a considerable profit on rye straw, for which there is a great demand for thatching, brickmaking, and collar-making. The amended system of poor-laws is spoken of as the best thing which has been done for the farmers. Mr. Houghton is of opinion that, in consequence of the low price of wheat, the labourers consume a greater proportion than at any previous time. The consumption of potatoes has not occasioned a decreased consumption of wheat. He says: "I am certain it has not, in places where I have personal knowledge; and I am continually visiting the cottages, and turning my attention to the state of the poor. There is more wheat used now than when it was very dear." In consequence of the low price of wheat, horses, pigs, and beasts have been fed upon it to a great extent. The wages and profits of the handicraftsmen employed by the farmers do not bear the proportion which they ought to those of the farmer and farm-labourer. Mr. Houghton states that he has reduced his blacksmiths' bills very much, knowing what they ought to charge; but there are many small farmers who do not know what ought to be the blacksmiths' charges, and are paying them at the same rate they did some years ago.

Mr. John Rolfe, a farmer, an appraiser of farming stock, and a land-valuer at Beaconsfield, Bucks, states that, in the district with which he is acquainted, several farmers have latterly been obliged to give up their farms, and there are a great many now on the brink of ruin. There is a difficulty in getting tenants on poor soils. Within the last few years rents have generally been reduced about one-fourth. The business of a farmer was never one in which great fortunes could be made. During the war, farmers, by being very careful and industrious, might realize property, and many did so. The distress of the farmer is to be attributed, in many cases, to the loss of his sheep-stock, which he sustained a few years ago. Not having capital to obtain a fresh stock, the crops have not been so good as when a flock was kept on the farm, and the farmer has depended more upon the price of wheat. The wages and profits of wheelwrights and blacksmiths have, not come down in proportion to the price of corn. Tradesmen are paid better in proportion to the price of produce than they ever were. The condition of the agricultural labourer in employment is considered at present to be very good, and but few are unemployed.

Mr. John Kemp examined:—Is an occupier of 500 acres at Southminster in Essex, and has been on his farm eight years, and during this period he stated, that his losses, if he were now to leave it and the stock to be taken at a valuation, would amount to 3000*l.* The soil of this farm is good, neither heavy nor light, but of a mixed quality, and 400 acres are arable and 100 are in pasture marsh land, and the whole is taken at an average rent of 30*s.* an acre. The following is a statement of the expenses and the produce of the farm:—120 acres of wheat, averaging three quarters two bushels an acre, at 56*s.* a quarter, equal 1192*l.*; 30 acres of barley, at four quarters six bushels, at 30*s.* a quarter, equal 213*l.* 16*s.*; 30 acres of oats, at six quarters an acre, at 20*s.* a quarter, equal 180*l.*; 30 acres of beans, at three quarters one bushel an acre, at 32*s.* a quarter, equal 150*l.*; 30 acres of peas, at two quarters six bushels an acre, at 38*s.* a quarter, equal 156*l.* 15*s.*; 60 acres of clover, at 3*l.* per acre, equal 180*l.*; pigs and poultry, 60*l.*; total 2032*l.* 10*s.* Then as to expenses:—Lands at 30*s.* an acre, 600*l.*; tithe 6*s.* 6*d.* per acre, 130*l.*; labour 30*s.* per acre, 600*l.*; poor-rates about 50*s.*, equal 100*l.*; church rate 15*l.*; horse-keep for sixteen horses, at 15*l.* a horse, 240*l.*; allow wear and tear of horses, 3*l.* per horse, equal 48*l.*; wheelwright's bill about 1*s.* 6*d.* per acre, equal 30*l.*; blacksmith's bill 2*s.* per acre, 40*l.*; collarmaker's bill 10*s.* per horse, 8*l.*; malt and hops 30*l.*; corn factor's commission, freight and metage, 100*l.*; interest on capital of 3500*l.*, equal 175*l.*, and 5 per cent. more for skill and industry 175*l.* more, making a total of 2291*l.* Instead of getting 10 per cent., he had for the last three years been receiving only 2½ per cent. for his labour, skill, and capital. A month previous to the examination of witness wheat was from 42*s.* to 44*s.* per quarter, from 12*s.* to 14*s.* per quarter less than mentioned in the above estimate, which is the average of the preceding seven years; but at the period of giving his evidence it had risen from 8*s.* to 10*s.* per quarter. A deduction of one-third of the rent would enable this farm to realize ten per cent., or 350*l.* per annum, on a capital of 3500*l.*, and a less per centage would not, in witness's estimation, enable a farmer to cultivate the land to advantage. The parish contains 6000 acres; the poor-rates were formerly 1600*l.* per annum; last year they amounted to 1200*l.*; and the Poor Law Amendment Act is stated to be working favourably. Four or five years ago the supply of labour was redundant. The farmers are in a better condition now than they were three years ago, and consequently have been enabled to employ more men. The labourers have been very fully employed for the last three years, and they are as well off now with wages at 10*s.*, as when they were paid 12*s.* when corn was dearer. They consume quite as much bread as ever they did, and of a good quality. The farm servants live in cottages, and not with the farmer. Two of them who are single, lodge in the cottages of others who are married. This witness was unable to state on what particular portions of the farm his losses had been sustained.

Mr. William Thurnall examined:—Residence at Duxford, Cambridgeshire; occupies a farm of 400 acres, and is a maltster, miller, oil crusher, and general corn mer-

chant. The soil of his farm is light, and last year he lost the whole of his rent, and the year before 300*l.* The production of wheat per acre on an average of years is twenty-five bushels, and of barley nearly five quarters, but the quantity of barley last year did not amount to more than half this average. Instances have occurred where the crop of grain on this farm has been good, and six miles off, on the wet and heavy lands, there have been deficient crops. The labourers, in proportion to the value of corn, are receiving better wages than formerly, but their moral and physical condition is described as having considerably deteriorated owing to the want of employment. The witness adds:—"I will venture to say, that I could take my horse to the district in which I reside, and put the whole of it in a state of revolution; and any other farmer who is well known could do the same." Two or three fires had occurred last winter but one, and in the year and a-half previous to that there had been thirteen in one village. The last winter there had not been one, as one of the stack-burners had been executed. It was stated that the Poor Law Amendment Bill had scarcely come into operation in the above district.

Mr. Charles Page examined.—Rents a farm of about 1100 acres, chiefly arable, at Southminster, in Essex, and has lost money every year since he commenced farming in 1821. The same labour is employed upon the farm as there was ten years ago; wages have diminished, and are now from 9*s.* to 10*s.*; and the land is better cultivated than it was five or six years since. Farming has improved, but the farmer has deteriorated. There has been no land out of occupation at Southminster, but a great quantity in the neighbouring parishes was in the hands of the landlords two or three years, chiefly land of a very heavy, tenacious kind, expensive to cultivate, and requiring three horses instead of two. Some of these farms are again let, at a lower rent, and others are still in the hands of the landlords. In the opinion of witness the malt-tax had not been the cause of the farmer's distress; and when asked what was the prevailing opinion of the farmers as to the cause of the low prices? he stated that "there has been very little opinion entertained about it," and that "nobody pretends to give a reason for it." Accounts are kept of the sales and outgoings of the farm,—an account of stock is taken once a-year, but the accounts are not kept in a manner which shews on what portions of the farm a loss or profit has accrued.

G. Smallpiece, Esq., examined.—Occupies 500 or 600 acres of land of a great variety of soil, chalk and sand principally, near Guildford, and is also a land-valuer. In his opinion the condition of the farmer has been improved in the last few years, and the profits upon witness' farm have been greater this year than they were last. The expenses of cultivation have been diminished; but though the price of labour is less, it has not fallen in proportion to the decline in the price of corn, and the labourer was never better off. The poor-rates have been very much diminished in some parishes in Surrey, and average about 10 per cent. Farmers who have great numbers of sheep upon their farms, and who farm light barley land, are doing tolerably well; but the losses sustained by the rot have not been made up. All other grain but wheat is at a fair remunerating price, and the low price of wheat is attributed to the increased consumption of potatoes. In many parts of Surrey, where only one acre of potatoes was formerly grown, there are now ten. The labourer now subsists more upon potatoes than he did formerly, and the children live very much upon potatoes; and this practice has increased more particularly within the last two years. The labourers have allotments of land, and Mr Smallpiece adds,—"I have not a labourer who has not his 20*l.* worth of potatoes and pigs by him, generally speaking; this is not the case at present, as this year is a bad one." The poor-law has done a great deal of good. The following is given as the average number and price of lambs, bought by witness and his brother, for the last ten years—1714 lambs at 18*s.* 11½*d.* each, namely:—

	s.	*d.*		*s.*	*d.*
1825 . .	23	1	1831 . .	21	7
1826 . .	13	9	1832 . .	17	5
1827 . .	18	0	1833 . .	22	10
1828 . .	20	8	1834 . .	23	3
1829 . .	16	9	1835 . .	16	0
1830 . .	15	10			

Mr. Robert Babbs examined.—Occupies a farm of 228 acres in Essex, 224 of which are arable, and the rest in grass. The rent is 14*s.* an acre, and seventeen years 30*s.* was paid for it. The soil is a heavy strong loam, and has borne a very good crop this year. It is under the six-course husbandry, namely—68 acres of wheat, 14 acres of barley, 20 of oats, 17 of peas, 17 of beans, 34 of clover, and 34 acres of fallow. The witness read a detailed statement of his sales and expenditure on an average of seven years, from which it appeared that the former amounted to 1089*l.* 18*s.*, and the latter to 1292*l.* 4*s.* 3*d.*, the difference being a loss on each year of 202*l.* 6*s.* 3*d.* The capital employed is 2000*l.*, the interest upon which is reckoned at 5 per cent., and 5 per cent. is added for labour and superintendence of the occupier. It appears that the rent in this average, which commences with 1828, is put down at 21*s.* an acre, although, in 1830, it was lowered 15 per cent. The rent paid in 1829 amounted to 302*l.* 8*s.*, or 21*s.* per acre; in 1830, an abatement of rent was made, and 225*l.* was paid, instead of upwards of 300*l.*; in 1831 only 200*l.* rent was paid; in 1832, about 250*l.*; in 1833, the same; and in 1834 the rent was reduced to 14*s.* an acre. The grass-land, amounting to 64 acres, upon which three-score sheep are kept, is not included in the estimate. The following extracts from the Evidence shew some of the difficulties of the present inquiry:—

Sir James Graham.—Do you keep regular books?—No; I do not keep regular books.

Do you take stock once a-year?—No.

How do you ascertain your profit and loss, if you neither keep books, nor take stock?—I take accounts of the sales of the produce of my farm, and of the expenses.

If you do not annually take an account of the improved condition of your stock, how can you say whether you are a gainer or loser by you farm?—I do not take a valuation of the farm, but I keep an account of the produce of the farm, and the charges upon the farm; but I do not go into a valuation to know whether the land is improved.

Do you, as a practical farmer, say that it is possible to know, year by year, what is the precise amount of your loss, without keeping regular books, and taking stock annually?—I cannot state the precise profit and loss annually.

Then, when you say you have lost 200*l.* a-year, is not that more conjecture than matter of fact ascertained?—No; I do not think it is.

The Chairman. The total amount of the reductions, upon your farm, in the expenses have been 174*l.* within the last three years—that is to say, the labour of 84*l.* less (per annum), and the rent 90*l.*, therefore there has been a reduction of 174*l.* in the expenses of your farm in the last three years?—I think it may be somewhere thereabout.

Do you consider that there has been a corresponding reduction in the value of your produce in that time? I do, in the value of the produce.

With respect to the price of barley, has there been any alteration in the price of barley in that period?—No; I think the price of barley is about the same.

The price of oats?—That is reduced.

What is the difference between the price of oats now and three years ago?—The price of oats now is 21*s.* a-quarter; in 1832, in was 20*s.* 5*d.*

In all other articles of farming produce, except wheat, has there been any material reduction of price within the last three years?—No, I think there has not—it has kept about the same.

You have put down nothing for the profit upon the sheep?—No; I have not taken the account of the sheep into the question.

Mr. Evans.—In your estimate of profit and loss, do you give credit for the maintenance of your family?—I consider that I keep my family upon the charge of per centage upon my capital.

The O'Conor Don.—When you state that your capital is lessening year by year, how can you now be better off?—I have had the good luck to bring some more money into my business; and I think I have improved the condition of my farm by the outlay of that capital.

Mr. Thomas Bowyer examined:—Is an occupier, at Buckden in Huntingdonshire, of 400 acres of land, half of which is arable and the other half in grass; paid

for labour on his farm, in 1832, 430*l.* and for the last three years about 350*l.* His rent has also been reduced 10 per cent. since 1832. All other articles bear nearly as high prices now as in 1832, with the exception of wheat; the low price of wheat did not make up for a difference of 80*l.* less in labour and 10 per cent. abatement on the rent. Of the tenantry of Huntingdonshire it is said that nearly half of them have almost nothing—they are at a very low ebb. The soil of Huntingdonshire consists of a strong clay, turnip-land and light woodland. The best turnip-land would pay a rent if corn were 5*s.* a bushel; but with that price, and other articles of produce in proportion, two thirds of the county would go out of cultivation. Mr. Bowyer states that the number of acres sown with wheat bears no proportion to what it did twenty years ago. In the last three years there have been three acres of wheat to one of barley; and, previously, it was three acres of wheat to five of barley. Then, the extraordinary produce of the last three years, owing to the not less unusual occurrence of three successive dry seasons, will account for the low price of wheat. But not only has the produce been heavy, but the wheat has been of a quality which gave an increased quantity of flour. From the low price of wheat, the labourer is receiving double the amount of food which he formerly did.

Mr. Henry Thornton, of Denham, Middlesex, examined:—Rents about 2000 acres, none of which is clay land, in Middlesex and Hertfordshire—states that light land farms will let, but that others will not. If the price of wheat were to be not higher than 6*s.* a bushel, and barley in proportion, tenants could be found readily for lands that will bear turnips on a four-course system. Upon the grazing part of witness's farm, there has been a profit rather than a loss since 1833; on the arable part the loss has been on the wheat crops; for barley there has been a fair price. A farm, consisting of land of an average quality, would command as good a price now as in 1833. Looking forward to the prospect of alleviations of local burdens, county-rates, and poor-rates, it would command a rise of 1*s.* or 2*s.* an acre. Witness had lost, during the last two years, the interest of capital employed upon his farm. One hundred men and boys are employed upon Mr. Thornton's farms—two-thirds of whom receive 10*s.* a-week, and one-third 12*s.* and 13*s.* a-week. The labourers were never so well off as at present. When a man earned 15*s.* per week, it took the whole of it, or nearly the whole of it, to buy him a bushel of flour. The labourers do not use so much bread as when it was much dearer. They do not use so much now by one-fourth as they did three or four years ago. Their wages are not lowered to the price of bread; therefore the man who has a large family and goes and buys his three pecks of flour, finds that it takes less of his weekly wages than formerly, and he is enabled to buy meat and beer for his family, and does not, in consequence, require near so much bread. They eat the best sort of bread; they will not eat the second bread they used to do, nor fat bacon: they are much changed within the last two years in this respect.

Mr. F. Sherborn examined.—Occupies, with his brother, 1600 acres near Staines. The farms are stocked as well in this district as they formerly were, but the farmers are stated not to be so well off. In consequence of the fine harvests of the last three years, the average weight of the wheat per bushel has exceeded that of the three preceding years. The wheat never made more flour than it does at present, and this circumstance may, to a certain extent, have affected prices. The price of meat has been low, and the labourers having consumed more, have required less bread. The food of the labourers is of finer quality to what it was formerly. There never was a time when they could command so large a proportion of the necessaries and comforts of life as at present.

Mr. J. Tillyer, an occupier of 1600 acres at Harmondsworth, attributes the low price of wheat to a succession of heavy crops. The produce of 1834, the largest ever known, at the same time was much damaged, the effect of which would be to lower the general average price. Mr. Tillyer provides lodgings for his labourers, but they find their own victuals, which, however, their employer dresses for them; he also gives away 60 quarters of malt, and at Christmas 50 stone of meat. They have a fire and a tub of beer always [illegible]. The labourers were never so well off as at present within his recollection. Wages are about 12*s.*, one or two labourers get 13*s.*, some 14*s.* and 15*s.*, and one man 18*s.* The poors'-rate, which had been 4*s.* 6*d.* in the pound, was expected to be reduced this year to 2*s.* 6*d.*

Mr. Evan David, who occupies 730 acres near Cardiff, produced a statement of agricultural expenses and profits of cultivating 650 acres of land (450 arable and 200 pasture) in Glamorganshire, at three different periods, viz., 1790, 1813, and 1835. Expenses in 1790 amounted to 792*l.* 8*s.*; produce, 1852*l.* 18*s.* Expenses in 1813 were 1635*l.* 2*s.*; produce, 3408*l.* 16*s.* Expenses in 1835 were 1231*l.* 12*s.*; produce, 1984*l* 16*s.* Balance for rent, interest of capital, and superintendence and skill, 1060*l.* 10*s.* in 1790; 1773*l.* 14*s.* in 1813; and 753*l.* 4*s.* in 1835. He alluded to a large manufacturing establishment, employing a capital of 120,000*l.*, and 600 persons, which only contributed 90*l.* for poor-rate, road-rate, county-rate, and land tax, being only 1*s.* 6*d.* per cent.; while on his farm of 730 acres, which only employed a capital of 4000*l.* and 25 men, the same taxes amounted to 185*l.*, being rather more than 4*l.* 10*s.* per cent., or sixty times as much.

TREATY OF UNKIAR SKELESSI.

THE following is a Translated Copy of the Treaty of Constantinople, of the 8th of July, 1833 (called the Treaty of Unkiar Skelessi); together with the Separate Article of the same date; printed by Order of the House of Commons, on the motion of Lord Dudley Stuart:—

Treaty of Alliance concluded between Russia and Turkey on the 26th of June (8th July), 1833, communicated to his Majesty's Government by the Prince of Lieven, on the 6th of January, 1834.

Translation.

His Imperial Majesty, the most high and most mighty Emperor and Autocrat of all the Russias, and his Highness the most high and most mighty Emperor of the Ottomans, being equally animated with the sincere desire of maintaining the system of peace and good harmony happily established between the two empires, have resolved to extend and strengthen the perfect friendship and confidence which reign between them by the conclusion of a Treaty of Defensive Alliance.

Their Majesties have accordingly chosen and named as their Plenipotentiaries; that is to say, his Majesty the Emperor of all the Russias, the most excellent and most honourable Alexis Count Orloff, his Extraordinary Ambassador at the Sublime Ottoman Porte, and the most excellent and most honourable Apollinaire Bouteneff, his Envoy Extraordinary and Minister Plenipotentiary at the Sublime Ottoman Porte, &c. &c.

And his Highness the Sultan of the Ottomans, the most illustrious and most excellent, the most ancient of his vizirs, Hosrew Mehmet Pacha, Seraskier, Commander-in-Chief of the Regular Troops of the Line, and Governor-General of Constantinople, &c. &c., and the most excellent and most honourable Ferzi Akhmet Pacha, Mouchir and Commander of the Guard of his Highness, &c. &c., and the most excellent and most honourable Hadgi Mehmet Akiff Effendi, actual Reis Effendi, &c. &c.;

Who, after having exchanged their full powers, found in good and due form, have agreed upon the following Articles:—

Article 1. There shall be for ever peace, amity, and alliance between his Majesty the Emperor of all the Russias and his Majesty the Emperor of the Ottomans, their empires and their subjects, as well by land as by sea. This alliance having solely for its object the common defence of their dominions against all attack, their Majesties engage to come to an unreserved understanding with each other upon all the matters which concern their respective tranquillity and safety, and to afford to each other mutually for this purpose substantial aid and the most efficacious assistance.

Art. 2. The Treaty of Peace concluded at Adrianople, on the 2nd of September, 1829, as well as all the other Treaties comprised therein, as also the Convention signed at St. Petersburg, on the 14th of April, 1830, and the arrangement relating to Greece, concluded at Constantinople, on the 9th and 21st of July, 1832, are fully confirmed by the present Treaty of Defensive Alliance, in the same

manner as if the said transactions had been inserted in it word for word.

Art. 3. In consequence of the principle of conservation and mutual defence, which is the basis of the present Treaty of Alliance, and by reason of a most sincere desire of securing the permanence, maintenance, and entire independence of the Sublime Porte, his Majesty the Emperor of all the Russias, in the event of circumstances occurring which should again determine the Sublime Porte to call for the naval and military assistance of Russia, although, if it please God, that case is by no means likely to happen, engages to furnish, by land and by sea, as many troops and forces as the two high contracting parties may deem necessary. It is accordingly agreed that, in this case, the land and sea forces, whose aid the Sublime Porte may call for, shall be held at its disposal.

Art. 4. In conformity with what is above stated, in the event of one of the two Powers requesting the assistance of the other, the expense only of provisioning the land and the sea forces which may be furnished, shall fall to the charge of the Power who shall have applied for the aid.

Art. 5. Although the two high contracting parties sincerely intend to maintain this engagement to the most distant period of time, yet, as it is possible that in process of time circumstances may require that some changes should be made in this Treaty, it has been agreed to fix its duration at eight years from the day of the exchange of the Imperial ratifications. The two parties, previously to the expiration of that term, will concert together, according to the state of affairs at that time, as to the renewal of the said Treaty.

Art. 6. The present Treaty of Defensive Alliance shall be ratified by the two high contracting parties, and the ratifications thereof shall be exchanged at Constantinople within the space of two months, or sooner if possible.

The present instrument, consisting of Six Articles, and to be finally completed by the exchange of the respective ratifications, having been agreed upon between us, we have signed it, and sealed it with our seals, in virtue of our full powers, and have delivered it to the Plenipotentiaries of the Sublime Ottoman Porte, in exchange for a similar instrument.

Done at Constantinople, the 26th of June, 1833, (the 20th of the moon Safer, in the 1249th year of the Hegira).

(Signed) Comte Alexis Orloff.
A. Bouteneff.

Separate Article of the Treaty of Alliance concluded between Russia and Turkey, on the 26th of June (8th July), 1833, communicated to his Majesty's Government, by the Prince of Lieven, on the 16th of January, 1834.

Translation.

In virtue of one of the clauses of the first Article of the Patent Treaty of Defensive Alliance concluded between the Imperial Court of Russia and the Sublime Porte, the two high contracting parties are bound to afford to each other mutually substantial aid, and the most efficacious assistance for the safety of their respective dominions. Nevertheless, as his Majesty the Emperor of all the Russias, wishing to spare the Sublime Ottoman Porte the expense and inconvenience which might be occasioned to it, by affording substantial aid, will not ask for that aid if circumstances should place the Sublime Porte under the obligation of furnishing it, the Sublime Ottoman Porte, in the place of the aid which it is bound to furnish in case of need, according to the principle of reciprocity of the Patent Treaty, shall confine its action in favour of the Imperial Court of Russia to closing the strait of the Dardanelles, that is to say, to not allowing any foreign vessels of war to enter therein under any pretext whatsoever.

The present separate and secret Article shall have the same force and value as if it was inserted word for word in the Treaty of Alliance of this day.

Done at Constantinople, the 26th of June, 1833, (the 20th of the moon Safer, in the 1249th year of the Hegira).

(Signed) Comte Alexis Orloff.
R. Bouteneff.

EXCISE DUTY ON SOAP.

The following is a summary of the recommendations of the Seventeenth Report of the Commissioners of Excise Inquiry:—

1. That the present system of Excise survey on soap manufacturers be discontinued, and that they be at liberty to manufacture the article in any way, and of any material, they may think proper, subject only to such general superintendence of the officers of Excise as may be deemed necessary for the security of the revenue, such superintendence not to extend to any interference with the process of manufacture.

2. That the duty on hard soap be reduced from 1½*d.* to 1*d.* per lb.; and on soft soap from 1*d.* to ½*d.* per lb.

3. That the charge for duty be made on the soap when framed, and that previous to framing reasonable notice (to be agreed upon between the traders and the Excise) shall be given by the manufacturer of his intention to frame, so that an officer may be always in attendance during the operation of cleansing the soap from the coppers into the frames.

4. That the duty be extended to Ireland, and that the regulations be the same in both countries.

5. That a meeting should take place between the department of Excise and the manufacturers, for the purpose of discussing the question of shortening the present period allowed for payment of the country duties, and for settling some other points relating to facilities to be given for the making of experiments, for the purpose of improving the manufacture.

6. That the allowances to manufacturers be renewed before the period of their expiration, with a view of repealing, if possible, the allowance on soft soap, and materially diminishing that of hard soap.

7. That the penalties for breach of the laws affecting soap be revised, and more equally adapted to the offences committed, and that all laws relating to the manufacture be consolidated into one Act.

8. That the duties on various vegetable oils be materially reduced or repealed.

Lastly,—That the present survey of Excise on tallow-melters be reduced to an occasional superintendence, with a view to its final abolition.

STATISTICAL NOTICES OF THE ISLAND OF CUBA.

Cuba is the largest of all the West India Islands, being about 670 miles in length, and 110 in breadth in the narrowest part; and possessing a line of coast nearly 520 leagues in extent. The superficies of the island is upwards of 3600 square leagues.

The importance of Cuba consists not only in its vast extent, the fertility of its soil, and its convenient harbours, but also in its population, being composed of three-fifths of free people, whilst its favourable geographical position, adjoining Hayti and Jamaica on the south side, Campeachy on the west, and being within a few days' sail of Florida and the Bahama Islands on the north, renders it in a great measure the key to the Gulf of Mexico.

The climate of Cuba is considered quite as healthy as that of any other of the West India Islands, although situated almost within the limits of the Torrid Zone: the hottest months in the year are those of July and August, and the most temperate December and January. Hurricanes are not so frequent in Cuba as in other parts of the West Indies, but the north winds blow occasionally with great violence. A chain of mountains which runs through the whole length of the island divides it into two equal parts; the elevation is, however, not considerable.

The chief rivers of Cuba are the Guines, Canto, Maximo, and the Sagua, besides several rivulets, some of which are navigable for boats a few miles from their mouths.

Cuba is divided into four districts, the western part being within the jurisdiction of the Havannah, whilst the eastern side comprises the districts of Puerto Principe, Quatro Villas, and Santiago, containing altogether twenty towns, including two bishoprics. The whole population of the island is estimated at about 720,000 inhabitants, of whom one-half are whites, one-third slaves, and the remainder free people of colour.

The principal sea ports are those of Havannah and Matanzas on the north side, and Santiago and Trinidad on the south.

The city of Havannah, the capital of Cuba, is situated in lat. 23° N., on a promontory formed on one side by the sea, and on the other by a large bay nearly two and a-half miles in width: the entrance to the harbour is narrow, and defended by the Castle of the Moro on the east and Puntal on the west. The city is surrounded with walls and strongly fortified, being defended on the south side by the arsenal, on the north by the fort of Puntal, and on the west by three castles. The principal buildings consist of the cathedral, government house, dock-yard, arsenal, and the tobacco warehouses. The houses are mostly built of stone, but the streets are narrow and ill paved. There are two public walks, one within the walls called the Alameda, in which there is a fine statue of Charles III., and the other without the city: there is also a well laid-out botanical garden in the vicinity, and on the borders of the bay are numerous country seats, to which the inhabitants retire in the hot and unhealthy seasons. The population within the walls amounts to about 45,000 inhabitants, of whom one-half are people of colour and slaves, whilst the suburbs contain about 10,000 more inhabitants.

Sugar is the principal article of produce in Cuba: there are upwards of 800 sugar plantations in the island. The exports of sugar in 1834 amounted to 468,000 boxes, and in 1835 to 490,000; each box weighing about 3½ cwt. There are three qualities of sugar made in the island, viz., the white, mixed, and muscovado: the proportion being five-ninths of the first sort, three-ninths of the second, and one-ninth of the last. A sugar estate in Cuba, to produce 2000 boxes, requires 300 negroes: able-bodied negroes are valued at from 450 dollars to 500 dollars each, and their keep costs 45 dollars to 50 dollars a-year. It is estimated that sugar plantations return on an average a net income of about 6 per cent. per annum on the capital employed.

Coffee is the next important article of produce, and there are about 800 coffee plantations. In 1834 the exports of coffee amounted to 32,000,000 lbs. weight, and in 1835 to 28,000,000 lbs.

The cultivation of tobacco, although the Cuba tobacco is reckoned superior in flavour to that of any other country, has greatly decreased of late years, as the preference given to coffee-planting has occasioned the rental of land to increase more rapidly than the increase of capital. The average quantity of tobacco grown in Cuba is 10,000,000 lbs. weight, one-half of which is consumed in the island, and about 2,500,000 lbs are annually sent to Spain. The other principal articles of export are wax and hides: of the former upwards of 500,000 lbs. are annually exported, and of the latter about 60,000 lbs.

A valuable source of mineral wealth has arisen in the discovery of some copper mines, situated near the town of Colre, about ten miles distant from the port of Santiago, in the eastern part of the island, and which have been worked by some individuals for the last five or six years. A lease of this mine in perpetuity was granted by the King of Spain in 1832, exempting the produce from dues for the first ten years, after which period a duty of 5 per cent. is to be paid on the value of the copper contained in the ores. Up to the close of last year upwards of 800 tons of copper ore had been imported into this country from Cuba, the price of which averaged 21*l.* per ton.

Of all the Spanish colonial possessions, Cuba is that which has been the most prosperous: the revenue of the island for several years past has not only exceeded its expenditure, but has also added to the resources of the mother country in the late struggles with its colonies. Spain still defers recognizing the independence of Mexico and Columbia, and obliges Cuba to keep up a large military force, as a protection against any attack on the part of those States, and at the same time draws from the revenues of Cuba from 1,000,000 to 1,500,000 dollars every year for her own wants.

PARLIAMENTARY REGISTER.

LIST OF BILLS BROUGHT IN.

(Exclusive of Private Bills.)

HOUSE OF LORDS.

Bills which have received the Royal Assent:—

1. Slaves Compensation.
2. Capital Punishments Act Amendment.
3. Farnborough Road.
4. Reading Union Gas.
5. Hardwick's Inclosure.
6. Steiner's Naturalization.
7. Slave Treaty (Spain).
8. Indemnity.
9. Clifton Suspension Bridge.
10. Exeter Commercial Gas.
11. Reading Gas.
12. Bridgend Market.
13. Middlesex Hospital Incorporation.
14. Rochdale and Ealand Road.
15. Buckingham and Newport Pagnell Road.
16. Radcliffe Roads.
17. Wootton Common.
18. Orwell Common.
19. 20. 21. 22. Ring's, Darthez's, Focke's, and Michaelis's Naturalization.
23. Mutiny.
24. Marine Mutiny.
25. East Suffolk County Hall.
25. Cornwall Assize Hall.
27. Macclesfield Small Debts.
28. Birmingham and Gloucester Railway.
29. Bristol and Clifton Gas.
30. Manchester Improvement.
31. Richmond and Reeth Roads.

Bills brought in:—

March 22. Bill to amend the laws relating to bankruptcy in Ireland.—*Lord Plunket.*

— 24. Bill to abolish certain offices connected with the Court of Chancery in Ireland.—*Lord Plunket.*

— 29. Bill to repeal the several Acts now in force relating to bread to be sold out of the City of London and the Liberties thereof, and beyond the Weekly Bills of Mortality, and ten miles of the Royal Exchange; and to provide other regulations for the making and sale of bread, and for preventing the adulteration of meal, flour, and bread, beyond the limits aforesaid.—*Duke of Richmond.*

April 12. Bill to abridge and regulate the holding of benefices in pluralities, and to amend the laws relating to the residence of the clergy, and to the appointment and payment of stipendiary curates in England. *The Archbishop of Canterbury.*

— 25 Bill to grant certain powers to heirs of entail in Scotland, and to authorize the sale of entail lands for the payment of debts affecting the same.—*Lord Rosebery.*

HOUSE OF COMMONS.

March 24. Bill to enable persons to make deposits of Stock or Exchequer Bills, in lieu of giving security by bond to the Postmaster-General, and Commissioners of Customs, Excise-stamps, and taxes.

— Bill for the relief of persons elected to municipal offices, and entertaining conscientious objections to subscribe the declaration provided and enjoined by an Act made in the 9th Geo. IV., for repealing so much of the several Acts as imposes the necessity for receiving the sacrament of the Lord's Supper as a qualification for certain offices and employments.—*Mr. Baines.*

— Bill for the better regulation and protection of the fisheries, on the coast of England and Wales.

— Bill to remove difficulties which may arise from the confusion between calendar and lunar months in the computation of time.—*Mr. Pryme.*

— 25. Bill for the more perfectly uniting to the Crown the county palatine of Durham.—*Lord John Russell.*

— 29. Bill to consolidate and amend the laws relating to the stamp-duties.—*The Chancellor of the Exchequer.*

— Bill to regulate the navigation of steam-vessels upon certain parts of the river Thames.—*Mr. Alderman Wood.*

— Bill for the amendment of the law of landlord and tenant in Ireland.

— 30. Bill to render effectual powers of a former Act for enabling heirs of entail in Scotland, in possession, to burden their estates for the purpose of making turnpike roads and bridges thereon.

April 22. Bill to promote the observance of the Lord's Day.—*Sir Andrew Agnew.*

Declared by the House, "That, according to the established rules of Parliament, the Chairman of a Select Committee can only vote when there is an equality of voices."

The elevation of Mr. Dominic Browne to the Irish Peerage has occasioned a vacancy in the representation of the county Mayo.

LIST OF COMMITTEES APPOINTED.

(Exclusive of Committees to consider Bills.)

HOUSE OF LORDS.

March 30. Committee to inquire into the existing facilities for intercourse between the United Kingdom and the colonies of North America, and the expediency and means of improving them.

- Committee to consider of some additions to the Library of the House, and of other matters relating thereto.

- 12. Committee appointed in the last Session of Parliament to consider the Bill, intituled, "An Act for enabling prisoners to make their defence by counsel or attorney," revived.

HOUSE OF COMMONS.

March 23. Committee to consider the state of the salmon fisheries in Scotland.

ABSTRACTS OF RETURNS PRESENTED TO PARLIAMENT.

Power Looms.—A Parliamentary Return gives the following as the number of power looms in use in the various manufacturing districts visited by the factory inspectors:—In Lancashire 62,684, of which 61,176 are employed in the cotton manufacture, and the remainder in the woollen and silk manufactures, viz., 1142 in woollen, and 366 in silk. The number of power looms in Manchester is 15,960, Bury 9301, Blackburn 4256, and Ashton-under-Lyne 4018. The returns do not show the proportion for other places comprised in the Macclesfield district. The number of power looms in Yorkshire is 7809, of which 3885 are employed in the cotton manufacture, 3123 in worsted, and 801 in woollen. In Cheshire there are 22,913 looms—22,491 cotton, 411 silk, and 8 woollen; in Derbyshire 2403 looms—2403 cotton, and 166 silk; in Staffordshire 346, all of which are cotton looms; in Westmoreland there are 8 woollen looms; in Devonshire, 80 silk looms; in Essex, 506 silk looms; in Kent, 12 flax looms; in Leicestershire, there are 40 cotton looms and 89 woollen and worsted looms; in Middlesex, 8 cotton looms and 300 silk looms; in Norfolk, 24 silk looms; in Somersetshire, 71 woollen looms and 32 silk looms; in Warwickshire, 25 looms are used in the manufacture of girths, belts, braces, garters, &c.; in Worcestershire there are 7 riband looms; in Gloucestershire, woollen looms; in Montgomeryshire, 4 woollen looms; in Waterford, 339 cotton looms; in Wexford, 67; in Kildare, 52; and in Dublin, 23 cotton looms. In Scotland the number of power looms in use is 17,721, viz., 17,531 cotton, 168 linen, and 22 woollen. The number of cotton looms in Glasgow is 13,253. In the north of Ireland there are 935 cotton looms and 100 linen looms; and in the four northern counties of England the number is 221; 186 cotton looms at Carlisle, and 29 linen and 6 woollen looms at other places in these counties. The total number of power looms in use in the United Kingdom is 117,151; viz., in England, 95975; in Wales, 1939; in Scotland, 17,721; and in Ireland, 1516. This number is likely to be increased, as it is stated that in the manufacture of several articles the power loom had only been experimentally introduced, but that its success would occasion many more to be employed.

Punishments in the Army.—Within the five years, ending December 31st, 1835, there had been punished by the lash 1440 men belonging to regiments and depôts in Great Britain and Ireland, and 9591 had been imprisoned. Corporal punishment was inflicted on 1227 soldiers once only; on 172 twice; on 32 three times; on four times; and on 2 five times. Of the 1440 who received corporal punishment, 825 were also imprisoned, namely—294 once; 203 twice; 170 three times; 88 four times; 46 five times; 10 six times; 8 seven times; 4 eight times; 1 nine times; and 1 ten times. During the above five years, 415 men belonging to the Royal Marines received corporal punishment, namely—332 once; 70 twice; 12 three times; and 1 five times; and 1115 men had been imprisoned, namely—869 once; 171 twice; 56 three times; 17 four times; and 2 five times. Of the 115 who had been imprisoned, 263 had also received corporal punishment, namely—46, previous to imprisonment; 73, subsequent to imprisonment; and 44, both before and after imprisonment.

THE REVENUE.

ABSTRACT of the NET PRODUCE of the REVENUE of GREAT BRITAIN, in the Years and Quarters ended 5th of April 1835, and 5th of April 1836, showing the Increase or Decrease on each head thereof.

The Balance available for the service of the year ending Lady-day, 1837, is 1626*l.* 18*s.* 4*d.*; and the amount required 21,974*l.* Of a Special Parliamentary Grant of 6000*l.* for the purchase of Egyptian antiquities, the amount expended is 5081*l.* 16*s.*; and there remains with the Lords of the Treasury unexpended, the sum of 918*l.* 4*s.*

The number of persons admitted to view the General Collections in the British Museum was 71,336 in 1829;

* *Mem.*—The additional charge in these items is to be attributed chiefly to an increase in the number of Assistants and Attendants, and to a provision for an increased number of Copyists, for the purpose of furnishing the Public in the Reading Rooms with a complete Catalogue of the Printed Books within the current Year.

99,912 in 1830; 147,396 in 1831; and the following is a detailed return for the last three years:—

	1833. No.	1834. No.	1835. No.
January	16,318	16,977	17,431
February	12,464	16,639	15,309
March	17,738	16,181	17,918
April	12,994	16,252	20,355
May	19,485	19,057	37,054
June	28,821	36,652	35,565
July	36,191	36,485	50,951
August	28,260	26,144	35,151
September	207	485	463

December	6,459	11,088	12,559
	210,495	237,366	289,104

Number of visits made to the Reading Rooms for the purpose of study or research, about 1950 in 1810; 4300 in 1815; 8820 in 1820; 22,800 in 1825; 31,200 in 1830; 38,200 in 1831; 46,800 in 1832; 58,800 in 1833; 70,266 in 1834; 63,466 in 1835.

Number of visits, by artists and students, to the Galleries of Sculpture, for the purpose of study, 4938 in 1831; 4740 in 1832; 4190 in 1833; 5645 in 1834; 6081 in 1835.

Number of visits made to the Print Room, about 4100 in 1832; 2930 in 1833; 2201 in 1834; 1065 in 1835.

Internal Corn Trade.—The Appendix to the Evidence taken by the Select Committee on the State of Agriculture contains an account prepared by the Comptroller of Corn Returns, of the total number of quarters of wheat sold annually in each of the 149 markets from which Returns are made agreeably to the Acts of 7, 8, and 9 Geo. IV.: and also an Account of the aggregate number of quarters of wheat returned during the last three years, which latter is as follows:—

Years.	Quarters.	Bushels.
1833	3,576,653	1
1834	3,768,602	6
1835	3,927,620	5

The markets in which the quantity of wheat sold in 1834 exceeded 30,000 quarters per annum, are the following: and the quantity sold in each of the two previous years is also given:—

	1832.	1833.	1834.
Birmingham	69,139	67,508	66,164
Boston	78,173	92,925	131,370

York	43,179	58,014	54,168

Consumption of Rape-seed, Rape-cake, and Linseed cake, and of Bones, as Manure.—The following is an abstract of a Return prepared at the Custom-house for the use of the Committee on Agriculture. The importations for Scotland are included in this Return for each of the above articles; but without giving the quantities for each year, it may be sufficient to state that the use of rape-seed appears to be comparatively unknown in that part of Great Britain—that the consumption of linseed and other oil-cakes averages not quite one-eighth of the quantity imported in England; and that of the bones imported, which are intended to be used as manure, nearly one-fourth are employed for that purpose in Scotland. The following table has reference entirely to the importations into England:—

Years.	Rape-seed, qrs.	Oil-cakes, cwts.	Bones, Declared Value.
1821	9,091	110,030	£ 15,[illegible]
1822	30,963	75,019	9,[illegible]
1823	16,992	170,540	14,[illegible]
1824	74,561	488,872	43,[illegible]
1825	60,637	673.957	86,[illegible]
1826	73,449	510,824	94,[illegible]
1827	63,378	479,006	77,[illegible]
1828	53,587	478,886	59,782
1829	47,287	356,037	59,741
1830	66,195	298,979	58,233
1831	50,891	419,155	65,623
1832	72,744	398,253	77,847
1833	74,079	440,097	97,909
1834	62,733	537,367	118,121
1835	94,304	344,762	127,131

The duty paid on rape-seed, imported into England in 1825, exceeded 55,000*l.*, and, in 1835, amounted to 4316*l.*; duty on oil-cakes, in 1825, 5618*l.*; in 1835, 2918*l.*; duty on bones as manure, in 1825, 865*l.*; in 1835, 1309*l.*

Vagrants.—A Parliamentary Return shews the expenses incurred by different counties in England in removing poor persons to Ireland, Scotland, and the Isles of Man and Scilly, during the year 1834. In the county of Bedford, 36 Irish and Scotch paupers were removed at an expense of 7*l.* 19*s.*; Berkshire, 1 pauper, 3*l.*; Cambridge, 51 Scotch, 11*l.* 2*s.* 9*d.*; Chester, 54 paupers, 92*l.* 15*s.* 8*d.*; Cornwall, 1 Irish, 3*l.* 12*s.* 3*d.*; Devon, 6 Irish, 6*l.* 8*s.* 6*d.*; 26 Scotch, 5*l.* 14*s.* 3*d.*—Total, 12*l.* 2*s.* 9*d.* Durham, 375 paupers, 49*l* 2*s.*; Essex, 15 Irish, 27*l.* 13*s.* 5*d.*; Gloucester, 14 Scotch, 11*l.* 11*s.* 4*d.*; 23 Irish, 15*l.* 14*s.* 3*d.*—Total, 27*l.* 5*s.* 7*d.* Lancaster, 1,873 Irish, 49 Scotch, 683*l.* 16*s.* 9*d.*; Leicester, 15 removals, 34*l.* 19*s.* 7*d.*; Lincoln (return imperfect), 1 removals to the Isle of Man, 19*l.* 4*s.*; City of London, 84 Irish, 1 Scotch, 96*l.* 8*s.*; Middlesex, 709 Irish, 25 Scotch, 1,112*l.* 1*s.*; Monmouth, 115 Irish, 122*l* 8*s.*; Northumberland, 10 Scotch, 5 Irish, 22*l.* 11*s* 4*d.*; Newcastle-upon-Tyne, 12 paupers, 28*l.* 8*s.*; Oxford, 11 Scotch, 12 Isle of Man, 5 Isle of Scilly, 77*l.* 15*s.* 7*d.*; Rutland, 6 Irish, being 2 removals of the same individuals, 24*l.* 13*s.* 10*d* ; Somerset, 4 Irish, 6*l.* 9*s.*; Stafford, 16 men, 26 women, and 67 children to Ireland; 11 men, 27 women, and 89 children to Scotland; to the Isle of Scilly, 32 men and women, and 145 children, 616*l.* 17*s.* 6*d.*; Suffolk, a man, his wife, and eight children to Ireland, 28*l.* 7*s.* 6*d.*; a man and six children, 23*l.* 1*s.* 3*d.*—Total, 51*l.* 8*s.* 9*d.* Surrey, 61 removals, 70*l.* 19*s.* 10*d.*; Westmoreland, 5 Irish, 5*l.* 19*s.* 5*d.*; York, East Riding, 6 paupers, 16*l.* 8*s.* 6*d.*; York, North Riding, 9 paupers; York, West Riding, 242 removals, all Irish but 6, 436*l.* 2*s.* 5*d.*, including the expenses of preparing a vagrant depot at Wakefield; York City, 3 Scotch, 5*l.* 11*s.* 6*d.* The expenses are charged on the county rate by 3 & 4 William IV., c. 40. This Act has considerably reduced the costs of removing vagrants. When the mileage was higher, many individuals were constantly moving from one place to another, solely for the purpose of obtaining the allowance. The mileage in Kent, as established by the magistrates in 1816, was so high, that in sending a man, his wife, and four children, from Dover to Canterbury, sixteen miles, it was 10*s.* more than a post-chaise and four would have been. In 1832, the sum charged on the county rates in England for the removal of vagrants amounted to 28,597*l.*

MISCELLANEOUS.

Bankruptcy Analysis from March 20 to April 24.

Agent 1; auctioneers, 2; beer retailer, 1; brewers, 2; brass-founder, 1; builders, 2; butchers, 2; chandler, 1; chemist, 1; cheesemongers, 2; clothier, 1; coach-makers,

3; coal-merchants, 2; cord-wainers, 2; cotton-spinner, 1; drapers, 8; dyer, 1; earthenware manufacturer, 1; factor (Birmingham), 1; flax-spinner, 1; fruiterer, 1; grocers, 5; hat-manufacturers, 2; horse-dealer, 1; hosier, 1; iron-founder, 1; jeweller, 1; joiner, 1; lace-dealer, 1; linen-manufacturer, 1; livery-stable keeper, 1; lodging-house keepers, 2; mariner, 1; miller, 1; mercer, 1; merchants, 3; oilmen, 2; packer (Manchester), 1; painter, 1; plumber, 1; printer, 1; rope-maker, 1; saddler, 1; schoolmistress, 1; scrivener, 1; ship-owner, 1; silversmith, 1; tailors, 2; timber-merchant, 1; victuallers and innkeepers, 8; warehouseman, 1; wheelwright, 1; wine-merchants, 4.—Total, 91; from the 28th of December, 326.

Corn and Grain.—Average prices per quarter in England and Wales, from 'The London Gazette,' of Friday, April 22:—

Bank of England.—Quarterly Average of the Weekly Liabilities and Assets of the Bank of England, from January 12 to April 5, 1836, inclusive, published pursuant to Act 3 and 4 William IV., c. 98.

Liabilities.		Assets.	
Circulation	£18,063,000	Securities	£27,927,000
Deposits	14,751,000	Bullion	7,801,000
	£32,814,000		£35,728,000

Price of Consols.—The following are the closing prices of the Three per Cent. Consols for Account on each of the undermentioned days:—

March 26.	April 2.	April 9.	April 16.	April 23.
91⅛	91¼	92	91⅛	91⅞

Sugar.—Average price of Brown or Muscovado Sugar per cwt., computed from the returns published in the London Gazette:—

Weeks ending March 22, . .	38*s.* 0½*d.*
„ March 29, . .	38*s.* 2½*d.*
„ April 5, . .	38*s.* 4*d.*
„ April 12, . .	38*s.* 3*d.*
„ April 19, . .	38*s.* 8½*d.*

Sweden.—The following details are taken from tables which have been recently prepared by the Swedish Government:—From January, 1822, to December, 1834, the freehold property of the nobility had *decreased* to the amount of 631,362; that of the middle class had *increased* by 360,176*l.*; and that of the peasantry had increased by 271,599*l.* The unredeemed mortgages of the property of the three classes are stated to be—of the nobility 2,511,661*l.*; middle class, 2,222,774*l.*; peasantry, 2,247,375*l.* All transfers of land are registered, and all individuals are divided by law into these three classes; so that the accuracy of the above calculation may be relied on.

Holland.—We learn from official documents, that the population of Holland, on the 1st of January, 1835, was as follows:—North Brabant, 335,150; Gelderland, 323,167; North Holland, 420,315; South Holland, 492,918; Zealand, 140,342; Utrecht, 134,364; Friesland, 217,882; Overyssel, 186,062; Groningen, 166,164; Drenthe, 67,230—total, 2,503,624 souls. In the year 1834, there were born in the Northern Netherlands, 87,392 children; the deaths were 68,124; the marriages, 21,281.

Canton of Luzern, Switzerland.—The official Returns for the year 1834 state the revenue of this canton to have been 355,181 Swiss francs (about 24,350*l.*), and the expenditure 357,524 Swiss francs (about 23,354*l.*)

CHRONICLE OF OCCURRENCES.

The Postmaster-General and the Commissioners of the Board of Excise have respectively issued orders prohibiting all persons having connexion with these establishments from belonging to Orange Lodges.

It is understood that the Convention recently entered into between the authorities connected with the French and English Post Office will take effect in the month of June next. Newspapers exchanged between the two countries will be subject to a postage of one halfpenny in England, and four centimes, or about the same amount, in France. At present twopence is paid in England, and fivepence in France, on a newspaper transmitted from London to Paris, while in future a postage of only one penny (one halfpenny in England and one halfpenny in France) will be charged on newspapers destined for either country. The cost of a daily newspaper on the Continent is enormous; but the proposed reductions, both in the stamp-duty and postage, will doubtless occasion a great increase in the number of English newspapers circulated in France.

A meeting has been held at the London Coffee-House, the Lord Mayor in the Chair, to establish a society for the protection of life from fire. It was stated that, within the last twelve months, fourteen lives had been lost at fires.

The "Cygnet," with the first party of emigrants to the new colony of South Australia, has sailed from Gravesend. Eight gentlemen have gone out as surveyors, taking with them upwards of twenty artisans and labourers, a surgeon, steward, and harbour-master.

At the last Limerick assizes, the high-sheriff, Vere de Vere, Esq., presented Judge Perrin with a pair of white gold-fringed gloves, sentence of death not having been passed on any prisoner tried.

March 22. Death of the Right Reverend Christopher Butson, Bishop of Killaloe and Clonfert, aged 89.

29. At a meeting of the newspaper proprietors of Ireland, a Committee was appointed to draw up a petition to the House of Commons, and a memorial to the Chancellor of the Exchequer, praying that, in case a penny duty should be established in England, the duty in Ireland should be one penny. At a meeting of the Trades' Political Union, Mr. Lawless moved a resolution to the effect that the equalization of the duties would be "a complete extinguisher of the Irish press." No allusion was made at this meeting to the existence of 50 newspapers in Scotland, although they paid the same duty as the newspapers published in England

31. Death of the Hon. and Right Reverend Henry Ryder, Lord Bishop of Lichfield and Coventry, aged 59.

— Death of Mr. Ruthven, M.P. for the city of Dublin, aged 63.

April 4. The Right Reverend the Lord Bishop of Ely (Dr. Sparke) died at Ely House, aged 77.

— Dinner given to Mr. O'Connell at Nottingham; and in the same week the Honourable Member visited York and Hull, by invitation, where public dinners were given to him.

7. Death of William Godwin, aged 81, author of a work on "Political Justice," the novel of "Caleb Williams," and other works.

8. A little after midnight the statue of King William the Third, on horseback, on College-green, Dublin, was blown up by gunpowder. The statue stood on a pedestal eighteen feet in height, surrounded by an inclosure of iron railing, the summit of the statue being about thirty feet from the level of the street. It was situated almost in a central position between the Bank of Ireland and the College, and not more than ten or a dozen yards from some houses. The report was heard for a considerable distance in the neighbourhood, and the lamps in the streets were extinguished by the concussion. The figure was of lead, and, though weighing several tons, was blown up some distance in the air, and fell a few paces distant from the pedestal. The authors of the plot have not yet been discovered.

12. "The Gazette" announces that Dominic Browne, Esq., M.P. for the county of Mayo, has been raised to the dignity of a Baron of that part of the United Kingdom called Ireland, by the name, style, and title of Baron Oranmore and Browne, of Carra Browne Castle, in Oranmore, in the county of Galway, and of Castle Mac Garrett, in the county of Mayo.

Just Published, Price 2s.,

THE ABOLITION OF ARREST and IMPRISONMENT for DEBT CONSIDERED, in Six Letters addressed to a Constituent. By B. Hawes, Jun., Esq., M.P.

B. Fellowes, Ludgate-Street.

A SURGEON in a respectable Practice in the Country, has Two Vacancies for ARTICLED PUPILS. As a Dispenser is kept, the time of the Pupils will be chiefly devoted to the acquirement of General and Professional Knowledge.

Apply (if by Letter) post paid, to Messrs. Corbyn and Company, Chemists, 300, Holborn.

TO THE NOBILITY, GENTRY, AND PUBLIC.

London, 1836.

FAMILIES OF DISTINCTION, and Visiters to the Metropolis at this Season, who frequently experience great difficulty in suiting themselves with Furnished or Unfurnished Houses, owing to the great demand, are respectfully informed every attention will be afforded in the HOUSE AND ESTATE AGENCY DEPARTMENT of Henry L. Cooper in obtaining or disposing of the same, or in the Selling, Letting, or Valuing any description of Property in Town or Country.

From the central situations of the Establishments in their respective commanding localities, every facility is rendered to Families honouring his House with their instructions, and offering the advantage of a double Register, usually replete with eligible properties.

The general introduction of Plate Glass for Windows, Carriages, Conservatories, Internal Decorations, &c., has induced H. L. C. to annex a Tariff of Sizes adapted to those uses, with Prices exceedingly moderate, but of a Quality not to be excelled; also is added, an outline of his general business comprising the Cabinet, Upholstery, and Decorative Departments, in each of which the most careful attention is paid both to Quality and Cost.

HENRY L. COOPER,

Plate Glass and Furniture Warehouses,

93, BISHOPSGATE STREET WITHIN,

AND

WESTERN BRANCH, 57, CONDUIT STREET,

(Nine Doors from Regent Street, Left Hand side.)

Among the variety of Articles above referred to, will be found LOOKING-GLASSES of every denomination and size, varying from one foot to eighty feet and upwards, PLATE-GLASS for Windows, Carriages, &c., which possess great advantages over crown, and when required for exportation, a considerable drawback obtained.

Annexed are the Prices of Current Sizes of Plate glass, for Sashes, &c.

Or any sizes containing from 3 feet to 8 feet, at 9s. per foot, thus a plate being 30 inches by 18 inches contains 3 feet 9 inches superficial measure, and costs 1*l.* 13*s.* 9*d.*, as per above tariff. All under 3 feet superficial at a reduction.

CARVING AND GILDING IN ALL ITS BRANCHES.

In this department will be found a very elegant and extensive variety of Chimney and Pier Glass Frames, Cornices for Windows, Ornamental Tables and Furniture, and richly-mounted Frames in various styles, for Portraits, Paintings, &c. Paintings and Prints mounted, framed and repaired.

PAPER-HANGING AND INTERIOR DECORATIONS,

in all its Branches, from the most simple to the first Style of Elegance. A rich variety of new Patterns on show.

IN THE UPHOLSTERY ARRANGEMENT

the greatest attention is paid to unite elegance with economy in character, for the Drawing-room, Boudoir, Dining-room, Library, and Bed-chambers, from the most quiet to the most costly styles. In the various articles of Chintzes, Tabareens, Damask Silks, &c., a great variety of the most splendid and novel designs are constantly on view, of those qualities which can alone ensure permanent satisfaction; the extreme disparity of prices in these articles, mainly arises from the inferiority of the fabric.

CABINET, CHAIR, AND SOFA WORK

manufactured of the most seasoned materials. In the finish of Chairs, Sofas, &c., much depends on the quality of the materials used and the workmanship. It may not be unworthy of remark, that a similar effect may be produced at a saving of nearly one half, but which in the wear must eventually prove a serious disappointment to the purchaser. This applies also to the manufacture of Cabinet Goods, which, from being made of unseasoned materials and unskilful work (that cannot be detected by the casual observer), can never be of that service and durability so essential. H. L. C. begs to add, that he manufactures them on his own premises, and has always on hand a large stock of well-seasoned materials, which enables him to produce work at the lowest possible rate, and of a superior quality.

STEAM AND SAILING VESSELS PROMPTLY FITTED UP

with Cabin Furniture and Passengers' Requisites.

SOLID AND PORTABLE FURNITURE,

Bedding, Musquito Hangings, &c. for Foreign Climates. Families going abroad will receive every information respecting the Articles best adapted for their particular destination. Merchants, Captains, and Dealers supplied with the utmost despatch, on the most liberal terms.

CARPETING

of the fabric especially made for the first upholstery houses, viz.—Brussels, Kiddermaster, and Venetian; also a few of the much-admired Velvet Pile Carpets, Hearth Rugs, Druggets, Baize, Floor Cloths, &c.

BEDDING, BLANKETS, &c.,

well seasoned, real Dantzic Feathers, also equally prepared light downy Feathers for second and third-rate Beds, Elastic Spring Hair and Wool Mattresses, real Witney, fine Bath, and York Blankets, Marseilles Quilts and Counterpanes. In the articles of Bedding, Blankets, &c., so essentially important to all, H. L. C. is determined that no trader shall supply them on better terms.

Families in the Country may command the most approved Taste, by being waited on at Home with Patterns—and Designs made on the spot, calculated to harmonize with the plans, proportions, and decorations of the rooms; and their Orders delivered, and fixed on terms forming a very small addition to the first cost by the system adopted in this Concern.

With this short enumeration of the leading articles of his trade, and the very favourable terms on which he undertakes to supply them, Henry L. Cooper appeals to all classes for a continuation of that flattering preference hitherto afforded to his House, 93, Bishopsgate-street Within; Western Branch, 57, Conduit street, nine doors from Regent-street,

H. L. C. begs respectfully to solicit particular attention to the Address; also that any Article will be exchanged should a fair objection arise, thus securing the public from risk.

THE METROPOLITAN BRITISH & FOREIGN CLOTHING ESTABLISHMENT,

LONDON. 97, FLEET-ST.

GEORGE DAVID BOUDERY.

In remarking on his

FIRST-RATE QUALITIES,

G. D. D. respectfully addresses Gentlemen who have hitherto found it necessary to pay extravagantly high prices for really First-rate Clothes, to such he guarantees a **DRESS COAT** of any colour—as stylish in make, as tasteful and talented in cut, and as good in quality, as any bearing the names of the most expensive and favourite Fashionable Houses, for.....£3 0

Surtouts, including, of course, Silk linings 3 10

Black and Blue, 10s. extra on each

Buckskin Trousers, on G. D. D.'s new principles of Measurement, 1 8

Waistcoats 14

Ladies' Riding Habits..... 6 6

These will be found of that character which has raised this Establishment to such eminence in the estimation of the higher circles, where nothing short of **easy gentlemanly elegance** could be tolerated.

THE SECOND-RATE QUALITIES

Are especially recommended for Business and Travelling Clothes, also, to the **ECONOMIST** they are found preferable to the first on account of their Superior Durability, while in appearance none but the Connoisseur could discover a difference, excepting by comparison, in short, they are frequently substituted at other Houses for the Best. The Prices are, for **DRESS COATS**, of any colour (Style and Fit First-rate) £2 5

Surtouts, including Silk linings, 2 10

Black or Blue, 5s. each extra

Trousers 1 1

Waistcoats 10

The Army Blue Spanish Cloak, forming a circle of 9 yards round the bottom—the best Travelling Cloak that is made 2 10

A good Cloth ditto, with Fur Collar and Cape—9 yds round 3 3

Milled Petersham Great Coat.. 2 2

CONTRACTS FOR FIRST-QUALITY CLOTHES

As generally adopted, are objectionable, because they confine Gentlemen to one particular Dress, or subject them to considerable Extra Charges. G. D. D.'s system removes this difficulty by leaving at the option of the Customer what he chooses to wear, whether Surtouts or Dress Coats, either Coloured or Black; his Prices, including all extras (excepting Velvet Collars), being for

Two Suits per Annum.....£10 0

Three ditto ditto 14 18

Four ditto ditto 19 12

and so on in proportion to the number of Suits. Each Suit to be returned on the delivery of its successor. Gentlemen who take three or more Suits per Annum are allowed two Suits in wear during the whole term; thus in a contract for three Suits a Dress Suit and an Undress Suit are supplied together. The Dress Suit to be kept for twelve months, and, at the expiration of six months, the Undress Suit is returned, and another supplied to continue to the end of the term, the contract amount for each Suit being paid on delivery. Contracts for the second quality would be much lower.

A Suit of First-rate Liveries..... £3 18 6

For **WASHING TROUSERS** and **WAISTCOATS** definite prices cannot be stated, on account of the variety of Materials, but a very superior article for **SUMMER TROUSERS** are charged **10s.** per pair, and **WAISTCOATS, 6s.** each.

G. D. D. respectfully informs **COUNTRY GENTLEMEN**, that, on account of the numerous invitations he has received to make his Rhodian Excursions through England, his Traveller will wait on them on those occasions, or will proceed direct to any part where three or more Gents, according to the distance) favour him with their Addresses.

TERMS.—Cash on Delivery, without Discount. Country Orders must be accompanied by a Reference to Town.

THE FIRST HOUSE IN ENGLAND FOR DRESS WAISTCOATS.

NEW WORKS PUBLISHED BY JACKSON AND WALFORD,
18, ST. PAUL'S CHURCH-YARD.

THE CHINESE: A General Description of the Empire of China and its Inhabitants. By JOHN FRANCIS DAVIS, Esq., F.R.S., late His Majesty's Chief Superintendent in China. Two Vols. post 8vo., with Wood-cuts. 1l. 1s.

"The following Work owes its origin to a collection of notes which the Author made while resident in China. A residence of more than twenty years (which terminated in the Author succeeding, for some months previous to his final retirement, the late amiable and unfortunate Lord Napier as His Majesty's chief authority in China) has perhaps been calculated to mature and correct those opinions of the country and people which he had formed, as a very young man, in accompanying Lord Amherst on the Embassy to Peking in 1816. If some acquaintance, besides, with the language and literature of the Chinese empire has not been of considerable assistance to him in increasing the extent and accuracy of his information, it must have been his own fault entirely, and not any want of opportunities and means."—*Extract from Introduction.*

II.

PALEY'S NATURAL THEOLOGY ILLUSTRATED: Notes by HENRY LORD BROUGHAM and SIR CHARLES BELL. To which are added, Supplementary Dissertations by SIR CHARLES BELL. Two Vols. post 8vo., with numerous Wood-cuts. 1l. 1s.

IMPROVEMENTS IN THE KINGDOM OF THE TWO SICILIES.

(Continued from last Number.)

An additional interest is given to the restoration of the post of Nisita, by the circumstance that the works undertaken there are little more than a repairing of what was left by the ancient Romans. In the classical soil of the two Sicilies, where the splendid remains of monuments of an ancient civilization everywhere awaken great recollections, there are probably no works that have better withstood time, neglect, and the violence of the barbarians, and the tempests of eighteen centuries, than the great Mole of Pozzuoli, commonly called the Bridge of Caligula, and the Moles of Nisita and Cape Miseno, which places were the Portsmouths and Plymouths of the Roman Empire, while Pozzuoli was the great commercial port for the trade with Egypt and the East. These works, thrown boldly out into a sea where the Sirocco gales frequently exercise a tremendous violence, though damaged, still preserve a wonderful solidity, and not only serve as a model for new constructions of that kind, but by being repaired, are quite capable of performing the same valuable offices for which they were destined by the Cæsars of old. The ancient engineers and builders employed on these works availed themselves of the favourable sites and other advantages offered by nature with a felicity truly admirable, and which leaves the modern architect little else to do than follow their example. The piles that form the base of the moles, and which are the most difficult and expensive part of those works, are, in general, so well preserved, that with a little repairing they can serve as a foundation to the new masonry. "In this manner," says Afan de Rivera,"* as heirs of our remote ancestors, we can make use of the treasures which were the fruit of their industry, and can profit, at the same time, by their experience and ability." Many of these piles, of materials which seem almost indestructible, are driven into the sea where there are sixty *palmi* of water. Vitruvius has left a description of the method in which these sub-marine works were executed, and this method has been precisely imitated by Afan de Rivera and his colleagues. After commending the volcanic production called Pozzuolana, which is a soft, light substance, something between a stone and an earth, and easily pulverable, Vitruvius goes on to say, that being mixed with one-third of lime, it forms a compost or mortar, which not only renders all kinds of buildings exceedingly strong, but in a special manner binds and consolidates such as are constructed under water. The wood work used in fixing the piles, ought, he says, to be good oak, to be driven firmly into the bottom of the sea, and secured by chains, so as to form a hollow frame, within which (the water being pumped out) the masons were to build with their stone, and their mixture of lime and pozzuolana, which soon hardens. The pozzuolana, to be good, ought to be dug in the places situated between Cuma and Cape Minerva, now Cape Campanella, at the extremity of the Sorrentine promontory—a tract of country which embraces the whole of the Neapolitan gulf, and following the sinuosities of the shores may be thirty-five miles in extent. With deference to the high authority of Vitruvius, we are inclined to believe that the terra pozzuolana, differing in no essential respects in quality, is to be found in many other parts of these volcanic kingdoms; but, confining it even to his limits, there is more of this valuable material than the industry of man will ever exhaust. The territory around Mount Vesuvius, the hills of Posilippo close to Nisita, and Monte Nuovo, the Solfatara, and Monte Barbaro, immediately in the rear of the town and Port of Pozzuoli, would furnish pozzuolana enough to *set* piles and bridges for the world. Here, then, the Neapolitans have an invaluable material close at hand, and the forests of the kingdom, of which the Astroni, and Mondragone are not far from the Bay, abound in the very oak that Vitruvius recommends.

Strabo also attributed to the quality the Neapolitan Pozzuolana has of taking a quick and fast hold in water, the facility with which the ancient inhabitants of these regions built moles and piers, and made deep and safe ports; but in more modern times the successive eruptions of Mount Vesuvius have furnished a substance called *Pozzuolana di Foco* (Fire Pozzuolana), which Afan de Rivera and other experienced engineers consider even better for making the mortar which is to lie under water.

It was the dread of the cholera and the number of foreign vessels arriving at Naples from countries infected with, or supposed to be liable to that malady, which hastened the restoration of the ancient Port of Nisita, and the formation of a general lazzaretto. The operations were intrusted to Signor de Fazio, an intelligent engineer, who, for many years, had devoted himself to the study of the construction of the posts made in the best days of the Romans, and the works were actively commenced on the 26th of April, 1832. To enlarge and defend the existing Port two moles were requisite—the one to the east, and the other to the west, which had existed in ancient times. With the first made the first of these defences, the old piles were sunk and injured, that it was [illegible] Neapolitan ducats (about make much use of them, which seemed enormous to mole were so firm and besides, were not well satisfied operation. In 1825, after the

* Printed by mistake, in last Number, "di Rivera." The name is not Italian, but Spanish.

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

once began to rebuild upon them, and so to re-produce the ancient work. These piles, that had been many centuries under water, and particularly the layers of pozzuolana cement that enter so largely into their composition, were as hard as granite: they perfectly well supported the ponderous arches thrown across them, and in a short space of time this mole was finished. It presents the appearance of a bridge with low arches and massy pilasters, and sufficiently breaks the force of the waves in that direction to allow of good riding ground to ships of a high tonnage.

The eastern mole, which was to be almost entirely a new construction, was commenced in the middle of June, 1832; and the piles, after the manner of the ancients, were driven in deep water, fixed, and built upon, without any serious accident. During the execution of the more exposed and dangerous parts, under water, the men worked night and day, incessantly, fresh gangs relieving those who were fatigued; and, altogether, the energy and activity displayed reflect honour on the people and government. These qualities have not been considered inherent in the Neapolitan character, but they have only lain dormant from want of encouragement and circumstances favourable to their development. The result of these labours of six months, and the restoration of parts of the Roman works, has been an excellent port in an advantageous situation, wherein there is much less swell of the sea, and ships are much less laboured in rough weather than in the ports of Naples and Genoa. In the month of November, very shortly after the two arched moles were finished, a violent tempest set in and lasted for several days, but during its continuance the ships at anchor between them, though crowded rather closely together, suffered no inconvenience. Signor Afan de Rivera quotes this example as a triumphant refutation of the arguments of those who disapprove of the ancient Roman method of making moles or piers with open arches that allow a passage to the waves. These open arches, he says, guarantee a port from that accumulation of sand, earth, and rubbish, which has choked up the splendid harbour of Brindisi, and so many other ports in Italy; and he insists that the portion of water which finds its way through the arches, encountering the mass of still water within the port, does not, even in the roughest weather, produce any inconvenient swell.

Signor Afan de Rivera proposes that the Neapolitan government should erect Nisita into a Porto Franco—a purpose for which, from its situation, compact size, and the facility with which smuggling might be prevented, that small island is admirably adapted. Hitherto the kingdom of Naples has had no Porto Franco; and the one which existed in Sicily (at Messina) was deprived of most of its privileges about ten years ago. On the Mediterranean side of Italy the advantages of the Porto Franco system are confined to the ports of Leghorn and Genoa, and on the Adriatic shores to Trieste and Venice—which latter city was allowed the privilege by its Austrian masters some five or six years since.

But we must look to another part of the kingdom, remote from the capital, for the most curious, interesting, and praiseworthy improvement, undertaken and persisted in by the Neapolitan government. Here, too, we are carried back to the days of antiquity, and find our contemporaries only following the traces of the Romans, and repairing and renewing what was conceived and acted eighteen centuries before our time.

is the Lacus Fucinus of the Romans, the Lago d Celano of modern times; the present name being derived from the town of Celano, which stands on a hill that overlooks the whole lake. The vale in which the lake lies, and all the lower part of which it fills, is of an irregular but somewhat oval form; its greatest length is from south to north, and it is surrounded by mountains, or very lofty hills, that allow of no channel or passage for the accumulating water. It is a complete concha, or hollow, deep shell; and may be compared to the enormous crater of some volcano, the lips of which have not fallen in. The rain, the melted snows, most of the springs of an elevated region 400 miles square, pour themselves into this basis, and were it not for the calcareous, porous nature of part of the surrounding Apennines, which allows some of the water to filter through the rocks, the increase would be rapid and constant,—the supplies far outbalancing the decrease produced by evaporation during the heats of summer; which heats, moreover, by melting the snow on the loftiest mountains, act with two-fold effect. But, besides the filtration, there are several deep caverns which penetrate into the sides of the surrounding hills; and, from the eddies and whirlpools made by the water as it rushes into these caverns, it is supposed that a portion of the fluid finds its way, through the bowels of the earth, into the valley of the Liris, or into that of the Pescara—the lake, when at its lowest ebb, being much higher than either of those rivers. It has been observed by the old inhabitants of the country, that though, taking a long period, the volume of water has very sensibly increased, yet the increase has not been regularly progressive, year after year; but that, on the contrary, the lake, after rising for several years, has sunk for as many successive ones. People have endeavoured, though not very successfully, to account for this alternation of increase and decrease by the difference of the seasons, the greater or less fall of rain, snow, &c., and the greater or less facility afforded by the surrounding rocks and mountains to the filtration and passage of the water. Whatever may be the causes of the phenomenon, it is quite certain that no fall of the lake has ever reduced its superfices to the extent to which it was confined in former ages, when corn-fields flourished and towns and villages stood where there is now deep water. The Fucinus, indeed has never sunk low enough to allow an opportunity of discovering the sites of the ancient submerged cities. When we were on the spot a few years back, the lake was on the increase;—it had rolled its beautiful but destructive waves over one field and vineyard after another; and many of the inhabitants of Avezzano—an agreeable, industrious little town at the head of the lake—had lost some of their best lands by its encroachments. An old fisherman, whose boat we engaged at that town, showed us a spot, far from the then shore of the lake, where once stood the house in which he was born, surrounded by the fields his father cultivated.

As early as the time of Julius Cæsar the rising of Lacus Fucinus attracted attention, and that extraordinary man occupied his active mind in devising means for the prevention of the evil. Of some works he began, to drain the lake, no traces are found. About eighty-six years after the death of Julius Cæsar (A. D. 42), aroused by an extraordinary rise of the lake, which had swallowed up a great extent of the most fertile lands of the Marsi, a Germanic race who had settled near the Fucinus, in a country checkered with forests, the Emperor Claudius resolved to cut a great subterraneous passage, or tunnel, through the mountains, which should carry off the water to the bed of the river Liris, and prevent its usurpations for the future. The magnitude of this undertaking will be understood when we mention, that it is more than three English miles from the head of the

lake to the valley of the Liris, that the intervening distance is occupied by mountains, and that the base of Monte Salviano, which shelves down to the water, and through which it was necessary to cut, is composed in good part of hard rocks. At the will of the master of the world, however, a prodigious host of artisans and labourers, freedmen and slaves, crowded to the usually quiet shores of the lake, and began their excavations under Monte Salviano, at a short distance from the spot where the town of Avezzano now stands. The excavation was then continued simultaneously at several points, the direction of the tunnel being properly defined, and shafts to admit air sunk through the body of the mountain from its sides and summit, at regular distances, down to the level and course of the passage. Seutonius tells us that part of this excavation was made by digging, and that part was cut out or chiselled (*excisa*), and we observed in some portions of the tunnel, where the masonry had been destroyed, evident marks of the chisel, which must have been wielded upon such masses of rock at a tremendous expense of time and human labour. Many of the cuniculi, or shafts, were not sunk perpendicularly, but in a sloping direction, and up these inclined planes the earth, stone, and rubbish dug below in the tunnel, were carried on men's shoulders. When the extent of the work, with its numerous accessories of shafts, and the want of those arts in modern engineering which so materially economise labour, are taken into consideration, the assertion of the Roman writers that it took 30,000 men eleven years to complete the tunnel becomes perfectly credible.

According to Tacitus, the gigantic labours of so many years were thrown away in a moment by the puerile vanity of Claudius who, anxious to produce a striking effect, got up a grand fête and spectacle on the lake, and at a given sign, had the dikes and sluices which retained the water at the mouth of the tunnel removed at once, without any precaution, when an immense volume of water, with a terrific roar, rushed into the passage, breaking up and destroying the tunnel, and shaking the hills like an earthquake. It has been doubted from this account whether at the time a drop of water reached the Liris, but had the works held good against such rash violence, the valley of that river must have been inundated and ruined to a great extent. A passage in Pliny, if correctly transmitted and understood, explicitly says that Claudius failed in giving a current to the water through the tunnel, and that his successor, Nero, abandoned the work out of hatred to his name. Hence several Roman and national antiquaries have concluded that this grand tunnel was never of any use; but an inscription discovered at Avezzano seems to settle the fact that, at least, in the time of Trajan, the work which had cost so much, served the purposes for which it was destined, and carried off the surplus water of the lake to the river on the other side of the mountains.

The ancient relict here alluded to records the gratitude of the people to the Emperor for his recovering the fields and possessions which the Lacus Fucinus had devastated. An equally convincing proof that the tunnel at one time or other performed its office is found in a thickish stratum of the sand of the lake, which lies on the floor or bottom of the passage, and has evidently not been left there by one inrush from the lake, but deposited quietly and gradually by many successive streams.

In the ruin of all good and useful things that took place in the dark ages, it was natural that this tunnel should be abandoned and become useless through want of attention, but there is some evidence to prove that in later ages attempts were made to restore it. In a register kept in the Camera della Sommaria (the Neapolitan Treasury of old times), it was recorded that Frederic II., who flourished in the thirteenth century, and one of whose earliest and warmest friends was the Count of Celano, the feudal lord of the lake and surrounding country, undertook to clean and repair the tunnel of Claudius, or, as it is commonly called in Italian, the *Emissary* of Claudius. It is also asserted on pretty good grounds by some local historians, that Alfonso I., of the house of Aragon, made a similar attempt in the fifteenth century. But conclusive evidence that some such essays have been made is presented by the tunnel itself, where, in several places, there are pieces of brick wall of a construction altogether different from the old Roman walls and vaulted roof they were vainly meant to continue and support. Moreover, in clearing out the shafts the workmen employed in restoring the tunnel have discovered a number of copper vessels and iron tools, which clearly are not Roman, but of a much more recent date. The awkward manner in which the latter repairs were executed, preclude the idea of their having been of much or indeed of any use.

From the middle of the fifteenth to the latter part of the eighteenth century it appears that this tunnel was wholly neglected. In 1786 the lake began to rise with alarming rapidity; many thousands of acres of productive land were inundated, and some villages were either submerged or threatened with speedy ruin. A priest of the country, the canon Lolli, who had long and attentively observed the Claudian emissary, called the attention of government to the increasing calamity, and maintained that it would not be a difficult undertaking to restore that tunnel. Ferdinand, the grandfather of the present king, lent a ready ear to these suggestions; and shortly after the work of restoration was commenced by his orders. The worthy canon, however, was more of a philanthropist and antiquary than engineer, nor were his deficiencies supplied by those who were intrusted with the actual execution of the work. They began without any fixed plan of operation—every one, even down to the common labourer, seems to have had a plan of his own; and, after committing various blunders, and causing an enormous expense, they were stopped in their progress of folly in order that government might have time to devise, or consider, and adopt, a wiser plan of proceeding. The calamities of wars and revolutions alluded to in a former part of these notes interrupted the whole affair for more than twenty-six years. In 1816, a year after the return of King Ferdinand from Sicily, Signor de Fazio, then at the head of the royal engineers, was charged to make a report, and on a careful examination of all the parts of the tunnel that were accessible, he gave it as his opinion that it would not be a very difficult undertaking to clear it out, and perfectly restore it. At the same time he drew up an approximative estimate of the expense. The old restored government had little money and not much enterprise: in default of these it was attempted to get up one of those companies or associations of capital in shares, that have done so much, and, in fact, almost everything for the improvement of modern Britain. But the plan of such joint-stock societies was altogether new in the kingdom of Naples, and after some landed proprietors in the immediate neighbourhood of the lake, and *three* or *four* patriotically-disposed gentlemen in the capital had set down their names, no more subscribers offered themselves, and the scheme fell to the ground.

Ferdinand then thought of undertaking the work on his own account, and he employed a Roman architect, Signor Pietro Ferrari, to examine the works and draw up an estimate of the expenses. This artist made the estimate amount to 2,393,483 Neapolitan ducats (about 400,000*l.* sterling), a sum which seemed enormous to the government, who, besides, were not well satisfied with Ferrari's plan of operation. In 1825, after the

death of Ferdinand, Francis I., his successor, charged Signor Afan de Rivera* with a commission to examine and report on the tunnel, and this he did with so much success, maintaining that the ancient work might be restored with comparative ease, and showing the means by which the repairs might be effected, that government immediately placed a fixed sum of money at his disposal, to do a part of the work as an experiment and a sample. Accordingly, in the spring of 1826, the long-talked-of labours were commenced under the immediate direction of the Cavalier D. Luigi Giura, inspector of roads and rivers.

Nobody had attempted to clear out the shafts, and descend by them into the intermediate spaces, but the subterranean channel had often been entered and examined at its two extremities, and as both on the side of the lake and on that of the river it was found to be cut, as far as people could safely penetrate, in a hard, calcareous rock that almost perfectly preserved the form given it by the Romans, it was rather hastily concluded that the same material would be found all through the mountain, and that there would be little more to do than clear out the fallen walls, rubbish, stones and sand, that blocked up the passage. But when the workmen had proceeded 2388 palmi† from the mouth of the tunnel on the river side, they found it was cut through a calcareous concretion that had very little tenacity, and required walls and arches to support it. This soft matter, as was afterwards ascertained, extended for a tract of 4276 palmi; beyond it the tunnel was cut in the hard, calcareous rock for the distance of 3500 palmi, and then followed a tract of equal length, that reached to the lake, of the calcareous concretion. In some parts the Roman walls and arched roof, erected wherever the rocks did not occur, were found in perfect preservation, in others they were much injured. In cutting through the long tracts of rock the Romans had occasionally come upon caverns and crevices, some under foot, and some branching off from the sides of the tunnel; and all these chasms they had closed up with admirable masonry, which in most cases remained good. The greatest errors they committed were in departing from the straight line; in one place the tunnel turns off almost at a right angle, and it is crooked in several other places where the cuniculi or shafts are the farthest apart.

A long line of the tunnel lying under Monte Salviano had been wholly inaccessible for many ages, and as both ends of this tract were blocked up, one of the assistant engineers (Signor Mascari) resolved on the bold expedient of getting at it from above. Having sounded, and found that that part of the tunnel was nearly full of water, he lowered a small boat through one of the shafts, and in this, after being lowered from the crest of the mountain, through the narrow shaft to the level of the water, he embarked with the contractor for the works and one or two labourers, and in darkness and at a great risk, penetrated for nearly half a mile, when the earth that had fallen in through another shaft stopped his further progress. There was scarcely a space of three palmi between the surface of the water and the roof of the tunnel, and in some places they were obliged to lie flat in the boat, in order to have room to pass. This gloomy voyage, in the very bowels of the earth, with a mountain over their heads all the way, may indeed be considered as striking and romantic, as Afan de Rivera calls it. It conveyed the consoling certainty that for half a mile, or one-sixth part of the entire length, the tunnel was open, and required few repairs. Subsequently, on cutting through the earth and rubbish that blocked up the lower end of this space, the water sunk and flowed on to the Liris.

In excavating, a shield, copied from the ingenious one invented by the excellent Mr. Brunel, senior, for the Thames Tunnel, was used; and Afan de Rivera admits that, without this invention, the work in many points must have stopped as wholly impracticable. The poor peasants of the mountains, who were chiefly employed, had at first a great dread of working under ground, with no light but that furnished by lamps and torches, but, seeing the safety afforded by the shield, they gradually became accustomed to it, and laboured very cheerfully. In forcing their way from one end to the other of this remarkable emissary, not a single life was lost. The greatest danger arose from foul air, which at some points extinguished all the lights, and held the men in check; but by opening the cuniculi or shafts, and sinking two new ones, and by allowing a small current of water to run almost constantly at the bottom of the tunnel, a supply from the wholesome atmosphere of day was admitted, and a current of air created.

We should far exceed our limits were we to detail all the ingenious contrivances and expedients resorted to, but the result of them was, that after a labour of eight years, which we regret to think was too often checked or carried on languidly through the want of a proper supply of funds, the ancient Roman work was so far restored and rendered available as to carry off a constant though not voluminous stream of water from the lake to the river. It was calculated that this stream would suffice to keep the lake to its present level, and prevent further encroachments; but the plans of Afan de Rivera embraced a much greater object,—namely, that of reducing the lake to the limits it had in the year 1745, since which it has encroached upon and drowned more than 10,000 acres of the most fertile land in the Abruzzi. The value of this land he rates at 1,000,000 of Neapolitan ducats, and the expense of the works necessary to reclaim it he calculates cannot possibly exceed 500,000 ducats, one-half of which would be spent in the interior of the tunnel, and the other in exterior works on the lake. Supposing his project carried into effect, he estimates that, in addition to the 10,000 acres which would be thoroughly reclaimed, there would be 8000 square acres of land which would be under water only a part of the year, and excellent, by reason of the very inundation, for the production of Indian corn, sown grasses, &c., during the other months.

We do not know what progress has been made in this honourable undertaking, our information ending with the interesting volumes of Signor Afan de Rivera; but we will endeavour to procure further details from some friends in the country, which, together with a few notes on the present state of agriculture, trade, and manufactures in the kingdom of the two Sicilies, may form the matter of another paper.

The slightest indication of reviving enterprise and civil improvement in any corner of the world is matter of congratulation, but these beautiful and classical regions have an extra claim on our sympathies. Considered merely as a relic of ancient times, the tunnel of Claudius is a highly interesting object. When we were on the spot we could not sufficiently admire the beauty and durability of the bricklayers' work; the bricks, compact and sharply cut, were as hard as granite, and the cement or plaster was still harder. The only part of the ancient tunnel we had an opportunity of examining was that opening from the head of the lake, and there it was with great difficulty we penetrated about a hundred feet. At this point the height of the vaulted roof was above thirty feet, the breadth of the tunnel about twenty-eight feet. It appears, however, that these dimensions

* This gentleman had published an ingenious work on the Emissary and the draining of the Lake of Celano in 1823.

† A Neapolitan Palmo is about ten English inches.

are materially diminished as the subterranean passage advances towards the Liris.*

CHANGES OF ADMINISTRATION AND HISTORY OF PARTIES.

(Continued from No. 39).

THE operations of the war and the other transactions in America, during the summer and latter part of the year 1778, may be summed up in a few words. The English Minister, with the view of anticipating the arrival of the treaty of peace with France, had sent off to Congress rough drafts of his bills of conciliation at the same time that they were first introduced into the House of Commons. They reached America about the beginning of April, and before the end of that month, they had also arrived in the shape of Acts of Parliament, along with the three Commissioners, Lord Carlisle, Mr. Eden, and Mr. Johnson, and their Secretary, Dr. Adam Ferguson, appointed to carry them into effect. In neither of the two forms, however, in which they were submitted to them, did the new propositions of the British government make any impression upon that of the revolted provinces. The Commissioners were distinctly informed from the first, that no terms would be accepted or listened to until the King of England should have acknowledged the independence of the States, by withdrawing his fleets and armies. At length, after pressing their object in every way they could devise, and in some instances with considerably more zeal than discretion, finding all their efforts in vain, they took their leave of the country in the month of October in an angry manifesto, in which they declared that the policy, as well as the benevolence, of Great Britain, had, hitherto, prevented it from carrying the war to extremes; but that now that America professed the design of mortgaging herself and her resources to France, the whole contest was changed; and the question was, how far Great Britain might, by every means in her power, destroy or render useless a connexion contrived for her ruin, and for the aggrandizement of her enemy. "Under such circumstances," it was added, "the laws of self-preservation must direct the conduct of Great Britain; and if the British colonies are to become an accession to France, will direct her to render that accession of as little avail as possible to her enemy."

Meanwhile, on the 14th of April, General Sir William Howe, who had, for some time past, solicited permission to resign his command, on the ground that he did not feel he possessed, in a sufficient degree, the confidence of the Ministry at home, (his opinions, in fact, were opposed to the policy of the war, or, at least, of the measures that had led to it), was allowed to come home, and was succeeded as commander-in-chief by Sir Henry Clinton. On the 2nd of May, Mr. Deane arrived in America with the French treaty. On the 18th of June, the English troops, in obedience to orders from home, evacuated Philadelphia, and proceeded to New York. Eleven days after, the French Admiral D'Estaing arrived off the mouth of the Delaware, with a fleet of twelve ships of the line, and three frigates. No important action, however, took place in the course of the summer, either by sea or land; but in the state in which affairs now were, every day that passed without a blow being struck by the British, added strength, both material and moral, to the American cause.

In these circumstances Parliament re-assembled on the 26th of November. The debates on the Address in both Houses were long and interesting. In the Lords, the very unusual course was adopted by the Opposition of moving a direct negative to the Address proposed by Ministers. In the course of the debate strong observations were made on the conduct of Lord Sandwich, the First Lord of the Admiralty, for his alleged negligence, in not having the naval force of the kingdom in a state of better preparation for the crisis which had arrived, and especially for having, the preceding June, sent out Admiral Keppel at the head of a fleet, greatly inferior in strength to that which the French had, at the time, lying ready for sea at Brest. In point of fact, when Admiral Keppel was appointed to this command in March, he found, on his arrival at Portsmouth, only six ships of the Line fit for service; on his earnest representations the whole armament was, after some time, made up to twenty ships; and by great exertions, in the course of about four months, the twenty were increased to thirty. This was the whole naval force the British empire was then able to put to sea. The French fleet at Brest consisted of thirty-two sail of the line. On the 27th of July, the two fleets encountered off Ushant, when an action took place which lasted for some hours, but was prevented from being so decisive as it otherwise probably would have been by Sir Hugh Palliser, one of Keppel's captains, not being able to bring up his ship with the rest in the latter part of the fight, at the Admiral's signal. The ship had been greatly damaged, and the Admiral did not profess to have any charge to make against Sir Hugh; but the latter, in order to vindicate himself, thought proper to attack the conduct of the Admiral; and in the end each was brought to a court-martial. No events of the kind ever excited so great a popular ferment as did these trials. The issue of that of Admiral Keppel, which lasted for thirty days, was his acquittal of every charge brought against him in the fullest, clearest, and most honourable terms, the court also declaring that the charges were malicious and unfounded. Palliser was also acquitted, with a slight expression of censure for not having exerted himself to assist his commander to the utmost of his power. Admiral Keppel's trial did not terminate till the beginning of February, 1779; but from the first agitation of the affair it was made use of as a powerful lever in the Parliamentary attack upon Ministers. The popular feeling, all along, espoused the side of Admiral Keppel with the warmest enthusiasm. The Ministers, on whom —and on Lord Sandwich in particular—the public laid the original blame of all that had happened, were generally considered to have shown the greatest want of delicacy in the precipitate manner in which they went into the proposal of calling to account, as a criminal, the man whom their own mismanagement had previously deprived of adequate means of doing justice to himself and his country. On his acquittal this feeling broke out with extraordinary vehemence. "The general, public, and unusual rejoicings," says the Annual Register, "which took place in such various and remote parts of the kingdom upon this occasion, seemed to afford a strong presumption, that the people in general considered this business to be at least as much a public as a private concern; and, indeed, the whole manner of celebrating this event seemed rather as if it had been a great national deliverance than that merely of an individual. The rejoicings and illuminations in the cities of London and Westminster were of such a magnitude, as has scarcely been exceeded upon any public occasion whatever. The excesses committed by the populace, the latter, which were directed against the houses and persons of those whose supposed share in a division. tion had drawn on them the odium began to be in all were indeed furious, and had a the safety of the king disgust many of those who partook degree, stilled the the general joy. Even the measures of the Session the Admiralty were not sufficien by Ministers into the

* The Liris is now called the Garigliano. The traveller, in going from Rome to Naples by the usual high road, crosses it at a lower part of its course.

ing from receiving strong marks of the popular indignation; nor were some of the great officers of state free from sufficient cause of alarm, until the troops were brought forward to their protection." It may be added, that the disreputable private character of Lord Sandwich helped to sharpen the popular hatred which his politics excited.

In the debate on the Address his Lordship observed, that although he had been almost forty years a Member of the House, he did not recollect another instance in which a similar course had been pursued by the Opposition. He admitted that he had stated in the preceding Session, that he would undertake, at all times, to have a naval force equal to cope with, or superior to any which the united efforts of the House of Bourbon would be able to bring against it; "but then," he added, "it must be considered that this general opinion had relation only to the home defence; besides, it did not intend to imply any assertion that we had such a naval force, but that we ought to have a force at all times equal to cope with that of the House of Bourbon. I am still of the same opinion, that we ought; nor do I hold myself responsible, as an official man, that we have not. I act merely ministerially, under the direction of his Majesty's councils, and can never, therefore, be deemed further responsible, or bound by any engagement, than so far as I am enabled to perform it." Here we seem to have the particular Minister, against whom the accusation is directed, throwing the blame upon the general body of his colleagues—an indication of the state of the Government that must have been sufficiently intelligible. His Lordship concluded by declaring that he would never give his consent to any concession whatever, and by (very characteristically and appropriately, it must be acknowledged) recommending unanimity, and the most decisive and vigorous exertions.

Lord Shelburne, from the other side of the House, attacked the policy of Ministers with great warmth and acrimony. He admitted, however, that the conduct of France was, "beyond all instance, treacherous and unjustifiable." In the conclusion of his speech he recommended a union of all parties in the House for the purpose of acting with effect against the administration. He said that although he himself was of no party, (the cause of which, he presumed was, because he did not come into public life under the wing of any party), and although he preferred, and ever should, measures to men; yet that the conduct, temper, and apparent disposition of the present Ministers, were so strongly marked with infamy, weakness, and wickedness, that he would cheerfully co-operate with any set of men to drag them from their situations, and make them examples for the time to come, by punishing them in a manner suited to their crimes and notorious demerits. At this period a proposition to turn a set of Ministers out was not unusually accompanied by another for bringing them to the block; but, practically, the latter was much about as mere a figure of speech as it would be now. On a division the Address was carried by a majority of 67 to 35.

In the Commons an amendment to the Ministerial Address was moved, pledging the House to the support of such measures as might be necessary for the defence of the kingdom and for frustrating the designs of France, [illegible] "that restless Power," as it was called, "which has [illegible] often disturbed the peace of Europe,"—but adding [illegible] would think it one of their most important [illegible] calls it. [illegible]nire at the same time by what fatal councils [illegible] half a mile, or [illegible] brought to the state in which she now [illegible] tunnel was open, an[illegible] support of this amendment, Mr. [illegible] Majesty might have spared him[illegible] taken to shew that there was [illegible] is against France; "there is cause, said he, "to go to war with France —there was cause enough long ago." So that, upon this point, there was a perfect agreement among all parties in the country. Mr. Fox, in some remarks which are not reported, on the recent publications respecting the scheme projected by Doctors Addington and Wright, of a union between Lord Chatham and the Earl of Bute (See "Companion" for March, p. 41), appears to have taken occasion to intimate his conviction, formed upon the letter of Lord Mountstuart, that Lord Bute no longer possessed any of the influence at Court which had been so long attributed to him. From this conclusion, Mr. Wilkes, who afterwards rose, expressed his decided dissent. "Is the heir," he said, "of that noble family being lately created an English Peer, a proof of the father's now retaining no influence? Is the lieutenancy of a county, given to the same nobleman, to be admitted as evidence that his power is extinguished?" "I rejoiced," he added, "that the heir of that noble family was created an English Peer, for I thought that the young Lord's unspotted reputation, intrinsic merit, and great as well as amiable qualities, would reflect back more honour than he could receive from a modern peerage of this country; but I was persuaded that he owed his English peerage, no less than his birth, to his father." Very little doubt, however, can now be entertained as to the groundlessness of this favourite popular imagination. At two o'clock in the morning the House divided, when the original Address was carried by a majority of 226 to 107.

On the 4th of December the subject of the Manifesto of the American Commissioners was brought before the House of Commons by Mr. Coke, of Norfolk, who moved an Address to the Crown, beseeching his Majesty forthwith publicly to disavow the Paper. The motion was negatived by a majority of 209 to 123; but the debate was rendered interesting by one of the Ministers, Lord George Germaine, the Secretary for the Colonies, being directly accused of mismanagement, and put upon his defence, by Sir William Howe, the late American Commander-in-Chief. "The war," Sir William said, "had not been left to his management; and yet, when he applied for instructions, he frequently could not get them. The Noble Lord at the head of the Treasury had, indeed, supported him; but the Noble Secretary for the American Department had not used him well,—had often left him without instructions, to shift for himself, at the opening of a campaign, without sending information how to act." Lord George Germaine, of course, defended himself against these general allegations by explanatory statements, which might or might not be a sufficient answer to them. But it was at any rate remarkable that the Ministers should now find among their political opponents so many of the principal persons whom they had employed in both services in the conduct of the war. In this very debate, Lord Howe, Sir William's brother, who had recently returned from the command of the naval force in America, seconded his brother's demand for an inquiry, and proposed that it should comprehend his own conduct as well as that of Sir William and that of Lord George Germaine. General Burgoyne next rose, and also spoke and declared he should vote against them; and Admiral Keppel, also a Member of the House, they had in like manner, as we have just seen, contrived to disgust and alienate.

On the 7th of the same month an Address, similar to that moved in the Commons by Mr. Coke, was proposed to the other House by the Marquess of Rockingham. The motion was negatived, after a long debate, by a majority of 71 to 37. On this occasion the young and ardent Lord Lyttelton was again, as he had been for some time past, the boldest and most thorough-going champion of Ministers out of their own ranks, on which account he was described by the Duke of Grafton as

* This gentleman had [illegible] Emissary and the draining[illegible]

† A Neapolitan Palmo [illegible]

"the Drawcansir of Administration, ready to undertake its defence at all times, even when they were ashamed to attempt it themselves." His Grace, in the course of his speech, called upon Lord Stormont, who had been ambassador at Paris when the late treaty between France and America was signed, to account for the extraordinary fact which had been stated in the last Session by Ministers, that they were without any information of the existence of such a treaty a month after it had been signed (See "Companion" for March, p. 40). Lord Stormont, being thus called upon, distinctly stated both that he had had himself the earliest intelligence of the treaty having been concluded, and that he had not lost a moment in acquainting Lord Weymouth, the Secretary for Foreign Affairs, with the fact. Lord Weymouth was now called upon to inform the House why a communication of such singular importance had been withheld, and why, especially when he had been expressly asked if any information of the signature of the treaty had been received, he had answered in the negative. His Lordship's explanation was sufficiently curious. He recollected very well, he said, the question which had been put to him on the 5th of March last, "and were he now questioned in the same manner, he should, he believed, return the same answer; for though the Noble Viscount did give him an account of the treaty being signed in the manner related by him, *he must confess it did not bring home conviction to his mind that the fact was so.*" This apology was justly treated by those who spoke after his Lordship as defying all commentary, and indeed as a palpable mis-statement of the motives by which he had really been actuated.

The storm to which Ministers were exposed in consequence of the affair of Admiral Keppel began immediately after the announcement of the verdict of the court-martial. On the 12th of February the thanks of the Commons were given to the Admiral, on a motion which was carried with only one dissentient voice; and on the 16th the thanks of the Upper House were voted to him unanimously. On the 23rd a motion, by Mr. Fox, in the Commons, for copies or extracts of all letters and papers received by Ministers respecting the state of the French fleet which had been equipped at Brest, was only negatived by the comparatively small majority of 134 to 97. On the 3rd of March, in a House so full that every seat below was occupied, and above fifty Members were obliged to take seats in the side galleries, Mr. Fox moved a resolution of strong censure on the Admiralty for having sent Admiral Keppel to sea in the preceding June with so inadequate a force. At half-past one in the morning the House divided, when the numbers were found to be, for the motion 170, against it 204. "This," observes the Annual Register, "was an unusual division on the side of the minority, and the Minister shewed a degree of passion and vehemence, in different parts of this debate, which was not at all customary with him. It was observed by some, who from long experience think they may form an opinion on the appearances of things in that House, that the question would probably have been carried in the affirmative if the Noble Lord at the head of the Administration, having equally perceived the same indications, had not immediately applied himself to prevent their effect. For that Minister, observing strong marks of defection, particularly among that part of the country gentlemen who supported the Administration, recalled both them and his other wavering friends to the standard, by openly declaring that the motion of censure against the First Lord of the Admiralty went directly to himself and to all the other Ministers; that there could be no discrimination; as they were all equally concerned in the conduct of public affairs, they were all equally liable to answer for the consequences; there could be no separate praise or censure; whatever reached one must reach the whole." Five days after, however, Mr. Fox returned to the charge, on a motion substantially the same in import, but varied in its terms, so as to express a general censure upon the Ministers, on the ground of the unprovided state of the navy at the breaking out of the war with France. The House this day was still fuller than it had been on the preceding occasion; but the accession of numbers appears to have consisted principally of the adherents of Ministers, for, when a division took place, at one in the morning, the motion was negatived by a majority of 246 to 174. Both Lord Howe and Admiral Keppel took part in this debate. The former said that, as for his own case, "he was deceived into his command; that he was deceived while he retained it; that, tired and disgusted, he desired permission to resign; that a thorough recollection of what he had suffered, induced him to decline any risk of ever returning to a situation which might terminate in equal ill-treatment, mortification, and disgust. Such were his motives for declining any future service so long as the present Ministers remained in office; for past experience had sufficiently convinced him, that besides risking his honour and professional character, he could, under such counsels, render no essential service to his country." Admiral Keppel concluded a long speech by pronouncing the Admiralty Board "totally negligent, misinformed, and every way unequal to the administration of the naval affairs of the country."

Still persevering in the attempt to improve his first advantage, or at least to regain the ground on which it had placed him, Mr. Fox, on the 22nd, moved a third resolution of censure on Ministers for their neglect and misconduct in not sending out reinforcements in the preceding June to America, and a fleet at the proper time to the Mediterranean. This motion was negatived by a majority of 209 to 135. On the 19th of April he moved an Address to the Crown for the removal of Lord Sandwich from the Admiralty, when the division shewed a still further falling off in the strength of the assailants of the Administration, the numbers on this occasion being, against the motion 221, and for it only 118. When the same motion was made in the Lords, on the 23rd, by the Earl of Bristol, it was rejected by a majority of 78 to 39. On the 15th of June, Mr. Thomas Townshend, in the Commons, moved an Address to his Majesty imploring him to defer the prorogation of Parliament, which was negatived by a majority of more than two to one, the numbers being 70 for the motion, and 142 against it.

Two days after this last division a Message from the King was delivered to both Houses, conveying the alarming information that Spain had followed the example of France, and declared war. To the Address in answer to this Message, which was proposed by Ministers in the Lords, two amendments were successively moved, the first by the Earl of Abington, calling, in very strong terms for the dismissal of Ministers; the second by the Duke of Richmond, representing in much milder language the necessity of a change of system as the only means of resisting the powerful hostile combination now threatening the country. The former was rejected by a majority of 62 to 23, the latter by a majority of 57 to 32. In the Commons the minority appear to have been discouraged by the result of their recent attempts from any further trial of strength, and the Ministerial Address was voted without a division. The apprehensions, indeed, that now began to be in all quarters seriously entertained for the safety of the kingdom, had for the moment, in some degree, stilled the agitation of party. The last measures of the Session were two Bills that were brought by Ministers into the

House of Commons, the one for doubling the militia, the other for more speedily manning the navy, by taking away for a limited time the exemptions from impressment of certain descriptions of seamen and seafaring persons. In introducing the former measure, Lord North expressly grounded it on the danger there was of an invasion, and the necessity of guarding against the consequences of such an event. No division took place upon either of these Bills in their passage through the Commons, but the debates were occasionally characterized by much violence and personality. In reply to many accusations of corruption, and threats to bring him to trial and to condign punishment, Lord North, on the second reading of the Militia Bill, spoke as follows:—"There is nothing, at a proper time, I more ardently desire than a public trial, nor anything I less fear than public punishment. I have been publicly accused in this House in the face of the nation; justice requires that I should be indulged with an opportunity of exculpating myself. I shall insist upon the exercise of that justice; I hope I shall not be refused; I shall and must be tried, be the event of the present measures what they may. . . . It is well known that I accepted my present situation with great reluctance; that I have remained in it much against my own judgment and liking; that I feel in the same manner at the instant I am speaking; and when the period arrives that I can resign with honour to myself, and consistently with the duty I owe to my sovereign and my country, I shall quit my present office with singular satisfaction. . . . . When I came into office my private fortune was not very considerable; and I can affirm, be it what it might then, whenever I quit my present situation, now or at any future period, I shall not be richer."

In the Lords, however, a strong stand was made against some parts of both measures; and on the 30th of June the Ministry were beaten on the most important clause of the Militia Bill, that empowering his Majesty to double the numbers of that description of force, which was rejected by a majority of 39 to 22. No report of the debate which led to this decision is given in the "Parliamentary History," further than the statement that it lasted till ten o'clock; but, according to other authorities, the rejection of the clause was occasioned by a speech of the Duke of Richmond, in which he displayed great military knowledge, and pointed out with much force of argument the objectionable character of the Ministerial proposition. It is also stated that the two Secretaries of State, Lords Weymouth and George Germaine, and Earl Gower, the Lord President of the Council, all voted with the Opposition on this occasion. When the Bill came down again, thus mutilated, to the Commons, a proposal was made to reject it altogether, on the ground that, being a money Bill, it ought not to be suffered to be altered by the other House; but this attempt not being supported by the Minister, failed. Lord North however shewed, by the manner in which he expressed himself, how much annoyed he was by the conduct of the Lords, and especially by the desertion of his colleagues. Complimenting the Commons upon what he called "the spirit and unanimity" with which they had passed the measure in its original shape,—a spirit and unanimity, he said, which did them the highest honour,—he added that he could not speak of the proceedings of the other House with the same degree of applause. "He was exceedingly sorry that any of his Majesty's Ministers, or any one member of the Cabinet, should differ in opinion from him, but he could not help it. . . . . He wished most heartily the whole Bill had been suffered to stand: as it had not, he must take the remnant, and pick up even the crumbs which fell from their Lordships' table." Mr. Fox had observed that the opposition in the other House was chiefly made by the lord-lieutenants of counties, and was understood to insinuate that the Premier had mismanaged the affair by not securing their approbation of the Bill before bringing it in. "Ought he," Lord North asked in reply to this charge, "as a Member of that House, and one of the representatives of the Commons of England, before he suggested the measure to the Commons themselves, to go and ask the opinion of such of the Lords as happened to be lieutenants of counties? He thought he should have degraded himself and insulted that House if he had ever taken any such step."

This long Session was brought to a close on the 3rd of July. The subject of "the rebellion in North America" was only adverted to in the concluding paragraph of the Royal Speech, and then in doubtful and almost desponding accents. It was impossible to speak of its continuance, his Majesty said, without the deepest concern; but he must still hope that the "unhappy provinces will not blindly persist in preferring an unnatural and dangerous connexion with a foreign power to peace and reunion with their mother-country."

Early in this Session—on the 7th of March—Lord Suffolk, one of the Secretaries of State, had died; and the business of his office had ever since been conducted by Lord Weymouth, whose own situation, according to the division of the duties that then prevailed, was that of Secretary for the Southern, as Lord Suffolk had been Secretary for the Northern Department. This arrangement subsisted till the 27th of October, when Lord Suffolk's place was given to David Murray, Viscount Stormont (in the Scottish Peerage), and afterwards Earl of Mansfield, in which British title he succeeded his uncle, the celebrated Lord Chief Justice. Lord Stormont, who was the father of the present Earl of Mansfield, had lately, as we have already noticed, been ambassador at the Court of France. He had spent his life, indeed, in a diplomatic capacity at different Courts. On the 24th of November, both Lord Weymouth, and Earl Gower, the President of the Council, resigned, when the Earl of Hillsborough (See "Companion" for December, 1835, p. 535) was again taken in, and appointed to the place of the former, and Earl Bathurst, the late Lord Chancellor, to that of the latter. On the 6th of November, also, the office of First Lord of Trade, which had been for some years conjoined with the Secretaryship for the Colonies, was again separated and given to Frederick Howard, Earl of Carlisle (the father of the present Earl).

These new arrangements were just completed, when Parliament re-assembled on the 25th of November. Up to this time no material change had taken place in the aspect of the war, which both in America and Europe continued to be actively waged, but without any event which threatened to be of a decisive character. In the speech with which he opened the Session, his Majesty urged the prosecution of the contest, the object of which he described to be the defence of the country, with all the energies of the national spirit and strength. The Address proposed by Ministers in both Houses adopted as usual the tone of the Royal Speech. Without dissenting from the determination expressed to resist to the utmost the hostile combination of France and Spain, which was indeed a national feeling, the Opposition renewed their demands for the removal from the conduct of affairs of the men whose incapacity and rashness had, as they alleged, brought the kingdom to the alarming condition in which it was. An amendment to the Address was moved in the Lords by the Marquess of Rockingham, in which his Majesty was told that if anything could prevent the consummation of public ruin, it could only be new counsels and new counsellors without further loss of time—a real

change, from a sincere conviction of past errors, and not a mere palliation, which must prove fruitless. The debate that followed was long and animated. It was noticed by the Opposition as something very remarkable that, in the course of the Royal Speech, the war in America was not so much as mentioned. It seemed now to be understood on all sides that the object of recovering the revolted provinces must be given up as hopeless, and that all the efforts of the country must be concentrated upon the more pressing contest with France and Spain. Among their opponents the Ministers now found their former zealous champion Lord Lyttelton, who, making a singularly sharp and sudden turn, spoke in this debate as strongly against their whole policy as ever he had done in support of it. The people, he said, expected a decisive administration, not an administration of jobs and jugglers—they would not be satisfied with changing the balls, and putting out this man merely to take in that. A Noble Lord whom he saw present (Earl Gower), had gone out. Why? Was it not because the Noble Lord could not get an administration to meet his wishes, and come to some fixed rule of conduct? Administration was to the world the best instance of its own want of firmness; it was a rope of sand crumbling away, day by day, till it came to nothing. He went on to say, on the subject of the late appointment of Lord Stormont as one of the Secretaries of State, that he hoped the public would thereby derive the benefit of "the councils of an old, a noble, and a learned lord (Lord Mansfield), whom he had, from his childhood, been taught to reverence and admire, and to regard as an oracle of wisdom." After all this, and having observed that it was true he had a place, and perhaps he should not very long hold it, his Lordship concluded by saying that "he had, for the seven years he had been in Parliament, given Ministers his support; that he was free to correct past errors, but that he did not mean to retract any of his arguments respecting the legislative rights of Great Britain over America. He still remained firmly of the same opinion, but as he was convinced, by experience, of the improbability of attaining the desired end of the war, it appeared to him to be absurd to pursue so expensive a measure further." The opinion thus expressed by Lord Lyttelton had now become the general conviction of all men of all parties, including, there can be little doubt, the Ministers themselves.

A great part of this debate, and also of many subsequent discussions in the course of the Session, ran upon the extraordinary and alarming appearance which public affairs had suddenly assumed in Ireland. The manufacturing and commercial, which were the popular interests in that country, had for some time been addressing urgent remonstrances to Government on the subject of the restrictions by which the trade of the country was cramped and depressed, but without gaining any attention. It seemed to be felt by Ministers that the conduct of Ireland in this instance was nothing else than a dangerous imitation of the example set by America, and therefore the last thing in the world to be encouraged. The Irish, however, now took advantage of the crisis to press their demands in another attitude and tone. Under pretext of making ready to resist the threatened invasion of the country by France and Spain, associations were formed for calling forth and organizing the military strength of the people, and in a few weeks there sprung up in this way an army of between forty and fifty thousand volunteers in arms. With such a power in their hands the popular party did not affect to conceal that their object was as much to wrest the redress of domestic grievances from their own Government as to repel foreign violence. In everything, in fact, but the mere form, and almost even in that, it was nothing else than an insurrection. It had far more of that character than the remonstrances of the Americans had at first assumed. We may conceive how greatly the embarrassment of the Ministers must have been increased by thus finding themselves with a second colonial rebellion upon their hands, while they were every day more and more losing hope of being able to make head against the first. But, whether made wiser by experience, or forced by the necessities of their position, they fortunately resolved upon taking another course in this case than they had followed in the former.

(To be continued.)

POLITICAL RETROSPECT FOR MAY, 1836.

GREAT BRITAIN.

A portion of the Parliamentary proceedings of the past month has been of unusual importance, though at the moment at which we write the fate of the measure about which the greatest interest has been felt still remains in suspense.

Our last Retrospect brought down the Chronicle of the Session to Thursday, the 21st of April. On that day nothing was done in the Upper House, but the Commons were occupied with two curious businesses—Sir Andrew Agnew once more on the Sabbath, and Mr. Hardy again on the Carlow election. For the moment a delusive show of success, or at least an escape from immediate defeat, was permitted to lure on the efforts of both the Honourable Members. The motion for leave to bring in a Bill for the better observance of the Sabbath was carried, after a short discussion, by a majority of 200 to 82; and the debate on Mr. Hardy's Resolutions, which went to affirm that the agreement between Mr. O'Connell and Mr. Raphael, to which Mr. Vigors was a cognizant and consenting party, was a high breach of the privileges of this House, was at a late hour adjourned till the following day. In the mean time Lord John Russell had met the motion by moving, as an amendment, the whole of the Report of the Committee on the Carlow election, reduced to the form of a series of counter-resolutions.

On Friday, the 22nd, the debate was resumed, when Lord John Russell's amendment was carried by a majority of 243 to 169. Lord Stanley afterwards moved the following additional Resolution:—"That it appears that there was between the contracting parties in this case a distinct understanding that any surplus which should remain after providing for the legal expenses of the election of Mr. Raphael, should be applied, first, to defraying the expenses of the previous election, and in the next place to the fund of the Carlow Liberal Club; that such an understanding called for the notice of the House, as liable to abuse, and as a dangerous precedent tending to subvert the freedom and purity of election." This Resolution was opposed on two grounds; first, by Mr. Warburton, who denied that its statement of facts was sustained by the evidence taken before the Committee; secondly, by Lord John Russell, who argued that, however the facts might stand, the House would act with the greatest discretion and wisdom in not going beyond the Report of the Committee. His Lordship accordingly moved, as an amendment,—"That the Order of the Day be now read." On this question another division took place, when the numbers were

found to be, for Lord Stanley's Resolution 166, for Lord John Russell's amendment 238, being nearly the same with those on the previous vote.

On Monday the 25th, the ministerial measure for the settlement of the tithe question in Ireland was brought forward in the House of Commons by Lord Morpeth, in a Committee of the whole House. It was stated by his Lordship that the present measure differed from that introduced last year, principally in an arrangement being now made, by which no parochial benefice would be altogether suppressed. It was now proposed, that in all parishes where the number of resident Protestants was below 50, the incumbent should have an income of 100*l.*; one of 200*l.*, where the number of Protestants was below 500; one of 300*l.*, where the number was below 1000; and one of 400*l.*, where the number did not exceed 3000. No parochial living would be above 500*l.* in annual value. According to this scheme his Lordship calculated that the annual remuneration to the clergy would amount to 361,938*l.* This sum was of course to be obtained from the tithes, which it was proposed to commute into a perpetual rent-charge, payable by the owner of the first estate of inheritance, a deduction being made from the present amount of the burden to the extent of 30 per cent. This, it was calculated, would afford a revenue of 459,550*l.*; so that the difference between the receipt and expenditure would be 97,612*l.* The present motion was merely preliminary to the bringing in of the Bill, and an assent to it would not pledge any Member to the principles of the measure; but his Lordship observed, that the Government felt they could not abandon the declarations or shake off the engagements they had made on entering office, and that therefore they still adhered to the principle of what was called the appropriation clause in the Bill of last year, and should propose that if, in the future disposition of the revenues of the Irish Church, any portion of them should appear to be superfluous for the legitimate and becoming uses of the members of her community, it should, after the satisfaction of all existing interests, be applied to the religious and moral instruction of the whole Irish people. The Noble Lord concluded by moving, "That it is expedient to commute the composition of tithes in Ireland into a rent-charge, payable by the first estate of inheritance, and to make further provision for the better regulation of ecclesiastical duties." After some remarks from Sir Robert Peel, Lord Stanley, Lord John Russell, and other Honourable Members, this resolution was agreed to, and leave was given to bring in a Bill founded upon it. The House then went into Committee on the Registration of Voters' Bill, and proceeded in the discussion of its clauses as far as to the forty-eighth.

On Tuesday the 26th the Lords assembled in great force to do execution, as threatened, upon the Irish Municipal Corporations Bill. On the Order of the Day being moved for the House to resolve itself into a Committee on the Bill, Lord Fitzgerald, in a long speech, moved "That it be an instruction to the Committee to make provision for the abolition of the corporations, and for such arrangements as may be necessary, on their abolition, for securing the efficient and impartial execution of justice, and the peace and good government of cities and towns in Ireland." The principal speakers in the debate that followed were, in support of the motion, Lords Abinger and Lyndhurst; and, in opposition to it, the Lord Chancellor and Lords Holland and Melbourne. Their Lordships divided at near one o'clock in the morning, when the numbers were found to be—for Lord Fitzgerald's motion, 203 (including 70 proxies); against it 119 (including 47 proxies).

This evening, in the Commons, the Great Northern Railway Bill was thrown out, on the second reading, by a majority of 99 to 85. Mr. Rippon then brought forward his Resolution, "That the attendance of the Bishops in Parliament is prejudicial to the cause of religion;" which, after a short debate, was negatived by a majority of 180 to 53.

On Wednesday, the 27th, the great strength of the landed interest in the present House of Commons was shown on occasion of the motion of the Marquess of Chandos, on the subject of agricultural distress. The Resolution proposed by his Lordship was—"That in the application of any surplus revenue towards the relief of the burdens of the country, either by remission of taxation or otherwise, due regard should be had to the necessity of a portion thereof being applied to the relief of the agricultural interest." Lord John Russell, in opposing the motion, pointed out the various ways in which the burdens of the proprietors and cultivators of the soil had been of late years diminished, and dwelt especially upon the important relief which it was unanimously agreed they had obtained through the new poor-law. The result, however, of this first side-blow aimed at the proposed reductions of the newspaper stamp and the paper duty, was calculated to give rise to some apprehension as to the fate of these propositions of enlightened policy; for Lord Chandos's motion was only negatived by a majority of 208 to 172. Thus, in a House of 380 Members, the exertion of all the strength of Government appears to be able to beat the combination of the landlords by no greater a majority than 36; and on this occasion both Sir Robert Peel, Lord Stanley, and Sir James Graham deserted the opposition, and voted with Ministers against the motion.

On Thursday, the 28th, in the Lords, the Lord Chancellor explained the Ministerial plan for the new regulation of his own office, as contained in two Bills which he presented,—the one to provide for the better administration of justice in the Court of Chancery, the other respecting the appellate jurisdiction of their Lordships' House. By these measures it was, he stated, proposed that in addition to the Lord Chancellor, there should in future be another Judge, styled the Lord Chief Justice of the Court of Chancery, who alone should preside in that Court, the Lord Chancellor remaining only at the head of all the ultimate appellate jurisdictions of the country, by presiding at appeals in error before the House of Lords, and also at appeals before the Privy Council. The new Lord Chief Justice would, like the other Judges, be appointed during life and good behaviour, and be removable upon an address from the two Houses of Parliament. It was also intended that the House of Lords, sitting as a Court of Appeal, should, notwithstanding any prorogation or dissolution of Parliament, be always accessible to suitors. Appeals from the Vice Chancellor and from the Master of the Rolls would be made in the first place to the Chief Justice of the Court of Chancery, and not directly to the House of Lords. These are the material provisions of the scheme, to which objections were made by various Noble Lords, and among others by Lord Langdale, the new Master of the Rolls, who, although he admitted that the two Bills were calculated to effect much good, yet regretted that political and judicial functions of the greatest importance would still be left united in the Lord Chancellor. For the mere purposes of deciding causes, and administering justice, a Judge altogether unconnected with the politics of the day might probably be the best. Yet in such a profession as the law, the man of eminent abilities will in general have distinguished himself in public life and party politics, as well as in his profession, and his having done so has scarcely been held as an objection to his appointment to a seat on the Bench. Thither, however, he of course carries with him his political partialities and connexion, even although he should not be actually invested with political functions. It has also

equently happened that the other Judges have as well s the Lord Chancellor been ennobled, and made legis- ators; and whenever that has been the case, although ey may not have held any ministerial office, they ave usually been as steady supporters of their party as ny other Members of Parliament. Lord Mansfield the great Chief Justice), Lord Denman, Lord Langdale imself, are all examples of the union in this way of im- ortant judicial and political functions. The late Lord llenborough at one time, while Chief Justice of the ing's Bench, actually held a place in the Cabinet. ere, then, we have various degrees of that which in all s forms appears to be condemned as an abuse by the bjection which we are considering. How far is our dmission of the force of that objection to carry us? Are ve only to have no Judges holding Cabinet offices? Or re we also to lay it down as a rule that no Judge ought o have a seat in either House of Parliament? Or are ve to go still further, and to insist that no decided poli- ical partisan, no man, that is to say, who has acted a onspicuous part in public life, shall ever be elevated to he Bench? Such a rule of exclusion as this last seems o be of impracticable application even if it were sound n principle, but its wisdom is at least as questionable as ts practicability. Yet give up this, and you abandon at he same time the principle, and at least a great part of he reason, of the other proposed exclusions.

But, upon the whole question, it may be observed, hat it is scarcely to be decided by the single consi- deration of whether the holding of a political office by a particular head of the law is favourable or the re- verse to his performance of his judicial functions. We will not say that there may be a higher or more important object than this to be contemplated in the right settlement of the matter; but there may be other objects which a comprehensive arrangement will not overlook, and for the sake of attaining which it may be well to sacrifice a very small portion even of that which must be regarded as the essential and pri- mary purpose to be kept in view. It is not the character of the primary purpose of any political insti- tution to exclude the consideration of all other ends but itself, or even to be so inviolable and monopolizing as never to admit, in any circumstances, of the least abridgment out of regard to such other ends. It is a great, though a common mistake, to assign this rigorous character to political institutions, and to reason respect- ing them accordingly. Such reasoning has, no doubt, the attraction of great directness, simplicity, and appa- rent clearness; but if it be indebted for its freedom from complexity, and the ease with which it may be followed, merely to its not taking in the whole of the *data* upon which the solution of the question depends, these qualities are manifestly of no value whatever.

In the particular case before us, while it is admitted that the chief design of the institution of the office of Lord Chancellor, and the end which is to be, in the first instance, and most directly, aimed at, is the right admi- nistration of justice, it may, at the same time be con- tended that that is neither the single object to be kept in view, nor even the one with which no other is ever in the least degree to be allowed to come into competi- tion. Another object, very inferior in importance on the whole, and therefore by no means to be sought at the expense of any considerable sacrifice of the primary object, may yet be so desirable as to be worth the securing at the expense of a very slight sacrifice of that other. For instance, it may be deemed expedient that some high testimony of respect and honour should be rendered by the State to the profession of the law, by the head of the profession being maintained in a station of eminent rank and splendour. It may be thought well in this way at once to elevate the law in the public imagination, and to stimulate the ambition of its mem- bers. Again, instead of altogether disconnecting the law from politics, and establishing an impassable barrier between the forum and the senate, it may be held to be a better polity to keep the statemanship of the country constantly in communication with, and under the in- fluence of, the spirit of its established laws. With this view, it may be considered proper that the head of the law should be always, in right of his office, a member of the executive government. Once more, in a country where distinctions of rank exist, and, especially, where the aristocratic principle is preserved in great strength as an element of the constitution, by the maintenance of hereditary honours, and the assignment to their holders of privileges extending to a large share in the government, it may be conceived that the coun- teracting force of the popular interest is materially invigorated, and that a valuable provision is made for keeping up the general health of the body politic, by a power being lodged in the State, and being in common exercise, by which the man of the humblest parentage may at any time be raised to a position, even in the artificial edifice of precedency, as high as or higher than that occupied by him of proudest ancestry. The Lord Chancellor, placed as he is at the head of the peerage, is yet the people's peer, the peer both taken from among the people and made by the people, for he must have been raised to eminence by the public voice before he can be ennobled by the King's patent. Such considerations as these would seem to make it desirable, that in the arrangement of the office of this head of the law, something more should be kept in view than the placing him merely in the best possible position for the hearing and deciding of causes. If even a slight dimi- nution of his efficiency in that respect were found to be necessary for securing the other objects which have been indicated, it might still turn out that the gain would be worth the cost.

On Friday, the 29th, the House was principally en- gaged in Committee on the Registration of Voters Bill. On Clause 51, Mr. T. Duncombe proposed an amend- ment, to the effect, that where the landlord of any house shall compound for the payment of any poor-rates or assessed taxes, the tenant in occupation should be enti- tled to be placed on the register of voters; but the motion was opposed by the Attorney-General, and negatived on a division, by a majority of 135 to 38. Some opposition was also made to the 52nd clause; the object of which is, to put an end to the system of creating votes by means of what may be called fictitious or fraudulent tenures, such as the erection on a piece of ground of a mere hovel or pigstye, and then claiming a vote for the tenant as the occupier of a tenement and land together, of the yearly value of 10*l.*; but the clause was at last agreed to without a division.

On Monday, the 2nd of May, the Lords were chiefly occupied with the Irish Constabulary Force Bill. The measure was strongly denounced by Lord Roden and other Noble Lords, but the motion of Lord Duncannon that the House should go into Committee on it, was eventually agreed to. In the Committee, however, all the amendments proposed by the opposition were carried without a division.

In the Commons, the Edinburgh Poor Rates Bill was read a third time, and passed. The House then went into Committee on the Tithes Commutation Bill, when the first thirty three clauses were agreed to.

On Tuesday, the 3rd, a petition wrs presented to the House of Commons by Mr. Goulburn, from the pro- prietors of four London daily papers, complaining of that part of the plan proposed by the Chancellor of the Exchequer for regulating the stamp-duties, which im- poses an increased duty upon newspapers exceeding a

certain size. In his explanation, Mr. Rice completely vindicated himself from the supposition, if such could in any quarter have been entertained, that in limiting the size as he had done, he had been actuated by any view of injuring the papers belonging to the petitioners, which happened to be all opposed to the Government, and also to the only papers which were in the habit of publishing sheets exceeding the assigned dimensions. But if it is considered necessary to impose any limitation of size at all, it would certainly seem to be the fairer plan to make the allowed size sufficiently large to comprehend the largest of the papers which are now published, all the arrangements connected with which have of course been formed upon the till now universally entertained conviction of the permanence of the existing law. The Chancellor of the Exchequer, indeed, appears to have proceeded upon this feeling, when he enlarged the number of superficial inches at first proposed, upon learning that there were certain country papers now published of greater extent. Why not have enlarged it so far as to take in the largest of the present town, as well as the largest of the present country papers? As for the circumstance that the large sheet of the *Times*, *Herald*, &c., goes by the name of a double paper, that cannot be considered as of any importance. It is, in point of fact, a single paper just as much as the *Leeds Mercury* is a single paper, only that it happens to be differently folded. Several of the acknowledged single papers, too, are folded in the same way. The only thing that could reasonably be regarded as making a distinction as to this matter between certain of the existing newspapers and others, would be, that the former exceeded the size of the latter in some very remarkable degree—that they were of double, or nearly double, dimensions. In that case it might be said that, the stamp-duty being in lieu of a postage, it was not fair that a paper of twice the ordinary weight should be carried by the mails for no more than the ordinary charge. But the difference between the *York Courant*, for instance, which is within the Chancellor's limits, and the large sheet of the *Times*, which they do not comprehend, is nothing of this kind,—it is only a very few inches. If the one is to be conveyed over the country at the ordinary charge, so ought the other.

On the principle of a limited size, indeed, the limitation must be fixed somewhere; but the proper point evidently is, where it would take in all the existing papers—not where, taking in all the rest, it would exclude only some three or four, whose extent was but a few inches more than that of the largest of their favoured rivals. What reason there may be for standing out against this proposition we cannot perceive. No good purpose can possibly be served by putting down what are called the double sheets of *The Times*, *Herald*, *Post*, and *Standard*. On the contrary, the public will be thereby deprived of a cheap commodity, and the revenue will be affected by the diminished consumption of paper, and probably, also, by the return of the advertisement duty being less than they otherwise would be. What benefit we are to have in compensation for these evils we are quite at a loss to conjecture.

This evening a Resolution, moved by Mr. Grantley Berkeley, for the admission of ladies to the Gallery of the House to hear the debates was, after a short discussion, carried by a majority of 132 to 90. It does not, however, seem to have been arranged very precisely in what manner the project is to be carried into effect. Sir William Molesworth then brought forward his motion for the appointment of a Select Committee to inquire into the conduct of the Commander of the Forces, in appointing Lieutenant-Colonel Lord Brudenell to the lieutenant-colonelcy of the 11th Regiment of Light Dragoons. The motion was supported by Mr. Hume, but was negatived on a division by a majority of 322 to 42.

On Wednesday the 4th, a short discussion took place on a series of resolutions brought forward by Mr. Poulett Scrope, recommending that no time should be lost in taking such steps as might tend to relieve the poor of Ireland from the calamitous situation in which they were described to be in the late Report of the Commissioners. The resolutions were eventually withdrawn on Lord Morpeth having moved the previous question, in a speech in which he assured the House that his Majesty's Government were not leaving this question at rest—that on the contrary they were now engaged in determining the proper and necessary steps to be taken for its adjustment, and that at the first moment when they were in a condition to propose such a general measure as they could recommend to the adoption of Parliament on their own responsibility, that moment they would do so without subterfuge or delay. The House was afterwards counted out while engaged with Mr. Buckingham's motion, for the second reading of his Public Walks Bill.

On Friday the 6th, in the Lords, the Report on the Irish Constabulary Bill was brought up on the motion of Lord Duncannon, when an amendment to one of the clauses moved by the Duke of Leinster, for the purpose of exempting freemasons from the provision obliging a constable or sub-constable to swear that he did not belong to a secret society, was rejected on a division by a majority of 44 to 41.

In the House of Commons, the Chancellor of the Exchequer brought forward the Budget in a Committee of Ways and Means. After going over the general condition of the country at great length, the Right Honourable Gentleman stated that the income of the current financial year was in round numbers 46,980,000*l.*, and the expenditure 46,318,000*l.*, leaving a surplus of 662,000*l.* With this surplus he proposed to reduce the duty on first class paper, after the 10th of October, from 3*d.* to 1½*d.*, and to abolish altogether the duty on stained paper, from which he calculated upon a loss this year of 125,000*l.*; to remit the South Sea duties, amounting to 10,000*l.*; to reduce the duties on insurances of farming stock, from which there would be a loss of 20,000*l.*; to reduce the duties on taxed carts, from which the loss would be 5000*l.*; and to reduce the newspaper stamp-duty from 4*d.* to 1*d.* without discount, after the 5th of July, from which he calculated that the loss on the present year would be 150,000*l.* There would also be a loss of 20,000*l.* occasioned by the proposed alteration of the probate duties, and of as much more on the revenue of the Post Office under the new arrangement with France. The total amount of the repeals which he proposed he estimated at 351,000*l.* for the present year, and 520,000*l.* when they should all come into operation. It is understood that the Right Honourable Gentleman has since consented to reduce the stamp-duty on Irish newspapers to ½*d.*, being, as at present, half the amount of the English duty.

On Monday the 9th, the Lords went into Committee on the Irish Municipal Corporations Bill, when an amendment, moved by Lord Lyndhurst on the second clause, which raised the whole question between the plan of the reform of the corporations, as proposed by Ministers, and that of their destruction brought forward by the Opposition, was, after an animated debate, carried on a division, by a majority of 107 to 53. All the rest of the clauses to the 21st inclusive was then struck out, on the motion of Lord Lyndhurst, except the 3rd and 10th, which were agreed to. On the 22nd clause, which Lord Lyndhurst also proposed to strike out, the Duke of Richmond proposed an amendment, which went to allow corporations to the larger towns; but Lord

Lyndhurst's motion was eventually carried by a majority of 98 to 45. The remaining clauses, to the 37th, were then agreed to without discussion.

In the Commons a long debate took place on the second reading of the New Factory Bill, which was moved by Mr. Poulett Thomson. In his speech the Right Honourable Gentleman stated that the object of the Bill was to place the law regarding factories in the same situation as that in which it stood previously to the 1st of March last. By the law, as it stands at present, children under the age of thirteen years are prohibited from working in factories for more than eight hours a-day, and the object of the Bill is to allow children between the ages of twelve and thirteen to work, if they were so inclined, for twelve hours a-day. Lord Ashley opposed the Bill, and moved that it should be read a second time that day six months; but this amendment was negatived, on a division, by a majority of 178 to 176.

On Tuesday, the 10th, in the Lords, the Irish Constabulary Force Bill was read a third time, and passed, after the oath to be taken by constables had, on the motion of Lord Ellenborough, been amended so as to exempt freemasons from the words of exclusion directed against the members of secret societies. The House then went into Committee on the Church Pluralities Bill, when, on the first clause being read, which prohibits persons from holding two livings situated at a greater distance than ten miles from each other, Lord Wynford proposed an amendment to the effect, that the distance should continue to be forty-five miles, as at present. His Lordship, however, eventually acknowledged that he was convinced, by the arguments he had heard that he had taken a wrong view of the point, and withdrew his amendment. He afterwards moved another amendment on the 4th clause, to the effect that no spiritual person should hold two benefices with a cure of souls where the united value of the two livings exceeded 1000*l.* a-year, instead of 500*l.* a-year as proposed in the Bill; but this was rejected, on a division, by a majority of 29 to 7. The House then adjourned till Friday.

In the Commons, Mr. O'Connell's motion for leave to bring in a Bill to regulate the Dublin Steam Packet Company, notwithstanding that the Standing Orders had not been complied with, was carried by a majority of 106 to 65. The House afterwards went into Committee on the English Tithes Commutation Bill, and agreed to a modification of one of the original clauses proposed by Lord John Russell, to the effect that instead of the actual produce of the tithes for the last seven years being taken, the composition during that period should be deemed the actual value, only adding a fair equivalent in cases where the tithe-owner has been induced to take a smaller sum, in consideration of his being exempted from all burdens. Some other amendments were rejected.

On Wednesday, the 11th, the third reading of the Roman Catholic Marriages' Bill was carried by a majority of 100 to 91. Various other Bills were also forwarded a stage; after which, the House went into Committee on the Civil Courts (Ireland) Bill, when the clauses up to the 38th were agreed to.

On Thursday, the 12th, on the motion of Mr. Clay, a Select Committee was appointed to inquire into the operation of the present law respecting joint-stock banks. An addition to the motion proposed by Mr. Hume, that the Committee should be instructed to inquire into the effect of the clause in the charter of the Bank of England authorizing country bankers to pay their engagements in Bank of England paper, was rejected by a majority of 98 to 12. The House then went again into Committee on the Commutation of Tithes' Bill; when the 34th clause, fixing the *maximum* of the rent-charge at 75*l.* and the *minimum* at 60*l.*, gave rise to a long discussion, which was not terminated when the House rose at near one in the morning.

On Friday, the 13th, the House having gone again into Committee on the Tithe Bill, the 34th clause, after several other amendments had been rejected by considerable majorities, was carried, against a motion by Mr. Wrightson for its entire omission, by a majority of 78 to 70. The remaining clauses, up to the 49th, were then agreed to, with the exception of a few the consideration of which was postponed.

On Monday, the 16th, the Lords went into the re-consideration in Committee of the Irish Municipal Corporations' Bill, on the motion of Lord Lansdowne, after Lord Lyndhurst had declined moving its re-committal; and the several clauses were agreed to with some unimportant alterations.

In the Commons a division took place on the motion of Mr. Bannerman to refer back the Aberdeen Schools' Bill to the Select Committee that had already reported upon it, that they might re-consider their objections to the preamble. The motion was carried by a majority of 158 to 107. Mr. Roebuck then brought forward his motion for the House resolving itself into a Committee to take into consideration the present constitution of the Executive and Legislative Councils of the Canadas. Sir George Grey, however, in the course of the debate that followed, having declared that it was the anxious desire of Ministers to conciliate the Canadians, and that when the Report of the Commissioners now in the colony was received, he did hope that, without superseding the King's prerogative in any way, measures might be taken, with respect to the remodelling of the legislative council, which would remove the existing discontent, the motion was withdrawn.

On Tuesday, the 17th, a motion, submitted by Mr. Wallace, for a Commission to proceed to the county of Carlow to inquire into the alleged coercion and intimidation of voters in that county was opposed by Lord John Russell, and negatived by a majority of 123 to 52. The House was afterwards counted out whilst engaged in considering the Lords' amendments on the Irish Constabulary Bill.

On Wednesday, the 18th, the Irish Municipal Corporations Bill was read a third time in the Lords, on the motion of the Marquess of Lansdowne. A debate and division took place on an amendment of Schedule A, proposed by the Duke of Richmond; the object of which was to give municipal institutions to Dublin, Belfast, and five more of the principal towns of Ireland. The amendment was negatived by a majority of 141 (including 61 proxies) against 82 (including 37 proxies). The Bill was then passed.

In the Commons the Over Inclosure Bill was thrown out on the third reading, on the motion of Dr. Bowring, by a majority of 88 to 84. Sir Andrew Agnew then moved the second reading of his Sabbath-day Observance Bill, when Mr. Ward moved, as an amendment, that the Bill should be read a second time that day six months; and, on a division, the amendment was carried by a majority of 75 to 43. Afterwards the House went into Committee on the Tithes Commutation Bill, when, on the 76th clause being read, Mr. T. Duncombe moved that after the passing of the Act all tithes of fish or of fishing, and all personal tithes, should cease and determine; but the motion was negatived by a majority of 96 to 50.

On Thursday, the 19th, the Irish Municipal Corporations Bill was brought down from the Lords, when the re-appearance of the metamorphosed measure produced, as was to be expected, a considerable sensation. In the course of an animated conversation which arose, Lord

John Russell expressed his decided dissent from the Lords' amendments, which he moved should be printed, and taken into consideration on the 2nd of June.

On Friday, the 20th, the Gravesend Pier Bill was thrown out on the second reading by a majority of 93 to 14. Mr. O'Connell then presented a petition from certain electors of the city of Dublin against the sitting Members for that city, the question of printing which gave rise to a debate of some length, which was eventually adjourned till the 30th instant. The Tithe Commutation Bill and the Stamp Duties Bill were then considered in Committee, and the several clauses agreed to; and the Report on the Registration of Voters Bill was further considered.

At their rising, both Houses adjourned to Monday, the 30th of May.

FRANCE.

THERE have been some long debates in the Chamber of Deputies on the new Customs' Tariff Bill. On Monday the 18th of April some reductions were sanctioned in the duties on foreign iron, cotton yarn or twist, and a few minor articles; but from the general tone of the debates, it does not appear that the free-trade system has gained many new converts among French legislators, or that ministers are disposed to give up the principle of protecting duties. Among the warmest adherents to the old restrictive system are many of the ultra-liberal party, whose prejudices are incurable.

The whole of the new Tariff Bill was carried, in the Deputies, on the 29th of April, by a majority of 233 to 22. In some respect the trade of England will be benefited by it; but, for the interest of both countries, the reduction of duties ought to have gone further, and included other commodities. On iron the reduction was only from 22 fr. 65 c. to 20 francs.

In the Chamber of Peers there was some warm debating, towards the end of April, on the unhappy affairs of Spain. The Marquis de Deux Breze criticised the Quadruple Alliance, which, he said, had put France in a position in which she was obliged to afford protection to anarchy and misrule. He then inquired what line of conduct ministers meant to pursue with reference to Spain in future. In reply to the Marquis, the Minister of the Interior merely said, that neither his colleagues in office nor the members who voted with them in the Chambers would ever think of aiding and supporting an anarchical system or a republican party in Spain. He declined giving any more information than this.

Considerable interest was created by an announcement that the two eldest sons of King Louis Philippe —the Duke of Orleans and the Duke of Nemours— were about to visit the northern courts with objects at once political and matrimonial. The ministerial paper, the *Journal des Debats*, said, on this important occasion, "Hitherto the ministers and ambassadors of France have treated only with governments: the Duke of Orleans will now treat with kings. The Duke will personify at the German courts that spirit of enlightened *conciliation* and prudent decision which is the spirit of new France; the government has caused the revolution of July to be respected—the Duke of Orleans will cause it to be *understood*." We should have thought that, by this time, the affair was intelligible enough to the commonest capacities; but the simple meaning of these fine words seems to be that Louis Philippe, who has made the constitution of France worth next to nothing, is to put himself on the most friendly footing with the sovereigns of countries that have no constitution at all; and that he is sending his sons across the Rhine in order that their formal reception by the northern Powers should look like, and stand for, an indirect recognition of his right to the throne he occupies, and of the right of his children to succeed him on it.

On Sunday the 1st of May, Louis-Philippe's fête, the usual diplomatic compliments and ministerial addresses were made to his Majesty. Count Appony, the Russian ambassador, was orator for the diplomatic body; and the Baron Pasquier and M. Dupin were principal speakers for the French cabinet. Count Appony praised "the wise and enlightened government" of the king— which, he said, was "a pledge of general peace;" and Baron Pasquier proclaimed that the proper name for his Majesty was "Louis-Philippe le Sage."

On the 7th of May a petition was presented to the Deputies, praying for the suppression of those licensed gaming-houses which disgrace Paris and the government that derives a profit from them. Several members spoke warmly in support of the petition, but M. Thiers stuck to the money. These hells yield a revenue of 5,000,000 of francs, and so government could not consent to their suppression. Ultimately, the petition was referred to the President of the Council. M. Thiers's open and sordid defence of what causes infinite immorality and wretchedness will not do him much honour. On the 14th of May, in a debate upon the expenses incurred in public buildings and improvements, M. Thiers was accused of extravagance; but he defended himself successfully.

Towards the end of April, all the ships of war at Toulon were ordered to be got ready, so as to be able to put to sea at a moment's notice. It was understood they were to proceed to Africa to take on board the garrisons of Oran and Bona, which unprofitable dependencies of Algiers, it seems, are to be evacuated. According to some of the French papers, this force is to be conveyed to Spain, and joined to the legion of Africa already there.

A report has been repeated in the Chambers, that in July next, on the anniversary of the revolution, two of the ministers of Charles X. in the castle of Ham (Messrs. Chantelauze and Guernon de Ranville), with other persons imprisoned for political offences, will receive the royal pardon.

The two French princes arrived, on the 11th of May, at Berlin, where, according to the German papers, they were received by the royal family in the most flattering manner. In April, the official gazette of St. Petersburgh contained an order for the celebration of a service, after high mass, on the fête day of Louis Philippe.

SPAIN.

IN consequence of their long and violent altercations in the Chamber of Procuradores, Senors Mendizabal and Isturitz fought a duel, on the 16th of April, outside the Puerta di Segovia at Madrid. Although they fought with deadly pistols, and not with the weapon of the country—the small sword, with which, in ninety cases out of a hundred, Spanish duellists merely scratch one another,—no harm of any kind was done, and after Senor Isturitz had retracted some words that were personally offensive, the affair ended.

The difficulties encountered by Mendizabal, in forming a Cabinet, appear to have been very great, nor was it until the 6th of May that the news of its completion reached London. The Spanish Government then stood thus:—

Mendizabal,	President of the Council and	Finances.
Rodil	,,	War.
Count Almodovar	,,	Foreign Affairs.
Martin de los Heros	,,	Interior.
Gomez Becerra	,,	Justice.

On the 23rd of April the Chambers voted the Address by a large majority. Mendizabal again promised the speedy putting down of the "faction" in the north, for

which purpose he said 70,000 faithful troops were actually marching thither. He also stated, that he had so far restored the credit of Spain as to be enabled to negotiate a loan on the foreign exchange upon very favourable conditions. On the subject of the quadruple alliance he did not say much, but the little that fell from him went to encourage the hope that France, as well as England and Portugal, would be faithful to the treaty. The great stumbling block in his path, and the main cause of his difficulties in getting together a Cabinet, was the disposal of monastic property, on which question the majorities of the two Chambers are directly and violently opposed to each other. The Proceres, or Peers, had moved a petition praying for the reversal of the royal decree issued some time since under Mendizabal's advice, and enjoining the immediate sale of all monastic lands, houses, &c. &c.; whereas the Procuradores, or Commons, were inclined to go hand in hand with Government, and even hurry on the Bills necessary to complete the measure of confiscation.

On the 23rd a Royal order, regarding the liquidation of the national debt, was published. It contained the following paragraph in relation to the foreign passive debt.

"It had been estimated that the amount of this debt would reach the sum of 1,051,000,000 reals, but the amount of documents hitherto produced in London and Paris reaches only 1,048,640,000 reals. Calculating, however, that they may amount to 1,051,000,000, the sixth part to be consolidated will be 175,166,666⅔."

The war in the north has been much more active, though, with the exception of the affair before St. Sebastian, it has consisted merely of skirmishes,—sharp, and desperate in some instances, yet still too unimportant to merit anything like detail.

On the 25th of April, the Carlists, under General Eguia, gained some advantages over the Queen's troops commanded by General Espeleta, in the valley of Mira; but on the 26th they were defeated on the heights of Larascana by the Algerine legion (the French auxiliaries of the Queen) commanded by General Bernelle.

The Carlists had for some time been gathering in great force in front of St. Sebastian, and erecting works which menaced that town. For part of this time they held a battery at the convent of San Bartolome which commanded the harbour. To dislodge these beleaguerers, General Evans's corps was ordered from Vittoria to St. Sebastian. These troops marched in good order, and with admirable rapidity, to the port of Santander, where they embarked. The 6th and 3rd regiments, with the General and his staff, landed on the morning of the 22nd of April at San Sebastian, which place they found in a deplorable condition. The rifle brigade under Colonel de Rottenberg, and the rest of the corps, (with the exception of the Cavalry), arrived in the course of the two following days, and then it was determined to dislodge the Carlists.

On the 5th of May a general sortie was made from the town, which is built upon a peninsula formed by the river Urumea and the sea. The road to Passages used to be carried over the river by a bridge, but that had been destroyed by the Carlists, who occupied the large convent of St. Francis, and a village on the opposite bank. General Evans having no materials for the construction of a bridge tried a ford lower down, by which the British, in 1813, advanced to the breach of St. Sebastian, but this ford was found to be impracticable, and being thus constrained to renounce his project of turning the enemies' positions and getting in their rear, he determined to attack them in front, in three columns. The Carlist works, through the centre of which ran the high-road to Hernani, were very strong, both by nature and art, and the steep hills that formed the position were defended by five heavy pieces of artillery, which swept the ground in their front (by which the British had to advance) in every direction. By three o'clock in the morning General Evans had brought up his three columns close to the enemy's first line, which was immediately penetrated and carried. The Rifle regiment then pushed back the enemy's right, while the Spanish Chapelgorries, and two English regiments advanced against the formidable centre of the position. In this attempt on the centre no good progress was made, but many lives were lost. A deadly fire drove back the head of the column which thrice strove to penetrate the line of the Carlists who, from behind their works, wounded and killed without exposing their own persons. General Evans stood amidst a shower of balls, urging on his men, who shewed the greatest gallantry in this unequal fight, but could not, with all their efforts, penetrate the position by that point. On the right, however, the brigades under Colonels Chichester and Shaw made considerable progress, and carrying some works above the Ajuda Convent, advanced against the last line of entrenchments.

This last line consisted of a strong redoubt on the extreme left, which was connected by a loop-holed wall, with the fortified village and redoubts that extended to the right nearly a league. Three bold attempts were made to carry the redoubt, but they all failed. The steep ascent—the slippery nature of the ground, and the mud, in which, owing to the heavy rains, the assailants sank nearly knee deep, were great advantages on the side of the Carlists, who fought under cover of their works. At this moment Lord John Hay, who a short time before had landed 800 men of General Evans's legion, opened a tremendous fire on the works, with the view of assisting the attacking party. Seldom has aid been more opportune or decisive. Such was the precision of the vertical firing, and the effect of the shells thrown at a distance of 1500 yards, that after killing a great many of the Carlists, they tore down an *epaulement*, and made a breach through which General Evans prepared to enter. In the meantime the men Lord John Hay had landed arrived on the ground; they were formed in columns of attack by General Evans in person, and presently advancing, they carried the redoubt through the breach at the point of the bayonet. The Carlists all along the line then fled in the greatest disorder, and were hotly pursued as far as Hernani. These advantages were rather dearly bought, for in killed and wounded General Evans lost above 800, among whom were from 70 to 80 officers. The only ships Lord John Hay brought into action were his Majesty's armed steamers the "Phœnix" and "Salamander."

The loss of the Carlists who were so long sheltered by their works was less than that of General Evans, but the death of the brave Segastibelza (the best of their commanders since Zumalacarregui) who was killed by a musket-ball in the midst of the attack, is a serious blow to the party. Two or three other Carlist generals were bayonet or cut down, "it being impossible" says one of the English reports of the battle, "to save them from the fury of our soldiers."

Soon after the victory was gained, the works of the Carlists, which had cost them between three and four months' labour to erect, were demolished. They left behind them four out of their five pieces of heavy artillery—a serious loss in their circumstances, for the vigilance of Lord John Hay's cruizers will prevent the landing of any supplies of the sort, while it will be very difficult to smuggle articles of such bulk and weight across the French frontier by land. The active co-operation of our ships of war will very soon enable the Queenites to drive the Carlists from all the sea-ports and places near the coast. It appears that Lord John Hay's squadron has concentrated at Bermeo, a central

point, near the theatre of war, whence he can promptly assist Bilboa and Sebastian if again attacked, and by detaching a steamer or two, drive the Carlists out of Lequeito, which was lately taken by Casa Eguia, and the other little ports they occupy, in half an hour. The wonderful precision of our marine artillery in throwing them, and the instantaneous effect of our shells and rockets, strike the Carlists with dread, and astonish all Spaniards. We fear that the prospects of the young Queen which are brightening on this side are darkening in the capital. On the 12th of May the Madrid newspapers pretty generally circulated a report that the Mendizabal Administration was about to be broken up. The mere rumour of this event, in the critical state of the finances—and, indeed, of everything belonging to Spain, created excitement and dismay; and we regret to see that the report of this new convulsion is rapidly gaining ground. Our papers of Saturday, May 21st., copied from the Paris journals of the 19th, give the following paragraphs:—

"A telegraphic despatch from Bayonne communicates intelligence to the effect, that in consequence of the Queen's refusal that Generals Quesada, Espeleta, and San Roman should be superseded in the commands they held in Madrid, all the Ministers have resigned.

"The Queen has accepted the resignations, and intrusted, on the 15th of May, M. Isteritz with the construction of a new Cabinet."

Whether true or false, or premature, this news caused the Spanish stock in Paris to fall at once from 46 to 44¼. In London the fall has been still greater; on Saturday morning (21st) the panic continuing to spread, the price was once as low as 40, and a universal confusion involved the stock and everything connected with it. This is sad news for the Constitutionalists of Spain, whose cause depends more on the Stock Exchange of Europe, than on their armies in the field.

Since the above was in type, intelligence has been received of the resignation or dismissal of Mendizabal and his colleagues, and the appointment, on the 16th, of the following new Ministry:—

Don Francisco Javier de Isturitz, President of the Council, and Secretary of State for Foreign Affairs; in the room of Senor Mendizabal.

Don Angel Saavedra, Duke de Rivas, Minister of the Interior; in the room of Don Martin de los Heros.

Don Antonio Seoane, Minister of War; in the room of General Don Jose Ramon Rodil.

Don Jose Ventura Aguirre Solarte, Minister of Finance; in the room of Senor Mendizabal.

Don Antonio Alcala Galiano, Minister of Marine; in the room of Don J. M. Chacon.

It is also understood that Senor Gonsalez, President of the Chamber, is to have the office of Minister of Grace and Justice.

PORTUGAL.

PRINCE FERDINAND, the husband elect of Donna Maria, arrived at Lisbon, where the royal marriage was celebrated on the 9th of April. Senhor Campos, the new Finance Minister, had caused great dissatisfaction, by annulling the decree for the conversion of the 5 per cent. stock into 4 per cent.

A day or two after the celebration of the marriage the Queen prorogued the Cortes, delivering a speech in person. They had offended the Queen by not going readily into her views of appointing her husband commander-in-chief of the forces. On the 29th of April, however, her Majesty, by proclamation, convoked the Cortes for an extraordinary Session to commence on the 29th of May.

On the 20th of April another new ministry was announced, composed of

Duke of Ferceira . .	President of the Council.
Count of Villa Real .	Foreign Affairs.
Gonzalez da Miranda .	Navy.
Carvalho	Finances.
Jose Freire . . .	Interior.
Antonio d'Aguiar . .	Justice.

At the same time the Duke of Palmella was appointed Plenipotentiary to conclude a new treaty with England. This business, it appears, is to be arranged at Lisbon between the Duke and our ambassador Lord Howard de Walden.

It is said that the new Portuguese ministry, which has been much pressed for money, has had good credit enough to obtain considerable loans from capitalists, native and foreign, at Lisbon and Oporto. Some disturbances have taken place in various parts of the country, but they are represented as unimportant. The young prince has several times reviewed the troops, and is said to be popular with the army.

AUSTRIA.

THE Emperor is making very considerable reductions in his army, and a demi-official article in the *Allgemeine Zeitung*, in praising this proceeding, dwelt upon it as a consoling proof that the peace of Europe is in no danger. The writer says that the Cabinet of Vienna, on higher grounds than merely financial ones, has long been anxious to lessen the standing army, and that Prussia will readily follow the example of Austria. "On the whole," he continues, "the peaceful impulse given from Vienna will be followed by St. Petersburgh and Paris; for however critical the situation of Spain may be, by which alone France might have been forced to maintain its warlike attitude, yet the united will of the great continental Powers to avoid everything that might produce fresh misunderstandings, has made it possible for France to wait calmly, and *without interfering*, for the end of the catastrophe which hangs over Spain."

The reduction of the Austrian force has happily been extended to Italy, where Bologna and the Legations of the Pope are to be evacuated, and the whole army beyond the Alps reduced to 30,000. When the Austrians are no longer at Bologna, we suppose the French will evacuate Ancona, and leave his Holiness once more the master of his own dominions. The recent act of grace by which the Emperor of Austria liberated Count Frederic Gonfalonieri, and the other Italian state prisoners, whom his father had barbarously confined so many years in the dungeons of Spielberg, will produce a favourable effect on the temper of the Italian people. We understand the distinguished captives are allowed to emigrate to America, and that the sequestration of their property is to be reversed.

In a later number of the German paper already quoted from, it is observed, that "The reduction of the Austrian army is the result of a thorough conviction, that war is one of the most improbable contingencies, and that it may be left to diplomacy to settle the European differences which already exist, or may arise hereafter. To this feeling the valuable works of peace in the Austrian empire are indebted for their recent rapid progress. During the last three days, the first payments for iron railroad shares have been made at the house of Baron Rothschild. The applicants were as eager as if they had to receive money, instead of paying it."

This is all very consoling, and as it should be. We will return to the subject of the internal improvements, the navigation of the Danube by steam-vessels, &c., on an early opportunity.

DOCUMENTS AND ABSTRACTS.

CRIMINAL OFFENDERS—ENGLAND AND WALES.

A SERIES of elaborate tables has been prepared and laid before Parliament, exhibiting the following interesting particulars:—1. Table, showing the total number of persons committed for trial, or bailed, charged with each description of offences, and the result of the proceedings. 2. Table, showing the age, sex, and degree of instruction of the total number of persons committed for trial or bailed. 3. Table, showing, in each county, the total number of persons committed for trial, or bailed, and the result of the proceedings. 4. Table, showing, in each county, the age, sex, and degree of instruction of the total number of persons committed for trial, or bailed. 5. Table, showing, at one view, the counties in which the different description of offences were committed, with which the persons committed for trial, or bailed, were charged. 6. Table, showing, in each county, the proportion of persons committed for trial, or bailed, to the population; the proportion of males and females, the proportion of offenders at the different periods of life, the proportion of offenders who had received instruction, and the proportion of offenders charged with each class of offences; and 7. Table, showing, in each county, the Courts before which the persons committed for trial, or bailed, were tried, or discharged without trial. —These tables occupy 126 folio pages.

The following is an abstract of part of the sixth table. It shows the proportion of offenders to the population, calculated on the census of 1831; the centesimal proportion of offenders who had received instruction,; and the centesimal proportion of offenders of each class:—

COUNTIES.	Proportion of Offenders to the Population.	Read and Write.	Read only.	Neither Read nor Write.	Instruction could not be ascertained	Offences against the Person.	Offences against Property, committed with Violence.	Offences against property, committed without Violence	Malicious Offences against Property.	Forgery and Offences against the Currency.	Other Offences not included in the foregoing Classes.

The total number of persons committed for trial, or bailed, in England and Wales, in 1835, was 20,731 (17,275 males and 3459 females)—namely, 2016 (1790 males and 226 females) offences against the person; 1354 (1286 males and 68 females) offences against property committed with violence; 15,478 (12,554 males and 2924 females) offences against property committed without violence; 156 (140 males and 16 females) malicious offences against property; 368 (279 males and 89 females) forgery, and offences against the currency; and 1859 (1226 males and 133 females) other offences, not included in the above classes. Of the above 20,731 offenders, sentence of death was recorded against 523 for capital offences, of whom 34 were executed; 306 transported for life; 52 transported for 14 years; 44 for 7 years; 3 imprisoned for periods above 2 and not exceeding 3 years; 22 imprisoned above 1 and not exceeding 2 years; 35 imprisoned above 6 months and not exceeding 1 year; 22 imprisoned 6 months and under; and 5 received a free pardon. The number of offenders transported for life was 746; for 14 years, 554; 7 years, 2325; and 4 for other periods, exclusive of those whose capital sentences were commuted. Of the offenders sentenced to imprisonment, with, in some cases, whipping, fine, &c., there were, for periods of 3 years and above 2 years, 11; 2 years and above 1 year, 290; 1 year and above 6 months, 1543; 6 months and under, 8071. The number sentenced to be whipped was 58; fined 351; discharged on procuring sureties 242; and 11 received a respite and pardon: making the number of persons in England and Wales who were actually convicted 14,729, exclusive of 4 found to be insane on arraignment, and 21 acquitted on the ground of insanity.

The total number of persons acquitted was 5977; of

whom 4034 were found not guilty on trial; 1526 no bill found; and 417 not prosecuted.

The table shewing the ages of offenders offers the following results: aged 12 years and under, 295 males, and 51 females; aged 16 years and above 12, males 1707, females 303; aged 21 years and above 16, males 5257, females 890; aged 30 years and above 21, males 5524, females 1093; aged 40 years and above 30, males 2371, females 533; aged 50 years and above 40, males 1042, females 327; aged 60 years and above 50, males 514, females 159; aged above 60 years, males 212, females 57. The ages of 353 males and 43 females could not be ascertained.

Of the 20,731 criminal offenders, 7896 males, and 906 females could read and write; 3159 males and 1162 females could read only; 5745 males and 1325 females could neither read nor write; and the degree of instruction of 475 males and 63 females could not be ascertained.

The following are some of the general results shewn by these valuable tables:—

There has been a *total decrease* in the numbers charged in 1835, as compared with the preceding year, of 1220 persons, or nearly 8 per cent.

In thirty English counties there was a decrease. This decrease was most marked in the following counties:—in Northamptonshire, it was nearly 100 per cent.; in Herefordshire, above 1-3rd; in Berkshire, Cheshire, Hampshire, and Worcestershire, 1-4th; and in Durham and Shropshire, 1-5th. In Middlesex the decrease was 17 per cent., in Surrey little more than 4 per cent., in Yorkshire 14 per cent, and in Lancashire 4½ per cent. In Wales the total decrease, on the twelve counties, was 27 per cent.

In the remaining eleven English counties, and in Bristol, there was an *increase*, which was proportionally greatest in Gloucestershire, where it amounted to 19 per cent., in Kent to 15 per cent., in Warwick to 14 per cent., and in Staffordshire to 10 per cent. In Essex the increase was above 8 per cent.

The decrease does not appear to be confined to any one class of offences, but to be spread pretty equally over the whole,—being however rather the greatest on the more heinous offences,—thus the offences against the person bore the proportion to the whole—

In 1834 of . . . 10·94 per cent., and
In 1835 of . . . 9·72 per cent. only;

and the violent offences against property—

In 1834 of . . . 6·53 per cent.
In 1835 of . . . 6·50 per cent.

Making the comparison with the *average of the preceding five years*, there is an increase in the offences against the person (exclusive of assaults and assaults on peace officers, which were not then admitted into the calculations) of 7 per cent. But in the violent offences against property a decrease is shewn of above 11·25 per cent.; and in the malicious offences against property of 137 per cent.

Resuming the comparison with the year 1834, the decrease which took place shews the following results on the number sentenced:—

Including the commutations, there is a decrease in the numbers transported of 414, and in the numbers imprisoned of 784. In the capital convictions there is an increase of 43 persons, which arose chiefly in the numbers charged with robbery and burglary, though the increase in the latter offence may be probably attributed more to the recent alteration in the law of house-breaking, than to an increase in the number of burglaries.—The numbers executed are the same in both years 34.

The decrease has not only been proportional on the juvenile offenders, but *greater* in that than in the other classes. The proportion of offenders aged 12 years and under was—

In 1834 . . . 1·78 per cent.
In 1835 . . . 1·67 per cent. only.

Of offenders aged 16 years, and above 12—

In 1834 . . . 9·82 per cent., but
In 1835 . . . 9·70 per cent. only.

From the new table, shewing the Courts before which the prisoners were tried, it appears that—

2819 were tried before the new Central Criminal Court,
3408 before the Circuit Assize Courts,
10,737 (above half) before the County Quarter-Sessions Courts, and
3767 before Local Courts.

As the different offences tried before each of these Courts are described in the tables, it will be seen how greatly the recent abolition of the capital punishment, in many cases, has tended to increase the jurisdiction of the sessions. Last year these Courts tried—

132 prisoners for house-breaking,
14 for cattle-stealing,
62 for horse-stealing,
108 for sheep-stealing, and
41 for larceny to the value of 5*l.* in dwelling-houses.

All of which offences, while the capital punishment existed, were tried at the assizes. The Acts for the Consolidation of the Criminal Law passed in 1827, also greatly increased the severity of the sentences which it was in the power of the sessions to pass, and transportation for life, theretofore not a common sessions punishment, is now of constant recurrence.

POST-OFFICE INQUIRY.

THE Fourth Report of the Commissioners appointed by a Treasury Minute of 9th May, 1835, to inquire into the mode of conducting the business of the Post Office Department, contains the following suggestions:—

"We have had under our consideration the general management of the post, and we feel convinced that it would be impossible for us to propose any substantive alteration in the number of clerks employed, the mode of conducting the business, or any of the complicated machinery of the department, without, in fact, putting ourselves in the situation of Postmaster-General, and devoting many months to the investigation. We have, however, sufficiently informed ourselves on this subject to be satisfied that an alteration in the present system is absolutely necessary, and that the supervision of a Board properly constituted, and subject to the control of the Treasury, would tend much to a more regular and satisfactory discharge of the business of this important department.

"It appears to us that it is the strong tendency of the present system to place all the duties and powers, both of control and execution, in the hands of a single subordinate officer; and, although we are not disposed to undervalue the services of Sir Francis Freeling, yet we cannot think that this is not the proper and satisfactory constitution of any public department. The Duke of Richmond, indeed, broke through the practice he found established, of leaving the management almost entirely in the hands of the secretary, and was in the habit of constantly attending and transacting business in person; and we have reason to believe that his successors have followed his example. But the public has no security against a recurrence to the former system; and when we consider how ineffectual any control over such a department must be, without an intimate knowledge of its details, we feel satisfied that, as long as it is vested solely in a high officer of State, liable to be removed with every change of Administration, it is not likely that it will be much more than nominal.

"We, therefore, recommend that a Board of Commissioners, with a responsible chief in Parliament, should be substituted for the office of Postmaster-General. We propose that the Board shall be constituted on such a principle as to make it necessary for the department to be under the immediate control of the Commissioners: and, with this view, we recommend that all correspondence, except what relates merely to matters of detail and ordinary occurrence, shall pass through them by letters signed by themselves, and that no money shall be paid but by drafts with their signatures. We are of opinion that all the officers of the department, whether surveyors, superintendents, or comptrollers, should act only through the Board, and that no clerk or officer should hold any other situation, or receive any pay, fee, or emolument, but the actual sum put down against his name, and considered commensurate to the duty he performs. We also recommend that a record of all official acts done by the Board shall be regularly kept, and that an annual report be made to the Treasury of any alterations in the preceding year, of new expenses incurred, and of the general state of the revenue.

"It may be said that a Postmaster-General can do all that is here recommended; but looking to the other departments, we are convinced that, in practice, it would not be done by an individual. We consider a Board to be peculiarly calculated to conduct the management of such a

department as the Post Office, which requires daily attendance, constant supervision, and a general control of the various branches connected with it; and we express this opinion with the greater confidence, as we find that all those who have preceded us in their inquiries into this subject have arrived at the same conclusion. We refer especially to the Report of the Select Committee of Finance presented in 1797; to the Ninth Irish Report of the Commissioners of Inquiry into Fees and Gratuities, in 1809; and to the Eighteenth and Nineteenth Reports of the Commissioners of Revenue Inquiry, in 1829. We agree with them in recommending that the Board shall be composed of a chief and subordinate Commissioners; but we are of opinion that three of the latter would be sufficient, one of whom might occasionally visit Dublin and Edinburgh.*

"We are not without hopes that when the Commissioners have made themselves practically acquainted with the machinery and various duties of the Post Office, they will feel justified in proposing to your Lordships a reduction in several branches of the establishment; and we are satisfied that such suggestions can be most safely acted upon when they come from those whose experience gives great weight to their opinions. We believe, therefore, that we shall most usefully discharge our duty by proceeding to investigate those larger branches of the subject to which we have not yet directed our attention, such as the Steam-packet Establishment, and other questions of a general nature; but we are persuaded that your Lordships will agree with us that very dangerous consequences might ensue, if, on the examination of a Commission temporarily appointed, your Lordships were induced to make reductions in the establishment in London, which, in practice, might be found inapplicable to the service required.

"It is with these feelings and upon the best consideration that we have been able to give to the subject, that we recommend to your Lordships, even in the present Session of Parliament, to give directions that a Bill may be prepared which will enable the Treasury to appoint a Board of Commissioners for the management of the Post Office.

(Signed) DUNCANNON.
H. LABOUCHERE.
SEYMOUR.

"Office of Woods, July 23, 1835.

"We have appended some evidence to this Report, which has been received at different times from various officers of the Post Office. We think it advisable to postpone expressing an opinion on the subject to which it refers, until your Lordships have taken into consideration the recommendations which we have now made."

The Fifth Report of the Commissioners is devoted to an inquiry into the practicability of giving facilities for the transmission of commercial lists or Prices Current through the Post Office. The Report says:—

"By the Act 4 and 5 Will. IV. c. 44, the Paymaster-General is authorized to contract for the conveyance of certain unstamped publications, formerly circulated under the privilege of the clerks of the roads. Very few publications have, however, been sent under his authority, and the rates of composition which have been demanded by the Postmaster-General are so high as to amount almost to a prohibition.

"We find that, in France, and generally on the continent, the circulation of Prices Current, at a low charge, is encouraged by the government, and we are of opinion that any facility which can be given for the transmission of mercantile information, must tend to promote the commercial interests of the country. We therefore beg to recommend to your Lordships, in the first place, that English Prices Current, and publications of a similar nature published in this country, be permitted to pass through the medium of the Post Office without the imposition of a charge so high as to impede their general circulation.

"We are aware, that from the immense correspondence, the number and size of newspapers, and the heavy bulk of parliamentary and official documents, it would be impossible, under the present arrangements of the Post Office Department, to give to all mercantile publications that facility which might otherwise be desirable; nevertheless, we are of opinion that the conveyance by post of Prices Current, under certain restrictions, will not materially add to the weight of the mails, or occasion much inconvenience by the additional duty which will be imposed on the clerks of the Inland Office."

Lord Lowther, who has given much consideration to the subject, recommended that Prices Current should be permitted to pass free through the Post Office, if printed on paper bearing a reduced stamp. The Commissioners agree in this view; but, taking into consideration the reduction which is contemplated in the stamp-duty on newspapers, they feel it may be deemed inexpedient, at present, to permit the transmission of Prices Current for a less charge than that which is imposed on newspapers; otherwise they would have been inclined to suggest that the charge should not exceed a halfpenny; and they express a hope that, after the proposed change in the newspaper duties has taken effect, and been some time in operation, Prices Current bearing a halfpenny stamp may be freely transmitted by post.

The Commissioners are decidedly opposed to a postage instead of a stamp for the free transmission of Prices Current. A charge in the nature of a stamp would be collected with much greater facility and certainty than a postage, which would, besides, they remark, impose much additional duty on the Post Office. It is proposed, in order to give effect to the recommendations contained in this Report, that the Commissioners of Stamps should be authorized to fix a stamp bearing a certain duty on "Prices Current" intended for circulation by post (such publications, when unstamped, not to be made liable to any penalty), and by giving a power to the Postmaster-General to allow them to go free of postage, if so stamped: it being left to the Postmaster-General, with the concurrence of the Lords of the Treasury, to define what publications shall be permitted to circulate as Prices Current, and to make regulations with respect to the form in which they shall be received. To prevent publications of this class becoming vehicles for advertisements, the names and residences of the sellers of the various articles of which the prices are given should be excluded.

This Report is dated the 11th of April, at which period the Convention with the French Post Office had not been settled. The Commissioners state that when the negotiation then proceeding was completed, they should then feel inclined to take into consideration plans for the transmission of foreign Prices Current.

The Sixth Report on the management of the Post Office relates to the packet establishment. Without taking into account the original cost of the packets, amounting to 273,018*l.*, the total annual loss in this department has averaged 38,739*l.* 3*s.* during the last four years. The nature of the control exercised by the General Post Office over the management and expenditure of this branch of the public service, has been hitherto extremely defective. It was found that at Dover the accounts were not examined with a view to ascertain whether the stores charged had been actually supplied. The agent at Dover acknowledged that the only check he had was "his dependance upon the honour of the tradesman not to charge for more than has been actually delivered." At Holyhead various instances were discovered in which articles had been sold from the dock-yard by the resident engineer and storekeeper, and no account rendered to the Post Office of the produce of these sales. It has been impossible to trace the extent to which peculation has been carried. Mr. M'Knight who was despatched to investigate the matter, states, that the accounts of the receipts and issues were so complicated, as to afford no check on the remains in the store; not one half of the things in the store being made any return of whatever. An overcharge of 1000 tons of coals a-year to the packets has been clearly proved; and with respect to other stores, the books or accounts were in so imperfect a state that they did not show what ought to have remained.

The control exercised over the steam-packet establish-

"* Since this Report was presented to your Lordships we have completed the inquiry we proposed to make relative to the Post Office Packets, and have considered it expedient to recommend that this branch of the establishment should be transferred to the Board of Admiralty; if our recommendations are carried into effect, we are of opinion that two subordinate Commissioners will be sufficient."

ment on the part of the General Post Office having been found completely nugatory, the Commissioners, as a remedy, propose, in the first place, that the performance of this service should be contracted for to as great an extent as possible; and, secondly, that the remainder should be placed under the management of the Board of Admiralty. The Commissioners follow up this recommendation by the subjoined remarks:—

"We are so convinced of the advantages which a system of contract must generally secure to the public over one of establishment, however well conducted, that we wish we could have felt justified in recommending that it should be universally and immediately adopted. But we are satisfied that notwithstanding the great and rapid extension which has taken place in the private steam navigation of this country, it would not as yet be safe and expedient to throw open to competition at once all the six stations which are now maintained at the public expense.

"It has been stated to us that much inconvenience has been felt by the public from their not knowing the time fixed for the departure of the Post Office packets, and that when persons are at a distance from the station, this information is with difficulty procured. Private companies usually make their hours of departure known by means of advertisements, but the Post Office has a great advantage in this respect, since it possesses in every town and many villages a house where, without any additional expense, this information might be deposited for the convenience of the public.

"With regard to the passage fares at the different stations, wherever the service is conducted by a public establishment, we would recommend that the rates should be fixed by the Post Office with the concurrence of the Treasury, and that no fees of any kind, in addition to the sum so fixed, should be allowed to be received. We are also of opinion that the salaries of the officers of the packet service ought to be revised by the Lords of the Admiralty, and that these charges as well as the rest of the expenditure incurred by them for the Post Office, should be annually submitted to Parliament in the Navy Estimates.

"We desire, in conclusion, to state to your Lordships, that if the steam-packet department is transferred to the Admiralty, and you are disposed to act upon the recommendation we made in a previous Report, to substitute a Board of Commissioners for the office of Postmaster-General, we are of opinion that three Commissioners will be sufficient to execute the duties which will devolve upon them.

(Signed) DUNCANNON,
H. LABOUCHERE,
SEYMOUR."

ECCLESIASTICAL ESTABLISHMENTS OF PRUSSIA AND IRELAND

THE analogy between the state of Ireland and of parts of the kingdom of Prussia, in respect of the religious and ecclesiastical relations of the population, having led the Commissioners appointed to inquire into the state of religious and other instruction in Ireland to believe that an authentic account of the ecclesiastical state of Prussia would throw some light on the matters in which they were engaged, a series of questions was in consequence transmitted by Viscount Palmerston to the Prussian Government. The information thus obtained, accompanied by an introductory Report, has been printed, and presented to both Houses of Parliament.

It appears that the population of Prussia, in 1831 (leaving out the Jews and the Mennonites), consisted of 7,941,721 Protestants, and 4,915,153 Catholics. For the whole kingdom, therefore, the Protestants were to the Catholics nearly as 60 to 37, or somewhat more than 3 to 2. The largest proportion of Protestants occurs in the provinces of Brandenburgh and Pomerania. The largest proportion of Catholics occurs in the Rhenish province.

There is a close analogy between the circumstances of the Rhenish province of Prussia and those of Ireland, as respects ecclesiastical matters. The original and hereditary provinces of the Prussian monarchy are chiefly Protestant; the royal family has been, and is, Protestant. Berlin, the seat of government, is so far a Protestant town, that, in 1831, out of a population of 229,843 persons, there were only 4295 Catholics. It is in the more recent acquisitions of Prussia, such as the provinces of Posen and Silesia, that the Catholics form a considerable portion of the population. In the Rhenish province, acquired by the Treaty of Vienna, and which, like Ireland, is separated from the body of the kingdom, this character is still more strongly marked, the number of Protestants in 1831 being 500,546, of Catholics 1,699,002. This preponderance is especially seen in the three districts of Cologne, Treves, and Aix-la-Chapelle. The first district contains 51,975 Protestants, and 332,521 Catholics; that of Treves 39,252 Protestants, and 328,799 Catholics; and that of Aix-la-Chapelle 10,063 Protestants, and 339,025 Catholics: total for the three districts, 101,290 Protestants, and 1,000,345 Catholics. In the entire Rhenish province, therefore, the ratio of Protestants to Catholics is less than 1 to 3 (about 5 to 17); in the three districts just mentioned it is nearly as 1 to 10.

In the whole of Ireland the ratio of Protestants of all descriptions to Roman Catholics is nearly as 1 to 4; in the archiepiscopal province of Dublin, or the civil province of Leinster, it is nearly as 1 to 6; and in the archiepiscopal province of Cashel, or the civil province of Munster, nearly as 1 to 19.

The author of the introductory Report states, that on comparing the ratio of Protestant churches and clergymen to the number of Protestants in the Protestant part of Prussia, and in the Rhenish province, it appears that the provision for religious worship is strictly adapted to the actual wants of the population. The provision for the worship of the Protestants in the Rhenish province is not made on the supposition that the entire population is Protestant, and without reference to the fact that the majority belong to the Roman Catholic communion.

In the province of Brandenburgh, the number of Protestants is 1,512,828, and of Roman Catholics 13,082. The number of Protestant places of worship is 2,296, and of Protestant clergymen 1,203; the ratio of the former to the number of Protestants being as 1 to 658, and of Protestant clergymen to the Protestant population as 1 to 1257.

In the Rhine province, notwithstanding the preponderance of Roman Catholics, the provision for Protestant worship is not more ample. There the number of Protestants is 500, and of Roman Catholics 1,699,002; and the ratio of Protestant places of worship to Protestants is as 1 to 970; and of Protestant clergymen to Protestants as 1 to 1169.

In Ireland, the provision for the religious worship of the people, by means of the Established Church, is made on the supposition that the entire, or nearly the entire, population, is Protestant, although the Roman Catholics are 80 per cent. of the population; and it is arranged on the same principles as the Established Church in England, where this state of things in fact exists. Even in Ireland a considerable discrepancy may be observed, according as the number of Protestants in the population is great or small. In the diocese of Clogher there are 104,359 members of the Established Church; in Dromore, 41,737; in Ossory, 12,361; in Ardfert and Aghadoe, 7529; and in Tuam, 9619. The number of Roman Catholics in the first of these dioceses (Clogher) is 260,241; in Dromore, 76,275; in Ossory, 209,848; in Ardfert and Aghadoe, 297,131; and in Tuam, 467,970. Thus in the diocese of Clogher the Episcopalian Protestants form 26 per cent. of the population, and in Dromore 22 per cent., while in the three other dioceses they only form 5 and 2 per cent. of the population. In the two first-mentioned dioceses there are on an average 1999 Episcopalian Protestants to each benefice, and 1664 to each church, and in the three last, on an average, only 211 to each benefice, and 254 to each church. No such discrepancies as these, it is remarked, appear on the face of the Prussian statistical tables; but the ecclesiastical system of that kingdom seems to be adapted to the actual circumstances of each religious persuasion, and to its numbers in any given spot, and not to be arranged with reference to any hypothetical or possible state of things.

We learn, from answers to the queries put to the Prussian Government, and which are printed at the end of the Report, that the King confers a number of livings and other clerical offices in all provinces among both confessions. He appoints the Protestant general-superintendent, superintendents, and members of the consistories. By an

indult, implicitly contained in a Papal Bull, the King likewise appoints the Catholic cathedral provosts, and fills up those canonries which become vacant, in *mense papali*; but in this case the See of Rome gives the *provista*, or the institution. The appointment of Catholic bishops is regulated by the Bull of 1821. The Chapter has the right of election. Every ecclesiastic, whether he belongs to the chapter or diocese, or not, is eligible, even foreign clergymen, but only after a previous Royal permission. A contemporary brief of Pope Pius VII. obliges the Chapters to elect *personam regi gratam*. The King fixes the day of election, and sends a commissioner, who takes no part in the canonical affairs of the election; but assumes, notwithstanding, the initiative, by declaring to the members of the chapter the intentions of the Crown. By these means, not only has the election of an individual disliked by the Court been avoided, but the choice falls always on those whose promotion to the rank of bishop the Court had in view. The person canonically chosen receives his confirmation from the Pope, and the approbation from the Sovereign. The Pope is required to entrust a Prussian prelate with the consecration.

The King is the head of the Protestant Church. The department for ecclesiastical affairs is the central authority for all ecclesiastical matters. Each of the provinces has its consistory, subordinate to the ministerial department, to watch over the affairs of the Protestant Church. None but Protestants are members of these boards, which are presided over by the highest civil authority of the province. The consistory superintends the ecclesiastical seminaries, and appoints teachers to them; examines the candidates, and orders their ordination, and also grants clerical dispensations.

The departments for the management of ecclesiastical affairs in the district governments stand on the same line as the consistories. It is stated, that they exercise the Government right of patronage in concurrence with the general-superintendent of the province, manage the external affairs of the buildings, surplice-fees, &c., and, at the same time, together with the consistories, keep a watch over the moral and official conduct of the clergyman, positive breaches of official duty being reserved to the consistories. The superintendents are subordinate church-officers; and every consistorial district is geographically divided into different superintendencies. The superintendent, who is appointed by the King, is himself a parson, and has other parsons under him. He visits the churches in his district, and has only the duties of inspection. He sends his report, partly to the consistory, partly to the Government, according to the different objects.

Ordination, even in the Catholic Church, is only granted upon proof of the right of consecration, according to the canonical law; and is, besides, restricted by a regulation, obliging the bishops to deliver a list of the candidates for ordination, shewing the want of them, to the chief president of the province. Nobody, without a special permission, is permitted to be ordained abroad.

In reply to the ninth query, it is stated that there exists no general rules for the support of the clergy. Only the incomes of the higher Catholic clergy are fixed by the Papal Bull — namely, for the Archbishop and Prince Bishop of Breslau, about 1750*l.*; for the other bishops, about 1067*l.*; for the dignitaries of cathedral chapters respectively, about 292*l.*, and rather more than 200*l.*; and for canons and prebendaries respectively, 175*l.* 146*l.*, and 117*l.*, besides house-room. The incomes of all other livings, either of the Protestant or Catholic Church, are very different. The clergyman receives his income either in kind or money. It is paid in kind when it arises from a real estate belonging to his benefice, which he manages himself, or when it is paid to him by landed proprietors. Of the same kind are tithes, rents, and other payments from lands. The money-income of the clergy arises partly out of the public revenues of the Crown, or of the parishes, either as salary or compensation for appropriated lands or ground-rents, or as rents from private estates, or from endowments laid out at interest. The Crown has undertaken the above-mentioned payment of the Catholic dignitaries since their landed property had been appropriated to the public revenue. For the Trans-Rhenane part of the kingdom, where much of the Church property was alienated during its possession by the French, the Crown pays a salary to the clergy as a compensation, according to a Concordat which the Pope entered into with Napoleon, when First Consul.

The maintenance of the clergy proceeds in general from the peculiar endowments of each congregation. Where this is not the case the congregation that desires the service of a clergyman is responsible for his maintenance. The Government in general is not obliged to vouch for the salary of the clergy of either confession. Nevertheless, the number of parishes is not small which, in this case, enjoy a support out of the public funds by the favours of the King.

There exists in both confessions surplice-fees for marriages, baptisms, and bans. The cases where such fees are not levied are rare. Fees on confession are not levied among the Catholics. The surplice-fees are divided among the clergy, the church servants, and the church fund. New surplice-fees can only be enacted by permission of the Government.

In general every church has its own fund, out of which it has to defray the expense of building, repairing, and the expenses caused by divine service. Where this is not the case, the subsidiary obligation falls, according to the difference of the provincial or local law, either upon the beneficed clergyman, if he has more than a sufficient living; or the parish, if there is no patron; or the patron together with the parish; or the patron exclusively; or the proprietor of the church tithes; or the civil commune. In cases of urgent necessity, the assistance of Government is accorded, but only as a bounty, if there be no special legal ground providing for it.

New churches can only be erected by the permission of the clerical authorities—namely, the Bishops or the Consistory, and with the approbation of the Crown. But with regard to the re-building or repairing existing churches, that concerns the interested parties—namely, the parish and the patron. As regards the building of churches and schools, the civil and religious authorities concur in right of their superintendence, in examining their necessity or fitness. When parties cannot agree on these matters, the provincial governments decide whether, and how the building should be undertaken, and who is to bear the expense, reserving the final decision on the point of expense for a court of law.

In general every parish possesses a place of worship for its exclusive use. The exception is, when two congregations of different confessions are entitled to the use of the same building for divine worship, is very rare, and then, in many cases, depends on old usage. In the Trans-Rhenane part of the kingdom it is forbidden by law. Proselytism is prohibited by law, but only punished in case discord between parents, children, or married people, shall have been caused by it. In this respect the liberty of change of religion is open to everybody; but the clergyman receiving the proselyte into his congregation is bound to notify it to the Government. Controversial sermons are forbidden by law, and are punished by a fixed term of imprisonment. In the provincial school boards, spiritual and lay members of both confessions are to be found united, and also in the same manner in the school and poor communions of the towns.

The Report concludes with the following summary:—According to the Prussian ecclesiastical law, neither the Protestant nor the Catholic Church is considered as enjoying any legal precedence of the other, or as being in exclusive connexion with the State. The King is the head of the Protestant Church, and, in virtue of the episcopal power which he enjoys as sovereign, he governs this Church through authorities appointed by himself. The Protestant Church of Prussia is neither episcopal nor Presbyterian, but *consistorial* (if such an expression may be allowed); it is neither governed by bishops at the head of each diocese, nor by a general assembly, synods, and presbyteries, but by *consistories*, or boards appointed by Government, at the head of each province. The Protestant clergymen are in some cases elected by their congregations, in others they are named by the patron of the living. The Catholic Church of Prussia is governed like the other branches of the same Church in other countries. The bishops are nominally elected by the chapters, but are virtually (in consequence of an arrangement with the See of Rome) appointed by the King, who sends his Commissioner at the time of election, like the congé d'élire addressed by the King of England to the cathedral chapters.

The parish priests are appointed by the patron of the benefice, where there is an endowment; where the church property was confiscated by the French, they are appointed by the bishops. In general, throughout Prussia, the clergy of both persuasions are maintained by an endowment belonging to each parish or congregation; or, if such endowment should be insufficient, or should be altogether wanting, the Government in such cases furnishes assistance.

NEW ARRANGEMENT OF DIOCESES.

ANOTHER Report from the Commissioners appointed to consider the state of the Established Church, with reference to the ecclesiastical duties duties and revenues, has just been presented to Parliament, and forms the Third Report which has been made since the establishment of the Commission in February, 1835. The object of the present Report is to render complete one branch of the inquiry—namely, the new arrangement of dioceses, and the adjustment of episcopal incomes; "because (it is remarked), in consequence of the number of Episcopal Sees at present vacant, any further delay in carrying into effect the new arrangements respecting the bishoprics will be attended with great inconvenience." The final Report of the Commissioners will be made at a future period. The Third Report presents, in the form of fifty-four distinct propositions, the various recommendations of the Commissioners contained in this and the two previous Reports. For the reasons upon which they are founded, and statements of an elucidatory nature, reference may be made to Nos. 28 and 40 of the "Companion." This Report is dated May 20th, 1836, and is signed by the following Commissioners:—W. Cantuar, Cottenham (C.), E Ebor, Lansdowne, Harrowby, Melbourne, J. Russell, C. J. London, J. Lincoln, J. H. Gloucester, T. Spring Rice, H. Hobhouse, Herbert Jenner.

PROPOSITIONS.

1. That Commissioners be appointed by Parliament, for the purpose of preparing, and laying before your Majesty in Council such schemes as shall appear to them to be best adapted for carrying into effect the following recommendations; and that your Majesty in Council be empowered to make orders, ratifying such schemes, and having the full force of law.

2. That the diocese of Canterbury consist of the county of Kent (except the city and deanery of Rochester, and those parishes which it is proposed to include in the diocese of London), and of the parishes of Croydon and Addington, and the district of Lambeth Palace, in the county of Surrey.

3. That the diocese of London consist of the city of London, and the county of Middlesex, of the parishes of Barking, East Ham, West Ham, Little Ilford, Low Layton, Walthamstow, Wanstead St. Mary, Woodford, and Chimford, in the county of Essex, all in the present diocese of London; of the parishes of Charlton, Lee, Lewisham, Greenwich, Woolwich, Eltham, Plumstead, and St. Nicholas Deptford, in the county of Kent, and St. Paul, Deptford, in the counties of Kent and Surrey, all now in the diocese of Rochester; of the borough of Southwark, and the parishes of Battersea, Bermondsey, Camberwell, Christchurch, Clapham, Lambeth, Rotherhithe, Streatham, Tooting Graveney, Wandsworth, Merton, Kew, and Richmond, in the county of Surrey, and present diocese of Winchester; and of the parishes of St. Mary Newington, Barnes, Putney, Mortlake, and Wimbledon, in the county of Surrey, and in the peculiar jurisdiction of the Archbishop of Canterbury: together with all the extra parochial places locally situate within the limits of the parishes above enumerated, except the district of Lambeth Palace.

4. That the diocese of Winchester be diminished, by the transfer of the parish of Addington to the diocese of Canterbury, and of the before-mentioned parishes to the diocese of London.

5. That the whole of the parish of Bedminster be transferred from the diocese of Bath and Wells to the diocese of Gloucester and Bristol.

6. That the city and deanery of Bristol be united to the diocese of Gloucester; and that the southern part of the diocese of Bristol, consisting of the county of Dorset, be transferred to the diocese of Salisbury.

7. That the diocese of Ely be increased, by the counties of Huntingdon and Bedford, now in the diocese of Lincoln, by the deaneries of Lynn and Fincham, in the county of Norfolk and diocese of Norwich, and by the archdeaconry of Sudbury in the county of Suffolk and diocese of Norwich, with the exception of the deaneries of Sudbury, Stow, and Hatismere, and by that part of the county of Cambridge, which is now in the diocese of Norwich.

8. That it be declared, that the Scilly Islands are within the jurisdiction of the Bishop of Exeter and of the Archdeacon of Cornwall.

9. That the sees of Gloucester and Bristol be united; and that the diocese consist of the present diocese of Gloucester, of the city and deanery of Bristol, of the deaneries of Cricklade and Malmesbury, in the county of Wilts, and now in the diocese of Salisbury, and of the whole of the parish of Bedminster, now in the diocese of Bath and Wells.

10. That the diocese of Hereford be added to the deanery of Bridgenorth, now locally situate between the dioceses of Hereford and Lichfield; and that those parts of the counties of Worcester and Montgomery, which are now in the diocese of Hereford, be transferred to the dioceses of Worcester and St. Asaph and Bangor, respectively.

11. That the diocese of Lichfield consist of the counties of Stafford and Derby.

12. That the diocese of Lincoln consist of the counties of Lincoln and Nottingham; and that the latter county, now in the diocese and province of York, be included in the province of Canterbury.

13. That the diocese of Norwich consist of the counties of Norfolk and Suffolk, except those parts which it is proposed to transfer to the diocese of Ely.

14. That the diocese of Oxford be increased by the county of Buckingham, now in the diocese of Lincoln, and by the county of Berks, now in the diocese of Salisbury.

15. That the diocese of Peterborough be increased by the county of Leicester, now in the diocese of Lincoln.

16. That the diocese of Rochester consist of the city and deanery of Rochester, of the county of Essex (excepting the parishes which it is proposed to leave in the diocese of London), and of the whole county of Hertford.

17. That to the diocese of Salisbury, reduced according to the foregoing propositions, be added to the county of Dorset, now in the diocese of Bristol.

18. That the diocese of Worcester consist of the whole counties of Worcester and Warwick.

19. That the Sees of St. Asaph and Bangor be united; and that the diocese consist of the whole of the two existing dioceses (except that part of the diocese of St. Asaph, which is in the county of Salop), and of those parts of the county of Montgomery, which are now in the dioceses of St. David's and Hereford.

20. That the dioceses of Llandaff consist of the whole counties of Glamorgan and Monmouth.

21. That the diocese of St. David's be altered by the transfer of those parts of the counties of Montgomery, Glamorgan, and Monmouth, which it is proposed to include in the respective dioceses of St. Asaph and Bangor, and Llandaff.

22. That the diocese of York consist of the county of York, except such parts thereof as it is proposed to include in the new diocese of Ripon.

23. That the diocese of Durham be increased by that part of the county of Northumberland, called Hexhamshire, which is now in the diocese of York.

24. That the Sees of Carlisle and Sodor and Man be united; and that the diocese consist of the present diocese of Carlisle, of those parts of Cumberland and Westmoreland which are now in the diocese of Chester, of the deanery of Furnes and Cartmel in the county of Lancaster, of the parish of Aldeston, now in the diocese of Durham, and of the Isle of Man.

25. That the diocese of Chester consist of the counties of Chester and Flint, and of so much of the county of Salop as is not in the diocese of Hereford; and that the whole diocese be included in the province of York.

26. That two new Sees be erected in the province of York—one at Manchester and the other at Ripon.

27. That the diocese of Manchester consist of the whole county of Lancaster, except the deanery of Furnes and Cartmel.

28. That the diocese of Ripon consist of that part of the county of York, which is now in the diocese of Chester; of the deanery of Craven, and of such part of the deaneries of the Ainsty and Pontefract, in the county and diocese of York, as lie to the westward of the following districts—namely, the liberty of the Ainsty, and the wapentakes of Barkston Ash, Osgoldcross, and Staincross.

29. That all parishes which are locally situate in one diocese, but under the jurisdiction of the Bishop of another diocese, be made subject to the jurisdiction of the Bishop of the diocese within which they are locally situate.

30. That such variations be made in the proposed boundaries of the different dioceses as may appear advisable, after more precise information, respecting the circumstances of particular parishes or districts.

31. That the Bishops of the two newly-erected Sees be made bodies corporate, and be invested with all the same rights and privileges as are now possessed by the other Bishops of England and Wales; and that they be made subject to the metropolitan jurisdiction of the Archbishop of York.

32. That the collegiate churches of Manchester and Ripon be made the cathedrals, and that the chapters thereof be the chapters of the respective Sees of Manchester and Ripon, and be invested with all the rights and powers of other cathedral chapters; and that the members of these, and all other cathedral chapters, in England, be styled, dean and canons.

33. That the chapter of Carlisle be the chapter of the united See of Carlisle and Man.

34. That the Bishops of the See of St. Asaph and Bangor be elected, alternately, by the Dean and Chapter of St. Asaph, and by the Dean and Chapter of Bangor.

35. That the Bishops of the See of Bristol and Gloucester be elected, alternately, by the Dean and Chapter of Bristol, and by the Dean and Chapter of Gloucester.

36. That power be given to determine the future mode of confirming such acts of the Bishop, of either of the united Sees, as may require confirmation, by a dean and chapter.

37. That upon the first avoidance of either of the Sees of St. Asaph and Bangor, and of Gloucester or Bristol, the Bishop of the other of the Sees proposed to be united, become, *ipso facto*, Bishop of the two Sees, and thereupon become seised and possessed of all the property, advowsons, and patronage, belonging to the See so avoided.

38. That the jurisdiction of the Bishop's Court, in each diocese, be co-extensive with the limits of the diocese, as newly arranged.

39. That such arrangements be made, with regard to the apportionment of fees payable to the officers of the several diocesan courts, as may be deemed just and equitable, for the purpose of making compensation to those officers who may be prejudiced by the proposed alterations.

40. That such alterations be made in the appointment or exchange of ecclesiastical patronage, among the several Bishops, as shall be consistent with the relative magnitude and importance of their dioceses, when newly arranged; and as shall afford an adequate quantity of patronage to the Bishops of the new Sees.

41. That none of the proposed alterations, affecting the boundaries or jurisdiction of any diocese, or the patronage of benefices with cure of souls, belonging to any See, the Bishop of which was in possession on the 4th day in March, 1836—take effect until the next avoidance of the See without the consent of such Bishop.

42. That in order to provide for the augmentation of the incomes of the smaller bishopries, such fixed annual sums be paid to the Commissioners, out of the revenues of the larger Sees respectively, as shall, upon due inquiry and consideration, be determined on; so as to leave as an average annual income, to the Archbishop of Canterbury 15,000*l.*, to the Archbishop of York 10,000*l.*, to the Bishop of London 10,000*l.*, to the Bishop of Durham 8000*l.*, to the Bishop of Winchester 7000*l.*, to the Bishop of Ely 5500*l.*, to the Bishop of St. Asaph and Bangor 5200*l.*, and to the Bishops of Worcester and Bath and Wells respectively 5000*l.*

43. That out of the fund thus accruing, fixed annual payments be made by the Commissioners, in such instances and to such amount, as shall be in like manner determined on; so that the average annual incomes of the other Bishops, respectively, be not less than 4000*l.* nor more than 5000*l.*

44. That at the expiration of every seven years, reckoning from the 1st day of January, 1836, a new return of the revenues of all the bishopries be made to the Commissioners; and that, thereupon, the scale of episcopal payments and receipts be revised, so as to preserve, as nearly as may be, to each Bishop, an amount of income, equivalent to that which shall have been determined, in the first instance, to be suitable to the circumstances of his bishopric; and that such revised scale take effect, as to each See respectively, upon the then next avoidance thereof.

45. That if, in determining the mode of regulating the episcopal incomes, either in the first instance, or on any future revision of them, it shall be deemed expedient to make the alteration required, in any case, by the subtraction or addition of any real estates, such real estates be transferred accordingly.

46. That, out of the property of the See of Durham, provision be forthwith made for the completion of those augmentations of poor benefices which the late Bishop had agreed to grant, but which he left uncompleted at the time of his death.

47. That the Bishop of Durham do in future hold the Castle at Durham in trust for the University of Durham, and that all expenses of maintaining and repairing the same be defrayed by the University of Durham.

48. That so soon as the relative values of the several Sees, under the new arrangements, shall have been ascertained, apportionment be made of the sums to be thereafter paid by the respective Bishops for first fruits, so as to leave the aggregate amount payable from all the Sees to the bounty of Queen Anne, the same as at present; and that the Bishops who shall, on the present vacancies, succeed to the Sees of Durham and Ely, be relieved from the excess beyond their due proportion payable for first fruits; and that the residue of the sums due be paid by the Commissioners out of the surplus funds arising from those Sees.

49. That the tenths to be hereafter payable by the respective Bishops be regulated by the amount of the first fruits payable under the preceding propositions.

50. That no ecclesiastical dignity, office, or benefice, be in future granted to any Bishop to be held *in commendam*; but that such of the endowments of certain prebends in the cathedrals of Lincoln, Lichfield, Exeter, and Salisbury, as now belong to the Bishops of the respective dioceses, continue annexed to the respective Sees.

51. That fit residences be provided for the Bishops of Lincoln, Landaff, Rochester, Manchester, and Ripon; and that for the purpose of providing the Bishop of any diocese with a more suitable and convenient residence than that which now belongs to his See, sanction be given for purchases or exchanges of house or lands, or for the sale of lands belonging to the respective Sees; and also, where it may be necessary, for borrowing, by any bishop, of a sum not exceeding two years' income of his See, upon such terms as shall appear to be fit and proper; and that the governors of the Bounty of Queen Anne be empowered to lend money, upon mortgage, to such Bishops.

52. That so much of the sum of 6000*l.*, recovered by the late Bishop of Bristol, for damages done to the episcopal residence at Bristol, and of its accumulations, as may remain after deducting proper expenses, together with the money arising from the sale of the site of such residence, if sold, be applied to the purchase, or erection of a residence, for the Bishop of the See of Bristol and Gloucester.

53. That new Archdeaconries of Bristol, Maidstone, Monmouth, Westmoreland, Manchester, Lancaster, and Craven, be created, and that districts be assigned to them; that archidiaconal power be given to the Dean of Rochester, within that part of Kent, which will remain in the diocese of Rochester; and that the limits of the other existing deaneries and archdeaconries, be newly arranged; so that every parish and extra-parochial place be within a rural deanery, and every deanery within an archdeaconry; and that no archdeaconry extend beyond the limits of one diocese.

54. That all the archdeaconries of England and Wales be in the gift of the Bishop of the respective dioceses in which they are situate; and that all archdeacons have and exercise full and equal jurisdiction, within their respective archdeaconries.

ELECTORAL STATISTICS.

County Electors in England.—A Return has been printed of the number of persons qualified to vote for county Members at any election which may take place before the 1st of November, 1836. This Return will be rendered more interesting by placing in connexion with it the information afforded by another Parliamentary Return which shews the number of persons who were on the registry at the period of the last general election:—

Bills brought in :—

April 28. Bill for the better administration of justice in the High Court of Chancery.—*The Lord Chancellor.*

— — Bill for the making better provision for the hearing of appeals and writs of error in the House of Lords, and of appeals in the Privy Council.—*The Lord Chancellor.*

HOUSE OF COMMONS.

April 29. Bill for the better regulation of ecclesiastical revenues, and the promotion of religious and moral instruction in Ireland.

May 3. Bill to enable persons to recover debts contracted for spirituous liquors.

— Bill to enable persons holding licenses to sell beer, spirits, and other Exciseable liquors, in Scotland, to obtain a renewal of their licenses from the Excise.

— 7. Bill to amend an Act for the better administration of justice at the holding of petty sessions by justices of the peace in Ireland.

— Bill to repeal such portions of all Acts as impose prohibitory tolls on steam-carriages, and to substitute other tolls on an equitable footing with horse-carriages.

— 10. Bill for granting an additional rate of postage on letters between Great Britain and Ireland by way of Milford and Waterford.

— Bill for the more effectual recovery of small debts in Scotland.

— Bill to indemnify the Governors and others of several of the West India islands for having permitted the importation of certain articles duty free.

— Bill to amend the laws relating to loan societies in Ireland.

— 12. Bill for facilitating the inclosure of open and arable fields in England and Wales.

— Bill for facilitating the recovery of the possession of tenements after the determination of the tenancy.

— 14. Bill for investing in Government securities unemployed cash belonging to bankrupts' estates.

— 17. Bill to amend an Act for the encouragement of building of chapels of ease in Ireland.

— 18. Bill to provide for the appointment and election of magistrates and councillors for certain burghs of regality and barony, and incorporated towns in Scotland.

— Bill for consolidating and amending the laws relating to the presentment of public money by grand juries in Ireland.

— 20. Bill for carrying into effect the Reports of the Commissioners appointed to consider the state of the Established Church in England and Wales, with reference to ecclesiastical duties and revenues, so far as they relate to episcopal dioceses, revenues, and patronage.

— Bill for extinguishing the secular jurisdiction of the Archbishop of York and Bishop of Ely in certain liberties in the counties of York, Nottingham, and Cambridge.

— Bill for the better administration of justice in the Cinque Ports.

NEW MEMBERS.

May 16. Dublin Election Committee.—House informed that the Committee had determined that Daniel O'Connell, Esq. is not duly elected a citizen to serve in this present Parliament for the city of Dublin: that Edward Southwell Ruthven, Esq. was not duly elected a citizen to serve in this present Parliament for the city of Dublin: that Geo. Alex. Hamilton, and John Beatty West, Esqrs. are duly elected, and ought to have been returned citizens in this present Parliament for the said city of Dublin: and that the petition of the said Robert King, John Mallet, and others, does not appear to the said Committee to be frivolous or vexatious: that the opposition to the said petition does not appear to the said Committee to be frivolous or vexatious: that the said Committee have altered the poll taken at such election, by striking off (here a list of 373 names is given): House also informed that the Committee have come to the following resolutions:—That the Committee feel it to be their duty to report to the House, that eight persons, viz.—Matthew Madden, George Osborn, Patrick Finucane, Oliver Richards, John Forsyth, Charles Dempsey, James Baldwin, and Andrew Hutchinson, were struck off the poll as having voted under a corrupt expectation, and having subsequently received money; but the Committee are unanimously of opinion, that there is no evidence that Messrs. West and Hamilton, for whom they voted, were either directly or indirectly implicated in such corrupt practices. That the Committee further consider it their duty to make known to the House, that they have found a very general irregularity to prevail in the assessment and collection of municipal taxes in Dublin; and that from the absence of all public notice of their imposition, the uncertainty attending their collection, and the liability to payment attaching in many instances to various occupiers of the same premises, the exercise of the franchise is frequently subject to impediments and difficulties, which the Committee cannot believe were contemplated by the Legislature.—To be entered in the Journals; Clerk of the Crown to attend forthwith to amend the Return; Clerk of the Crown attending, amended the Return accordingly.

Essex.—There is a vacancy in the representation of the southern division of this county, occasioned by the decease of R. W. Hall Dare, Esq.

Kilkenny City.—Daniel O'Connell, Esq., duly elected, without opposition, in the room of R. Sullivan, Esq. who has accepted the Chiltern Hundreds.

Mayo County.—Robert Dillon Browne, Esq., in the room of Mr. Dommic Browne, now Lord Oranmore. The election was contested. Final close of the poll:—R. D. Browne, 599; John Browne, 305; majority, 294.

LIST OF COMMITTEES APPOINTED.

(Exclusive of Committees appointed to consider Bills.)

HOUSE OF COMMONS.

April 28. Committee to inquire into the management of Dover harbour and the dues received, and to report their observations thereupon to the House.

May 12. Committee to inquire into the operation of the Act of 7 Geo. IV., c. 46, permitting the establishment of joint-stock banks, under certain restrictions; and whether it be expedient to make any alterations in the provisions of that Act. Ordered, that the Committee be a Committee of Secresy. Names of the Members:—Mr. Chancellor of the Exchequer, Sir Robert Peel, Mr. Poulett Thomson, Sir James Graham, Mr. Clay, Mr. Goulburn, Mr. Baring (Portsmouth), Mr. Loch, Mr. Morrison, Mr. John Abel Smith, Mr. Pattison, Sir John Wrottesley, Mr. M. Attwood, Mr. Strutt, Sir T. Fremantle. Power to send for persons, papers, and records; five to be the quorum.

— 16. Committee on the affairs of the city of Edinburgh and port of Leith.

ABSTRACTS OF REPORTS AND RETURNS PRESENTED TO PARLIAMENT.

Revising-Barristers.—In 1832 the number of revising-barristers was 165; 169 in 1833; 170 in 1834; and 174 in 1835. The aggregate number of days in which the whole of them were employed was 3662 in 1832; 2632 in 1833; 2585 in 1834; and 3838 in 1835;—the total cost being for each of the above years, respectively, as follows:—30,400*l.* 5*s.* 9*d.*; 23,182*l.* 11*s.* 3*d.*; 22,520*l.* 10*s.* 10*d.*; and 32,086*l.* 5*s.* 2*d.*

Bankers' Notes.—The aggregate amount of notes circulated in England and Wales by private banks and joint-stock banks, in the quarters ending 1st October, 1835, 1st January, 1836, and 1st April, 1836, was as follows:—viz., 10,420,623*l.*; 11,134,414*l.*; and 11,447,919*l.*:—viz, for the quarter ending October last—by private banks, 7,912,587*l.*, by joint-stock banks, 2,508,036*l.*; quarter ending 1st June, 1836—by private banks, 8,334,863*l.*; joint-stock banks, 2,799,551*l.*; quarter ending 1st April by private banks, 8,353,894*l.*; joint-stock banks, 3,094,025*l.*

Corn.—The average prices of corn for 1835 have been struck by the Comptroller of Corn Returns, and are, for wheat, 39*s.* 4*d.*; barley, 29*s.* 11*d.*; and oats, 22*s.* per quarter. The average, for the seven years preceding 1836, are—for wheat, 56*s.* 3*d*; barley, 31*s.* 9*d.*; and oats, 22*s.*

Joint-Stock Banks in Ireland.—There are eight joint stock banks in Ireland viz, the Hibernian Joint-Stock Company, established by a special Act in 1825, and which has 225 partners; the Northern Banking Company, 208 partners; the Provincial Bank of Ireland, 644 partners; the Belfast Banking Company, 292 partners; the Agricultural and Commercial Bank of Ireland, 2170 partners; the National Bank of Ireland, 250 partners; the Limerick National Bank of Ireland, 523 partners; and the Ulster Banking Company, which has 117 partners. The four last have been established since September, 1834, and the other four in 1824-5-6. The Provincial Bank and the Agricultural Bank have each a great number of branch establishments.

New Houses of Parliament.—It is stated in the Second Report of the Select Committee of the Lords on the Rebuilding of the Two Houses of Parliament, that the expense of the whole building may be expected to amount to 724,984*l.*, including 14 per cent. to cover contingent charges, and any probable change in the value of materials; to which would be to be added about 60,000*l.* for the purchase of ground in Abingdon-street, and 30,000*l.* for fittings and fixtures.

Highland Roads and Bridges.—The Twenty-second Report states that the Commissioners have ordered a survey of the whole line between Perthshire and Inverness, in order to ascertain the best mode of shortening and improving the road, and thereby prevent the chance of incurring expense upon portions of this line, which may by future alterations be superseded. The sum expended last year was 9353*l.*

Beer Licenses.—Return for 1835 of the number of houses licensed under 1 Will. IV. c. 64, and 4 and 5 Will. IV. c. 85, for the sale of beer, to be consumed on the premises, 35,536; not to be consumed on the premises, 4118.—Total, 39,654.

Window Duty.—Amount of Window Duty paid by twelve towns which contribute the largest amount, except London:—

	1834. £.	s.	d.	1835. £.	s.	d.
Bath	18,029	12	6	18,035	5	3
Birmingham	6,290	9	2½	6,570	1	0

	£1,961,057	£1,935,742

Salaries in Public Offices.—A reduction of 128 persons was effected in the public offices in 1835, whose salaries amounted to 44,644*l.* 9*s.* 8*d.* per annum. In the same period the diminution of expenses, under the head of emoluments, was 705*l.*; retired allowances, 17,441*l.* 13*s.* 7*d.*; and expenses, 4963*l.* 15*s.*;—making a total reduction of 67,754*l.* 18*s.* 4*d.* The reductions effected in the Treasury, and some departments immediately connected with it, such as the Comptroller of the Exchequer, have amounted to 40,470*l.* in the last two years. An increase in the number of persons employed in some of the public departments took place within the above period, amounting altogether to 152 persons, of whom 119 were required for the service of the Post-Office. The expenditure has, in consequence, been increased 13,711*l.* 3*s.* 11*d.* in salaries; emoluments, 1264*l.* 14*s.* 7*d.*; retired allowances, 32,552*l.* 7*s.* 1*d.*; expenses, 10,707*l.* 9*s.* 9*d.*; making a total of 58,235*l.* 15*s.* 3*d.*

Negro Education.—A statement has been laid before Parliament, shewing the appropriation in detail of the sum of 20,000*l.* voted in 1835 for promoting the education of the negroes in the West Indies. The Society for the Propagation of the Gospel received 7500*l.* of the grant, to which the Society added 3750*l.*, being a total of 11,250*l.*, with which they proposed to erect 52 schools, capable of accommodating 7395 scholars. The Church Missionary Society received 2500*l.*, to which 1250*l.* was added by the Society for the purpose of building 15 schools, which will hold 2400 scholars. The Wesleyan Missionary Society has added 1500*l.* to a grant of 3000*l.*, the result of which will be the erection of 19 schools for the accommodation of 2740 scholars. The London Missionary Society received 3000*l.* of the grant, and by private aid increased the amount to 4553*l.*, with which 16 schools will be built, and 2000 scholars accommodated. The Moravian Missionary Society, with a grant of 1500*l.*, and 750*l.* added thereto by private donations, will build 8 schools capable of containing 1790 scholars. The Baptist Missionary Society received 1100*l.*, added 1270*l.* to that sum, and will erect 4 schools. The Ladies' Negro Education Society, the Governor of Trinidad, and the trustees of a charity, received 1400*l.* among them, on condition of adding 1245*l.*; and with the total, amounting to 2645*l.*, 10 schools will be built, and 1670 scholars provided with school accommodation. Altogether the number of new schools to be erected will be 124; estimated number of schools 18,665; amount of grant and voluntary contributions 31,318*l.* The sum of 500*l.* was placed at the disposal of the Governor of Trinidad in consequence of only one society having included that island in its estimates; and this amount will be increased from local sources to 750*l.* Some societies, it is understood, did not make applications for a portion of the grant to an extent commensurate with their means of co-operation with the Government. The grant of 5000*l.* voted by Parliament in 1835 in aid of normal schools for the purpose of training teachers, has been placed at the disposal of the Marquess of Sligo, the Governor of Bahamas, and the trustees of the Mico charity. Each society to whom a portion of the grant was appropriated was called upon to pledge itself not to withdraw any portion of its funds heretofore devoted to negro education. All such schools as may have received aid from the Parliamentary grant will be subject to the inspection of an officer appointed by the Government for that purpose, who will report upon their state and efficiency. It is not intended to interfere with the religious instruction given in the schools, but only to ascertain that they really conduce to the moral and religious education and improvement of the negro population, and thus answer the end for which the public money has been advanced.

Liverpool.—From the 1st of January, 1835, to the 1st of January, 1836, there was imported into Liverpool 491,271 bales of cotton, in 396 foreign ships; and for the same period 180,870 bales, in 157 British ships. The number of American ships entered inwards at the port of Liverpool, from New York, in 1835, was 121; tonnage, 63,526: the number of British ships entering from New York was 13; tonnage, 4257.

Legacies.—A Return has been published, shewing the amount of capital on which the several rates of legacy-duty have been paid in Great Britain, in the years 1834 and 1835—namely,

Rate of Duty.	1834	1835.
1 per cent.	£ 22,109,303	£ 22,085,931
2½ do.	160,338	206,593
3 do.	12,400,973	11,931,642
4 do.	36,792	16,549
5 do.	1,558,875	1,642,198
6 do.	300,872	300,998
8 do.	91,538	91,844
10 do.	4,915,934	4,813,882
	£ 41,574,628	£ 41,092,660

For the two years the capital amounts to 82,667,288*l.* A similar Return for Ireland exhibits the extraordinary difference in the circumstances of the two countries; the amount of capital on which duty was paid being, for the two years, 4,545,765*l.*

	1834.	1835.
At 10*s.* per cent.	£ 1,243,471	£ 1,552,892
2*s.* do.	606,059	597,406
40*s.* do.	83,912	68,391
50*s.* do.	81,983	4,382
100*s.* do.	163,792	143,377

Glass Duty.—In the last Session the duty on flint glass was reduced to one-third of the former rate. The following returns of the amount of duty charged on such description of glass, with the drawback on exportation for the years 1834 and 1835, exhibit a comparative view of this branch of industry. The reduction alluded to amounted to 155,000*l.*; and the duty for 1834, on flint glass, produced 233,317*l.*; and for 1835, the sum of 188,813*l.* In 1834, the duties on all descriptions of glass made within the United Kingdom amounted to 923,056*l.*; in 1835, to 966,136*l.* The amount of drawback allowed on exportation was 257,855*l.*, in 1834; and 322,789*l.* in 1835. An increased domestic consumption has therefore taken place, the exports have been greater, and the revenue, instead of sustaining a diminution has been considerably improved.

King of the Belgians.—A Paper embodying the following Returns has recently been presented to Parliament:—

(1.) A Return of the sums received by the trustees in each of the seven quarters, from July, 1834, to February, 1836, inclusive, on account of his Majesty's annuity:—

September 3, 1834, the quarter due July 5, 1834	£12,500	0	0
October 22, 1834, the quarter due October 10, 1834	12,500	0	0
January 19, 1835, the quarter due January 5, 1835	12,500	0	0
April 20, 1835, the quarter due April 5, 1835	12,500	0	0
July 11, 1835, the quarter due July 5, 1835	12,500	0	0
October 19, 1835, the quarter due October 10, 1835	12,500	0	0
January 22, 1836, the quarter due January 5, 1836	12,500	0	0
	87,500	0	0
Deduct Stamps for Receipts	3	12	6
Balance Received	£87,496	7	6

(2.) An Account of the sums paid by the trustees on account of Marlborough House in each quarter:—

For the quarter ending July 5, 1834	£943	4	10½
For the quarter ending October 10, 1834	785	6	11
For the quarter ending January 5, 1835	799	0	1½
For the quarter ending April 5, 1835	888	4	9½
For the Remainder of the Term of the Lease, ending June 4, 1835	693	19	1
For amount of Dilapidations of Marlborough House, paid to the surviving trustee of the Duke of Marlborough, and by him to the Commissioners of Woods and Forests, December 15, 1835	1,645	0	0
	£5,763	15	9½

(3.) A Return of the annual amount reserved by the King of the Belgians by the Deed of Trust, to be applied by the Trustees in payment of the salaries, annuities, allowances, and charities, as specified in a list signed by his Majesty, and delivered to the Trustees on their acceptance of the Trust:—£9263.

(4.) A Return of the sums paid in each of the Quarters by the Trustees into the Exchequer:—

The first payment was delayed in consequence of the appointment of the Trustees not being completed, so that no one could act, and other unavoidable circumstances, until March 31, 1835, when was paid into the Exchequer the sum of	£25,000	0	0
April 28, 1835	5,000	0	0
July 17, 1835	9,000	0	0
November 28, 1835	7,500	0	0
February 6, 1836	8,600	0	0
	£55,000	0	0

Abstract of the above Returns:—

Received in respect of the Annuity	£87,496	7	6	Paid in respect of Marlborough House	£5,763	15	9
Sums specified on the other side	76,444	2	3	Paid Pensions and Annuities	15,680	6	6
Remainder expended by the Trustees for seven quarters, including the Balance now standing to the credit of the Trustees at the Banker's	£11,052	5	3	Paid into the Exchequer	55,000	0	0
					£76,444	2	3

Irish Constabulary Force.—This force consists of 4 inspectors-general, 1 superintendent county of Dublin, 10 resident magistrates, 155 chief constables, first class, including sub-inspectors, 59 chief constables; second class, 1232 constables, 6233 sub-constables: total number of individuals 7594, and 277 horses. The total annual expense is 314,071*l.* 18*s.* 3*d.* Besides the Constabulary Force there is the "Peace Preservation Force," which consists of 10 magistrates, 9 chief constables, 109 constables, 492 sub-constables, and 10 horses. The annual expense of this force is 31,824*l.* 17*s.* 4*d.*; making, with the constabulary force, and 4739*l.* allowed to 7 stipendiary magistrates, the large sum of 350,635*l.* 15*s.* 7*d.* The amount chargeable to counties is 143,060*l.* 9*s.*; the remainder is defrayed out of the Treasury of the United Kingdom.

Metropolitan Police.—Receipts and disbursements on account of the metropolitan police, made up to the 31st of December, 1835. Amount received from parishes 151,759*l.* 10*s.* 10*d.*; from the Treasury, 49,489*l.* 14*s.* 7*d.*; total, 201,249*l.* 5*s.* 5*d.* The receipts were augmented to 210,428*l.* 3*s.* 8*d.* by the following payments:—further sum out of the Consolidated Fund in addition to one-fourth of parochial warrants, 6258*l.* 14*s.* 10*d.*; and voluntary payments for attendance at theatres, races, fairs, sales of condemned clothing, fines for assaults upon public constables, &c., 2920*l.* 3*s.* 5*d.* The amount outstanding from parishes was, 16,154*l.* 19*s.* 6*d.*; from the Treasury, 26,908*l.* 0*s.* 4*d.*; total, 43,062*l.* 19*s.* 2*d.*; from which the sum of 32*l.* 7*s.* 4*d.* is deducted for official buildings, making the balances outstanding 43,030*l.* 12*s.* 6*d.* The following are the chief items under the head of disbursements:—salaries to superintendents, (200*l.* per annum)—inspectors, (1*l.* 18*s.* 6*d.* per week)—serjeants, (22*s.* 6*d.* do.)—and constables, (19*s.* 6*d.* do.)—169,745*l.* 15*s.* 11*d.*; clothing, 16,362*l.* 0*s.* 5*d.*; police premises, 9868*l.* 6*s.* 6*d.*; coals, 3607*l.* 5*s.* 3*d.*; lamps and gas-lights, 1444*l.* 10*s.* 6*d.*; medical attendance, 1115*l.* 9*s.*; stable expenditure, 2548*l.* 19*s.* 8*d.*; total amount of disbursements, 208,221*l.* 19*s.* 9*d.*; all of which, with the exception of 6257*l.* 4*s.* 1*d.* had been actually paid within the year.

Irish Ecclesiastical Commission.—The Annual Report of the Commissioners for the year ending August 1st, 1835, has only just been printed. The attention of the Commissioners within the above period has been occupied principally in—1st, the examination of the items and sums of money required by the estimates for providing things necessary for the celebration of Divine service in the several parishes in Ireland: 2ndly, the investigation of outstanding claims on account of the vestry cess for the year 1833, and of arrears of cess for preceding years: 3rdly, the examination of the estimates furnished by the provincial architects for the repairs of churches and chapels; 4thly, the sale of perpetuities; 5thly, demising and setting the see-houses and mensal or demesne lands of or belonging to the bishoprics, the temporalities of which have become vested in the Commissioners; 6thly, the suspension of the appointments of clerks to such benefices as became vacant within the year, and in which Divine worship had not been celebrated for the three years next preceding February, 1833; and, 7thly, in the several other important matters in connexion with the execution of the trusts reposed in them. The Commissioners have paid the sum of 29,816*l.* in salaries to clerks and sextons, and for purposes connected with the celebration of Divine service; 10,268*l.* on account of arrears of vestry cess: making the total expenditure incurred under this head since the opening of the Commission, amount to 46,259*l.* The Commissioners have also paid 11,366*l.* on account of repairs of churches, being part of the sum of 75,000*l.*, which they have deemed it indispensable to devote to this object. Applications have been received for aid in order to enlarge several churches where the accommodation is insufficient, and also for the rebuilding or erection of sixty churches; the parties expressing their willingness to contribute sums varying in amount from 60*l.* to 600*l.* The Commissioners state that some churches had been wantonly injured; and that in such cases where the amount of injury was sufficient to justify the expense necessary to be maintained, they had, under the provisions of the Statute, applied to the grand-juries of the respective counties in which the churches were situated for compensation, to be levied by presentments. During the year 164 applications had been received relative to the sale of perpetuities, making 270 since the establishment of the Commission. The sum received on account of the Perpetuity Purchase Fund is set down in the annual account at 89,552*l.* The see-estates which had fallen into the Commissioners' hands had produced the following sums:—Waterford and Lismore, 2773*l.*; Clonfert, 366*l.*; Killala, 3760*l.*; Raphoe, 1613*l.* The fines on the demise of the mansion-houses and demesnes of Killala and Clonfert were 2000*l.* each. The other sees which have more recently been vested in the hands of the Commissioners have not yet produced any available income. The sum of 4000*l.*

had been paid by the Bishop of Derry, under the provisions of the Act for regulating the revenues of that see. Under the peculiar circumstances in which the clergy have been placed, the tax on benefices has not been very productive. In three benefices having neither church, glebe-house, or glebe, and in which Divine service had not been performed for three years preceding February, 1833, the appointment of the incumbents had been suspended by the Commissioners, with the consent of the respective diocesans. The spiritual duties have been committed to the care of curates of adjoining parishes, nominated by the respective ordinaries, and at stipends fixed by the Board. These benefices were—Dunbyn, annual value, 290*l.*; Erry, 77*l.*; and Kilteynan, 320*l.* There are 53 Protestants in the parish of Erry, and 86 in the adjoining benefice of Ballyshehan, which has no church, nor is there one within four miles of the parish. The Commissioners express their regret that the smallness of the income of the benefice of Erry will render the erection of a church, upon which they have decided, a work of considerable time.

Miscellaneous Estimates.—We select a few of the items of expense under this head for the current year. For the Polish refugees, 10,000*l.*; the Euphrates expedition, 8000*l.*; for school-houses in England, 20,000*l.*; captured negroes, 20,000*l.*; convict expenditure, Australia, 171,600*l.*; revising-barristers, 40,000*l.*: Commissioners of Religious Instruction in Scotland, 10,000*l.*; in Ireland, 36,000*l.*; Portpatrick harbour, 12,226*l.*; Kingstown (Dublin) harbour, 15,000*l.*; British Museum buildings, 25,860*l.*; National Gallery, 31,112*l.*

Irish Miscellaneous Estimates. — Under the head of "Charitable Institutions," an aggregate sum of 97,345*l.* is put down: of which the most important items are, schools of education, 35,000*l.*; Foundling Hospital, 1400*l.*; House of Industry, 20,000*l.*; Catholic College, 8928*l.*; Royal Dublin Society, 5300*l.*; Royal Irish Academy, 300*l.*; Belfast Academical Institution, 2375*l.* Under another head there are, for nonconforming and other ministers, 26,579*l.*; for the police of Dublin, 17,900*l.*; for criminal prosecutions and low charges, 65,000*l.*; household of the Lord-Lieutenant, 12,406*l.* The whole amount for these and other charges for Ireland is 282,574*l.*

Colonial Miscellaneous Estimates. — These amount to 296,988*l.*. Among the items are—clergy, North America, 14,110*l.*: of this sum the Catholic Bishop of Quebec receives 1000*l.*; the Catholic Bishop of Newfoundland, 75*l.*; five Presbyterian ministers, 375*l.*, and the rest for the clergy of the establishment, including 3000*l.* to the Bishop of Quebec. The expense for the Indian department in Canada is 20,000*l.*; for justices in the slave colonies, 69,950*l.*; and for education in the slave colonies, 25,000*l.*

The documents, of which the following are abstracts, were introduced by the Chancellor of the Exchequer, on bringing forward the Budget:—

Reduction in Poor-rates by the operation of the new Bill.

Counties.	Estimated Annual Expenditure.	Average Annual Expenditure, 1833 4 5.	Saving On Annual Average Expenditure.	Saving Rate per Cent. on

Savings' Banks.—In the summary of depositors, and the amount of deposits in savings' banks in England, Wales, and Ireland, the increase or decrease since November 20th, 1834, is shown in the third column; and in the last the amount invested by each class of depositors on the 20th November, 1835. The increase in the number of depositors is about 7 per cent., and in the amount deposited about 6 per cent. The deposits of charitable institutions and friendly societies are not included.

Depositors.		Increase or Decrease. £.	Amount of Investment. £.

Insolvent Debtors.—The number of persons discharged as insolvent debtors in 1832, was 4648; 1833—4583; 1834—4275; 1835—3890.

British Produce of Manufactures Exported.—The declared value of the exports was, in 1833—36,531,000*l.*; in 1835—41,350,000*l.* Increase 4,819,000*l.*, or 13 per cent. Out of 17 articles there has been an increase on 14. The only articles on which a decrease has taken place are tin plates, salt, and refined sugar. The exports of the five great staples of manufacture have been as follows:—

Linen, 1834—2,579,000*l.*; 1835—3,226,000*l.* Increase 647,000*l.*, or 26 per cent.

Cotton, 1834—15,302,000*l.*; 1835—16,394,000*l.* Increase 1,092,000*l.*, or 7 per cent.

Hardware and cutlery, 1834—1,485,000*l.*; 1835—1,835,000*l.* Increase 350,000*l.*, or 23 per cent.

Silk, 1834—637,000*l.*; 1835—972,000*l.* Increase 335,000*l.*, or 6 per cent.

Woollen, 1834—5,975,000*l.*; 1835—7,046,000*l.* Increase 1,071,000*l.*, or 18 per cent.

Cotton Wool. — Home consumption in 1833—293,682,000 lbs.; in 1834—302,935,000 lbs; in 1835—333,080,000*l.*lbs. Increase in 1834 over 1833—3.15 per cent.; 1835 over 1834—10.36 per cent.; 1835 over 1833—13.48 per cent. The average consumption for the ten years from 1816 to 1825, was 138,120,000 lbs.; and from 1826 to 1835—255,975,000 lbs. Increase 85 per cent.

Saving effected in the Public Offices.—In 1815 the number employed in the public departments was 27,365: number employed in 1835—23,578. Salaries paid in 1815—3,763,100*l.*; ditto in 1835—2,786,278*l.* The actual reduction is, in salaries, 976,000*l.*; and in the number of persons employed, 3787. The reductions since 1825 have been:—Treasury, 27,421*l.*; Exchequer and Paymaster of Civil Services, 58,994*l.*; War-Office, including Military Boards, 29,509*l.*; Ordnance, 122,174*l.*; Admiralty and Naval Departments, 303,489*l.*; Excise, 152,301*l.*; Stamps and Taxes, 103,929*l.*; Audit Department, 54,078*l.*; Vice-Treasurer's Office, &c., 23,805*l.*

Estimated Income and Expenditure for 1836-7:—

Total income estimated for 1836-7 . .		£46,980,000
Total expenditure for debt and other charges on Consolidated Fund, exclusive of charge for West India grant	30,620,000	
Supplies for 1836-7 . .	14,585,807	
Total expenditure, exclusive of charge for West India grant		45,205,807
Surplus . .		1,774,193
The utmost amount of the liabilities that can occur in the year 1836-7 for the charges on the West India grant will be . . .	1,454,604	
But the probable amount of the same, for which payment will be required in this year, is only	1,111,863	
If, therefore, the latter amount be deducted from the above surplus . .		1,111,863
The remaining amount of surplus of income over expenditure will be . . .		£662,330

TRADE, STATISTICS, &c.

Algiers.—From Statistical Tables recently published in the French journals: European population on the 1st of December last.—Algiers 6649, Oran 1212, Bona 1154, Mostaganem 41; total, 9056. In March, 1835, the lands in cultivation in the district of Algiers were 15,000 acres, or 25 square miles. The total revenue raised in the colony in the year was 100,000*l.*, about one-fifteenth part of the expenditure. The ships which entered the ports of the colony in 1835 were 2090, their burden 136,000 tons, of which only one-fifth belonged to France. The imports of the colony were 1,040,000*l.*

United States.—The revenue of the quarter ending the 31st of March, was 10,725,000 dollars—namely, Customs, 5,006,050 dollars; Public Lands, 5,439,650 dollars; and Miscellaneous, 280,000 dollars. The amount of public money in the Treasury, on the 31st of March, was 31,895,155 dollars.

Public Instruction.—The "Instituteur," a French journal devoted to education, states that there are in France 43,951 primary schools, having together 2,453,254 scholars, two-thirds of whom are boys.

Grain consumed in Distilleries.—An approximate Return has been prepared by the Excise Office, of the total quantities of grain used in distilleries in the three kingdoms, by estimating 1 quarter of grain to every 14 gallons of spirits, if made from malt only, and the like quantity to every 19 gallons, where mixed grain is used, including barley, wheat, oats, and such proportion of malted grain as may be necessary. Upon these principles of forming a calculation, it would appear that the consumption for the last three years, ending October 10th in each year, has been as follows:—

Years.	Quarters.
1833 . . .	1,221,607
1834 . . .	1,238,047
1835 . . .	1,294,224

Price of Consols.—The following are the closing prices of the Three per Cent. Consols for Account on each of the undermentioned days:—

April 30.	May 7.	May 14.	May 21.
91⅛	92	92⅛	91⅞

Sugar.—Average price of Brown or Muscovado sugar per cwt., computed from the Returns published in the *London Gazette*:—

Weeks ending	April 26 . .	39*s.* 8*d.*
,,	May 3 . . .	40*s.* 1½*d.*
,,	May 10 . . .	40*s.* 9*d.*
,,	May 17 . . .	40*s.* 8¾*d.*

Corn and Grain.—Average prices per quarter in England and Wales, from the *London Gazette* of Friday, May 20:—

	Wheat.	Barley.	Oats.	Rye.	Beans.	Peas.
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*
Week ending May 17	49 3	33 2	23 1	33 4	38 9	40 10
Average of last six weeks .	48 5	32 6	22 4	31 6	36 10	38 11
Duty on foreign corn.....	38 8	13 10	13 9	22 9	15 6	12 6

Bankruptcy Analysis from April 24th to May 22nd.—Agent, 1; bill-broker, 1; bone-dust manufacturer, 1; brassfounder, 1; brewer, 1; builders, 2; butcher, 1; carpenter, 1; cheesemonger, 1; cloth-merchant, 1; coach-builder, 1; coach-proprietor, 1; coal-merchant, 1; cooper, 1; corn-merchant, 1; cotton-doubler, 1; cotton-spinner, 1; dealer, 1; drapers, 2; dyer, 1; factor (Birmingham), 1; flax-spinner, 1, fishmongers, 2; glass-manufacturer, 1; grocers, 4; hardwareman, 1; hotel-keepers, 2; iron-founder, 1; ironmonger, 1; machine-maker, 1; mercer, 1; merchant, 1; needle-manufacturer, 1; paper-manufacturer, 1; pastry-cook, 1; 1; plumbers, 2; potato-dealer, 1; poulterer, 1; printer, 1; scriveners, 2; silk-spinner, 1, slater, 1; stable-keeper, 1; stationer, 1; surgeon, 1; tailor, 1; timber-merchant, 1; victuallers, 3; wine-merchants, 2.—Total 61; from the 28th of December, 387.

CHRONICLE OF OCCURRENCES.

May 2. In the Court of King's Bench, the parties convicted of bribery at the Ipswich election were brought up for judgment. W. B Finch was sentenced to be imprisoned four months; J. M. Dasent, two months, and fined 100*l.*, and to be further imprisoned until paid; W. Filgrim, six months; and J Cooke, four months.

5. A new statute for excluding Dr. Hampden from one vote out of five in the appointment of select preachers for the University of Oxford, was this day brought forward in Convocation, and agreed to: the numbers being 474 to 94. The number of members who have the privilege of voting in Convocation is 2500. Sir John Campbell and Dr. Lushington have given it as their opinion, that the Convocation do not possess the power of curtailing any privilege belonging to Regius Professors. The undergraduates were not admitted to the theatre on the present occasion, their unruly conduct at the previous meeting having been strongly censured. In consequence of being excluded, about 800 of them assembled outside, attempted to force the doors, broke the windows, and kept up an incessant disturbance during the meeting

— It was stated by the lord-mayor, while presiding at the annual festival of the City of London School of Instruction and Industry, that there were in London 100,000 children totally destitute of education.

13. A public meeting, numerously attended, was held in London, for the purpose of forming a Colonial Missionary Society, to supply the great deficiency that now exists in the means of religious instruction in the colonies of Great Britain.

14. At the twenty-fifth anniversary of the Protestant Society for the Protection of Civil and Religious Liberty, it was moved, that the grateful thanks of the meeting were due to Lord Melbourne's administration for municipal reform; and the Dissenters were called upon at the next general election, to insist upon this one pledge, from every candidate for their suffrages—"Justice to Ireland." Edward Baines, Esq., M.P., in seconding the above resolution, said, "that the great principle on which the government of this country was at present conducted was, that every man should be placed upon a footing of equality with regard to all civil and religious rights; and it was their glory that they were arriving, perhaps somewhat slowly, at the establishment of this principle in every part of the empire."

16. The thirty-first anniversary of the British and Foreign School Society was held at Exeter-hall, Lord Morpeth in the chair. While an encouraging report was made of the exertions of the institution, it was stated that in the preceding year the expenditure had exceeded the income to the amount of nearly 500*l.* A donation of 100 guineas was announced from his Majesty.

17. At a preliminary meeting of the requisitionists for calling a public meeting of the citizens of Dublin, on the rejection of the Irish Municipal Reform Bill by the House of Lords, H. Grattan, Esq., M.P., in the chair, Mr. Sheil insisted that the time was arrived for "a strenuous and simultaneous movement of the popular masses." "From every district," he said, "petitions to Parliament, demanding justice, must be poured in; thousands must assemble; and above all, the active system of organization devised by O'Connell must be strenuously, immediately, and simultaneously supplied. Call it by what name you please—association, board, committee, anything—let us have the weekly meetings, the appeals to the people, the exciting eloquence, the enthusiasm, the devotedness—and again and again we shall beat down every obstacle before us. We are sure that the House of Lords can be brought to reason, and be persuaded to be just. But for this purpose the energy and determination of the people must be made manifest." An open committee was formed for obtaining, from all parts of Ireland, petitions for a measure of municipal reform founded upon the same principles of popular election and popular control already extended to England.

BOOK SOCIETIES, AND FAMILIES IN EVERY PART OF THE KINGDOM,

are regularly supplied with WORKS for PERUSAL, including all the NEW and STANDARD PUBLICATIONS, MAGAZINES, &c., upon the most Advantageous Terms to them, according to the New System just planned and conducted by EDWARD BULL, Librarian, 19, Holles-street, four doors from Cavendish-square.

Full particulars can be had on application, or sent by post.

TO THE NOBILITY, GENTRY, AND PUBLIC.

London, 1836.

FAMILIES OF DISTINCTION, and Visiters to the Metropolis at this Season, who frequently experience great difficulty in suiting themselves with Furnished or Unfurnished Houses, owing to the great demand, are respectfully informed every attention will be afforded in the HOUSE AND ESTATE AGENCY DEPARTMENT of HENRY L. COOPER in obtaining or disposing of the same, or in the Selling, Letting, or Valuing any description of Property in Town or Country.

From the central situations of the Establishments in their respective commanding localities, every facility is rendered to Families honouring his House with their instructions, and offering the advantage of a double Register, usually replete with eligible properties.

The general introduction of Plate Glass for Windows, Carriages, Conservatories, Internal Decorations, &c, has induced H. L. C. to annex a Tariff of Sizes adapted to those uses, with Prices exceedingly moderate, but of a Quality not to be excelled, also is added, an outline of his general business comprising the Cabinet, Upholstery, and Decorative Departments, in each of which the most careful attention is paid both to Quality and Cost.

HENRY L. COOPER,

Plate Glass and Furniture Warehouses,

93, BISHOPSGATE STREET WITHIN,

AND

WESTERN BRANCH, 57, CONDUIT STREET,

(NINE DOORS FROM REGENT STREET, LEFT HAND SIDE.)

Among the variety of Articles above referred to, will be found LOOKING-GLASSES of every denomination and size, varying from one foot to eighty feet and upwards, PLATE-GLASS for Windows, Carriages, &c, which possess great advantages over crown, and when required for exportation, a considerable drawback obtained.

Annexed are the Prices of Current Sizes of Plate-glass, for Sashes, &c.

In	Inches. 15			Inches. 18			Inches 20			Inches 22			Inches 25			Inches. 28			Inches. 30		
	£	s.	d.	£	s	d	£	s.	d	£	s.	d.	£	s.	d.	£	s.	d	£	s.	d.

38	1	15	7	2	2	9	2	7	6	2	12	3	2	19	4	3	6	6	3	11	3

Or any sizes containing from 3 feet to 8 feet, at 9*s*. per foot, thus a plate being 30 inches by 18 inches contains 3 feet 9 inches superficial measure, and costs 1*l*. 13*s*. 9*d*., as per above tariff. All under 3 feet superficial at a reduction.

CARVING AND GILDING IN ALL ITS BRANCHES.

In this department will be found a very elegant and extensive variety of Chimney and Pier Glass Frames, Cornices for Windows, Ornamental Tables and Furniture, and richly-mounted Frames in various sizes for Portraits, Paintings, &c. Paintings and Prints mounted, framed, and re-gilt.

PAPER-HANGING AND INTERIOR DECORATIONS,

in all its Branches, from the most simple to the first Style of Elegance. A rich variety of new Patterns on show.

IN THE UPHOLSTERY ARRANGEMENT

the greatest attention is paid to unite elegance with economy in character for the Drawing-room, Boudoir, Dining-room, Library, and Bed-chamber, from the most quiet to the most costly styles. In the various articles of Chintzes, Moreen, Damask Silks, &c., a great variety of the most splendid and novel styles are constantly on view, of those qualities which can alone ensure permanent satisfaction, the extreme disparity of prices in these articles, mainly arises from the inferiority of the fabric.

CABINET, CHAIR, AND SOFA WORK

manufactured of the most seasoned materials. In the finish of Chairs, Sofas, &c, much depends on the quality of the materials used and the workmanship. It may not be unworthy of remark, that a similar effect may be produced at a saving of nearly one half, but which in the wear must eventually prove a serious disappointment to the purchaser. This applies also to the manufacture of Cabinet Goods, which, from being made of unseasoned materials and unsound work (that cannot be detected by the casual observer), can never be of that service and durability so essential. H. L. C. begs to add, that he manufactures them on his own premises, and has always on hand a large stock of well-seasoned materials, which enables him to produce work at the lowest possible rate, and of a superior quality.

STEAM AND SAILING VESSELS PROPERLY FITTED UP

with Cabin Furniture and Passengers' Requisites.

SOLID AND PORTABLE FURNITURE,

Bedding, Musquito Hangings, &c. for Foreign Climates. Families going abroad will receive every information respecting the Articles best adapted for their particular destinations. Merchants, Captains, and Dealers supplied with the utmost despatch, on the most liberal terms

CARPETING

of the fabric especially made for the first upholstery houses, viz.—Brussels, Kiddermenster, and Venetian; also a few of the much-admired Velvet Pile Carpets, Hearth Rugs, Druggets, Baize, Floor Cloths, &c.

BEDDING, BLANKETS, &c,

well seasoned, real Dantzic Feathers, also equally prepared light downy Feathers for second and third-rate Beds, Elastic Spring Hair and Wool Mattresses, real Witney, fine Bath, and York Blankets, Marseilles Quilts and Counterpanes. In the articles of Bedding, Blankets, &c., so essentially important to all, H. L. C. is determined that no trader shall supply them on better terms.

Families in the Country may command the most approved Taste, by being waited on at Home with Patterns—and Designs made on the spot, calculated to harmonize with the plans, proportions, and decorations of the rooms, and their Orders delivered, and boxed on terms forming a very small addition to the first cost by the system adopted in this Concern.

With this short enumeration of the leading articles of his trade, and the very favourable terms on which he undertakes to supply them, Henry L. Cooper appeals to all classes for a continuation of that flattering preference hitherto afforded to his House, 93, BISHOPSGATE-STREET WITHIN; WESTERN BRANCH, 57, CONDUIT-STREET, nine doors from REGENT STREET,

H. L. C. begs respectfully to solicit particular attention to the Address; also that any Article will be exchanged should a fair objection arise, thus securing the public from risk.

THE METROPOLITAN BRITISH & FOREIGN CLOTHING ESTABLISHMENT,

LONDON. **97,** FLEET-ST.

GEORGE DAVID' EDWARDS.

In remarking on his

FIRST-RATE QUALITIES,

G. D. D. respectfully addresses Gentlemen who have hitherto found it necessary to pay extravagantly high prices for really First-rate Clothes, to such he guarantees a **DRESS COAT** of any colour—as stylish in make, as tasteful and talented in cut, and as good in quality, as any bearing the names of the most expensive and favourite Fashionable Houses, for.....£3 0
Surtouts, including, of course, Silk linings 3 10
Black and Blue, 10*s*. extra on each
Buckskin Trousers, on G. D. D.'s new principles of Measurement, 1 8
Waistcoats 14
Ladies' Riding Habits..... 6 6

These will be found of that character which has raised this Establishment to such eminence in the estimation of the higher circles, where nothing short of **easy gentlemanly elegance** could be tolerated.

THE SECOND-RATE QUALITIES

Are especially recommended for Business and Travelling Clothes; also, to the **ECONOMIST** they are found preferable to the first on account of their superior Durability, while in appearance none but the Connoisseur could discover a difference, excepting by comparison; in short, they are frequently substituted at other Houses for the Best. The Prices are, for **DRESS COATS**, of any colour (Style and Fit First-rate) £2 5
Surtouts, including Silk linings, 2 10
Black or Blue, 5*s*. each extra
Trousers 1 1
Waistcoats 10
The Army Blue Spanish Cloak, forming a circle of 9 yards round the bottom—the best Travelling Cloak that is made 2 10
A good Cloth ditto, with Fur Collar, and Cape—9 yds round 3 3
Milled Petersham Great Coat.. 2 2

CONTRACTS FOR FIRST-QUALITY CLOTHES

As generally adopted, are objectionable, because they confine Gentlemen to one particular Dress, or subject them to considerable Extra Charges: G. D. D.'s system removes this difficulty by leaving at the option of the Customer what he chooses to wear, whether Surtouts or Dress Coats, either Coloured or Black, his Prices, including all extras (excepting Velvet Collars), being for
Two Suits per Annum.....£10 0
Three ditto ditto 14 18
Four ditto ditto 19 12
and so on in proportion to the number of Suits. Each Suit to be returned on the delivery of its successor. Gentlemen who take three or more Suits per Annum are allowed two Suits in wear during the whole term; thus in a contract for three Suits a Dress Suit and an Undress Suit are supplied together. The Dress Suit to be kept for twelve months, and, at the expiration of six months, the Undress Suit is returned, and another supplied to continue to the end of the term, the contract amount for each Suit being paid on delivery. Contracts for the second quality would be much lower.

A Suit of First-rate Liveries..... £3 18 6
For **WASHING TROUSERS** and **WAISTCOATS** definite prices cannot be stated, on account of the variety of Materials; but a very superior article for **SUMMER TROUSERS** are charged **10s.** per pair, and **WAISTCOATS, 6s.** each.

G. D. D respectfully informs **COUNTRY GENTLEMEN**, that, on account of the numerous invitations he has received to make Periodical Circuits through England, his Traveller will wait on them occasionally, or will proceed direct to any part where three or more Gents. (according to the distance) favour him with their Addresses.

THE FIRST HOUSE IN ENGLAND FOR DRESS WAISTCOATS.

LIBRARY FOR THE YOUNG.

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.

This day, with Six Wood-cuts, price 3s. 6d.,

The SUPPLEMENT to the MUSICAL LIBRARY. — No. XXVII. Price 6d.

London: CHARLES KNIGHT, 22, Ludgate-street.

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE

This day is published, price 1s.

THE PENNY CYCLOPÆDIA,

PART XLI.

ADVERTISEMENT TO VOLUME THE SIXTH.—The Fifth Volume of the 'Penny Cyclopædia' being now finished, the Committee of the Society, and the Publisher, feel themselves called upon, for the satisfaction of the numerous body of Purchasers, to announce their intentions with regard to the completion of the work. The great anxiety of the Committee and of the Editor has been to produce a Cyclopædia which, in accuracy, completeness, and originality, should not be surpassed by any similar publication of this or any other country; and the Publisher has not hesitated to incur the large expenses which are necessary for the attainment of this excellence, although the work is sold at a price not amounting to a fourth of the cost of any other Cyclopædia of established reputation The articles in this work have been drawn up with the greatest care from the best and most recent authorities It will be found, on making a comparison, that the essential differences between the articles in the 'Penny Cyclopædia' and those in other Cyclopædias or Dictionaries, are sufficient to prove that original sources of information only, and not previous compilations, have been consulted by the writers for this work Independently of this, the numerous references given in all the more important articles show distinctly what are the authorities that have been used, they indicate to the careful reader the means of extending his knowledge on any particular subject, and at the same time give him the power of testing the general accuracy of the work, by consulting the same sources of information that have been used by the writers. By means of the gentlemen who are members of the London and Local Committees, and with the aid of other gentlemen, not members of the Committees, who have in many cases kindly given their assistance, the present work has had the advantage of a careful revision of many of the most important articles, and has received a number of valuable additions from documents and authorities which have never before been made public.

A publication such as this, among at the union of excellence with cheapness, requires the support of a very large body of purchasers, and this support has been obtained. The continuance of this support must, however, in great part, depend upon the Cyclopædia being completed within a reasonable period, and in a moderate number of volumes, it being borne in mind, at the same time, that no rate of publication must be attempted which would prevent the careful revision of every portion of the work, and that no scale as to the length of articles must be adopted which would destroy their usefulness It has been the constant endeavour of the Editor and the gentlemen who contribute to the Cyclopædia, to render the articles as concise as was compatible with preserving their value, and experience will now enable them to effect this object more completely than has already been done Added to this, many of the articles already published are, necessarily of greater length than the majority of those which are to come, for advantage has been taken, in most cases, to explain the general principles of a subject on the first notice of a word connected with it, and in many instances it has been considered advisable to give under one head or title such a general view of a subject as will render it sufficient, in many subsequent heads or titles, to refer to the general article. Without any material alteration of the present scale as regards the length of the more important articles, the Committee feel assured that *somewhat more than a fourth of the whole Cyclopædia is now published*, and they therefore propose that the work shall be completed in Eighteen Volumes of the present size, and they pledge themselves that it shall not exceed Twenty Volumes. Having settled these limits, the Committee look forward with confidence to the production of a work which will be useful to the most critical student by its completeness and accuracy, and will present a vast body of information, at the cheapest rate, to those who are seeking for knowledge in a popular form.

In order to comply with the wishes of the bulk of the Subscribers to the Cyclopædia, it is the intention of the Committee, upon the completion of the letter B, to publish at the rate of *Three Volumes Annually*, instead of Two, so that *the entire work may be published in little more than Four Years from the present date*. The Monthly Parts will therefore be raised to Eightcenpence each, and *Four Parts will complete a Volume*, instead of Six.

In making this announcement as to an increased speed in publication, and giving this pledge as to limitation of quantity, the Committee and the Publisher beg it to be understood that they consider those arrangements as final. They do not think it possible to proceed at a quicker rate than they have announced, or to attempt any curtailment that may reduce the number of volumes below eighteen, without injury to the character of the work.

London: CHARLES KNIGHT, 22, Ludgate-street.

On Wednesday May 25, was published, in 2 Vols. post 8vo., with numerous Wood-cuts, price ONE GUINEA,

PALEY'S NATURAL THEOLOGY, with Illustrative Notes, by HENRY LORD BROUGHAM, F.R.S. and Member of the National Institute of France, and SIR CHARLES BELL, K.G.H., F.R.S.L. & E., Professor of Surgery in the University of Edinburgh, formerly of the Council, and Professor of Anatomy in the Royal College of Surgeons, London, &c. &c. To which are added SUPPLEMENTARY DISSERTATIONS, by SIR CHARLES BELL.

London: CHARLES KNIGHT, 22, Ludgate-street.

On Saturday, May 27, in 2 Vols. post 8vo, price ONE GUINEA,

THE COTTON-MANUFACTURE of GREAT BRITAIN SYSTEMATICALLY INVESTIGATED, and illustrated by 150 Original Figures engraved in Wood and Steel, with an Introductory View of its Comparative State in Foreign Countries, chiefly drawn from Personal Survey. By ANDREW URE, M.D., F.R.S., M.G.S., M.A.S. London, M. Acad. N.S. Philadelphia, Corresponding Member of the Pharm Soc North Germany, and of the Société Industrielle of Mulhausen, &c., &c., &c

London. CHARLES KNIGHT, 22 Ludgate street

LIBRARY OF ANECDOTE AND TABLE TALK.

This day is published, fcp 8vo, price 6s,

THE BOOK of TABLE-TALK, Vol. I., illustrated with many Wood cuts.

"I love anecdotes. I fancy mankind may come, in time, to write all aphoristically, except in narrative, grow weary of preparation, and connexion, and illustration, and all those arts by which a big book is made If a man is to wait till he weaves anecdotes into a system, we may be long in getting them, and get but few in comparison of what we might get."—*Dr. Johnson (Boswell's Tour)*

London. CHARLES KNIGHT, 22, Ludgate street

REFORM OF THE SCOTTISH UNIVERSITIES.

This is a subject to which, for some years past, the attention both of the public and of the legislature has been a good deal directed. No inquiry or interference with the Universities of Scotland, on the part of the State, had taken place since the year 1690, when, under an Act passed by the Scottish Parliament, entitled an "Act for Visitation of Universities, Colleges, and Schools," certain persons therein named were constituted and appointed visitors, with full power and commission to consider the foundations of these institutions, with the rents and revenues thereof, and how the same had been administered and managed, and to set down rules and methods for the good management thereof in future; as likewise for ordering the said Universities and Colleges, and the professors and manner of teaching therein, and all things else relating thereto, as they should think most meet and convenient, according to the foundations thereof, and consistently with the established government of Church and State. A dispute which arose in 1826 between the Senatus Academicus of the University of Edinburgh and the town-council of that city, induced both parties to apply to Government for a royal visitation; and the consequence was the appointment of a Commission for visiting and inquiring into the condition, not only of the metropolitan University, but also of each of its sister establishments. The original commissions were dated the 23rd of July, and 28th of September, 1826; and after the accession of his present Majesty the powers of the Commissioners were renewed by another commission, dated the 12th of October, 1830. On the 28th of the same month the Commissioners gave in a general Report of great length, having separate Reports on each of the Universities appended to it, together with a large mass of evidence. These documents were some time after, laid, by order of his Majesty, before the House of Commons; and the several Reports, but without the evidence, were ordered by that House to be printed on the 12th of March, 1832. The volume forms No. 100 of the House of Commons' papers of that Session, and contains 436 folio pages.

No step having been taken by the Government to carry the recommendations of the Commissioners into effect, two Bills were introduced into the House of Commons in 1834, by individual Members of Parliament —the one by Mr. Oswald, for the regulation of the University of Glasgow,—the other by Mr. Bannerman, for the union of the two Aberdeen Colleges into one University, with a new constitution. The former of these measures, however, was withdrawn after it had passed through the Committee, and the latter after the second reading.

Within these few days, however, a general measure on the subject has at length been submitted to the House of Lords by Viscount Melbourne, in the form of a Bill entitled an "Act for the Visitation and Regulation of the Universities of Scotland." We shall, in the first place, briefly state the leading provisions of this proposed measure.

The Bill begins by reciting that the rules and regulations established by the visitors under the Act of 1640, "have proved insufficient for the objects in view, or have not been duly observed;" and that the late Commissioners suggest in their Report, "that the most expedient form of introducing the necessary changes in reference to the said Universities and Colleges which might be found not to be within the existing powers of the Crown, was for Parliament to grant special powers to his Majesty in regard to the same, and that it was expedient that Royal visitors should be appointed, with authority to superintend the execution of the regulations to be approved by his Majesty in the Report of the said Commissioners, and to modify or extend such regulations, as circumstances might appear to require." It then enacts, "That it shall be lawful for his Majesty, if he shall think fit, with the advice of his Privy Council, to appoint a Board of Visitors to the several Universities of St. Andrews, Glasgow, and Edinburgh, and to the Universities of King's College and Marischal College, of Aberdeen; and such Boards shall respectively (including the constituent members thereof herein after nominated) consist of not fewer than five, or more than seven members, and shall subsist for a period of five years from and after the appointment thereof." By subsequent clauses it is enacted that the Principals of the several Universities, for the time being, shall be constituent members of the respective Boards of Visitors, —that a majority of the members of each Board shall constitute a quorum,—that the chairman, who shall be chosen by the members, shall have only a casting vote in cases of equality,—and that in case of a vacancy occurring in any of the Boards, it may be filled up by the Crown.

It is then provided, "That the several Boards of Visitors to be appointed as aforesaid, shall constitute a Court of Review in the University to which such Boards are so appointed respectively; which Court shall have full power and authority to entertain and determine all questions which shall be brought before the same, in relation to the regulation and discipline of the University, the management and distribution of the property and funds thereof, or under their administration, and generally, in all questions touching the affairs and interests of such Universities, of whatever kind or description." Appeals, it is added in another clause, may be made to the said Court of Review, by any person connected with the University, "against any decision, deliverance, or regulation made or pronounced by the

 [Printed by WILLIAM CLOWES and SONS, Stamford Street.]

Senatus Academicus, or Rectorial Court of such University, or by any other court, body, or person, possessing, or claiming to possess, any jurisdiction, control, or authority in regard to the regulation, discipline, property, and administration of, in, or concerning such University."

The unlimited language here made use of would seem to go the length of even superseding the authority of the ordinary courts of law, and giving a right of appeal in any matter connected with the Scottish Universities from the highest legal tribunal in the country to these Courts of Review, the members of which at the same time appear to be bound to the observance of no rules or statutes whatever beyond those which they may please to lay down by their own authority. Even in dealing with questions of property they seem to be authorised to dispense, not only with foundations and charters, but also with Acts of Parliament, and all the established principles of law. There are many rights both of property and of other kinds which individuals possess, or lay claim to, in connexion with these Universities; surely it never can be intended that all such rights and claims should be thrown in a heap into the hands of the new royal courts, to be treated just as they, acting without either control of law or responsibility, shall think fit, to be abridged or extended, confirmed or extinguished, without regard to anything except the view of general expediency that may chance to be taken by this arbitrary supreme jurisdiction. Indeed, if we have rightly understood the terms of the clause, it may be safely affirmed that these proposed Boards will form a species of courts, with powers far transcending any that were ever before delegated by Parliament.

The authority to be exercised by the Boards of Visitors, in making regulations respecting the internal arrangements of the Universities, as conveyed by subsequent clauses, is of the same ample description with that which is conferred upon them in their capacity of Courts of Review; only that it is provided by the 12th clause, that all such regulations which they may make shall, within one month after the same shall be framed and settled, be submitted to his Majesty's Privy Council for revision and approbation. The supreme authority here, therefore, is divided between the Boards of Visitors and the Crown. The former are also required, in framing their orders, to take into consideration the representations of the Senatus Academicus, the patrons, and the professors, and to have regard to the Reports of the late Commission of Visitation. With these slight restrictions—if they at all deserve that name—the Boards are authorized "to make such regulations in relation to the government, discipline, and system of education in the Universities, and to the management and distribution of the property and funds thereof, as they shall think most conducive to the improvement of education in such Universities, and to the beneficial administration of the affairs of the same;" and further, "to make such regulations regarding the abolition of professorships within the universities to which they shall be appointed, or to the institution of new professorships therein, and also regarding the endowment of professorships instituted, or to be instituted in such Universities, out of the funds of the same, as shall appear calculated to promote the prosperity and success of such University, and the interests of science and learning." Of course, they are restrained from interfering with any existing professorship during the life of the present incumbent or holder, and from injuring or affecting the legal vested rights or interests, or the pecuniary or other emoluments or advantages derived by any such present professor, from or out of the property or funds of the University. But the rights of patrons and all other parties connected with the Universities, except the professors, seem to be left at their mercy.

By subsequent clauses the rights of patrons are directly interfered with. In the first place, it is enacted that in no case shall it be lawful to fill up a vacancy in a professorship until the expiration of two months, at least, after the fact of the vacancy shall have been intimated by the Principal of the University to the Board of Visitors. And then, in all cases in which the professors are patrons of the vacant chair, no professor who has been appointed by the Crown since the year 1832, is to be allowed to vote, but the Board of Visitors are to nominate a person to act as elector for, and in lieu of the professor, or several professors, so excluded from voting, and such person shall have a vote for each professor, in whose place he shall be so appointed to vote and act. In other words, the patronage, in all these cases is to be transferred from the professors to the Board of Visitors. Provision is afterwards made for gradually extinguishing altogether the right of patronage at present belonging to professors, and vesting it in the Crown, unless Parliament shall interfere to make another disposition of it.

Of the remaining clauses, one directs the Board of Visitors to be nominated to the Universities of Aberdeen to consider and report upon the propriety of uniting King's College and Marischal College; and another enacts, that in case the office of Principal of the United College of St. Andrews shall become vacant before the expiration of the Commission appointing a Board of Visitors to that University, it shall be lawful for the said Board to nominate any of the professors of the said University to such vacant office, and to appropriate the salary of the said Principal, either partially towards an additional salary of the professor so to become Principal, or towards the endowment of a new professorship, or to provide for its accumulation towards the creation of a fund for the payment of suitable retiring salaries to the professors of the said college, who, from age or sickness, may be unable to discharge the duties of their respective offices.

The only other clause of any importance is the 19th, which enacts that the Board of Visitors shall annually, on or before the 1st of April, make Reports of their proceedings to the Secretary of State for the Home Department; which Reports shall, within one month thereafter, be laid before both Houses of Parliament, if Parliament shall be then assembled, and, if not, then within a month after the meeting of Parliament.

This Bill then may be shortly described as a proposition for throwing the entire business of regulating the Universities, and, with scarcely any exception, the settlement of the rights and claims of all the parties connected with them, into the hands of five Boards, to consist of from twenty-five to thirty-seven individuals, all, except four, nominated by the Crown, not liable to be removed even by the power that has appointed them, and released from all obligation to decide the questions that may come before them according to any other law than that of their own pleasure. Sitting as courts superior, in regard to the matters over which they have jurisdiction, to every other court in the kingdom, they are not even bound to hold their sittings in public. Nor is any provision made for ensuring uniformity in the decisions of so many separate and independent tribunals. Each is left both to settle the disputes of the parties that may appeal to it, and to form a new constitution for the University that is to be given up to it, according to its own particular views or fancies; and the probability is, that in both tasks the most contradictory principles will be brought into operation in the different cases.

It does not appear whether or not salaries are to be paid to the visitors; but from the number of persons to be appointed, it is likely that their services are to be gratuitous. In that case each Board must be composed of such individuals willing to undertake the duty, and

having leisure to perform it, as can be found on the spot. In this way there seems reason to apprehend that the field of selection will be very inconveniently narrowed, and that the office will not always fall into the hands of those most competent for its discharge. Besides, the system of having public services rendered without pay is vicious in principle. It is not to be expected that people in general will really give their time and labour to the public for nothing; if they are not paid in salaries, they will take care to be paid in some other way. They will, at least, have consideration and authority if they cannot get money—more consideration and authority than it is right they should have; or, they will perform the business assigned them, not with the diligence and submission to rule, of persons feeling that it has a fair claim upon their best exertions, but rather in the notion that, as they are doing the public work for nothing, they may do it in the way that best suits their humour or convenience.

While upon the subject of the powers proposed to be conferred on the visitors, it may be proper to mention that some stress appears to be laid on the privilege accorded to the Senatus Academicus of proposing the reforms to the Board in the first instance; but the visitors are in no respect bound to adopt the suggestions thus submitted to them, and the provision, therefore, does not in the slightest degree interfere with their absolute authority. It gives them the advantage of the advice of the professors, in so far as they choose to take it, and that is all.

We confess that the five separate Boards seem to us to be a machinery, beyond all necessity or use, extensive and cumbrous. Surely, after the long and minute examination of the subject by the late Commissioners, who spent nearly four years in investigating and considering it in all its details and all its extent, and who have recorded in a series of voluminous reports, both the facts ascertained in the course of their inquiries, and a full detail of the various measures of reform which they deemed to be advisable, it cannot require the labours of five additional Boards for five years more, merely to carry the propositions thus made into effect. The new Boards, indeed, are to be authorized to begin the investigation anew, if it shall so please them, and to substitute altogether new arrangements of their own for those proposed by their predecessors. What is expected to be gained in this way we are at a loss to conceive. There seems to be no reason for anticipating that the views and conclusions of the new Boards will be, upon the whole, sounder or better considered than those of the old ones. If the plans of the latter, therefore, are not thought deserving of adoption, why is it to be assumed that those of the [illegible]ll necessarily be so much wiser, that Parliament ma[illegible]ely, beforehand, sanction their being at once carried into execution by their authors, subject only to such amendments or objections as may be offered by the Crown?

The Bill has all the look of a lazy expedient for relieving the Government from the trouble of taking the arrangement of the business into its own hands, as we cannot help thinking it was bound to do, at least in regard to the fundamental principles and great outlines of the reform to which the Universities are to be subjected. But if the whole of this task must be devolved upon a new body of Commissioners, at the same time that the investigations and recommendations of the Commission which has already inquired into the matter are to go for nothing, we are decidedly of opinion that one Board would answer the purpose quite as well as, and indeed much better, than the five which it is proposed to appoint. We see no chance, as we have already observed, of fit persons being found to compose so many Boards. Most certainly it is altogether improbable that each of these local Boards will bring to its task anything like the amount of ability which might be concentrated in a single Board, or which was actually embodied in the former Commission, whose judgments and recommendations, nevertheless, the new visitors are to be entitled to throw overboard at their pleasure, their own views and the enactments founded upon them, which they may substitute, becoming final, and having all the force of law. Then, you are likely to have as many different systems as you have Boards, and the reform of the Universities, when it is completed after this mode of proceeding, stands a chance of being a shapeless mass of contradiction and confusion, like any other production of many hands working without concert and without a common head.

It has been stated that the Bill, in the generality and vagueness of its enacting clauses, and the large powers it confers upon the royal visitors, is in conformity with the recommendation of the late Commissioners themselves. But this statement is not quite correct. The Commissioners say in their Report (p. 14), "We beg leave humbly to suggest that, in framing any Act of Parliament, it may be expedient that it should not consist of positive enactments, embracing the details of the particular changes intended to be introduced, but should rather confer on your Majesty, by legislative provisions, full power and authority to make, in the exercise of the right of visitation, the special alterations recommended in this Report, and to embody them in the Statutes of Visitation, which are to form the code of laws for the government of the Universities." To propose that his Majesty should, by Act of Parliament, be authorized to make certain alterations in the constitution of the Universities which are distinctly specified, is a very different thing from proposing that the legislature should sanction by anticipation, and give the force of laws to any changes whatever that may obtain the approval of his Majesty on the recommendation of any one of five Royal Boards, which are not yet appointed, and all the members of which are probably yet to be sought out.

There is another point which deserves to be noticed. It appears by the words already quoted from the Bill, that the royal visitors are to be commissioned to act for five years, nor is any provision made for the cessation of the functions of any one of them, except only in the event of his death. Would it not be proper that the Crown should be empowered to withdraw its commission in any case in which it should see occasion—unless, indeed, this discretion be already a part of the prerogative in regard to all royal commissions. If we rightly understand their words, the Commissioners who have already inquired into, and reported upon, the state of these Universities, consider their powers as in existence up to the present time; and unless their commission can be annulled, they may dispute the management of the business with the new Boards. Towards the conclusion of their Report, they say—"In regard to the code of laws or statutes of visitation which are submitted to your Majesty along with this Report, we are aware that various alterations may be proposed before these statutes can be finally issued, which it may be necessary to adopt, in order to render them better adapted for practical operation, and that many additional regulations may become necessary, in order to carry into effect some of the recommendations and suggestions which we have made. As your Majesty's Commission continues the powers committed to us as visitors until these Statutes shall be finally issued, and the other purposes of our appointment shall be accomplished, such additions and alterations may be carefully considered by us, and submitted for your Majesty's approbation, after your Majesty's pleasure in regard to our recommendations, has been notified to us." It is plain, from these expressions, that the authors of the Report were not at

all prepared when they drew it up for the task which they had begun, and carried on so far, being taken out of their hands, and made over to be finished by others, in the manner that is now proposed.

CHANGES OF ADMINISTRATION AND HISTORY OF PARTIES.

(Continued from No. 42).

WE resume our account of the debate in the House of Lords on the Address of Thanks, at the opening of the Session which commenced on the 25th of November, 1779.

In his speech, Lord Lyttelton, who stated that he had lately returned from Ireland, drew a forcible picture of the extraordinary attitude the people of that part of the kingdom had taken. "Ireland," he said, "is ready to part from us. Ireland, my Lords, is armed, and what is her language? 'Give us free trade;' and not only that, my Lords, but they add something more, 'and give us the free Constitution of England, such as it was originally, such as we hope it now continues and will remain, the best calculated of any in the known world for the preservation of freedom.' This language, my Lords, is not the language of an idle mob, it is the loud voice of the whole kingdom of Ireland, who thunders it in your ears, and who will be heard. The Parliament itself says—Government there, my Lords, as well as here, has a majority at command, but that majority dare not dissent from the popular opinion in this particular; it is therefore the unanimous voice of Parliament, and through them of all Ireland—that nothing less than a free trade will content them, and that they will have it." Of the associations he said—"They are now, at least the greatest part of them, disciplined, and have not only received the thanks of their counties, but of both Houses of Parliament, and of the Lord-Lieutenant, in whose printed speech you will find those thanks." "Let me also, my Lords," he added, "recite to you an expression which I heard from a gentleman in the Irish House of Commons, and which struck me very forcibly: talking of the situation of Ireland, her necessities, and her just rights, 'We have, Sir,' said he, addressing himself to the Speaker, 'our back towards England, and our face towards America.'"

Lord Hillsborough, in reply, professed to be surprised at hearing the Noble Lord give so exaggerated an account of the situation of affairs in Ireland. "He had been in that kingdom as well as the Noble Lord, and he believed, more recently; and he had never seen or heard of any of those forerunners of tumult, sedition, or revolt, which had been so strongly described by the Noble Lord; he was satisfied the case was exactly the reverse; that the people of Ireland were not only loyal, but affectionate; and that it was as abhorrent to their principles as it was alien to their hearts and inclinations to employ those arms which were put into their hands for their safety, protection, and self-defence, in endeavouring to dissolve the ancient and constitutional connexion by which both kingdoms were knit together." The new Secretary, however, admitted that the situation of Ireland was, to the last degree, miserable and distressed—that the people were starving and unemployed—and that measures of relief were become highly necessary. Such measures, therefore, it behoved the Legislature to adopt, "not from any motives of compulsion or threat, such as had been held out by the Noble Lord, but upon solid and substantial grounds of good policy and mutual benefit."

The controversy upon the subject of Ireland between Lords Lyttelton and Hillsborough was continued through several additional speeches, in which the former Noble Lord, whose abilities were of a very high order, greatly distinguished himself. It was the last appearance this young Nobleman ever made in Parliament. He died suddenly on the 27th, in the thirty-sixth year of his age. Everybody has heard of the story of the ghost that is said to have announced his death to him three days before it took place, and which has been often quoted as one of the most extraordinary and seemingly best authenticated relations of the kind on record.

In the preceding August, the combined fleets of France and Spain, amounting to nearly seventy ships of the line, besides a great number of frigates and fire-ships, had entered the British Channel, and while the British fleet commanded by Sir Charles Hardy fled before them, had approached the town of Plymouth, and threatened a descent, which, if they had executed, there can hardly be a doubt that that important place must have fallen. This subject was now taken up by the Duke of Richmond. His Grace frankly expressed his astonishment that the Noble Lord at the head of the Admiralty (Lord Sandwich) was not ashamed to stay in office, when every day's experience afforded fresh proofs of his total unfitness for his important station. He then alluded to the fact, that all the most distinguished naval officers belonging to the country—Keppel, Howe, Harland, Pigot, Barrington—to mention no other names,—had distinctly declared their determination never to serve under his Lordship; and that, he observed, if no other reason existed, ought to be a sufficient motive to induce the Noble Lord to resign. He went on to remind him of his constant answer on former occasions to all who expressed any apprehension of either a French or a Spanish war,—"that any First Lord of the Admiralty who had not always in readiness a fleet equal, if not superior, to the House of Bourbon, ought to lose his head." Was the fleet in the Channel, asked his Grace, equal to cope with the united fleets of France and Spain in the late campaign? He then informed the House, that he was in the neighbourhood of Plymouth at the time of the sudden terror excited in the minds of the inhabitants by the presence of the enemy, and he was never more astonished than when he beheld the weak and defenceless condition of the place. "There were guns and shot, but neither the one nor the other answered; but if there were guns and shot, all pieces of what are called small stores were totally wanting; there were neither handspikes to work the guns, or give them the necessary direction, nor wadding, rammers, sponges, spring-bottoms, nor, in short, any one part of the apparatus fit to receive an enemy. The persons who were to work and direct them, were still, if possible, less able to answer any one purpose of defence; they consisted, in the whole, of thirty-six or thirty-eight persons—most of them old and infirm." His Grace computed that besides the possible injury which the inhabitants of the town might have suffered in the loss of property, the stores, shipping, docks, &c., might be well estimated at a loss equal to 5,000,000*l.*, attended with this circumstance, that the mere loss of property was not the object, but the difficulty, if not impossibility, of repairing it in due time. From whence could we procure the necessary supplies of timber, stores, guns, sails, rigging, &c.? The attempt would have been impracticable; and, though we had not lost a single ship of the line or frigate, the capture of Plymouth, or rather its destruction, would in fact amount to an annihilation of the navy of England." The debate lasted till half-past one in the morning, when a division took place, and the amendment of the Marquis of Rockingham was negatived by a majority of exactly two to one, the numbers being, for the amendment 41, against it 82.

In the Commons, an amendment to the Ministerial Address was also proposed by Lord John Cavendish, and gave rise to a long and violently personal debate, in which nearly the same topics were urged by

the assailants of the Government as in the House of Lords. The original Address was eventually carried by a majority of 233 to 134. This debate is memorable, as having occasioned a duel between Mr. Fox and Mr. William Adam, Member for Gatton, in which the former was wounded. Early in the debate Mr. Adam, who had till now voted with the minority, had intimated his intention of supporting Ministers; and his desertion was made by Mr. Fox the text of some very severe remarks.

The contest that had thus commenced was carried on throughout the remainder of the Parliamentary campaign with the ardour that was to be expected from this first encounter, and with a fluctuation of fortunes that renders the present Session one of the most remarkable in the history of parties. We can afford only to notice, very shortly, a few of the most memorable occasions on which the opposing bands made trial of their strength.

The first ground that was taken up from which to make an attack upon Ministers, was the state of Ireland. This subject was brought before the House of Lords on the 1st of December by the Earl of Shelburne, who concluded a long speech, by moving that it was highly criminal in his Majesty's Ministers to have neglected taking effectual measures for the relief of Ireland, and to have suffered the discontents of that country to rise to such a height as to threaten a dissolution of the constitutional connexion between the two kingdoms. In the course of the discussion that arose, Earl Gower said that he was fully convinced the charge urged against Ministers was strictly true; but he should vote against the motion, on the ground that they had desired a few days to acquit themselves, and the dignity and wisdom of Parliament was interested in giving them the short time they asked. On a division, the motion was negatived by a majority of 82 to 37.

A similar motion, made in the Commons on the 6th, by the Earl of Upper Ossory, gave rise to a long and animated debate, followed by a division, in which Ministers beat their opponents by a majority of 192 to 100. This was the first occasion on which Mr. Fox had appeared in the House since his duel with Mr. Adam; and both he and Mr. Burke greatly distinguished themselves in the debate. The latter, by the part which he took in supporting the demands of the Irish for the release of their trade from the restrictions that had been imposed upon it by various Acts of the English Parliament, so deeply offended his constituents at Bristol, that at the next election he lost his seat for that city. A short passage from the report of one of the speeches delivered on the question may show the extraordinary heat and animosity with which the discussion was carried on, and illustrate the habits of parliamentary warfare at this period. Mr. Archibald Macdonald, one of the Members for Hindon (afterwards Sir Archibald Macdonald, and successively Solicitor-General, Attorney-General, and Lord Chief Baron of the Exchequer) having begun by declaring that although he believed the charges against Ministers to be perfectly well founded, he could not, as a Member of Parliament, give his assent to the motion, unless its allegations were supported by proper proofs, proceeded to indulge in an unmeasured invective against the personal character of the Premier. "He accused him," says the report, "of being lazy, indolent, and incapable; of being evasive, shuffling, cutting, and deceptious—of being plausible and artful, mean, insolent, confident, and cowardly—of being a poor, pitiful, sneaking, snivelling, abject creature, fraught with deceit, and one whom no man of honour could support or trust as a Minister or an individual." When the House met again two days after, indeed, Mr. Macdonald apologized to Lord North for what he called "the hasty expressions" he had thus given way to, declaring that he now considered his censures to be totally unfounded, and directly contrary to the real opinion of his cooler moments, as he never had any reason for entertaining such sentiments respecting the Noble Lord. He imputed his diatribe to a natural infirmity which sometimes suddenly hurried him beyond the limits of his judgment. With his usual good humour, Lord North thanked the Honourable and Learned Gentleman for the very handsome manner in which he had expressed himself, and begged to assure him that the whole matter should be from that moment forgotten.

On the 7th of December the Duke of Richmond brought forward a motion in the Lords for an Address to his Majesty, humbly recommending a reduction of the Civil List; but it was negatived, on a division, by a majority of 77 to 36.

On the 13th Lord North came down to the House of Commons, and, in wise compliance with the demands of the people of Ireland, moved a series of Resolutions for the relief of the trade of that country, which were agreed to without a vote. Three Bills, founded upon these Resolutions, were afterwards brought in, and passed.

The next debate of importance which took place was that in the Lords, on the motion of the Earl of Shelburne for a Committee of both Houses to inquire into the Public Expenditure, which was brought forward on the 8th of February, 1780. In this debate the Marquis of Carmarthen (afterwards Duke of Leeds), who had some years before been summoned to the House of Peers, in the lifetime of his father, as Baron Osborne, declared his secession from the party of the Ministers, to which he had hitherto belonged. "He said he had, a few days since, resigned a place in the Household (Vice-Chamberlain to the Queen) the occupying of which he should ever esteem one of the greatest honours of his life. Why had he resigned it? Because his duty to his Sovereign and his country, and a regard to his own honour, would not permit him longer to retain it. He could no longer give his support to a Ministry which had, after a series of repeated trials, proved themselves pusillanimous, incapable, and corrupt—who had brought the nation to the brink of destruction, and still persisted to plunge it deeper into calamity and danger. They were the curse of this country, and he feared would prove its ruin,—one of them from his deserved ignominy, and another, from his criminal indolence and neglect (he was supposed to mean Lords Sandwich and North). * * * While he remained in office, he did not think it decent to oppose Government. He could not, in conscience, absent himself from his duty at so momentous a crisis; the only method which, therefore, presented itself to him, to get rid of the embarrassment, was to resign. But what had been the consequence of his moderate conduct? That of dismissing him, that morning, from an office he held under the Crown—the Lord-Lieutenancy of the East Riding of the county of York. He did not pretend to say who it was that advised this measure; but let it have come from whom it might, he despised the little, mean resentment which gave it birth, laughed at the folly, and felt the injustice and intended insult as he ought." One thing very observable in all these desertions of the adherents of the North Ministry, is the extreme bitterness of feeling which the parties manifest in reference to those with whom they have been recently connected. It has all the appearance of an explosion of long-cherished, though suppressed resentment, the growth of accumulated provocations. There is no expression of regret at the separation from old friends,—no syllable of hesitation as to the propriety of the step which has been taken,—no admission even that the policy dissented

from may have been directed by honest motives,—nothing but the foulest imputations and the keenest indignation and contempt. The present motion was negatived by a majority of 101 to 55.

On the 11th of February, Mr. Burke submitted to the House of Commons his "plan for the better securing of the independence of Parliament, and the economical reformation of the civil and other establishments," in a motion for leave to bring in a Bill for carrying it into effect, which he prefaced by one of his greatest speeches. For some weeks previous an extraordinary fermentation had pervaded the public mind, which began in a demand for a diminution of the public expenditure, but had latterly risen in many places to the expression of a strong desire for a reform, in addition, of the Parliamentary representation. Since the beginning of the year public meetings had been held and numerously attended in almost every county of England, at which petitions for one or both of these objects had been agreed on, and committees appointed to organize and join in a general national effort for their accomplishment. The petition of the great county of York, which had been the first to meet, had been presented to the House of Commons on the 8th of this month by Sir George Savile, who stated in his speech that it had been first moved at a meeting of 600 gentlemen and upwards—that in the hall where it was voted there was more property than there was within the walls of the Commons' House—and that it bore the subscriptions of between 8000 and 9000 individuals. The Committee appointed at the meeting consisted of sixty-one gentlemen, of whom fourteen were clergymen, including two dignitaries of the church.

Mr. Burke's plan of economical reform was mainly intended, as he has himself stated, to avert the cry for organic changes in the Constitution, which, both to him and to the other chiefs of his party, appeared pregnant with danger; and it undoubtedly, in a considerable degree, answered that end. In his Letter to a Noble Lord on his Pension (written in 1796), he has said, after drawing a striking picture of the elements of agitation that were gathering over the country on the one hand, and "the unnerved, confounded, and in a manner suspended," condition of the Government on the other,—"At that time I was connected with men of high place in the community... The liberty they pursued was a liberty inseparable from order, from virtue, from morals, and from religion; and was neither hypocritically nor fanatically followed. They did not wish that liberty, in itself one of the first of blessings, should, in its perversion, become the greatest curse that could fall upon mankind. To preserve the Constitution entire, and practically equal to all the great ends of its reformation, not in one single part, but in all parts, was to them the first object. ..... By what accident it matters not, nor upon what desert, but just then, and in the midst of that hunt of obloquy which ever has pursued me with a full cry through life, I had obtained a very considerable degree of public confidence... I endeavoured to turn that short-lived advantage to myself into a permanent benefit to my country..... In that period of difficulty and danger, more especially, I consulted and sincerely co-operated with men of all parties, who seemed disposed to the same ends, or to any main part of them. Nothing to prevent disorder was omitted; when it appeared, nothing to subdue it was left uncounselled nor unexecuted, as far as I could prevail. At the time I speak of, and having a momentary lead, so aided and so encouraged, and as a feeble instrument in a mighty hand, I do not say I saved my country—I am sure I did my country important service. There were few indeed that did not at that time acknowledge it."

Mr. Burke's Bill for economical reform, however, although, as will be afterwards seen, it was eventually carried through both Houses, was materially curtailed and mutilated before it passed into a law. The present motion was only opposed by Lord George Gordon, who however insisted upon dividing the House on the question. "On this, Lord George," says the Parliamentary History, "was appointed one of the tellers for the noes; but no other Member remaining in the House to be a second teller for the noes, the ayes returned into the House, and the Speaker declared the ayes had it."

One of the most animated debates and closest divisions of the Session took place a few days after this on a motion by Sir George Savile, for an account of all pensions granted during pleasure, or otherwise. The motion was made on the 15th, but the debate, in consequence of the sudden illness of the Speaker, was adjourned to the 21st. Lord North did not directly oppose the motion, but moved, as an amendment, that the account should be confined to those pensions which were paid at the Exchequer, contending that over those paid out of the privy purse the House had no control. Even this amendment, though supported by a speech of great power from the Attorney-General, Wedderburn, was only carried by a majority of 188 to 186. The Pension List had been one of the favourite topics of declamation at the county meetings.

The discussion on the particular enactments of Mr. Burke's Bill began on the 8th of March, when the first clause for abolishing the recently-created office of Secretary of State for the Colonies, gave rise to a debate which lasted till nearly three o'clock in the morning. The House then divided, when the clause was negatived, but only by a majority of 208 to 201. On the 13th another great contest took place on the clause for abolishing the Board of Trade; and this time the victory remained with the opposition, the clause being carried, at a quarter past two o'clock in the morning, by a majority of 207 to 199. Mr. Burke supported his proposition in a speech which, in rich and overflowing humour, appears to have been one of the most effective he ever pronounced, but of which no adequate report has been preserved. "I can never forget," says Gibbon, who was present, and was himself one of the members of the Board, "the delight with which that diffusive and ingenious orator, Mr. Burke, was heard by all sides of the House, and even by those whose existence he prescribed. The Lords of Trade blushed at their insignificancy, and Mr. Eden's appeal to the 2,300 volumes of our Reports, seemed only to excite a general laugh." This unfortunate illustration of the laborious duties of the Board was eagerly seized upon by Burke, and made the theme of the most merciless merriment. The present debate is further memorable for a warm altercation which took place in the course of it between Lord North and the Speaker, Sir Fletcher Norton, who, in a long speech which he delivered on the question from his place as a Member of the House, expressed himself with strong feeling in regard to the treatment he had lately received from the Minister. "The Noble Lord and he," he said, "were not friends; he was not a friend to the Noble Lord, and he had repeated proofs that the Noble Lord was no friend of his." He imputed the feeling which he had experienced to a speech which he had addressed to his Majesty, on presenting some money bills at the Bar of the House of Lords, so long ago as the 7th of May, 1777, when he was understood to have given great offence in certain quarters, by describing the revenue which had been then granted by the Commons as "great beyond example—great beyond your Majesty's highest expense." Ever since then he declared that the Noble Lord had withdrawn even the appearance of all friendship and confidence. "The Noble Lord and he," he added, "from a recent transaction, must henceforward stand upon the most unequivocal terms; his Lordship's con-

duct was such as to put an end to every appearance of mutual goodwill and friendship. The time was not yet arrived when it would be proper to make the circumstances of this transaction public. If the Noble Lord did not do him justice he would state the particulars to the House, and submit to it how far he was bound to remain in a situation where the performing the duties annexed to it was the pretext of doing him a gross and flagrant injury." Upon Lord North declaring his utter inability to conceive what Sir Fletcher alluded to, the latter explained that he had accepted the office of Speaker, upon the express condition that he should not be taken out of the line of his profession, but that, as he expressed it, "the way, whenever an opportunity offered, should be kept open for his return to Westminster Hall." In plain language, he meant that he was to have the first place on the Bench that should become vacant. He had, however, lately heard, from the best authority, that a negociation was in progress for getting the Chief Justice of the Common Pleas (De Grey) to retire on a pension, and putting the Attorney-General (Wedderburn) in his place. Many violent personalities followed which we cannot stop to detail. But it will be seen that the arrangement mentioned by Sir Fletcher, in so far, at least, as regarded the offices, soon after actually took place. And thus the Minister contrived to disgust and alienate another of his natural adherents and supporters.

On the 20th another contest took place on the clause of the Bill, which proposed to abolish the household office of Treasurer of the Chamber, and ended in the rejection of the clause by a majority of 211 to 158. This blow, coming so soon after the success of their last effort, seems to have for the moment staggered the Opposition, and on the division being announced, Mr. Burke, in a passion of disappointment and dejection, declared that having lost this point he was indifferent as to what became of the rest of the Bill. He was strongly exhorted, however, still to persevere with the measure by Mr. Fox, who, not so easily thrown down by a sudden shock, observed, that even if they could obtain no more than the abolition of the seven Lords of Trade, he should think that well worth the struggle, were it only for this, that when they renewed the Bill session after session, as they should certainly do, till they had fully effected their purpose of bringing within due limits the overgrown influence of the Crown, they would have seven of the enemy less to fight against.

On the 6th of April, another series of attacks against the Ministry, which were waged with all the strength and skill of opposition, and at one time threatened to prove fatal to their existence, was commenced by Mr. Dunning in his famous motion, brought forward in a Committee of the whole House, for taking into consideration the Yorkshire county petition, "That it is the opinion of this Committee that it is necessary to declare that the influence of the Crown has increased, is increasing, and ought to be diminished." After a debate, which lasted till twelve o'clock, the motion was carried by a majority of 233 to 215. It was followed up by other two resolutions in the same spirit, which were agreed to without a division; and in spite of Lord North's vehement appeals to the House to proceed no farther in a course which he denounced as violent, arbitrary, and unusual, a fourth motion, that the resolutions should be immediately reported, and a fifth, that the Report should be received, were insisted upon, and carried by the remorseless majority.

On the 10th, another resolution, brought forward by Mr. Dunning, to the effect, that for preserving the independence of Parliament, exact accounts of all disbursements of the public money should in future be laid before the House within seven days after the opening of each Session, was agreed to without a division. The same Honourable and Learned Member then moved, that it was incompatible with the independence of Parliament, that persons holding the offices of Treasurer of the Chamber, Treasurer of the Household, Cofferer of the Household, and his clerk, Master of the Household, and the clerks of the Green Cloth, should be entitled to sit in Parliament, if such places should be permitted to exist; and this resolution was also carried, though only by a majority of 215 to 213. On the 13th of the same month, the motion for the second reading of a Bill for disabling revenue officers from voting at elections, which was opposed by Ministers, was only negatived by a majority of 224 to 195. Meanwhile, in the Upper House, also, the old ministerial preponderance seemed to be giving way. On the 14th of April, a Bill brought in by the Duke of Bolton, for restraining any Member of the House of Commons from being concerned in Government contracts, and which Ministers opposed, was only thrown out on the second reading by a majority of 61 to 41.

From this point, however, the tide turned. On the 21th, a motion by Mr. Dunning, in the Commons, for an address to the King, not to dissolve the Parliament, nor prorogue the Session, was negatived by a majority of 254 to 203. On this occasion Mr. Fox declared, with great heat, that "it was a scandalous, treacherous, and disgraceful vote." He threw no blame on the regular supporters of Administration. "But who could contemplate, without surprise and indignation, the conduct of another set of men in that House, who, on a former night, resolved that the influence of the Crown was increased and ought to be diminished, and that the grievances and complaints of the people ought to be redressed; and who pledged themselves to that House, to the nation, to their constituents, to the people at large, and to themselves, that it was their duty to redress the grievances complained of; but who, on the only two occasions that offered, shamefully fled from that solemn engagement, by rejecting the means proposed! It was shameful, it was base, it was unmanly, it was treacherous. The gentlemen he alluded to surrounded him; they sat on his side of the House; he was sorry for it . . . . He was taken in, deluded, and imposed on. He acknowledged it; for in his conscience he thought the assistance of such men did more harm than good." On the 28th, the clause in Mr. Burke's Bill, for abolishing the offices of the Great Warbrobe, the Removing Wardrobe, the Master of the Robes, and the Jewel Office, was thrown out by a majority of 210 to 162, and that for abolishing the Board of Works, by a majority of 203 to 118. On the 18th of May many other clauses were negatived by majorities some of which were two to one. In reference to these divisions, Mr. Alderman Sawbridge observed, that ever since the vote of the 6th of April, which denounced the growing influence of the crown, that influence had been in a progressive state of increase. "Some measures for the purpose of following up that vote were proposed in the course of the ensuing week, and a few country gentlemen or county Members, from what motives he would not pretend to say, seemed or affected to be staggered; they divided from their friends, or absented themselves. But this was only the forerunner of the sudden alteration which was about to take place. The Speaker's illness caused a recess of a few days, and what was then before in embryo, in the interim grew into full maturity. The Minister brought over persons of a doubtful description so successfully, that, by the time the House met again, so many new converts were made as to ensure the Noble Lord a decided majority. * * * The moment was critical; the accursed system which directed the affairs of the country to the very brink of ruin, was on the very point of dissolution, when by the art and management of the Noble Lord, it was esta-

from may have been directed by honest motives,—nothing but the foulest imputations and the keenest indignation and contempt. The present motion was negatived by a majority of 101 to 55.

On the 11th of February, Mr. Burke submitted to the House of Commons his "plan for the better securing of the independence of Parliament, and the economical reformation of the civil and other establishments," in a motion for leave to bring in a Bill for carrying it into effect, which he prefaced by one of his greatest speeches. For some weeks previous an extraordinary fermentation had pervaded the public mind, which began in a demand for a diminution of the public expenditure, but had latterly risen in many places to the expression of a strong desire for a reform, in addition, of the Parliamentary representation. Since the beginning of the year public meetings had been held and numerously attended in almost every county of England, at which petitions for one or both of these objects had been agreed on, and committees appointed to organize and join in a general national effort for their accomplishment. The petition of the great county of York, which had been the first to meet, had been presented to the House of Commons on the 8th of this month by Sir George Savile, who stated in his speech that it had been first moved at a meeting of 600 gentlemen and upwards —that in the hall where it was voted there was more property than there was within the walls of the Commons' House—and that it bore the subscriptions of between 8000 and 9000 individuals. The Committee appointed at the meeting consisted of sixty-one gentlemen, of whom fourteen were clergymen, including two dignitaries of the church.

Mr. Burke's plan of economical reform was mainly intended, as he has himself stated, to avert the cry for organic changes in the Constitution, which, both to him and to the other chiefs of his party, appeared pregnant with danger; and it undoubtedly, in a considerable degree, answered that end. In his Letter to a Noble Lord on his Pension (written in 1796), he has said, after drawing a striking picture of the elements of agitation that were gathering over the country on the one hand, and "the unnerved, confounded, and in a manner suspended," condition of the Government on the other,—"At that time I was connected with men of high place in the community... The liberty they pursued was a liberty inseparable from order, from virtue, from morals, and from religion; and was neither hypocritically nor fanatically followed. They did not wish that liberty, in itself one of the first of blessings, should, in its perversion, become the greatest curse that could fall upon mankind. To preserve the Constitution entire, and practically equal to all the great ends of its reformation, not in one single part, but in all parts, was to them the first object. ..... By what accident it matters not, nor upon what desert, but just then, and in the midst of that hunt of obloquy which ever has pursued me with a full cry through life, I had obtained a very considerable degree of public confidence... . I endeavoured to turn that short-lived advantage to myself into a permanent benefit to my country..... In that period of difficulty and danger, more especially, I consulted and sincerely co-operated with men of all parties, who seemed disposed to the same ends, or to any main part of them. Nothing to prevent disorder was omitted; when it appeared, nothing to subdue it was left uncounselled nor unexecuted, as far as I could prevail. At the time I speak of, and having a momentary lead, so aided and so encouraged, and as a feeble instrument in a mighty hand, I do not say I saved my country—I am sure I did my country important service. There were few indeed that did not at that time acknowledge it."

Mr. Burke's Bill for economical reform, however, although, as will be afterwards seen, it was eventually carried through both Houses, was materially curtailed and mutilated before it passed into a law. The present motion was only opposed by Lord George Gordon, who however insisted upon dividing the House on the question. "On this, Lord George," says the Parliamentary History, "was appointed one of the tellers for the noes; but no other Member remaining in the House to be a second teller for the noes, the ayes returned into the House, and the Speaker declared the ayes had it."

One of the most animated debates and closest divisions of the Session took place a few days after this on a motion by Sir George Savile, for an account of all pensions granted during pleasure, or otherwise. The motion was made on the 15th, but the debate, in consequence of the sudden illness of the Speaker, was adjourned to the 21st. Lord North did not directly oppose the motion, but moved, as an amendment, that the account should be confined to those pensions which were paid at the Exchequer, contending that over those paid out of the privy purse the House had no control. Even this amendment, though supported by a speech of great power from the Attorney-General, Wedderburn, was only carried by a majority of 188 to 186. The Pension List had been one of the favourite topics of declamation at the county meetings.

The discussion on the particular enactments of Mr. Burke's Bill began on the 8th of March, when the first clause for abolishing the recently-created office of Secretary of State for the Colonies, gave rise to a debate which lasted till nearly three o'clock in the morning. The House then divided, when the clause was negatived, but only by a majority of 208 to 201. On the 13th another great contest took place on the clause for abolishing the Board of Trade; and this time the victory remained with the opposition, the clause being carried, at a quarter past two o'clock in the morning, by a majority of 207 to 199. Mr. Burke supported his proposition in a speech which, in rich and overflowing humour, appears to have been one of the most effective he ever pronounced, but of which no adequate report has been preserved. "I can never forget," says Gibbon, who was present, and was himself one of the members of the Board, "the delight with which that diffusive and ingenious orator, Mr. Burke, was heard by all sides of the House, and even by those whose existence he prescribed. The Lords of Trade blushed at their insignificancy, and Mr. Eden's appeal to the 2,300 volumes of our Reports, seemed only to excite a general laugh." This unfortunate illustration of the laborious duties of the Board was eagerly seized upon by Burke, and made the theme of the most merciless merriment. The present debate is further memorable for a warm altercation which took place in the course of it between Lord North and the Speaker, Sir Fletcher Norton, who, in a long speech which he delivered on the question from his place as a Member of the House, expressed himself with strong feeling in regard to the treatment he had lately received from the Minister. "The Noble Lord and he," he said, "were not friends; he was not a friend to the Noble Lord, and he had repeated proofs that the Noble Lord was no friend of his" He imputed the feeling which he had experienced to a speech which he had addressed to his Majesty, on presenting some money bills at the Bar of the House of Lords, so long ago as the 7th of May, 1777, when he was understood to have given great offence in certain quarters, by describing the revenue which had been then granted by the Commons as "great beyond example—great beyond your Majesty's highest expense." Ever since then he declared that the Noble Lord had withdrawn even the appearance of all friendship and confidence. "The Noble Lord and he," he added, "from a recent transaction, must henceforward stand upon the most unequivocal terms; his Lordship's con-

duct was such as to put an end to every appearance of mutual goodwill and friendship. The time was not yet arrived when it would be proper to make the circumstances of this transaction public. If the Noble Lord did not do him justice he would state the particulars to the House, and submit to it how far he was bound to remain in a situation where the performing the duties annexed to it was the pretext of doing him a gross and flagrant injury." Upon Lord North declaring his utter inability to conceive what Sir Fletcher alluded to, the latter explained that he had accepted the office of Speaker, upon the express condition that he should not be taken out of the line of his profession, but that, as he expressed it, "the way, whenever an opportunity offered, should be kept open for his return to Westminster Hall." In plain language, he meant that he was to have the first place on the Bench that should become vacant. He had, however, lately heard, from the best authority, that a negociation was in progress for getting the Chief Justice of the Common Pleas (De Grey) to retire on a pension, and putting the Attorney-General (Wedderburn) in his place. Many violent personalities followed which we cannot stop to detail. But it will be seen that the arrangement mentioned by Sir Fletcher, in so far, at least, as regarded the offices, soon after actually took place. And thus the Minister contrived to disgust and alienate another of his natural adherents and supporters.

On the 20th another contest took place on the clause of the Bill, which proposed to abolish the household office of Treasurer of the Chamber, and ended in the rejection of the clause by a majority of 211 to 158. This blow, coming so soon after the success of their last effort, seems to have for the moment staggered the Opposition, and on the division being announced, Mr. Burke, in a passion of disappointment and dejection, declared that having lost this point he was indifferent as to what became of the rest of the Bill. He was strongly exhorted, however, still to persevere with the measure by Mr. Fox, who, not so easily thrown down by a sudden shock, observed, that even if they could obtain no more than the abolition of the seven Lords of Trade, he should think that well worth the struggle, were it only for this, that when they renewed the Bill session after session, as they should certainly do, till they had fully effected their purpose of bringing within due limits the overgrown influence of the Crown, they would have seven of the enemy less to fight against.

On the 6th of April, another series of attacks against the Ministry, which were waged with all the strength and skill of opposition, and at one time threatened to prove fatal to their existence, was commenced by Mr. Dunning in his famous motion, brought forward in a Committee of the whole House, for taking into consideration the Yorkshire county petition. 'That it is the opinion of this Committee that it is necessary to declare that the influence of the Crown has increased, is increasing, and ought to be diminished." After a debate, which lasted till twelve o'clock, the motion was carried by a majority of 233 to 215. It was followed up by other two resolutions in the same spirit, which were agreed to without a division; and in spite of Lord North's vehement appeals to the House to proceed no farther in a course which he denounced as violent, arbitrary, and unusual, a fourth motion, that the resolutions should be immediately reported, and a fifth, that the Report should be received, were insisted upon, and carried by the remorseless majority.

On the 10th, another resolution, brought forward by Mr. Dunning, to the effect, that for preserving the independence of Parliament, exact accounts of all disbursements of the public money should in future be laid before the House within seven days after the opening of each Session, was agreed to without a division. The same Honourable and Learned Member then moved, that it was incompatible with the independence of Parliament, that persons holding the offices of Treasurer of the Chamber, Treasurer of the Household, Collerer of the Household, and his clerk, Master of the Household, and the clerks of the Green Cloth, should be entitled to sit in Parliament, if such places should be permitted to exist; and this resolution was also carried, though only by a majority of 215 to 213. On the 13th of the same month, the motion for the second reading of a Bill for disabling revenue officers from voting at elections, which was opposed by Ministers, was only negatived by a majority of 224 to 195. Meanwhile, in the Upper House, also, the old ministerial preponderance seemed to be giving way. On the 14th of April, a Bill brought in by the Duke of Bolton, for restraining any Member of the House of Commons from being concerned in Government contracts, and which Ministers opposed, was only thrown out on the second reading by a majority of 61 to 41.

From this point, however, the tide turned. On the 24th, a motion by Mr. Dunning, in the Commons, for an address to the King, not to dissolve the Parliament, nor prorogue the Session, was negatived by a majority of 254 to 203. On this occasion Mr. Fox declared, with great heat, that "it was a scandalous, treacherous, and disgraceful vote." He threw no blame on the regular supporters of Administration. "But who could contemplate, without surprise and indignation, the conduct of another set of men in that House, who, on a former night, resolved that the influence of the Crown was increased and ought to be diminished, and that the grievances and complaints of the people ought to be redressed; and who pledged themselves to that House, to the nation, to their constituents, to the people at large, and to themselves, that it was their duty to redress the grievances complained of; but who, on the only two occasions that offered, shamefully fled from that solemn engagement, by rejecting the means proposed! It was shameful, it was base, it was unmanly, it was treacherous. The gentlemen he alluded to surrounded him; they sat on his side of the House; he was sorry for it . . . . . He was taken in, deluded, and imposed on. He acknowledged it; for in his conscience he thought the assistance of such men did more harm than good." On the 28th, the clause in Mr. Burke's Bill, for abolishing the offices of the Great Warbrobe, the Removing Wardrobe, the Master of the Robes, and the Jewel Office, was thrown out by a majority of 210 to 162, and that for abolishing the Board of Works, by a majority of 203 to 118. On the 18th of May many other clauses were negatived by majorities some of which were two to one. In reference to these divisions, Mr. Alderman Sawbridge observed, that ever since the vote of the 6th of April, which denounced the growing influence of the crown, that influence had been in a progressive state of increase. "Some measures for the purpose of following up that vote were proposed in the course of the ensuing week, and a few country gentlemen or county Members, from what motives he would not pretend to say, seemed or affected to be staggered; they divided from their friends, or absented themselves. But this was only the forerunner of the sudden alteration which was about to take place. The Speaker's illness caused a recess of a few days, and what was then before in embryo, in the interim grew into full maturity. The Minister brought over persons of a doubtful description so successfully, that, by the time the House met again, so many new converts were made as to ensure the Noble Lord a decided majority. * * * The moment was critical; the accursed system which directed the affairs of the country to the very brink of ruin, was on the very point of dissolution, when by the art and management of the Noble Lord, it was esta-

blished upon a firmer and more permanent basis than ever."

In reply to Lord North's warm protestations, that the charge thus made against him was wholly unfounded, the Honourable Member reiterated his assertion in more direct and unqualified terms than before. He said—"He was satisfied that the Noble Lord had, during the Speaker's illness, influenced or corrupted several of the majority of the 6th of April; and he was convinced that he had tampered with many. He was ready and fully prepared to go into the proofs of the tampering, or of offers having been held out to influence some of the Members of that House to vote against their former opinions, their perfect conviction, and the interests of their country." It is right to add, however, that these proofs were never actually brought forward. On the 26th, on Mr. Dunning moving to report the Resolutions which had been carried on the 10th of April, the motion was negatived by a majority of 177 to 134.

The last month of the Session was chiefly occupied with proceedings connected with the petitions of the Protestant Association, and with the dreadful riots which arose out of the meeting of that body in St. George's Fields on the 2nd of June, and for that and the three or four following days kept the metropolis of the empire in subjection to all the horrors of mob-domination. With these events, however, we have here nothing to do.

Parliament was prorogued by a Speech from the Throne on the 8th of July. "Such," says the "Annual Register," was the end of this unusually long, and very extraordinary Session of Parliament—a Session in which almost every day produced a question, and every question a debate, which in any other would have been deemed highly interesting, but which were frequently lost in that glare of still greater matter, which was so continually thrown out in this—a Session in which unexpected victories and unaccountable defeats alternately raised and sunk the hopes of the contending parties from the highest pitch of exultation to the lowest state of despondency. The point of decision seemed more than once quivering and hanging only by a hair. Upon the whole, it may be said with confidence, that so great a number of important affairs were never agitated in any one Session. The riot, in the close, threw a general damp upon all endeavours whatever for reformation, however unconnected with its particular object. Popular fury seemed, for that time at least, the greatest of all possible evils; and Administration then gathered, and afterwards preserved, no small degree of power, from a tumult which appeared to threaten the subversion of all government."

On the 1st of September the Parliament, which had now completed its sixth Session, but might have continued in existence for another year, was suddenly and unexpectedly dissolved.

POLITICAL RETROSPECT FOR JUNE, 1836.

GREAT BRITAIN.

Both Houses of Parliament reassembled, pursuant to adjournment, on Monday, the 30th of May; but the business in the Lords was confined to the presentation of a few petitions. In the Commons, the debate on the Dublin Election Petition was resumed; but on the Attorney-General stating that he had, although with much reluctance, come to the conclusion that the petition could not be received by the House, it was withdrawn by Mr. O'Connell. A strong opinion, however, was expressed by the Speaker, and appeared to be generally concurred in by the House, that the Committee, although it might be unadvisable to disturb their decision, had committed a great error in declaring the sitting Members duly elected, while they refused to examine the charge of bribery brought against them. After this, Mr. Grove Price withdrew the motion of which he had given notice for expunging from the Order Book Mr. O'Connell's notice of motion relating to the reform of the House of Lords. Lord John Russell expressed himself very glad that the Honourable Member had determined upon taking this course, and stated that had the motion been persevered in, he should certainly have voted against it, as he should also do against that of Mr. O'Connell. The House then went into a Committee of Supply, when a considerable portion of the Miscellaneous Estimates was voted. In the course of the discussion that took place upon some of the votes, Mr. Rice observed that, in his opinion, it was very desirable the British Museum should be kept open both on holidays, and also, if possible, on Sundays. He likewise announced that he intended to lay before the House a small supplementary Estimate, for the purpose of establishing a School of Design, with a view generally to the cultivation of the popular taste, and to the practical improvement of our manufactures.

On Tuesday, the 31st, the Lords went into Committee on the Jamaica Slavery Abolition Bill, on the motion of Lord Glenelg, who, in stating to the House the nature of the measure, explained that it was a Bill for carrying into effect certain of the provisions of the Emancipation Act, and that it had become necessary that it should be submitted to the British Parliament in consequence of the Colonial House of Assembly not having come to an agreement in favour of a similar measure before being dissolved. The remainder of the sitting was occupied in the discussion of the Bill for abolishing the civil jurisdiction now possessed by the Bishop of Durham, which was eventually read a second time, without a division.

In the Commons, an interesting debate took place on Mr. Thomas Duncombe's motion for an Address to his Majesty, humbly submitting the propriety of his Majesty using his good offices with the King of the French for the liberation of the Prince de Polignac and the other state prisoners confined at Ham. The feelings which had dictated the motion appeared to be generally participated in by the House; but it was finally withdrawn by Mr. Duncombe, in the conviction that he should best consult the interests of the parties whose cause he had taken up, by not pressing its adoption. Lord John Russell then intimated that he should, on Thursday, move that the consideration of the Lord's amendments to the Irish Municipal Corporations Bill should be postponed till that day week. A motion for certain Returns, by Mr. Bannerman, afterwards gave rise to a short conversation on the claims to an increase of pay, or a brevet promotion, of naval and military officers of long standing, in the course of which Lord Howick stated that, although Government did not feel at liberty at present to propose a general brevet promotion, they were prepared, with the least possible delay, to look into the general state of the army, with a view to a better arrangement of the whole system, and and that this would most probably be done next Session.

On Wednesday, the 1st of June, on the Order of the

Day for the second reading of the Irish Tithe Bill being read, Lord Stanley rose, and after having, in a speech of great length, explained his own plan for the settlement of the question, concluded by moving, as an amendment upon the Order of the Day—"That leave be given to bring in a Bill for the conversion of tithe composition into rent charges, and for the redemption thereof, and for the better distribution of ecclesiastical revenues in Ireland." Lord Stanley intimated that he was, he might venture to say, empowered, on the part of the Church, to offer the propositions which he did, and that his plan would, he had reason to believe, meet the concurrence of those who never could, and never would concur in the principles of the Bill already before the House. Of course the leading feature of his Lordship's scheme was the preservation to the Irish Church of all its present revenues, and the consequent negation of what has been called the appropriation principle in the Ministerial measure. Lord John Russell, who replied to Lord Stanley, rested his opposition on the distinct ground that in legislating for Ireland with regard either to the present, or any other matter, it was right and necessary to consult the interests and feelings of the great body of the people. This is, no doubt, the consideration which goes most directly to meet the pretensions of the general policy of the Tories in regard to Ireland. On the other hand, the weakness of the position occupied by Ministers consists in the undeniable insufficiency of their proposed measures to satisfy the principles upon which they are brought forward and defended. To take, for instance, the present question, if the Irish Church is henceforth to be regulated simply according to the fashion that shall best suit the taste of the majority of the inhabitants of Ireland, it is manifest that the mere abstraction, as proposed, of some 90,000*l.* or 100,000*l.* yearly from its present revenues, will not at all attain that object. There is no denying the truth of the charge that, upon the principles asserted by Ministers, this concession can only be rationally regarded as the first instalment of a vastly larger debt, as but the insertion of the sharp edge of the wedge which is eventually to leave no Protestant Established Church in Ireland at all. This may or may not be a desirable result; but the awkwardness of the case lies in this—that whether it be the one or the other, it is at any rate a result which the Ministers do not profess to contemplate, while yet it is the legitimate and inevitable consequence, if not of the measures they bring forward, at least of the principles on which their measures are by themselves vindicated and urged. Lord John Russell put the question upon the true ground, when he stated that the controversy, both with regard to the Church and the corporations was, in fact, nothing else than a controversy about the system on which Ireland was in future to be governed—whether it was to be a system of Protestant supremacy as heretofore, or a system by which the control of their own affairs should be left in the hands of the majority of the people. But while all this was very clearly and effectively put, there remained to be given any satisfactory explanation of how the reform of the Church proposed by Ministers offered even the remotest chance of settling the question on the principle which they themselves assumed. Neither, in default of this explanation, was there any admission of the final result to which the principle thus assumed must really lead. The debate was continued, by adjournments, over the two following nights, and was terminated by a division at a quarter-past three o'clock on the morning of Saturday, the 4th, when the numbers were found to be—for Lord Stanley's amendment 261, against it, 300. Lord John Russell's Bill was then read a second time.

On Thursday, the 2nd, in the Lords, the presentation by Lord Clare of a petition for an equalization of the duties on East and West India sugars, from a meeting of East India proprietors, which was, however, in the end withdrawn, on account of an informality, gave rise to a short conversation on that subject, in the course of which Lord Melbourne said that his Majesty's Ministers entertained the deepest sense of the importance of the subject, and the strength of the claims set forth by the petitioners; and he trusted that when they had communicated with the various parties, whose interests were concerned, they would be enabled to introduce a measure that would prove satisfactory to all.

On Friday, the 3rd, the third reading of one of the Railway Bills having been moved by the Marquess of Clanricarde, the motion was opposed by the Duke of Wellington, on the ground that before any of these Bills were passed, a general measure should be introduced, securing to Parliament the power of periodically revising the arrangements made, to prevent the railways becoming perpetual monopolies; and Lord Melbourne having concurred in this view of the subject, the third reading of the Bill was deferred.

On Monday, the 6th, in the Commons, in answer to a question from Mr. Robinson, respecting the state of our commercial relations with Portugal, Lord Palmerston said that negotiations for a new commercial treaty were now in progress, but while in progress he could not state to what point they had yet arrived. Mr. Robinson had particularly called attention to the fact, that the Portuguese government had recently raised the duty on British produce from 15 to 29 per cent. in some of the ports of the kingdom, in violation of an assurance given to our Minister, Lord Howard de Walden, that no increase of duty would be made by the government of Portugal without due notice being given to this country; but of this point in the case Lord Palmerston, in his reply, appears to have taken no notice. Afterwards, on Lord John Russell moving the Order of the Day for the further consideration of the Report of the Registration of Births and Marriages Bill, Sir Edward Codrington attempted to bring forward, by way of amendment, a motion on the subject of certain naval and military officers who had been deprived of their half-pay without trial by a court-martial; but on Lord John Russell declining to discuss the question thus raised at that moment, Sir Edward withdrew his motion. The House then went into a Committee on the Registration Bill, when the clauses up to the 27th were agreed to, with the exception of a few that were postponed. On the 27th clause being read, Mr. Goulburn objected to certain expenses connected with the registration being paid out of the parochial funds, and contended, that as the object was a national one, the expenses should be defrayed out of the general funds of the country; but on a division the clause was carried by a majority of 71 to 28. The remaining clauses to the 33rd inclusive were then agreed to.

On Tuesday, the 7th, the Lords were engaged for some hours in the discussion of a matter of certainly as singular a nature as has for many a day been brought before Parliament—a petition presented by Lord Lyndhurst from a Roman Catholic priest in Ireland for redress against his diocesan, by whom he had been turned out of his living. His Lordship, in presenting the petition, went at great length into the details of its allegations, and took all manner of pains to make out a strong case for the attention of the House. In this course he was followed by Lord Wicklow and the Duke of Wellington, both of whom not only contended stoutly for the reception of the petition, but expatiated on its high importance and the extraordinary claims it had upon the notice of their Lordships. The disingenuousness of all this has not

been often matched. On the question, indeed, of allowing the petition to lie on the Table, if that had been all, there might fairly have been room for a difference of opinion. The friends of liberty will naturally be inclined to open the doors of Parliament as widely as possible to the petitions of the people; and if the Rev. Mr Mulholland should take it into his head to draw up a pathetic representation, humbly setting forth that he had for many months past been subjected to grievous sufferings from toothe-ache in one of his jaws, or gout in one of his great toes, and praying that, as he had been unable to obtain relief from any other quarter, their Lordships would be pleased to take his case into their merciful consideration, it might be as well not absolutely to refuse to hear the petitioner, however obviously impossible it might be to grant his request. In truth, such a petition as we have just supposed would not be a whit more preposterous than the one actually presented by Lord Lyndhurst. In the eye of the law the Roman Catholic Church in Ireland is a mere voluntary association, over the internal arrangements of which the State has no more control than it has over those of the society of Freemasons. The case of the Rev. Mr. Mulholland is, by his own showing, simply that of a member of this voluntary association, whom the other members do not choose to recognise in a particular character or position which he wishes to assume or to retain. For if he should please still to call himself priest of the parish from which he has been dismissed, he is at perfect liberty to do so; he has, in the eye of the law, as much right to that title as the person who has been appointed by the bishop to take his place. Of what, then, is it that he has really been deprived? Of the income of the appointment, perhaps it will be said. But this is altogether the voluntary contribution of the people, which, if they shall choose to refuse it, his successor can no more enforce than he can. It is probable, no doubt, that they will pay the money to his successor and decline paying it to him; but that is entirely their own affair; the law does not insist that the money shall be paid at all, either to the one or the other. If the whole Catholic population of Ireland were to resolve to-morrow never to contribute another farthing for the support of their priests, the law would have nothing to say in the case. In such circumstances, would any one of these priests be listened to if he were to come to Parliament, and ask it to compel his parishioners to pay him as formerly? Above all, would Lord Lyndhurst be the man to present and support such a petition? Yet the petition which his Lordship actually presented from Mr. Mulholland goes even further than this. It calls upon the Legislature to compel the Roman Catholics of a certain parish in Ireland to pay a certain sum of money annually, not to the person regularly appointed to be their priest according to the rules and forms of their Church, but to another person whom their Church has regularly deprived of that character. A more impudent application never was made. It is, in fact, precisely the same thing as if a merchant's clerk, who had been dismissed at the end of his engagement, should petition the House of Lords to compel his master to reinstate him, because he had been turned off, and his place given to another, without any other reason being assigned than his employer's good pleasure. It is curious enough, however, as was well remarked by Lord Holland, that Lord Lyndhurst, of all men, should have brought this matter before their Lordships; because if the House could have been prevailed upon to interfere in the case, the State might almost be said to have thereby for the first time recognised the Catholic Church, and taken it in some degree under its superintendence and protection. The act would have gone far to place that Church on the footing of a legal establishment. But it was with no such view, we may be sure, that the proposition was made; and, indeed, the real design of the proceeding was much more transparent than creditable to its movers. They were compelled to admit in the course of the debate, that the case stated in the petition was one in which nothing could be done; that, in fact, in so far as respected the purpose avowed on the face of it, the reverend gentleman's application was a piece of absurdity and nonsense. It was the same thing as if he had asked the House to make him Pope or Grand Lama. Yet the story he had to relate was taken up, and produced in the most imposing form, with a view to the effect with which the *ex parte* statement might tell in inflaming the public mind against certain parties to whom it referred. It is impossible to consider such a proceeding as anything else than a gross abuse of the privilege of Parliamentary debate. Nothing can be more detrimental to the character and influence of the House of Lords, and especially of the party in that House which attempts to attain its objects by expedients so tortuous and unfair.

In the Commons, on occasion of the presentation, by Mr. Ewart, of a petition for the redress of grievances from the inhabitants of Malta, and of another from the Maltese merchants by Mr. Holland, Sir George Grey stated that Ministers had determined to send out a Commission to inquire on the spot into the several points which were made matter of complaint. On Mr. Wallace being afterwards called upon by the Speaker to bring forward his Resolution on the subject of the Post-Office, Mr. Spring Rice rose, and intimated that it was the intention of Government, in the course of the present Session, to introduce one or more Bills founded upon the recommendations of the Commissioners who had been appointed to inquire into that establishment; and upon this assurance Mr. Wallace consented to abandon his Resolution. A Resolution moved by Mr. Tulk, for granting compensation to Mr. Buckingham, in compliance with the Report of the Committee which investigated his claims in 1834, was then, after a short debate, negatived by a majority of 92 to 60.

On Wednesday, the 7th, Mr. Labouchere, the Vice-President of the Board of Trade, on his attention being called to the subject by Mr. Loch, stated that the department of the Government with which he was connected was fully impressed with the importance of giving every possible encouragement and protection to the fisheries of the country, and that no time should be lost in making such representations to Russia, which now imposed almost a prohibitory duty upon British herrings, as he hoped would be attended with a beneficial result. Mr. Ward afterwards withdrew his motion for the appointment of a Committee to inquire into the different modes in which land has been and still is disposed of in the British colonies and in the United States of North America, on Sir George Grey consenting that the Committee should be appointed, provided its inquiries were limited to our Australian colonies. The House then went into Committee on the Bribery at Elections Bill, when the first three clauses were agreed to; the 4th, prohibiting the giving to voters any sum of money as a consideration for loss of time, in travelling to or from, or attending at the election, was carried against an amendment of Mr. Roebuck, which went to prohibit the giving of money altogether, by a majority of 65 to 58; and the 5th, which imposed a fine of 50*l.* upon any person who should "by himself, or by or with any person, or by any ways, means, or devices, or any colour, excuse, or pretence whatsoever, directly or indirectly give, present, allow, provide, or procure, or promise, engage, or agree to give, present, allow, provide, or procure, any meat, drink, entertainment, or provision, to or for any person, with the intent or for the purpose of thereby corruptly influencing such or any other person to give or refuse

his vote in any such election, or for the purpose of corruptly recompensing such or any other person for having given, or refused, or forborne, to give his vote in any such election," was negatived by a majority of 40 to 33. Afterwards the Poor Rate Bill was recommitted, and several of the clauses were agreed to; Sir R. Musgrave, Mr. W. S. O'Brien, and Mr. P. Scrope, severally withdrew their Bills for the relief of the poor in Ireland, on an understanding that the subject would be taken up by the Government; the Bill for the Recovery of Tenements, the Chapels of Ease (Ireland) Bill and the Copyright Act Amendment Bill, were read a second time; and the Fisheries Bill, and the Oyster Fisheries Bill, were amended in Committee. Divisions took place upon several of the clauses of the two last-mentioned measures, which, however, were all carried by considerable majorities.

On Thursday, the 9th, the Waste Lands (Ireland) Bill was read a second time in the Lords, on the motion of the Earl of Devon, who stated that the object of the measure was to raise money by shares, to be applied to the cultivation of tracts of land in Ireland which were at present unproductive, but which were capable of improvement if capital could be found to expend upon them. The Marquis of Downshire expressed in warm terms his approbation of the measure.

In the Commons a short conversation, followed by a division, took place on Mr. Buckingham's motion for leave to bring in a Bill to protect the copyright of prints and engravings in Ireland. The motion was carried by a majority of 169 to 80. Lord John Russell then proceeded to move the Order of the Day for the further consideration of the Lords' amendments to the Irish Municipal Reform Bill, and to explain the views which were taken of those amendments by his Majesty's Ministers. His Lordship, after minutely detailing the destructive provisions introduced into the Bill by the other House, declared emphatically, and amidst the tumultuous cheers of those around him, that to these provisions he never could, and never would, agree. He objected altogether to the principle of substituting for the local government of municipal corporations the single authority of the supreme central executive. It was, therefore, quite impossible for him to consent either to the first part of their Lordships' Bill, which proposed to destroy corporations; or to the second part of it, which placed such extraordinary powers in the hands of Commissioners nominated by the Lord-Lieutenant. He would not propose that all the original clauses of the Bill, which the Lords had struck out, should be restored to it, for that would lead to its certain rejection; but what he should propose was this—that all the great towns which originally stood in the first and second schedules of the Bill—namely, Belfast, Cork, Dublin, Galway, Kilkenny, Limerick, Waterford, Clonmell, Drogheda, Londonderry, and Sligo, and also Carrickfergus as being a county of a town, should be placed in one and the same schedule, and that all the clauses for the government of corporate towns, which their Lordships had erased, should be restored to the Bill, and applied to these particular towns. He proposed further, that the provisions of the Act of the 9th Geo. IV., by which the Lord-Lieutenant was empowered, on the application of the inhabitants of towns, to permit Commissioners to be elected by them for paving, watching, &c., should be applied immediately to twenty-two towns, and that the Commissioners should be chosen by the five-pound householders. As to all the remaining boroughs, they should be left to adopt that Act or not as they chose; and if it should after some time appear that any of them had declined to adopt it, he should then have no objection that in these the corporations should be wholly abolished. His Lordship concluded by moving, in the first place, that the House disagree to the Lords' amendments on the 4th clause of the Bill, that being the first provision of importance which had been struck out. The debate which followed was adjourned till the next day.

On Friday, the 10th, in the Lords, evidence was examined by Counsel in support of the second reading of the Stafford Disfranchisement Bill. The Report on the Bishopric of Durham Bill was afterwards agreed to on the motion of the Marquis of Lansdowne, the clauses having been struck out which abolished the local courts.

In the Commons, it was intimated by Mr. Poulett Thomson, that after the division which took place on the Factory Bill the other evening, it was not the intention of Government to proceed further with the measure in the present Session. All that the Government had now to do, he added, was to see the provisions of the existing Act duly enforced. After this the debate on the Lords' Amendments to the Irish Municipal Corporations Reform Bill was resumed, and continued till nearly four o'clock in the morning, when, on a division, the numbers were found to be—for Lord John Russell's motion 324, against it, 238—majority for Ministers, 86. In the course of the evening, Sir Frederick Trench and Mr. Rigby Wason were both ordered to be taken into the custody of the Serjeant-at-Arms, on a Report from the South Durham Railway Committee, that something of a personal nature had taken place that day in the Committee between the two Honourable Members.

On Monday, the 13th, the second reading of the Court of Chancery Bill was moved, in the Lords, by the Lord Chancellor, when a debate arose which lasted till a late hour. A division then took place, when Lord Lyndhurst's amendment, that the Bill should be read a second time that day six months, was carried by a majority of 94 to 29. The principal speech delivered in favour of the measure was that of Lord Langdale, which however was, for the greater part, directed to the advocacy of changes which the Bill did not contemplate. His Lordship even disapproved of some of the provisions of the proposed plan of reform; but he stated that, as it was not likely to present any obstacle to what he deemed desirable, and as, on the whole, it would afford considerable relief, he should vote for the second reading. His own views Lord Langdale explained as follows:—"He thought that there ought to be a Lord Chancellor in the Court of Chancery appointed by letters patent, without delivering to him the Great Seal. Thus he would be exempted from all political duties, and from sitting as a Judge of Appeal in the House of Lords. The Lord Chancellor in the Court of Chancery should be precluded from re-hearing the decisions of the Master of the Rolls and the Vice-Chancellor; so that he would, in fact, be converted entirely into a Judge of original jurisdiction. He would have the Great Seal delivered to a Lord Keeper, and would annex to that office all the political functions, numerous and important as they were, at present discharged by the Lord Chancellor. He further thought that provision should be made for the constant, regular, and due administration of justice in the House of Lords, and that there should be appointed by his Majesty a Lord-President or Lord-Speaker of the House in Judicature, who should be a permanent Judge, unconnected with politics, and to be assisted by persons called Lords-assistants." His Lordship, however, after giving a detail of the various changes which had been made in the constitution of the Court of Chancery since its creation, and adverting to the alterations which had been contemplated and proposed at different times by various persons with respect to the administration of justice in the House of Lords as a court of appeal, and to the shifting views with which even the eminent projectors of those alterations had regarded the subject, ob-

served that it would ill become him, after this statement, to express any confidence in any views which he had himself formed, seeing the great diversity of opinion that had prevailed even among the most able and experienced persons. Of course the present decision also determines the fate of the other Ministerial Bill—that for regulating the appellate jurisdiction of the House of Lords.

The House of Commons met this day at twelve o'clock; but the greater part of the morning sitting was occupied in debating the affair between Sir Frederick Trench and Mr. Wason, both of whom were brought up in custody of the Serjeant-at-Arms. Both parties at length expressed themselves satisfied with each other's explanations and willing that the matter should go no further, upon which they were ordered to be discharged from custody, on the payment of the usual fees. After this the Lords' amendments on the Irish Municipal Corporations Bill were taken into further consideration, when most of the original clauses, up to the 86th inclusive, were restored without alteration, and with scarcely any discussion. Sir Robert Peel stated that, after the decisive majority which had supported Ministers on Friday evening, he thought it would be vexatious for the minority to carry their opposition further. When the House met again at five o'clock, Mr. Bannerman stated that in consequence of the Committee (the second to which it had been referred) having decided against the principle of the Aberdeen Public Schools Bill, he would not proceed further with the measure this Session, but he would, next Session, assuredly bring the subject again before the House. In answer to a question from Lord Francis Egerton, Mr. Spring Rice explained, but only in general terms, his intentions with regard to the manner in which the reduction of the paper-duty would be brought into operation. He intimated that, with regard to the duty on stained paper, he was prepared to allow the reduction to take place in July, instead of in October, as at first proposed. As to first-class paper, he remained opposed to the proposition of allowing a drawback upon stocks in hand. "To give increased facility, however, to the manufacture, he was inclined to grant the privilege of manufacturing in bond, under certain regulations, and also the power of placing, under certain regulations, duty-paid first-class paper in the hands of stationers; and in the event of any surplus of paper remaining on the 10th of October, an allowance of the amount of duty would be made—he did not mean a drawback on paper generally, but on paper under the particular regulations which would be provided." The House then resolved itself into a Committee on the Registration of Births and Marriages Bill, when the clauses from 34 to 42 inclusive, and also the schedules, were agreed to. After this the Marriages Bill was considered in Committee. The first fourteen clauses were agreed to after some debate; but on the 15th, relating to the registering of dissenting places of worship for the celebration of marriages being proposed, Dr. Bowring moved that the signatures of ten, instead of twenty, householders belonging to the congregation should be sufficient to entitle the chapel to be registered; and the Committee having divided upon this motion, the clause, in its original form, was carried by a majority of 128 to 22. Another division took place on the 18th clause, which enacts that any person who may object to marry in a registered building may contract marriage at the office of the registrar. The omission of this clause was moved by Mr. Poulter, who objected to it that it would alter the whole marriage law of England, by separating the contract of marriage from a religious sanction. To this it was well answered by Dr. Lushington, that to expunge the clause would be contrary to the principle upon which the whole Bill was founded. The clause was eventually carried by a majority of 123 to 58. The other clauses, up to the 28th inclusive, were all agreed to. On the proposition of Dr. Nicholl, the 17th clause was amended, by its being enacted that each of the parties at a marriage, in addition to saying to the other —"I call upon these persons here present to witness that I, A. B., do take thee, C. D. to be my lawful wedded wife (or husband)" should make the following declaration:—"I solemnly declare that I do not know of any lawful impediment why I, A. B., should not be joined in holy matrimony to thee, C. D." The Learned Gentleman observed that he thought this declaration would be offensive to the conscience of no man. It may be considered, however, from the phraseology employed, as amounting to a recognition of the religious character of the marriage contract.

On Tuesday, the 14th, in the Lords, the Marquess of Lansdowne having stated that the Government were not prepared to bring forward any general proposition on the subject of railroads, although they were fully alive to the great importance of the suggestion which had been made about preventing these undertakings from becoming permanent monopolies, the Duke of Wellington said that he should propose the insertion of a clause in every Railway Bill which should come before the House, providing that the railroad to be formed should not be exempted from the operation of any general Act or Acts for the regulation of railroads which might be passed, with a view to the advantage, protection, and security of the public, before the expiration of one year after the passing of the Bills, or, if Parliament should not then be sitting, before the end of the next Session of Parliament. Afterwards the Dublin Police Bill was read a second time, and the Bishopric of Durham Bill was read a third time, and passed. The Bill for the regulation of the Universities of Scotland was then read a second time, on the motion of Lord Melbourne, who explained the nature of the measure at some length. We have given an account of it in another part of the present number. The second reading of the Bill was not opposed, although it was admitted that it conferred extraordinary powers. On the suggestion, however, of the Duke of Wellington, the Archbishop of Canterbury, and the Earl of Haddington, —the latter of whom observed that the subject had excited the greatest possible interest in Scotland, and he thought that time ought to be given for the promulgation of the Bill in that country, and for hearing the sentiments of the Universities upon its provisions, it was agreed that the consideration of the measure in Committee should be fixed for that day fortnight.

In the Commons, the consideration of the Lords' amendments to the Irish Municipal Corporations Bill was resumed, when most of the original clauses were restored to the Bill without opposition. The only debate that took place was that which arose on Mr. S. Crawford's motion, to add the town of Bandon to those in which corporations were to be established, a proposition which the Honourable Member made with the intention of following it up by similar motions for the restoration of all the small towns which it was originally intended to endow with corporations. This amendment, however, after having been discussed with an extraordinary display of warmth and much bandying of personalities on the part of certain Honourable Members, was eventually thrown out by a majority of 148 to 8. The House then went into Committee on the Marriages Bill, when the clauses from the 27th to the end were agreed to.

On Thursday, the 16th, in the Lords, on the third reading of the London Grand Junction Railway Bill being moved by the Marquis of Clanricarde, the Duke of Wellington moved the clause which he had given notice that he should propose to insert in that and all future

Railway Bills, and after considerable discussion, it was, with a slight modification, carried on a division by a majority of 33 to 15, although various reasons were strongly urged against both its expediency and its equity.

In the Commons, a Committee was obtained on the motion of Mr. Alderman Wood, to consider the most effectual plan for raising money for certain extensive improvements in the metropolis, a sketch of which was given by the Honourable Member. They were stated to embrace the formation of a new street from Southwark Bridge to the Bank of England; of another from Waterloo Bridge to the North Road; of another from the Bank through Lothbury to the Post Office; of another from the Post Office to Smithfield; of another from St. Paul's to Blackfriars' Bridge; of another from Holborn to the Strand; of another from Westminster Abbey to Belgrave-square; and of another through Southwark; besides the purchasing of the interest of the proprietors of the Waterloo and Southwark Bridges, that they may be thrown open for the use of the public, free from toll. It was calculated by the Honourable Member that all this might be accomplished at an expense of about 1,000,000*l.* sterling. The House afterwards went into Committee on the Registration of Voters Bill, when the first seventeen clauses were all agreed to, or carried by considerable majorities. The question of adjournment was then twice moved by the minority, on the pretext of an aversion to midnight legislation; but was negatived on the first division by a majority of 85 to 39, and on the second by a majority of 83 to 30. It was eventually agreed, however, on the motion of Mr. Rice, that the Chairman should report progress. A misunderstanding, which took place on the debate on one of the motions for adjournment, between Sir John Hobhouse and Colonel Sibthorp, was arranged on the interposition of the House, by the former declaring that he had not intended any personal offence by the words which were objected to, and the latter intimating that he was perfectly satisfied.

On Friday, the 17th, in the Lords, the Municipal Act Amendment Bill was read a third time, and passed. The Chancellor of the Exchequer and other Members of the House of Commons then appeared at the Bar, and requested a conference on the subject of their Lordship's amendments to the Irish Municipal Corporation Reform Bill. The conference having taken place, the Lords who had been appointed to manage it reported that the Commons had communicated, in writing, their reasons for not agreeing to the amendments. It was then agreed, on the motion of Lord Melbourne, that the reasons of the Commons should be taken into consideration on that day week. It was, however, afterwards arranged that the question should be deferred till Monday, the 27th.

In the Commons, when the Chancellor of the Exchequer presented, at the Bar, the Report of the Committee appointed to draw up the reasons to be offered to the Lords for not agreeing to their Lordship's amendments on the Irish Corporation Reform Bill, Sir Robert Peel protested against being supposed to concur in the Report, though he offered no opposition to its being received. It was admitted by Mr. Rice, that the reasons were to be considered as only speaking the sense of the majority.

The House having then resolved itself into a Committee on the Tithe Commutation Bill, two new clauses were adopted on the motion of Lord John Russell, materially modifying the rule originally laid down in the Bill for fixing the amount of the commutation. They provided that, on notice being given to the Commissioners, either by any landowners or any titheowners having an interest to the extent of not less than half the lands or tithes of any parish, the Commissioners shall have power to diminish or increase the average derived from the payments of the last seven years by any sum not greater than one-fifth part of its amount; that cases appearing to the Commissioners to be fraudulent or collusive shall be reserved for separate adjudication; and that the Commissioners shall make a Report to the Secretary of State before the 1st of May, 1837, stating in what manner the discretion thus vested in them ought in their judgment to be exercised, which Report, and all other Reports given in by the Commissioners, shall be laid before Parliament within six weeks after they shall have been received, or after Parliament shall have met. The Church of England Bill, the object of which is to carry into effect the recommendations of the Ecclesiastical Commissioners respecting the alteration of the extent of dioceses and the incomes of Bishops, was then read a second time. After this the House went into Committee on the Registration of Voters Bill, when the clauses up to the 66th were agreed to, after several amendments proposed by the Opposition had been negatived by large majorities.

On Monday, the 20th, in answer to a question from Lord Stanley, Lord John Russell stated that he should not be able to bring in any Bill upon the subject of church-rates during the present Session; but whenever he did introduce such a measure, it would be founded upon the principle which he had always maintained—that it was the duty of the State, either by means of rates, or of some other public fund, to maintain the buildings set apart by the State for divine worship in good and sufficient repair. The House having then resolved into Committee, the Chancellor of the Exchequer moved that the duty now payable on newspapers should be reduced to 1*d.*, subject to such provisions with respect to the size of the newspapers as may be enacted by any Act passed in the present Session. As an amendment on this Resolution, Sir Charles Knightley moved that the duty on hard soap be reduced from 1½*d.* to 1*d.*, and that on soft soap from 1*d.* to one farthing per lb. A long debate followed, in which the principal speakers were Mr. Spring Rice in support of the reduction of the newspaper duty, and Mr. Goulburn for the reduction of the tax on soap. When the Committee at length divided, the numbers were found to be—for the original motion 241, for the amendment 208. The question of the reduction of the newspaper stamp-duty may now, therefore, be considered safe. Some other Bills were afterwards advanced a stage.

On Tuesday, the 21st, in the Lords, among some other business of less importance, the Dublin Police Bill went through Committee, and a Bill was brought in by the Lord Chancellor, and read a first time, for the improvement of church discipline.

In the Commons, in answer to a question by Mr. Grote, the Chancellor of the Exchequer stated, that in order to relieve the tea-dealers as far as possible from the pressure occasioned by the circumstance of the duty on Boheas being to be augmented from 1*s.* 6*d.* to 2*s.* 1*d.* per lb. by the 1st of July, it had been determined to permit the payment of the duty to be deferred to any time not exceeding thirty days after that date. In answer to another question from Sir George Clerk on the subject of the duty on first class paper, Mr. Rice made the following statement:—In the interval before the reduction of the duty, (on the 10th of October), papermakers would be allowed to pass paper into the stocks of their customers under the direction of the Board of Excise, the duty having been paid before it was issued from the mills, and any stock of that paper unconsumed on the 10th of October in the hands of stationers, would entitle them to a return equal to the excess of the old duty over the new. Mr. Hume afterwards obtained leave to bring in a Bill for separating the administration of the financial from that of the judicial affairs

of counties. During the remainder of the evening the House sat in Committee on the Registration of Voters Bill, when a good deal of discussion took place on some of the clauses, and several amendments were proposed, all of which, however, were negatived. The clause directing the poll to be taken in one day was omitted, on an understanding that the point should be made the subject of a separate Bill. An amendment was proposed by Sir James Graham, with the view of preventing the creation of county votes out of leases conferring votes for a town; but at this point it was moved that the Chairman should report progress, and the motion was carried, on a division, by a majority of 63 to 49.

On Wednesday, the 22nd, on the further consideration of the Report on the Metropolitan Suspension Bridge over the Thames being moved by Mr. Tennyson D'Eyncourt, Mr. Tooke moved that the Report should be taken into consideration that day six months; but, on a division, the amendment was negatived by a majority of 109 to 30. Mr. Gully then, in support of a statement which he had made on a former evening, read a letter, addressed by Mr. Hardy, the member for Bradford, to one of his supporters in that place, in which the Honourable Member had used the following words:—"I always felt bound in honour, though much against my conscience, to pay the head-money to those who voted for me, and which was, in many instances, taken by those who ought to have been ashamed of such a thing." In a long reply which Mr. Hardy made to Mr. Gully's speech, and in which he entered into very full explanations of various matters alluded to in the letter, he appears to have passed over this the most material sentence in it, without observation. Mr. Hume afterwards moved that the letter, which had been laid upon the table of the House, should be printed, but the motion was negatived by a majority of 136 to 97. The House having then resolved itself into a Committee of Ways and Means, the Chancellor of the Exchequer moved a resolution, of which he had given notice a day or two before, for equalizing the duties on East and West India sugar. Although some difficulties and objections were started by one or two Honourable Members, this important proposition appeared to be generally received with much gratification by the House. The resolution was agreed to without a division. A division then took place, after a short debate, on Mr. Wakley's motion for the second reading of the Parish Vestries Bill,—the object of which is to repeal the 28th of Geo. III., commonly called Sturges Bourne's Act, which gives a plurality of votes in vestry to property; when the numbers were found to be, Ayes 42, Noes 60. After this the Municipal Corporations (Scotland) Bill went through Committee; and the Bribery at Elections Bill was also considered in Committee, and several of the clauses agreed to.

On Thursday, the 23rd, the Lords were for some time occupied, as they had been for several days previously, in hearing evidence in support of the Stafford Borough Disfranchisement Bill. Lord Lyndhurst then moved the second reading of a Bill for allowing the aid of counsel to prisoners in making their defence in cases of felony, which had been some days before introduced by the Lord Chancellor. The motion was agreed to without a division.

In the Commons the question of the ballot was again brought forward by Mr. Grote, in a motion for leave to bring in a Bill, providing that the votes at elections for Members of Parliament should be taken by that method. The motion was supported by Mr. Leader, Dr. Bowring, Mr. Ewart, Colonel Thompson, Mr. Villiers, and Mr. Roche, and opposed by Lord Dalmeny and Mr. Robinson. On the division it was negatived by a majority of 139 to 86. Lord John Russell afterwards obtained leave to bring in a Bill for the more convenient division of counties into polling districts for the election of Members of Parliament, and for taking the poll in one day. A debate and a division then took place on a motion of the Lord Advocate, for leave to bring in a Bill for the better regulation of the office of auditor of accounts in the Court of Session in Scotland, and for the appointment of two accountants-general in the said court. The motion was opposed by Sir William Rae, Sir George Clerk, and Mr. Goulburn, but was carried, on the division, by a majority of 93 to 69. The Lord-Advocate also obtained leave to bring in a Bill to regulate the constitution, jurisdiction, and forms of process of sheriffs' courts, and the civil jurisdiction of sheriffs' burgh courts, in Scotland. Mr. P. Thomson obtained leave to bring in a Bill for the better regulation of light-houses, founded on the Report of the Committee which had lately inquired into that subject.

FRANCE.

THE affairs of Algiers have occupied the attention of the Chambers, and caused considerable embarrassment to government, which feels more and more the weight of that useless conquest. A party proposed that the army of Africa, as it is called, which is 23,000 strong, and costs an enormous sum, should be forthwith reduced, but this was opposed by government; and Marshal Clausel, the governor of Algiers, who was present at the debate, stated plainly, that instead of being in a condition to maintain himself against the Arabs and Kabyles with fewer men than he then had, he actually wanted reinforcements. The Marshal, moreover, gave it as his opinion, that in order to ensure the prosperity of the African colony, government ought to prevent both the civil and military functionaries from occupying themselves, so much as they have been doing, with the purchase and cultivation of land for their own benefit, and require them to devote themselves solely to the support of French influence in Algiers and its dependencies.

We suppose this means that both civil and military functionaries—the colonist who goes thither on his own account, as well as the paid servant of government,—should be constantly in arms. On the very day of the debate at Paris, news arrived that General Arlanges required re-enforcements on the river Tafna, his entrenched camp there being surrounded by clouds of Arabs.

It appears that General Arlanges has since succeeded in getting back to Oran, and that considerable re-inforcements were landed at that place from the ship of the line "Nestor," on the 4th of June. Admiral Hugon was expected to arrive with fresh forces on the 7th or 8th, and, after landing them, to proceed to Tripoli with his squadron of observation, to watch the proceedings of the Sultan's fleet. Mahmoud, it seems, is determined to reduce the Bey of Tripoli, and this the French are anxious to prevent.

The subject of the total abolition of slavery in the French colonies has been again introduced in the Chamber of Deputies. No specific motion was made, but Ministers declared that they warmly desired the emancipation of all slaves, and were studying the means of accomplishing that important measure. As compensation must in justice be given to the French slave-holders, we hope that when that word is mentioned the zeal and humanity of the deputies will not evaporate as they did last year when treating of the same subject.

On one or two matters of no great moment the Cabinet has been defeated in the Chamber of Deputies. At the end of May a majority of 168 to 148 voted against Ministers, who were for keeping the salaries of the

prefects of the departments *in statu quo*. The whole of the proposed reduction amounted to about 4000*l*. sterling!

On the 1st of June, the Duke de Fitzjames, a fanatic absolutist of the most hopeless description, who was formerly a peer, but not choosing to take the oaths to Louis Philippe, threw up his peerage, and now sits in the lower house, delivered there a long and most ferocious tirade against England, the natural, the eternal enemy of France. This ultra-royalist imitated the reasonings and style of the Jacobins and the worst of the Bonapartists, scarcely omitting a single term of abuse coined between 1790 and 1815. To strengthen his declamation he had recourse to falsehood, misrepresenting a speech of Mr. Canning's, and the feeling, of the English people, which at this moment is anything but hostile to the French. We wish we were quite sure of the reciprocity of this good feeling. The speech was interesting only inasmuch as it led to a declaration from M. Thiers, the head of the present Cabinet, who said in reply, that a good understanding and the best of feelings existed between France and England,—that the alliance with England was not only, under circumstances, the very best that France could enter into, but also the one likely to last longest, and he treated as a vulgar absurdity the Duke's assertion that the people of France and the people of England are, and ever must be, irreconcilable enemies.

On the 2nd of June some questions were put to Ministers with respect to their projects for the third series of the Greek loan, and some other points of foreign policy. The first question was altogether evaded, but after deprecating a too busy interference in the affairs of other nations, M. Thiers said, with reference to the occupation of the free city of Cracow by Prussian, Austrian, and Russian troops, "That there could be no doubt that the Treaty of Vienna guaranteed the freedom of Cracow; but he found by Article 9 of that Treaty, that it was laid down, that the free city of Cracow should not be made an asylum, and the centre of plots and operations, for individuals proscribed by the neighbouring States. He said it appeared that a number of Polish refugees had taken up their residence there —had formed an extensive conspiracy, and caused disturbances in the town; and that, apprized both of the plot and the riot, the Three Great Powers had determined to occupy Cracow for the avowed purpose of preserving tranquillity."

In this case the accusers make themselves witnesses and judges. It is very probable, however, that some imprudent men may have been renewing at Cracow the desperate measures by which the Poles have occasioned Switzerland so much trouble.

The debates in the chamber of deputies on the 14th and 15th of June were rather remarkable, though they led to no results. M. Lafitte, who considers himself an ill-used man, and a victim to Louis Philippe's duplicity and ingratitude, denounced the extravagance of the present government, which, it appears, costs the nation much more than the government of Charles X. According to his showing, during the six years immediately preceding the expulsion of Charles, the receipts of the Treasury had been 5,500,000,000 francs,—in the six years that have since elapsed the receipts have been swelled to 7,500,000,000 francs,—in the first of these six years, a deficit had always existed, and in spite of the increase of revenue, a deficit is equally to be remarked now. He said, in conclusion, "If this deficit continue whilst the existing high taxes are maintained, I shall feel bound to ask pardon of my God and of my country for the part I took in the revolution of July."

M. Lafitte, the liberal, was followed in his line of reasoning by M. Berryer, the ultra-royalist, who said that the budget of 1837 exceeded that for 1829, by 105,000,000 francs.

A mission has been despatched by Louis Philippe's government to the Emperor of Morocco, some of whose subjects have fought along with Abdel Kader against the French, in the neighbourhood of Oran. Another mission to the Pasha of Egypt is spoken of.

Louis Philippe's sons—the Duke of Orleans and the Duke of Nemour—have been as favourably received by the Austrian as they were by the Prussian court. His Royal Highness of Orleans is said to have been much affected as he stood before the tomb of the Duke of Reichstadt, the son of Napoleon, in the imperial vaults of the church of the Capuchins,—and well he might be, if he recalled the many vicissitudes crowded within a few years!

SPAIN.

From the hard fighting in front of St. Sebastian, on the 5th of May, which we described in our last retrospect, no operations of any consequence took place until the 24th of the same month, when Lord John Hay, our naval commander on the station, who seems to have become the hero of this war, ran down the coast as far as Fonturabia, which town, together with the town of Passages, he reconnoitred with the view of subsequently making an attack on the Carlists there. One of his steamers got a-ground near to Passages, and lay exposed for some time to the musketry of the Carlists, who lined the cliffs above the sea, but the vessel was got off without any serious injury, and no lives were lost in her. While the men on the cliffs were firing, several women were seen charging the muskets and handing them to the men; but these Amazons, as well as their companions, were put to flight by a few of Lord John's shells. On the 28th of May, the Carlist entrenchments on the right bank of the Urumea were attacked by land and water by General Evans and Lord John Hay, and after some sharp cannonading, the town and Port of Passages were taken possession of for the Queen. These operations were greatly facilitated by Captain Maitland, of the Tweed, who succeeded in laying a bridge of boats across the broad and rapid Urumea. If General Evans had had such a bridge on the 5th, some hundreds of his men who then fell might have been spared.

The Carlists gathering in force made a bold attempt on the 6th of June to recover all the ground they had lost since the 5th of May. In ten battalions they attacked all along the Christino lines, from the works opposite St. Sebastian to those at the south-west of the Port of Passages, but they were beaten at every point, and gave up the attempt after losing 300 men. It will surprise those who took the most favourable view of General Evans's successes, that they should have been in a state to attack at all. On the 9th, however, they fell on the lines again, or rather on an advanced post to the east of Passages, principally defended by British; but here again they were driven back with loss. Still it should seem that they keep the Queen's forces close to the sea line, and maintain themselves inland. The Queenites had received a re-enforcement of 2000 men on the 8th.

In Lower Arragon the Carlist bands have been more successful, and Cabrera, whose old mother was foully murdered by the Christinos, seems to be taking a fearful vengeance. In conjunction with some other insurgent chiefs he surrounded the far inferior force of Colonel Valdez, and cut it to pieces. It is reported that, after his victory, he shot 70 of the Carlist prisoners, "amid manifestations of much delight, and to the sound of music." Valdez himself escaped with great difficulty.

There was some fighting at Arlaban, near Vittoria, on the 23rd and 24th of May, when the insurgents tried the lines of General Cordova, but instead of carrying them they were beaten back, and are said to have lost some fortified works of their own. The Queenites lost 250 men in killed and wounded; the loss of the Carlists was more considerable. A few days after Cordova repaired to Madrid.

Turning from the field of actual warfare, we find little to raise our hopes for this unhappy country. On the 22nd of April, Carthagena became the scene of disgraceful disorders which lasted three days, during which some twenty defenceless individuals—government clerks, priests, and notables of the town,—were seized and massacred in the public square. The Governor-General O'Daly and the National Guards are said to have remained passive spectators of these atrocities, which were committed by about a hundred ruffians, crying "Death to the Carlists." The civil authorities were panic-struck, and did nothing. At Saragossa an attempt at a similar riot was put down through the firm and proper conduct of General San Miguel. A revolutionary junta, formed at Malaga, dissolved itself at the end of May, finding it impracticable to organize a powerful insurrection in favour of "the spirit of unlimited democracy."

Some uneasiness was created at Madrid among the *moderate* party (if we can call any party in Spain moderate) at the admission into the different public offices of a number of persons notoriously attached to the movement party; but it is said in defence of Isturitz, the new Minister, that these appointments were made by his predecessor Mendizabal, a few days before quitting office. It was considered matter of great congratulation for Isturitz that the provincial deputies from Leon, General Palarea from Valencia, General Roten from Alcaniz, and a few other officers, had explicitly declared that they would support his Ministry. The Premier himself, however, does not appear to have much confidence in its stability; and certain measures of suppression and prohibition he has adopted against the journals in opposition to him, added to the readiness with which he has recourse to the military, have much increased his unpopularity. In the hope of gaining strength for him, the Queen Regent has dissolved the Cortes; but it is much doubted whether, in the new estate of Procuradores, he will have more friends than in the old one. As for the Proceres, or Peers, they are expected to be against him almost to a man.

Cordova, who had left his army unpaid and in perfect inactivity at Vittoria, was still lingering at Madrid.

The Madrid Gazette of the 7th of June contained a royal decree respecting the non-consolidated debt. By a previous decree issued by Mendizabal, one-third of that kind of debt was secured to the holders, and the 15th of May last was fixed as the latest term on which claims to that advantage could be made. Only one-half of the holders having presented themselves by that day, one-third promised to those who had lodged their claims was paid them (in cash, it is said), and the other one-third not claimed was secured to them; the non-claimants being for ever disqualified. The decree set forth that the paper debt was to be paid integrally.

Another decree, published by the same official organ, is intended to regulate the sale of church and monastic, or, as it is called, "national" property. It offers still more facilities and accommodations than the decree on the same subject issued by Mendizabal, but capitalists and purchasers continue to be wanting or diffident.

The new Cortes are convoked for the 20th of August. The elections are to be conducted according to the new scheme proposed to the legislature in the ministry of Mendizabal, but which had not been passed into a law when the late Cortes were dissolved: this is something new in the history of constitutional governments. The Exchequer is represented as empty; but as far as inclination goes to keep good faith, Isturitz is favourably regarded by the foreign creditors of Spain.

PORTUGAL.

The political atmosphere of Lisbon has been stormy, and is still very threatening. On the 29th of May the Queen opened the Cortes with great ceremony, and seven days after she dissolved them with the shortest, or without any notice. The majorities against Ministers were overpowering in both Chambers, and in both the debates had been carried on with much violence and gross personality. The chief bone of contention seems to have been the appointment of Donna Maria's husband, now styled Prince Don Fernando, to be Commander-in-Chief of the Forces. The meeting of the New Cortes now stands appointed for the 15th of August. The finances are in disorder.

SAXONY.

The King, Anthony Clement Theodore, died at Pilnitz on the 6th of June in the eighty-second year of his age. He succeeded his brother Frederick Augustus (the most steady of Bonaparte's allies) in 1827, and he is now in his turn succeeded by a nephew (another Frederic Augustus) who ever since 1830 had been associated with him in the Government, under the title of co-regent. This interesting but very limited State has had but little influence in the affairs of Germany since the Congress of Vienna, when, in punishment for their Sovereign's having been the last to quit Napolean and join the allies, a million of the Saxon people who had all along disapproved of the tergiversations of the King, and his devotion to the French, were given over to Prussia, and the territories they occupied (about half of the kingdom) incorporated with the Prussian dominions. Since then the King of Prussia has exercised an influence over the whole, and recently Saxony, in opposition to her best interests, has been induced to become a party to his exclusive trade-leagues.

The people have paid dearly for the fault of their ruler, and yet, according to M. de Talleyrand, the only fault to be attributed to the old King in not seceding from Bonaparte quite as soon as some other allies of the French, was his having allowed his clock to be a quarter of an hour slower than his neighbours.

The new King's first proclamation is as brief as need be—it merely summons all public functionaries to take the oath of allegiance to him.

SOUTH AMERICA—MEXICO AND TEXAS.

If we can place faith in news received from more than one quarter, the Texians have entirely defeated the Mexican army sent against them, captured or killed Santa Anna, the Mexican President, and achieved, for the time, their independence. Nearly all the names that appear of those in command on the part of the Texians have a very English sound! The Secretary-of-War signs "Thomas Rush."

As the President refused to interfere, or take the field on Government account, Brother Jonathan got up a joint-stock war against Mexico on his own account. The subjects of the United States are numerous in Texas, and if they have the lead, they are likely to settle down into a quiet and durable State much sooner than the turbulent republicans of Spanish descent in South America.

DOCUMENTS AND ABSTRACTS.

REASONS OF THE COMMONS FOR DISSENTING FROM THE IRISH MUNICIPAL BILL SENT DOWN FROM THE LORDS.

In the discharge of the high trust committed to them by the Constitution of this realm, the Commons of the United Kingdom of Great Britain and Ireland feel it to be their duty to guard against the establishment of any precedent inconsistent with the maintenance of that good correspondence and understanding between the two Houses of Parliament which is essential for the framing and enacting of good laws to the ease and contentment of all classes of the King's subjects, and the security, honour, and dignity of his Majesty's Crown.

In considering the amendments made by the Lords in the Bill for the regulation of municipal corporations in Ireland, the Commons are bound to advert to the mode of procedure adopted in the other House of Parliament.

The Bill passed by the House of Commons provided for the regulation of municipal corporations and borough-towns in Ireland, and was framed upon the principle of reforming existing abuses, but of preserving within certain cities and towns in Ireland a system of municipal government.

It appears from the Minutes of the House of Lords, that in pursuance of an instruction from the House, the principle of the Bill has been altogether altered in Committee, and a change of title has been consequently rendered indispensable.

By the Bill returned from the Lords, it is proposed to abolish municipal corporations throughout all Ireland, and to place the management of all corporate property under Commissioners appointed by the Lord-Lieutenant of Ireland, and holding their offices during his pleasure.

The Bill, as amended, founded on a new principle, bearing a new title, and varying in its enactments from the Bill sent to the other House of Parliament, must, therefore, be considered as an original measure. The Commons are far from questioning the undoubted right of the Lords to exercise their undisputed powers and privileges in modifying or rejecting legislative measures submitted to them; but as the due and careful examination in each House of Parliament of the principle and details of all legislative enactments passing through the various stages as prescribed by the orders, ancient usages, and constitution of Parliament, is essential to the making of just laws, and as such due and careful consideration is rendered difficult, if not wholly impossible, if original Bills are transmitted in the form of amendments from one House of Parliament to the other, the Commons trust that the course pursued on the present occasion by the Lords may not be drawn into precedent.

But while the Commons have felt it to be their duty to state the reasons which preclude them from agreeing to the Bill as amended, yet, from an earnest desire to maintain undisturbed that good understanding and correspondence between the two Houses which they consider as essential to the well-being of the British monarchy, and from a conviction of the evil consequences of leaving great and admitted grievances without present and adequate remedy, they have proceeded to take into their consideration the Lords' amendments, in an earnest hope that such a measure may be thereon founded as shall meet the concurrence of the other House of Parliament, as shall be consistent with the principles of legislation adopted in the reform of the municipal corporations of Great Britain, satisfying the just expectations of his Majesty's subjects in Ireland, and thereby maintaining and strengthening the union between Great Britain and Ireland.

Because the Commons cannot consent to abolish a branch of the institutions of this free country, which is coeval with the earliest connexion between Great Britain and Ireland, which is founded upon charters granted by his Majesty's royal predecessors, and is recognised by the statute law of the realm, at various periods, more particularly in the Act of Settlement and the Act of Union between Great Britain and Ireland.

Because, as the Imperial Parliament has passed laws for Great Britain, reforming the existing corporations, but providing a permanent system of municipal government, the Commons are not prepared to assent to any enactments for Ireland irreconcilable with those sound principles which have given ease and contentment to the inhabitants of the corporate cities and towns in Great Britain, and have been conducive to the common weal.

Because it appears to the Commons essentially necessary to the best interests of Great Britain and Ireland, and to the maintenance of the legislative union between the two countries, that the same general principles of legislation should be applied to both parts of the empire, subject to such modifications as local circumstances may render indispensable or expedient.

Because if the rights, immunities, and franchises granted and continued to municipal corporations in Great Britain, are in Ireland abolished or withheld, the Commons are apprehensive that a spirit of distrust and discontent will be produced in Ireland, lessening the confidence reposed in the decisions of Parliament, endangering the public tranquillity, and thereby impairing the strength, the resources, and the security of the British empire.

Because the Commons consider the discharge of local duties, and the enjoyment of local privileges, under a system of self-government, as established in the Acts for the reform of the municipal corporations of Great Britain, to be among the most efficient guarantees and securities for peace and good order, and contentment, and to afford the surest means of directing the active ambition of the free subjects of a constitutional monarchy to just and legitimate objects, thus ensuring obedience to the laws, and an attachment to the constitution of the realm.

Because the conduct of the several corporations in Ireland, as set forth in the Reports presented to Parliament, has been such as to render it wholly inexpedient to continue in office, by one general enactment, all the servants of such corporations, intrusted as they are with the performance of duties highly important to the mercantile and commercial interests of the several cities and towns in Ireland.

The Commons disagree to the amendments of the Lords, by which members of the corporations other than the officers of such corporations may claim to receive compensation.

Because the grant of such compensation, without reference to duties of office performed by the party claiming compensation, is unprecedented, and likely to lead to injurious results.

Because the payment of pensions, alowances, and annual sums, without reference either to the time at which such pensions, allowances, or annual sums were granted, or to any public services rendered by the persons to whom such grants have been made, whether supported by an alleged established usage or a previous resolution, may entail on the cities and towns of Ireland charges created contrary to law, unsupported by any just authority, and may thus continue and sanction abuses of trusts, augmenting the local burdens, and diminishing the revenues applicable to the common good.

Because these enactments of the Lords, if not amended, are wholly at variance and irreconcilable with the facts of the case, as appearing on the face of the Report of the Commissioners presented to both Houses of Parliament.

Because, if the malversation and abuse of trust by existing corporations be such as to impose an obligation upon the Legislature to extinguish or remodel all such corporations, a continuance of the existing corporators in the discharge of their duties is inexpedient and unjust.

Because the property of many of the existing corporations has been granted in trust for paying and improving several of the cities and towns in Ireland, and for other public uses, and consequently these enactments would continue the powers of the existing corporations, or of the governing bodies and leading members thereof, by a law which proposed to provide for their absolute abolition and extinction.

Because these enactments would, in some cases, have the effect of converting a terminable trust or office into an office or trust for the life of the party, and that not in the

case of persons appointed or elected with such intent, but for the benefit of such as are casually in office on a given day.

Because such enactments might create an impression, that whilst the Legislature proposed to abolish the existing corporations, care was taken to continue and to sanction the powers and authority of the existing corporators.

Because the estates and personal property of corporations being granted for local purposes, will be most advantageously administered by those who are at once locally interested and locally responsible.

Because in so far as these corporate funds are applicable to the purposes of paving, watching, and lighting, and other analogous public services, which must otherwise be provided for by local taxation, it is just that the parties authorized and empowered to impose these local taxes should also be intrusted with the management and application of the corporate estates.

Because the effect of placing the management of these estates and funds in the hands of Commissioners, holding office during the pleasure of the Lord-Lieutenant, would be the creation of an undue influence in the several cities and towns inconsistent with their freedom and political independence.

Because the transfer of the right of nominating various public servants and officers from a local authority to Commissioners, holding office during the pleasure of the Lord-Lieutenant, will increase the patronage of the Crown, unsupported by the suggestion of any adequate grounds either of necessity or of expediency.

Because the enactment that such surplus revenue may be applied to the public benefit of the several towns is vague and indeterminate, and leaves too wide a discretion to the nominees of the Lord-Lieutenant.

Because it is proposed in this enactment to sanction the appropriation of corporate revenues to the uses of local boards or trustees, acting under a statutable authority, and the public revenues of the cities and towns may thus be applied to purposes of limited usefulness, by which the general interests of the inhabitants may not be promoted.

Because this enactment may sanction a misapplication of the corporate funds from the public purposes to which they were originally destined, and to which, for the benefit of the country, they should still continue to be applied.

Because, if the conduct of the existing corporations in Ireland has been such as to render their abolition not only expedient but indispensable, the continuance in office of the nominees of such corporations, without reference to their character or qualifications, cannot be justified.

Because such offices are connected with the administration of justice in Ireland, and should therefore be removed from local influence, and placed under the immediate authority of the Crown.

Because the effects of the Lords' amendments would be to give to several of their officers a more permanent title in their several offices than that which they now possess.

Because the effect of such an enactment would be, to give to the officers in question a more extended interest in their offices than that which they now enjoy.

Because the officers appointed by or under the authority of the existing corporations of Ireland, are not in all cases the best qualified persons to be continued in the exercise of functions connected with the administration of justice.

Because such officers have been appointed by the corporate bodies, whose abuse of trust is proved by the Report of the Royal Commission, and is admitted by both branches of the Legislature.

Because such offices relating to the administration of justice ought not to be exposed to animadversion or suspicion.

Because the effect of the Lords' amendment will be, in some cases, to convert an office held during pleasure, or by annual appointment, into an office held during good behaviour, thereby creating a new and extended title, for the benefit of the officers of existing corporations.

The Commons have felt it to be incumbent on them to state the foregoing reasons for their disagreement with certain of the amendments sent to them by the Lords.

In the Bill, as now amended, the Commons have consented to confine the establishment of town-councils to twelve considerable cities and towns, of which the wealth and importance render them well suited to such a system of local government. The Commons have further provided for the local government of twenty cities and towns of lesser extent and population, by applying to them the enactments of a statute specially relied upon in the amendments of the Lords. Within these several cities and towns it cannot be doubted but that the wealth, the intelligence, and the public spirit of the inhabitants, will supply both a constituent and a representative body fully qualified for the performance of local duties. The Commons have excluded from the immediate operation of the Bill, as returned to the Lords, eighteen towns in which the necessity of legislative interference is less apparent.

The Commons have thus endeavoured to maintain a good understanding between the two Houses, by not insisting on many provisions contained in the Bill as it originally passed their House.

The amendments to which the Commons have still felt it their duty to refuse their concurrence are such as appear to them to be wholly irreconcilable with the principle of the Bill as introduced, and no less at variance with the principles adopted in reforming the municipal corporations of Great Britain.

From these leading principles the Commons think it would be expedient, unwise, and unjust to depart. In an Address carried by both Houses to the foot of the Throne, a determination was expressed to preserve inviolate the legislative union, but at the same time to remove all just causes of complaint, and to promote all well-considered measures of improvement. Were the present corporations of Ireland, or the governing bodies thereof, to be continued in the exercise of their functions, proved and admitted, as has been, their scandalous abuse of trust, the Commons feel that a just cause of complaint would remain unremoved; and if a Bill were permitted to become law, extinguishing in Ireland all traces of those municipal institutions, which have existed for upwards of six centuries, and which at no former period, even during internal commotion and civil war, it was ever proposed to abolish, the Commons do not conceive that enactments of such an unprecedented nature would come within the description of those well-considered measures of improvement which Parliament has pledged itself to promote.

POST-OFFICE TREATY.

CONVENTION BETWEEN HIS MAJESTY AND THE KING OF THE FRENCH, FOR EXTENDING THE FACILITIES OF COMMUNICATION BY POST, BETWEEN THEIR RESPECTIVE DOMINIONS, SIGNED AT PARIS, MARCH 30, 1836.

His Majesty the King of the United Kingdom of Great Britain and Ireland, and his Majesty the King of the French, being desirous of extending the facilities of communication by post between their respective dominions, and to accomplish by means of a convention this important object, have for this purpose named as their Plenipotentiaries, that is to say:—

His Majesty, the King of the United Kingdom of Great Britain and Ireland, the Right Hon. Granville Earl Granville, a Peer of the United Kingdom, Knight Grand Cross of the Most Honourable Order of the Bath, a Privy Councillor, and his Majesty's Ambassador Extraordinary and Plenipotentiary at the Court of France:—

And his Majesty the King of the French, M. Louis Aldolphe Thiers, Commander of the Royal Order of the Legion of Honour, &c., a Member of the Chamber of Deputies of the Departments, Minister Secretary of State for the Department of Foreign Affairs, and President of the Council of Ministers:—

Who, after having exchanged their respective full powers, found to be in good and due form, have agreed upon the following Articles:—

Art. I. Persons desirous of sending letters either from France to the United Kingdom of Great Britain and Ireland, and to those British colonies or possessions where the Post Office of Great Britain has established post-offices, or from the United Kingdom of Great Britain and Ireland and the British colonies or possessions, to France, shall have the option—First, of allowing the whole of the postage of such letters to be charged to the receiver; secondly, of paying the postage in advance to the place of destination; thirdly, of paying the postage only as far as the frontier of the country to which the letters are sent.

Art. II. The system of optional payment of postage spe-

cified in the preceding article, in favour of ordinary letters from the two countries, shall be applicable to letters and packets containing patterns of merchandise.

Art. III. Letters and packets containing patterns of merchandise, which shall be forwarded from one country to the other, either paid or unpaid, shall be conveyed at such reduced rates of postage as are allowed for such articles by the laws and regulations of each country.

Art. IV. The inhabitants of the two countries may send from one country to the other, letters termed registered or recommended letters. The postage of such letters shall be fixed according to the combined rates of both countries, and shall always be paid in advance to the place of destination.

Art. V. The postage of a single letter (for which the post-offices of the two countries shall account to each other), for ordinary letters, paid or unpaid, is fixed as follows; that is to say:—

FOR THE FRENCH POST-OFFICE.

1. Between Paris and the frontier of the United Kingdom of Great Britain and Ireland, one franc.

2. And with respect to any other part of the French territory situated on either side of Paris relatively to the frontier of the United Kingdom of Great Britain and Ireland, a charge in proportion to the rate of postage above fixed for the conveyance between Paris and the said frontier.

FOR THE POST-OFFICE OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND.

1. Between London and the frontier of France, 10*d.*

2. And with respect to any other part of the United Kingdom of Great Britain and Ireland situated on either side of London relatively to the frontier of France, a charge in proportion to the rate of postage above fixed for the conveyance between London and the said frontier.

Art. VI. The postage of a single letter, for which the French Post Office will have to account to the Post Office of the United Kingdom of Great Britain and Ireland, with regard to letters arriving from the British colonies and possessions, or from other countries beyond sea, destined for France, or from France for the British colonies and possessions, or other countries beyond sea, which shall be conveyed by the regular packets of the Post Office of Great Britain and Ireland, is fixed as follows; that is to say:—

1. From and to Jamaica, Barbadoes, Martinique, Guadaloupe, St. Domingo, the British settlements and islands, the mails for which are conveyed by the Jamaica and Leeward Island packets, the United States of America and British North American, 2*s.* 3*d.*

2. From and to Portugal, 2*s.* 7*d.*

3. From and to Madeira, the Azores, and the Canaries, 2*s.* 8*d.*

4. From and to Carthagena, La Guayra, and Honduras, 3*s.* 1*d.*

5. From and to Brazil, Buenos Ayres, Chili, and all other places in South America, the mails for which are conveyed by the Brazil packet, 3*s.* 7*d.*

With respect to such of the above-mentioned letters as shall be conveyed by merchant-vessels leaving the ports of the United Kingdom of Great Britain and Ireland, or arriving at those ports, the rate for which the French Post Office will have to account to the Post Office of Great Britain and Ireland, is fixed as follows; that is to say:—

For letters destined for France, 1*s.* 6*d.* for each single letter.

For letters coming from France, 1*s.* also for each single letter.

The postage of the letters from France for the countries beyond sea, mentioned in the present Article, which shall be conveyed by merchant-vessels leaving the ports of the United Kingdom of Great Britain and Ireland, shall be paid in advance, agreeably to the practice with respect to the letters sent from the United Kingdom.

Art. VII. The two Post Offices shall mutually account to each other for the postage received on letters, whether paid or unpaid, forwarded from one office to the other, according to the scale of postage in force in that one of the two countries to which the account is to be rendered.

Nevertheless, the Post Office of the United Kingdom of Great Britain and Ireland shall account to the Post Office of France at the rate of a single rate of postage for each quarter of an ounce, on letters addressed to France, post paid, to their destination.

Art. VIII. English newspapers sent to France shall, like newspapers coming from other foreign post-offices in correspondence with France, and like French newspapers in France, be subject to a rate of only four centimes for each newspaper, to be paid by the receiver; and, reciprocally, French newspapers destined for the United Kingdom of Great Britain and Ireland, shall be subject only to a postage equivalent to that of four centimes, and to be paid by the English receiver. The whole, however, upon the condition that on both sides the newspapers shall be printed in the language of the country in which they shall have been published; and that, with respect to them, the laws and decrees which regulate their publication and circulation shall have been duly complied with.

With regard to newspapers coming from foreign countries through the French territory, and destined for the United Kingdom of Great Britain and Ireland, the English Post Office shall pay to the French Post Office, for the conveyance of those newspapers through France, a postage of four centimes on every printed sheet.

Art. IX. His Majesty the King of the French promises to use his good offices with the governments of those countries, of which the Post Offices are in relation with the Post Office of France, in order to procure for the inhabitants of Great Britain and Ireland, whose correspondence with those countries passes through the French territory, the option reserved by Article I. of the present convention to the correspondence between France and the United Kingdom.

Art. X. Letters misdirected, or mis-sent, as well as letters addressed to persons who have changed their residence, shall be returned without delay to one of the offices of exchange belonging to the Post-office from which they have been forwarded, for a return of the postage at which they were delivered by that office to the office of the other country.

Art. XI. Dead letters of every description shall be mutually returned by each office at the expiration of every month, or oftener if possible; and those letters which shall have been charged in account, shall be returned for the same amount of postage which was originally charged for them by the office from which they were sent.

Art. XII. Independently of the respective offices for the exchange of letters for the two countries, which are established at Dover and Calais by Art. I. of the convention of June 14, 1833, and through which principally the correspondence between Great Britain and France shall continue to be forwarded, it is agreed that bags may be made up for the transmission of local correspondence between Brighton and Dieppe, Southampton, and Havre, and all other places on the coast of each of the two countries, for which such direct communications may hereafter be deemed necessary.

The inhabitants of the places above-mentioned shall have the option of paying in advance, or not, the postage of the letters which they may forward from one country to the other by the above-mentioned channels, in the same manner as stipulated by Art. I. of the present Convention.

Art. XIII. The transit postage through France on letters from the United Kingdom of Great Britain and Ireland to those countries to which France is the channel of communication, and from those countries to the United Kingdom, shall continue as fixed by Article IX. of the Convention of the 17th May, 1802, with the exception of the undermentioned modifications, that is to say:—

1. Letters from Austria, and from the Lombardo-Venetian kingdom, shall pay for every 30 grammes, net weight, independently of the sum of 1 franc 50 centimes, stipulated by the before-mentioned convention as transit postage through France, the sum of 1 franc 80 centimes, as a reimbursement to France of the sum paid to the Austrian Post-office for the conveyance of the said letters through Switzerland; making, in all, 3 francs and 30 centimes.

2. Letters from Turkey, from the Levant, from the Archipelago, and from Greece, shall pay for every 30 grammes, net weight, independently of the sum of 3 francs stipulated by the above-mentioned convention as transit postage through France, the sum of 3 francs 20 centimes, as a reimbursement to France of the sum paid to the

Austrian Post-office for the conveyance of the said letters through the Austrian territory and through Switzerland; making, in all, 6 francs, 20 centimes.

3. Letters from the Ionian islands shall pay for every 30 grammes, net weight, independently of the sum of 3 francs, stipulated by the above-mentioned convention as transit postage through France, the sum of 2 francs 40 centimes as a reimbursement to France of the sum paid to the Austrian Post-office for the transit of the said letters through the Austrian territory and through Switzerland; making, in all, 5 francs 40 centimes.

With respect to those foreign governments, the transit postage of whose correspondence is now paid to France by the Post-office of Great Britain, both going and returning, the French government engages, in the event of the renewal of any Post-office conventions with those governments, to demand that they should bear the charge of one of the rates of transit.

Art. XIV. The Post-offices of Great Britain and France shall, every month, balance their accounts for the mutual transmission of letters; and those accounts, after having been examined, compared, and settled by the Post-offices, shall be liquidated at the expiration of every three months by that Post-office which shall be acknowledged to be in debt to the other.

Art. XV. The form in which the accounts mentioned in the preceding article are to be made up, as well as the mode of verifying the account of the postage to be mutually accounted for by each office, and all other matters of detail which are to be arranged by mutual consent for ensuring the execution of the stipulations contained in the present convention, shall be settled between the Post-offices of the two countries as soon as possible after the exchange of the ratifications of the said convention.

It is also agreed that the measures of detail mentioned in the present article, may be modified by the two Post-offices whenever, by mutual consent, those Post-offices shall have decided that modifications would be beneficial to the Post-office service of the two countries.

Art. XVI. The high contracting parties engage to recommend, with the least possible delay, the one to his parliament, and the other to the chambers, that they should be empowered to carry into execution such of the stipulations of the present convention as may not now be in conformity with the laws of the two countries respectively.

Art. XVII. The present convention is concluded for an indefinite period. If, at any future time, circumstances should render desirable any change or modification in any of its articles, the high-contracting parties will concert upon the subject; but it is understood that, unless by mutual consent, neither the convention, nor any of its stipulations, shall be invalidated or annulled without a previous notification of six months. During that term of six months, the convention shall continue to be fully and entirely carried into effect, without prejudice to the settlement and liquidation of the accounts between the two Post-offices after the expiration of the said term.

Art. XVIII. The present convention shall be ratified, and the ratifications exchanged at Paris, at the expiration of three months, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the present convention, and have affixed thereto the seals of their arms.

Done, in duplicate, at Paris, the 30th day of March, in the year of our Lord, 1836.

GRANVILLE, (L.S.)
A. THIERS, (L.S.)

CIRCULATION OF COUNTRY NEWSPAPERS.

A RETURN has been published of the number of stamps issued in each month by the Stamp Office for all the newspapers in Great Britain, from 30th June, 1835, to 30th of April, 1836, specifying each newspaper by name, and the number of stamps issued each month during the above period. The principle on which the Return has been made is obviously better [illegible] it merely shewed the aggregate supply, as the apparent circulation of a single newspaper cannot be swelled by the receipt of a large quantity of stamps just previous to the accounts being made out. Nevertheless, the present Return is not entirely perfect; and in the subjoined list we have made corrections of the aggregate supply in the case of the "Manchester Guardian," "Liverpool Mercury," "Leeds Times," and "Sheffield Mercury." It will be seen that in several instances blanks occur in cases where the papers have nevertheless been in existence during the whole of the period which the Return comprises. It is stated that "this can only be accounted for by supposing they were included in the number of stamps taken out and returned as issued for other papers." A large number of stamps taken out by the "Liverpool Mercury" were supplied by an agent who furnishes the "Age" with stamps; and that paper has probably an excess of stamps put down in its name. The blank returns for some of the country papers may be accounted for in several cases by the fact of their being partly printed by a London newspaper proprietor at his office in London. These papers are of very small circulation. The following journals are published on this plan:—"Blackburn Standard," "Chatham Standard," "Dover Telegraph," "Gravesend Journal," "Greenwich Gazette," "Greenwich Guardian," "Leicester Herald," "West Kent Guardian," and "Devonport Standard." The defective nature of the Return is by this means in some degree satisfactorily explained, and becomes more worthy of attention. The number of country newspapers for which Returns are made is 165; the total number of stamps supplied to them is 7,019,947. This yields an average circulation of 966 per week; but as 57 newspapers have a circulation of from 1000 to upwards of 5000 per week, the remainder have a much lower average weekly circulation than 966. The "Leeds Mercury," "Stamford Mercury," "Manchester Guardian," and "Liverpool Mercury," all papers of the same political complexion, are at the head of the English provincial press, and rank in the order in which they are placed. There are 4 papers whose average weekly circulation exceeds 3000; 11 circulate 2000 and under 3000 per week; 12 above 1500 and under 2000; and 29 1000 and under 1500. The Returns of the London and Scotch newspapers will be published in a succeeding Number.

Salaries and allowances, 38,0[illegible] poundage and percentage under Acts of Parliame[illegible] 10,230*l.*; allowances for travelling and other expen[illegible] 029*l.*; tradesmen's bills, 36*l.*; rates and taxes, 40[illegible] law charges, 2414*l.*; postage and carriage, 4408*l.*; superannuation, or retiring allowances, 3588*l.*; compensation to officers for loss of office, 23,801*l.*; other payments, 2574*l.*; church and corporation land-tax, 240*l.* Total charge on the revenue, 209,372*l.* 15*s.* 6¾*d.*

POST OFFICE.

Salaries and allowances, 244,509*l.* 13*s.* 4¾*d.* Salaries to the postmaster-general, officers and clerks in the London and Edinburgh offices, and wages and allowances to letter-carriers, messengers, &c., also in the Dublin office, 89,252*l.*; salaries and allowances to deputy-postmasters and agents in Great Britain and the Colonies, &c., also in Ireland, 114,576*l.*; salaries and wages to officers and letter-carriers in the twopenny post-office, 40,680*l.* The allowances for special services and travelling charges are 9039*l.* The conveyance of mails, transit postage, and payments for ship letters cost 260,539*l.* 11*s.* 10¾*d.*, viz.—Riding work and expresses by the deputy-postmasters in Great Britain and Ireland, 96,341*l.*; mileage to mail-coaches, wages to mail-guards, and other mail-coach expenses, 101,503*l.*; tolls paid on mail-coaches, 28,075*l.*; riding work and conveyance of mails in Canada, Nova Scotia, and Jamaica, 12,672*l.*; riding work of the twopenny post-office, 4219*l.*; transit postage through foreign countries, 9160*l.*; ship-letter payments, 8567*l.* The expense of the packet service, including Port dues, is 109,987*l.*; the tradesmen's bills, buildings and repairs, amount to 9975*l.*; rents, taxes, and tithes, to 4085*l.*; law charges, to 6912*l.*; stationery, printing, and postage, to 3539*l.*; superannuation allowances, to 15,071*l.*; and with deductions, to 14,312*l.*; the allowances for offices abolished are 11,670*l.*; and the allowance to Secretary of State's clerks, in consideration of the loss of their privilege of franking newspapers by the Acts of 9 Geo. III. c. 25, and 25 Geo. III. c. 60, is 2500*l.*; there are other payments which amount to 1565*l.* 10*s.* 3¾*d.*, making the charge of collection 678,837*l.* 4*s.* 4½*d.*

TURNPIKE TRUSTS IN ENGLAND AND WALES.

A Bill has been introduced into the House of Commons to authorise the consolidation of the trusts of turnpike roads in England, "in order," as the preamble states, "to lessen the expense of the management and maintenance of turnpike roads." It is proposed by this Bill to appoint a Board of Commissioners, who are to have a common seal, and to be empowered to unite so many turnpike trusts as they may think fit to be consolidated, the management of such consolidated trusts to be placed in the hands of the Commissioners.* In order to show the financial state of the present turnpike trusts, there has been printed, by order of the House of Commons, "An Abstract of the General Statements of Income and Expenditure of the several Turnpike Trusts in the different counties of England and Wales, from 1st January, 1834, to 31st December, 1834." We shall give, in the first place, the aggregate amount for England and Wales under the various items exhibited by the abstract, and afterwards the most important items for each of the counties separately. The general state of the turnpike trusts, as exhibited under more than forty heads, is deduced from separate accounts, equally minute, of each of the 1108 trusts of England and Wales. The number of surveyors employed in England is 857, and there are 764 treasurers and 716 clerks; in Wales, 55 surveyors, 55 clerks, and 58 treasurers. In 1830, the number of trusts in England was 956, length 18,244 miles; in Wales there were, as at present, 69 trusts, and their total length was 2631 miles.

INCOME.	England.	Wales.

THE COAL TRADE.

A series of Accounts has been published in a Parliamentary Return, shewing—1. The quantities of coal, culm, and cinders shipped coastways at the different ports of the United Kingdom in the years 1834 and 1835. 2. The quantities exported in the above years, distinguishing the countries to which the same were sent; also—3, distinguishing the ports of the United Kingdom from which the same were shipped. 4. The rate and amount of duty on the quantities exported in 1835; and 5. An account of the quantity of coals brought coastwise, and by inland navigation into the port of London in the years 1834 and 1835. The following is an abstract of these Accounts, omitting places of secondary importance.—

1. The Exports coastwise to other ports of the United Kingdom consisted of 5,822,561 tons in 1834; and 6,117,093 tons in 1835; and the chief places of shipping were—

	1834. Tons.	1835. Tons.
Newcastle	2,022,226	2,266,531
Sunderland	952,087	929,187
Stockton	623,484	677,941
Newport	427,681	443,651
Whitehaven	354,524	354,098
Swansea	345,367	361,417
Irvine, North Britain	122,949	147,949
Cardiff	120,774	123,279
Borrowstoness	117,130	110,616
Goole	105,618	121,445
Llanelly	94,150	86,080
Glasgow	87,083	77,913
Grangemouth	80,880	76,675
Chester	75,163	79,207
Air	56,189	53,432

2. The foreign Export of coal amounted to 615,255 tons in 1834—declared value, 220,746*l.*; in 1835, to 736,060 tons—declared value, 244,816*l.*

Principal countries to which exported.	1834. Tons.	1835. Tons.
Holland	94,447	115,138
Denmark	72,188	83,109
Guernsey, Jersey, Alderney & Man	63,182	68,482
France	59,690	104,136
British North American Colonies	55,201	38,565
Germany	50,258	66,055
British West Indies	43,617	61,654
United States of America	39,855	19,585
Russia	35,214	42,061
Prussia	23,781	43,675
Portugal, Azores, and Madeira	13,714	11,981
Italy	12,587	6,377
Sweden	110,658	16,076

3. Ports from whence the largest quantities were exported:—

	1834. Tons.	1835. Tons.
Newcastle	230,342	313,107
Sunderland	149,956	154,638
Liverpool	59,078	61,542
Borrowstoness	22,273	23,640
Swansea	20,419	23,741
Whitehaven	18,121	19,606
London	17,056	20,353
Greenock	14,710	13,998
Hull	12,161	10,078
Stockton	9,988	26,840
Bristol	5,340	7,294

4. The duty on coal, cinders, and culm exported in British ships, or ships of countries with which a treaty of reciprocity has been concluded, is—to British possessions, free; to foreign countries, 10*s.* per cent. *ad valorem*; if exported in foreign ships, not entitled to the privileges conferred by treaties of reciprocity, the duty is 4*s.* per ton, whether to foreign countries or to British possessions. At the rated duty of 4*s.* per ton, 5,480*l.* 14*s.* 9*d.* duty was paid in 1835; and the duty of 10*s.* per cent., *ad valorem*, produced 747*l.* The distinction between large and small coals has not been observed at the Custom-house since August 6th, 1834, when an Act came into operation, by which the duty chargeable on both descriptions was made the same.

5. The coals brought coastwise, and by inland navigation into the port of London, in 1834, were 2,080,547 tons; in 1835, the quantity was 2,299,816 tons.

CUSTOMS' DUTIES.

The gross amount of Customs' Duties collected in England, Scotland, and Ireland, for the years ending Jan. 5, 1835 and 1836, was as follows:—

	1835.	1836.
England	£17,912,978	£19,614,974
Scotland	1,441,245	1,529,810
Ireland	1,757,142	2,016,149

The net receipt exhibits the produce after deducting re-payment of trade vouchers, officer's expenses, and incidental charges. The net amount remitted in the above years was as follows:—

	1835.	1836.
England	£15,918,843	£17,579,960
Scotland	1,090,485	1,199,292
Ireland	1,484,988	1,743,642

The following was the gross receipt at the re[illegible] ports named in the above-mentioned years:—

	1835.	1836.
London	£10,697,263	£11,773,616
Liverpool	3,846,306	4,272,847
Bristol	1,072,106	1,177,687
Hull	682,008	720,870
Newcastle	286,916	289,508
Gloucester	131,105	150,464
Plymouth	94,495	93,462
Dovor	60,897	52,714
Portsmouth	55,153	51,887
Falmouth	21,661	19,157
Southampton	46,825	49,806
Stockton	47,870	51,487
Sunderland	65,284	62,626

	1835.		1836.
Whitehaven	86,063		96,079
Yarmouth	64,410		56,814
Greenock	482,138	448,661	
Glasgow	270,667 893,089	314,701	888,524

Newry	51,083		54,081
Galway	38,308		31,133
Sligo	34,915		33,703

JOINT-STOCK BANKS.

The following Circular has been addressed by the Chancellor of the Exchequer, as Chairman of the Committee of the House of Commons on Joint Stock Banks, to the Directors of each of these Establishments:—

(Copy). Downing-street, May 21, 1836.

Gentlemen,—In pursuance of a Resolution of the House of Commons, adopted unanimously on the 13th instant, a Committee has been appointed "to inquire into the operation of the Act 7th Geo. IV. cap. 46, permitting the establishment of Joint Stock Banks under certain restrictions, and to examine whether it be expedient to make any alterations in the provisions of that Act." Of that Committee I have the honour to be Chairman, and at the first meeting I was requested to obtain from the joint stock banks such information as may enable the Committee to execute the duties confided to them by the Legislature.

As it was considered just to the parties concerned that the Committee appointed should be one of secrecy, for the purpose of avoiding any disclosure of private transactions not required by the public interest, in place of addressing to you the usual order of the Committee, issued under the power and authority of the House of Commons, it has been judged more advisable this communication should be addressed to the joint stock banks by me as Chairman, and that your reply should be addressed, under cover, to "the Chancellor of the Exchequer," and marked "Confidential Bank Returns." I enclose two papers, calling your attention to the particular points on which the Committee require information, and you will be so good as to fill up the Returns with as little delay as possible.

The amount of Liabilities and Assets (No. II.) should, if possible, be furnished from the *three* last half-yearly periods to which your accounts are made up; and the answer to the questions in No. I., may be made in reference to your period of balance. This may, I hope, diminish the trouble imposed upon you, and the returns called for may also limit the examination of witnesses.

You will not hold yourself precluded from adding any explanation not coming within the scope of these inquiries: and I can assure you that while I place every confidence in the zeal and readiness with which you will promote the objects of this inquiry, it is at the same time the earnest desire of the Committee so to govern their proceedings as most to conduce to the convenience of all parties concerned.

I am, Gentlemen, yours, &c.
(Signed) T. SPRING RICE.

No. I.

1. Name of the bank and date of commencement.
2. Number and situation of branches, and distance of each from the parent establishment.
3. Amount of nominal capital.
4. Number of shares and nominal value of each share.
5. Number of shares issued.
6. Amount of paid up capital.
7. Date of the several calls for paid up capital, and amount of the several instalments paid up.
8. Number of shares, if any, which may have been forfeited for non-payment of instalments.
9. Rate of declared dividend.
10. Variations in rate of dividend, and date of such variations.
11. Date of deed of settlement and number of persons who have signed such deed.
12. Copy of deed of settlement when it has been printed and published.
13. Copies of the last reports and accounts laid before the proprietors. A statement of the nature of the audit and examination to which the accounts are subjected, and of the responsibility under which such reports are prepared.
14. Statement whether the Bank holds any and what amount of its own shares or stock, either in trust as security for advances, or in its own right.
15. Places at which promissory notes and bank post bills are made payable.
16. At what date or sight bank post bills are issued.
17. Rate of interest paid by the bank, whether on deposits or balances of accounts.
18. Variations in such rate, and date of such variations.
19. Date to which the account is made up.

ECCLESIASTICAL REVENUES (IRELAND).

THE following documents were introduced by Lord Morpeth, in the course of his speech on Irish Tithes, June 3rd:—

I. CHURCH TEMPORALITIES ACT, 3 and 4 Will. IV. c. 37. Revenues as at present contemplated to arise from

1. Produce of suppressed sees	£50,780
2. Reduction of the bishopric of Derry, immediate and prospective	6,160
3. Future reduction of Armagh see	4,500
4. Glebe-house loan instalments, repayable for the next fifteen years	7,500
5. Tax on continuing bishoprics	4,600
6. Tax on incumbents of benefices	7,300
7. Interest at 4*l.* per cent. on 1,050,000*l.*, to arise from sale of perpetuities	42,000

N.B. Of the 1,200,000*l.* calculated to arise from sale of perpetuities by the ecclesiastical commissioners (but estimated by Mr. Finlaison, the Government actuary, to amount to 1,507,050*l.*), there has been realised and disbursed by the commissioners 150,000*l.*; but the interest of the residue thereof, amounting to 1,050,000*l.*, will, at the rate of 4*l.* per cent., produce an annual permanent sum, as above specified.

8. Income of benefices, suspended under the non-celebration service clause, for the three years to February, 1833 . . . . Nil

Carried forward . . . £122,840

Brought forward . . .	£122,840
II. Act to alter and amend Church Temporalities Act, 4 and 5 Will. IV. c. 90.	
9. From 38 dignities, without cure, and 49 prebends, without cure of souls, after deducting the expenses of collection, and making other abatements and deductions	8,000
N.B. This Act provides that in the case of any person holding any dignity or office under the rank of an archbishopric or bishopric, and not having cure of souls in any parish appropriated thereto, the appointment to such dignity or office may, on the next avoidance, be suspended, which is the case of the aforesa. 38 dignities and 49 prebends.	
	£130,840
III. The Present Tithe Bill.	
10. The 77th clause saves existing interests, but vests the property belonging to minor canons and vicars choral in the ecclesiastical commissioners (some of which offices are reported by the revenue commissioners to be complete sinecures); and after providing for such of these offices as have duties, and are necessary to be upheld, authorises the surplus arising from such estates, amounting to an entire sum of 22,624*l.*, to be carried to the general fund, which surplus is estimated to amount to	4,000
11. The 79th clause provides that the sinecure tithes disappropriated from *all* dignities (having cure) may, instead of being given to the vicars or perpetual curates, if otherwise sufficiently endowed, be carried to the general fund, under the administration of the Ecclesiastical Commissioners; the revenue arising from which, after making all necessary deductions and abatements, is estimated to amount to . .	5,300
	£ 139,140

The Revenues contemplated to arise from the combined provisions of the Church Temporalities Act, the Amendment Act, and the present Tithe Bill, therefore, amount to 139,140*l.*

Application of this Revenue.

The charges which the foregoing fund of £139,140 is designed to meet will be as follow:—	
1. When the churches shall have been put into complete repair, the Ecclesiastical Commissioners report that the future repair of them will require an annual sum of . . .	£25,000
Other expenses formerly defrayed by vestry cess, they state, will require	35,000
2. Expenses of the Commission . . .	10,000
3. Interest on 100,000*l.* advanced the Ecclesiastical Commissioners in way of loan, at 4 per ct.	4,000
	£74,000
4. Building of churches, as estimated by Earl Grey	20,000
5. Building of glebe-houses, as estimated by Earl Grey	10,000
6. To repayment of the loan of 100,000*l.*, by annual instalments, for the next five years, of	20,000
	£124,000
There will remain, therefore, to meet deficiencies in the items as above specified, which must increase as the building of churches increases; for the other objects of the Commission, and for the additional clerks which the Ecclesiastical Commissioners are authorised to employ to carry the provisions of the Tithe Bill into effect, a residue of	15,140
	£139,140

By the Report of the Commissioners of Public Instruction, it appears that there are 1,385 ecclesiastical benefices in Ireland at the present time; but should a new distribution of ecclesiastical benefices take place, it is proposed to reduce the number to 1,250, with an average net income of 294*l.* 13*s.* 4*d.* Of these 1,385 benefices there are—

Without any Protestants.	Where the Protestant Population does not exceed, or is less than				
	5 Persons.	10 Persons.	15 Persons.	20 Persons.	25 Persons.
Class I. 41	Class II. 20	Class III. 23	Class IV. 31	Class V. 23	Class VI. 27

The details of the proposed 1,250 benefices, with the average amount of clerical incomes under the present Bill, are these. There will be—

675 benefices, containing more than 50 and less than 500 Protestants, to each of which may be assigned an income of 200*l.* arising from rent-charge, and 45*l.* arising from thirty statute acres of glebe, valued at 30*s.** per acre; thereby making the gross income required for benefices of this class amount to—

Rent charges . .	£135,000	
Glebe lands . .	30,373	
Total . .		£165,373

211 benefices, containing more than 500, and less than 1,000 Protestants, to each of which may be assigned an income of 300*l.* from rent-charge, and 45*l.* from thirty statute acres of glebe, valued at 30*s.** per acre; thereby making the gross income required for benefices of this class, amount to—

Rent charges . .	£63,300	
Glebe lands . .	9,495	
Total . .		£72,795

190 benefices, containing more than 1,000, and less than 3,000 Protestants, to each of which may be assigned an income of 400*l.* from rent-charge, and 45*l.* from thirty statute acres of glebe, valued as before; thereby making the gross income required for benefices of this class, amount to—

Rent charges . .	£76,000	
Glebe lands . .	8,550	
Total . .		£84,550

51 benefices, containing more than 3,000 Protestants, to each of which may be assigned an income of 500*l.* from rent-charge, and 45*l.* from thirty statute acres of glebe, valued as before; thereby making the gross income required for benefices of this class, amount to—

Rent charges . .	£25,500	
Glebe land . .	2,295	
Total . .		£27,795

And if to these be added the 123 benefices, containing less than 50 Protestants; to each of which may be assigned an income of 100*l.* from rent-charge, and 45*l.* from thirty statute acres of glebe, valued as before; thereby making the gross income required for benefices of this class amount to

Rent-charges .	£12,300	
Glebe lands .	5,535	
Total . . .		17,835
1250 benefices requiring an entire sum of .		£368,338

thereby making the average net income of the 1250 benefices amount to 294*l.* 13*s.* 4*d.* per annum.

	Benefices.	Of Income.	Population.	Acres.	Square Miles.
England and Wales	10,718	£285	1,014	3,460	5
Scotland . . .	900	240	2,770	21,048	32
Presbyterians of Ulster . . .	300	155	2,500	15,903	40
Established Church in Ireland . .	1,250	295	681	10,000	13 to 14

* The value of the glebe-lands is taken at 30*s.* per statute acre, as the glebes to be assigned the clergy will consist wholly of profitable land, rent-free, which is about the average acreable value of the profitable glebes in Ireland at present.

The preceding table is given for the purpose of comparing the incomes, &c., of the Irish clergy under the Ministerial Bill, with the incomes of the English and other clergy.

PUBLIC PETITIONS.

The Sixteenth Report of the Committee on Public Petitions has been printed, and comprises from the 16th to the 20th of May, up to which period the following is an account of petitions presented since the commencement of the Session:—

	No. of Petitions.	No. of Signs.
Parliamentary.		
Carlow County Election	1	201
Registration of Voters	26	975
Ecclesiastical.		
Bishopric of Durham Bill, against	20	7,836
Church of Ireland Bill, against	2	51
Church Building Materials, for remission of duty on	11	2,669
Church Rates	5	3,126
Jews, against relief	1	1
Lord's Day Bill, in favour	909	130,455
Marriages and Registration of Births, &c., Bill	1	19
Tithes (Ireland), for abolition	73	42,843
Colonies.		
Canada, from the Commons of Lower Canada, signed by the Speaker	1	1
East and West India Produce	10	873
East India Salt	7	947
Taxes.		
Building Societies	12	624
Charitable Bequests	4	197
Cotton Wool	1	53
Joint Stock Banking Companies	1	2
Land Tax (Scotland)	1	1
Marine Insurances	37	4,128
Newspaper Stamps, repeal of duty	436	210,237
Post Horses and Carriages	2	47
Spirit Licenses	152	1,595
Stamp Duties Bill, for alteration	2	42
Statute Labour (Scotland)	8	1,489
Miscellaneous.		
Bankrupts' Estate (Scotland) Bill, against	1	1
Civil Bill Courts (Ireland) Bill, against	13	1,346
Coal Trade	1	7
Copyholds, &c. Bills, against	13	65
Criminal Laws, for limiting capital punishments	41	3,383
Danish Claims	2	268
Excise Licenses (Ireland) Bill, in favour	20	1,974
Factories Regulation Act, for amendment	74	100,398
Herring Fishery	1	27
Joint Stock Banks	1	1
Landlord and Tenant (Ireland) Bill, in favour	11	16,070
Medical Practitioners, coroners' inquests	29	1,684
Patents for Inventions, for an alteration of the law	2	16
Poor Law Amendment Act, relative to workhouses	47	918
Poor Laws (Ireland)	8	4,485
Poor Relief (Ireland)	1	244
Prisoners (Scotland)	8	39
Salmon Fisheries (Scotland)	3	6
Salmon Fisheries (Scotland) Bill, against	38	1,480
Spirit Licenses (Ireland), against grocers having spirit licenses	9	659
State of Ireland	1	933
Steam Navigation Companies	1	60
Turnpike Trusts Consolidation, for compensation	1	17
Turnpike Trusts Consolidation Bill, against	15	172

LIBRARY OF THE HOUSE OF COMMONS.

In 1834 it was resolved that a Standing Committee of sixteen Members be appointed, and be renewed at the commencement of each Session, to assist the Speaker in the direction of the Library. The Report of the Committee appointed in February last has recently been printed, and is as follows:—

"The limited space allotted to the Library in the present building has prevented any extensive purchase of books during the recess. Such additions have, however, been made as were more urgently required; and no opportunity has been allowed to pass of procuring works which were more particularly of a Parliamentary nature. Some law books and works of general history have also been added. It is the opinion of the Committee that Mr. Speaker should continue, at his discretion, to replace the books lost by the fire of 1834, in such a manner as to ensure an adequate Library by the time that any new building shall be erected: this arrangement being the best plan for ensuring an economical supply, and a choice of the best copies which may come into the market during the intervening period.

"An arranged set of Reports of the Commissioners on Charities, divided into counties, and accompanied with an Index to each county, has been placed in the Library, and affords the most ready method of rendering available the information contained in the twenty-nine Reports which had been presented up to the time when the Act, under which those Commissioners were employed, expired in 1834.

"Your Committee in 1835 reported that the Index to the Acts from 1800 to 1834 had been destroyed. Of that work the portion from 1800 to 1829 was in print, and the portion for the subsequent years was added in MS. This Index has been recompiled, and a copy in MS. is now on the Table of the House as well as in the Library. This work has been performed in pursuance of the orders of the Committee.

"The Librarian was directed to resume the compilation of the Index to Local and Personal Acts, which was also destroyed in the fire of 1834, "as soon as circumstances would permit." Some progress has been made in the work, but not sufficient to enable the Committee to consider that the Index can be printed before 1837.

"Considerable progress has been made by Messrs. Hansards in the Index to Reports, and Indexes to several subjects have been printed. They will, when finished, be the means of opening easily the information contained in the Reports of the House of Commons, to which at present the access is difficult, owing to the absence of any means of reference.

"In pursuance of the Report of the Library Committee in 1835, the Librarian, under the superintendence of Mr. Speaker, has been employed in preparing for publication the General Index to the Journals, 1820 to 1834, for which purpose an office has been taken, and several clerks engaged. Such progress has been made in the work as renders it necessary for your Committee to establish the mode of payment.

"The Select Committee appointed in 1818 reported—"That a General Index to the Journals from 1800 to 1820 should be formed; that Mr. Speaker should appoint a person to carry the same into effect; and that the best mode of payment was a fixed payment per volume; and that 600*l.* per volume (or 12,000*l.* for the whole work) was a proper remuneration. The sum to be advanced partly during the progress of the work, the balance on the production of the volume." This plan was considered the best mode of ensuring expedition and economy.

"The opinions above stated were sanctioned by the aurity of a Select Committee in 1825. Both Committees reported on the necessity of the Index being in future compiled annually.

"The Library Committee of 1835, having examined the state of the work, reported that it had become desirable that the Index should be printed, as the bulk of the volume, owing to the increase of business from 1820 to 1834, would exceed considerably in extent the General Index to the Journals from 1800 to 1820. The following Table proves this fact:—

Number of Pages in Annual Indexes to Journals, 1800 to 1820, compared with those in 1820 to 1834:—

1800 to 1820	1050 pages.
1820 to 1834	1382 "
Average for the twenty years, 1800 to 1820,	52 pages per annum.
Average for the fifteen years, 1820 to 1834,	98 "

"The Select Committee of 1825 proposed a scale of payment which would have produced the volume now under consideration for the sum of 3600*l.*; and this might possibly have been effected had not the following causes disturbed the calculation on which such a presumed result was founded:—

"1st. The labour of the Index has been nearly doubled from the increase of business transacted in the House,—a fact reported on by the Library Committee of last year, and proved by reference to the preceding Table.

"2nd. In the fire of the Houses of Parliament, in 1834, though the volumes of alphabetical Index were saved, the digested headings of proceedings of the House, which were necessarily kept separate, were destroyed; as also papers of reference and queries for alterations which had arisen from time to time. The loss of the digested headings has rendered it necessary to re-compile that portion of the Index. The loss of the papers of reference has in like manner entailed a tedious re-examination of the whole work.

"An arrangement has been made which leads to the following gratifying result:—While the Index from 1800 to 1820 was formed at an expense of 12,000*l.*, the present work, if completed on the same plan, would, taking into consideration also the increased matter, have required an expenditure of nearly 16,000*l.*; the volume now in preparation, exhibiting a much larger quantity of Index matter than that in the preceding volume, will be completed for 6000*l.*, including the cost of compilation. And it has been practicable to enter into this arrangement, notwithstanding the destruction of a considerable portion of the MSS. by the fire."

PAPER DUTIES.

The following Resolutions, moved by the Chancellor of the Exchequer, were agreed to on Tuesday, June 21. The Committee of Ways and Means was empowered to make provisions therein pursuant to the first Resolution. A Bill on the subsequent Resolutions was ordered to be brought in by the Chancellor of the Exchequer:—

1. "That the duty now payable on newspapers shall be reduced, and that the following duty shall be paid and payable thereon—that is to say, for every sheet or piece of paper whereon any newspaper shall be printed, a duty of 1*d.*, subject to such provisions respecting the size of newspapers, and the printing of supplements, as may be provided by any Act to be passed during the present Session of Parliament.

2. "That the duties and drawbacks on paper printed, stained, or painted, in the United Kingdom, should cease and determine.

3. "That the duties now payable on paper, and other articles of paper or materials of the first class, made in the United Kingdom, should cease and determine; and that, in lieu thereof, the duty now payable on paper of the second class, shall be charged and paid on all paper, glazed paper, sheathing-paper, buttonboard, millboard, pasteboard, and scaleboard, of whatever kind or description, made in the United Kingdom.

4. "That the allowance and drawbacks on paper, glazed paper, sheathing-paper, button-paper, buttonboard, millboard, pasteboard, and scaleboard, and on books, now payable, shall be reduced to the amount of the duty now payable on second-class paper.

5. "That for every dozen square yards of paper, printed, painted, or stained, in the United Kingdom, which shall be exported as merchandise to foreign parts, there be granted and paid, in respect of the paper-duty charged thereon, a drawback of 2*d.*"

SUGAR DUTIES.

In a Committee of Ways and Means on Thursday, June 23rd, the following Resolutions were moved by the Chancellor of the Exchequer, and agreed to. A Bill for carrying the same into effect was ordered to be brought in by the Chancellor of the Exchequer:—

"That, towards raising the Supply granted to his Majesty, the following duties shall be paid on the importation of sugar on and from the 5th day of July, 1836, for a time to be limited, and under such regulations and conditions as shall be provided by any Act to be passed in this Session of Parliament (that is to say):

Sugar, viz.—	£.	s.	d
—— Brown, or Muscovado or Clayed Sugar, not being refined, the cwt.	3	3	0
—— the growth of any British Possession in America, and imported from thence, the cwt.	1	4	0
—— the growth of any British Possession within the limits of the East India Company's Charter, into which the importation of Foreign Sugar may be prohibited by law, and imported from thence, the cwt.	1	4	0
—— the growth of any other British Possession within those limits, and imported from thence, the cwt.	1	12	0
—— Molasses, the cwt.	1	3	9
—— the produce of and imported from any British Possession, the cwt.	0	9	0
—— Refined, the cwt.	8	8	0
—— Candy, Brown, the cwt.	5	12	0
—— White, the cwt.	8	8	0

RAILWAYS.

CLAUSE PROPOSED BY THE DUKE OF WELLINGTON TO BE INSERTED IN RAILWAY BILLS.

"Provided always, and be it further enacted, that nothing herein contained shall extend or be construed, deemed, or taken to extend to exempt the railroad to be formed under or by virtue of the powers in and by this Act contained and given, or any branch thereof, from the provisions of any general Act or general Acts for the regulation of railroads which may be passed with a view to the advantage, protection, and security of the public, before the expiration of one year from the passing of this Act, if Parliament shall be sitting at the expiration of such period of one year, or (if Parliament shall not then be sitting) before the end of the then next Session of Parliament."

FACTORIES' REGULATION ACT.

The following notice is taken from *The London Gazette* of June 24th:—

"As all the clauses of the Factories' Regulation Act are now in full operation, the inspectors of factories deem it expedient, in order to remove any doubt as to the employment of children subject to restricted hours of labour, to issue the following notice:—

"1st. No child under nine years of age can be employed in any cotton, flax, or wool factory.—Sec. 7.

"2nd. No child between nine and thirteen years of age can be employed, or even allowed to remain in such factory, without the certificate of a physician or surgeon, countersigned by a magistrate or inspector of factories, certifying in the form set forth in the 13th section the strength and appearance of such child.—Secs. 11, 12, and 13.

"3rd. No child between nine and thirteen years of age can be employed in such factory, without producing weekly a schoolmaster's certificate that the "child has, for two hours at least, for six out of seven days of the week next preceding, attended his school, excepting in cases of sickness, to be certified in such manner as such inspector may appoint, and in case of any holiday, and in case of absence from any other cause allowed by such inspector, or by any justice of the peace in the absence of the inspector."—Sec. 21.

"4th. No child between nine and thirteen years of age can be employed, or even allowed to remain in such factory longer than forty-eight hours in any one week, and not more than nine hours in any one day.—Secs. 8 and 24.

"5th. No child under thirteen years of age can be employed in any silk-mill more than ten hours in any one day.

"The above, and all other provisions of the Factories' Regulation Act, together with all orders and regulations issued by the inspectors in their several districts under the authority of this Act (3 and 4 Will. IV. cap. 103, passed the 29th of August, 1833) must be strictly observed in the mills and factories subject to the said Act."

PARLIAMENTARY REGISTER.

BILLS WHICH HAVE RECEIVED THE ROYAL ASSENT.

June 7.

Consolidated Fund Bill.
West India Judicature Bill.
Slavery Abolition (Jamaica) Bill.

LIST OF BILLS BROUGHT IN.

HOUSE OF LORDS.

June 6. Bill for the visitation and regulation of the Universities of Scotland, by *Lord Melbourne.*

— 21. Bill for the more effectually enforcing Church discipline, by the *Lord Chancellor.*

HOUSE OF COMMONS.

May 30. Bill to facilitate the recovery of certain arrears of highway-rates and composition in lieu of statute-duty.

June 2. Bill to amend the law in ecclesiastical matters, and to consolidate and amend the Courts for the probate of wills, and granting letters of administration throughout England and Wales.

— 9. Bill to repeal two Acts relative to the period of the execution and the prison discipline of persons convicted of the crime of murder.

— Bill to abolish sinecure and useless offices in the Superior Courts of Common Law, and to provide a more uniform establishment of offices, and to fix and regulate the fees.

— 14. Bill for relief of his Majesty's subjects professing the Jewish religion.

— 15. Bill for the regulation of Benefit Building Societies.

— Bill to provide for the attendance and remuneration of medical witnesses at coroners' inquests.

— Bill to extend the protection of copyrights in prints and engravings to Ireland.

— 17. Bill to consolidate the trusts of several turnpike-roads in the neighbourhood of Dublin, and to substitute a local rate for the present tolls.

— 20. Bill to amend the laws relating to letters-patent for inventions, and for the better encouragement of arts and manufactures.

June 20. Bill declaring the law as to the day for presenting to the acceptor or others bills of exchange which have been dishonoured.

— 21. Bill to continue for a limited time the laws for the relief of insolvent debtors in England.

— Bill for the better defining and establishing the powers and jurisdiction of his Majesty's Consuls in the Ottoman dominions.

— 22. Bill to prevent the fact of a previous conviction being given in evidence to the jury on the case before them, except when evidence to character is given.

— Bill for the better regulation of the Corporation of the Trinity House in Hull.

— 23. Bill for the more convenient division of counties into polling districts for the election of Members of Parliament, and for taking the poll in one day.

— Bill to repeal the duties and drawbacks of Excise on paper, printed, painted or stained, in the United Kingdom; and to reduce the duties, allowances, and drawbacks on paper, buttonboard, millboard, and scaleboards made in the United Kingdom of the first class; and to discontinue the Excise survey on the manufacturers of certain articles made from paper; and on dealers in, and retailers in vinegar.

— Bill for granting to his Majesty, for a time to be limited, certain duties on sugar, imported into the United Kingdom, for the service of the year 1836.

— Bill to alter and amend several Acts for the better regulation of public notaries in England.

— Bill for vesting lighthouses, &c., on the coasts of England, in the corporation of Trinity House, and for making provisions respecting lighthouses, &c, and the tolls and duties payable in respect thereof.

LIST OF COMMITTEES.

HOUSE OF COMMONS.

June 2. Committee to inquire into the state of the coal trade as respects the supply of coal to the Port of London and the adjacent counties, from the rivers Tyne, Wear, Tees, and other places; and into the several charges added to the price of coal.

— 9. Committee to inquire into the different modes in which land has been, and is at present disposed of, in the Australian Colonies, in the Cape of Good Hope, and the West Indies, with a view to ascertain that mode which would be most beneficial in future, both to the colonies and to the mother country.

— 10. Committee to consider of the practicability and expediency of adopting some plan for the more carefully preparing, drawing, and revising Public Bills, previous to their being brought in, or during their progress through the House of Commons.

— 14. Committee to inquire into the causes of the increased number of shipwrecks, with a view to ascertain whether such improvements might not be made in the construction, equipment, and navigation of merchant vessels, as would greatly diminish the annual loss of life and property at sea.

— 16. Committee to consider of the most effectual plan for raising of money to carry into effect the necessary improvements required in the cities of London and Westminster, borough of Southwark, and counties of Middlesex and Surrey, and for the purchasing of the interest of the proprietors of the Waterloo and Southwark Bridges, that they may be thrown open for the use of the public free from toll.

NEW MEMBER.

For South Essex, George Palmer, Esq., in the room of R. W. Hall Dare, Esq., deceased. The election was contested, and at the close of the poll the numbers were—for Mr. Palmer 2103, for Mr. Branfill 1527; majority 576.

NEW WRITS ISSUED.

For the county of Merioneth, in the room of Sir Robert Williames Vaughan, Bart., who has accepted the Chiltern Hundreds.

For South Warwickshire, in the room of E. R. C. Sheldon, Esq., deceased.

ABSTRACTS OF RETURNS PRESENTED TO PARLIAMENT.

Victuallers and Retail Brewers.—The number of licensed brewers in England is 2099, who consume 16,412,440 bushels of malt; of victuallers 54,551, of whom 25,962 brew their own beer, and consume 9,521,797 bushels of malt. There are 35,536 persons licensed to sell beer to be drunk on the premises, of whom 14,840 brew their own beer, and consume 3,702,417 bushels of malt; and of the 4118 licensed sellers of beer not to be drunk on the premises, 987 who brew their own beer consume 218,616 bushels of malt. In Scotland 242 brewers consume 988,800 bushels; and out of 17,026 victuallers there are 335 who brew their own beer, and consume 149,380 bushels. In Ireland there are 245 brewers, whose consumption of malt is 1,829,587 bushels.

Jesuits and other Religious Orders.—On the motion of Sir Robert Inglis, a Return has been prepared of the "notices or statements which, pursuant to the provisions of the Act 10 Geo. IV. c. 7, have been delivered to the several clerks of the peace by Jesuits and members of other religious orders, communities, or societies of the Church of Rome bound by monastic vows." No such statements appear to have been made in England, and only two in Wales; one by a Benedictine, and the other by a member of the Society of Jesus. In Ireland the individuals coming within the prescribed forms are more numerous. The "Brothers of the Christian Schools," in the county Clare, four in number, gave in the required notice to the clerk of the peace in 1829, accompanied by a protest, "that they do not come within the meaning of the Act for suppressing monastic or religious orders in the United Kingdom, inasmuch as they are a society of laymen only, and not subject to any foreign superior." Altogether 281 individuals have given in notices to the clerks of the peace in Ireland.

Tobacco and Snuff.—The total quantity of tobacco and snuff imported into the United Kingdom in the year ending January 5th, 1836, was 25,818,965 lbs.—namely, 25,523,611 lbs. of unmanufactured tobacco; 294,601 lbs. of manufactured tobacco and cigars; and 753 lbs. of snuff. The imports from the United States amounted to 25,133,158 lbs., of which 24,955,419 lbs. were unmanufactured tobacco; 177,724 lbs. of manufactured and cigars; and 15 lbs. of snuff. The supply from Russia was 162,794 lbs.; from Germany, 197,416 lbs.; from Cuba, 143,852 lbs., including 79,752 lbs. of manufactured tobacco and cigars; from Turkey, 27,265 lbs. The imports at London were 16,604,715 lbs.; at Liverpool, 5,662,695 lbs.; at Bristol, 1,794,598 lbs.; and the imports at other places were in quantities under 1,000,000 lbs. The quantity of snuff and manufactured and unmanufactured tobacco entered for home consumption in the year ending January 6th, 1836, was—for England, 15,222,884 lbs.; Scotland, 2,014,156 lbs.; Ireland, 4,879,719 lbs.: total, 22,116,759 lbs. The duty amounted to 3,354,459*l.* 1*s.* 5*d.* The duty payable on unmanufactured tobacco imported from British possessions in America is 2*s.* 9*d.* per lb.; from other parts, 3*s.* On manufactured tobacco and cigars the duty is 9*s.* per lb., and on snuff, 6*s.* The duty paid on cigars and manufactured tobacco amounted to 63,746*l.* 1*s.* 4*d.*; on snuff, to 58*l.* 11*s.* 1*d.* Of the 22,116,756 lbs. entered for consumption during the above period, 16,385,901 lbs. had been imported at Liverpool; 5,822,963 lbs. at London; and at Bristol, Glasgow, and Dublin, the quantity exceeded 1,000,000 lbs.

Spirits.—The total number of proof gallons of British and foreign spirits on which duty was paid in the United Kingdom during the year ending January 5th, 1836, was 29,528,889, and the duty was paid for consumption on 24,710,208 gallons. The total duty paid amounted to 8,140,469*l.* 6*s.* 7*d.* The number of gallons of spirits of all kinds on which duty was paid, in England, 11,939,608; duty, 5,681,071*l.*: Scotland, 6,160,110 gallons; duty, 1,095,340*l.*: Ireland, 11,429,171 gallons; duty, 1,364,057*l.* Duty paid on foreign spirits in the United Kingdom, 3,047,359*l.*; the number of gallons, 4,765,706,—namely, 3,416,966 rum; 1,314,943 brandy; 19,648 geneva; and 14,149 of other foreign spirits. In England 2,918,071*l.* duty was paid on 3,285,473 gallons of rum; 1,260,374 brandy; 12,775 geneva; and 12,958 gallons of other foreign spirits: in Scotland, 93,035*l.* duty on 146,178 gallons,—namely, 105,198 rum; 34,806 brandy; 5251 geneva; and 923 other foreign spirits: in Ireland, 36,251*l.* duty on 47,948 gallons,—namely, 26,295 gallons rum; 19,763 brandy; 1622 geneva; and 268 other foreign spirits. The number of gallons of spirits of the manufacture of the United Kingdom on which duty was paid for the above-mentioned period was 25,763,183; duty, 5,093,110*l.*;—namely, England, 7,315,053 gallons; duty, 2,743,124*l.*: Scotland, 6,013,932 gallons; duty, 1,002,305*l.*: Ireland, 11,381,223; duty, 1,327,805*l.*: Guernsey, &c., 52,975 gallons; duty, 19,874*l.* The number of gallons of proof spirits imported into England from Scotland was 2,463,295 gallons. Ireland sent 524,333 gallons to England, and imported 763,890 gallons from Scotland. The duty on rum is 9*s.* per gallon; on brandy and geneva, 22*s.* 6*d.*; and on other foreign spirits various rates are imposed. The duty on spirits distilled in England is 7*s.* 6*d.* per gallon; Scotland, 3*s.* 4*d.*; and Ireland, 2*s.* 4*d.* Of the spirits distilled in the United Kingdom, 6,210,810 gallons were made from malt only; 18,489,135 from a mixture of malt with unmalted grain; and 10,263 gallons were distilled from potatoes. In England no spirits are distilled from malt alone; and in Ireland only 91,308 gallons.

Executions.—The executions in England and Wales since 1820 have been in each year as follows:—1820, 107; 1821, 114; 1822, 97; 1823, 54; total for four years, 372: 1824, 49; 1825, 50; 1826, 57; 1827, 73; total for four years, 229: 1828, 58; 1829, 74; 1830, 46; 1831, 52; total for four years, 230: 1832, 54; 1833, 33; 1834, 34; 1835, 34; total for four years, 155. The executions in London and Middlesex, in each year, from 1827 to 1835, have been:—1827, 17; 1828, 21; 1829, 25; total for three years, 63: 1830, 6; 1831, 4; 1832, 6; total for three years, 16; 1833, 2; 1834, 0; 1835, 0; total for three years, 2.

Copper and Tin.—Returns for the year ending January 5th, 1836, of the copper and tin imported into, and exported from, the United Kingdom:—unwrought copper, 5389 cwts.; partly wrought, namely, in bars, rods, or ingots, 1968 cwts.; plates and coin, 2 cwts.; old copper to be re-manufactured, 493 cwts.; copper ore, 278,900 cwts.; of which, 84,136 from Cuba, 84,536 from Columbia, and 76,245 from Chili; and manufactured copper, 5353 cwts., namely, from Germany, 2903 cwts., and France, 2287 cwts.—total imports, 292,755 cwts. The total quantity of British copper exported was, 182,228 cwts., and 55,456 cwts. smelted in the United Kingdom from foreign ore; and of the latter, 41,108 cwts. were sent to France. Of the British copper, 72,830 cwts. were exported to Asia; 32,538 cwts. to the United States; 26,389 cwts. to France, 8023 cwts. to Brazil; and smaller quantities to different parts of the world. The largest quantity of copper is exported from the port of Liverpool—namely, 96,100 cwts. of British copper, and 15,131 cwts. smelted in this country from foreign ore: from London, the export of the former amounts to 54,340 cwts.; and of the latter description, to 4921 cwts. The quantity of copper ore imported and warehoused during the year for the purpose of being afterwards exported, or delivered for home consumption, at the option of the merchants, was 277,133 cwts., none of which, however, was exported: the drawback was allowed on 55,456 cwts. of foreign copper smelted in this country. The tin imported in 1835, amounted to 19,704 cwts.: of which 10,029 cwts. were from Singapore, 4186 from Java, and 4768 from Belgium. Of British tin the exports amounted to 7765 cwts., of which France took 5034 cwts.: foreign tin 23,795 cwts.; 6200 cwts. of which were taken by Belgium, 5738 by Russia, 4079 by the United States, 2385 by Turkey and Continental Greece, and the remainder in inconsiderable quantities was sent elsewhere.

MISCELLANEOUS.

Bank of England.—Quarterly Average of the Weekly Liabilities and Assets of the Bank of England, or February 9 to May 3, 1835, inclusive, published according to Act 3 and 4 William IV., c. 98.

Bankruptcy Analysis from May 22nd to June 26th.—Bath proprietor, 1; brewers, 2; builder, 1; coal-merchants, 2; cotton-manufacturer, 1; currier, 1; cheesemonger, 1; cabinet-maker, 1; carpenters, 2; chemist, 1; china-manufacturer, 1; drapers, 4; druggist, 1; dealer, 1; grocers, 6; horse-dealers, 3; hatter, 1; ironmonger, 1; jeweller, 1; linen-yarn-dealer, 1; leather-seller, 1; millers, 2; merchants, 2; mason, 1; music-seller, 1; master-mariner, 1; manufacturer of fancy goods, 1; millwright, 1; oilman, 1; picture-dealer, 1; printer, 1; rope-maker, 1; shopkeepers, 2; shipowner, 1; sugar-refiner, 1; scrivener, 1; soap-manufacturer, 1; surgeon, 1; straw-hat-maker, 1; shoemaker, 1; stationer, 1; tailors, 2; victuallers, 7; woollendraper, 1; warehousemen, 2; wine-merchant, 1—Total 70; from the 28th of December, 457.

CHRONICLE OF OCCURRENCES.

June 1. A very numerous and respectable meeting of the friends of Mr. O'Connell was held at the Crown and Anchor, for the purpose of setting on foot a subscription to indemnify that gentleman for the expenses to which he had been put in defending his seat for Dublin. Nearly 3000*l.* were subscribed at the meeting.

— 10. The operation of removing the cataract which had for so long a period obstructed the vision of the Duke of Sussex, was successfully performed, and his Royal Highness has gradually been recovering the use of his sight.

— 15. A meeting of the friends of Mr. Buckingham, M.P., at which Lord William Bentinck, M.P., late Governor-General of India, presided, was held at Exeter Hall. Many Members of Parliament attended, and a series of Resolutions was agreed to, declaratory of the sense of the injustice which had been done to Mr. Buckingham, and recommending a subscription to be entered into with the view of purchasing an annuity for Mr. and Mrs. Buckingham on their joint lives.

— 16. The following notice was issued by the East India Company relative to the payment of the duties on bohea teas:—

"East India House, June 15th, 1836.

"The buyers of bohea teas at the East India Company's sale in the present month, are hereby informed that the Company will be prepared to advance on their account the duties which may be payable upon such of those teas as they may require to be entered for home consumption previously to the 1st of July, provided the warrants for those teas shall be delivered up by them to the Company's tea warehouse-keeper, at his office in Cutler-street, on or before the 27th instant, in order that the proper officer of the Company may be enabled to pass the necessary entries previously to the 1st of July, when the Act 5th and 6th William IV. cap. 32, will come into operation. The warrants will be redelivered to the trade at the East India House on the 1st of July, with the amount of duty stated thereupon, which amount the buyers will be required to pay to the Company at the prompt day, or previously thereto if cleared before that day."

— 21. Robert Rickards, Esq., having resigned his office of Inspector of Factories, the Secretary of State for the Home Department has directed Leonard Horner, Esq., In-
— 20. [illegible] Factories, to take charge of the district hitherto for inven[illegible]spection of Mr. Rickards, viz. Yorkshire, arts and manuf[illegible] Cheshire, with the adjacent parts.

[illegible]eath occurred a few days afterwards.

June 23. Died, Mr. James Mill, the author of the "History of British India," the Treatise on the "Elements of Political Economy,' and also the Treatise on "The Analysis of the Human Mind."

— 25. The following paragraph, respecting the newspaper duty, appeared in "The Globe" and "Courier" newspapers of this evening:—"We are authorized to state that a mistake has occurred as to the period at which the reduction of duty on newspapers will take effect. The time originally intended was the 6th of July next; but as it is impossible that the Bill can pass by that period, or for some weeks after, we understand that no day can yet be positively fixed upon for its commencement."

— 27. The following telegraphic despatch was published in "The Morning Chronicle" of this day:—

"Paris, June 26th,
"One o'clock in the morning.

"The King has just escaped from a new danger. An individual has fired at his Majesty, who has not been hit. The assassin is apprehended. Paris is indignant; order everywhere prevails."

The same Journal contains the following account of this transaction, from "The Journal de Paris" of Saturday night, received by extraordinary express:—

"This evening, at six o'clock, an assassin, armed with a walking-stick gun, who had lain in wait near the gateway leading from the Tuileries to the Pont Royal, fired at the King the instant he was passing in his carriage, in company of the Queen and Madame Adelaide, on his return to Neuilly. Providence has again preserved the days of his Majesty. No one was struck. The King himself tranquillized the assembled people. The assassin was immediately arrested, and attempted to stab himself, but was disarmed in time. The National Guards on duty, in the highest state of indignation, were about inflicting summary punishment, but, after a moment's pause, gave up the villain to the proper authorities. The King reached Neuilly at half-past six. The ball has been found in the carriage."

The Paris correspondent of "The Morning Chronicle" says—"It is singular enough that one of the National Guards on duty, who is a gunsmith, recognised the assassin as being employed in the trade."

Public meetings have been very generally held during the month in all the large towns in the United Kingdom, for the purpose of petitioning in favour of the Irish Municipal Corporation Bill, and advocating the claims of Ireland to equal laws and institutions with other parts of the empire.

BOOK SOCIETIES, AND FAMILIES IN EVERY PART OF THE KINGDOM,

are regularly supplied with WORKS for PERUSAL, including all the NEW and STANDARD PUBLICATIONS, MAGAZINES, &c., upon the most Advantageous Terms to them, according to the New System just planned and conducted by EDWARD BULL, Librarian, 19, Holles-street, four doors from Cavendish-square.

Full particulars can be had on application, or sent by post.

TO THE NOBILITY, GENTRY, AND PUBLIC.

London, 1836.

FAMILIES OF DISTINCTION, and Visitors to the Metropolis at this Season, who frequently experience great difficulty in suiting themselves with Furnished or Unfurnished Houses, owing to the great demand, are respectfully informed every attention will be afforded in the HOUSE AND ESTATE AGENCY DEPARTMENT of HENRY L. COOPER in obtaining or disposing of the same, or in the Selling, Letting, or Valuing any description of Property in Town or Country.

From the central situations of the Establishments in their respective commanding localities, every facility is rendered to Families honouring his House with their instructions, and offering the advantage of a double Register, usually replete with eligible properties.

The general introduction of Plate Glass for Windows, Carriages, Conservatories, Internal Decorations, &c., has induced H. L. C. to annex a Tariff of Sizes adapted to those uses, with Prices exceedingly moderate, but of a Quality not to be excelled; also is added, an outline of his general business comprising the Cabinet, Upholstery, and Decorative Departments, in each of which the most careful attention is paid both to Quality and Cost.

HENRY L. COOPER,

Plate Glass and Furniture Warehouses,

93, BISHOPSGATE STREET WITHIN,

AND

WESTERN BRANCH, 57, CONDUIT STREET,

(NINE DOORS FROM REGENT STREET, LEFT-HAND SIDE.)

Among the variety of Articles above referred to, will be found LOOKING-GLASSES of every denomination and size, varying from one foot to eighty feet and upwards; PLATE-GLASS for Windows, Carriages, &c., which possess great advantages over crown, and when required for exportation, a considerable drawback obtained.

Annexed are the Prices of Current Sizes of Plate-glass, for Sashes, &c.

In.	Inches. 15	Inches. 18	Inches. 20	Inches. 22	Inches. 25	Inches. 28	Inches. 30

38	1 15 7	2 2 9	2 7 6	2 12 3	2 19 4	3 6 6	3 11 3

Or any sizes containing from 3 feet to 8 feet, at 9*s.* per foot; thus a plate being 30 inches by 18 inches contains 3 feet 9 inches superficial measure, and costs 1*l.* 13*s.* 9*d.*, as per above tariff. All under 3 feet superficial at a reduction.

CARVING AND GILDING IN ALL ITS BRANCHES.

In this department will be found a very elegant and extensive variety of Chimney and Pier Glass Frames, Cornices for Windows, Ornamental Tables and Furniture, and richly-mounted Frames in various sizes for Portraits, Paintings, &c. Paintings and Prints mounted, framed, and re-gilt.

PAPER-HANGING AND INTERIOR DECORATIONS,

in all its Branches, from the most simple to the first Style of Elegance. A rich variety of new Patterns on show.

IN THE UPHOLSTERY ARRANGEMENT

the greatest attention is paid to unite elegance with economy in character for the Drawing-room, Boudoir, Dining-room, Library, and Bed-chamber, from the most quiet to the most costly styles. In the various articles of Chintzes, Moreens, Damask Silks, &c., a great variety of the most splendid and novel styles are constantly on view, of those qualities which can alone ensure permanent satisfaction; the extreme disparity of prices in these articles, mainly arises from the inferiority of the fabric.

CABINET, CHAIR, AND SOFA WORK

manufactured of the most seasoned materials. In the finish of Chairs, Sofas, &c., much depends on the quality of the materials used and the workmanship. It may not be unworthy of remark, that a similar effect may be produced at a saving of nearly one-half, but which in the wear must eventually prove a serious disappointment to the purchaser. This applies also to the manufacture of Cabinet Goods, which, from being made of unseasoned materials and unsound work (that cannot be detected by the casual observer), can never be of that service and durability so essential. H. L. C. begs to add, that he manufactures them on his own premises, and has always on hand a large stock of well-seasoned materials, which enables him to produce work at the lowest possible rate, and of a superior quality.

STEAM AND SAILING VESSELS PROPERLY FITTED UP

with Cabin Furniture and Passengers' Requisites.

SOLID AND PORTABLE FURNITURE,

Bedding, Musquito Hangings, &c. for Foreign Climates. Families going abroad will receive every information respecting the Articles best adapted for their particular destinations. Merchants, Captains, and Dealers supplied with the utmost despatch, on the most liberal terms.

CARPETING

of the fabric especially made for the first upholstery houses, viz.—Brussels, Kidderminster, and Venetian; also a few of the much-admired Velvet Pile Carpets, Hearth Rugs, Druggets, Baize, Floor Cloths, &c.

BEDDING, BLANKETS, &c.,

well seasoned, real Dantzic Feathers, also equally prepared light downy Feathers for second and third-rate Beds, Elastic Spring Hair and Wool Mattresses, real Witney, fine Bath, and York Blankets, Marseilles Quilts and Counterpanes. In the articles of Bedding, Blankets, &c., so essentially important to all, H. L. C. is determined that no trader shall supply them on better terms.

Families in the Country may command the most approved Taste, by being waited on at Home with Patterns—and Designs made on the spot, calculated to harmonize with the plans, proportions, and decorations of the rooms; and their Orders delivered, and fixed on terms forming a very small addition to the first cost by the system adopted in this Concern.

With this short enumeration of the leading articles of his trade, and the very favourable terms on which he undertakes to supply them, Henry L. Cooper appeals to all classes for a continuation of that flattering preference hitherto afforded to his House, 93, BISHOPSGATE-STREET WITHIN; WESTERN BRANCH, 57, CONDUIT-STREET, nine doors from REGENT-STREET.

H. L. C. begs respectfully to solicit particular attention to the Address; also that any Article will be exchanged should a fair objection arise, thus securing the public from risk.

THE METROPOLITAN BRITISH & FOREIGN CLOTHING ESTABLISHMENT,

LONDON. 97, FLEET-ST.

GEORGE DAVID ROUDNEY.

In remarking on his

FIRST-RATE QUALITIES,

G. D. D. respectfully addresses Gentlemen who have hitherto found it necessary to pay extravagantly high prices for really First-rate Clothes; to such he guarantees a **DRESS COAT** of any colour—as stylish in make, as tasteful and talented in cut, and as good in quality, as any bearing the names of the most expensive and favourite Fashionable Houses, for..... £3 0

Surtouts, including, of course, Silk linings 3 10

Black and Blue, 10*s.* extra on each

Buckskin Trousers, on G. D. D.'s new principles of Measurement, 1 8

Waistcoats 14

Ladies' Riding Habits..... 6 6

These will be found of that character which has raised this Establishment to such eminence in the estimation of the higher circles, where nothing short of **easy gentlemanly elegance** could be tolerated.

THE SECOND-RATE QUALITIES

Are especially recommended for Business and Travelling Clothes; also, to the **ECONOMIST** they are found preferable to the first on account of their Superior Durability, while in appearance none but the Connoisseur could discover a difference, excepting by comparison; in short, they are frequently substituted at other Houses for the Best. The Prices are, for **DRESS COATS**, of any colour (Style and Fit First-rate) £2 5

Surtouts, including Silk linings, 2 10

Black or Blue, 5*s.* each extra

Trousers 1 1

Waistcoats 10

The Army Blue Spanish Cloak, forming a circle of 9 yards round the bottom—the best Travelling Cloak that is made 2 10

A good Cloth ditto, with Fur Collar, and Cape—9 yds round 2 2

Milled Petersham Great Coat.. 2 2

CONTRACTS FOR FIRST-QUALITY CLOTHES

As generally adopted, are objectionable, because they confine Gentlemen to one particular Dress, or subject them to considerable Extra Charges: G. D. D.'s system removes this difficulty by leaving at the option of the Customer what he chooses to wear, whether Surtouts or Dress Coats, either Coloured or Black; his Prices, including all extras (excepting Velvet Collars), being for

Two Suits per Annum..... £10 0

Three ditto ditto 14 18

Four ditto ditto 19 12

and so on in proportion to the number of Suits. Each Suit to be returned on the delivery of its successor. Gentlemen who take three or more Suits per Annum are allowed two Suits in wear during the whole term; thus in a contract for three Suits a Dress Suit and an Undress Suit are supplied together. The Dress Suit to be kept for twelve months, and, at the expiration of six months, the Undress Suit is returned, and another supplied to continue to the end of the term, the contract amount for each Suit being paid on delivery. Contracts for the second quality would be much lower.

A Suit of First-rate Liveries..... £3 18 6

For **WASHING TROUSERS** and **WAISTCOATS** definite prices cannot be stated, on account of the variety of Materials; but a very superior article for **SUMMER TROUSERS** are charged **10s.** per pair, and **WAISTCOATS, 6s.** each.

G. D. D respectfully informs **COUNTRY GENTLEMEN**, that, on account of the numerous invitations he has received to make Periodical Circuits through England, his Traveller will wait on them occasionally, or will proceed direct to any part where three or more Gents, (according to the distance) favour him with their Addresses.

THE FIRST HOUSE IN ENGLAND FOR DRESS WAISTCOATS.

TEAS of the FINEST QUALITIES at the REDUCED PRICES.—In consequence of Government having reduced the Duty on the finer descriptions of Teas, we are enabled to offer as under :—

Good sound Breakfast Tea, 3s. 6d.—3s. 8d.—4s.
Common, as low as 2s. 4d.
Better, with more flavour, 4s. 6d.
Rich Pekoe Souchong, 6s.
Good Green, 3s. 8d.—4s.
Real Hyson, 5s.
Fine Hyson, rich and full, 6s—Finest, 8s.
Coffee, 1s. 6d.—1s. 8d—1s 9d.——Finest imported, 2s.

O. T. MANSELL and Co., Tea Importers, 2, Bucklersbury, Cheapside.

MAW'S DOMESTIC MEDICAL MACHINE, by Royal Letters Patent. This Instrument is accompanied by a Book of Instructions for the proper employment of Lavements or Injections in all CASES OF INTESTINAL IRREGULARITY; to which is appended, Copies of NUMEROUS TESTIMONIALS from the most eminent Professors of Medicine in the Kingdom. No Preparation is required beyond the mere act of opening the Case, on which all the parts are found in connexion, and arranged for use, so as to render the usual adjuncts of Basins, Chairs, &c., quite unnecessary. J. & S. M. have also the pleasure to state, that they are now enabled to supply this valuable invention at a REDUCED PRICE. Full Descriptions, with Professional Testimonials of its superiority, forwarded to any part of the Kingdom on Post-paid application.

MAW's Apparatus may be obtained on the same Terms as of the Manufacturers through any Respectable Druggist in Town or Country. But to prevent mistakes, observe that these words, viz.,

"BY THE ROYAL LETTERS PATENT,
"MAW'S DOMESTIC MEDICAL MACHINE,
"11, ALDERSGATE STREET, LONDON,"

are Stamped on each.

STEPHENS' WRITING FLUID.

THE Inventor of this original Composition for Writing, begs to call the attention of the Public to the following facts:—1st, that the inconvenience of writing with common ink had long been a source of general complaint,—2ndly, that to remedy this inconvenience was the subject of his serious occupation and experiment for several years:—3rdly, after composing a colour more suitable for writing, his further investigations were directed to improvements calculated to ensure the utmost possible durability and safety,—4thly, that the colour may be imitated by compositions which are deficient in most of the less apparent but highly-essential qualities—a fact which he is ready to demonstrate by experiment,—5thly, he has innumerable memoranda and records, written with the results of various modes of preparation, to which he can refer as *standing proofs* of the best composition, and of the best mode of preparation. The Public may thus judge of the superior value of an article which has had years of trial and experiment over hastily prepared imitations. Lastly, unprotected by a Patent, he trusts to the merits of the composition, and the preference and protection of a discerning Public, who, he believes will not, while feeling the convenience of "THE WRITING FLUID," forget the encouragement which is due to the Original Inventor.

The Public is hereby apprized that imitations of this article are selling in gallons, to parties who bottle and sell it as improvements and originals, a false recommendation being often given to them, by stating that they never require to be shaken—a good evidence of dilution and dearth of colouring materials.

Sold by all respectable Stationers and Dealers; as also STEPHENS' NEWLY FORMED STANDS, contrived to prevent lodgments of dust, to afford an oblique and more convenient access, with grooved rests for the Pen.

HENRY STEPHENS, Stamford street, Blackfriars-road, London.

ELEGANCE AND ECONOMY AT THE CITY CLOTHING ESTABLISHMENT.

A GOOD FIT, Good Workmanship, and Good Materials, having gained for E. P. DOUDNEY and SON a Good Name and extensive patronage for upwards of half a century, in presenting their unparalleled Low Prices for Public Inspection they beg to state that the three essentials to a Good Garment shall still have their unremitting attention, it being their ambition to ensure an increasing business, and merit the appellation of being "The Best, as well as the Cheapest, Tailors!"

CASH PRICES.

A super Cloth Coat, Trousers, and Waistcoat, fashionably made, per suit	£3	3	0
Ditto Spanish Superfine, ditto	4	4	0
Ditto extra Imperial Saxony, the best that is made, ditto	4	15	0
Superfine Frock Coats, Silk Facings	2	10	0
Summer Waistcoats, beautiful patterns, 7s each, or three for	1	0	0
Cantoon Drill (&c.) Trousers, 10s 6d. per pair, or three pair for	1	10	0
Morning Coats and Dressing Gowns	0	15	0
Cloth Travelling Trousers	0	13	6
Footman's Suit of Livery, complete	3	3	0

CONTRACT PRICES,
(The old suits to be returned.)

Two Suits per year	£7	7	0
The best that is made	8	6	0
Three Suits per year	10	17	0
The best that is made	12	5	0
Four Suits per year	14	6	0
The best that is made	15	18	0

BOYS' CLOTHES (tastefully and fashionably made) SURPRISINGLY LOW!—Skeleton Suits, 18s.; Tunic Dresses, 25s.; Hussar Suits, 30s.

The "City Clothing Establishment" has long been celebrated for having the Best and Cheapest Assortment of Shooting Jackets and Fishing Coats, Great Coats and Cloaks of every make, all sorts of Gaiters, Mud-boots, and Leggings; India-rubber Waterproof Cloaks, Capes, Air Cushions, Travelling Bags, &c. &c.

Gentlemen requiring Outfits, on a comparison with the Style, Qualities, and Prices of other Houses, will prove the advantages to be derived from giving their Orders to

E. P. DOUDNEY and SON, 49, Lombard-street.
Established Fifty Years.

T. COX SAVORY, Goldsmith, &c., 47, Cornhill, London, informs the Public that he offers DESSERT FRUIT KNIVES AND FORKS, with plain Ivory handles, silver ferrules, plated on steel blades, at Three Guineas per dozen pair, or with solid silver blades, at Eight Guineas and a Half per dozen pair.

N.B.—Carved Ivory handles at 13s. 6d. extra per dozen pair.

LIBRARY FOR THE YOUNG.

UNDER THE SUPERINTENDENCE OF THE SOCIETY FOR THE DIFFUSION OF USEFUL KNOWLEDGE.

Just published, with Six Wood cuts, price 3s 6d,

HISTORICAL SKETCHES: — SPAIN and PORTUGAL. Vol II., completing the Work.

London: CHARLES KNIGHT, 22, Ludgate-street.

In 2 Vols post 8vo, with numerous Wood-cuts, price ONE GUINEA,

PALEY'S NATURAL THEOLOGY, with Illustrative Notes, by HENRY LORD BROUGHAM, F.R.S. and Member of the National Institute of France, and SIR CHARLES BELL, K.G.H., F.R.S.L. & E., Professor of Surgery in the University of Edinburgh, formerly of the Council, and Professor of Anatomy in the Royal College of Surgeons, London,. &c &c. To which are added SUPPLEMENTARY DISSERTATIONS, by SIR CHARLES BELL.

London; CHARLES KNIGHT, 22, Ludgate-street.

In 2 Vols, post 8vo, price ONE GUINEA,

THE COTTON-MANUFACTURE of GREAT BRITAIN SYSTEMATICALLY INVESTIGATED, and illustrated by 150 Original Figures, engraved in Wood and Steel; with an Introductory View of its Comparative State in Foreign Countries, chiefly drawn from Personal Survey. By ANDREW URE, M.D., F.R.S., M.G.S., M.A.S. London, M. Acad. N.S. Philadelphia, Corresponding Member of the Pharm. Soc. North Germany, and of the Société Industrielle of Mulhausen, &c., &c., &c.

London: CHARLES KNIGHT, 22 Ludgate street.

LIBRARY OF ANECDOTE AND TABLE-TALK.

In fcp 8vo., price 6s,

THE BOOK of TABLE-TALK, Vol. I., illustrated with many Wood-cuts.

"I love anecdotes. I fancy mankind may come, in time, to write all aphoristically, except in narrative; grow weary of preparation, and connexion, and illustration, and all those arts by which a big book is made. If a man is to wait till he weaves anecdotes into a system, we may be long in getting them, and get but few in comparison of what we might get."—*Dr. Johnson (Boswell's Tour).*

THE CHINESE: A General Description of the Empire of China and its Inhabitants. By JOHN FRANCIS DAVIS, Esq., F.R.S., late His Majesty's Chief Superintendent in China. Two Vols. post 8vo., with Wood-cuts, 1*l.* 1*s.*

"The following Work owes its origin to a collection of notes which the Author made while resident in China. A residence of more than twenty years (which terminated in the Author succeeding, for some months previous to his final retirement, the late amiable and unfortunate Lord Napier as His Majesty's chief authority in China) has perhaps been calculated to mature and correct those opinions of the country and people which he had formed, as a very young man, in accompanying Lord Amherst on the Embassy to Pekin in 1816. If some acquaintance, besides, with the language and literature of the Chinese empire has not been of considerable assistance to him in increasing the extent and accuracy of his information, it must have been his own fault entirely, and not any want of opportunities and means."—*Extract from Introduction.*

THE PUBLIC REVENUE.

THE publication, at the usual time, of the account of the Quarter's Revenue, affords us a fit occasion for laying before our readers a brief sketch of the origin and progress of the public income of the kingdom, together with an explanation of the several items that enter into the periodical statements as they are now made up.

In every country where any form of government is established, a portion of the national income, that is, of the entire annual earnings of the community, must be allotted to the support of the public institutions of the State. It will be convenient to speak, as we have done, of the portion thus set apart, or abstracted, as the public income or revenue, and of the whole from which it is taken as the national income, or the income of the community.

With the income of the community we have at present nothing to do, except to point out the distinction between it and the public income or the revenue of the State. The consideration of the various questions relating to the former—of the manner in which it is created and distributed—belongs to the science of political economy, and may, indeed, be said to constitute the whole of that science as strictly defined. The consideration of the subject of the income of the State belongs to political economy no farther than inasmuch as it is necessary to take into account the incidence and effect of taxes, tithes, and other public burdens, on the growth of the national wealth.

The governing power in a country may receive its share of the national income in a variety of ways. The amount thus appropriated will also vary greatly according to circumstances. It ought of course to be no greater than may be necessary for the attainment of those really public objects in which the whole community has an interest; and wherever the government is properly constituted, this rule will be the limit of its expenditure and its exactions. Such a government is merely the organ and representative of the community—a system of establishments and functionaries created and maintained for the effecting of certain purposes which are held to be essential for the existence and well-being of the State.

We are far, however, from here undertaking to determine who, or what portion, of the inhabitants of every country are fittest to be the judges and regulators of what the government ought to be. Even the theories upon this subject that have gone farthest in the assertion of what is called the sovereignty of the people, have never contemplated by that doctrine anything like the sovereignty of the whole people. In the first place, almost all of them, by denying political rights to women, have begun by excluding from the scheme of a purely democratic government one entire half of the people. Then, the remainder they have in like manner reduced to half its number, by discarding all males under the age of twenty or twenty-one. The young man of twenty-one years of age is considered one of the people, but the young man of twenty years and eleven months is not. In this way what is designated the people is in reality, at the most, only a fourth part of the people. The reasons for excluding the other three-fourths may be perfectly sufficient. But there may also possibly be grounds equally good for excluding a portion of the remaining fourth. The expediency and right of exclusion at all being admitted, as it is admitted by the most liberal theories, and by those that affect to be based upon the simplest and purest principles, it is impossible to refuse at least to consider the propriety of any further exclusion that may be proposed, provided any reasons are alleged for it as advisable for the public good. It is possible that reasons as sound as those on account of which it has been thought fit to deprive all females and all males under a certain age of any share in the government, may exist for confining the political suffrage, as is done among ourselves, to persons possessed of a certain amount of property, and also, from among that body, for giving more power in the State to one class than to another.

And not only may it be the best arrangement for the public good that the actual working of the government should be conducted upon this plan; it may be even expedient that the original institution of the government should be the work only of a comparatively small portion of the people, and even if they should have to effect their purpose in opposition to the wishes of the rest. This again must be admitted upon the most liberal theory that has been propounded by any body. Even the theory which would exclude from the exercise of political rights only the women and the males under age, cannot maintain itself unless it shall allow that a good and legitimate government may be founded by one-fourth part of the people, without the wishes of the other three-fourths being at all regarded; for otherwise the government—namely, that of the grown-up men,—which it considers to be the best,—might probably be found in most cases to be of impracticable institution, it being unlikely that the women and the young men under twenty would give their consent to it if the question were fairly put to them, and its establishment really depended upon their concurrence. Their concurrence, therefore, must be held not to be necessary. But if the opposition of three-fourths of the people may thus be properly disregarded, there may also be good reasons for disregarding in this matter the opposition of a still larger portion of them. In short, it comes to this, that the ordinary proportional number of the people by whom the necessary government is either originally established or from time to time controlled, although of course operating as a powerful restraint, is [illegible] royal saying his enemies a word and threats, as [illegible] pleasant, courteous

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

other elements to affect the character of the government in various important respects, has no claim whatever to be accounted that decisive test of a free or a despotic, a legitimate or an anti-national, a fundamentally good or bad government, which it is often assumed to be. Why, indeed, should it be so accounted? The number of noses that may be reckoned up on either side of any question, does not in most cases form by any means the principal part of its real strength, either moral or even physical. Even in a mere contest of blows, an array of disciplined and instructed men will usually be found more than a match for many times their number of an untrained and unorganized rabble. Knowledge in the few is always, when properly exerted, able to obtain and to keep the ascendancy over ignorance in the many. Union, and preparation, and contrivance commonly in every kind of contest give the victory to the side in which they are found in the greatest perfection, no matter what may be the disparity of mere numbers. What reason is there, then, for demanding, that in political disputes the advantage of mere numbers should be the only thing looked to, and that all these other natural and inherent advantages should go for nothing?

What, then, is really the distinction between a free government and one not entitled to that name? Is not every government in which a particular class of the people enjoys the ascendancy, and that in opposition it may be to the wishes of the numerical majority of the whole people, essentially of the same kind with a government established by force or the right of conquest? Is not the ascendant class to be regarded precisely as a body of foreign conquerors holding the rest of the country in subjection?

The true answer to this question, we apprehend, is, that a free government is that in which, however unequally political power may be distributed among the different classes of the people, every man, in whatever class he may be born, finds no bar raised by the constitution to prevent him from making his way up to the class in whose hands the greatest amount of power and privilege is lodged, if he have sufficient talent and force of character to conquer the natural obstacles which must ever oppose the ascent of an individual from his original position. We do not see that upon any other definition than this, either our own country, or any other in which certain classes of the people are intrusted with more political power than others, can be said to have a free constitution.

Both in such a constitution as that now established in England, and even in others which do not affect to be of nearly so popular a character, it is at least always professed, that the portion of the national income abstracted for the expenditure of the government is not more than is necessary for the general good. Every tax or other exaction of the government is defended simply upon that consideration. Whatever may be the fact, it is at least never admitted that any office is maintained, or any payment made, merely for the benefit of individuals. Individuals may, incidentally, be benefited by the expenditure of the government; but nobody pretends to defend that expenditure on any other grounds than those of its public and general usefulness. This may now be said to be the principle upon which the fiscal affairs of the government are professed to be managed in every civilized country.

In other circumstances, however, governments have distinctly proceeded upon a different principle. A government, especially, that has established itself over a country by actual conquest, has usually conceived itself entitled, in regard both to revenue and to other matters, "to look to its own advantage without any regard to the [illegible] of the people, and has exercised this assumed [illegible] E. ring its exactions [illegible] the utmost limit the country or the [illegible] rance of the people would bear. In this case the government has openly professed to be an institution established not for the benefit of the people, but solely for that of the sovereign. Elsewhere, even while it has been denied that the right of sovereignty resided in the people, or that the government was to be considered as at all an institution emanating from their will, it has still been held, in profession at least, that the good of the people ought to be the sole directing motive of the operations of the government. But in the case we are considering the sovereign power has acknowledged neither a popular origin nor any popular connexion or obligation whatever; it has looked upon the people and the country simply as its property, and has in all its proceedings frankly avowed no other design than that of turning both to the best account, with a view to its own particular profit and advantage.

It was the fortune of our own country to be generally in the circumstances here described down to a comparatively recent date in its history. When was it that we had for the first time in England anything that really deserved the name of a national government? Our early history is the history of a succession of foreign conquests. During the period of above three centuries that the country was a province of the Roman empire, a revenue is said to have been drawn from it very considerably exceeding the actual expenditure of the government. All the expedients of taxation appear to have been applied by the sovereign power to wring from its subjects the largest possible portion of their earnings for the imperial treasury. All arable lands paid a tax to the government, in the shape of a portion of their produce, varying from a twentieth to a fifth. The proportion exacted from orchards was commonly a fifth part of their produce. In the case of pasture lands, a certain sum was demanded for each beast that grazed on them. All mines paid a proportion of their profits, commonly, it is believed, a tenth. The twentieth part of all estates and legacies, left by will to persons not within a certain degree of consanguinity to the testator, went to the State. So did a twenty-fifth part of the price of all slaves that were sold, All goods above a certain value that were sold by auction, or in the public markets, also paid a per centage upon the price which they brought. There were levied besides a poll-tax, which affected every individual whether possessed of property or not—a tax on the bodies of the dead before they were allowed to be buried—taxes on houses, pillars, hearths, &c.—taxes on artists for the liberty of exercising their several arts, &c. &c. And customs were paid on all goods exported or imported. "Though it is impossible," adds the historian Henry, from whom we have abridged this enumeration, "to discover the exact value of the Roman revenues in Britain, we have reason to believe that these revenues were very considerable. They were sufficient not only to defray all the expenses of the civil government, and to support a very large military establishment, but also to afford valuable remittances to the imperial treasury. If the calculations of Lipsius concerning the Roman revenues of Gaul be just, those of Britain could not be less than 2,000,000*l.* sterling annually."

The Saxon government of England partook, no doubt, in some respects more of the character of a national government than that to which the country was subjected while it was a Roman province. At least all the land of the country was now in the hands of the same race with its sovereignty; and the sovereignty was not exercised without the check of a considerable popular control. But we should fall into a great error if we supposed that the inhabitants of South Britain at this time were, in the greater part, even of Saxon blood. "The Anglo-Saxons," as Mr. Turner has observed, "did not, as some have fancied, exterminate the Bri-

tons, though many devastations must have accompanied their progress. The fierce warriors of Germany wanted husbandmen, artisans, and menials for domestic purposes. There can be no doubt that the majority of the British population was preserved to be useful to their conquerors." And in another place he adds—"The great bulk of the Saxon population was in a servile state, and therefore without any constitutional rights. All the villani, servi, bordarii, coscetæ, cotarii, and coliberti, esnes and theows; that is, all the working agricultural population, and most of those who occupied the station of our present small farmers; and in the burghs and cities all those who were what is called the men, or low vassals of other persons, analogous to our inferior artisans and mechanics, and small tradesmen, were the property of their respective lords, and with no more political rights than the cattle and furniture, with which we find them repeatedly classed and transferred. Two-thirds at least, more probably three-fourths, of the Anglo-Saxon population were originally in this state, till voluntary or purchased emancipations, and the effects of war and invasion, gradually increased the numbers of the free. Domesday-book shews, that, even in the reign of the Confessor, the largest part of the English population was in the servile state."

In reference, therefore, to the greatest number of their subjects, the Saxon Kings must be held to have exercised not a national government, but one of conquest and force. From the extent, also, of the lands annexed to the Crown, they were very nearly, if not altogether independent of the people in respect of their revenues. Speaking of the position of the Anglo-Saxon monarch, after the whole country had been brought under one sceptre, Mr. Turner observes—"The royal property consisted of lands in demesnes in every part of England; and though in the lapse of time he had given large possessions to his friends and followers, yet from many he reserved rents and services which were a great source of wealth and power. The places which occur with the denomination of royal towns, or royal villas, are very numerous; and among these we may notice the name of Windeshore (Windsor), which is still a regal residence. His revenues were the rents and produce of his lands in demesnes, customs in the sea-ports, tolls in the markets, and in the cities on sales; duties and services to be paid to him in the burghs, or to be commuted for money, wites, or penalties and forfeitures which the law attached to certain crimes and offences; heriots from his thanes, and various payments and benefits arising to him on the circumstances stated in the laws." It is to be remembered, also, that the royal revenues were not burdened with the support of the military force of the kingdom, which was both furnished and maintained by the proprietors or occupants of the land. And there was besides the land-tax called the Danegeld, originally imposed about the end of the tenth century as a tribute exacted by the Danes, afterwards collected to put the kingdom in a posture of defence against these invaders, but eventually continued as a regular part of the revenue of the Crown, after the occasion of its original application had long passed away. At first this tax is said to have amounted to a shilling on every hide of land in the kingdom, which contained in all 243,600 hides. The value of the Saxon money is very uncertain; but Henry calculates that even at this, its lowest amount, the tax must have produced a sum "equal in quantity of silver to about 36,540*l.* sterling, and in efficacy to more than 360,000*l.* of our money at present." It was afterwards raised to 2*s.*, and at last to 7*s.* on every hide of land. "This tax," continues Henry, "was raised so high, and collected with so much severity, by King Canute, A. D. 1018, that it amounted to the prodigious sum of seventy-one thousand Saxon pounds, besides eleven thousand of the same pounds paid by the city of London." This, estimated according to the previous calculation, would make about as much silver as is contained in 250,000*l.* sterling, or in real value, about 2,500,000*l.* of our present money. But as for the assumption involved in the latter computation, that one pound of silver in those times would have gone as far as ten pounds of the same metal at present, it is one upon which no dependence can be placed. The matter evidently does not admit of any precise determination, or indeed of any determination at all. It appears that houses in towns, as well as lands, were subjected to the Danegeld, a house of a certain value paying the same as a hide of land. The hide is supposed to have contained 120 acres.

Passing over the Danish Conquest, which first subjected the Saxons to a temporary foreign domination, we come to the complete and permanent subjugation of the country by the Norman invasion. The government now established held itself as independent of the great body of the people which it kept in subjection, as it did of the cattle that grazed in the fields. During the reigns of the Conqueror himself and his successor, the sovereignty of the Crown seems to have been without limit or control of any kind. The first two Williams were as independent of their Norman Barons as of their Saxon serfs. The revenues of the Conqueror were derived from many sources, and were of very great amount. It appears, in the first place, that he retained in his own possession, or, in other words, annexed to the Crown, no fewer than 1422 manors, besides a great number of forests, parks, chases, farms, and houses in all parts of the kingdom. The rents or produce of all these possessions flowed annually into the royal treasury; but even from the estates which were given away to the nobility, clergy, and others, the Crown at this period derived large revenues. From all the holders of these estates certain small annual payments were collected by the sheriffs for the king, under the name of reserved rents. So long as an heir was under age, the possession of his estate, under the name of wardship, fell to the Crown, which then drew the rents, or granted or sold the right of drawing them to a third party. No female ward of the Crown could marry without the consent of the Sovereign, which was never given without being purchased. When the heir became of age, he was not permitted to enter upon the possession of his property until he had paid a fine to the Crown, under the name of a relief, which is supposed to have usually amounted to about a fourth part of the rent. All vassals of the Crown who were either unable or unwilling to perform military service in person, were obliged to compound with the King, as often as the latter chose to engage in any military expedition, by the payment of what was called scutage or shield-money. Such expeditions were sometimes got up for the mere purpose of exacting these fines. Payments, denominated aids, were also made by every vassal of the Crown when the King's eldest son was made a knight, when his eldest daughter was married, and for the ransom of his person, when he was taken prisoner in war. A branch of the royal revenue, so important as to have a particular court or office—the Escheatry—erected for its management, was that derived from the escheats or forfeitures of their lands by the vassals of the Crown. When any ecclesiastical office became vacant, its temporalities were seized and kept possession of by the King during the vacancy, which, in the case of the richer sees and abbeys, it was not unusual to prolong for several years. Extraordinary payments, in addition to their annual rents, were sometimes arbitrarily exacted from the tenants of the demesnes, and the inhabitants of the royal manors, by the name of "tallages"—a French word signifying his entire, and threats, as

nearly the same thing with the modern term "excise," of Latin origin,—namely, *cuttings*, as being a certain proportion of the goods on which the tax was laid. The Danegeld continued to be levied for many years after the conquest. Customs were paid to the Crown on most goods that were imported or exported. Royal tolls were exacted at bridges, and in fairs and markets. A large amount of revenue was derived from what were called generally, fines, free gifts, and oblations. "No franchise or privilege of any kind," says Henry, "could be obtained from the Crown without a fine or oblation proportioned to its value. Great fines were paid by prodigious numbers of people in order to obtain justice, and that they might be allowed the benefit of a legal trial; while others gave great gifts to procure the royal interposition for preventing law proceedings against them; and not a few agreed to give one half, or a third or fourth part, of their lawful debts, to the King, that they might procure payment by his authority. No office, either in Church or State, could be obtained without a bribe; and in some reigns even bishoprics were exposed to sale, and bestowed on the highest offerers. There was hardly any business so contemptible or so dishonourable in which some of our princes of this period did not engage for money; nor did they disdain to accept of dogs, hawks, hens, lampreys, shads, and such paltry presents, when they could not obtain more valuable bribes." Amerciaments for crimes, which were often imposed on the most frivolous pretences, constituted another valuable species of royal pillage. Once in every three years every hearth in the kingdom paid the King a shilling under the name of moneyage, to withhold his Majesty from exercising his prerogative of debasing the coin. The Crown received two-thirds of the dues paid on all law proceedings in the county courts throughout the kingdom. The inhabitants of all the royal cities and towns, as well as the tenants of the Crown lands, paid annual rents to the King. Considerable sums of money were paid yearly into the Exchequer by corporations or gilds for various privileges granted them by the Crown. A particular office was eventually established, called the Exchequer of the Jews, for the receipt and management of the large sums which the Crown was constantly extorting in the most arbitrary manner from that people. Add to all these the royal property in all forests and mines throughout the kingdom, in all treasures found hid in the earth, in all estrays or animals strayed, in all large fish caught near the shore, in all goods wrecked when no owner appeared, and in all goods uninherited, or to which no person could establish a legal claim. The revenues of the early Norman kings derived from all these sources must unquestionably have been of great amount. "We are assured," says Henry, "by an author who was born in England only nine years after the Conquest, that those of William I. amounted to the incredible sum of 1061*l.* 10*s.* 1½*d.* per day, which (neglecting the fraction) was equal in efficacy to 157,915*l.* of our money per day, and to 5,806,975*l.* per year. This amount, extravagant as it may appear, is not very different from that which is given by Roger Hoveden, a contemporary historian, of the revenues of England in the reign of Richard I. When Hubert, Archbishop of Canterbury, was about to resign the office of high justiciary, A. D. 1196, he proved from his books, that the revenue he had collected in England in the two preceding years was no less than 100,000 marks of silver. A great sum, equivalent to 11,000,000*l.* at the above rate of computation, or 5,500,000*l.* in one year. But though it should be allowed that both these accounts are exaggerated, we have still no reason to be surprised that the Gen. of the England in this period kept such splendid and ind Prince's Onsing urts—lived in such affluence—entertained civil E. P. tes and nobles at the three great festivals—endowed so many monasteries, built so many strong castles and magnificent churches—carried on so many wars—and, after all, left so much money in their treasury when they died."

It is not our intention to follow up this statement by any deduction in detail of the changes that took place from time to time, in the modes and contrivances resorted to by succeeding kings to procure the means of maintaining their power and dignity. The materials, indeed, do not exist for furnishing any full and accurate history of the royal revenues. But it may be observed, in general, that, although the gradual alienation of the Crown lands (notwithstanding the strict provisions made by the law against that practice), the charters which were extorted from Henry I. and his successors, the rise of the House of Commons, and the sentiment of a common nationality which in course of time united sovereign and subject, tended both to throw the King more into the hands of his people and to give to the income and expenditure of the Government more of a public character, yet the power of arbitrary exaction to any amount remained one of the almost undisputed prerogatives of the Crown down, we may say, to the beginning of the seventeenth century. We shall merely, for the present, subjoin in conclusion a few of the most important of the scattered notices that have been preserved relating to the remainder of this period, which may be called, by way of distinction, that of our ancient financial history.

Among the provisions of the Great Charter granted by King John, in 1215, were clauses regulating the royal prerogatives of wardship and marriage; but they only went the length of confining, within certain specified limits, the exactions to be made in future under these pretences. The prerogatives were not abolished. Another right which the Crown then had, and which it made an instrument of the most vexatious robbery, that of the pre-emption of all things necessary for the court and the royal castles, called the right of purveyance, was apparently taken away by the Great Charter; but this prerogative was in full exercise even so lately as in the reigns of Elizabeth and James I.

The first Parliament in which representatives of the commons appeared is commonly considered to have been that which was called together in 1265, in the reign of Henry III. Before this time the great council of the barons and military tenants of the Crown had been in the habit of occasionally making grants of money to the King, which they raised by taxes upon their lands, when a war or other national object demanded an extraordinary expenditure. The weak prince who now occupied the throne, however, had by his prodigal dissipation of his hereditary revenues, and his wasteful mismanagement in a variety of ways, reduced himself to such a state of poverty, that he was obliged to make constant applications to his Parliament even for the ordinary maintenance of his court. The Parliament supplied his wants by grants, sometimes of a twentieth, sometimes of a fifteenth, sometimes of a tenth of all the moveable property in the kingdom. On these occasions, the books of the clergy, the ornaments of churches, the horses and armour of knights, and the implements of husbandry, were not taken into account.

In the next reign, that of Edward I., the method of obtaining money by scutages, which had been much employed till then, was dropped; and the inadequacy of the hereditary revenues of the Crown to meet the expensive wars in which the King was engaged during a great part of his reign, was chiefly supplied by parliamentary grants. Taxes were thus imposed on the moveable property of the kingdom in different years, varying from a thirtieth to a seventh part of its value. Yet, on other occasions, the method of arbitrary extortion was employed by Edward with as much license as

by any of his predecessors. "From the Jews," observes Henry, "he extorted prodigious sums of money at different times; and at last he seized the whole possessions of that devoted people, banishing the owners out of the kingdom. Though he was really a friend to trade, yet when his want of money was great and urgent he sometimes made too free with the cash and goods of merchants. Before his departure on his expedition into Flanders in 1297, he seized great quantities of wool and leather belonging to the merchants, for no other reason but that it was the most speedy and effectual means of procuring money. At the same time he took by mere force, without any other plea but that he had need of them, immense quantities of corn and great multitudes of cattle for the use of his army. Nor did this prince abstain from laying violent hands on the property of the Church, however sacred it was then esteemed. At one time he seized all the money and plate in the monasteries and churches; and at another all the possessions of the clergy, for refusing to grant him a subsidy."

Edward III., whose wars involved him in great expenses, was in the habit of applying for supplies to Parliament more regularly than any of his predecessors; but Hume has completely shown that in no reign since the Conquest were either the old royal prerogatives in general, or the power of arbitrary exaction in particular, carried to a greater height. The oppressive right of purveyance, for instance, though repeatedly characterized by the Parliament as an outrageous and intolerable grievance, was in constant exercise by this Sovereign. Among other prerogatives always complained of by the Commons, but which Edward, nevertheless, exerted to the full, were the granting of monopolies (for the first time, as far as is recorded) the exacting of loans, the levying of arbitrary and exorbitant fines, &c. "But there was no act of arbitrary power" continues the historian "more frequently repeated in this reign than that of the imposition of taxes without consent of Parliament. Though that assembly granted the King more supplies than ever had been obtained by any of his predecessors, his great undertakings, and the necessity of his affairs obliged him still to levy more; and after his great success against France had added weight to his authority, these impositions became almost annual and perpetual. . . . The King openly avowed and maintained this power of levying taxes at pleasure. At one time he replied to the remonstrance of the Commons, that the impositions had been exacted from great necessity, and had been assented to by the Prelates, Counts, Barons, and *some* of the Commons; at another, that he would advise with his Council. When the Parliament desired that a law might be enacted for the punishment of such as levied these arbitrary impositions, he refused compliance. In the subsequent year they desired that the King might renounce this pretended prerogative; but his answer was, that he would levy no taxes without necessity for the defence of the realm, and where he reasonably might use that authority. This incident passed a very few days before his death, and these were in a manner his last words to his people." It is worth noticing that this Prince is said to have derived an annual revenue of 30,000*l.* from Ireland. He also, in all probability, drew considerable sums from his continental dominions. A chief part of the royal revenue was now obtained from the Customs. In 1331 those of the port of London alone amounted to 8000*l.* per annum—that is, to 24,000*l.* of our present money. In 1354, the Customs for the whole kingdom appear to have amounted to about 240,000*l.* of our money, principally arising from duties on the exportation of wool. The first duty on merchants' ships and the value of their cargoes, called the tonnage and poundage duty, was imposed by Edward, without the authority of Parliament, as is thought, in the year 1871. This tax, from the first levied professedly for the guard of the seas, came afterwards to be usually granted by Parliament to each King for his life-time.

In the reign of Richard II. the Crown-lands had from alienations become quite insufficient to defray even the ordinary expenses of the Government. Among the taxes now resorted to, was one imposed by Parliament in 1378 of a novel description—a capitation or poll-tax, embracing the male and female population of the kingdom, of all ranks, of the age of sixteen and upwards. An earl was taxed 4*l.*; a baron, 2*l.*; an esquire entitled to be made a knight, 20*s.*; an esquire of less estate, 4*s.* 7*d.*; the Judges, 100*s.* each; the Mayor of London, 4*l.*; merchants of the highest class, 8*s.* 4*d.*; every married man, for himself and wife, 4*d.*; and every unmarried woman, 4*d.* This was the tax which occasioned the insurrection of Wat Tyler. It is also in this reign that we find the first mention made of the practice of levying benevolences, which was, in truth, nothing else than a mode of taxing the people by the sole authority of the Crown, under pretence of only soliciting their voluntary contributions.

The doubtful title of the House of Lancaster served to augment considerably for the time the power and influence of the House of Commons; and it is observed that neither Henry IV., Henry V., nor Henry VI. ever attempted to impose a general tax, without the authority of Parliament. An account has been preserved of the entire ordinary revenues of the Crown, and also of their expenditure for the year 1421, in the reign of Henry V., from which it appears that they amounted only to 55,714*l.* 10*s.* 10*d.* in money of that time. "This," observes Hume, "is nearly the same with the revenues of Henry III., and the Kings of England had neither become much richer nor poorer in the course of so many years. The ordinary expenses of the Government amounted to 52,507*l.* 16*s.* 10*d.*, so that the king had of surplus only 3206*l.* 14*s.* for the support of his household, for his wardrobe, for the expense of embassies, and other articles. This sum was nowise sufficient; he was therefore obliged to have frequent recourse to Parliamentary supplies, and was thus, even in time of peace, not altogether independent of his people. But wars were a monstrous expense, which neither the prince's ordinary revenue, nor the extraordinary supplies, were able to bear; and he was always reduced to many miserable shifts, in order to make any tolerable figure in them. He commonly borrowed money from all quarters; he pawned his jewels, and sometimes the crown itself; he ran in arrears to his army; and he was often obliged, notwithstanding all these expedients, to stop in the midst of his career of victory, and to grant truces to the enemy." At this time the charge of the town of Calais cost the Crown nearly 20,000*l.* a-year, and Ireland about 2000*l.* a-year over and above its own revenue. It has been noticed that the first instance of a debt being contracted upon Parliamentary security occurs in the reign of Henry VI.

Some of the succeeding kings descended to still more extraordinary practices. "Edward IV., for example," says Henry "not only carried on trade like a common merchant, but also solicited charities, which he called benevolences or free gifts, like a common, or rather like a sturdy beggar. Having expended all the aids granted to him by Parliament in preparing for his expedition into France, A.D. 1475, he sent for all the rich lords, ladies, gentlemen, and merchants, of whom he had procured a list, received them with the most captivating affability, represented the greatness of his necessities, and earnestly entreated them to grant him as great a free gift as they could afford, accompanying his entreaties with smiles and promises, or frowns and threats, as he saw occasion. Being a handsome, gallant, courteous,

and popular prince, he was exceedingly successful in his solicitations, particularly with the ladies, and collected a greater mass of money than had ever been in the possession of a king of England. This mode of raising money appeared to be so dangerous to the liberties of the kingdom, as well as hurtful to particular persons, who were induced to contribute more than they could afford, that an Act of Parliament was made against it, 1st Richard III., A.D. 1483." A subsequent Act, however, passed in the reign of Henry VII., empowered that king to levy, by course of law, all the sums which any person had agreed to pay by way of benevolence; "a statute by which," as Hume has justly observed, "that arbitrary method of taxation was directly authorized and justified." This last-mentioned monarch left at his death the sum of 1,800,000*l.* in cash, an amount of gold and silver equal to 2,700,000*l.* of our present money, and in effective value undoubtedly to much more. The profusion of his successor, however, soon dissipated all this anxiously-gathered treasure; and Henry VIII., notwithstanding the extraordinary resources he opened to himself by his wholesale confiscation of the religious establishments, and by debasing the coinage, died in debt. So did both his successor, Edward VI., and Edward's successor, Mary.

Elizabeth paid off these debts of her father, her brother, and her sister, and also left more money due to her than she owed at her death. Mr. Hume thinks that the ordinary revenue of this Princess could not have fallen much short of half a million. All the supplies she received from Parliament during her whole reign were only twenty subsidies and thirty-nine fifteenths; amounting probably in all to about three millions, which is at the rate of only 66,666*l.* a-year. But the Crown had still a great variety of ways of obtaining money from the subject without the assistance of Parliament. From the year 1590 the Customs of the port of London alone were farmed at 50,000*l.* per annum. Mr. Hume has shown that nearly all the most obnoxious of the old royal prerogatives continued to be both maintained and exerted in this reign; and of these many were largely productive in a pecuniary sense. The Star Chamber still possessed and exercised its unlimited discretionary authority of fining, imprisoning, and inflicting corporal punishment. The Court of High Commission still took cognizance of ecclesiastical offences, and outraged all sense of justice at once by the monstrous tyranny of its pretensions, and by the inquisitorial process by which it sought to enforce them. The Queen was resolved, she herself declared in a letter to the Archbishop of Canterbury, "that no man should be suffered to decline, either on the left or on the right hand, from the drawn line limited by authority, and by her laws and injunctions." Martial law was still put in force by the Crown at its discretion. The mere warrant of a Secretary of State or of the Privy Council was still authority enough to consign any individual in the kingdom to imprisonment in any gaol, and for any length of time that these ministers might think proper. The rack was still frequently used on the same authority. The power of pressing and obliging any person to accept of any office was another royal prerogative which was still kept up; and money was frequently extorted by the exercise, or threatened exercise of this iniquitous power. Benevolences and ship-money were still occasionally exacted. The country was still obliged to raise, arm, and clothe any number of soldiers the Crown might at any time demand. The prerogative of purveyance was still exercised almost without limitation; so was that of wardship. When an estate fell to a female she was obliged to marry any one the sovereign pleased; whether the heir was male or female, the Crown enjoyed the whole profits of the rents during the minority: nay, none of the nobility could marry without permission from the Crown, nor could any person visit a foreign country without a similar license. Embargoes on merchandize imported from abroad were still laid on by the Sovereign at pleasure. The Crown still exercised what was called the dispensing power,—that is, the power of declaring any statute null and of no effect at its discretion. A royal proclamation had still all the authority and effect of law. A royal warrant was still allowed to stop the course of justice, and to shelter the person in whose favour it was issued from all suits and prosecutions. In short, as Hume has observed, "the inventions were endless which arbitrary power might employ for extorting money, while the people imagined that their property was secured by debarring the Crown from imposing taxes." But the power of imposing taxes was the only power which the House of Commons at this time exercised. Its general demeanour to the Crown was the very extreme of timidity and abjectness. "The Crown, on the other hand," continues the historian, "conceived the Parliament in no other light than a means of supply. Queen Elizabeth made a merit to her people of seldom assembling Parliaments." .... "The Government of England in that age," he observes in another place, "bore some resemblance to that of Turkey at present; the sovereign possessed every power except that of imposing taxes; and in both countries this limitation, unsupported by other privileges, appears rather prejudicial to the people. In Turkey it obliges the Sultan to permit the extortion of the bashas and governors of provinces, from whom he afterwards squeezes presents or takes forfeitures; in England it engaged the Queen to erect monopolies and grant patents for exclusive trade; an invention so pernicious, that had she gone on during a tract of years at her own rate, England, the seat of riches, and arts, and commerce, would have contained at present as little industry as Morocco or the coast of Barbary."

ADMISSION TO THE COMMONS' GALLERY.

For a long time past the public have obtained admission as spectators to the proceedings of the Houses of Parliament, only by written orders of Peers for the House of Lords, and for the House of Commons by the Speaker's order to a seat below the Gallery, and either by a Member's order, or by the payment of half-a-crown, to the Gallery. By a regulation promulgated a few weeks ago, the privilege of admission to the Commons' Gallery by the half-crown payment is abolished, and the written order of a Member is made the only passport.

The pretence, or the chief pretence, for this innovation, we believe, is, that it is expedient to put an end, in all cases, to the practice of the receipt of fees or gratuities by the officers of the House. But with whatever object the new regulation may have been made, it appears to be impossible to regard it as in effect anything else than a material abridgment of an important public accommodation, and, we will add, of a great public right.

It is sufficient, in order to place the matter in a proper light, merely to observe, that of two modes of obtaining admission to the Gallery which were heretofore available to the public, one is now wholly put an end to. And we shall be very much surprised, indeed, to find that the mode which is left has hitherto been one-fiftieth part as much resorted to,—in other words, has been one-fiftieth part as much an accommodation—as the one which has been taken away. For one person who came to the Gallery with a Member's order, we should think there must have been fifty who had no other means of admission than their half-crowns. These last are now deprived of all means of admission whatever.

The system according to which the public were admitted to the House of Lords has always been consi-

dered as exclusive and illiberal, in comparison with the system of admission to the Gallery of the Commons. There are many persons, we will venture to say, who have resided in London for years, and who, although they have repeatedly visited the Commons' Gallery, have not been once present at a debate in the Lords. Yet now the exclusive system of the Lords has been adopted by the Commons also. In these days of popular ascendancy, and of the fashion of liberalizing old institutions, it might rather have been expected that the more accommodating system of the Commons would have been extended to the Lords.

The objection to the practice of the door-keeper taking money from the visitors to the Gallery rests, we presume, upon his putting the money in his pocket. It is conceived to be an inexpedient mode of paying an officer of the House. But the half-crowns, although received at the door, might, instead of going into the pocket of the door-keeper, be carried to the public account. Any fraud on the part of the person receiving the money might be prevented, by the same means that will have to be used to prevent similar frauds under the newly-established system.

But perhaps the half-crown payment is disliked as giving an advantage to the man who has got half-a-crown over him who has not. It is an advantage, we fear, which will always exist. But is it anything else, after all, than mere cant to pretend that the class of persons who cannot occasionally spare half-a-crown to pay for admission are those to whom it is most important to secure the means of visiting the Gallery? Are such persons, generally speaking, likely to have either much leisure for going to hear the debates, or much taste for that kind of amusement, or sufficient information and intelligence to make them on any account the fittest audience for a legislative assembly to collect around it? Did not the mode of admission by Members' orders, considered as supplementary to the ordinary mode of admission by a money payment, allow as many of this class of persons to find their way into the Gallery as was desirable? However, with room enough, and proper regulations to preserve order, we should, for our own part, have no objections to the admission of all who choose to come, without either money or orders, as freely as people are admitted into a church. This would be the really liberal and popular system. That recently established, and now in operation, has nothing whatever of a popular character about it; but on the contrary, is the most illiberal and exclusive that it is possible to imagine.

If Members, as a general practice, are only to give orders to their acquaintances, it is needless to remark that not many of them will go to persons whom their poverty would otherwise exclude from the Gallery;—they will be given away, as franks are, for the most part just to those to whom the saving of half-a-crown is least a matter of any consequence.

But even to the acquaintances of Members, or to persons having any such knowledge of, or connexion with them, as may be supposed to entitle them to ask an order, the new system is infinitely less convenient than the old. Formerly, when you wished to be present at a debate, if you chanced to meet with a Member whom you knew, good and well, you might have your order; but, if not, you got in by paying your half-crown. Now, as the cookery-book says of the goose, you must in all cases first catch your Member; unless you succeed in that attempt, all your time and trouble in going down to the House are thrown away.

How would it answer to extend the principle of this rule to our other places of public resort? Would it deserve to be accounted an accommodation to any class of persons whatever, if instead, for instance, of the shilling paid for admission to the exhibition at Somerset House, it were to be insisted that every applicant should bring with him an order from one of the Academicians? The only plan that could prevent such a rule from operating as an impassable barrier of exclusion, in regard to the greater part of the public, would be the plan adopted at the Zoological Gardens, where, although the admission is by members' orders, the orders are to be had, for the asking, in every grocer's and confectioner's shop. So, the only way in which the new rule for admission to the Gallery of the House of Commons could be made tolerable, would be by its being distinctly understood that an order was no favour, but that you might call a Member as you would a coach from the stand; and that, as a matter of course, they should "come when you do call for them."

We take it for granted that, at least, Members are not to be restricted, under the new system of admission, from giving as many orders as they please for the same day. If each Member is only to have the power of granting a single order, the regulation, under a show of reform, goes as near as possible to the shutting of the Gallery, and the exclusion of the public, altogether. It would be a very small portion of the public, indeed, that would ever enter the Gallery through so narrow an opening as would be thus afforded.

By the way, admission to see the Houses, when the Lords and Commons are not sitting, has hitherto been to be had for a shilling. Is this also to be put a stop to, and a Member's order to take the place of the gratuity to the housemaid? The practical application of the soundest and most salutary general principle may be carried out to a point at which it becomes both tormenting and ridiculous.

(To be continued.)

POLITICAL RETROSPECT FOR JULY, 1836.

GREAT BRITAIN.

Our last Retrospect brought down the account of the proceedings of Parliament to Friday, the 24th of June. Both Houses met that evening; but in the Lords nothing took place requiring notice. In the Commons a somewhat warm discussion on the Liverpool Docks Bill was terminated by a division, by which a motion, made by Mr. Ewart, for throwing out the Bill, was carried by a majority of 197 to 173. The matter seems to have been made a party question, the Ministerial Members generally voting for Mr. Ewart's motion, and the Opposition against it. Mr. Ewart opposed the Bill principally on the ground that it took the management of the Dock estate out of the hands of the town-council. It is understood that this decision will prove a serious, if not a fatal, blow to the parliamentary interest of the Opposition in the borough of Liverpool. The House then went again into Committee on the English Tithe Bill, when the remaining clauses were carried, after divisions had taken place on several of them. A motion, by Mr. Trevor, for the insertion of a proviso that the Commissioners should be members of the Established Church, was negatived by a majority of 58 to 19; and another by Mr. Hume, for an alteration of the proposed mode of taking the tithes on hop-grounds and market-gardens, by a majority of 104 to 23. We record these divisions merely as indicative in some degree of the strength of parties in the House.

The Lords assembled in unusual force on Monday,

the 27th, to debate the question of taking into consideration the amendments of the Commons to the Irish Corporation Reform Bill. Lord Melbourne having moved that their Lordships should proceed to consider the amendments in a remarkably earnest and striking speech, a long and animated debate arose. The opposition to the motion was led by Lord Lyndhurst, who was followed on the same side by Lord Ripon, Lord Winchilsea, Lord Ellenborough, the Duke of Wellington, the Marquis of Westmeath, and Lord Wharncliffe. The speakers in support of the motion were the Marquis of Clanricarde, Lord Falkland, Earl Grey, Lord Holland, and the Duke of Richmond. At length, after a reply from Lord Melbourne, the House divided at one o'clock in the morning, when the numbers were found to be, for Lord Melbourne's motion 123 (including 48 proxies), against it 220 (including 78 proxies); majority for rejecting the amendments of the Commons, 97.

Lord Grey, in the course of his speech, threw out a suggestion for a modification of the Bill, with the view of effecting a compromise between its supporters and opponents, which we deem to be very deserving of notice for the sake of the principle involved in it, and the more as it does not seem to have been well understood either in the House or by the public. His Lordship is reported to have said—"Suppose that every voter was restricted to voting for only half the number of town-councillors; the consequence would be that there would be no exclusive party established, but that a minority in any corporation, of whatever persuasion they might be, would retain their due share of influence. . . . It is obvious, that if a voter were restricted to vote for only half the town-councillors, unless the majority of one opinion could be swelled to two to one, no principle of exclusion could be established. What I propose, however, is, that the voter should be restricted to vote for five-eighths of the town-councillors."

A respectable weekly newspaper, commenting upon this proposition, observes—"Lord Grey appeared in the character of a mediator or middle man. He professed to have a plan of compromise, and he attempted to explain it, but it was quite unintelligible. He proposed that the electors in Irish municipalities should have the right of voting for only half the number of councillors, in order to insure a share of the representation to the Protestant minority. But how this was to be effected by his plan—who were to choose the other half of the council, or whether they were to be nominated by the Crown, or in what way the body was to be put together—Lord Grey did not seem to understand himself, and certainly did not explain to his hearers. Whatever it was, it found little favour in the House."

The total misconception of the matter involved in this commentary will appear from the remarks that follow.

We have already adverted, on more than one occasion in the pages of the "Companion," to the importance of securing in all public bodies of a representative character a representation of the minority of the community, as well as of the majority. We would refer our readers in particular to what we said upon this subject in our Political Retrospect for March last (see "Companion" for April, No. 40, pp. 71, 72). At present we shall only observe, that a representation of all interests and of all parties that may exist in the community, great or small, for which the representative body professes to act, appears to be demanded by the very principle in which such bodies originate and have their being. And the considerations of expediency which call for such an arrangement are as decisive as those of principle and equity.

But the common plan of election is obviously unfitted to secure this result. Suppose that a constituency is divided into two parties, as nearly equal as you please; say that there are 101 blue and 100 yellow voters; if every elector has a vote for every member to be returned, the blues have it in their power to make the whole representation of their own colour. Who will say it is fit that in the circumstances they should have this power?

But this is not all. To see the whole absurdity and unfairness of the common mode of election, we must look beyond a single constituency. Let us take the case of a number of distinct constituencies, each returning the same number of members to some common representative body. Let the number of constituencies, for example, be six, and let each have the privilege of returning two members. It may very well happen that while in each of five of the six constituencies there is a small majority of one party, there is in the sixth so considerable a majority of the opposite party, that if the whole six constituencies were to be formed into one, the numbers of the latter party would preponderate. Yet, each party putting forth its full strength, what is the result of the election? Why, that the party which is really the majority on the whole returns only two of the twelve members, and that which is the minority on the whole all the remaining ten.

Now it is impossible, by any practicable plan of voting, altogether to reduce and equalize this injustice; it is impossible to provide that the two parties shall always be represented in exact proportion to their numbers. But a very considerable approximation to that result is attainable.

The method is, to give to each individual voter the right of voting only for a certain portion of the whole number of members to be returned.

In the case, for example, of the Irish municipal constituencies, Lord Grey appears to have proposed that each elector should vote for only five-eighths of the whole number of town-councillors. Let us see what would be the effect of this arrangement.

Suppose the entire number of voters in the town to be 100, and that they are divided into two parties; one of 60, and the other of 40 votes. Suppose, further, that the number of councillors to be elected is eight; each voter, therefore, upon Lord Grey's plan, would vote for five councillors. How much of the representation could each party secure to itself, in these circumstances, by the most economical and effective distribution of its forces?

It is plain, in the first place, that no candidate supported by the minority can have more than 40 votes. The whole question, therefore, is, to how many candidates can the majority give more than 40 votes each?

That question is easily answered. The entire number of votes which the majority can command is sixty times five, or 300; there are in 300 seven times 41, and 13 over; the majority, therefore, may give 41 votes each to seven candidates; that is to say, they may place seven of their own men highest on the poll. The minority will be able to return the eighth man only.

The majority would distribute their votes in the following manner:—Let the seven candidates whom they intended to bring in be designated A, B, C, D, E, F, G. Then, of the 60 voters, 17 would vote for A, B, C, D, E; 17 for A, B, C, F, G; 8 for A, D, E, F, G; 8 for B, D, E, F, G; and 8 for C, D, E, F, G. The result would be that A, B, and C, would each have 42 votes; D, E, F, and G, each 41; and there would be two voters to spare. The 126 votes divided among A, B, and C; the 164 divided among D, E, F, and G; and the 10 votes over, make up the whole 300 votes of the party.

It is evident that, upon this scheme, the power of the majority is increased directly in proportion to the number of votes allowed to each elector. That is the reason why the power of the majority is greatest when each elector may vote for the whole number of candidates, as is done under the existing system. Every diminution made in the number of votes allowed to each elector

reduces the inequality of strength between the majority and the minority; and the greater that diminution, the more is the inequality reduced. By limiting each elector to a very small number of votes in proportion to the whole number of members to be elected, a very considerable majority might be brought down to an absolute equality of strength with the minority,—an effect which, of course, it would not be desirable to produce in any case. But Lord Grey's proposition, on the other hand, seems to err in giving too great a preponderance to an inconsiderable majority. A minority of 40 in a constituency of 100 ought surely to possess more than an eighth part of the representation. Even an eighth part, however, is better than none at all—than that complete preponderance and despotism of the majority (nay, as we have shown above, by possibility, of the minority), which is established by the existing system.

The working of this principle of proportional voting may be most distinctly exemplified by supposing its application in a case where the number of persons to be elected is very small. Take for instance the case of the election of Members of Parliament. The House of Commons, it is admitted on all hands, should present a perfectly faithful reflection of the public sentiment, from which it is presumed to spring. But this it does not do if it represent only the majority in the nation. A fair representation of the minority, as well as of the majority, might be secured by a very simple plan, and one that seems to be free from objection in all respects. *Let every place represented in Parliament return three Members, but let each elector have only two votes.* It may be demonstrated that, upon this scheme, the full strength of each party being exerted, the minority never could carry one of the three Members, unless they amounted in number to *more than two-thirds of the majority.* Let us suppose them to be only half the number of the majority—to be, for instance, 1000, the majority being 2000. In this case they would, upon a principle of perfectly equal justice, be entitled to return one Member out of the three. But, upon the plan proposed, they would not be able to do so; the majority would return all the three. Let A, B, and C, be three candidates in the interest of the majority, and D a candidate in the interest of the minority. D, it is plain, can at most have only the 1000 plumpers of his friends; if any of the 1000 should split his vote, he would only assist the enemy. But the other side will distribute their force in this way:—668 of them will vote for A and B; 666 for A and C; and the remaining 666 for B and C: thus giving to A and B each 1334 votes, and to C 1332 votes. A, B, and C, will therefore be the Members, and D will be thrown out. Suppose, again, that the minority amounts exactly to two-thirds of the majority,—that they are 2000, the majority being 3000; even in this case they will not necessarily be able to secure the return of one Member. The candidate D will now have 2000 plumpers; but of the 3000 friends of the other candidates, 1000 will vote for A and B, 1000 for A and C, and the remaining 1000 for B and C; so that A, B, and C, will have each 2000 votes, or as many as D. D will not be returned unless the officer authorised to give the casting vote shall give it in his favour. It is only, as we have said, when the minority is in a *higher* proportion to the majority than that of two to three, that, by the exertion of their utmost strength, they could, upon this plan, secure to themselves one-third of the representation.

The plan, therefore, can hardly be objected to as giving too much to the minority. It does not give them so much as they are fairly entitled to. But still it is a much more equitable plan than that actually in operation; according to which, be the minority in any instance ever so near the majority, it is allowed no share in the representation whatever. The Members, whether one, two, or three, are all returned by the majority exclusively.

In the House of Commons, on Monday the 27th, the Registration of Voters Bill was considered in Committee, when Sir James Graham moved the insertion in the Bill of a clause to prevent freeholders and leaseholders of property in boroughs, which conferred the privilege of voting for borough Members, from voting also in right of the same property for county Members. It appeared to be admitted that the intention of the Reform Bill was to prevent such double voting; but the clause was rejected by a majority of 133 to 100. The English Tithe Bill was then, after some debate, read a third time and passed. It was proposed by Mr. Hume to strike out the 37th and 38th clauses, which fixed the amount of tithe to be paid for hop-grounds and market-gardens; but the amendment was negatived on a division, by a majority of 153 to 39.

On Tuesday, the 28th, a debate of some length took place on the question of receiving the Report of the Committee on the Brighton Railway, which had decided in favour of Stephenson's Line; the motion for receiving the Report was carried by a majority of 101 to 61. The Registration of Births Bill was then read a third time, and passed, after an amendment proposed by Mr. Goulburn to prevent the registration of the name of the child, in order that that might be only done, as at present, on the performance of a religious ceremony, had been negatived by a majority of 97 to 73. Lord John Russell next moved the third reading of the Marriages Bill, when Mr. Goulburn proposed the insertion of a clause, compelling parties, in giving notice of their intention to marry to the registrar, to declare that they had conscientious scruples against being married according to the forms of the Established Church; the clause was rejected by a majority of 132 to 68. The clause requiring parties about to be married to make a declaration of their religious opinions was afterwards, on the motion of Mr. Warburton, who was supported by Lord John Russell, struck out by a majority of 108 to 67. Finally, the third reading of the Bill was carried by a majority of 104 to 54.

On Wednesday, the 29th, a petition from Dr. Mulholland similar to that presented a few days before in the House of Lords (See 'Retrospect' for last month) was, after a short discussion, received in the House of Commons, and laid upon the Table. Afterwards the Resolutions of the Committee upon the House of Commons' Officers Compensation were agreed to. The Bill for regulating the sale of spirits was thrown out, on the motion for its being considered in Committee, by a majority of 52 to 15; and the Civil Bill Courts (Ireland) Bill went through the Committee.

On Thursday, the 30th, in the Lords, the Report of the Select Committee appointed to draw up reasons for dissenting from the Commons' amendments to the Irish Municipal Reform Bill was agreed to, on the motion of Lord Ellenborough, without a division, after Lord Melbourne had, in his own name, and that of his colleagues, emphatically disclaimed all participation in the course which the majority of their Lordships had adopted. The Prisoners' Counsel Bill afterwards went through Committee.

The reasons of the Lords on the Irish Municipal Bill having been communicated at a Conference, were presented in the House of Commons by Mr. Spring Rice, when Lord John Russell, in an address of considerable length, which was frequently interrupted by the loud cheers of the Ministerial side of the House, moved that they should be taken into consideration that day three months—in other words, that the measure should be dropped for the present Session. No opposition was made to this motion; but various Members took occasion to express their sentiments on the conduct of the

Lords, which was attacked with less or more asperity by Mr. Hume, Mr. Spring Rice, Mr. O'Connell, Mr. Roebuck, and Mr. Dillon Brown, and defended by Sir Robert Peel and Mr. J. M. Gaskell. Of the former speakers several directed their remarks against the constitution of the Upper House.

On Friday, the 1st of July, the Commons, on the motion of Lord Morpeth, went into Committee on the Irish Tithe Bill. The only division that took place was on a Resolution proposed by Mr. Sharman Crawford, declaring it to be expedient that tithes, and all compositions for tithes in Ireland should cease, and be for ever extinguished, after compensation had been made for all vested interests out of a tax on rents, which was opposed by Mr. O'Connell, as well as by Ministers, and negatived, after a short discussion, by a majority of 51 to 18. The first forty-nine clauses of the Bill were agreed to; after which, the appropriation clause being the next in order, it was agreed that the Chairman should report progress.

The tug of war, as Lord Morpeth expressed it, came when the consideration of the Bill was resumed on Monday, the 4th. The 50th clause having been read, it was moved by Lord Mahon that it should be struck out, on which a vehement and protracted debate arose. The most distinguished speeches were those of Mr. Sheil and Mr. O'Connell against Lord Mahon's motion, and that of Lord Stanley in support of it. At length the Committee divided, when the numbers were found to be, for the clause 290, against it 264; majority for ministers 26.

On Tuesday, the 5th, in answer to a question from Mr. H. L. Bulwer, Sir George Grey said it had been intended to bring in a Bill to regulate the legislation of New South Wales during the present Session, but subsequent intelligence from the colony had rendered it necessary to take the question into further consideration. He pledged himself, however, that a measure of the kind would be introduced next Session. Lord Palmerston intimated that a new and satisfactory treaty with Portugal for the suppression of the slave trade had been almost arranged. A short discussion then arose on a motion by Mr. Plumptre, for an address to his Majesty, praying that his subjects in the civil and military services abroad may be relieved from assisting in religious ceremonies to which their own tenets are opposed: the motion was negatived, on a division, by a majority of 44 to 38. After this the remaining clauses of the Irish Tithes Bill were considered in Committee, and agreed to. The House then went into Committee on the Paper Duties Bill, when the Chancellor of the Exchequer stated, that in order, as far as possible, to obviate the difficulty arising from the stock of paper that would be on hand when the reduction of duty took place, he intended in the first place to postpone the reduction to the 10th of October; and, secondly, to allow parties in the interim to take from the mill any quantity of paper they pleased, which should bear, not only the Excise mark, but be so identified and distinguished as to exclude all attempts at fraud; and upon all of that paper that remained on hand on the 10th of October, the amount of duty that had been paid would be returned. This would prevent any stoppage of purchases and of manufacturing in the meantime.

On Thursday, the 7th, in the Lords, the Bill for the Commutation of Tithes in England and Wales was read a second time, after scarcely any debate. In the Commons, the Bill for the regulation of the Court of Session in Scotland went through a Committee; after which the House went into Committee on the Poole Corporation Bill, the object of which is to nullify the late election of town-councillors for that borough, which a Select Committee to whom the Bill was referred, declared had been effected through fraud and falsification. Mr. Forbes having moved that the first clause of the Bill be expunged, a debate and division took place, when the numbers were found to be, for the motion 64, against it 98. The chairman then reported progress.

On Friday, the 8th, Lord John Russell, in moving the Order of the Day for the House going into Committee on the Reform of the Church of England Bill, founded on the fourth Report of the Commissioners on Ecclesiastical Revenues and Duties, explained the leading provisions of the proposed measure. The principal object of the Bill is to settle the future incomes of the Bishops; to whom it proposes to allot 150,000*l.* a-year in all, to be divided as follows:—To the Archbishop of Canterbury 15,000*l.*; the Archbishop of York, 10,000*l.*; the Bishop of London, 10,000*l.*; the Bishop of Durham, 8000*l.*; the Bishop of Winchester, 7000*l.*; to the other Bishops incomes varying from 4500*l.* to 5500*l.* With these endowments Bishops are to be prohibited from holding any subordinate cathedral office with their Sees. The Bill also reduces the number of canons and prebendaries in cathedrals, and takes about 130,000*l.* from the revenues of the Deans and Chapters, for the augmentation of poor livings. On Lord John Russell's motion being put from the chair, Mr. C. Lushington moved as an amendment that an address should be presented to his Majesty, praying him to direct the Commissioners to inquire into the expediency of abolishing the translation of Bishops from one See to another. In the course of the debate that followed, the amendment was supported by Mr. Ewart, Mr. Wason, Mr. Hume, Mr. Lennard, Mr. Buxton, Mr. Poulter, and Mr. C. Buller, most, if not all, of whom also expressed their dissatisfaction with the Bill in general, as not going far enough in the way of a reform of the Church. The amendment was opposed by Sir Robert Peel, Sir Robert Inglis, Mr. A. Trevor, Mr. Goulburn, and Mr. Rice; but Sir Robert Inglis and Mr. Trevor at the same time declared themselves opposed to the Bill. On a division Mr. Lushington's amendment was negatived by a majority of 124 to 44. Mr. A. Trevor then moved that the Bill be committed that day six months; and the motion was supported, though on various grounds, by Mr. Potter, Mr. Lambton, and Sir H. Williamson. It was negatived on a division by a majority of 142 to 22. The House then went into Committee on the Bill, when the first eight clauses were agreed to, the only division having been on a motion by Mr. Hindley to throw out the third clause, which was negatived by a majority of 79 to 21. These several divisions show that although ministers on this occasion were pertinaciously enough opposed, both on particular points and on the general measure, by individual members, they were supported throughout by an overwhelming majority of the House.

On Monday, the 11th, in the Lords, the second reading of the Bill for abolishing imprisonment for debt was moved by the Lord Chancellor, in a speech in which he detailed the principal provisions of the measure at considerable length. It proposed to carry the new system into effect by means of the Bankruptcy Court of Review in London, and of Commissioners in the country. The Duke of Wellington, however, protested against entering, at so late a period of the Session, upon the consideration of a measure which, especially by the new rights which it gave to creditors over the landed estates of their debtors, interfered to such an extent with the whole law of property. Without pledging himself either to oppose or to support the Bill in another Session, he moved that the second reading should be postponed to that day three weeks. The same views were urged by Lord Abinger, and upon a division the amendment was carried by a majority of 46 to 22. After this the Registration of Births Bill, and the Marriages Bill were read a second time without opposition,

but not without intimations of their intention to oppose certain clauses of both from several Peers on the opposition side of the House.

In the Commons the several clauses of the County Election Polls Bill were considered in Committee, and agreed to. By this Bill elections in counties are limited to a single day. The House then went into Committee on the Stamp Duties Bill, when, on the motion of the Chancellor of the Exchequer, it was agreed to proceed at once to the part of the Bill relating to the newspaper stamp, and to postpone the first 162 clauses, the substance of which would probably be brought forward in the shape of another Bill next Session. The only division that took place was on a motion by Mr. Wakley, to strike out from the 163rd clause the words "or pamphlets," on the alleged ground, that by these words pamphlets were brought under the same duties and liabilities in other respects with newspapers; the motion was negatived by a majority of 69 to 1. Some amendments suggested from different quarters were afterwards introduced; among others, the fine on a person selling an unstamped supplement was reduced from 50*l.* to 20*l.*; and the 175th clause imposing penalties upon persons violating the new law, by having unstamped newspapers in their possession, was qualified by the insertion of the words "knowingly and wilfully." Some conversation, also, passed on the projects of registering at the Stamp Office the names of all the proprietors of every newspaper, and of having a distinct die for the stamps issued to each; but both were eventually reserved for further consideration. Some Members even proposed that the names of all the writers in every newspaper should be required to be registered at the Stamp Office. We may be of opinion that our newspapers would be raised in character and influence were the writers in them generally to put their names to their articles; but this is a very different thing from holding that it would be expedient to attempt to put down all anonymous writing in newspapers by law. Such an attempt we should regard as one of the most direct blows that could be dealt at the liberty of the press. If anonymous writing in newspapers were to be prohibited, anonymous writing of every other kind would have to be made illegal upon the same principle; that is to say, it would be necessary to establish a system of inquisition to ascertain the real authorship of every book, and every pamphlet, and every printed page that should henceforth appear in any part of the United Kingdom. And as a necessary consequence all anonymous publications that might be imported from foreign parts, whether in our own or in any other language, would have to be equally prohibited. Nay, the reason of the prohibition would include many other things as well as the productions of the common printing press; if anonymous letter-press was forbidden, it would be impossible to tolerate a page of lithography, or even a page of penmanship, the authorship of which was not registered at the Stamp Office. But even if the law were to be confined to newspapers alone, it would be found to be of impracticable application. The prohibition, to be worth anything, would have to comprehend all the matter of every description whatever inserted in the paper. Then, not a letter from a correspondent could be given until the authorship had been verified and duly registered at the Stamp Office. Not even an advertisement would be allowed to appear until the same process had been gone through in regard to it. Otherwise, the letters from correspondents and the advertisements would soon become the most important and attractive parts of the publication. But such a proposition is really not worth discussing. It belongs to that impetuous legislation which looks only at the single evil to be got rid of, and in its reckless precipitation never stops to examine whether it is not creating a dozen other evils by its mode of remedying, or trying to remedy, that one. There is also another point of view in which this busy law-making deserves to be looked at with considerable jealousy. The eagerness of its authors appears to be little restrained by any dislike to interfere unnecessarily with that freedom of individual action which in this country has long been not only the soul of all commercial speculation, but the very breath of our social existence altogether. The motives that prompt such intermeddling may be very good; but that only makes the habit more dangerous. Nothing requires to be more carefully kept within its proper province than the law. It has a strong tendency to overstep its proper limits, and it is exceedingly mischievous when it does so.

On Tuesday, the 12th, the Lords sat in Committee on the English Tithe Bill, when all the clauses were agreed to without any material alteration.

In the Commons the Lighthouses Bill was considered in Committee, when all the clauses were agreed to, without any division, with the exception of the 41st; on which Mr. Warburton moved an amendment to the effect that the Trinity House, the Commissioners of Northern Lights, and the Ballast Board of Dublin, should all be placed under the control of a Central Board, which itself should be under the superintendence of the Admiralty; the amendment was negatived by a majority of 68 to 7. Lord John Russell then moved the Order of the Day for the House resolving itself into a Committee on the Established Church Bill, on which Mr. Maxwell moved, as an amendment, the second reading of his Hand-Loom Weavers Bill; on a division taking place, the numbers were 51 for the amendment, and 65 against it. Previous, however, to the House resolving itself into a Committee on the Church Bill, Mr. Jervis moved that it be an instruction to the Committee to receive a clause enacting that no clergyman not fully conversant with the Welsh language be appointed to any see or benefice in the principality; and the motion, although opposed by Lord John Russell, was carried, on a division, by a majority of 74 to 64. The House then went into Committee on the Bill, when Mr. Lambton moved, as an amendment to the 10th clause, that no part of the revenues of the See of Durham should be devoted to other ecclesiastical purposes until provision had been made for the spiritual instruction of the people of that diocese; the amendment was rejected by a majority of 68 to 8. The remaining clauses were then agreed to. It was this evening ordered, on the motion of Mr. Divett, that no new writ should be issued for the borough of Stafford till that day fortnight.

On Wednesday, the 13th, the House of Commons was counted out while sitting in Committee on the Hackney Carriages Bill, of which, however, the first twenty clauses were carried.

On Thursday, the 14th, a debate of some length arose in the Lords, on the motion for receiving the Report on the Prisoners' Counsel Bill, which was opposed by Lord Wharncliffe. His Lordship moved that the Report should be received that day three months; but he did not press his amendment to a division, and eventually the original motion was agreed to.

In the Commons, after the Municipal Corporations (Scotland) Bill had gone through Committee, and the Greenwich Pier Bill, the Personal Tithes Bill, the Deeds Registration Bill, and the Irish Constabulary Act Amendment Bill had been read a third time and passed, Mr. Hume called the attention of the House to a petition from Calcutta on the present state of India, and concluded by moving certain resolutions on the subject, which, after a short discussion, were negatived without a division. A long debate then took place on the motion for receiving the Report on the Established Church Bill,

as an amendment on which Mr. Hume moved that the Report be received that day six months. Mr. Hume was supported in his opposition to the Bill by Mr. Cayley, Mr. Lennard, Mr. Poulter, Mr. C. Buller, Mr. Robinson, Mr. Mark Philips, Mr. Buxton, and Mr. Warburton; but the amendment was negatived, on a division, by a majority of 90 to 43. On this occasion most of the Opposition Members present voted in the majority with Ministers.

The Report having then been brought up, Mr. Trevor moved the insertion of a clause, providing that the income of the Bishop of Durham should be 10,000*l.* a-year, but on a division, it appeared that the number of votes against the motion was 133, and that nobody voted in favour of it. Mr. Charles Buller then moved a clause, fixing the income of the Archbishop of Canterbury at 8000*l.*; that of the Archbishop of York at 7000*l.*; that of the Bishop of London at 4500*l.*, and that of each of the other Bishops at 4000*l.*, until such time as those parts of the country declared by the Commissioners to be destitute of religious instruction should be supplied with it, and the incomes of clergymen reported to be inadequate were sufficiently augmented. The motion was supported by Mr. Villiers and Colonel Love Parry, and opposed by Lord John Russell and Mr. A. Trevor. On a division, it was negatived by a majority of 82 to 44. The Report was then agreed to.

On Friday, the 15th, the Prisoners' Counsel Bill was read a third time in the Lords. On the question, that the Bill do pass, Lord Radnor moved the restoration of a clause which had been struck out on a former day, giving the prisoners' counsel the last word; but the motion was negatived by a majority of 24 to 14.

The House of Commons met this day at twelve o'clock, when a long debate arose on a motion by Mr. Warburton for the appointment of a Select Committee to consider the case of Catherine Robson and Isabella Ainslie, claiming to be the heirs of Samuel Troutbeck, a merchant at Madras, who died in 1785, and whose property which, in 1814, amounted to upwards of 140,000*l.*, had, in default of heirs, been taken possession of by the Crown. The rights of the claimants were strongly insisted upon both by Mr. Warburton and by Sir F. Pollock. Eventually the debate was adjourned.

At the evening sitting, on the Order of the Day being moved for the third reading of the Irish Church Bill, Mr. Clay, as an amendment, brought forward a motion of which he had given notice some time back, for the appointment of a Select Committee to consider the Danish Claims, in so far as they yet remained unsatisfied. This is a subject to which we have more than once adverted in the "Companion" (See No. 31, p. 415, and No. 41, p. 100). The motion was, as on former occasions, opposed by the Chancellor of the Exchequer, but on a division, it was only negatived by a majority of 8 votes in a House of 110 Members. The Church of Ireland Bill was then read a third time and passed; and various other Bills were advanced a stage, with little or no discussion.

On Monday, the 18th, the Lords acquiesced in the reasons of the Commons for dissenting from several of their amendments on the Municipal Corporation Act Amendment Bill, but resolved by a majority of 63 to 33 to insist on the clause compelling town-councils to choose their mayors by lot, when parties in the councils are equally divided, instead of referring the choice to the votes of the burgesses.

In the Commons, Mr. Cundy the engineer was called to the Bar of the House to answer the complaint of Sir Charles Burrell, whom he was said to have charged with having been influenced by corrupt motives in the support he had given to Stephenson's Line in the Committee on the Brighton Railway. Mr. Cundy denied that he had made any such charge, but admitted that he had mentioned something of the kind as a general rumour. On this it was moved, by Lord John Russell, that the next Order of the Day be read, which was carried by a majority of 114 to 56. The House then went into Committee on the Stamp Duties Bill, when the Chancellor of the Exchequer announced that he intended to strike out the 180th clause, making the printer of a newspaper liable to have his property seized for payment of an arrear of newspaper duty, and to alter other clauses imposing upon printers the liability to penalties, by allowing them to register their names at the Stamp Office as the printers of certain papers, and entitling them, in that case, to a notice from the Stamp Office to desist from any illegal practice before they could be proceeded against for the penalty. Such printers as did not register their names would be liable to be proceeded against without notice. He also intended to omit the word "pamphlets" wherever it could be interpreted as extending the duty to any publications that were not newspapers. The Right Honourable Gentleman then moved the addition of a clause reducing the duty on Irish newspapers from a penny to three farthings. On this clause no fewer than three divisions took place. The motion for the second reading was carried by a majority of 89 to 52. Mr. Robinson then moved to strike the word "Ireland" out of the clause, the effect of which would have been to extend the reduced duty to all the newspapers of the United Kingdom; this amendment was negatived by a majority of 106 to 61. Finally, a division took place on the question whether the clause should stand part of the Bill, when it was carried in the affirmative by a majority of 104 to 79. A clause was then moved by Mr. Grote for assigning a distinctive die to each newspaper, and after a debate of some length, in the course of which the proposition was supported by Mr. Leader, Mr. Robinson, and Sir Robert Peel, and opposed by Mr. S. Rice and Dr. Bowring, it was agreed that the consideration of the matter should be postponed. Mr. S. Rice has since agreed to adopt the proposition. Mr. Goulburn then called the attention of the Government to the proposed retrictions on the size of newspapers, and urged the expediency and fairness of allowing the 1530 square inches to be the measure, not of the whole paper, but only of the printed portion of it. To this amendment the Chancellor of the Exchequer assented. The Paper Duties Bill was then read a third time, as was also the Lighthouses Bill.

On Tuesday, the 19th, the Lords went into Committee on the Parochial Assessment Bill, the object of which is to provide that the poor-rates shall be assessed on the full rent of the property rated, and not, as is done in most parishes at present, on the value, or a proportion of the value, as estimated by the churchwardens. The only opposition the measure met with was from the Archbishop of Canterbury and Lord Ellenborough, who objected to the rating of tithes at the full value. The clause, however, which they wished on this ground to strike out, or to amend, was carried, on a division, by a majority of 31 to 28.

In the Commons a debate took place on the Charitable Trustees Bill, the object and provisions of which were, for the first time, explained by Mr. Vernon Smith on moving that the Report on it should be taken into further consideration. By an Act passed last year the management of charitable trusts remains for the present in the hands of the members of the old corporations, the Act providing that they should retain it till the 1st of August. The new Bill proposes to transfer it to the hands of trustees elected by the reformed municipal constituency; and it adopts the principle to which we have adverted at length in a preceding page, of securing some power to the minority in the borough, by giving to each elector the right of voting only for half the

number of the trustees to be elected. The motion was opposed by Sir Robert Peel, who, besides objecting to several details of the Bill, urged strongly the unadvisableness of making over the control of charities to bodies so much apt to be swayed by party feeling as the borough constituencies. Colonel Sibthorp afterwards moved that the Report be received that day three months; but on a division this amendment was negatived by a majority of 133 to 88. The House of Lords, we may observe, by an alteration made by them in the Municipal Act Amendment Bill, have provided for the continuance of the old corporations in their trusteeships till August, 1837.

Another debate then arose on Lord John Russell moving the third reading of the Established Church Bill. As on several former occasions, this measure was strenuously opposed by Mr. Hume and other Members of the same section of the Ministerial side of the House. It was also opposed by Sir Robert Inglis. Finally, the debate was adjourned to Friday.

On Wednesday, the 20th, the Lords concluded the hearing of evidence against the Stafford Disfranchisement Bill, which had occupied a part of almost every day for some weeks past. Several measures were also advanced a stage without discussion. In the Commons only 81 Members assembled at four o'clock, and there was, consequently, no House.

On Thursday, the 21st, in the Lords, the Marquis of Londonderry brought forward a motion of which he had given notice, to delay any legislative measures that might affect the spiritual interests of the diocese of Durham till the circumstances of the diocese should be further investigated by a Select Committee; but the motion being opposed on all hands, was ultimately withdrawn. Some amendments were afterwards made in the Parochial Assessments Bill on the Report being brought up. One clause introduced provided that "nothing in this Act contained should alter the proportion or principles on which different kinds of lands or hereditaments are rated under the existing law." This seems to have been intended, in some degree, to meet the views of the Archbishop of Canterbury about the proper mode of rating tithes.

Of various subjects that occupied the Commons this evening, the first was the, so called, Report of the Agricultural Committee, which proved to be, in fact, no Report at all. The Committee, after their four months' labours, had agreed merely to lay before the House the evidence they had taken. It appears that they could not come to an agreement upon almost any one point of the subject they were appointed to consider, with the exception of the preference due to a particular description of plough. Nay, there would seem not to have been even a majority in favour of any positive opinion or doctrine whatever. A Report had been actually drawn up by one of the Members, but when a vote was about to be taken upon it, it appeared that there was scarcely a chance of a paragraph of it being carried; and it seems to have been thought that no other possible Report would fare better.

After this business had been disposed of, Mr. Hume made another attempt to obtain a revisal of the decision that had been come to on the subject of the new Houses of Parliament, by moving, that his Majesty should be requested to direct a further competition in designs, without limitation to any particular style of architecture, but with a limitation of the cost to a certain fixed sum. The proposition, however, met with scarcely any support, and was ultimately negatived without being pressed to a division. Mr. Wallace then addressed the House, on the motion for the second reading of the Post Office Bill, and concluded a long detail of alleged abuses in the present management of that establishment, by moving a series of Resolutions in conformity with his statements. He afterwards, however, consented to withdraw them, on the Chancellor of the Exchequer representing that they would have the effect of impeding measures that were already in preparation or contemplation for the removal of the evils complained of. The new Bill proposes to abolish the office of Postmaster-General, and to transfer his duties to a Board of Commissioners.

On Friday, the 22nd, in the Lords, the English Tithe Bill was read a third time and passed. Lord Melbourne then moved the second reading of the Church of Ireland Bill; and the motion was agreed to without a division, the Duke of Wellington intimating that he and his friends would reserve their opposition to the parts of the measure to which they objected till its clauses should come to be discussed in Committee. There can be no doubt that the appropriation clause will be then struck out. Their Lordships then went into Committee on the Scotch Universities Bill, when various amendments were made in the Bill. Among others, it was carried by a majority of 16 to 8, on the motion of Lord Haddington, that whatever alterations might be proposed by the visitors affecting the course of theological study in the universities should be reported to the General Assembly, and by that body communicated to his Majesty in Council, who should thereupon make such orders in the matter as to him should seem fit.

The meeting of the House of Commons this evening was looked forward to with much expectation, from the reports that had been prevalent of the strong disinclination of a portion of the Ministerial Members to support the Government on the question of the Established Church Bill, or even to allow the measure to proceed further without resisting it to the utmost of their power. When the Speaker, however, took the Chair at the usual hour, it was found that there was not a sufficient number of Members present to constitute a House; and an immediate adjournment of course took place. The House met again on Saturday, when it was ordered that the adjourned debate on the third reading of the Established Church Bill should be resumed on Monday.

FRANCE.

We briefly noticed in our Chronicle of Occurrences last month, another foul attempt to assassinate Louis Philippe. No evidence was found to connect the man who fired the gun with any accomplices. He was merely a fellow in desperate circumstances, professing republican principles according to the fashion of the day, and thinking that to kill the King was a good way to be rid of a life that was of no value to him or any one else. The notoriety given to Fieschi by the laboured details of the newspapers, had evidently had an effect on his imagination. He was tried by the Court of Peers on the 8th of July, and found guilty of high treason. He was guillotined on the 11th. His name was Alibaud, or Alibeau. When congratulated on his escape Louis Philippe is reported to have said despondingly, "Henry IV. escaped twenty-two attempts of the kind, and was murdered by the twenty-third!"

As the Session of the Chambers drew towards a close, the Finance Minister agreed with the deputies, that this should be the last year Government would derive a revenue from licensing gambling houses. Count d'Argout and others defended the old system of licensing, on the ground that the Government could not spare the revenue it yielded, and that whether licensed or not there would still be gambling-houses to tempt people to their ruin. He referred to the example of England, whose government had never derived revenue from such establishments, and where, in fact, gambling-houses are illegal, and yet he was well informed that there were from fifteen to twenty houses of this sort open every night in

London alone. On this speech the 'Standard' newspaper has well remarked—"We are afraid there are many more than fifteen or twenty gaming-houses in London; but that is not the point. The French Finance Minister ought to know that there is a marked difference between overlooking the existence of a nuisance and openly encouraging it, by making it contribute directly to the necessities of the State. Gaming, no doubt, will always exist, and minute legislation on matters of the minor morals is seldom, if ever, attended with a beneficial result; but that the legislation should participate in the profits of vice and robbery, is in the highest degree disgraceful. As for the revenue derived from them, it is, under any circumstances, disgraceful to insist upon that, when compared with any question of national honour or morality; and in the present case, viewing it only in a financial light, it is ridiculous to say that France cannot from other sources supply such a paltry sum as a couple of hundred thousand pounds, which is the whole amount. The whole revenue of France amounts to something more than 41,000,000*l.* sterling this year."

To this we may add, that whatever be the number of hells or gaming-houses in London, they are for the most part difficult to get at, and almost altogether unknown to the mass of the people. This is very different from the open doors and glaring lamps of the Parisian ridottas, that are known to every man in that capital, that are accessible to all, and that tempt the poor by a pompous display of silver and gold. We have ourselves watched the change resulting from a suppression of public and licensed gaming. At Naples there used to be a ridotto, open day and night, in a house in the Strada Toledo, the most frequented part of the city, and another, open all night, in the great theatre of San Carlo. The short-lived constitutional government of 1820 very laudably suppressed both in spite of the profits that had been derived from them, and the restored absolute government of 1821 had not the face to renew the license. The consequences were an immediate and sensible decrease of peculation, vice, and misery, among the classes of servants, mechanics, and the like, notwithstanding that the government continued a weekly lottery —another source of misery. Two or three houses were opened in different parts of the town, where inveterate gamesters ruined themselves in profound secrecy, but these places were unknown and inaccessible to the masses that had formerly been tempted to the open and authorized establishments; and a master could give money to his servant or his workman to pay an account for him, without incurring the risk, that in the hopes of being lucky, the poor fellow would go and lose it all at the roulette table—a case that was constantly occurring before. In the course of the debate in the French Chambers, a member asked, whether it was not probable that had Fieschi never been tempted into the public gaming rooms (where he lost a sum of money that had been entrusted to him by his employers, and his character and chances of honest employment with it,) he would never have attempted the life of the King?

General Bugeaud claims some successes in the war of Algiers, which seems likely to become as long and tedious as the war in Spain. The affairs of this African colony were again discussed in the Chamber of Deputies on the 6th of July, when it was formally announced that the cruel, exterminating system of warfare hitherto adopted by the French is to be wholly abandoned, and a mild, but firm principle of government adopted there. We are inclined to believe that the mildness will come too late, and that their fir[illegible]s will not avail the French in securing themselves i[illegible]ose extensive possessions they aim at, unless the troops are re-inforced to an extent that will prove very burdensome to France.

The Chambers, after an unusually long Session, were prorogued on the 12th of July by a royal ordinance. At that time a report prevailed that the Duchess of Berri had again thrown herself into France, and that alarming movements were observable among the Absolutists; but this, like so many other reports got up for the sake of agitation, has proved wholly without foundation. It is said that the King has at length paid to King Leopold, of Belgium, the million of francs agreed upon as the marriage portion of his daughter, the Princess Louise of Orleans, new Leopold's consort; and that an application is to be made to the Chambers, next Session, for the refunding of the money thus advanced by Louis Philippe. The amount is not much for so great a King, and so rich a man—a million of francs being only 40,000*l.* of our money.

Rumours have been afloat of other plots to murder the King, and many men have been arrested both in Paris and the provinces. The strictest caution is now adopted to prevent any unknown individual from approaching the person of Louis Philippe, who is attended with a numerous and vigilant guard, wherever he goes.

The celebrated Abbé Sieyes died at Paris towards the end of last June, after having survived many revolutions and changes. At the beginning of the French Revolution he was grand-vicar to the Bishop of Chartres, but having already obtained a reputation by some political writings, he was elected a member of the National Assembly, where he was soon considered as the oracle of the Tiers-etat, and the most redoubtable enemy of the privileged classes. Dumont, who knew him at that time, speaks of him as an absent-minded, shy, dreaming man, who had lived a great deal in solitude, and had an immense conceit in his own political wisdom, and ability in Constitution-making. One day, after breakfasting together at Talleyrand's, he said to Dumont, "*La politique est une science que je crois avoir achevée*" (Politics are a science which I believe I have brought to perfection). The whole of the British Constitution appeared to him as nothing but a *charlatanerie* —a piece of juggling to impose on the people; he looked upon the English, in spite of some few years of experience, as mere infants in matters of Constitutions, and believed himself quite able to give a much wiser and better system than theirs to the French people. He subsequently tried,—but though he made about *fifty constitutions*, he never hit upon the practicable and right one! He was successively a member of the National Convention, a Director, and Consul, (being associated in the latter capacity with Napoleon Bonaparte and Roger Ducos), and on the fall of the republic he became a Count and Peer of the Empire. On the return of the Bourbons, he was proscribed, with others, for having voted the death of Louis XVI. These proscriptions were removed by the government of Louis Philippe, on which Sieyes returned to France. He was eighty-seven years old when he died. His vote for the death of the King was given with peculiar energy and harshness. While other members of the convention made long speeches to explain the cruel necessity of the case, and the purity of their own intentions, Sieyes merely said—*La mort sans phrase*.

SPAIN.

AFTER a long absence at Madrid, Cordova, the commander-in-chief, returned to the army at Vittoria, upon which it was expected that some decisive operations would take place. Hitherto, however, he seems to have done little more than make a series of short marches and countermarches, which have not even had the effect of clearing the neighbourhood of Vittoria of the Carlists, or checking their advance into Navarre. His rear guard, composed of the Portuguese contingents, having been removed from the good positions it occupied in

the mountains, has been engaged, and has suffered considerable loss. This General's plan of operation (if indeed he has one) puzzles military men who are on the spot, and seems to us utterly inexplicable.

Gomez has made farther advances in the Asturias, and though Espartero is following him with much superior forces, he cannot, it should seem, bring the Carlist chief to action.

Cabrera has continued his successes and cruelties in Lower Aragon, and the Carlists are evidently masters of more ground than they were at the opening of the campaign, notwithstanding their losses on the coast of Guipuzcoa. In the latter direction General Evans, though reinforced by three thousand men, remained for some time inactive in and about St. Sebastian, and when he moved from those lines he met with a serious reverse —at least, if we may place credit in the concurring accounts of several English and French papers.

According to these accounts, he embarked between three and four hundred English and Spanish troops on the 11th of July, which force, covered by Lord John Hay's squadron, was to proceed down the coast to assist in driving the Carlists out of Fuenterrabia, which place, he had been most incorrectly informed, was weakly defended by a few battalions. The larger portion of his force, including the British Royal Marines, moved from St. Sebastian and Passages by land, making their way by night along the ridge of high cliffs that extends from Passages to Fuenterrabia. Altogether he employed about five thousand men on the expedition.

The squadron got into the bay at an early hour, and between seven and eight o'clock the heads of the columns that had proceeded by land began to show themselves on the extremity of the heights that look down upon the town and bay of Fuenterrabia. As soon as they were visible, the vessels of war and steamers (English as well as Spanish) opened a tremendous fire of shot and shell upon the town, under cover of which the troops on board were landed on the sands not far from the town. On the land-side General Evans commenced the action by advancing a body of Chapelgories and two companies of the 10th regiment, which, descending the heights, and crossing the bridge of Fuenterrabia, gallantly drove the enemy before them along the road that leads to St. Jean de Luz. But the Carlists soon rallied in front of a strong reserve, and throwing forward three fresh battalions, not only checked the pursuers, but drove them, by force of numbers, back over the bridge they had crossed. Other reinforcements pouring in from the rear and both flanks, the Carlists advanced as assailants, and made the engagement a general one. Their furious attacks were sustained with admirable coolness, and successively repulsed by the Royal British Marines, the 3rd, 6th, 9th, and 10th regiments of the British Legion, and the Spanish Chapelgories.

The Rocket Company, directed by Lieutenant Backhouse, did terrible execution on the Carlists, the advance of large bodies of them being three several times completely checked and scattered by the fall of those formidable projectiles. Still, however, the Carlists continued to gather in strength from all points; and seeing that an attack on the town of Fuenterrabia, the object of the expedition, was utterly hopeless under the circumstances, General Evans beat a retreat about seven o'clock in the evening, and retraced his steps to Passages, without disorder, and with very little loss.

Meanwhile the squadron in front of the town had been maintaining its fire, though English and Spaniards were alike ignorant of General Evans's movements, being able only now and then to see the troops in action on the heights. The sailors, however, expected the General would enter Fuenterrabia, the only battery in which place they silenced and dismantled several times in the course of the day. The next morning, as no firing was heard on shore, and the white caps of the Carlists were seen on the hills where the red coats of the British had been the day before, it was reasonably enough concluded that Evans had retreated. The larger portion of the ships then sailed for Passages, where they found the General and all his staff, several officers on which were openly complaining of treason on the part of Cordova and their Spanish allies.

If only half of these facts are correct, there will remain enough to prove that this expedition, which cannot fail of having a disheartening effect, was most blindly conceived, and impotently executed.

It is reported that General Evans, in his dispatch to the Minister of War, excuses his failure, by saying he had received false reports concerning the *strength of the walls of Fuenterrabia!* But was it not as easy, as it was expedient, to ascertain the condition of that town, which is only a few miles from the lines he has so long occupied, before moving to its attack?

The chief command of Don Carlos's army is now in the hands of Villareale, Eguia having retired from ill health; but the Pretender is said to be in treaty with Marshal Bourmont.

The effects of this lingering, desolating warfare begin to show themselves in frightful colours. The vallies of Biscay, once so happy and flourishing, are now filled with a wandering starving population—the villages are burnt or deserted, or only occupied by the sick and wounded—the fields lie uncultivated, and famine and disease threaten the entire destruction of the most interesting province of Spain.

At Madrid, and in all the large cities occupied by the Queenites, the public mind is filled with anxious expectations as to the result of the elections for the new Cortes, which is to be assembled on the 20th of August.

The ministry of Isturitz does not appear to be firmly seated, nor does the Queen Regent show it much favour. When the Premier's decree for the removal of the University of Alcala to Madrid was presented to her Majesty, she met it with a direct refusal, and this is not the only instance of her differing in opinion from her advisers. Isturitz, however, has succeeded in arranging a loan of 1,000,000*l.* on the special guarantee of the Queen. This money, it appears, is to proceed from the issue of Treasury or Exchequer bills, which are to be taken at the Custom-house, and other Government offices, in payment of duties and taxes for the present and ensuing year, with a discount of 15 or 16 per cent., and 3 per cent. commission, being in all a discount of from 18 to 19 per cent.! The whole sum is to be paid in monthly instalments. The whole scheme shows the deplorable straits the Government is reduced to.

Don Carlos is at Villafranca busied in organizing a regular Court and Cabinet. His devoted partisan, the Bishop of Leon, succeeded in crossing the French frontier, and joined him a day or two after the affair of Fuenterrabia. Although it does not very plainly appear from what quarters he obtains his supplies, it is quite certain that considerable sums of money are placed at his disposal from time to time, and that his troops are much better paid, clothed, and fed than those of the Queen. Some desertions, though we believe not many, have taken place among the British Legion. This induced General Evans to issue a proclamation, usual on such occasions, but which has been misunderstood, or wilfully misinterpreted by a certain party at home.

The Carlists continue to receive supplies from the French frontier. To check this, the new ministry has made earnest representations to Louis Philippe, who

published a Royal Ordinance, in the 'Moniteur;' dated the 14th of July, wherein the interdiction decreed by the Ordinance of the 7th of July, last year, against the transport into Spain of ammunition, clothing, warlike equipments, and stores and horses, by the frontiers of the Lower Pyrenees, is extended to the whole of the frontier of the Pyrenees, and all such ammunition, stores, horses, &c., are further forbidden to be brought or circulated within two *myriamètres* of the same frontier, without an express authority from the Minister of the Interior. If this ordinance could be strictly carried into effect, the Carlists would be sorely embarrassed; but the difficulty of watching the whole line of the Pyrenees, from the Atlantic Ocean to the shores of the Mediterranean, and of blocking up all the numerous defiles and passes that occur along such a vast and wild tract of country, must be evident to every one. The contrabanderos, or smugglers, on the Spanish side of those mountains, who are by far the most energetic class of men in Spain, and professionally the best acquainted with the passes of the Pyrenees, incline rather to Don Carlos than to the Queen, and will carry ammunition and stores from France to his camp, as long as they can make anything by so doing.

We willingly leave untold many acts of cruelty perpetrated on both sides, but there is one atrocious deed which we must record. Don Carlos has recently ordered the execution of the venerable Doctor Manzanares, whose only crime was that of being father of Señor Manzanares, who was constitutional minister at Cadiz in 1823, and who was shot by order of Ferdinand, when a French army had enabled that monarch to wreak his vengeance on his subjects. The elder Manzanares, the victim to the vengeance of Ferdinand's brother, was eighty-five years of age. He was shot at Escoriaza, before the door of his own house.

TURKEY.

A SERIOUS contest arising out of an accidental circumstance, has gone very near to break off our diplomatic relations with the Porte. Mr. Churchill, a British merchant settled at Constantinople, accidentally wounded a young Turk, while shooting quails, at a village near Scutari. A crowd of Turks immediately fell upon him, and after treating him most cruelly, dragged him before the Cadi of Scutari, who, unmindful of existing treaties, and of Mr. Churchill's explanations, and regret at the accident that had happened, ordered him to be bastinadoed. Nor was this all. After the torturing and degrading punishment had been inflicted he loaded his victim with chains, and sent him across the water to Constantinople, where, to the surprise alike of Turks and Franks, he was thrown by the judicial authorities at Galata into the Bagnio or common Turkish prison.

When our ambassador, Lord Ponsonby, applied to the Porte for the enlargement of Mr. Churchill, and satisfaction for the unheard-of treatment he had endured, he was met by the Reis Effendi with evasive answers, nor did he obtain his first object (the liberation of Mr. Churchill) for some time,

On this, Lord Ponsonby ceased all communication with the Reis Effendi, and applying directly to the Sultan, insisted on that minister's dismissal, as one who had identified himself with the most violent breach of our treaties, and had offered the grossest insult to the British nation. The Porte tried to satisfy the Ambassador, with assurances that the cadi of Scutari and all the subalterns should be severely punished, but Lord Ponsonby very firmly and properly insisted on the punishment of the great offender. The Sultan, sceptical that all his relations with the British Govern-

The Co. interrupted, deputed the Seraskier Pasha were prorogued Ponsonby. A long interview took place. The Seraskier stated that he was authorized to offer an adequate satisfaction, if his Lordship would accept of his mediation; to which Lord Ponsonby replied, that he would listen to no attempts at reconciliation until the Reis Effendi were dismissed. Matters remained in this state for some weeks, when finally, and reluctantly, the Sultan agreed to the dismissal of this favourite minister, who was forthwith sent to Brusa in Asia Minor—a place of exile much nearer the capital than those generally appointed for the residence of state offenders. The cadi of Scutari, and the chief of the police at Galata, who committed Mr. Churchill to the Bagnio, are now inmates of that horrible prison, and all the inferior actors have been soundly bastinadoed. In the latter respect, as long as it was confined to poor helpless subjects, the Porte would readily have satisfied the most vindictive spirit; but Lord Ponsonby was quite right in insisting on a higher and more exemplary satisfaction. By our treaties with the Porte no British subject can be tried or punished by a Turkish court of any kind. France, Austria, Russia, and other countries, enjoy the same advantage, without which, owing to the very summary nature of Turkish proceedings, few subjects of those Christian States would venture to trade or reside in Turkey. Until the entire nature of the Turkish government and people be changed, it is impossible to insist too sternly on the observance of this essential part of our treaties. Lord Ponsonby's firm conduct entitles him to that praise which we see is liberally bestowed upon him by the merchants of all nations resident at Constantinople.

It appears that Silistria is not yet given up, but that Halil Pasha, the Sultan's son-in-law, is just gone thither as commissioner to receive that fortress from the Russians.

PERSIA.

ACCORDING to advices from Constantinople, Mr. Ellis, *the ambassador sent out to the Schah, by our Government* last year, has fully succeeded in obtaining for British merchants the same advantageous commercial privileges as are enjoyed by Russian merchants,—that is to say, a duty of no higher than 5 per cent. on every article of British manufacture imported into the Persian dominions, and the same duty on all Persian exports.

Our trade with the Schah's dominions by the Black Sea and the port of Trebizond, and thence over-land by Baïbout, Erzeroum, and Tabriz, is somewhat on the increase, though cramped by the impoverished state of the people and other circumstances. The rapid and large increase of the exports of Turkish raw silk from Brusa to England checks the trade in Persian silks, which are to be brought from so much greater a distance.

PERU.

THE termination of another revolution, of which we have never known any particulars, is just announced in a manner very characteristic of these turbulent and sanguinary countries.

"The civil war in P[illegible] completely at an end. The chiefs executed are—Generals Salaverry and Fernandini; Colonels Cardenaz, Valeiva, Solar, Boza, Escovedo, Sudres, Lagomarsino, Carsillo, Rivero, Salaverry, Rivas, Mayo, Montaya, Negron, Medina, Lersundi, Picoaga, and Arrizueno. In Lima, General Obregosa caused to be shot the General Brestamente, and the Colonels Guellen and Salarena. In Huacho, General Vidal shot Lieutenant-Colonel Lusan and Major Ecovar —the latter a bandit chief." This compendious account of executions is followed by a list of exiles and refugees who have fled from the victorious party to Valparaiso.

DOCUMENTS AND ABSTRACTS.

IRISH MUNICIPAL CORPORATION BILL.

REASONS OFFERED BY THE LORDS IN CONFERENCE FOR DISSENTING FROM THE AMENDMENTS OF THE COMMONS.

HAVING given in the last Number of the "Companion" the "Reasons of the Commons for dissenting from the Irish Municipal Bill sent down from the Lords," we now publish the following replicatory document:—

The Lords participate in the conviction expressed by the Commons that a good correspondence between the two Houses is essential to the well-being of the British monarchy, and it is always a subject of regret to them when, in the performance of their duty, they are compelled to take a different view of any important measure from that which has been adopted by the House of Commons.

The Lords are earnestly desirous of removing all just causes of complaint, and of promoting all well-considered measures of improvement in all parts of the United Kingdom.

Impressed with these feelings the Lords were anxious to co-operate with the Commons in carrying into effect some of the important objects of the Bill for the regulation of Municipal Corporations in Ireland, although there was one principle in that Bill in which they were unable to concur.

They assented to the dissolution of corporations, the practical effect of whose constitution is a subject of reasonable dissatisfaction.

It did not appear to them advisable to establish in their place that particular form of local government which was proposed by the Commons, but they were not without the hope that the two Houses might agree upon provisions, which, accomplishing at once their common object—of removing a just cause of complaint—might, at the same time, secure the due administration of justice in cities and towns, preserve the corporate property for their respective benefit, and leave their local government under acts voluntarily adopted.

The Lords coincide in the opinion that it is not generally expedient to introduce, in the form of amendments, matters which may seem to require the more mature consideration which is given in its successive stages to an original Bill; but on this occasion the most convenient mode of procedure appeared to be that which enabled the Lords to make the fullest communication of their views to the House of Commons.

The Lords remain strongly impressed with the belief that the system of local government proposed by the Commons would, in the actual state of Ireland, be the present cause of party triumph, and the continued source of party and religious dissension.

The Lords earnestly desire the tranquillity of Ireland; they are unwilling to adopt a measure which would, in their apprehension, supply new occasions of collision to the adherents of different creeds and principles.

They are prepared to do equal justice to all; but it cannot always be assumed that, by the grant of similar institutions to countries differing in their circumstances, equal justice will be done.

The Lords are unable to acquiesce in the proposition now made by the Commons, that corporations, as reconstructed by the Bill, shall be confined to twelve cities and towns, because it is in those cities and towns of larger population that the most extensive evils would, in their opinion, result from such reconstruction.

The Lords disagree to the amendment whereby the existing corporations are to be continued in eighteen towns. They are reluctant to circumscribe the extent of the general relief they deem it expedient to grant.

Neither are the Lords prepared to concur in the proposition that the Act of the 9th year of the late King George the Fourth, to make provision for the lighting, cleansing, and watching of towns in Ireland, and to give the power of taxation for such purpose to elective commissioners, should be imposed upon twenty cities and towns. Anxious that there should exist the power of taxation for local purposes wherever its existence might be desired by the inhabitants to be taxed, the Lords had not suggested any alteration of that Act. They had afforded new inducements to its voluntary adoption by giving the means of placing the surplus property of the corporations to be abolished at the disposal of the commissioners who might be elected in the towns with which such corporations are respectively connected.

The Lords readily acquiesce in the desire of the Commons, that, whenever that Act may be adopted, the whole corporate property shall be at once transferred to the management of the commissioners, elected under its provisions.

But the Lords must call to the recollection of the Commons that hitherto the inhabitants of towns in Ireland have very generally refrained from availing themselves of the power of local government and taxation so offered to them. To render indispensable the election of commissioners, to whom would be confided the power of raising taxes for local purposes, would, undoubtedly, be in accordance with the principle adopted in the reform of municipal corporations in Great Britain; but the Lords cannot apprehend that the proposed intervention of the Legislature to overrule a manifest reluctance to be so governed and to be so taxed, would not, as the Commons anticipate, have any tendency to satisfy the just claims or a term tions of his Majesty's subjects in Ireland, or want of and strengthen the union.

The Lords have abstained from insisting upon several amendments to which the Commons appear to attach much importance.

They acquiesce in the opinion that officers connected with the administration of justice in Ireland should be removed from local influence, and placed under the direct authority of the Crown.

They have willingly consented not to insist upon amendments which conflicted with the immediate application of the principle thus established.

It will be a matter of sincere regret to the Lords if their adherence to the more important amendments made by them in the Bill, and their inability to concur in the new propositions made by the Commons, should have the effect of leaving a just cause of complaint without a full and present remedy.

The Lords will, however, still entertain the hope that the two Houses of Parliament, maintaining the good understanding which happily subsists between them, and zealously co-operating in the discharge of their common duty to the country, may at no distant period devise such measures of reform in the administration of local affairs as may give real contentment, by effecting real improvement, and promote prosperity by promoting social and religious peace in the cities and towns of Ireland.

Because the retention of the preamble, as amended by the House of Lords, is rendered necessary by the other amendments on which they insist.

Because the Bill, as it passed the House of Commons, having practically extinguished all existing municipal corporations in Ireland, and the Lords having assented to that provision, the question between the two Houses is no longer whether corporations should be abolished, but whether they should be reconstructed.

Because, in the present state of Ireland, the general ease and contentment of the inhabitants of cities and towns therein would not be effected without modifications of the principle of local government, as applied to England and Scotland respectively, different from and more extensive than those which have been proposed by the Commons.

Because the public good is the only true object of legislation; and, according to the difference of circumstances, that object is to be equally attained by different measures in different parts of the United Kingdom.

Because confidence in the decisions of Parliament follow the well-considered adaptation of measures to the advantage of those for whose benefit they are desired; and a spirit of distrust and discontent would be produced by instituting measures similar in name but dissimilar their results.

Because it is similar in effect to another provision contained in a clause proposed to be inserted by the Commons

ted under such

in a subsequent part of the Bill, and the omission of which is proposed by the Lords.

Because it is necessary, consistently with other amendments proposed by the Lords, to make a temporary provision for the discharge of the duties of the officers to whom the clause refers.

Because the 1st and 2nd of such clauses contain regulations respecting the corporations proposed to be abolished.

Because the 3rd of such clauses contains regulations respecting property held upon charitable trusts, and which for further reasons hereinafter mentioned are insufficient.

Because the 4th, 5th, 6th, and 7th of such clauses contain regulations for transferring trusts and powers under Acts of Parliament to members of the corporations proposed to be abolished.

Because the 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, and 18th of such clauses contain regulations of police which the Lords consider to be sufficiently provided for by the Act passed in the present Session of s. Parliament for establishing a constabulary force in Ireare land.

and Because the remaining clauses contain regulations reof thecting the corporations proposed to be abolished.

the Que Lords have taken into their consideration the rea- France tonexed by the Commons to the proposed amend- by so doing Clause 1, which reasons apply to other subsequent

We willing which the Commons equally disagree.

petrated on be observe that the Bill, as passed by the Com- ained certain trusts in certain corporations, being trustees casually in office on a given day, notwithstanding those persons might have ceased to hold any office, by virtue of which they were such trustees, and that the clauses objected to were intended to prevent the detriment which might have arisen from the provision made by the Commons, that all such trusts should cease on a day named; and the Lord Chancellor then made such orders as he might see fit for the appointment of trustees and the administration of the trust estate, if Parliament should not have otherwise directed.

The Lords are of opinion that it was inexpedient to throw upon the Lord Chancellor a duty he could not satisfactorily discharge, the more especially as no provision was made by the Commons for the security of the trust property, in the event of the duty imposed upon the Lord Chancellor not being in any case performed.

The Lords therefore thought it desirable to continue the several trusts in the several persons in whom they were continued by the Bill, as it passed the House of Commons, until Parliament should otherwise provide.

The clauses objected to contain other enactments obviously necessary to meet cases which, arising out of the proposed abolition of corporations, had not been provided for by the House of Commons; but all such enactments, proceeding upon the same principle, are of a character subject to the future direction of Parliament.

For these reasons the Lords insist upon these several clauses:—

Because it is necessary to provide for the security and management of corporate property when, by the enactments of the Bill insisted upon, corporations shall be abolished.

Because it is advisable to place the management of such property in the hands of commissioners removed from local influence, and responsible for the due performance of their duties.

Because the management of an inconsiderable property, and the right of nomination to some offices of small value required for the collection of such property, or otherwise necessary, cannot, in the apprehension of the Lords, create an influence inconsistent with the freedom and independence of the several cities and towns in Ireland.

Because the amendment proposed by the Lords appears to them to be necessary, with a view to the title to the lands which the commissioners are by that clause empowered to purchase.

Because the provisions to which the Commons have disagreed appear to the Lords to be necessary, on account of the peculiar circumstance of the right of patronage to which these provisions were intended to apply.

Because there are duties to be performed by the officers to whom that clause refers which the Lords agree with the Commons in regarding as highly important to the mercantile and commercial interests of the several cities and towns in Ireland, and for the performance of which no sufficient provision would otherwise be made.

DEFENCE OF PRISONERS BY COUNSEL.—PUNISHMENTS, AND PARTICULARLY THAT OF DEATH.

THE Second Report of the Commissioners on the state of the Criminal Law is chiefly devoted to a consideration of what "partial alterations may be necessary or expedient for more simply and completely defining crimes and punishments, and for the more effectual administration of criminal justice;" and to the question respecting the defence of prisoners by counsel, to which their attention was especially called by the Secretary of State for the Home Department. On this latter point the Commissioners submit the following views as the result of their inquiries:—

"It appears (they say) to us, that, as a general position, the right of a party accused to be heard previously to condemnation, is founded on principles of reason, humanity, and justice, recognised by the law of England.

"That it is essential to this right that it should, at the option of the accused, be exercised through the agency of Counsel.

"That no reasonable distinction, as to the exercise of the right, can be made between felonies and other classes of crimes.

"That the present practice is, in many respects, detrimental to the interests of justice, in regard to the conviction of the guilty, as well as to the protection of the innocent.

"That, whilst it appears to us that considerable inconvenience might follow from permitting a full defence by Counsel on trials for felony, we do not think that the arguments urged in favour of the monopoly are sufficient to warrant its continuance.

"That the prisoner's Counsel should, in all classes, be entitled to the concluding address; and that the same practice, in this respect, should be extended to trials for misdemeanours.

"Considering, however, the deference due to opinions which are entitled to high respect, and that the alleged inconveniences of the proposed change would principally occur on trials in the inferior criminal courts, we have to remark that, if it should be deemed desirable to make an experiment as to the probable effect of the change, full defence by Counsel might be allowed, in the first instance, in capital cases only, and it might be declared that, in other cases of felony, the prisoner's Counsel should have the like privilege, in case the prosecuting Counsel addressed the jury."

On the other branch of inquiry, to which attention was directed, the Commissioners, after a number of preliminary observations, remark as follows:—

"The result of our observations being, that capital punishment ought (subject to the exercise of the Royal prerogative) to follow conviction of a capital offence, the next question is, what are the offences to which capital punishment ought to be confined?

"It is certain that severity of punishment, when carried too far, defeats its purpose, and tends to impunity. It is, therefore, inexpedient to annex capital punishment to an offence, if the actual infliction of it would offend the sense and feelings of the generality of society, and particularly of those members of it, on whom, in the capacity of jurors, the administration of the criminal law essentially depends. It is the presumed unwillingness of juries to convict capitally, where the offence is free from any peculiar aggravation, that commonly inspires the offender with the hope of impunity, and makes him congratulate himself on the capital nature of the charge. The administration of a law not in accordance with the opinions of society, and shocking their moral or religious sentiments, cannot but be precarious; and without supposing that they break deliberately the sacred obligation of their oath, we may presume that slight grounds will satisfy the conscience of jurors in acquitting a party accused of infringing it. At the same time it is perfectly true that the public feeling on subjects of criminal jurisprudence is not always directed by the most enlightened views, and would of itself be no sufficient ground for determining the measure of punishment.

"Considering the general principles which, in particular

instances, justify or forbid the resort to so severe a means of preventing crimes as that of capital punishment; considering the opinions on the subject of capital punishment entertained by the bulk of society, and especially of those members of it who are engaged as jurors in the administration of the criminal law; and considering the opinions on the same subject entertained by the executive magistracy, so far as they may be inferred from the actual decline in the infliction of the penalty, we think that the punishment of death ought to be confined to the crime of high treason (happily now of rare occurrence) and (with perhaps some particular exceptions) to offences which consist in, or are aggravated by, acts of violence to the person, or which tend directly to endanger human life."

Capital offences, as thus limited, would, it is stated, be reduced to the crimes of—1st. High treason; 2nd. Murder; 3rd. Attempts to murder, accompanied with actual injury to the person, to be particularly defined; 4th. Burning of buildings or ships, with danger to human life, and under circumstances to be particularly defined; 5th. Piracy, accompanied with actual injury to the person, or acts endangering human life, to be particularly defined; 6th. Robbery, aggravated by cruelty or violence, under circumstances to be particularly defined; 7th. Rape; and violation of a female child under the age of ten years, with or without consent. The Commissioners, for the present, exclude from consideration an offence of great enormity. In this list several offences, now capital, are wholly omitted, and many extensive classes of offences are now reduced, in regard to their liability to capital punishment, to very narrow limits.

The Commissioners are of opinion that in all the cases above enumerated, it is desirable, if it be practicable, that death should be invariably inflicted agreeably to the dispositions of the law, subject only to the exercise of the royal prerogative of mercy. But if, with regard to any one or more of the above enumerated offences, (as, for example, burglary or robbery), it should be found impossible to frame a definition capable of such invariable application, the inconvenience might be remedied by investing the court with a limited power of reducing the capital punishment to that next in degree.

Some of the witnesses whom the Commissioners examined are of opinion that it is impolitic to visit the offence of rape with death, on account of the great difficulty attending conviction of this crime; the Commissioners, however, state that, considering the enormous atrocity of this offence, and its mischief to society, they do not venture to recommend that it should cease to be capital, although it certainly admits of aggravating circumstances; *e.g.* the administration of drugs or the perpetration of the offence by numbers.

After diminishing the number of capital offences, the punishment of those from which the capital punishment is removed becomes an important object of attention. This subject leads the Commissioners to notice the existing law and practice as to the infliction of secondary punishments, having reference to specified gradations of crime, and upon a uniform system. They observe that the law, in respect of punishments less than capital, exhibits defects such as naturally result from long-continued neglect and want of legislative supervision. Such inferior punishments are applied indiscriminately, are often disproportioned to the offences in respect of which they are inflicted, unsystematic, and frequently of a description ill-adapted to the effectual prevention of crime. One of the leading causes of the want of discrimination in punishments arises from offences not being properly defined. The fear of punishment is thus diminished, and the more heinous are confounded with the more trivial degrees of crime.

Striking instances of disproportion in punishment to the nature of the crime are very frequently exhibited in cases where prisoners, charged with capital offences, are, for want of proof of the consummation of a meditated capital offence, acquitted, and after great delay, expense, and inconvenience, are convicted of the attempt to commit such capital offence. Having narrowly escaped the punishment of death, the offender thus escapes altogether, or is sentenced as for a misdemeanor to imprisonment for one or two years; a punishment wholly disproportioned to an offence so proximate in point of guilty intention to that which is capital. The Commissioners suggest that it would be a great improvement in the administration of criminal justice to provide, for the purpose of obviating this inconvenience, that in every case of capital felony, where the intention and attempt were fully proved, but the evidence was insufficient to prove actual consummation of the crime, the jury should be enabled to convict the offender of such attempt, and a punishment better proportioned to the real malignity of the offence should be inflicted. By these means the punishment of very atrocious offenders would be much more certain than it now is. It appears from the criminal returns for England and Wales, that out of 134 persons tried for the capital offences of shooting at, stabbing, administering poison, &c., with intent to murder, maim, &c., only sixty were convicted.

The Commissioners are of opinion that the certainty of punishment would be much greater, if, upon all capital charges, the jury acquitting the prisoner of the capital charge, might, when the evidence warranted such a verdict, find him guilty of the minor offence; as, for example, if, upon a prisoner being indicted for arson accompanied with aggravations making the offence capital, the jury might find him guilty either of arson simply, or of arson with such aggravations, as would make the offence capital. In the same manner, upon indictments for murder, juries at present have very frequently the power of finding the prisoner guilty of the inferior degree of culpable homicide.

The Commissioners point to the present practice of criminal courts in rarely inflicting imprisonment for a term exceeding two years, as one course of the existing want of discrimination in punishments. A wide chasm in the scale of punishments is left between death and the longest term of imprisonment. The punishment of transportation which in legal contemplation ranks next to capital punishment, is one which very inadequately fills up the chasm between loss of life and loss of liberty for two years. The Commissioners suggest the adoption of a less frequent and better regulated use of the punishment of transportation by the infliction of longer periods of imprisonment in certain cases, and by a much more frequent judicious use of the punishment of solitary confinement.

Another cause of the want of discrimination in punishments arises from their having been imposed or mitigated at various times, ancient and modern, and upon the spur of the occasion, and without reference to any uniform system. In some instances, it is remarked, misdemeanors are punishable with greater severity than felonies; and a number of examples are adduced by the Commissioners in proof of the unequal operation of the criminal law. Curious instances are given of punishments for particular offences having undergone a succession of changes without any apparent reason. For example, the punishment for forging assay marks on plate was by a Statute of Geo. II. pecuniary; by another Statute of the same King it was punished with death; by a Statute of Geo. III. the punishment of death was reduced to that of transportation; by a later Statute of Geo. III. it was made a capital offence again. By a subsequent Statute of Geo. III. the punishment for forgery of assay marks on gold plate is reduced to transportation, leaving the forgery of the like marks on silver plate a capital offence, and as such it remained till the passing of the late Forgery Act.

In awarding punishments a most inconvenient latitude of discretion is allowed by the law in the case of the greater number of offences, yet the law is not uniform in this policy; for in the case of some felonies, the punishment is made transportation for life, without any power given to the Court of mitigating the sentence.

It appears to us, say the Commissioners, that it would be desirable, for the reasons already adverted to, that a scale of punishments should be established by which the different gradations of crime should be more distinctly marked, and settled according to some uniform system.

That the more heinous of such offences as were not capital should subject the offenders to longer terms of imprisonment than are now in use.

That the offences cognizable by the superior Criminal Courts, and by Courts of Quarter Sessions, should be distinguished into four classes.

That the first should consist of such as were capital, in accordance with the principles already considered.

That the second should be punishable with imprisonment for a term of ten years or more, or transportation for life; and should include burglaries, robberies, arson, rape (if it should cease to be capital), together with other offences not capital, but committed under such defined circum-

stances of aggravation as might render them worthy of the punishment second in degree.

That those of the third class should be punishable by imprisonment for a term not exceeding ten years, nor less than two years, or by transportation not exceeding fourteen years, nor less than seven years; and should consist chiefly of ordinary burglaries and robberies (exclusive of those which are such by mere construction), together with theft aggravated by its extent, the time and place of its commission, the number concerned in committing it, their relation to the prosecutor, or such other defined circumstances of aggravation as might render it worthy of the punishment third in degree.

That those of the fourth class should be punishable by imprisonment not exceeding two years, transportation not exceeding seven years, or fine; and should consist of simple thefts, and of offences not included in any of the three preceding classes.

That with regard to any such of the above-mentioned offences as should be made punishable with imprisonment, solitary confinement and hard labour might be added to the punishment, according to definite rules.

In suggesting the propriety of a scale of punishments, the Commissioners profess to do no more at present than attempt to sketch a mere outline of the principles on which such a scale ought to be constructed. They are of opinion that benefit would result from the adoption of such a scale, because the process of adjusting punishments to particular offences would be much expedited by referring to such an established scale; and because the referring offences to such a scale would tend to preserve a greater degree of consistency in the measure of punishments than now exists. Whilst it might, as a general rule, be convenient to refer to such a scale in apportioning punishments, deviation from it might frequently be necessary in particular instances.

The Commissioners advert to the shortness of the period limited by law between the sentence and execution of persons convicted of murder, and express an opinion, founded upon several strong reasons, that the time ought to be left to the discretion of the Judge who tries the prisoner, and who is most competent to determine the validity of the reasons which may render a greater or less interval expedient.

The order adopted by the Commissioners, in pursuing their inquiry, is as follows:—

1st. The Classification of Crimes.
2nd. The Definition.
1.—Of Crimes.
2.—Of Punishments.
3rd. The Jurisdiction of Courts.
4th. The Process of Accusation, Inquiry, Judgment, and Execution.

MANAGEMENT OF THE BRITISH MUSEUM.

The Committee appointed in the Session of 1835, to inquire into the management of this institution, and which resumed its sittings at the commencement of the present Session, have agreed upon the following Resolutions, which were reported to the House of Commons, July 14:—

1. That the great accessions which have been made of late to the collections of the British Museum, and the increasing interest taken in them by the public, render it expedient to revise the establishment of the institution, with a view to place it upon a scale more commensurate with, and better adapted to, the present state and future prospects of the Museum.

2. That this Committee do not recommend any interference with the family trustees, who hold their offices under Acts of Parliament, being of the nature of national compacts.

3. That though the number of official trustees may appear unnecessarily large, and though practically most of them rarely, if ever attend, yet no inconvenience has been alleged to have arisen from the number; and the Committee are aware that there may be some advantage in retaining in the hands of Government a certain influence over the affairs of the Museum, which may be exercised on special occasions; yet if any Act of the Legislature should ultimately be found necessary, a reduction in the number of this class of trustees might not be unadvisable.

4. That, with regard to the existing elected trustees, the Committee think it very desirable that the trustees should take steps to ascertain, whether some of those whose attendance has been the most infrequent, might not be willing to resign their trusteeships: that, in future, it be understood, that any trustee hereafter to be elected, not giving personal attendance at the Museum for a period to be fixed, is expected to resign his trusteeship, being, however, re-eligible upon any future vacancy.

5. That in filling up vacancies it would be desirable that the electing trustees should not in future lose sight of the fact, that an opportunity is thus afforded them of occasionally conferring a mark of distinction upon men of eminence in literature, science, and art.

6. That the extension of the collections which has taken place, and the still greater extension which may be looked for, render a further division of departments necessary; and that at the head of each department there be placed a keeper, who shall be responsible for the arrangement, proper condition, and safe custody of the collection committed to his care.

7. That it is desirable that the heads of each department shall meet once in three months, for the purpose of consulting with reference to any matters of detail relating to the internal arrangements of the Museum, which they may desire jointly to submit to the trustees in writing.

8. That whenever there may be a vacancy in the office of principal librarian, or in that of secretary, it is desirable that the distribution of the duties now discharged by those officers respectively, including the expenditorship, be reconsidered, and that the office of secretary be not combined with the keepership of any department.

9. That it is desirable that the hours during which the Museum shall be open on public days, be hereafter from ten o'clock until seven throughout the months of May, June, July, and August; and that the reading-room be opened throughout the year at nine o'clock in the morning.

10. That it is desirable that the Museum be hereafter opened during the Easter, Whitsun and Christmas weeks, except Sundays and Christmas Day.

11. That it is expedient that the trustees should revise the salaries of the establishment, with the view of ascertaining what increase may be required for the purpose of carrying into effect the foregoing resolutions, as well as of obtaining the whole time and services of the ablest men, independently of any remuneration from other sources; and that when such scale of salary shall have been fixed, it shall not be competent to any officer of the Museum paid thereunder, to hold any other situation conferring emoluments or entailing duties.

12. That it is desirable that the heads of departments do consult together as to the best method of preparing on a combined system, an improved edition of the Synopsis of the Museum; that each officer be responsible for that part which is under his immediate control, and attach his signature to such part, and that the work be prepared in such a manner as to enable each part to be sold separately, which should be done at the lowest price which will cover the expenses of the publication.

13. That it is expedient that every exertion should be made, to complete within the shortest time, consistent with the due execution of the work, full and accurate catalogues of all the collections in the Museum, with a view to print and publish such portions of them as would hold out expectations of even a partial sale.

14. That it be recommended to the trustees, that every new accession to the Museum be forthwith registered in detail, by the officer at the head of the department, in a book to be kept for that purpose; and that each head of a department do make an annual report to the trustees of the accessions within the year, vouched by the signature of the principal librarian, of desiderata, and of the state and condition of his own department.

15. That it be recommended to the trustees to take into consideration the best means of giving to the public a facility of obtaining casts from the statues, bronzes, and coins, under competent superintendence, and at as low a price as possible.

16. That the committee are well aware that many of the alterations, which they have suggested, cannot be carried into effect, except by increased liberality on the part of Parliament, both with respect to the establishment of the Museum, and also to a much greater extent, for the augmentation of the collections in the different departments; but they confidently rely on the readiness of the representatives of the people to make full and ample pro-

vision for the improvement of an establishment which already enjoys a high reputation in the world of science, and is an object of daily-increasing interest to the people of this country.

17. That the Committee, in the alterations which they have suggested, do not mean to convey any charge against the trustees, or against the officers of the Museum, whose talents, good conduct, and general and scientific acquirements, are universally admitted; and they are aware, that where imperfections exist in the collections, those imperfections are mainly attributable to the very inadequate space hitherto available for their exhibition, and to the limited pecuniary means at the disposal of the trustees, and they are of opinion that the present state of the British Museum, compared with the increasing interest taken in it by all classes of the people, justifies them in the recommendations contained in the above resolutions.

18. That the Committee, having taken into consideration the petition presented to the House by Mr. Charles Tilt, and referred to the Committee, which petition prayed for public assistance in the preparation of a work from the medals in the British Museum, and having taken evidence on the said subject, consider that in no way can they more satisfactorily discharge the duty confided to them by the reference in question, than by simply laying before the House the minutes of evidence so taken, and ordering the petition of Mr. Charles Tilt to be placed as an appendix to that evidence, and to these resolutions.

PRISON REFORMS (SCOTLAND).

Frederick Hill, Esq., Inspector of Prisons (Scotland), has made a Report to the Secretary of State, in which the following remedial measures are proposed:—

1. A uniform system to be adopted.
2. All prisoners, except those confined for very short periods, to be placed in large penitentiaries.
3. The principle of entire separation of prisoner from prisoner to be immediately carried into effect where possible, and to be provided for in the construction of all new prisons.
4. Female prisoners to be placed under the care of female officers.
5. All prisoners to be required to work.
6. Prisoners to be instructed, as far as possible, in such kinds of work as will enable them to earn an honest livelihood on leaving prison.
7. An increased provision to be made for the mental, moral, and religious instruction of prisoners.
8. A general asylum to be provided for juvenile offenders after they have left prison.
9. A lunatic asylum to be erected for the reception of all the lunatic prisoners in Scotland.
10. The peculiar liability of royal burghs to pay the costs of erecting and maintaining prisons, and to pay the expense of prisoners, to be abolished; as also the responsibility of burgh magistrates for the safe custody of debtors; and all persons, whether dwelling in burghs or not, to be henceforward upon an equal footing in these respects.
11. The management of all prisons in Scotland to be placed under one directing authority, to be appointed by Government, and the cost of the prisons and prisoners to be defrayed out of one general fund.

FOURTH REPORT ON THE STATE OF THE ESTABLISHED CHURCH.

This Report is dated June 24th, and was presented to Parliament in the first week of July. It relates to the Cathedral and Collegiate Churches of England and Wales; to archdeaconries; to livings annexed to headships of colleges; to portionist livings, and some other points.

As the immediate reduction of chapters would, in the opinion of the Commissioners, affect the succession to cathedral preferment for so long a time as to afford a just ground of complaint to the clergy, while it would exclude the Crown in some cases, and the Bishops in others, from the exercise of this kind of patronage, a plan is submitted for filling up certain vacancies among the canonries in chapters, when the number of canonries is not less than six. Under the plan proposed, the disposal of preferment sufficient to provide for members of chapters, and the clergy serving under them, will remain in the gift of such chapters, and the remainder will revert to the Bishops, to be bestowed by them only upon clergy of a certain standing. It is recommended in the 35th proposition of the Commissioners, that "power be given to unite such of the better endowed canonries in the respective chapters as may be deemed properly available for the purpose, with the parochial charge of populous districts within the dioceses in which such churches shall be respectively situate;" and the 37th proposition recommends that the visitors of the respective chapters do so alter, from time to time, the existing statutes and rules, as to make them consistent with the altered constitution and duties of the chapters respectively, subject to the approval of Commissioners and the King in Council.

With respect to the endowment of archdeaconries, the Commissioners have already recommended that, in each cathedral, where it is practicable, one at least of the stalls should be applied to the purpose of making a better provision for that important office; and they now recommend the annexation to the office of archdeacon of a canonry either entire, or charged with a provision for another archdeaconry within the diocese, as soon as either of such arrangements can be made; and until such method can be resorted to, it is proposed that the Commissioners appointed for ecclesiastical purposes should have power, in cases where it may be necessary, to augment the income of archdeaconries to a sum not exceeding 200*l.* per annum out of the property arising from sinecure rectories, or from the suppressed prebends. The Commissioners add that they would not be understood to express an opinion that this amount of income is an adequate provision for the office of archdeacon; but they do not think it expedient to propose any larger deduction from the means of augmenting the incomes of the parochial clergy to be furnished by the operation of the measures which they have recommended.

It is proposed that livings annexed to headships of colleges and to the regius professorship of divinity at Cambridge may be sold, and the proceeds of sale invested, and interest paid to the respective heads,—as it is evidently desirable, observe the Commissioners, that such benefices should have incumbents practically, as well as legally, invested with the cure of souls.

It is recommended that, in the few parishes in which both the profits and the spiritual charge are divided between two or more incumbents, each having a portion, or mediety, as it is in some places called, of the benefice, and being charged with its duties in turn, such benefices may either be consolidated into one, or separately constituted.

They recommend also, with an especial view to the better care of populous parishes, that power should be given to bishops, colleges, and other public bodies, in whom the advowsons of such parishes are vested, on the recommendation of the proposed Board of Commissioners, and subject to the approbation of his Majesty in Council, to exchange advowsons between themselves; and generally the Commissioners are of opinion that it would be highly expedient that similar power should be given to sanction any arrangement for the purpose of improving the value, or making a better provision for the spiritual duties of ill-endowed parishes or districts, by altering the exercise of patronage, or by apportioning the income of two benefices belonging to the same patron, or that of one benefice having more than one church or chapel between the incumbents or ministers of such benefices, churches, or chapels respectively; these powers not to be exercised with respect to advowsons in the patronage of laymen without the consent of the respective patrons, nor in any case, without the consent of the bishop of the diocese

With respect to the ancient hospitals, adverted to in the second Report ('Companion,' No. 40), the Commissioners have not yet received such further information as to enable them to offer any distinct recommendation upon the subject.

In consequence of the avoidance of some of the preferments which, if the recommendations already made should be adopted, will not be filled up, it becomes necessary to determine to whom the custody of the fund, which will arise from the endowments of those preferments, should be intrusted. It is recommended that the Commissioners to be appointed for ecclesiastical purposes should be empowered to appoint the necessary officers for performing such duties as may arise out of transactions connected with this fund; and that the treasurer of Queen Anne's

Bounty should pay over to the proper officer, so appointed, the monies received by him, under the authority of the Act passed in the last Session of Parliament, to which reference has been made in the second Report.

With regard to the application of the resources arising from the operation of those measures which affect the cathedral and collegiate establishments, it is recommended that, except in cases where any specific appropriation has been suggested, the property and revenues rendered available by these alterations, should, after a due consideration of the wants and circumstances of the places in which they accrue, be applied to the purpose of making additional provision for the cure of souls, in parishes where such assistance is most required, in such manner as shall be most conducive to the efficiency of the Established Church.

The details by which the above recommendations are to be carried out, are given in fifty-eight distinct propositions, above forty of which relate to the chapters of cathedral and collegiate churches; but as they involve no principle differing from that laid down as above, and in the preceding Reports they are merely of local interest.

COMMUNICATION BETWEEN LONDON AND DUBLIN.

THE London and Dublin Roads Committee appointed to inquire into the existing means of communication between these two places, and to consider what improvements could be made therein, have agreed upon the following Resolutions:—

1. That the Chairman be directed to move the House—That an humble Address be presented to his Majesty, requesting that his Majesty will be graciously pleased to direct that an immediate survey be made of the Harbours of Liverpool and Holyhead and Port Dynllaen, and of such other points on the western coast of England and Wales as may appear suitable for a direct communication between London and Dublin, so as to ascertain the respective qualifications and capacities of improvement of each as a Packet Harbour between London and Dublin, and also as a Harbour of Refuge for the trade passing up and down the Irish Channel, with a view to such Surveys being laid before Parliament.

2. That the Chairman be directed to move the House—That an humble Address be presented to his Majesty, requesting that his Majesty will be graciously pleased to direct a survey to be made of the country intermediate between Holyhead, and also between Port Dynllaen Harbours, and also between such other ports as may appear upon such surveys desirable as such packet station; and the nearest railroads already sanctioned by Parliament, with the view of ascertaining and reporting the best and most convenient lines of railway communication between Dublin and London.

COMMUNICATION WITH FRANCE.

PUBLIC notice has been given that persons desirous of sending letters from the United Kingdom to France will have the option—first, of sending them unpaid, allowing the whole of the postage to be charged to the receiver: secondly, of paying the whole of the postage in advance to the place of destination; thirdly, of paying the British postage only to the frontier of France, as at present.

The optional payment of postage applies equally to patterns of merchandise.

The British postage upon all letters to and from France, and passing through France, is reduced at the rate of 4*d* each single letter, and so on in proportion for double and treble letters, and so forth (except the local letters between Dover and Calais). A considerable reduction has been made in the French postage also.

A letter consisting of one piece of paper, under the weight of one ounce, will be liable, as at present, to single postage only, so far as regards the British rates; but no letter will be chargeable with more than a single rate of postage, whatever the number of inclosures may be, if it does not exceed the weight of one quarter of an ounce, or double postage from one quarter of an ounce, and not exceeding half an ounce, and treble postage from half an ounce and under one ounce weight.

The postage in France is charged wholly by weight, without reference to the composition of the letter, and is at the rate of single postage if under a quarter of an ounce, and so on in proportion. A single sheet of paper, weighing more than a quarter of an ounce, will therefore be liable in France to additional charge.

Persons desirous of *registering letters* and packets for France, and passing through France, may have them entered on the letter-bill; such letters will be liable to a registration rate of 2*s*. 6*d*. each, in addition to the ordinary British rates, and to double the French postage according to weight.

The whole payment to the place of destination must be made in advance, and such letters must be brought to the General Post Office, for the purpose of being registered, before six o'clock in the evening on ordinary post nights, and before ten o'clock on Tuesdays and Fridays.

In addition to the general reduction in the British rates of postage of 4*d*. upon all letters to and from France, and passing through France, there will be a further reduction at the rate of 3*d*. for each single letter, and so on in proportion, for all letters to and from Spain and Portugal, passing in transit through France; and of 2*d*. for each single letter, and so on in proportion, upon all letters to and from Switzerland, passing in transit through France.

The rate of postage on the local letters between Dover and Calais is reduced from 6*d*. to 3*d*. for each single letter, and so on in proportion.

British rates upon a single letter from London for France, and for countries passing through France:—

	Old Rate.	New Rate.
	s. *d*.	*s*. *d*.
France . . .	1 2	0 10
Spain and Portugal	2 2	1 7
Switzerland . .	1 8	1 2
Germany . .	1 8	1 4
Italy, Turkey, &c. .	1 11	1 7
Dover and Calais .	0 6	0 3

Ship letter-bags will be made up at Southampton and Havre, Brighton and Dieppe, for letters passing between those places, to be forwarded by the regular passage-vessels. The postage of such letters will be 8*d*. for each single letter, and so on in proportion, and the payment in advance will be at the option of the senders.

English newspapers, addressed to France, may be forwarded (in covers open at the sides, and under the usual regulations as to writing and inclosures) free of charge to the sender; a rate of four centimes each paper (equivalent to one halfpenny) will be charged upon delivery in France. *French newspapers*, addressed to the United Kingdom and the colonies, will be liable to a charge of one halfpenny each upon delivery.

The public are especially requested to observe that, for the present, unpaid letters can only be sent to places within France, and not to any foreign countries passing through France. Letters for Switzerland and Sardinia may be post paid in advance to the place of destination. Letters to Southern Italy may be post paid in advance to the Italian frontier of Sardinia; and letters for Austria and Venetian Lombardy may be paid in advance through France; but unpaid letters to those countries cannot be forwarded.

RECORD COMMISSION.

THE Committee appointed February 18th to inquire into the management and affairs of the above Commission, and the present state of the Records of the United Kingdom, have reported as follows:—

1. That it appears from Evidence taken before your Committee, that the Record Commission is, as far as can be ascertained, in debt to the amount of 24,000*l*.

2. That, as various current expenses must, in addition, be provided for out of the funds annually granted to the Commission, it is expedient that a sum adequate to the discharge of the whole of the present debt be forthwith granted over and above such sum as the House of Commons may think fit to vote for the current expenses of the Commission during the present year.

3. That, in consequence of the advanced period of the Session, and the necessity for an immediate provision for this purpose in the Miscellaneous Estimates for the year, the amount of this debt be forthwith reported to the House, with a recommendation that it be immediately discharged, under the sanction and control of the Lords Commissioners of the Treasury.

REPORT OF PRISONS' COMMITTEE (NEWGATE).

THE following Resolutions have been reported to the House of Commons by the Prisons' Committee:—

1. That it is the opinion of this Committee that it is expedient to provide means for the separate confinement of prisoners committed for trial before the Central Criminal Court.

2. That, for this purpose, it is desirable either to reconstruct Newgate, or to build a new prison adjoining the place of trial.

3. That the mode of carrying these Resolutions into effect, with the consent of the authorities of the City, requires the immediate consideration of his Majesty's Government; and that competent surveyors should be employed for the purpose of forming a mature decision.

4. That it is expedient to revise the Act 4th and 5th Geo. IV., commonly called the Gaol Act, and to give greater discretion to the Secretary of State and the magistrates of counties and boroughs, with respect to the classification of offenders.

NEW CUSTOMS DUTIES.

On Thursday, July 14, a Bill was ordered to be brought in by the President of the Board of Trade, founded on the following Resolution of the House:—"That the duties of Customs following shall be charged on all goods imported into the United Kingdom, in lieu of those now payable, that is to say:—

	Duty proposed. £.	s.	d.
Aristolochia, the lb.	0	0	1
Beads of glass, the lb.	0	1	0
Boxwood, the ton	0	10	0
Bugles, the lb.	0	1	0
Cassia fistula, the lb.	0	0	1
Cedar, imported from the Bay of Honduras in a British ship cleared out from the Port of Belize, the ton	0	10	0
Chalk, viz.; prepared or otherwise manufactured, the 100*l.* value	10	0	0
Chalk, unmanufactured, the 100*l.* value	5	0	0
Chicory, or any other vegetable matter applicable to the uses of chicory, viz., raw or kiln-dried, the cwt.	1	0	0
Ditto, roasted or ground, the cwt.	2	16	0
Ebony, the ton	0	10	0
Feathers, viz., ostrich, the lb.	0	1	0
Flower roots, the 100*l.* value	5	0	0
Horns and horn tips, the ton	0	1	0
Lignum vitæ, the ton	0	10	0
Mahogany, imported from any foreign country, entered after the 5th July, 1837, the ton	5	0	0
Morphia and its salts, the lb.	0	16	0
Nickel, viz., arsenate of nickel, in lumps or powder, being in an unrefined state, the 100*l.* value	5	0	0
Nickel, metallic, refined, and oxide of nickel, the 100*l.* value	20	0	0
Olive wood, the produce of or imported from any foreign country, the ton	2	10	0
Opium, the lb.	0	1	0
Orange flower water, the lb.	0	0	1
Quinine, sulphate of, the ounce	0	0	6
Sebadilla seeds, the cwt.	0	4	0
Speckled wood, the produce of or imported from any foreign country, the ton	2	10	0
Succades, the produce of or imported from any foreign country, the lb.	0	0	6
Sweetwood, the produce of or imported from any foreign country, the lb.	2	10	0
Teeth, viz., elephant's, sea cow, sea horse, or sea morse teeth, the cwt.	0	1	0
Water, viz., mineral water, the gallon	0	0	1

ABSTRACTS OF RETURNS PRESENTED TO PARLIAMENT.

London Police Offices.—The charge of the eight Police Offices of the metropolis, for the year ending 5th January last, amounted to 54,600*l.*

Post-Office Revenue.—The following Abstracts relative to the revenue of the Post-office in Great Britain are taken from the Finance Accounts for the year ended January 5th, 1836 :—

	£.
Unpaid letters outwards, and paid letters inwards, and ship-letters charged on country postmasters:—England, 482,351*l.* 11*s.* 2*d.*; Scotland, 80,969*l.* 12*s.* 8*d.*	563,321
Unpaid letters inwards, and paid letters outwards, collected by letter-carriers, &c. in London and Edinburgh:—England, 472,703*l.* 16*s.* 5*d.*; Scotland, 38,201*l.* 8*s.* 11½*d.*	510,908
Bye and cross-road letters, &c.:—England, 628,957*l.* 12*s.* 2*d.*; Scotland, 81,442*l.* 15*s.* 9*d.*	710,400
Twopenny and penny post letters at London and Edinburgh:—England, 112,924*l.* 17*s.* 8*d.*; Scotland, 8,561*l.* 9*s.* 8*d.*	121,489
Letters charged on the postmasters in the West Indies and British North America:—England only	61,993
Postage of letters received by the window-men of the Foreign Office, &c.: London	85,415
Passage and freight by packets	52,038
Miscellaneous receipts	2,009
Total gross receipt	£2,107,676
Deduct for letters refused, mis-sent, re-directed letters, overcharges, and rebates	84,328
Net receipt within the year	2,023,347
Balances and bills outstanding 5th January, 1835	133,071
Total income	£2,156,418
Total payments into the Exchequer	1,418,000
Charges of collection, and other payments	600,245
Bills outstanding 5th January, 1836	138,173
	£2,156,418

Post-Office Revenue (Ireland).—The gross receipt for the year ended 5th January last, was

	£.
	245,664
Deduct re-directed, returned, dead, and other letters	25,718
Net receipt within the year	219,946
Balances due 5th January, 1835	44,733
Total income	£264,679
Charges of collection	96,327
Payments into the Exchequer	122,300
Balances due from country postmasters, &c., including 28,921*l.* insolvent arrears; 1,157*l.* balances due by deceased and dismissed letter carriers and deputy-postmasters	46,052
	£264,679

Corporal Punishments (Army).—A Return of the number of cases in regiments and depôts in Great Britain and Ireland in which corporal punishment has been inflicted, specifying the offences for which it was awarded, since the issuing of the circular letter, dated Horse Guards, 24th August, 1833, restricting the punishment of flogging to certain offences indicated in the said letter:—Mutiny, insubordination and violence, or using or offering violence to superior officers, 270; drunkenness on duty, 80; sale of, or making away with arms, ammunition, accoutrements, or necessaries, 139; stealing from comrades, 32; disgraceful conduct, 47.—Total, 588. The above Return includes only cases in regiments and depôts at home. A similar statement will be immediately called for from the several regiments and corps employed abroad.

Mail Coaches.—There are 54 four-horse mails in England and 49 pair-horse mails. The greatest speed travelled is 10 miles furlongs per hour; slowest speed 6 miles; average speed per hour 8 miles 7 furlongs. The average mileage paid for four-horse mails is 1⅞*d.* per mile; for pair-horse mails 1¾*d.* per mile. The number of four-horse mails in Scotland is 10; of pair-horse mails 4. The greatest speed travelled is 10 miles 4 furlongs per hour; slowest speed 7 miles per hour; average speed 8 miles 2 furlongs. The average mileage paid for four-horse mails in Scotland is 1½*d.* per mile; for pair-horse mails 2¼*d.* per mile. In Ireland there are 30 four-horse mails, and 5 pair-horse mails. The greatest speed travelled is 9 miles 1 furlong per hour; slowest speed 6 miles 7 furlongs; average speed 8 miles 2 furlongs per hour. The average mileage paid for the four-horse mails is 2⅝*d.* per English mile; for pair-horse mails 1¾*d.* per English mile. In Ireland there are 97 mail-cars employed in the conveyance of the mails. The greatest speed at which they travel is 7; an hour; slowest 5⅛ miles; and the average speed is 6⅛ per hour.

National Debt.—The following abstract is taken from the Finance Accounts of the United Kingdom for the year ending 5th January, 1836 :—

Total Debt of the United Kingdom, 5th January, 1836		£760,291,554
Unclaimed Dividends, &c., standing in the names of Commissioners		1,744,687
Amount of unredeemed capital		£758,546,866
Annual charge of the Public Debt:—		
Due to the public creditor	£28,246,6607	
Management	156,697	
	£28,403,305	
Debt reduced in the year 1835		£ 3,818,758
Debt created in the year 1835, the sum of 16,734,353*l.*, being included in the West Indies and Barbadoes loans		£18,693,325

Circulation of Scotch Newspapers.—Return of the aggregate number of stamps issued by the Stamp Office from 30th June, 1835, to 30th April, 1836 :—

Copyright.—The following is a Return to an Order of the House of Commons, of the amount of wholesale price of one copy of each book entered at Stationers' Hall during the years 1833-4-5 :—In 1833, 233*l.* 12*s.* 7*d.*; 1834, 203*l.* 17*s.* 4½*d.*; 1835, 248*l.* 15*s.* 1½*d.*

Lead and Lead Ore.—Imports and exports of lead for the year ending January 5, 1836, from a Return made to an Order of the House of Commons :—The imports were —Pig lead, 1276 tons; lead ore, 1437 tons; red lead, 11 cwts.; white lead, 13 tons—total 2727 tons. The net amount of duty received on the quantities entered for home consumption, 67*l.* 18*s.* 11*d.* The countries from which the above quantities were imported are—pig-lead, Hanseatic Towns, Belgium, Spain, Gibraltar, and New South Wales; lead-ore, Spain, United States of America, Guatemala, and Isle of Man (which latter place imported 1,417 tons 5 cwt.); red lead, Hanseatic towns; white lead, Holland, France, Italy (Austrian territories), and United States of America. The following is an account of the British lead and lead ore exported from the United Kingdom in the year ending January 5, 1836 :—pig and rolled lead and shot, 11,082 tons; litharge, 454 tons; read lead, 562 tons; white lead, 978 tons; lead ore, 295 tons—total, 13,372 tons. Of foreign lead, 1268 tons were exported in pigs, and 7 tons 14 cwts. 2 qrs. and 9 lbs. of white lead.

Wool and Woollens.—The total quantity of wool imported into the United Kingdom, in the year 1835, was, by weight 42,208,949 lbs., which is rather more than 4,000,000 lbs. under the importation of 1834; but on the 5th of January, 1835, 6,494,266 lbs. remained warehoused under bond; whereas on the 5th of January, 1836, there were no more than 2,846,014 lbs. so locked. The country from which we import the greatest quantity of wool is Germany. In 1835 the amount was nearly 24,000,000 lbs. From Russia, to which our exports of manufactured woollens is comparatively small, we imported upwards of 4,000,000 lbs.; from New South Wales and Van Diemen's Land, taken together, about 200,000 lbs. weight more than from Russia. The next largest importations are from Spain, Turkey, and Italy, which, taken together, supply us with nearly 4,000,000 lbs. Portugal furnishes 683,000 lbs., Holland 301,000 lbs., and Belgium 231,000 lbs. Of the foreign wool which we have imported, we re-exported, in its unmanufactured state, 4,101,700 lbs. during 1835. And of the total quantity imported in 1835 we retained for manufacture 41,718,514 lbs. This is nearly 1,000,000 lbs. more than was taken up by the manufacturers in the preceding year.

LIST OF BILLS BROUGHT IN.

House of Lords.

June 30. Bill for facilitating the recovery of debts, the relief of debtors willing to make cession of their property for the payment of their debts, the prevention of fraud by debtors, and abolishing imprisonment for debt, except in cases of fraud, by the *Lord Chancellor.*

July 4. Bill for further facilitating the hearing and determining of suits in equity in his Majesty's Court of Exchequer at Westminster, by *Lord Abinger.*

— 13. Bill to secure to his Majesty's subjects the free and quiet enjoyment of property against the claims of the personage for the time being, entitled to the revenues of the Duchy of Cornwall, by the *Lord Chancellor.*

House of Commons.

June 28. Bill to make provision for the better and more expeditious administration of justice in the Stannaries of Cornwall, and for the enlarging the jurisdiction and improving the practice and proceedings in the courts of the said Stannaries.

— 30. Bill for the better regulation of the office of auditor of accounts in the Court of Session in Scotland, and for the appointment of two accountants-general in the said Court.

— Bill to regulate the constitution, jurisdiction, and forms of process of Sheriff Courts, and the civil jurisdiction of Burgh Courts in Scotland.

July 1. Bill to consolidate and amend the several Acts for the uniform valuation of lands and tenements in Ireland, and to incorporate certain detached portions of counties and baronies with those counties and baronies respectively, whereto the same may adjoin, or wherein the same are locally situate.

— 4. Bill to give publicity to the prices of weaving by hand-loom labour.

— Bill to fix the standard qualities of gold and silver plate in Scotland, and to provide for the assaying and marking thereof.

— 6. Bill to continue for one year, and from thence to the end of the then next Session of Parliament, the several Acts relating to the importation and keeping of coins and gunpowder in Ireland.

— Bill to continue in like manner the several Acts for regulating the turnpike roads in Ireland.

— 7. Bill to continue an Act relative to the administration of justice in New South Wales and Van Diemen's Land.

— Bill for granting Admiralty jurisdiction to the Court of Judicature of Prince of Wales's Island, Singapore, and Malacca.

— Bill to continue the provisions of the law relating to insolvent debtors in India.

— Bill to amend an Act passed in the present Session, for consolidating the laws relating to the constabulary force in Ireland.

— 8. Bill for the establishment of a cemetery for the interment of the dead in the southern vicinity of the metropolis.

— Bill for converting the Richmond General Penitentiary into one of the prisons for the county of the city of Dublin, and to amend the law relating to prisons in Ireland.

— Bill to restrain the alienation of corporate property in certain towns in Ireland.

— Bill for carrying into effect the Fourth Report of the Commissioners appointed to consider the state of the

Established Church in England and Wales, with reference to ecclesiastical duties and revenues.

July 8. Bill to transfer the collection and management of the duties, in Great Britain, on horses let for hire, and on licenses relating to the same, from the Commissioners of Stamps and Taxes to the Commissioners of Excise.

— 11. Bill for the more effectual recovery of small debts in the Justice of Peace Courts in Scotland.

— 12. Bill to facilitate the administration of the poor-laws in England and Wales.

— 14. Bill for the regulation of the medical charities supported by county assessment in Ireland.

— Bill to continue an Act relating to the dispatch of business done by the Court of Exchequer in Scotland.

— Bill to repeal so much of the Act 10 Geo. II. c. 28, as provides that no plays shall be acted but in Westminster, or places of his Majesty's residence.

— Bill to consolidate and amend the laws relating to the conveyance of newspapers by the post.

— 15. Bill to authorise the application of highway rates to turnpike-roads in certain cases.

— Bill to amend the law relating to bankrupts.

— 18. Bill for more effectually securing the duty on malt in Ireland.

— 19. Bill to impose countervailing duties of Excise on mixtures, compounds, preparations, and commodities made from or with spirits removed from Ireland to England or Scotland, or from Scotland to England, and to grant countervailing drawbacks on the removal of the same from England to Scotland or Ireland, or from Scotland to Ireland; and to repeal the additional duties of Excise on licenses to retailers of spirits in the United Kingdom, imposed by an Act passed in the 4th and 5th of his present Majesty; and to alter certain provisions in the laws of Excise relating to distillers and retailers of spirits.

— Bill to continue an Act of 10th Geo. IV., for providing for the government of his Majesty's settlements in Western Australia, on the western coast of New Australia.

LIST OF COMMITTEES APPOINTED.

House of Commons.

July 5. Committee to inquire into existing communications between London and Dublin, and to consider what improvement could be made therein.

New Members.

For South Warwickshire, Evelyn John Shirley, Esq., in the room of E. R. C. Sheldon, Esq., deceased. The election was contested, and at the close of the poll the numbers were—E. J. Shirley, Esq., 1873; Sir Grey Skipwith, 1354; majority, 519.

For the county of Merioneth, —— Richards, Esq., in the room of Sir R. W. Vaughan, Bart., accepted Chiltern Hundreds. Election contested: close of the poll—Mr. Richards, 500; Sir W. Wynn, 144; majority, 366.

New Writ Issued.

For Newcastle-upon-Tyne, in the room of Sir M. W. Ridley, Bart., deceased.

MISCELLANEOUS.

Van Diemen's Land.—Dr. Ross's "Hobart Town Almanac" for 1836 contains the following statements:—"The Annual Agricultural Return shows an increase of 3767 acres sown with wheat more than in the former year. At an average produce of twenty bushels to the acre, 674,540 bushels will be reaped during the present harvest. This quantity, after deducting 76,000 bushels for seed at the rate of two bushels per acre for 30,000 acres and 296,000 bushels for the consumption of an average population of the year, of 37,000 inhabitants at the rate of eight bushels per head, will leave upwards of 300,000 bushels for exportation. But taking the average produce at only fifteen bushels, which is the return that some agriculturists calculate upon, only half this quantity will be to spare, as the consumption and seed are to be in like manner deducted from the smaller as the larger quantity. The Table also shows an increase of about 1800 acres in the cultivation of barley, and of 250 of oats. In live stock there is a decrease of 656 horses, which we cannot account for; an increase of more than 8000 cattle, and a decrease of 21,096 sheep, which last may be accounted for from various causes, of which the late establishments on the northern coasts of the Straits are but one of the effects. No return has been received from Circular Head, which is in consequence omitted in the above account."

Comparative Colonial Imports and Exports.—We take the following from Colonel Torrens' work "On Colonization":—

	Population.	Total Exports and Imports.	Per Head.	Imports from United Kingdom.	Per Head.
		£.	£. s. d.	£.	£. s. d.
New South Wales	60,000	968,000	16 0 0	400,000	6 12 8
Van Diemen's Land	30,000	600,000	20 0 0	353,000	11 0 0
Canadas.....	750,000	2,952,000	3 10 0	1,136,000	1 10 0
Nova Scotia	174,000	743,000	4 0 0	311,000	1 15 0
Cape Colony.....	126,000	500,000	4 9 0	281,000	2 0 0
Mauritius	94,000	....	....	148,000	0 11 6
Ceylon	950,000	620,000	0 13 0	28,000	0 0 7

The Cotton Trade.—The following details give a complete view of this great branch of our national industry in 1834:—

1. Cotton wool imported		lbs. 326,875,425
2. Value at 8*d.* per lb. average		£ 10,895,847
3. Number of spinning and weaving mills		1,200
4. Number of spindles used in spinning		10,041,000
5. Number of power-looms		100,000
6. Amount of capital invested, viz.—		
Of fixed capital	£17,000,000	
Of floating capital	17,000,000	
Total capital		£ 34,000,000
7. Wages paid to factory operatives		£ 6,044,000
hand-loom weavers		4,375,000
calico printers		1,170,000
lace-workers		1,000,000
makers of cotton hosiery		505,000
bleachers, dyers, fustian-cutters, tools, &c.		4,000,000
Total wages		£ 17,094,000
8. Total value of manufactured cotton goods		£34,825,586
9. Home consumption	£14,312,000	
Foreign consumption	20,513,000	
10. Quantity—white or plain cottons		yds. 283,950,180
printed or dyed		yds. 271,755,651
twist and yarn		lbs. 76,478,468
11. Number of persons employed, viz.—		
Factory operatives		237,000
Hand-loom weavers		250,000
Calico printers		45,000
Lace-makers		159,300
Makers of cotton hosiery		33,000
Bleachers, fustian-cutters, tool and machine makers, &c.		100,000
Total number		824,300

Provincial Newspapers (England).—With the exception of two or three newspapers, almost exclusively devoted to commercial matters, each of the provincial journals now sustains a political character. Of the 175 newspapers published out of London (excluding those published in Wales), 100 are of Liberal politics, and 75 advocate the principles of the Tory party. There are sixty journals, which have an average circulation of 1000 and upwards per week—namely, 37* Liberal journals and 23 Tory journals. The aggregate circulation of the 37 Liberal papers is 72,193 per week, which gives an average weekly circulation of 1951 to each: the aggregate circulation of the 23 Tory papers is 31,606 per week, or 1374 per

* The "Hereford Times" should, we believe, be included in the list of Liberal papers which have a weekly circulation of 1000 and upwards per week; but although in that paper for June 11 its circulation is stated to be grossly misstated in the Parliamentary Return, no information is given as to the number of stamps actually consumed within the period which the Return comprises.

week, taking the average of each paper. Of the papers which have a weekly circulation exceeding

3000, there are	4	Liberal—	0	Tory.
2000, and under 3000	8	„	2	„
1500, and under 2000	8	„	6	„
1200, and under 1500	11	„	6	„
1000, and under 1200	6	„	9	„

The following table of the proportion per cent. of the Tory to the Liberal papers,—first, as to the aggregate number of each, and afterwards of those which have a circulation of 1000 and upwards per week of papers, and the aggregate circulation of this rank shews, in the case of the Tory journals, a decline from 75 to 43¼ per cent.:—

	Liberal.	Tory.
Proportion, taking the aggregate of the provincial papers . . (per cent.)	100	75
Proportion of papers having a weekly circulation of 1000 . . .	100	62
Proportion of the aggregate circulation of papers circulating 1000 and upwards weekly	100	43¼

The following list of the papers which enjoy a circulation of 1000 per week, having undergone corrections from various sources, including the "Supplementary Return of Newspaper Stamps," ordered to be printed by the House of Commons, for the purpose of amending the previous Return, is, we have reason to believe, worthy of confidence:—

CHRONICLE OF OCCURRENCES.

July 2. The annual distribution of prizes and certificates of honour took place in the Theatre of the London University; the Right Hon. the Chancellor of the Exchequer in the chair. The annual report which was read to the meeting was very satisfactory. After Mr. Spring Rice had distributed the prizes, he expressed the great satisfaction which he felt in

presiding on so interesting an occasion. He said he hoped that, in a week or a fortnight, the London University would have not only the honour of communicating knowledge, but the privilege of bestowing all those badges or symbols of knowledge which other Universities can confer. And he must be allowed to say, that when he had first had the honour of meeting with the Professors and Council on the subject of conferring degrees, they said, "Let there be the fullest competition;" for they were satisfied they had nothing to fear from the competition of other institutions. It was delightful to him to see this recognition of a principle of liberality on the part of those connected with the London University; but he was not surprised, for that was the principle on which the institution was based. It had afforded him great satisfaction to witness at the late examinations of the University of Cambridge—a University with which he was intimately connected—so many of those who had studied at this institution distinguishing themselves. There was one who had so distinguished himself as to receive the fourth honour—received it, did he say? he did not receive it, though he had earned it, and it was awarded to him. There was a bar when he advanced to the table—he was a Dissenter.

July 5. The usual form of nomination of the Bishop of Bristol to the See of Ely, and of Dr. Butler, to that of Lichfield and Coventry, appeared in the Gazette.

— 6. In a letter to Mr. Barrett, proprietor of the *Dublin Pilot*, Mr. O'Connell developed the plan for "The General Association of Ireland." Its objects are—1. To procure by law a complete municipal reform in Ireland, on as large and effectual a basis as that originally proposed by the ministry. 2. To secure by law such a settlement of the tithe question as shall be fully satisfactory to the people of Ireland. The association to stand absolutely dissolved the moment these two objects are attained; and during its existence it is to be supported by a rent, on the same basis as the Catholic rent. Mr. O'Connell, about the same period, addressed a letter to the Irish people, in which he made the following declaration respecting the objects of the reformers:—"1. To rally all our exertions for the support of the King's Government. The safety of Ireland—of the lives and properties of all classes in Ireland—its freedom from the horrors of anarchy and a servile war,—all depends on the stability of the present Ministry. Let us, then, rally round the government of Lord Melbourne, and give it all the aid we can in and out of Parliament. Heart and hand let us and Lord Mulgrave in Ireland. 2. Our second duty is to exert all the influence we possess to preserve the internal peace of Ireland—to prevent or to suppress agrarian outrages of every description—to advise, control, and protect the people—to protect them from their own natural resentments, as well as from the insidious, equally with the open machinations of their enemies. 3. The third and chiefest, because the best instrument of the other two, is the immediate formation of an active society, to regulate all legal and constitutional exertions in the paths of peace and with the fervour of freedom—a body free from any legal objection or any moral reproach." In a letter addressed to the newly-constituted association, Mr. O'Connell says,—"Meet weekly; digest in committees every point upon which honest men may differ. Let every man be disposed to yield to others equally honest with himself, everything but principle. Harmony, union, exertion, perpetual, unremitting exertion."

— 14. At a special meeting of the Protestant Association, held at Exeter Hall, the Rev. Robert M'Ghee read long extracts from a pamphlet purporting to be a translation of "A Letter of our Most Holy Father, by Divine Providence, Pope Gregory XVI., to the Archbishops and Bishops of Ireland." The two principal subjects to which the letter referred were the national schools, and the conduct to be pursued by the Bishops. The Rev. Gentleman made comments on the conduct of the Catholic hierarchy as he proceeded: and great excitement was occasioned in the meeting by the apparent disclosures of the policy of the Church of Rome which the pamphlet revealed. The following day Mr. M'Ghee addressed a letter to the journals, stating that the pamphlet was discovered to have been a fabrication.

— 15. Earl Mulgrave, who is making a tour in the south of Ireland, has been everywhere received with the strongest demonstrations of attachment and respect. The inhabitants of the town and neighbourhood of Mallow presented an address to his Lordship, which contained the following passages:—

MALLOW ADDRESS.

"We stand before you in numbers amounting to many thousands, and the greater part of us, even ourselves, as having belonged to that political party in this country who advocated the repeal of the Legislative Union between Great Britain and Ireland, in the eager pursuit of which we dismissed, or aided in dismissing, from the representation of this great county and borough in Parliament, individuals who, on the other public questions, were entitled to our respect and confidence. As Irishmen, the love of our country is paramount in our breasts; and we could not behold, without grief and indignation, the wide-spread poverty, discontent, and misery, the effects of long-established oppression and misrule, which have afflicted the land. We thought that the only remedy that could be devised for such evils was a recurrence to a domestic legislature, when the laws would emanate from our countrymen under the control of the opinions and feelings prevailing in Ireland. But the experience we have had of your Excellency's wise, just, and paternal government, carrying into effect the liberal and enlightened principles of his Majesty's present advisers, has taught us otherwise, and we now acknowledge that English statesmen, sent by and representing fairly the people of England, would do full and ample justice to this long-afflicted country. Such a statesman we feel we have in the person of your Excellency, worthy your great station, and representing fully its generosity, its dauntless spirit, its wide grasp of intellect, the kindly sympathies of the heart, and all the other qualities which dignify and ennoble the name and nature of man. From the hope that we entertain, and on the condition that the principles indicated by your Excellency's government will be carried into effect—namely, of having the inhabitants of this country rank in the eye of the law on terms of perfect equality with the British people, we tender to your Excellency our solemn abjuration of the question of the repeal of the Legislative Union, and of every other question calculated to produce an alienation of feeling between the inhabitants of Great Britain and those of Ireland. We seek for equality with the British people, common interests, and reciprocity of benefits, and to be legislated for as a part of Great Britain: with less we can never be content."

July 17. Gratifying accounts have been received from Ireland respecting the general lightness of the calendar in the respective Circuit Courts of Assize. At Drogheda, Chief Justice Bushe expressed his satisfaction at this improved state of society. At Athy, Judge Johnston said that the light state of the calendar called for no observation from him. At Dundalk, the Chief Baron Joy congratulated the Grand Jury on the unparalleled lightness of the calendar. At Ennis, Baron Foster said to the Grand Jury, that he was happy to have it in his power to congratulate them on the great diminution of crime which had taken place in the county, compared with former periods. In Wexford, Baron Pennefather briefly addressed the jury:—He was happy to inform them that little was to be done in the criminal department of their duties, and if the calendar faithfully represented the state of the county, it afforded him matter of congratulation, for it was really surprising to see a county of such extent so free from crime. In Waterford, the total number on the calendar of the county is ten. In the city of Waterford there are only two female prisoners for trial. In the city of Limerick, Baron Foster, in his address to the Grand Jury, said,—"I am happy to inform you that the calendar is exceedingly light." In the county of Limerick, Judge Perrin said that the reduced state of the present calendar, as compared with the last, was evidence of the peaceful state of the county. At Carlow, Baron Smith, alluding to the state of the calendar, said,—"I congratulate you on the prospect of its being light; for the lightness of a calendar is, in general, a proper subject of congratulation, though unfortunately there may be, as there have been, times and circumstances where this lightness will not indicate the absence of offence, but the prevalence of intimidation, confederacy, and connivance. I hope this is not the case in the county in which I am."

This day is published in 8vo., price 1s.

PAPERS RELATING to the ECCLESIASTICAL ESTABLISHMENT of PRUSSIA.

London: CHARLES KNIGHT and Co. 22, Ludgate-street.

This Day is published, in fcp 8vo., price 6*s*,

THE BOOK of TABLE-TALK, Vol. II., illustrated with many Wood cuts.

"I love anecdotes. I fancy mankind may come, in time, to write all aphoristically, except in narrative; grow weary of preparation, and connexion, and illustration, and all those arts by which a big book is made. If a man is to wait till he weaves anecdotes into a system, we may be long in getting them, and get but few in comparison of what we might get."—*Dr. Johnson (Boswell's Tour.)*

Vol I was published on the 1st of June, price 6*s.*

London CHARLES KNIGHT & Co., 22, Ludgate-street.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

This day is published, in 2 vols., post 8vo, illustrated with Wood-cuts, price One Guinea,

THE CHINESE: A General Description of the Empire of China and its inhabitants. By JOHN FRANCIS DAVIS, Esq., F.R.S., late his Majesty's Chief Superintendent in China.

"In Mr. Davis's account of China we find every subject brought forward that can throw light on the laws and institutions of a people to whom, we think, that justice has not been rendered by foreigners, which is then due. Mr Davis brings to his task advantages which have fallen to the lot of few Europeans. He resided twenty years at Canton, where he at length rose to be chief of the factory; he accompanied Lord Amherst's embassy to Pekin; and he ranks as one of the few Europeans who have ever really mastered the language and literature of China. He has rendered into English several pieces from their romances, their poetry, and their dramatic works; of which last class, in all tongues, but more especially in the unique tongue of China, it is particularly difficult to preserve the spirit in a translation. We have a right, therefore, to consider the statements which he has now submitted to the public as containing as full and correct a view of this singular people, of their government, laws, and institutions—and, in short, of the whole frame of their society, as the many difficulties with which the subject is beset, will admit."—*Quarterly Review, June*, 1836.

Gentlemen requiring Outfits, on a comparison with the Style, Qualities, and Prices of other Houses, will prove the advantages to be derived from giving them Orders to

E. P. DOUDNEY and SON, 49, Lombard-street.

Established Fifty Years.

METROPOLITAN BRITISH & FOREIGN CLOTHING ESTABLISHMENT,

LONDON. **97,** FLEET-ST.

GEORGE DAVIES' HOUDNEY.

In remarking on his
FIRST-RATE QUALITIES,
G. D. D. respectfully addresses Gentlemen who have hitherto found it necessary to pay extravagantly high prices for really First-rate Clothes; to such he guarantees a **DRESS COAT** of any colour—as stylish in make, as tasteful and talented in cut, and as good in quality, as any bearing the names of the most expensive and favourite Fashionable Houses, for.....£3 0
Surtouts, including, of course, Silk linings 3 10
Black and Blue, 10s. extra on each
Buckskin Trousers, on G. D. D.'s new principles of Measurement, 1 8
Waistcoats 14
Ladies' Riding Habits..... 6 6
These will be found of that character which has raised this Establishment to such eminence in the estimation of the higher circles, where nothing short of **easy gentlemanly elegance** could be tolerated.

THE SECOND-RATE QUALITIES
Are especially recommended for Business and Travelling Clothes; also, to the **ECONOMIST** they are found preferable to the first on account of their Superior Durability, while in appearance none but the Connoisseur could discover a difference, excepting by comparison, in short, they are frequently substituted at other Houses for the Best. The Prices are, for **DRESS COATS,** of any colour (Style and Fit First-rate) £2 5
Surtouts, including Silk linings, 2 10
Black or Blue, 5s. each extra
Trousers 1 1
Waistcoats 10
The Army Blue Spanish Cloak, forming a circle of 9 yards round the bottom—the best Travelling Cloak that is made 2 10
A good Cloth ditto, with Fur Collar, and Cape—9 yds round 3 3
Milled Petersham Great Coat.. 2 2

CONTRACTS FOR FIRST-QUALITY CLOTHES
As generally adopted, are objectionable, because they confine Gentlemen to one particular Dress, or subject them to considerable Extra Charges: G. D. D.'s system removes this difficulty by leaving at the option of the Customer what he chooses to wear, whether Surtouts or Dress Coats, either Coloured or Black, his Prices, including all extras (excepting Velvet Collars), being for
Two Suits per Annum.....£10 0
Three ditto ditto 14 18
Four ditto ditto 19 12
and so on in proportion to the number of Suits. Each Suit to be returned on the delivery of its successor Gentlemen who take three or more Suits per Annum are allowed two Suits in wear during the whole term, thus in a contract for three Suits a Dress Suit and an Undress Suit are supplied together. The Dress Suit to be kept for twelve months, and, at the expiration of six months, the Undress Suit is returned, and another supplied to continue to the end of the term, the contract amount for each Suit being paid on delivery. Contracts for the second quality would be much lower.

A Suit of First-rate Liveries..... £3 18 6
For **WASHING TROUSERS** and **WAISTCOATS** definite prices cannot be stated, on account of the variety of Materials, but a very superior article for **SUMMER TROUSERS** are charged **10s.** per pair, and **WAISTCOATS, 6s.** each.

G. D. D respectfully informs **COUNTRY GENTLEMEN,** that, on account of the numerous invitations he has received to make Periodical Circuits through England, his Traveller will wait on them occasionally, or will proceed direct to any part where three or more Gents. (according to the distance) favour him with their Addresses.

THE FIRST HOUSE IN ENGLAND FOR DRESS WAISTCOATS.

PLATE GLASS.

CARVING and GILDING, CHAIRS and CABINET

WORK, CARPETING, UPHOLSTERY, and INTERIOR DECORATIONS in the present improved style, on terms which fear no competition, at HENRY L. COOPER'S Old Establishments for Superior Furniture Looking Glasses of a quality that cannot be excelled. For a more detailed enumeration of the Articles connected with the Manufactory, and a Tariff of Plate Glass for Windows, &c., *vide* Advertisements in the Magazines and Newspapers for 1835 and 1836

93, Bishopsgate-street Within. Western Branch, 57, Conduit-street, nine doors from Regent-street, left-hand side

H. L. C. begs respectfully to solicit particular attention to the address.

USEFUL INVENTIONS.

KNIGHT'S PATENT BACK-SPRING PEN.

This Pen, by its lunge-like elasticity behind the axis, allows the distance between the nibs and writer's fingers to vary with the pressure of the hand, becoming thereby more pleasingly soft and yielding, and easier to write with than even a Quill Pen, and giving to the running-hand the clearness, uniformity, and beauty of slow careful writing with any other pen.

It has in itself a degree of the longitudinal elasticity of KNIGHT'S SPRING PEN HOLDER, patented with it, and issued before it a year ago, for all other Pens. The number of attempts made to copy and approximate to it, distant as they all are, since the specification was enrolled, proves how important the Makers have deemed the new principle.

Each Pen is marked "C. KNIGHT'S PATENT," and each Card bears the Signature, *Charles Knight.*

Twelve Pens, with Holder, 2s. 6d.

KNIGHT'S PATENT SPRING PEN-HOLDER.

The use of Metallic Pens in this country has become so general that an invention which corrects their defects, and remarkably improves their usefulness, cannot be regarded as unimportant.

The new PATENT SPRING PEN-HOLDER, while it renders the act of writing itself easier with any pen, LEAVES TO THE METALLIC PEN ALL ITS ADVANTAGES OVER THE QUILL, AND ENTIRELY OBVIATES THE DISADVANTAGES. By allowing the length of what may be called the axis of the Pen, or the distance between the nibs and the writer's fingers, to vary according to the pressure made, the hand may descend considerably without making the pen scratch the paper, and rise without causing the pen to leave it. The freedom of motion thus attained produces these effects:—

1. The difficulty of writing with the common Steel Pen at once ceases when the pen is united with the Patent Spring Holder. 2. The fatigue is prevented. 3. The slowness is replaced by rapidity.

The elasticity of the Holder is regulated by a screw, so that every writer is enabled to adjust it to his own habit or fancy.

The instrument is not in the least complicated, and not liable to be out of order.

It may be used with any of the numerous descriptions of Metallic Pens now made.

It is of inexpensive construction, so that it may be attained at small cost by the thousands of persons who now use Steel Pens.

The Patent Spring Pen-Holder is issued in cases, adapted for the waistcoat pocket, with directions for use, signed by C. Knight on each, at the following prices:

In ALBATA, for any pen, 2s.
Ditto, superior quality, 2s. 6d.
In ALBATA, for SHORT pen, with four pens, 3s.
In SILVER, EBONY Handle, for SHORT pen, with four pens, 6s.
In SILVER, IVORY Handle, for SHORT pen, with four pens, 7s.

Booksellers, Stationers, and Jewellers may be supplied wholesale, on application to Messrs. Knight and Co., 22, Ludgate Street, or through the agents for the sale of their Publications.

THE PATENT LEAF HOLDER.

By the means of a little instrument attached to the back of a Portfolio, as few as two or three, or as many as forty or fifty sheets, may be held tightly together as if they were bound, the volume thus seemed opening with as much ease as a sewed book. The compression can be immediately withdrawn, and the number or numbers added or subtracted without the slightest difficulty. The principle is, of course, equally applicable to music, prints, and manuscripts. A Patent has been taken out for this invention, and the Portfolios, with leather backs and cloth sides, may now be had of the following sizes, and at the affixed retail prices:—

	Iron Holder.	Brass Holder.
	s. d.	s. d.
Demy Octavo, for the Mirror, and similar Publications, Pamphlets, &c.	3 6	
Post Quarto, for Letters		4 6

THE SHUTTING OF THE COMMONS' GALLERY IN FORMER TIMES—ADMISSION OF LADIES.

SINCE our last notice upon this subject, the attention of the House has been called by more than one Member to the operation of the new rule, and to the necessity of a revision and alteration of it. It appears that since it has come into operation the Gallery has scarcely ever been half filled. Can any better proof be desired that the rule works as ill as possible—that instead of affording a freer admission to the public than they had previously enjoyed, it acts decidedly as a bar and an exclusion? It ought to have been clear from the first that this would be its effect; but the experiment that has been made has now put the matter beyond doubt or controversy. Of all that portion of the public to whom the Gallery was formerly open, one-half at least, it appears, now find its doors shut upon them; and could it have turned out otherwise? Formerly all persons were admissible who could either obtain a Member's order, or chose to pay their half-crown; the right, we were going to say, is now restricted to the holders of orders, but in fact there is now no right of admission; that is wholly taken away; it has been made a mere affair of favour and nomination according to the partialities or caprice of Members. It is of no consequence to tell us that, strictly speaking, the public never have possessed any right of admission to the debates—that it was always in the power of a single Member to clear the Gallery whenever he chose, by merely calling attention to the Standing Order against the presence of strangers. This was the mere theory of the law; practically, the right of admission did exist, and the whole public were in the full enjoyment of it. The power which a Member possessed of clearing the Gallery amounted merely, if he was not supported by the majority, to a power of stopping the business of the House; it was a power which he could exercise in various other ways. But no Member had then a power of, at his pleasure, admitting one man, and shutting the door upon another; nay, the whole House had no such power, or never, at least, in a single instance exercised it. That assumption has been reserved for the Session which has just expired. But it is, we apprehend, too late in the day for the success of such a scheme. The public will not endure from a reformed House of Commons what it certainly would not have patiently submitted to, if attempted by any Parliament which has sat for the last fifty years.

Ever since a general interest has been taken in the proceedings of Parliament, the free admission of the public to the gallery may almost be said to have come to be considered as essential to the utility of the House of Commons. Even the power of occasionally clearing the gallery, which any Member may exert by calling attention to the Standing Order, has for many years past been very rarely resorted to. If it were now attempted to be put in force, except in very extraordinary circumstances indeed, the attempt would certainly be met by the most pertinacious and determined exercise of the right of dividing the House on ever so many successive motions of adjournment, which also belongs to every Member. But nearly all Members now feel that, to carry on the debates with the gallery shut; would be very nearly the same thing as for the House not to meet at all.

For some years, however, after the great constitutional victory was gained which established the right of the publishers of newspapers to report the debates day by day as they occurred, or at least left them in unassailed and unassailable possession of that privilege, the shutting of the Gallery was very frequently resorted to, the public being sometimes excluded for a whole Session. The contest on the reporting of the debates by the newspapers took place in March 1771 (See "Companion," No. 2, p. 19, and No. 36, p. 533). Under date of the 9th of March, when there was a debate on a subject that greatly interested the public—the Royal Marriage Bill—we find it noted in the Parliamentary History, that "no persons were admitted into the House of Commons this day but Members; the Gallery-door was locked, and notwithstanding several noblemen made application for admittance, they could not obtain it."

Again, on the 14th of March, 1774, when the famous Boston Port Bill was introduced by Lord North, we find the following scene recorded to have taken place:—"The Order of the Day being called for, the House was silent for a few minutes, when Mr. Cornwall rose, and moved that the Gallery be cleared. This occasioned a vehement debate. Colonel Barré said that if the motion was insisted on, the ladies would be obliged to withdraw. Mr. C. Fox was of the same opinion. Mr. Grenville remarked that it was easily seen from what quarter the present motion originated, as he could perceive that applications had been making ever since the House met, for the purpose now intended to be carried into execution, though the authors did not choose to appear publicly in it themselves. The majority of the House did not seem to approve of the motion when it was first made; but the interference of the Speaker at length turned the scale, and not only the Gallery, but all the rooms and avenues leading to it, were cleared about four o'clock." This instance is remarkable, as one in which the motion to clear the Gallery appears to have been made the subject of a debate. It is to be observed, however, that the Standing Order was eventually enforced by the authority of the Speaker, without any vote of the House. The modern practice, we believe, has been for the Gallery to be cleared at once as a matter of course, on a Member merely noticing that strangers were present. Afterwards we find it

[Printed by WILLIAM CLOWES and SONS, Stamford Street.]

noted that the Standing Order for the exclusion of strangers was strictly enforced during the progress of the three coercive measures—the Boston Port Bill, the Massachusetts Government Bill, and the Massachusetts Administration of Justice Bill, with which Lord North at that time thought to put down the American Insurrection.

A curious notice occurs under date of the 16th November, 1775, the day on which Mr. Burke explained the provisions of his Bill for composing the troubles in America. "No Englishman," says the 'Morning Chronicle,' "except the Members, was admitted during this debate; the only strangers in the Gallery were four women of quality, and a few foreigners." The debate, which terminated in the rejection of the motion for leave to bring in the Bill by a majority of 210 to 105, lasted till four o'clock in the morning. The Standing Order for the exclusion of strangers is also stated to have been strictly enforced on the preceding 22nd of March, the day on which Burke delivered his great speech (afterwards published) in introducing his Resolutions for conciliation with America. Accordingly, no report of that debate has been preserved. Another occasion on which the public were prevented in the same manner from hearing the eloquence of that great orator, was on the 6th of February, 1778, when he made his motion on the employment of the Indians in the American war. "He introduced the motion," says Mr. Prior ('Memoir of Burke') "by a speech three hours and a half long, which excited not only extraordinary testimonies of admiration, but was considered by all who heard him the very best he had ever delivered. . . . Strangers being excluded from the gallery, no tolerable report, or even abstract of it, has ever been published, or perhaps preserved . . . Heated by the powers of the speaker, Colonel Barré, in a fit of enthusiasm, offered [proposed!] to nail up the speech, if published, on every church-door in the kingdom, by the side of the proclamation for a general fast. Governor Johnstone thought it fortunate for the two Noble Lords (North and George Germaine) that there were no strangers present, or their enthusiasm and indignation would have excited the people to tear them to pieces on their way from the House. Sir George Savile said to many of his friends—'he who did not hear that speech has not witnessed the greatest triumph of eloquence within memory.'"

At this time, as may be gathered from some of the above notices, it was common for ladies to attend in the gallery. In a former paper (see 'Companion,' No. 1, p. 3,) we gave from Hatsell's Precedents, an abstract of the description given by that writer, who was himself present, of the extraordinary scene that took place on the last occasion on which ladies were admitted. Hatsell does not mention the day or even the year when the affair happened; but it appears to have been on the 2nd of February, 1778, on which day Mr. Fox was to make a motion, which had excited much interest, on the state of the army. "This day," says the 'London Chronicle,' "a vast multitude assembled in the lobby and environs of the House of Commons, but not being able to gain admission by either entreaty or interest, they forced their way into the gallery in spite of the door-keepers. The House considered the intrusion in a heinous light, and a motion was directly made for clearing the gallery. A partial clearing only took place; the gentlemen were obliged to withdraw; the ladies, through complaisance, were suffered to remain; but Governor Johnstone observed, that if the motive for clearing the House was a supposed propriety, to keep the state of the nation concealed from our enemies, he saw no reason to indulge the ladies so far as to make them acquainted with the arcana of the State, as he did not think them more capable of keeping secrets than the men; upon which they were likewise ordered to leave the House. The Duchess of Devonshire, Lady Norton, and nearly sixty other ladies, were obliged to obey the mandate." It is worth remarking, as an illustration of the natural effect of shutting the gallery, that on this occasion, notwithstanding the great public expectation, and the full House that had assembled (424 Members voted) no debate ensued, nor was the smallest reply made to Mr. Fox's speech. "Since that time," says Hatsell, "ladies, many of the highest rank, have made several powerful efforts to be again admitted. But Mr. Cornwall and Mr. Addington have as constantly declined to permit them to come in. Indeed, was this privilege allowed to any one individual, however high her rank, or respectable her character and manners, the galleries must be soon opened to all women, who from curiosity, amusement, or any other motive, wish to hear the debates. And this, to the exclusion of many young men, and of merchants and others, whose commercial interests render their attendance necessary to them, and of real use and importance to the public."

This remarkable occurrence, had it been recollected when the debate took place the other day on the proposed re-admission of ladies to the Gallery, might have been brought forward with effect in aid of the argument by which the motion was resisted. But it seemed to be forgotten on both sides of the House, that the admission of ladies had ever been the practice in former times. They appear, however, to have occasionally found their way into the Gallery from a very early period. The following notice occurs in Grey's Debates under date of 1st June, 1675:—"Some ladies were in the Gallery peeping over the gentlemen's shoulders. The Speaker spying them, called out,—What borough do those ladies serve for? To which Sir William Coventry replied,—They serve for the Speaker's chamber. Sir Thomas Littleton said,—Perhaps the Speaker may mistake them for gentlemen with fine sleeves dressed like ladies. Says the Speaker,—I am sure I saw petticoats." It would seem, therefore, that at this time their intrusion was only connived at, and when present they were generally obliged to keep out of sight. Afterwards, however, they were in the habit of attending openly, and used to come down in formidable numbers on all occasions of interest. Thus, on occasion of the prolonged discussions that took place on the 13th and 14th of February, 1764, on the subject of the seizure of Wilkes, by a general warrant of the Secretary of State, when the House sat for eleven hours on the one day, and for the unprecedented space of seventeen the next, we are informed by Horace Walpole in a letter to Lord Hertford, that several ladies stand out the whole. (See "Companion," No. 28, p. 342). He mentions Lady Rockingham and Lady Sondes as having remained the whole of both days; and Lady Sondes's sister, Miss Mary Pelham, Mrs. Fitzroy, and the Duchess of Richmond, as having been present all the time on the second. These seem to have been all opposition ladies. It is added that Lady Mary Coke, Mrs. George Pitt, and Lady Pembroke came after the Opera on the second day, but did not stay above seven or eight hours. The Earl of Pembroke, Lady Pembroke's husband, was appointed to a regiment from which General Conway was dismissed for his vote this very night. The House having sat till half-past seven in the morning of the 15th then divided on the question of adjourning the debate, when the proposal to adjourn was still resisted by 184 Honourable Members, whom, it would appear, no length of oratory could tire out. The motion, however, was carried. On Friday another long debate took place, and the House did not divide till five o'clock on Saturday morning. In narrating the events of this last

day, Walpole says, "The Duchess of Richmond has got a fever with the attendance of Tuesday; but on Friday we were forced to be unpolite. The Amazons came down in such squadrons, that we were forced to be denied. However, eight or nine of the patriotesses dined in one of the Speaker's rooms, and stayed there till twelve,—nay, worse; while their dear country was at stake, I am afraid they were playing at loo!" It would seem, from the allusion in the passage quoted above from Grey, that the practice of the ladies waiting to hear the result of the division in one of the Speaker's rooms was of considerable antiquity. On the occasion commemorated by Walpole, the fair oppositionists, or patriotesses, as he designates them, were disappointed of their anticipated victory over the Ministry after all. Walpole, who was himself on the same side, tells us that when the House proceeded to divide, it was decided by the Speaker that the ministerial party should go forth, according to the common practice of the probable minority being sent to the Lobby. He attributes this decision of the Speaker to the deeper sound made by the call of No, which was that of the opposition, than that of the softer monosyllable Aye admits of. "When I heard our side (he continues) counted to the amount of 218, I did conclude we were victorious; but they returned 232".

During a considerable part of Lord North's administration the Gallery seems to have been opened on some days and shut on others, very much at the discretion of the Speaker; who, upon whatever principle he may have acted in the matter, was naturally enough suspected to have sometimes been guided in the exercise of his authority by a hint from the Premier. A circumstance, however, which for some time was made a pretext for the exclusion of all strangers from the debates in the Commons, was a quarrel between the two Houses, from the history of which some curious particulars may be gathered.

It began on the 10th of December, 1770. On that day, in the House of Lords, the Duke of Manchester was inveighing with great animation against the misconduct of Ministers in neglecting the proper maintenance of the naval force of the country, when, on his proceeding to specify instances in support of his charge, he was suddenly interrupted by Earl Gower, who then held the office of Lord President of the Council. His Lordship, according to an account given in the "London Museum," "desired that the House might be cleared of all but those who had a right to sit there. He observed that, when motions were brought on by surprise, and the Members of that House had no previous notice to enable them to guess at what they might consist of, and when upon those motions such things came out as ought not to be publicly divulged, no persons but Peers should hear them; as, in a House so crowded as the present, there might be emissaries from the Court of Spain and other Powers. And, indeed, another reason why the House ought to be cleared was, that persons were admitted who took notes of what had passed; as was evident from a speech made by a Noble Lord, which his Lordship declared he had at that time in his pocket in print." It was just about this time that the practice of reporting debates in the daily newspapers began. (See "Companion," No. II., p. 19) It was objected by the Duke of Richmond, in a short speech, that it was irregular to move to clear the House while a Peer was speaking; but on this, the account proceeds, "immediately a violent outcry arose, and all became clamour and confusion. 'Clear the House! Clear the House!' was echoed from side to side. The Duke of Richmond's voice was drowned in the clamour. Lord Chatham, shocked at the indecency of such proceedings, arose, hoping that his age, his services, his abilities, would enforce attention—but in vain." His Lordship continued speaking, without being heard, for some time: at last he left the House, and about fifteen Lords followed his example. "No sooner," continues the narrative, "were these Noble Persons retired, than, as if the design of the Ministry had been to tell the world that the presence of those Members was the only check that controlled them from the most violent absurdities, they insisted on the Members of the House of Commons being turned out. In the crowd some of the Members of the House of Commons represented that they were in the act of their duty, attending with a Bill. They were, however, forced to withdraw till the Message was delivered, and then they attended their Bill in a pretty large body. They had no sooner delivered the Bill than the outcry begun again; time was not given them to see whether they would return or not of their own accord, but they were, in an unprecedented manner, hooted out of the House." A strong protest against this extraordinary proceeding was forthwith entered on the Journals, to which were appended the names of the Duke of Richmond, the Marquess of Rockingham, the Earl of Chatham, and thirteen other Peers; but a Resolution was notwithstanding carried, "That the Lord on the Woolsack be desired to give strict orders to the officers of this House that no person be permitted to be in any part of the House, during the sitting thereof, except such who have a right to be in the House according to the Standing Orders."

The matter, as might have been expected, was immediately taken up with great warmth in the House of Commons. The House was in a Committee on the Ordnance Estimates, when the debate was suddenly interrupted by Mr. George Onslow, who had been one of the Members just turned out of the House of Lords. "As soon as he had taken his seat," says the account in the 'Parliamentary History,' "he rose and said,—'Sir, I have a motion to make, and, I dare say, every gentleman will be convinced of the propriety of it—which is, that the House be cleared immediately; nay, I insist upon it, as a circumstance has happened to me within these five minutes which makes it necessary. I desire, Sir, the House to be cleared—*Peers and all!*'" The clearing of the House was opposed by Mr. Burke and a majority of the Members; but it took place at last, though it was not effected without great difficulty. The House was cleared at ten minutes past four: the Dukes of Richmond, Manchester, Bolton, and Portland, the Marquess of Rockingham, Earl Fitzwilliam, and other Peers, being among the persons compelled to retire.

An animated debate then arose, it having been immediately agreed, on the motion of Mr. Dempster, that the Committee should break up, and the Speaker resume the Chair. Lord North himself, and all the other Members who spoke, condemned the conduct of the Lords in the strongest terms. The only difference of opinion was, as to whether the House should content itself with the measure of retaliation it had already adopted, or, as proposed by Mr. Dunning, appoint a Committee to inspect the Journals of the Lords, as to what proceedings and Resolutions were therein, with relation to the not permitting any persons to be present, in any part of their House, during the sitting thereof. It was not denied that the Lords had the right of clearing their House at their pleasure, whatever might be thought of the manner in which they had exercised it on this occasion; and Lord North's motion for an adjournment was eventually carried by a majority of 48 to 27.

On the 13th the subject appears to have been again brought forward, in a motion "That a Conference be desired with the Lords, upon a matter highly concern-

ing the good correspondence between the two Houses of Parliament, and the mutual civility usually shewn by each House to the Members of the other House;" but the motion was negatived, on a division, by a majority of 77 to 42. On the 14th it was moved, by Lord George Germaine, "That the Speaker do write to such eldest sons, and heirs-apparent of Peers, King's Sergeants, and Masters in Chancery, as are Members of this House, and to the Attorney and Solicitor-General, and request them to attend in their places, every day, at two of the clock, and to assist in carrying Bills to the Lords." The object of this motion seems to have been to relieve all the Members of the House from the duty of going up with Bills, except those who were not prohibited from being present at the sittings of the House of Lords by the Standing Orders of that House. On a division, the motion was negatived by a majority of 104 to 38. So, also, was another, by nearly the same numbers, which was immediately after proposed by Lord George Cavendish, "That no Member of this House shall go into the House of Lords while that House, or any Committee of the whole House, is sitting there, without the leave of this House." "Lord George Cavendish," the account adds, "and Sir George Savile, both declared that they would not go up to the Lords with any Bills, even though they might relate to the county and town they had the honour to represent."

In this state matters seem to have continued throughout the Session, which terminated on the 8th of May. Meanwhile much of the time of the Commons had been occupied in their famous contest with the newspapers, on the subject of the right of the latter to report the debates, which terminated in the signal defeat of the House.—(See "Companion," No. II., pp. 19, 20, and No. XXXVI., pp. 533, 534). It is remarkable that the Lords seem to have taken no part in this attempt to restrain the press. Their non-interference is probably to be attributed to the peculiar position in which the two Houses stood in relation to each other at the moment. If this was the case, we may, after all, be indebted to the violent exclusion of the public from their House, by the Lords, for an earlier enjoyment than we should otherwise have had of a much more important privilege than that of merely being present at the debates in either House. The Commons, no doubt, must have felt themselves considerably weakened and embarrassed, in the battle they were fighting, by the Lords, who were equally interested in the matter with themselves, and were therefore peculiarly in such a case their natural allies, thus standing aloof, and giving them no sign of support or concurrence.

When Parliament met again, towards the end of January, 1772, the ill-humour between the two Houses appears to have been still as strong as ever. We find it breaking out in a new form on the 1st of April, when some Bills having been brought down to the Commons from the Lords by only one Master in Chancery, attended by the Clerk-Assistant of the Upper House, it was immediately moved and agreed to, first, "That the Speaker do not report the said Message to the House;" and, then, "That a Committee be appointed to examine into the precedents with respect to the Messengers by whom Messages have been brought from the Lords to this House; and to report the same to the House, with what proceedings have been had thereupon." It was also ordered. "That it be an instruction to the said Committee that they do take into their consideration the treatment offered to Mr. Speaker and the Members of this House, upon the first day of this Session of Parliament, and to other Members of this House, attending their duty in the House of Lords, during this Session of Parliament, when Bills have been passed by his Majesty, or by Commission; and to report the same to the House." The Committee thus appointed made their Report on the 9th. With regard to the manner in which Messages had been wont to be brought from the Lords, it appeared that there was one instance (31st August, 1641) of a Message brought by a single Messenger, to which the attention of the Lords was immediately called. Their Lordships' answer has a somewhat surly sound. They said "That, as concerning the sending by one Messenger only, the business required haste, and they sent as many as they had." The Committee concluded this part of their Report by stating that they found no instance of a Message sent from the Lords by a Clerk-Assistant of the Parliament. As to what was said to have happened on the first day of the Session, and on other subsequent days, when Members had gone up with Bills, they reported the evidence of the Speaker and of four other Members. The Speaker, Sir F. Norton, said that, on the first day of the Session, "after leaving the Bar, and before he got to the door, some persons called out—Clear the House, go out, or withdraw, or to that effect; that he thought it indecent, but cannot recollect the particular expressions which were made use of; that he took notice of it, and was answered it was not for the Members, but strangers to go out; that he understood the calling out came from below the Bar, and not from the House; if he had understood otherwise, and had thought it came from the Lords, probably he should have gone back, and demanded an explanation, and should certainly have reported it to the House upon his return." Other questions which were put did not draw from him any more information; and in conclusion he observed that if the inquiry had been made sooner, he should probably have recollected more than occurred to his memory at that time. Nor was anything very material ascertained from the other Members that were examined.

On the Report of the Committee being read, it was moved that the Bills brought down on the 1st instant should be sent back to the Lords; but it was eventually carried by a majority of 105 to 55—"That a Message be sent to the Lords to acquaint them that this House, having received a Message from their Lordships on Wednesday, the 1st instant, which was brought by a Master in Chancery and the Clerk-Assistant of the House of Lords; and being desirous of preserving a good correspondence with their Lordships, that this House do take notice of this unusual method of sending Messages to this House, and desire that the same may not hereafter be drawn into precedent." To this Message the Lords returned the following answer:—"That the Lords ordered their Message of the 1st of this month to be carried to the House of Commons in the usual manner; and their Lordships have found, upon inquiry, that one Master in Chancery being ill, their Message was carried by only one Master in Chancery and the Clerk-Assistant of the House of Lords; and the Lords desire the Commons may be informed that the Lords have nothing more at heart than to maintain a good correspondence between the two Houses, and do not mean to introduce any precedent contrary to the usage of Parliament." It was afterwards moved in the Commons—"That a Conference be desired with the Lords on matters tending to preserve a good correspondence between the two Houses;" but on a division, the motion was negatived by a majority of 117 to 51. So here the matter ended for the present.

The exclusion of the Members of the House of Commons from the Lords, however, appears to have continued for all the time that this Parliament sat—that is, for two more Sessions beyond the present. A new Parliament met on the 29th of November, 1774;

and on the 6th of December Lord Lyttelton moved, in the House of Lords, that their Lordships should be summoned for the day following, to take into consideration a motion for dispensing with the Standing Order against the presence of strangers, so far as to admit the representatives of the Commons into the House during the debates. His Lordship is stated to have advanced many reasons in support of his proposition, and it occasioned a good deal of discussion; but it was negatived, on a division, by a majority of 36 to 28. On the 18th of the same month, however, Lord Lyttelton made a second proposal to the House, recommending that the doors should be opened to the Members of the House of Commons, the sons and brothers of Peers, Peers of Ireland and Scotland, and to so many of the public at large as should be introduced by English Peers, each Peer to have the privilege of introducing one person; and after a short conversation, this motion was agreed to. Meanwhile, on the 12th, Mr. T. Townshend, in the Commons, had proposed, but without making any motion, that the Gallery of that House should be opened to the Peers and their sons as formerly; and the suggestion gave rise to a short debate. Mr. Rice, considering how outrageous the conduct of the Lords had been, objected to the Commons being the first to make a concession. Mr. Hans Stanley gave it as his opinion that all strangers who applied for admission into the Gallery should be admitted whenever there was room—a proposition certainly very far in advance of the time. Sir George Elliot was for admitting not only Peers and their sons, but surely very naturally and very reasonably, if there was to be any selection of classes, the sons of Members also. Since the Lords, he observed, had behaved improperly, the Commons should set them the example of good manners. On this, Colonel Barré rose, and observed that he had been told that in the latter end of the reign of George I., or the beginning of that of George II., a like affair had happened. The two Houses shut their doors upon each other, upon which John, Duke of Argyle, gave it as his opinion, that the Peers of the land, by their birth and education, ought to be more polite and have better manners than the Commons; and that therefore it was expedient in them to set the Commons an example, and to open their doors. Mr. Burke was far from agreeing with the Duke of Argyle in this opinion. As for himself, if he could do his duty without access to the other House, he should never desire to enter it; but he contended that upon certain occasions it was absolutely necessary that the Members of either House should have free admission to the other. He observed that a great commercial Bill, that for regulating the importation of provisions from Ireland, would probably have been lost, if he had not had access to the House of Peers, to explain its principles; and that on the other hand, if the doors of the House of Commons had not been shut against the Lords last Session, the Bill for the security of literary property would never have been rejected with such contempt after it had passed the House of Commons; for if the Peers had come down and heard the arguments on it, they must have been convinced of its expediency. Here, however, the matter dropped; and no express resolution on the subject was adopted by the House. But it is probable that after this the practice of excluding the Peers from the Commons' Gallery was at least somewhat relaxed; and it would appear that the opening or shutting of the Gallery was left to the discretion of the Speaker.

Still neither the mode in which the public were admitted to the Commons, nor that in which Members of the Commons were admitted to the Lords, seems to have given satisfaction. In the next Session the debate on the Budget, which took place on the 24th of April, 1776, ran in great part on this subject. After Lord North, as Chancellor of the Exchequer, had made his speech, Governor Johnstone rose, and began by observing, that it was a little extraordinary that the Gallery should be open on that day, and shut on almost every other, since the commencement of the Session, on which matters of importance had come under discussion. "He assured the House that he was always pleased to see the Gallery as full as the convenience of the Members would permit; but the admission on such a day as this, which gave the Minister an advantage over his opponents, by giving every sentiment as his own, and imputing any sentiments he pleased to others (we do not profess quite to understand this), fully convinced him that his Lordship's influence extended to every matter relative to the conduct and ordering of that House, be the occasion ever so trivial or important. If strangers are to be shut out one day, none can be at a loss whence the mandate originated; if the Gallery was to be open on another day, it was equally evident to whom the public were indebted for the indulgence." Mr. Fox spoke next, and, according to the report, animadverted with humour and asperity on the irregular opening of the Gallery-doors, asserting that the public had a right to hear in what manner their representatives discharged their duty, and maintaining that for the opening or shutting of the Gallery to depend on the will of any one or two persons was exceedingly unfair. "He dwelt," it is added, "a considerable time on this point, and after declaring that he knew that the Gallery had been opened on a whisper from the Noble Lord, when he was prepared to say anything likely to produce a popular effect, he went so far as to assert, that in his opinion it was a breach of the Constitution to prevent the public from hearing their proceedings." Mr. Fox's remarks were so pointed that they called up the Speaker, who begged to explain the reason why the doors of the Gallery had been opened that day, and to take the blame, if there was any, on himself. "The Standing Order of the House," he observed, "was known to every gentleman, and it was his duty to enforce it whenever it was desired to be read. An Honourable Gentleman had, at an early period of the Session, desired it to be read; he had ever since punctiliously kept to it; but, as this was a day of money business, when it was usual to admit strangers, he conceived the House would wink at a relaxation from the general rule; he had, therefore, told the sergeant to admit strangers into the Gallery, as far as the bars which were even with the bar below; but if he had gone too far, he asked pardon of the Committee." On this Mr. Fox said, "he by no means blamed the Speaker, as he was conscious no officer acted with more uprightness and impartiality; but he was sure the Gallery ought to be opened, and he heartily wished the House would follow the example of the other assembly, who now admitted strangers." This conversation called up Mr. Rigby, the eccentric Member for Tavistock, who "with that rough and unpolished manner," says the Report, "for which he is remarkable in his senatorial oratory, took up the subject, and declared he rose an advocate for the Order of the House—an Order which had stood the test of years, although it was now said to be a breach of the Constitution. He begged to know by what claim those who were not Members desired admittance? If one stranger had a right every man in the kingdom had a right, and where were the people to be put? He insisted upon it, that no person but a Member ought to be in that House, and he wondered that, after so violent a quarrel with the other House, the Members of this should accept so poor a compromise as the present disagreeable sufferance to hear the debates in the House of Lords. If a Member of the

House of Commons, indeed, had any Noble blood in his veins—if he was the third son of a Lord, or a cousin to a Peer,—he stood some chance of being accommodated, as the Members of the House of Commons were before the quarrel; but if he (Mr. Rigby) went there he was sure to be affronted, and to be thrust among the thieves and pickpockets below the bar." From this it would appear that the admission accorded by the Lords to Members of the House of Commons was not yet what it had been before the quarrel. Mr. Rigby's designation of the audience below their Lordships' Bar as thieves and pickpockets may seem somewhat unceremonious; but allowance being made for the manner of the speaker, it did not go very much beyond the customary mode of expression of the time. [illegible] common term for what [illegible] in those days, the in the dialect [illegible] we should now call the public, been "[illegible] of the House of Commons, seems to have also, [illegible] the mob," or rather "mob," without the article, as one would speak of something having mere quantity, and not even the dignity of any the lowest form of a definite whole. For example, in the Report made by the Committee appointed, as mentioned above, to inquire into the treatment received by Members when attending their duty in the House of Lords, we find the examination of one of the witnesses running on in this strain:—"Being asked whether, at the time the officers treated him in the manner he had mentioned (at the Bar of the Lords), he did not see a mixture of mob and Members? He said,—There always is; that he never was there without; that there is always more mob than Members, &c." Thus the whole community, the Peers excepted, seem to have been considered as properly divisible into Members and mob.

[In consequence of the length to which the Retrospect of the events of the Month has extended, we are obliged to defer the conclusion of this article till our Next.

POLITICAL RETROSPECT FOR AUGUST, 1836.

GREAT BRITAIN.

THE Parliamentary proceedings of the last month of the Session have embraced an extraordinarily long list of subjects. We shall notice the most important in the order in which they have occurred.

On Monday, the 25th of July, the Lords went into Committee on the Church of Ireland Bill, the transformation of which had been reserved for this stage of the progress of the measure. The first amendment proposed by Lord Lyndhurst was to substitute 25 for 30 per cent., as the deduction to be made from the present incomes of tithe-owners. It was carried, after some debate, by a majority of 126 to 48. The chief contest of the evening, however, took place on the 50th clause—that involving the famous appropriation scheme. For this portion of the measure, Lord Lyndhurst proposed to substitute a series of clauses, embodying Lord Stanley's plan for enabling the Ecclesiastical Commissioners to apply, in certain cases, part of the revenues of benefices worth more than 500*l.* a-year to the augmentation of the poorer livings. After a long debate, in which the original clause was defended by Lords Melbourne, Holland, and Clanricarde, and opposed by Lord Mansfield, the Bishop of Exeter, and Lord Winchilsea, Lord Lyndhurst's amendment was carried by a majority of 138 to 47. Lord Melbourne, in his speech, declared that he and his colleagues found themselves bound in honour to adhere to the Resolution of the House of Commons on which the appropriation clause was founded—that they stood on the principle of that clause—that they would not resign their places so long as they were supported, as he believed they were, by a majority of the House of Commons and of the country—and that he was of opinion that the Resolution in question was not indiscreet, rash, or violent, but on the contrary, calculated to set the question of the Irish Church at rest on grounds which would be really satisfactory to the country. The remaining clauses of the measure were afterwards considered very summarily, and after they had been disposed of, the House rose at a quarter before two o'clock.

In the Commons, the adjourned debate on the third reading of the English Church Bill was resumed, on the motion of Lord John Russell. In the debate that followed, the measure was opposed by Mr. Baines, Dr. Bowring, Mr. Brotherton, Mr. Arthur Trevor, Mr. Ewart, and some other Members; but on a division, the third reading was carried by a majority of 175 to 44. In the course of the evening, Lord John Russell announced that in consequence of the opposition made from various quarters to the Ecclesiastical Duties and Revenues Bill, the object of which was the application of a great part of the revenues of deans and chapters to the endowment of new livings in populous towns and districts, it was not his intention to persevere with the measure in the present Session. His Lordship also stated that he certainly intended to introduce a measure on the subject of church-rates early in the next Session, although he declined at present to explain the principles on which it would be founded. After the Church Bill had been disposed of, the Newspaper Stamp Duties Bill was read a third time, without a division. The Chancellor of the Exchequer then brought up a clause, compelling every newspaper to use a distinctive die, which was agreed to. Two divisions, however, afterwards took place, the first on a motion to omit the clause relating to the registration of all the proprietors, on which the numbers were, for the clause 58, against it 15; the second, on the motion that the Bill do pass, which was opposed by Mr. Wakley, but carried by a majority of 55 to 7.

On Tuesday, the 26th, in the Lords, the Earl of Shaftesbury having brought up the Report on the Irish Church Bill, Lord Lyndhurst asked Viscount Melbourne if he had any objection to fix the third reading for Thursday next. Lord Melbourne replied the Bill might be read whenever it was convenient to the Noble and Learned Lord. His Lordship had, on the previous day, declared that if the appropriation clause were struck out, he should wash his hands of the whole measure, and let it drop.

In the Commons this day a petition was presented by Dr. Bowring from a person of the name of Hugh Craig, a magistrate of Kilmarnock, complaining that he had been dismissed from his office of elder in the Scottish Church in consequence of his having presided at a meeting convened for the purpose of petitioning the Legislature to separate Church and State. This beats Dr. Mulholland. What is it that Mr. Hugh Craig would have? By his own statement he is opposed to Parliament having anything to do with the Church; and, yet, here he comes asking Parliament to interfere in the very matter with which he contends that it ought to have no concern. Would he have the Church to be separated from the State, and yet in all the affairs of its internal management to be under the control of the State? Would he have the Church to be a mere voluntary association, and yet Parliament to keep in its own hands the appointment of the elders? But to look at

the matter in another point of view, it puzzles us much, we confess, to understand how Mr. Hugh Craig could reasonably expect to be allowed to retain his office of elder when taking the part he professes himself to have done. This petitioner seems to have quite a genius for reconciling what he calls his principles with what he finds to be his personal convenience. First, he would be both an active assailant of the constitution of the Church, and at the same time one of the officers of the Church; secondly, he would have the State to break off all connexion with the Church, and yet to exert its authority to compel the Church to make him one of its ruling elders. The petition was eventually withdrawn. The House afterwards went into Committee on the Charitable Trustees Bill, when an amendment on one of the clauses was moved by Mr. Praed, to allow the freemen in corporate towns to vote at the election of trustees along with the burgesses; it was supported by Sir Robert Peel and Mr. D. W. Harvey, but negatived on a division by a majority of 65 to 48. The Report on the County Elections Bill was then agreed to, after divisions had taken place on several of the clauses, all of which, however, were carried by large majorities.

On Wednesday, the 27th, the Prisoners' Counsel Bill, with amendments, being brought down from the Lords, Mr. Ewart moved that the Bill be rejected, in consequence of the clause giving the right of reply to the prisoner's counsel having been struck out in the other House. It was eventually agreed, however, on the proposition of Lord John Russell, that the Bill should be referred to a Select Committee, with a view to coming to some arrangement with the Peers. The House was soon afterwards counted out while in Committee on the Hackney Carriages Bill.

On Thursday, the 28th, in the Lords, the Church of Ireland Bill was read a third time and passed, on the motion of Lord Lyndhurst, to whose care the metamorphosed measure had been left by Ministers. The House afterwards went into Committee on the Marriages Bill, when the Bishop of Exeter moved that the declaration to be made by the parties, as directed by the 20th clause, should be left out, with the view of introducing in its stead another declaration, which would have the effect of leaving marriage a religious contract. The motion was supported by the Archbishop of Canterbury; and notwithstanding the representations both of Lord Melbourne and of Lords Ellenborough and Ripon and the Duke of Wellington, that it would defeat the entire purpose of the Bill, it was carried, on a division, by a majority of 19 to 15. On the next division, however, when the question was the insertion of the new declaration, the majority was diminished by two.

In the Commons, the Report of the Select Committee appointed to consider the Lords' amendments to the Prisoners' Counsel Bill, which stated, that to deprive the prisoner of the last word would be most injurious to the interests of justice, was brought up by Mr. Ewart, and received. The Poole Corporation Bill was then read a third time, and passed. After this the House went into Committee on the Greek Loan Act, when Lord Palmerston moved a Resolution authorizing his Majesty to guarantee one-third portion of the last instalment of the loan without the consent of Russia, that power having taken advantage of an informality to withdraw from the engagement in regard to this matter she had made in conjunction with England and France. Mr. Robinson moved an amendment, declaring the inexpediency of the proposed guarantee, on the ground that the Treaty of 1832 had not been fulfilled on the part of Greece, which was supported by Mr. Hume, Lord Dudley Stuart, Mr. T. Baring, Dr. Bowring, and other Members; but on a division the original Resolution was carried by a majority of 81 to 40. No very encouraging account could be given of the prospects of the new State; but it appeared to be the feeling of the majority of the House, that the doubtful circumstances in which King Otho was placed rather formed an additional argument for a liberal construction of the arrangements that had been made by this country for his support. The interest on the sum to be guaranteed will amount only to 12,000*l.* After this a long discussion and several divisions took place on certain clauses of the Charitable Trustees Bill; but the clauses were all carried, and eventually the Report on the Bill was agreed to, after which the House adjourned at nearly three o'clock.

On Friday, the 29th, in the Lords, the second reading of the Stafford Disfranchisement Bill was moved by the Marquess of Clanricarde. The motion was supported by the Duke of Leinster, the Marquess of Tavistock, and Lord Duncannon, but opposed not only by Lord Ashburton but likewise by the Lord Chancellor and Viscount Melbourne, both of whom declared, that although they were of opinion something was required to be done in the case, the evidence did not appear to them sufficient for the entire disfranchisement of the borough. When the House divided the numbers were found to be, for the motion only 4, against it 55. The Bill was consequently lost. Immediately after the division, however, Lord Clanricarde introduced a new Bill for the disfranchisement of the old burgesses only. As the offences with which the Stafford voters are charged are the offences of certain individuals, the natural and only just way of treating the case would seem to be to disfranchise or otherwise punish those individuals. Even their permanent disfranchisement, indeed, is objectionable, on the ground that the numbers of the constituency might, although only for a time, be thereby too much reduced. It would be easy to punish them sufficiently in many other ways. But independently of the objection to the common plan of wholly disfranchising the borough when corruption has been proved to prevail extensively among the electors, on the ground that it punishes the innocent along with the guilty—an objection which we are aware has been attempted to be got over by maintaining that the deprivation of the electoral franchise is, properly speaking, no punishment—the consequences which this method of procedure brings after it appear to be opposed to the whole character and intention of our representative system. The fundamental principle of that system is, that every town throughout the kingdom, having a certain number of inhabitants, should send representatives to Parliament. This is the arrangement which is conceived to be best adapted to secure good government. Fifty years hence how will it look under such an order of things, to have, perhaps, some half dozen of the most important places in the country without representatives? It is Stafford to-day, it may be the turn of Liverpool to-morrow. But even if no other town than Stafford should ever be so disfranchised, the violation of the principle of the established system of representation is the same. Why should Stafford fifty years hence be the only town of its size left without representatives? Would it then be held any vindication of such an anomaly to say, that the voters of Stafford half a century before had been many of them found guilty of corruption? What of that? The voters will then be all dead and gone; the place will be filled by a wholly different body of inhabitants; unless it shall be contended that the air is poisoned, there will be longer any intelligible meaning in the disqualification, or any pretence whatever for keeping it up. Permanently to disfranchise a town on account of the corruption of certain of the individual electors, would seem, in short, to be very nearly as absurd as it would be to pass a similar edict of exclusion on certain proper-

ties or certain houses, in consequence of their having been once tenanted by corrupt voters.

After the Stafford Disfranchisement Bill had been disposed of, the second reading of the Established Church Bill, which had been sent up from the Commons, was moved by Lord Melbourne, and agreed to after scarcely any debate. The Marquess of Clanricarde, however, conceived that the measure did not go far enough; while on the other hand the Bishop of Hereford protested against it, as striking a blow at the Church from which it could never recover. The Bill was defended by the Archbishop of Canterbury, and also by the Bishop of Exeter, who stated, however, that he objected to some of the details.

In the Commons the County Elections Bill and the Charitable Trustees Bill were read a third time and passed, and the Stannaries Court Bill went through Committee. The House afterwards went into Committee on the Post Office Bill, the several clauses of which were all agreed to.

On Monday, the 1st of August, on the Report of the Marriages Bill being brought up in the Lords, Lord Melbourne moved that the declaration inserted on a previous day, on the motion of the Bishop of Exeter, should be omitted; and the motion was carried by a majority of 72 to 29. This important measure was thus saved from being rendered nearly valueless. Their Lordships afterwards went into Committee on the Established Church Bill, when the several clauses were agreed to, after two amendments moved by the Bishop of Exeter,—the first to prevent the Commissioners from becoming a perpetual corporation, the second to prevent the alienation of the income of any bishopric except that of Durham,—had been negatived by large majorities.

In the Commons a debate of some length took place on a Resolution moved by Mr. Walter, on the motion being made for the reading of the first Order of the Day, pledging the House to institute, early in the next Session, an inquiry into the operation of the new poor-law, particularly with regard to out-door relief, and the separation in the union workhouses of husbands from their wives, and of parents from their children. In his reply to Mr. Walter, Lord John Russell showed that in the expenditure on the poor for 1836, as compared with that for 1834, there was a diminution to the amount of 1,794,990*l.* The new law was also very ably and convincingly defended by Mr. Villiers. On a division the House passed to the Order of the Day by a majority of 82 to 46. The House then went into Committee on the Customs Bill, when Mr. P. Thomson stated the various reductions of duty which it would effect. The list will be found in a subsequent page. These reductions will all be beneficial to the consumers of the articles; but most of the duties in question ought undoubtedly to be totally repealed with all convenient speed, were it only for the sake of relieving the financial system of the country from a multitude of petty details with which it ought never to have been embarrassed. It appears from accounts laid before the Committee of Finance appointed in the Session of 1828, that the whole revenue collected in 1827 from the Customs duties was derived from no fewer than 566 duties on as many different articles. Of these there were 510 which produced altogether only 585,000*l.*, being no more than between 1100*l.* and 1200*l.* each on an average. No one of the number produced so much as 10,000*l.* a-year. Of the articles on which the duties are reduced by the present measure, pimento yielded in 1833 only 6893*l.*, cloves only 6379*l.*, mace only 2613*l.*, castor-oil only 621*l.*, verdigris only 2291*l.*, rags only 2391*l.* "This sweeping system of taxation," it is well observed by Sir Henry Parnell in his valuable work on Financial Reform (4th edition, pp. 118, 119), "shows the Customs duties laws have been framed by persons but little acquainted with the principles of trade and finance, and who had not the slightest consideration for the feelings and conveniences of individuals, or for the interests of foreign commerce. The effect of it is to render the accounts complex, and to generate smuggling. Prices are enhanced with little or no advantage to the revenue; the comforts and enjoyments of the people are uselessly abridged; and a great deal of delay, vexation, and loss must attend the collecting of duties on so many hundred commodities. Each of the duties on the 510 articles, which produce less than 10,000*l.*, should be repealed. If this were done, the imports of foreign goods, and, as a necessary consequence, the exports of British, would be greatly increased; the business of collection would then be confined to 56 articles, and the saving of expense in the management would in all probability be greater than the revenue (585,000*l.*) which would be lost by repealing these duties."

The amendments of the Lords to the English Tithe Bill were afterwards agreed to after a short discussion; and then the House was counted out at a quarter to three o'clock, on Mr. Wakley moving the third reading of the Medical Witnesses Bill.

On Tuesday, the 2nd, in the Lords, the Paper Duties Bill was read a third time and passed; and the Grand Juries (Ireland) Bill was read a second time. The second reading of the Poole Corporation Bill was then moved by the Duke of Richmond; but, after a short discussion, an amendment moved by Lord Redesdale, that the Bill should be read a second time that day six months, was carried without a division. It was afterwards agreed that the Universities (Scotland) Bill should be postponed till next Session.

In the Commons, the Order of the Day having been read for taking into consideration the Lords' amendments to the Irish Tithe Bill, Lord John Russell rose, and in an address which was loudly cheered throughout by the Ministerial side of the House, moved that the further consideration of the amendments should be postponed to that day three months. The principle of appropriation which had been rejected by the other House, his Lordship described as that which gave its chief value to the Bill. As for himself and his colleagues, "we are prepared," he said, "to stand upon that principle. We maintained that that principle was essential to a final settlement of the tithe question when we were out of office; and if, while we are in office, the House of Commons think proper to affirm an opposite principle, amounting to a denial of that which we asserted, of course, it will be our duty to resign, and to pretend no longer to govern the councils of this country." Lord John Russell was replied to by Sir Robert Peel, who concluded his speech by moving "that the Lords' amendments be taken into consideration now." A long and highly animated debate followed, in which Lord John Russell's motion was supported by Mr. E. Denison, Mr. Hume, Mr. O'Loghlen, Mr. Sheil, and Mr. D. W. Harvey; and the amendment of Sir Robert Peel, by Lord Sandon, Sir James Graham, and Lord Stanley. Mr. Sheil's speech, in particular, appears to have been one of great brilliancy. The interest of the occasion, however, hung less on the debate than on the division, to which the House at length proceeded about half-past one o'clock in the morning. The numbers were found to be, for the motion of Lord John Russell 260, for Sir Robert Peel's amendment 231; thus giving Ministers a majority of 29. Thus terminated another attempt to settle the question of questions for the present.

On Wednesday, the 3rd, the Handloom Weavers' Bill was postponed until the next Session. The Jewish

Civil Disabilities Bill was then, on the motion of Mr. Spring Rice, read a second time by a majority of 39 to 22, although strongly opposed by Sir Robert Inglis, Colonel Sibthorp, Mr. A. Trevor, Mr. Hardy, and other Members. The Bribery at Elections Bill afterwards went through Committee, and the Medical Witnesses Bill was read a third time and passed.

On Thursday, the 4th, in the Lords, the Marquess of Clanricarde moved the second reading of his new Bill on the subject of the borough of Stafford, the object of which was to disfranchise only the burgesses and freemen, leaving the ten-pound householders, of whom there are about 600, the sole constituency. The measure was supported by the Lord Chancellor, but opposed by the Earl of Devon, the Duke of Wellington, Lord Wharncliffe, Lord Lyndhurst, and other Peers on that side of the House; and on a division the motion for the second reading was negatived by a majority of 38 to 22. So nothing can be done in this case till the next Session. The Commons, however, have suspended the issue of the writ for filling up the vacancy in the representation of the borough till after Parliament shall have again met.

After the Stafford Disfranchisement Bill had been thus disposed of, the second reading of the Charitable Trustees Bill was moved by the Lord Chancellor; but the Duke of Wellington having moved that the Bill should be read a second time that day six months, this amendment, which was strongly supported by Lord Lyndhurst, was carried on a division by a majority of 39 to 22. Lord Clanricarde then moved the second reading of the Roman Catholic Marriages (Ireland) Bill; but here his Lordship was met by the opposition of the Archbishop of Armagh, and a majority of 39 to 19 decided that this measure also should be thrown out for the Session. Afterwards, on the Report of the Established Church Bill being brought up, the clause requiring the Welsh Bishops to possess a knowledge of the Welsh tongue was agreed to be struck out on the motion of the Archbishop of Canterbury. His Grace is reported to have maintained that the whole business of Bishops lay with the clergy, and that they had nothing to do with the people. Is the performance of the ceremony of confirmation, then, no part of the duty of Bishops? Are they never to be expected to preach? The Marriages Bill was then read a third time and passed, with the opposition only of the Earl of Mansfield, who, although he declined dividing the House, expressed his belief that the effects of the measure would be different from those contemplated by its framers and supporters.

The Commons this day met at twelve o'clock, to resume the adjourned debate on the Troutbeck petition. The claim of the petitioners was opposed at great length by the Attorney-General; but eventually the motion for the appointment of a Committee was negatived without a division. This was clearly the only decision that the House could have come to in the case, looking to the single point of the inconvenience and complete confusion that would follow from the House of Commons attempting, as was in this instance proposed, to usurp the functions of the courts of law. But in addition to this consideration, it may be observed that notwithstanding all the ability and zeal with which the present case was brought forward, the discussion it has undergone has by no means tended to make it appear that the claim of the petitioners is so clear as it is considered to be by those who have mixed themselves up with it as its advocates. Even Mr. Warburton's introductory statement, unreplied to, was very far from being sufficient to carry conviction to a perfectly uninterested and dispassionate judgment; and taking it along with Sir John Campbell's speech on the other side, it would not, we apprehend, have obtained a verdict on the merits of the case from any fairly selected jury.

At the evening sitting the Customs Bill and the Court of Chancery (Ireland) Bill were read a third time and passed; the Report on the Post Office Bill was received; in the Registration of Voters Bill the clause naming the chief and members of the Court of Revision, and several other clauses, were agreed to; the Spirits Excise Bill went through Committee; and the Gold and Silver Plate (Scotland) Bill was read a third time and passed. Dr. Lushington afterwards moved the insertion in the Ecclesiastical Appointments Suspension Bill of a clause, providing that nothing in the Act should prevent his Majesty from bestowing any church dignity, or preferment on those chaplains of the House on whose behalf addresses had been presented, recommending them for such preferment, and to which favourable answers had been returned; but the motion was opposed by Lord John Russell, and was negatived on a division by a majority of 31. The House was then counted out on Lord Morpeth moving the third reading of the Church Temporalities (Ireland) Bill.

On Friday the 5th, in the Lords, the Commons' amendments on the amendments of their Lordships in the English Tithes Bill, which had been communicated at a Conference the day before, were agreed to. The County Elections Bill was then, on the motion of Lord Melbourne, read a second time after a short discussion, in the course of which, however, several Peers objected to the part of the Bill restricting county elections to one day, and intimated their intention of opposing that much of the measure in Committee. The Established Church Bill was afterwards read a third time and passed. Finally, on the motion for committing the Small Debts (Scotland) Bill, the object of which was to raise the sum over which sheriffs have jurisdiction from 8*l.* 6*s.* to 10*l.*, and to empower the sheriff to hold his court in different parts of the county, Lord Bute moved, that the Bill should be committed that day three months; and the amendment was agreed to without a division.

In the Commons, the Assessed Taxes Bill was read a third time, and passed. A discussion then arose on a motion by Mr. Barlow Hoy for an Address to his Majesty on the subject of the apprehended annexation of Texas to the territory of the United States, which the Honourable Member, and also Mr. Ward, considered it would be the duty of this country, for various reasons, to take steps to prevent. The motion was eventually withdrawn, on Lord Palmerston observing that the proposed Address would at that moment be premature, inasmuch as although the annexation of Texas to the United States would be a subject which ought seriously to engage the attention of the House and the British public, yet he did not think the events which had yet occurred afforded any ground to think that there was at present any such probability of a result of that kind, as to call for the interference of the House. A motion by Sir Edward Cordrington for a Return of officers deprived of their half-pay, without an investigation of a court-martial, was afterwards negatived without a division. The House then resolved itself into a Committee of Supply on the Miscellaneous Estimates, when various sums, amounting in all to about 170,000*l.*, were voted.

On Monday, the 8th, in the Lords, after various measures had been advanced a stage, Lord Melbourne moved the Order of the Day for going into Committee on the Newspaper Stamp Duty Bill. The first ten clauses of the Bill met with no opposition; but on the eleventh, enacting that the names of all the proprietors of newspapers should be registered at the Stamp Office, an animated debate arose, which terminated in the motion of Lord Lyndhurst, that the clause should be

struck out, being carried by a majority of 61 to 40. The measure is, undoubtedly, greatly improved by being disencumbered of this inquisitorial and needless enactment.

In the Commons, the Registration of Voters Bill was, after some amendments had been agreed to, read a third time, and passed, as was also the Post Office Bill. Afterwards, on the Pension Duties Bill being brought up, Mr. Harcourt moved a clause to exempt from the operation of the Bill the Parliamentary annuity granted in the reign of Queen Anne to the descendants of John, Duke of Marlborough, in conformity, as the Honourable Member stated, to the practice which had been invariably pursued in such cases. No fewer than three divisions took place upon this question; the majority for bringing up the clause being 37 to 35—that for its being read a second time, 55 to 35; and that against a motion for the adjournment of the House before it was added to the Bill, 61 to 33. The House afterwards went into a Committee of Supply.

On Tuesday, the 9th, in the Lords, the Common Fields Inclosure Bill went through a Committee, when several amendments were made in it on the motion of Lord Ellenborough. The second reading of the Court of Session (Scotland) Bill was then moved by the Lord Chancellor; but the motion was opposed by several Peers, on the ground of the late period of the Session at which the measure had been brought forward, and eventually the amendment of Lord Rosslyn, that the Bill should be read a second time that day six weeks, was carried by a majority of 37 to 27. Various other Bills were afterwards forwarded a stage.

In the Commons, Lord John Russell, as he had intimated his intention of doing the preceding day, moved that the House should disagree to the Lords' amendments in the Municipal Corporations Act Amendment Bill, one of which provided that in case of no election of mayor being made by the town council, that officer should be chosen by lot, instead of as originally proposed in the Bill by the burgesses at large; and another of which continued the members of the old corporations for another year in the management of corporate charities. This latter alteration especially, his Lordship said, was one to which he never could give his consent. He would rather lose the Bill altogether, and leave the trustees to be appointed in every case by the Lord Chancellor. The motion was, after a short discussion, carried without a division; and it was agreed that a free conference with the other House should be asked for the further consideration of the subject. The motion of Lord John Russell, that the House should go into Committee on the Plurality of Benefices Bill was then carried by a majority of 66 to 28 against the amendment of Mr. Hume, that they should be taken into consideration that day three months; and the several clauses were, after some discussion, agreed to.

On Wednesday, the 10th, in the Lords, several Bills, among them the Newspapers Stamp Duties Bill, were read a third time, and passed; and various others went through a Committee.

The Commons were principally engaged in considering the Miscellaneous Estimates in a Committee of Supply, when all the votes proposed by Ministers were agreed to, with the exception of a vote of 400*l.* for making alterations in the Gallery of the House for the admission of ladies, in conformity with the late vote on that subject. After the proposition had been supported, in a debate of some length, by Mr. Freshfield, Mr. Ewart, Mr. Potter, Lord Palmerston, Mr. Aglionby, Mr. Buckingham, Viscount Howick, and Colonel Sibthorp, and opposed by the Earl of Lincoln, Mr. Tooke, Mr. P. Howard, Mr. P. Thomson, Sir J. Hobhouse, and Mr. Goulburn, whose views were also assented to by the Speaker, the Committee divided, when the numbers were found to be, for the grant 28, against it 42. The fiat of exclusion enforced against the ladies fifty-eight years ago, therefore, still remains unreversed (see page 214). After the House had resumed, the Chancellor of the Exchequer moved that the Newspaper Stamp Duties Bill, being a money Bill, and having been returned from the Lords with amendments, should be laid aside. This being agreed to, the Right Honourable Gentleman next moved for leave to bring in a new Bill without the clauses for the registration of the proprietors of newspapers, which the Lords had struck out, the only other alteration being that the reduction of the duty would now be made to take place on the 15th instead of the 1st of September. The Standing Order being suspended, the Bill was immediately read a first and second time.

On Thursday, the 11th, the Free Conference desired the preceding day by the Commons was agreed to by the Lords, on the motion of Lord Rosslyn, and took place immediately. All that was done, however, was the exchange, by the Managers appointed by the two Houses, of the reasons for which they adhered to their opposite views, in writing, just as at an ordinary Conference. On the return of the Managers for the Lords, Lord Lyndhurst moved that the House do insist on the amendments made by it in the Municipal Corporations Act Amendment Bill; and, after some debate, the motion was carried by a majority of 40 to 29. On this another Free Conference took place, at which the matters in dispute between the two Houses were debated at some length; but it ended, like the former, in no agreement being come to.

In the Commons, the Newspaper Stamp Duties Bill passed in a few minutes through its remaining stages, without a word of discussion. The Lords amendments in the Registration of Births Bill, and in the Marriages Bill, were then, on the motion of Lord John Russell, all agreed to, though not without strong expressions of dissatisfaction with some of those in the last-mentioned measure from various Honourable Members. Lord John Russell also moved that the House should agree to the amendments of the Lords in the Established Church Bill; but, although the other amendments were agreed to, a division took place on that by which the clause making it necessary that a Welsh Bishop should have a knowledge of the Welsh language was omitted; and the Lords' amendment was only carried by a majority of 51 to 45. Lord John Russell now called the attention of the House to the result of the two Free Conferences with the Lords on the subject of their amendments to the Corporations Act Amendment Bill; on which it was agreed to postpone the further consideration of the amendments to that day three months. The Bill was consequently lost.

On Friday, the 12th, in the Lords, the Standing Orders having been suspended, the Newspaper Stamp Duties Bill went through all its stages and passed. The second reading of the Post Office Bill was afterwards moved by Lord Duncannon, but the motion was opposed by the Duke of Richmond, who moved that the Bill should be read a second time that day three months; and this amendment, after a short debate, was carried by a majority of 51 to 22. The House then went into Committee on the Registration of Voters Bill, when, on the motion of Lord Wharncliffe, the first clause of the Bill constituting the new Court of Review, was struck out by a majority of 57 to 21; and a clause was added to prevent persons having borough property from voting both at the borough and at the county elections by virtue of the same property, by a majority of 54 to 20. The other clauses were agreed to.

In the Commons, Lord John Russell announced that in consequence of the state of the public business, he should postpone the Plurality of Benefices Bill till the next Session. Various Bills were forwarded a stage without discussion; after which, Lord John Russell having moved that the Lords' amendments to the Prisoners' Counsel Bill should be taken into consideration, Mr. Ewart moved that the amendment striking out the clause which gave the last word to the prisoner, should be disagreed to, and the motion was carried without a division. The House was afterwards counted out while about to proceed to the further consideration of the Report on the Bribery at Elections Bill.

Both Houses also met at twelve o'clock on Saturday, the 13th. In the Lords the Royal Assent was given by Commission to a considerable number of Bills. In the Commons, the Jewish Disabilities Bill was reported, and the Attorney-General brought in three new Bills embodying so many portions of the Municipal Corporations Act Amendment Bill, which both Houses had agreed to. They were all read a first time.

On Monday the 15th, in the Lords, after several Bills had been forwarded a stage, the House went into Committee on the Stannaries Court Bill, when various amendments were made in that measure. The Corporate Property (Ireland) Bill was then read a second time on the motion of Lord Melbourne, Lord Lyndhurst, however, intimating that he should endeavour to remodel it in various respects in Committee.

In the Commons, Lord Morpeth moved that as the Lords' amendments to the Grand Juries (Ireland) Bill could not, conformably with the practice of the House, be accepted, the Bill should be withdrawn, and a new one embodying the amendments immediately introduced in its stead. The motion was agreed to, and the new Bill was read a first time. The Boroughs Justice Administration Bill, the Boroughs Boundaries Bill, and the Boroughs Funds Bill, being the three measures introduced by the Attorney-General on Saturday, were afterwards severally read a second time. Among other Bills that were also forwarded a stage, the Pension Duties Bill was read a third time and passed, after another division had taken place on the clause exempting the pension of the Marlborough family, and the clause had been finally struck out by a majority of 36 to 34. The third reading of the Jewish Disabilities Bill was afterwards carried by a majority of 44 to 13; and then the House was counted out while discussing the Bribery at Elections Bill.

On Tuesday the 16th, in the Lords, the Common Fields Inclosure Bill, the County Elections Bill, and some others, were read a third time and passed; and the Greek Loan Bill went through Committee, and was reported without amendments, although the Duke of Wellington expressed some doubts of its expediency. The second reading of the Civil Offices Declaration Bill was then moved by Lord Duncannon; but the Duke of Wellington having moved that the Bill should be read a second time that day three months, on a division the amendment was carried by a majority of 43 to 27. The House afterwards went into Committee on the Corporate Property (Ireland) Bill, when Lord Lyndhurst brought forward his amendments, which were agreed to. The Commons' reasons for disagreeing to the Lords' amendments on the Prisoners' Counsel Bill, which had been communicated at a Conference, having then been taken into consideration, Lord Lyndhurst moved that their Lordships should, notwithstanding, insist on their amendments, and the motion was carried without a division. The Irish Tithe Suspension Bill was afterwards read a second time, on the motion of Viscount Melbourne.

In the Commons, Mr. Hume moved a declaration declaratory of the opinion of the House, that the government of Upper Canada ought to be conducted by the Lieutenant-Governor, with the advice and assistance of the Executive Council of the province, and intended to censure by implication the late conduct of Sir Francis Head; but after a speech in reply from Sir George Grey, the resolution was withdrawn. A short discussion afterwards took place on a motion made by Mr. Grove Price, for copies of the despatch of Mr. Villiers, announcing the proclamation in various towns of Spain of the Constitution of 1812: the motion was negatived in the end without a division. The three Bills relating to boroughs were then passed, the Standing Orders having been suspended for that purpose. The House was soon after counted out, while engaged in considering the Lords' amendments on the Common Fields Inclosure Bill.

On Wednesday the 17th, in the Lords, various Bills were advanced a stage, with little or no discussion.

In the Commons, Lord John Russell took an opportunity, on the presentation by Mr. Wilks of a petition relating to church-rates, to explain a misunderstanding which had gone abroad of a remark made by him on that subject on a former evening. The amount of what his Lordship said was, that whereas he had been supposed to have expressed an apprehension that the measure he intended to introduce next Session for the settlement of the question of church-rates, would not be satisfactory to certain Members of the House representing the interests and feelings of the Dissenters, his hope really on the contrary was, that the measure which he should have to propose would be perfectly satisfactory to those Members, and also to the great mass of persons out of doors who were interested in the subject. His Lordship afterwards announced that the whole of the 246 convicts from Hampshire, who had been transported for machine-breaking and riot, in 1831, had been pardoned, with the exception only of ten, who were undergoing punishment for offences committed in the Colonies. In the course of the evening, the Public Works (Ireland) Bill, and also the Bribery at Elections Bill, were read a third time and passed, after several amendments to the latter proposed by Mr. A. Trevor, had all been rejected. The House then adjourned till Friday.

On Thursday, the 18th, in the Lords, it was agreed that the Common Law Officers Bill should be postponed till next Session on the motion of Lord Langdale, who stated, that although he approved of the principle of the Bill, there were clauses in it to which he was not at present prepared to give his concurrence. Lord Lyndhurst, in moving for a return stating what had been the fate of each of the Bills introduced into either House of Parliament in the course of the Session, took an opportunity of entering at great length into the defence of the conduct which had been pursued by himself and his friends, and also of delivering a concluding philippic against the general policy of the Administration. The oration of the Noble and Learned Lord gave rise, of course, to some debate, in which Lord Holland, Lord Melbourne, and the Lord Chancellor took part on the one side, and the Duke of Wellington on the other. The motion was ultimately agreed to. Another debate then took place on the motion for the second reading of a Bill entitled the Municipal Elections Bill, which had been sent up from the Commons, as contributing, along with the three other measures already mentioned, to form a substitute for the Municipal Corporation Amendment Bill, which had been lost. The present Bill, like the others, contained only clauses which had been agreed to by both Houses; but inasmuch as it did not embody also certain amendments which had been made by the Lords, Lord Lyndhurst contended that its adoption

would, in fact, place the Upper House in precisely the same position as if, instead of insisting upon their amendments as they had done at the Conferences, they had agreed to abandon them. He therefore moved that the Bill should be read a second time that day three weeks; and on a division the motion was carried by a majority of 30 to 14.

On Friday, the 19th, various Bills were read by their Lordships a third time and passed. The Jewish Civil Disabilities Bill, however, was postponed by consent until next Session.

In the Commons, on the motion of Lord John Russell, who said that he acted on the advice of Lord Denman, as well as of both the Attorney and the Solicitor-General, the Lords' amendments on the Prisoners' Counsel Bill were agreed to. The Bill is thus saved. The Lords' amendments on the Stannaries Court Bill were afterwards agreed to without discussion; those on the Polls at Elections Bill, after a division, in which a proposition by Mr. T. Duncombe that they should not be agreed to was negatived by a majority of 54; and those on the Common Fields Inclosure Bill, after a motion by Mr. Potter for the insertion of certain additional regulations to prevent the inclosure of common fields in the neighbourhood of large towns had been defeated by a majority of 51 to 6.

Both Houses met for the last time on Saturday, the 20th. In the Commons, Mr. Hume was in the midst of a long speech on the conduct of the Lords, when he was interrupted by the entrance of the Usher of the Black Rod to summon the Members to the House of Lords, where, after they had made their appearance at the Bar, his Majesty delivered from the Throne the Speech which will be found in another page, and the Lord Chancellor afterwards, in the usual form, declared the Parliament to stand prorogued to Thursday, the 20th of October next.

FRANCE.

THE Fêtes of July, in commemoration of the revolution of 1830, were saddened by the recollection of the dreadful tragedy enacted by Fieschi last year, and by the recent attempt of Alibaud on the life of the King. An almost universal distrust and apprehension of some fresh catastrophe prevailed, and Louis Philippe (though it is said not without difficulty) was prevailed upon by his cabinet and family, not to expose his person to the aim of assassins, by attending, as formerly, the review of the national guards or any other of the public celebrations. It had, indeed, been rumoured that some hundreds of republican desperadoes from various quarters, armed only with knives, were to make a simultaneous rush upon the king and his family as they stood by the triumphal arch of *L'Etoile*, at the end of the *Champs Elysées*, which has at last been completed, and was to be opened in form during the fêtes. In this assault, it was added, that the inferior officers of several of the regiments of the line who had an understanding with the republicans, would join. From the loose evidence before us, we cannot pretend to say whether such an extensive conspiracy, or even any kind of plot existed, but circumstances seem to have thrown much mystery and suspicion about this pompous arch. It was reported, for example, that the veterans of Napoleon's guard had been summoned from far and near to attend the ceremony of opening the arch, originally destined by the Emperor as a monument to their valour and victories; and in the course of their secret researches Louis Philippe's police discovered forged circulars purporting to bear the seal and other official marks of the War Office, and enjoining the veterans to be at their post. The names of several members of the Bonaparte family were also heard in significant whispers, and engraved portraits of them were observed all at once to be very numerous. Doubts which we think must have been altogether unreasonable, for those citizens desire nothing so much as the continuance of peace and tranquillity, were entertained even of the fidelity of the National Guards, who are said to be much hurt at his Majesty's want of confidence in their loyalty and in their power of protecting him—a power, by the way, which can be of no avail in such attempts as those of Fieschi, or in many other modes of attack likely to suggest themselves to the imagination of skilful and desperate conspirators.

The French attach an importance to these shows and parades that is scarcely intelligible to the soberer or duller minds of Englishmen. We should have thought it of small importance whether Louis Philippe went to the fêtes or staid at home, and after all that has happened since the revolution of July should not regret to see the idle celebration set aside altogether. But the Parisians must have their *spectacle* and their king on horseback!

As the popular rumours of danger did not seem definite enough to them to account for Louis Philippe's absenting himself, the Journalists pretty generally supposed that he must have surer information of mischief intended him, and they called upon him to convey this information to his people, in order that they might know to what extent their tranquillity and prosperity were menaced. The king made no answer to these applications, but on the eve of the festival, his police arrested nearly two hundred individuals in and about Paris. To conciliate the heroes of the old army, a medal in commemoration of the opening of the triumphal arch of L'Etoile has been struck with this inscription:—"To the glory of the French armies. Commenced by Napoleon, and finished by Louis Philippe the First." (That is to say, the arch, and not the glory).

The arch in itself is a beautiful and grand object, exceeding in its span the triumphal arches of Rome, and all the works of the kind we know of, whether ancient or modern. It is a great addition to the many public embellishments of Paris, and we only wish it were the record of something more pleasing to humanity than the slaughter and devastation of Europe.

Armand Carrel, the editor of an ultra-liberal newspaper called "Le National" was shot in a duel by the editor of another paper called "La Presse," and died of his wound on the 24th of July. It was resolved to give his remains the empty honours of a public funeral, and as it has been the fashion to get up a riot in the streets of Paris on such appropriate occasions, fears were entertained for the public tranquillity. But as every possible precaution was taken by the police (that body which now meets us at every step in France) and as a formidable force was collected, the ceremony at St. Maude near Paris, went off without any disturbance, although seven thousand persons followed the body to the grave. This *cortege* must have been motley, as well as numerous. All the gentlemen of the Paris press attended, and among republicans and such opposite characters as Arago, Lafitte, and Beranger the poet, we find several ultra-royalists, with Chateaubriand at their head. The orations and eulogies of the deceased which stand in lieu of our service for the dead were delivered over the grave by Messrs. Thibaudau, Scheffer, and Maillefer, and are reported to have produced *une forte sensation.*

Numerous arrests of suspected persons have been made in the departments, and particularly at Lyons, where a secret society, having branches in the provinces and in the capital, is said to have been discovered by the police. Some of the Paris papers state that the investigations of the police there have failed to

establish the existence of any *extensive* conspiracy having for its object the assassination of the King during the late festival, and that there were *only* two youths—the one seventeen years old, and the other nineteen, who had formed that plan. These hopeful subjects belong to the poorer class of workmen.

On the 7th of August, Marshal Clausel, who is now on his way back to Algiers, took leave of the King. It is reported that he has been authorized to make an expedition against Constantine, and that the so-called army of Africa is to be raised to 40,000 men. General Bugeaud, the second in command, has been promoted as a reward for his late victory or victories over Abdel-Kader, which, should seem, however, to have been attended by very unimportant results. The Moorish chieftain has so far conformed to the usages of what is called civilized warfare as to propose an exchange of prisoners with the French.

The young King of Naples, who has become a traveller, and is supposed to be in search of another wife, has visited Paris, and shown all possible respect and affection to Louis Philippe, whose queen is his own aunt. As a member of the House of Bourbon, his Neapolitan Majesty, who vehemently protested against the change of the order of succession in Spain which places his niece on the throne with his own sister, Donna Christina, as regent, was supposed to adhere to the elder or Carlist branch of the French Bourbons, and to be altogether averse to the revolution of July. But his present visit is interpreted into a formal recognition of the right of Louis Philippe, and it is supposed that the smaller Italian princes, who merely out of affection for the principle of legitimacy, continue to speak of Charles X. as King of France, will speedily follow his example. This is very probable, and (considering the strength of those potentates) very unimportant.

According to the newspaper reports, the increase of assassinations and street robberies in Paris is quite dreadful. These crimes, until lately, used not to be included to any great extent in the immoralities and sins of the French capital. The agents of the police were never so numerous as now; but we suppose they are so engaged in pursuit of political offenders, as to have no leisure to attend to common felons. Among the recent victims, is one Mr. Nagle, an Irish gentleman, who was murdered by night, as he was returning to his residence in the Faubourg St. Germain, by two ruffians armed with large knives.

SPAIN.

Since the unfortunate affair of Fuenterrabia, the British Legion and other forces under General Evans have remained in inactivity behind the ramparts of St. Sebastian and the works thrown up at Passages. Discontent and insubordination, amounting on more than one occasion to open mutiny, have prevailed among the men, many of whom have returned to England. The General has been, and we believe still is, seriously indisposed,—the effect of disappointment and vexation of spirit. Most of the officers seem to be persuaded that there is deliberate treachery on the part of Cordova. In this state of things—unpaid, suspicious of all the Spaniards acting with them, and irritated in the extreme, the Legion cannot be expected to prove of much service to the Queen's cause, which recent proceedings on the part of the Constitutionalists and Liberals have embarrassed more and more.

In other provinces there has been a deal of marching and some fighting. The Carlist General, Lopez, who, after traversing the Asturias, threw himself into Gallicia, was defeated, taken prisoner, and shot, with several of his officers, by the Christinos. In Catalonia, where Mina has established a complete reign of terror, the Carlist chief Tristany was captured, and also shot. General Gomez, an active leader of the same party, has been more successful. By a succession of rapid marches he got through the Asturias unmolested, and entered Orensa, in Gallicia, on the 19th of July. He was, however, disappointed in his hopes that the people would rise and join him. The inhabitants of the towns in Gallicia looked on in sullen indifference, but in one or two instances showed a disposition to oppose him with arms in their hands. He entered Santiago, the capital of Gallicia, but, being followed up by General Espartero, he left that place, and marching rapidly, crossed the Minho, a river which, in part of its course, forms the boundary between Spain and Portugal. Here, again, he was disappointed, for the Miguelite Portuguese did not join his standard in force, as he had expected they would. In the course of several long marches and counter-marches his lightfooted mountaineers constantly outstripped the Queen's troops, but different divisions concentrating from various points, Gomez was obliged to fly in the direction of Leon, and the bands he left scattered in the Asturias and Gallicia were cut up. General Espartero entered Oviedo on the 3rd of August, and moved the next day towards Astorga. On the 5th the Carlist Commander-in-Chief, Villareale, was in the Amezeoas, after having suffered a severe check and some loss, on the 2nd, from an attack made by Lieutenant-General Bernelle.

It should appear that the Poles, whose exploits and cruelties in Spain during the wars of Napoleon are well remembered by many, English as well as Spaniards, are again figuring in that unhappy country; for Bernelle, in his bulletin, speaks of a regiment of Polish Lancers, lately incorporated in his division, that made a fierce attack on the Carlists, and "covered itself with glory."

Gomez, after traversing part of the province of Leon regained the mountains of Santander, and thence making a sudden turn, doubled on his pursuers and appearing again in Leon, marched towards its capital, expecting to form a junction with the Carlist bands of Garcia on his way. Meanwhile other insurgent bands had thrown themselves so forward in Aragon that apprehensions began to be entertained for the safety of Madrid itself.

On the 24th of July the court of the Queen Regent was frightened out of its propriety, by a report that the Carlists had reached within two leagues of the royal summer residence of La Granja, and a scene ensued which is described as ludicrous and disgraceful. The courtiers, panic struck, raised a universal *sauve qui peut* cry. Some made up their bundles, but the fears of others would not allow them time for that. Grandees of the first class, dukes, marquesses, generals, pages, footmen, favourites, and grooms, fled pell-mell, some on foot, and some mounted on asses or the mules of the Queen's coaches. The Duke of Hijar set off on foot, carrying his own bundle under his arm, and arrived at Madrid, with several persons of the same rank, in a deplorable plight. Ronchi, the Queen's confidant made his *entré* into the capital on an ass, with his son-in-law, the Marquess of Grimaldi, riding *en croupe* behind him. The Queen Regent, however, who is a person of spirit, would not stir, nor would she permit the removal of her daughter, but the royal baggage and valuables were packed up to be ready for an instant start in case the alarming intelligence should prove correct. It was afterwards ascertained that the nearest point to Madrid the Carlists had shown themselves at was Sepulveda, which is at the distance of about seventy miles from the

capital. The flight from La Granja led to some disturbances in the suburbs of Madrid, which were suppressed by the National Guards, though not until cries were heard of *Viva Don Carlos*, and two or three persons had been killed in the affray. But all these matters, with other desultory operations in the field against the Carlists, yield in importance to events which show how sadly the Constitutionalists are divided among themselves.

On the 25th of July, a great Spanish holiday, being the festival of their patron St. Jago, everything seemed tranquil in the city, and the pleasure-loving people of Malaga, were to all appearance absorbed by the amusements of the day. The beautiful public promenade, the Alameda, was crowded in the evening by persons of all classes; among whom were mixed the civil and military governors with their families, and most of the other *employés* of the Queen Regent. About eight o'clock in the evening this gaiety was interrupted by the sound of alarm beat by a single drum in the neighbourhood of the Alameda. About a week before, St. Just, the military governor, had issued an Order of the Day, prohibiting the national guards and troops of the line from playing certain revolutionary airs, or beating their drums at all after the Ave Maria, or hour of prayer. Leaving his wife and children on the Alameda, St. Just hastened to see who had infringed his orders, and found a picket of the national guards in the public square, with a drummer, and one officer. He mildly requested the officer to command the drum to cease. The officer obeyed, but the men persisted in spite of him, and joined their seditious cries to the roll of the drum. St. Just, who was in plain clothes, then attempted to seize the drummer, upon which the national guards, who pretended not to know his rank, resisted, and struck him several times, while some spectators in the square encouraged them, and cried out, "Beat him—cut him down!" Presently the alarm of the drum was repeated in various parts of the town, and guard-men were seen running to their different quarters crying out "Death to the military governor—death to the traitors!" By this time the disturbance had assumed the appearance of a regular and preconcerted revolt which seemed to threaten the whole city. St. Just retired from the square and went in search of his wife and children, whom he conveyed home unhurt. He then put on his uniform, armed himself, and proceeded to the main guard in the square of the Constitution, where he hoped to find some friends of order, and to be able to bring the men to reason. With the many tragical and recent precedents before his eyes this attempt was a very bold one; but all parties allow that the unfortunate St. Just had the virtue of courage in a most eminent degree. The officer in command at the main-guard, to whom he spoke, instead of aiding him in his exertions, advised him, if he valued his life, to leave the square immediately, and let matters take their course. St. Just, however, persisted, and attempted to address the armed mob that now completely filled the square; but their savage roar and screams made his voice inaudible, and, having excited one another to the proper point of ferocity, the Nacionales made a rush, in a mass, on this single man. A few—and we believe very few—of the officers had the spirit to form a circle round their superior, in order to protect him from slaughter; but their men coming up, threatened to shoot them, and, on one or two shots being fired, they gave way, and left St. Just to his fate. Struck by a musket-ball in the thigh, he fell in front of the guard-house, but had still sufficient strength left to crawl into that building, where he found no protection; for in this detestable affair those who were not insurgents seem to have been cowards almost to a man. The armed mob, composed chiefly of what they call *Nacionales mal-intencionados*, or, disaffected national guards, rushed into the guard-house, and dragged their bleeding victim out into the square, where they despatched him with a volley of shots and innumerable thrusts of the bayonet. A hellish shout was then raised for the civil governor, the Conde de Donadio—and that cry was his trial, condemnation, and death-warrant. The mob went to his house, but they did not find him there. On learning the critical situation of St. Just, the Count, who had left his young and beautiful wife at the Alameda, where the alarm first reached them, flew to the Convent of Mercy, which has been converted into barracks for the regular troops of the line. Here he found some six or eight hundred men, whom he called upon to march to the succour of their commander, St. Just, whose life was threatened; but they refused to act or expose themselves, replying to his earnest remonstrances and prayers, that they had no wish to oppose the desires of the people. It is said, in excuse of these Queenite heroes, that they were mostly raw recruits. Fear, indeed, and not the spirit of revolt and cruelty, seems to have actuated them; for when the Nacionales, who had traced the civil governor to their barracks, gathered in force in the square before the convent, and called for his head, they attempted to favour the unhappy man's escape, and disguised him in the uniform of a common soldier. The revolted militia having so stationed themselves that none could leave the convent or barracks without falling into their hands, summoned the regular troops to come out into the square by the main gate of the building, and one by one. After a certain number of these men had thus defiled through an opening left between the masses of the insurgents, the Count de Donadio followed like the rest, but he had scarcely got beyond the door, when he was recognised in his grenadier's uniform by a national guard, who fired at him point blank, and brought him to the ground. The savages, then seizing him, dragged him into the Square *of Mercy*, to finish his execution in the usual manner. The Count appealed to the memory of his past political conduct,—to his exertions for the cause of liberty in the very last Cortes, where he had sat as a member for Malaga; but the ruffians, who were shouting "Liberty," would not listen to him; and while he was protesting, that if, during his short civil government, he had done anything displeasing to the people of Malaga, it had been owing to the advice of some of their fellow citizens, they rushed upon him as they had done upon St. Just, and dispersing a few of their officers who would have protected him, fired a volley into his body, which produced instantaneous death. But death was not enough; they pierced him through and through with their bayonets, hacked his corpse with their swords, and then mutilated it in a manner too gross and horrible to describe. To increase the horrors of this tragedy, Donadio's young wife, who had only been married a few weeks, burst out of her house, and ran through the streets, seeking and calling for her husband. A few friends succeeded in making her believe the Count had escaped out of the town in disguise, and reconducted her to her widowed home; but this merciful deception could only be maintained for a very short time.

After exhausting their vengeance on the body of their civil governor, the insurgents repaired to the houses of some of the principal merchants of Malaga, whom they intended to massacre, as persons opposed to the march of liberal principles. The merchants fortunately had had time to escape before the domiciliary visitations of the Nacionales, who next proceeded to appoint a junta, and name a governor of their own. Their choice fell upon one Juan Antonio Escalante, who is described as a commandant of Caribineers. He ordered the imme-

diate interment of the two bodies; and, at three o'clock in the morning, after an exulting peal had been rung from the cathedral bells, the rioters dispersed.

As the day advanced Malaga seemed to be deserted by all the more respectable part of its inhabitants, many of whom, apprehensive of further atrocities, were flying in all directions. Upwards of fifty embarked in an English steam-vessel, that chanced to enter the port. At the hour of noon the drums beat to arms, and at two in the afternoon the national guards and the troops of the line, were reviewed together on the Alameda; and that ceremony over, they formally proclaimed the one chamber democratic Constitution of 1812. Thus has this monstrous monument of political folly been raised again, and upon a basis of blood and crime.

On the 28th of July, the self-constituted junta of government drew up a long "representation," which was forwarded to the Queen Regent. This document begins by stating that the evils of the country, which her Majesty's government could not correct, had reached such a point that it behoved the people to throw themselves into the arena, and to act by and for themselves. In deploring the overthrow of the late Mendizabal Ministry, it admits that even that Ministry did not satisfy *all* the hopes conceived from it; nor, we will add, will any cabinet ever possible to be formed. One of the most definite and prominent of the complaints is, that men of liberal principles,—that is to say, men of their own particular party, have lost their employments and places, and from the notorious place-hunting habits of the Spaniards in general, we are disposed to believe that the moving spirits of every faction are animated rather by a desire of the honours and emoluments of office, than by any patriotism, or real attachment to any system, or abstract principle whatsoever. The seeking after government places, of all degrees, has long been a regular profession in Spain. People are constantly crowding from every corner of the kingdom to the capital, on this pursuit, and if, at any time, these candidates and *intrigants* had been removed all at once from Madrid, the population of that city must have been materially and evidently decreased. Though it does not attempt to shew how the mischief could have been avoided, or how repaired, now that it has happened, the representation scarcely exaggerates the recent successes of the Carlists in the fields, in stating, that they have broken through the boasted lines formed by the Queen's troops, have traversed the whole country from Alava even to Gallicia; that the "rebels" of lower Aragon have made themselves masters of the whole kingdom of Valencia, with the exception of the capital city, and a few fortified places;—that the Christino troops, excepting in Catalonia, seem to be mere spectators of the advance of the rebels—and, in fine, that Andalusia, hitherto untouched, has been invaded, and its soil stained with the blood of its sons, while in the direction of Murcia "the cut-throats of absolutism" show themselves equally powerful, haughty, and cruel. As to their own cut-throats, the gentlemen of the Junta say very little. They assert, however, that the massacre of St. Just and Donadio "which has stained the noblest of causes," was as unforeseen and uncalculated upon by the Liberals of Malaga as it was melancholy and lamentable. We see it is very generally asserted that the two unhappy functionaries had drawn upon them the odium of the Liberals by trying to influence the elections of members of the new Cortes in favour of the present Cabinet.

As was to be expected, the flame of the revolt spread rapidly in other parts of Andalusia. When the news of the transactions at Malaga reached Cadiz, Don Pedro de Urquinaona, Civil Governor of the Queen, set forth a proclamation denouncing the inquities of "a handful of men," and expressing his conviction that they would in no sense be imitated by the loyal and faithful men of Cadiz. At the same time Don Bernardo Tacon, the military governor, issued an order that the National Guards of Cadiz should not assemble without receiving instructions from him. This was on the 28th of July. On the 29th, by day break, the Nacionales had not only assembled, but joining the troops of the line in garrison, had proclaimed the Constitution of 1812, after the example of Malaga, though, fortunately without bloodshed. It appears that both the military and civil governor prudently went with the stream and joined in the ceremony of promulgating what they had condemned only the day before. Don Bernardo Tacon indeed issued an apologetic and counter proclamation as soon as the movement began. It is evident that he and his colleague dreaded the fate of St. Just and Donadio, and were not men to risk much in opposing the popular will.

Almost simultaneously with these movements at Cadiz, the Constitution of 1812 was proclaimed at Xeres, Port St. Mary, Isla de Leon, Seville, and Cordova, and Juntas were created wholly independent of the Queen's authority. At Saragosa, which has been in a state of disorder ever since June last, some horrible outrages have been committed on such of the inhabitants as were reputed Carlists or enemies to the ultra-liberal code, and Evariste San Miguel, the Queen's general, has joined the movement party with a great show of ardour and decision. Following the example of Saragosa, the capital, Alcaniz, Caspe, Fraga, Sos, Mequinenza, Calatayud, Jaca, and other towns in Aragon, have proclaimed the Constitution of 1812. In Catalonia no decisive steps appear to have been taken, but it was hourly expected that Mina would declare for the new order or disorder of things, and proclaim the Constitution in Barcelona. The elections there have been all against the Isturitz ministry. Even in the Biscayan provinces, Bilbao has joined the insurrection, and St. Sebastian will have probably done the like ere these pages are in print. This must inevitably increase the already insupportable embarrassments of General Evans and the British troops under his command. Badajoz has unfurled the revolutionary banner, and the course of events seems to threaten that in a very short time, what with the Carlists and the Liberals, the Queen's authority will soon be acknowledged nowhere except in Madrid, where, under such circumstances, it must also fall soon.

When the news of the insurrection at Malaga reached Madrid (on the 30th of July), a circular, in the Queen Regent's name, was addressed to all the authorities of the kingdom, exhorting them to exert themselves strenuously, and with good faith, in the repression of all seditious attempts, and announcing, that to chastise the disturbers of Malaga, government relied upon the assistance and union of all good citizens, which had become more than ever necessary for the preservation of the throne and of liberty. The tranquillity of the Regent, a young, inexperienced woman, who evidently does not know where to look, or upon whom to rely for protection, was further disturbed on the 2nd of August by the intelligence from Cadiz, Seville, &c. A cabinet council was summoned at midnight, and sate until morning, when it was resolved to form a camp near Madrid of 15,000 or 20,000 men, to be picked from the regular troops raised to oppose the Carlists; not to march any more soldiers into the revolted provinces, but to despatch there skilful agents to bring them back to their duty, by the gentle means of *eloquence and persuasion*, and to send other agents into the remaining provinces to keep them, by the same peaceful instruments, steady to the present form of government, and so prevent their following the example of Malaga, Cadiz, and the rest. Some troops

that had been already sent in the direction of Malaga were recalled. The people of Madrid, meanwhile, were highly excited—the Liberal party went through the street singing *Tragala Peros* (the song which used to terrify King Ferdinand during the Revolution of 1820), Riego's hymn, and other revolutionary songs. The Marquis de las Amarillas, Count Toreno, Martinez de la Rosa, and other public men of royalist or moderate politics, were said to have prepared to fly into France at a moment's notice, and everything seemed to indicate that an insurrection was inevitable. An attempt, indeed, was made, but it turned out a deplorable failure, the citizen soldiers of Madrid shewing on this occasion, as they did on their rising in the month of August last year, a very weak stomach for fighting, and a decided antipathy to coming to an open combat with the troops of the line.

On the evening of the 3rd of August, just after the church-bells had tolled the Ave Maria, a drummer-boy of the national guards starting from the Plaza Mayor, hurried through the streets beating to arms. He was, however, not long permitted to give this concerted signal to muster. He was seized, and conveyed to a guard-house, without any effort being made for his rescue. Nevertheless a considerable number of the national guards took up their arms, and ran to the place of rendezvous agreed upon, which was the Plaza Mayor where both the infantry and cavalry barracks of their corps are situated, and which was soon made to ring with the cries of "The Constitution for ever," "Death to the Carlists and traitors," "Down with the Ministers," and the like. It was presently observed, however, that these leading cries, loud as they were, were uttered by a comparatively small number of men, and only faintly echoed by the majority; that the ranks of the infantry were far from being filled, and that hardly any of the officers of the Nacionales were present. Troops of ragamuffins—a mob, composed of the very dregs of the city and its purlieus, began to perambulate the streets, but the more respectable inhabitants shut themselves up in their houses, determined to take no part in the conflict.

On the part of the Queen, General Quesada commanded the regular troops, and he was not taken by surprise, but well prepared, while his men were obedient to their officers, and steady to their duty, in spite of many efforts made to corrupt them. This garrison marched out from its quarters in excellent order, and took up several positions in order to check the advance of the Nacionales; but when those civic heroes saw some pieces of artillery unmasked, and heard cavalry advancing, they converted the gradual dissolution, which had been going on in their ranks from the very beginning, into a general and rapid retreat, and went home to their beds without firing more than two or three muskets, by which *one* soldier was wounded. This was at half-past eleven o'clock; and having taken possession of the barracks of the Nacionales, and occupied all their posts, the Queen's regiments returned to quarters at two in the morning, when Isturitz and the rest of the Cabinet, who had been sitting through the night, retired to take some rest. At an early hour of the 4th of August a decrée declaring Madrid in a state of siege was posted on all the walls, and Ministers again meeting, deliberated as to the choice of members to compose a court-martial, and carry this decree into effect with rigour and promptitude. A series of severe measures were adopted in the course of a day or two;—

1. A decree dissolving the National Guards of Madrid.

2. That military patroles should seize every person found in the streets carrying arms without being authorized to do so.

3. That all assemblies of the people should be dispersed.

4. That, in case of riot or sedition, all persons found on the spot, whether engaged in it or not, should be held guilty of the offence.

5. That in such cases the pain of death should be inflicted, as also upon those who should beat drums to arms without orders.

6. That all cries of "vivas!" or "deaths!" should be punished.

7. That the court-martial, whose sittings are permanent, shall try in a summary manner all kinds of offenders that may be brought before it.

As it appears that most of the Nacionales have permitted themselves to be disarmed, we should think they have little mercy to expect; for no party in Spain ever shows itself merciful in moments of great excitation. The journalists have also been visited by the vengeance of Isturitz, who has suspended the publication of four opposition newspapers, and threatened some of the writers in them with arrest and trial before the military tribunal. Numerous arrests of persons of all classes have taken and are still taking place. Between Paris and Madrid there will soon be a little world in prison.

PORTUGAL.

THE rapid progress made by General Gomez and the Carlists under him in the Asturias and Gallicia, and their approach to the frontiers of Portugal, caused considerable alarm to the Government at Lisbon, who well knowing the number of the disaffected in the northern provinces, expected a rising in favour of Don Miguel. The country, however, remained quiet.

The Queen's government continues to be pinched in its finances, and, ominously enough, the Treasury has been burnt down! This building (formerly the Regency Palace) was observed to be on fire in broad day light, and though all the clerks were there at their work, or moving about from room to room, the flames were not attended to, until they had got to such a height that it was found impossible to save the edifice. Hence the good people of Lisbon have ventured to hint, in rather plain terms, that the Treasury was purposely burnt to conceal sundry frauds and robberies committed by Silva Carvalho, the Minister of Finance, and the Government clerks. How elevated a notion must the Portuguese have of the virtue of their statesmen and public functionaries! But for the exertions of detachments of sailors from the English and French squadrons, it appears that the conflagration would not have stopped at the Treasury. Another building had already caught fire, and in extinguishing the flames there a poor French seaman lost his life. Several other persons are said to have perished.

To stop the progress of the money-alarm, the Government immediately issued a notice, that the interest on the home debt would be paid in a day or two at the Erario Palace, to which the Treasury Office was removed for the present. "Many doubtful or inconvenient claims," says the correspondent of one of our newspapers, "have been disposed of at one sweep." On the same authority, there was little gold or silver to melt in the Treasury, but an enormous consumption of *titulos* or paper-money, the white ashes of which fell like a shower of snow all over the square in front of the building.

The elections for the Cortes are said to have been favourable to the existing Ministry. Prince Ferdinand, the Queen's husband, has made a journey through part of the kingdom, and has everywhere been received with respect.

DOCUMENTS AND ABSTRACTS.

REPORT OF THE COMMITTEE ON SHIPWRECKS.

THE Select Committee appointed to inquire into the causes of the increased number of shipwrecks, with a view to ascertain whether such improvements might not be made in the construction, equipment, and navigation of merchant vessels as would greatly diminish the annual loss of life and property at sea, and who were empowered to report their opinion thereupon, together with the minutes of evidence taken before them, to the House, have examined the matters referred to them, and agreed to the following resolutions:—

1. That the number of ships and vessels belonging to the United Kingdom which were wrecked or lost in the periods specified below, appears, by a return made to the Committee from the books of Lloyd's, to be as follows:—

Number of Vessels Stranded or Wrecked.

1816	343	1833	595
1817	362	1834	454
1818	409	1835	524
	1114		1573

Number of Vessels Missing or Lost.

1816	19	1833	56
1817	40	1834	43
1818	30	1835	30
	89		129

Making a total of 1203 ships or vessels wrecked and missing in the first period of three years, and a total of 1702 wrecked and missing in the second period of three years.

2. That taking the number of vessels wrecked and lost in the two periods named above at the assumed value of 5000*l.* for each ship and cargo, on the average of the whole, the loss of property occasioned by these wrecks would amount, in the first three years, to 6,015,000*l.*, being an average of 2,005,000*l.* per annum; and in the last three years to 8,510,000*l.*, being an average of 2,836,666*l.* per annum.

3. That the number of ships in each of the years above specified of which the entire crews were drowned, though the exact number of each crew is not stated, appears, by the same return made to your committee, from the books of Lloyd's, to have been as follows:—

Number of Vessels in each Year, of which the entire Crews were Drowned.

1816	15	1833	38
1817	19	1834	24
1818	15	1835	19
	49		81

Making a total of 49 in the first period of three years, and a total of 81 in the second period of three years.

4. That the number of persons drowned in each of the years specified, in addition to the above, and of which the number drowned belonging to each vessel is distinctly known, appears, by the same return from Lloyd's books, to be as follows:—

Number of Persons drowned in each Year by Ships named.

1816	945	1833	572
1817	499	1834	578
1818	256	1835	564
	1700		1714

5. That assuming the average number of persons in each of the vessels of which the entire crews were lost to consist of ten individuals, including officers, seamen, and passengers, it would appear, that in the first three years the number of persons drowned were 588 in the forty-nine vessels whose crews were entirely lost, and 1700 in the vessels of which the exact number in each was known, making a total of 2228 lives, or 763 per annum; and that in the last three years the number of persons drowned was 972 in the 81 vessels whose crews were entirely lost, and 1710 in the vessels of which the exact number in each was known, making a total of 2682 lives, or 894 per annum.

6. That among the special cases of loss by shipwreck on particular parts of the coast, it has been stated that, during the last four years 272 ships were lost belonging to the port of Tyne, averaging 68 vessels per annum; the whole number of vessels registered in that port being about 1000 sail; that these 272 vessels measured 60,489 tons; and assuming these to have been total losses, and the average value of the whole to be 10*l.* per ton, the loss of property from this single port would be 604,890*l.* in four years, or 151,222*l.* per annum, while the number of lives lost in these 272 vessels during the same period was 682; the number of widows and orphans left for relief was 147; and the amount of money paid out of the funds of the Seaman's Association at Shields, for relief of members of that society only, amounted to 1935*l.* 15*s.* 9*d.*; the ships employed from this port being principally colliers, which perform eight or nine voyages in each year, and are continued in occupation during winter as well as summer along a dangerous coast.

7. That during a period of 16 months, from January 1, 1833 to May 1, 1834, the number of vessels reported in Lloyd's books as missing or lost, and which have never since been heard of, amounted to 95 in number; and these ships being principally engaged in foreign voyages, the calculation made on their value, and the number of their crews, including officers, seamen, and passengers, assuming 8000*l.* as the lowest average value of ship and cargo throughout, and 15 persons as the average number of persons on board the whole, gives a total loss in these missing ships only, within the short period of sixteen months, of 740,000*l.* sterling in property, and 1425 lives.

8. That these results do not embrace the whole extent of loss in property or lives, occasioned by shipwrecks, even among those vessels only which belong to the United Kingdom, inasmuch as these Returns include only the losses entered in Lloyd's books, from which the Returns adverted to were made out; whereas it is well known that many vessels and lives are lost by wreck or foundering at sea, of which no entry is made in Lloyd's books, and of which, as no record is kept, no Return can be produced.

9. That the whole loss of property in British shipping wrecked or foundered at sea may therefore be assumed as amounting to nearly 3,000,000*l.* sterling per annum; the value of which property, though covered by insurance to certain parties, is not the less absolutely lost to the nation, and its cost paid for by the British public, on whom its loss must ultimately fall.

10. That the annual loss of life, occasioned by the wreck or foundering of British vessels at sea, may, on the same grounds, be fairly estimated at not less than 1000 persons in each year, which loss is also attended with increased pecuniary burdens to the British public, on whom the support of many of the widows and orphans left destitute by such losses must ultimately fall.

11. That among the various causes of shipwreck, which appear susceptible of removal or diminution, the following appear to be the most frequent, and the most generally admitted:—

1. Defective construction of ships.
2. Inadequacy of equipment.
3. Imperfect state of repair.
4. Improper or excessive loading.
5. Inappropriateness of form.
6. Incompetency of masters and officers.
7. Drunkenness of officers and men.
8. Operation of marine insurance.
9. Want of harbours of refuge.
10. Imperfection of charts.

One of the principal remedies which has been proposed or suggested is, the establishment of a Mercantile Marine Board, which shall be so constituted as to embrace a competent number of experinced officers of the royal navy, and masters in the merchant service, united with experienced ship-owners and ship-builders, assisted by a skilful

hydrographer, a professor of nautical astronomy and navigation, and one or more men of eminence in the legal profession, the election of such members to be vested in certain proportions in the Admiralty, the Trinity Board, and the ship-owners, and to be irremovable from office, except by the concurrence of the three bodies named; and that to such a Board should be intrusted the power to carry into effect, both in London and the outports, under the sanction and authority of Parliament, the following primary objects, viz.—1. The compilation and consolidation of a code of maritime law. 2. The promotion and encouragement of nautical improvement. 3. The perfecting a system of classification of ships, to the utmost attainable point of accurately defining, by such classification, the real state and condition of every ship registered. 4. The collection of information as to the best methods for building, surveying, fitting out, and equipping ships, &c. 5. The formation of certain standards of qualification in seamanship and navigation, to be attained by officers before they should receive licenses of appointment to particular grades in the merchant service; and certain higher standards of qualification in seamanship, navigation, and nautical astronomy, to be attained by masters before they should be entitled to receive licenses of appointment to the command of vessels of different classes and for different voyages. 6. The appointment of examiners in seamanship, navigation, and nautical astronomy, for the public examination of all candidates for appointment as officers or commanders, with power to remand all who should be deficient in the requisite degree of knowledge for the class to which the candidate might aspire, and with a power also to grant licenses to officers of superior skill and knowledge, authorizing each class to wear a uniform, as was done in the late mercantile marine of the East India Company, differing from the uniform of the navy, but at the same time sufficiently marked for the purpose of distinguishing the persons wearing it as passed officers of the merchant-service. 7. The establishment of savings' banks for the wages of seamen, and suitable asylums for them; for the purpose of saving these seamen, as far as may be found practicable, from the misery and degradation into which they are so constantly plunged almost immediately after their return from sea, when, being made intoxicated, and sometimes stupified by drugs, they are robbed and plundered by crimps who make them their victims, and who hold them in actual bondage till all their wages are drained from them, when they are often taken in a state of intoxication to a ship, of the officers and crew of which they know nothing, and their advance of wages, instead of being applied to the purchase of an outfit or the voyage, is seized by their original betrayer for a real or pretended debt incurred while in his custody. 8. The formation of registry-offices for merchant-seamen, at which certificates of the name, age, capacity, and character of every seaman (which, by the late Act for the registration of British seamen, must be granted to all seamen demanding the same from their commanders at the time of their discharge) may be deposited and recorded in a register-book to be kept for that purpose. 9. The establishment of cheap nautical schools, either in ships afloat adapted to the purpose, or in appropriate buildings on shore, in which the practical duties of seamanship and the elements of navigation should be taught to the young apprentices who are training up for the sea. 10. The arrangement of a plan for courts of inquiry into every shipwreck that occurs, as far as may be practicable, with power to censure the owners or commanders; to suspend the licenses of officers; and to reward officers and men, by gratuities or medals of distinction and honour. 11. The formation of special tribunals for the cheap and speedy termination of disputes respecting the wages and discipline of seamen.

The attention of the Government is directed to a number of objects, in the promotion of which they might render assistance towards the improvement of the mercantile navy, while the Mercantile Marine Board would be pursuing the same end by different means. The Report (which has been drawn up by Mr. Buckingham) concludes with the following Resolution:—"That it is, therefore, the opinion of this Committee, that the earliest opportunity should be taken, in the next Session of Parliament, to call the attention of the Legislature to the present state of British ships and British seamen, with a view to the introduction of such enactments as may be best calculated to elevate and improve the general character of the British mercantile marine, and to place it in such a state of safety and efficiency, as to make its ships the most perfect structures that art and science can form, its officers the most distinguished for their competency and skill, and its seamen as respectable in character, and as happy in the enjoyment of adequate remuneration for their toils, as their devotion to their country in war, and their services to commerce in peace, so justly entitle them to expect."

NATIONAL EDUCATION IN IRELAND.

THE Third Report of the Commissioners of National Education in Ireland, for the year ending March, 1836, has just been issued. It states that, during the year, 150 schools had been established, and grants had been made towards the building of 78 others. The number of schools in operation was 1181, and upwards of 400 applications had been received for aid towards new schools; but the Commissioners remark that "it must depend upon the amount of the grant which may be made for the present year whether we shall be enabled to accede to any of them, and to what extent we shall have it in our power to do so."

The national system will shortly be benefited by the services of an efficient and well-trained body of teachers. The Report, which is addressed to the Lord-Lieutenant, thus alludes to this circumstance, which is calculated to promote still more the success of the national plan:—

"Considerable progress has been made in the buildings which we are having erected for model and training establishments. We hope they will be completed within a few months, and that we shall then be enabled to proceed extensively, and with effect, to the perfecting of teachers for our several schools. This is a work which we deem of vital importance to the whole system of national education. We have not hitherto had it in our power to bring forward the class of teachers which we desire to raise up; but our training establishment will, we hope, enable us to do so, provided we can secure the services of competent persons by adequate salaries. At present, the salaries which the funds placed at our disposal afford, are by no means sufficient to induce persons possessing the requisite qualifications for teachers. We are, therefore, most anxious that further provision should be made for the purpose, and we earnestly recommend the subject to your Excellency's consideration."

The greater part of the Report is devoted, at the desire of the Lord-Lieutenant, to an examination of a pamphlet entitled "A Speech delivered in the House of Lords, March 15th, 1836, in moving for a Select Committee to inquire into the operation of the Commission for National Education for Ireland; by Henry, Lord Bishop of Exeter." The Bishop is clearly convicted of suppressing passages in the previous Reports of the Commissioners to suit his purposes, and of adopting other means not less disgraceful, in order to misrepresent and vilify the Commission. After a lengthened and most triumphant notice of his objections, the Report concludes in the following excellent spirit:—

"We have now gone through the whole of the pamphlet, and have answered, we hope, every tangible part of it. We have thus noticed it because it was your Excellency's wish that we should do so; we should otherwise have spared ourselves so ungrateful a task. We accepted the Commission with which we are charged in the hope that it might enable us to pour oil on the troubled waters of Ireland, and to allay those dreadful dissensions which divide and distract her people: we are labouring so to do. We have no sordid object to accomplish, no factious purpose to serve, no bigoted passion to gratify; we are endeavouring to give a new stamp to the rising generation of the country, to bring children of all denominations together from their infancy in feelings of charity and good-will; to make them regard each other, not as belonging to rival sects, but as subjects of the same King, and fellows in the same redemption; so that all who profess and call themselves Christians may be led into the way of truth, and 'may hold the faith in unity of spirit, in the bond of peace, and in righteousness of life.' This is the end we seek. We feel that we have so pursued it as to entitle ourselves to public confidence and support, and that confidence and support we have the satisfaction to say we enjoy and receive from many persons of different religious views

and of different political opinions. We, therefore, hope it may not again be deemed necessary that we should give a formal contradiction to the accusations which prejudice or malice may from time to time put forth against us. If persons who see, or think they see, anything wrong in the working of the system committed to us, will communicate with the Board upon the subject, they will find us ever ready, to the utmost of our power, to apply a remedy to the evil. If they will not do so, and will yet assail our proceedings before the public, it may, we think, be safely left to the candour and good sense of the country, without any interference from us, to discriminate their motives, and deal with their statements according to their deserts.

"Richard Dublin,
"Francis Sadlier,
"James Carlile,
"A. R. Blake,
"July 13, 1836. "Robert Holmes."

RESOLUTIONS OF THE SELECT COMMITTEE ON CONTROVERTED ELECTIONS.

1. That the Speaker of the House of Commons do, at the commencement of every Session, nominate three barristers, of not less than seven years' standing, to fill the office of assessors to Election Committees; such nomination being subject to the confirmation of the House.

2. That one of these shall assist at the deliberations of every Election Committee, presiding as Chairman, but without power to vote.

3. That in all cases in which there shall be a difference of opinion in the Committee, the assessor shall remain with the Committee, while strangers are excluded: that he shall, before any division, state the question at issue to the Committee, together with his opinion thereon; that he pronounce the decisions of the Committee, declaring his own assent or dissent; and that such assent or dissent shall be recorded in the Minutes of the Committee.

4. That the assessors decide, under the sanction of the Speaker, which of their number shall preside over each Committee.

5. That if, at the commencement of a Parliament, it shall appear to the Speaker that the number of election petitions presented is so great that the three assessors will be unable to preside at the respective trials of such petitions, without causing considerable inconvenience, it shall, in such case, be lawful for the Speaker, within three weeks from the meeting of Parliament, to nominate, subject to the confirmation of the House, one or more barristers of not less than seven years' standing, who shall officiate as assistant-assessors; and that in case, on the arrival of any day on which an election petition shall be appointed to be tried, none of the three assessors shall be disengaged, it shall be lawful for the assessors, or any of them, to appoint, under the sanction of the Speaker, any one of the assistant-assessors to act as assessor and chairman, with all the duties and powers thereof for the trial of that petition.

6. That the assessors and assistant-assessors be not Members of the House, and hold no office of profit under the Crown, except that of recorder.

7. That the remuneration of the assessors be by an annual salary; and that the assistant-assessors be paid in proportion to their respective services.

8. That every Election Committee consist of five Members, to be chosen by ballot.

9. That within ten days of the commencement of every Session, the names of all the Members of the House be formed into one general committee-list by public ballot, for the purpose of fixing the order in which they are to stand on the list; that such list be printed and circulated with the Votes; that within one week thereafter, the names of Members excused altogether from serving on any Election Committees, as well as of those petitioning or petitioned against, and of those holding certain specified official situations, be expunged therefrom.

10. That the general list, so reduced, be then divided into separate lists, or panels, consisting of not less than sixty Members each.

11. That if the cause for expunging any such name shall, at any subsequent period, cease to operate, the Speaker shall state the fact to the House, and the name of such Member shall be added by ballot to some one of the panels from which Committees shall not yet have been struck.

12. That each panel be numbered; and that, whenever a day shall be fixed for taking into consideration one or more election petitions, one such panel be taken by ballot, from which the required Committee or Committees shall be struck.

13. That the names of the panel so taken be circulated with the Votes, together with notice of the day on which it is appointed to attend.

14. That if any Member, whose name is left on any panel, shall die or vacate his seat, and be succeeded by another Member, the name of such last Member shall, after fourteen days from his return, unless he be petitioned against, be substituted in the place of the former, and he shall be liable to be called on to serve as such former would have been.

15. That on such day the pannel be called over; that no excuses be received except "leave of absence granted by the House," "voted at the election," or such other as shall appear to the House an unavoidable cause of absence, or of inability to serve.

16. That if a Member shall not answer to his name, and the excuse made for him shall not be allowed, the House do order the Serjeant-at-Arms to take such Member into custody.

17. That the House do not give leave of absence to any Member extending to the day on which the panel containing his name is ordered to attend, except under very special circumstances.

18. That from the Members of the panel then present, names to compose each Committee be drawn by ballot; and that peremptory challenge to the number of five being allowed to each party, the first five names drawn, and passing unchallenged, do form the Committee.

19. That the Committee shall abate by reason of the death or absence of more than two of its members.

20. That if at any time during a Session it shall be found that each panel has taken its turn of service, the Speaker shall state the fact to the House, and the House shall appoint a day for the formation of a fresh General Committee List, which shall be formed as above-mentioned, except that, in addition to the excuses to be received on such occasions as aforesaid, the names of all Members who shall have served on any Election Committee during the Session be also expunged from the list; and that from such fresh General Committee List the new panels be formed, and the Committee finally appointed for each petition, and struck as aforesaid.

21. That under such regulations as the House may adopt, Members be allowed to exchange from one panel to another.

22. That every Election Committee have power, by an unanimous vote, to sit during the sittings of the House, unless the House shall command the attendance of its members.

23. That whenever a division shall take place in the Committee, the names of the members voting for or against any Resolution shall be entered in the Minutes, and publicly read by the Chairman, when announcing the decision of the Committee.

24. That in all cases in which there shall, on a division, be an equal number for or against any Resolution, the same do not pass.

25. That the Reports of the Committee be presented to the House by such one of its members as shall be selected by the Committee for that purpose.

26. That the Committee shall in all cases allow or apportion the costs, without its being necessary for it to declare whether the petition or defence be or be not frivolous or vexatious.

27. That the assessor, who presided at the trial of the petition, be one of the taxors, instead of the Clerk of the House.

28. That the three Chairmen shall from time to time, and at such times as they shall appoint, sit as a Court of Appeal, to hear and decide appeals from revising-barristers on circuits, by way of special case, on questions of law alone.—(See Registration Bill, as amended on second recommitment, Clause 10.)

29. That no such appeal be entertained unless lodged within after the date of such decision, and

brought to hearing within after the same period —(Ibid. Clause 11.)

30. That the registers be amended in pursuance of such decision.—(Ibid. Clause 12)

31. That the provisions of Clauses 13. 14, 15, of that Bill be adopted for this Court, so composed of the three Chairmen.

REPEAL OF AGRICULTURAL TAXES SINCE 1815.

A STATEMENT introduced by Mr. Hume, M.P., in the debate on the Marquis of Chandos' motion on agricultural distress (April 27), of taxes which bore chiefly on agriculture, and which have been reduced or altogether repealed, since the passing of the Corn Bill of 1815, shewing the amount of relief given in each year to the agricultural interest, and the total relief since 1817 to this time, namely,—

	Years.	Amount.
		£
Horses.—Husbandry horses used by farmers at rents under 200*l.* per ann., repealed in	1816	150,119
Mules under 13 hands, carrying coal, ore, &c.	do.	1,156
Horses used by farmers, of farms under 50*l.* rent, and gaining a livelihood principally therefrom, but partly by trade	do.	60,461
Servants.—Labourers in husbandry	do.	5,835
Horses.—Horses ridden by occupiers of farms at less than 200*l.* rent	do.	59,186
Horses employed in carrying coal and wood, where not more than four are kept	do.	3,938
Horses used by bailiffs	do.	273
Mares kept for breeding	1819	3,593
Husbandry horses	1822	470,108
Horses drawing taxed carts exempted from lower rate of duty thereby chargeable at a reduced rate of duty on horses	do.	5,064
Servants.—Husbandry servants, occasionally employed as domestic servants	do.	34,374
Carriages.—Taxed carts at the lower rate of duty	1823	9,310
Horses.—All horses chargeable heretofore at 3*s.* each	do.	4,040
Dogs.—Dogs kept wholly for the care of sheep by farmers at rents under 100*l.* per annum	1824	6,876
Horses.—Horses drawing taxed carts exempted from higher rate of duty thereby chargeable at a reduced rate of duty on horses	do.	11,334
Houses and Windows.—Farmhouses occupied by labourers, and servants retained for husbandry (by 6 Geo. IV. c. 7, s. 36)	do.	6,866
Servants.—Husbandry or trade servants employed as grooms by persons assessed for carriages with less than four wheels	do.	5,076
Carriages.—Taxed carts at the higher rate of duty	do.	20,675
Horses.—Mules carrying coal, ore, &c.	1825	71
Horses occasionally lent to hire by farmers, at rents under 200*l.*	do.	5,637
Carriages.—Common stage carts drawn by one horse	1832	8,716
Servants.—Stewards, bailiffs, overseers, or managers and clerks under them	1833	10,110
Windows.—Windows in farm-houses	1834	35,000
Horses.—Husbandry horses occasionally ridden by farmers at 500*l.* rent per annum	do.	10,000
Ditto, used occasionally for other purposes, or let occasionally for hire	do.	2,000
Horses used by bailiffs, shepherds, &c.	do.	2,000
Dogs.—Shepherds' dogs	do.	3,000
Fire Insurance of implements of husbandry and stock	do.	50,000
Total		£985,824

Mr. Hume made the following calculation of the total amount of the savings to the agriculturists by these reductions, reckoning from the year they were made to the end of the year 1835:—

	Reduced.	Period.	Both inclusive.	£
In 1816.....	£281,695....	19 years,	viz. 1817 to 1835 =	5,352,205
1819.....	3,868...	16 ,,	1820 to 1835 =	61,888
1822.....	470,108....	13 ,,	1823 to 1835 =	6,111,404
1823.....	52,792....	12 ,,	1824 to 1835 =	633,504
1824.....	6,876....	11 ,,	1825 to 1835 =	75,636
1825.....	49,659....	10 ,,	1826 to 1835 =	496,590
1832.....	8,710....	3 ,,	1833 to 1835 =	26,130
1833.....	10,110....	2 ,,	1834 to 1835 =	20,220
1834.....	52,000....	1 ,,	1835 to 1835 =	152,000
				£12,929,577

It is stated, in a note, that some of these duties are applicable to persons in trade, but to a small extent only,—the whole having been repealed for the relief of the agriculturists.

NEW CUSTOMS DUTIES.

THE following Articles, in addition to the list given in the last "Companion," will be subjected in future to a lower and more favourable rate of duty:—

	Proposed duty. £. s. d.	Present duty £ s. d.
Clinkers, called Dutch clinkers (the 1000)	0 10 0	1 2 6
Drugs, not particularly enumerated, or charged with duty in this or any other Act (the cwt.)	0 2 0	0 10 0
Ginger, preserved; the produce of, or imported from, any foreign country (the lb.)	0 0 6	0 1 3
Maps or charts, or parts thereof, namely—		
Plain (each)	0 0 1	0 0 6
Coloured (each)	0 0 2	0 0 6
Marmalade, the produce of, or imported from any foreign country (the lb.)	0 0 6	0 1 3
Nuts, viz. castor nuts or seed (the ton)	0 1 0	0 10 0
Oil, viz. castor oil (the cwt.	0 1 3	See Note (A).
Plate, old, not battered up, having been in the private use of the importer, while residing abroad, and intended for his private use in this kingdom, viz.—		
Silver (the oz.)	0 2 6	0 4 6
Gold (the oz)	1 0 0	3 16 9
Rags, viz. old woollen rags (the ton)	0 1 0	15 per cent.
Rice, rough and in the husk, imported from the West Coast of Africa (the qr.)	0 0 1	0 2 6
Rose wood (the ton)	6 0 0	10 0 0
Spices, viz.—		
Cloves (the lb.)	0 0 6	0 2 0
Mace (the lb.)	0 2 6	0 3 6
Pepper (the lb.)	0 0 6	0 1 0
Pimento (the lb.)	0 0 3	0 0 5
Teak wood (the load)	0 10 0	1 10 0
——— imported from any British Possession within the limits of the East India Company's Charter (the load)	0 0 1	0 0 1
Verdigris (the lb.)	0 0 6	0 1 0
Wax, viz. bees-wax unbleached, the produce of the West Coast of Africa, and imported from thence (the cwt.)	0 10 0	1 10 0
Note (A).		
Oil, viz. castor (the lb.)	0 0 0	0 1 0
——— imported from any British possession (the lb.)	0 0 0	0 0 3
——— the produce of, or imported from, any British possession (the cwt.)	0 0 0	0 2 6

NEW COLONY OF SOUTH AUSTRALIA.

SOUTH AUSTRALIA, the proposed site of the new colony of that name, lies between the 132° and 141° of east longitude, and from the south coast it comprehends the islands contiguous to the 26th degree of south latitude, between the Swan River and New South Wales, an extent of country nearly double that of Great Britain. It was discovered by Captain Flinders, of his Majesty's ship "Investigator," who, in 1802, explored the coast.

By Act of Parliament 5 Will. IV. c. 95, his Majesty was empowered to erect South Australia into a British province, and to provide for the colonization and government thereof. The inhabitants are not to be subject to the laws or constitutions of any other part of Australia, but bound by those only which shall be constructed especially for their own territory. It is also enacted that his Majesty shall empower any persons who shall seem fit to be his Privy Council, to frame laws and establish courts, to appoint officers, chaplains, and clergymen of the Established Churches of England or Scotland, and to levy such duties and taxes as may be necessary for the well-being of the colony,—such laws to be laid before the King in Council with all convenient expedition. Three or more Commissioners to be appointed by the Crown to carry the Act into execution; their proceedings to be laid before Parliament once a-year.

No person or persons convicted in any court of justice in Great Britain or Ireland, or elsewhere, shall at any time, or under any circumstances, be transported as a convict to any place within these limits.

When the population amounts to 50,000, the colony will be entitled to a local constitution. The powers of the governor in South Australia are the same as other governors, except in so far as the disposal of the public lands is concerned, which, by the Act, is under the especial control of a resident Commissioner, acting according to the instructions of the Board of his Majesty's Commissioners for South Australia in London. The chief duty of this Board is to take care that the lands be properly surveyed and brought into market, and that the revenue arising from their sale be strictly devoted to the purpose of supplying the colony with labourers. His Majesty has been pleased to nominate as governor, Captain Hindmarsh, R.N., K H. A complete system in reference to the titles of land, as well as for the registration of births, marriages, and deaths, and for facilitating the transfer of property, has been arranged by James H. Fisher, Esq., the resident Commissioner. No danger can reasonably be apprehended from the natives; and Lord Glenelg has appointed an officer, whose especial duty is indicated by his title, "The Protector of the Aborigines;" and every exertion will be made to cultivate their good-will and to improve their social condition.

Clauses 6 and 7 in the Act relate to the sale of land, and provide regulations for its being brought into cultivation. We give a *verbatim* copy of them:—

VI. "And be it further enacted, that the said Commissioners shall, and they are hereby empowered to declare all the lands of the said province or provinces (excepting only portions which may be reserved for roads or foot-paths) to be public lands open to purchase by British subjects, and to make such orders and regulations for the surveying and sale of such public lands at such price as the said Commissioners may, from time to time, deem expedient, and for the letting of the common of pasturage of unsold portions thereof, as to the said Commissioners may seem meet, for any period not exceeding three years; and from time to time to alter and revoke such orders and regulations, and to employ the monies from time to time received as the purchase-money of such lands, or as rent of the common of pasturage of unsold portions thereof, in conducting the emigration of poor persons from Great Britain or Ireland to the said province or provinces: provided always, that no part of the said public lands shall be sold, except in public, for ready money, and either by auction or otherwise, as may seem best to the said Commissioners; but in no case, and at no time for a lower price than the sum of 12*s.* sterling per English acre:—provided also, that the sum per acre which the said Commissioners may declare during any period to be the upset or selling price at which public lands shall be sold shall be an uniform price—that is to say, the same price per acre whatever the quantity or situation of the land put up for sale: provided also, that the whole of the funds, from time to time received as the purchase-money of the said lands, or as the rent of the common of pasturage of unsold portions thereof, shall constitute an "Emigration Fund," and shall, without any deduction whatsoever, except in the case hereinafter provided for, be employed in conveying poor emigrants from Great Britain or Ireland to the said province or provinces: provided also, that the poor persons who shall, by means of the said "Emigration Fund," be conveyed to the said province or provinces shall, as far as possible, be adult persons of the two sexes in equal proportions, and not exceeding the age of thirty years.

VII. "And be it further enacted, that no poor person having a husband or wife (as the case may be), or a child or children shall, by means of the said "Emigration Fund," obtain a passage to the said province or provinces, unless the husband or wife (as the case may be), or the child or children of such poor person, shall also be conveyed to the said province or provinces."

In compliance with the conditions of the Act of Parliament, the Commissioners have already sold 35,000*l.* worth of land, at 12*s.* per acre; the purchasers having a right to select their land before any other parties. At the 1st of March last, the price of land was advanced to 1*l.* per acre, and all future sales will take place in the colony. Nothing, whether above or below the surface, will be reserved by the Crown. Investments for the purchase of land, conferring a right to select labourers for a free passage, will also be received in this country; and purchasers of land in this country will be allowed the privilege of selecting servants and labourers for a free passage at the rate of one person for every 16*l.* expended in land, provided that the selection is made within a reasonable time, that it is in conformity with the existing regulations for the selection of emigrant labourers, and that there is at the time a want of labour in the colony. In the event of there appearing any tendency to injurious dispersion among the colonists, the Colonial Commissioner shall have authority, after the expiration of three months from the date of the first sales in the colony, to raise the price of land to any sum not exceeding 2*l.* per acre.

The lands comprised within the site of the first town will be divided into 1000 sections of an acre each, and, with the exception of 437 sections already disposed of, will be put up to auction, one section at a time, at the upset price of 1*l.*

Leases of the pasturage of unsold lands will be granted on the following conditions among others:—The term to be three years, the tenant having a right of renewal in preference to any other applicant. Cultivation of the soil and the felling of timber to be disallowed. The land, or any portion of it, to be liable to sale, and if sold, the lease to terminate on a notice of two months, the tenant having a right of renewal to unsold portions. The yearly rent to be 10*s.* sterling per square mile to proprietors of land in the colony (each being restricted to one square mile of pasturage for every forty acres of land he may possess), and 40*s.* sterling per square mile to non-proprietors, or to proprietors for any quantity exceeding the stated allowance. No lease to contain any fractional part of a square mile of pasturage.

Any one who shall hereafter pay in advance to the proper officer, either in England or in the colony, the price of 4000 acres of land or upwards, shall have a right, for every 4000 acres thus paid for, to call on the Colonial Commissioner to direct the survey of any compact district within the colony of an extent not exceeding 15,000 acres; and, within fourteen days after the publication of such surveys at the Land Office, to select his land from any part of such district before any other applicant.

An accurate statement of all purchases of land made, and leases of pasturage granted, specifying the quantity and situation in each case, and the name of the purchaser or tenant, will be published from time to time in the "Colonial Gazette."

The infant settlement will receive about 874 emigrants during the present season. The Surveyor-General, and his staff of assistant surveyors, sailed from Gravesend on the 4th of May, in the "Rapid" brig, which had been furnished with a very complete set of surveying instruments, and provisions, clothing, and other stores for twelve months.

The "Cygnet," a vessel of 239 tons preceded the "Rapid," and carried out the chief assistant surveyor and a number of labourers. It is intended thoroughly to examine the coast, and as much as possible of the interior, with the view of ascertaining the fittest spot for the site of the future capital; and it is expected that the ground for the first new town will have been marked out before the arrival of the Governor and the main body of the colonists.

A clergyman has been appointed as pastor of the colony; and the frame of a church, capable of holding 750 souls, is to be sent out by one of the next vessels. The sum of 700*l.* has been subscribed already, to be applied to religious purposes in the colony.

It is proposed to establish a school for the education of the children of the emigrants; and a high school upon an extensive scale, for the purpose of providing the means of superior education to the colonists, not only of South Australia, but of Van Diemen's Land and New South Wales. Madras is only six weeks' sail from South Australia, and it is conceived that many children of Anglo-Indian parents, instead of being separated from home for years, would be sent to school in the colony, if an establishment of a superior kind were founded. A sort of pleasure town, or watering place, might also be established, which would attract invalids from India, who at present are obliged either to make a long voyage to England, where the climate is inferior and less suitable than that of South Australia, or they are compelled to undergo the fatigue of an inland journey to a temperate northern latitude.

The first number of a weekly newspaper, entitled the "South Australian Gazette and Colonial Register," has already been published in London—the capital of the civilized world. The second number, as the conductors state, will be issued "in a city of the wilderness of which the site is yet unknown." In reference to this interesting part of the concerns of the new colony, the following explanations are given:—

"It may be thought that in a colony, the population of which at the outset must necessarily be limited, the establishment of a Journal like the present is premature. That we do not think so, the fact of types precisely similar to those which have printed what the reader now holds in his hands, printers, presses, paper, and the whole *material* of a newspaper, being already on shipboard, and bound to South Australia, sufficiently proves. But the history of the progress of a colony founded upon principles which are believed to be the true principles of colonization, ought, we think, to be a source of deep and permanent interest to every one who has at heart the welfare of our poor and the increase of the prosperity of our country; and as our Journal is intended not as a vehicle for the diffusion of political or party opinions, but as the simple record of the proceedings of a new colony which professes to commence with the elements of society already formed, and society itself to a certain extent, matured, with a government organized and complete, and to be conducted on the principle of selling unoccupied land to the settler, and expending the price received for it in providing him with labourers to render it productive and valuable, we are led to the conclusion that our Register may find its way into the hands of the statesman and philanthropist at home, by whom the importance of this experiment on society in England, and on the future well-being of all her colonial possessions, must be at once discovered."

From the above facts it will be seen that the colony of South Australia is constituted on different principles to those which have hitherto chiefly been acted upon in forming new settlements. The ruin of the Swan River settlers was occasioned by gratuitous grants of land. Mr. Peel had a grant of 500,000 acres, and was nearly in a state of starvation; as his labourers deserted him, and procured land on equally easy conditions and almost to any extent. They imagined that land was wealth, forgetting that labour alone could give it value. This fatal error will be avoided in South Australia, and its hopes of prosperity will rest upon the combination of capital and labour. It is stated in the "South Australian Gazette," that "The due proportion between land and labour will be preserved by the only possible means—namely, by selling all new land for money, to be paid *before* the purchaser obtains possession of it. This, too, will be accomplished without at all infringing upon the liberty of appropriation. Any quantity of land may be purchased by public sale, and at a fixed price, such price not being less than as at present—namely, 20*s.* per acre, subject, of course, to advance, in case the present price of 20*s.* per acre should not be found sufficient for the only object with which any price is required—namely, the retention of hired labour in the colony; which object can be attained no otherwise than by putting upon all new land such a price as will prevent every labourer from becoming a landowner until he shall have worked for hire for a few years. This regulation will ensure the supply of a proper quantity of land, and no more than a proper quantity. The field of production will always be proportioned to the number of producers or labourers. Hurtful dispersion, and separation of the colonists, or the ruinous cutting up of capital and labour into fractions, will be unknown."

As, therefore, the Act of Parliament declares, that the whole of the funds arising from the sale of land, and the rent of pasturage, shall form an emigration fund, to be employed in affording a free passage to the colony from Great Britain and Ireland for poor persons, "provided that they shall, as far as possible, be adult persons of the two sexes in equal proportions, and not exceeding the age of thirty years," any emigrant capitalist, or other party, who may be desirous of fitting out a vessel for the colony, from any port of Great Britain or Ireland, will be allowed to carry out, at the charge of the Commissioners, any approved emigrants who may offer themselves in the neighbourhood of such port, provided that the arrangements for securing the comforts and safety of the emigrants on their passage are approved of by the Commissioners, and that the charge per head does not exceed that for emigrants leaving the port of London. The same allowance to be made for any of the crew of the vessel who are of the proper description of emigrants, provided they go out as colonists to engage in the coasting trade or fisheries, and that satisfactory security can be given for their continuing such for at least three years. Provided also, that their families, if any, shall be resident in the colony.

The following is from the official account given by the Commissioners under the Act for erecting South Australia into a British Province, and will best illustrate the principles upon which they act in reference to land and labour:—

1. "The characteristic feature of the plan of colonization laid down by the Act of Parliament is a certain means for securing a sufficient supply of free labour.

2. "This is accomplished by requiring every applicant for colonial land, in order to entitle himself to a grant, to pay a certain sum per acre to a general fund, to be employed in carrying our labourers.

3. "The EMIGRATION FUND thus raised is placed under the management of the Commissioners, whose duty it is to regulate the rate of payment, so as to obtain neither too large nor too small a number of labourers; and by the selection of young healthy persons of good character, and of both sexes, in equal numbers, to render the fund as efficient for the purposes of the colony as possible.

4. "This arrangement secures many very important advantages. First. Having provided a sufficient supply of *free* labour, the Act of Parliament declares that no *convicts* shall be sent to the settlement, and thus the colonists are protected from the enormous evils which result from the immorality and profligacy unavoidable in a penal settlement.—Secondly. As the labourers will be carried out at the common cost of the landowners by means of the Emigration Fund, and as they will be sufficiently numerous, it is not necessary that they should be *indentured* to any one. Both employers and labourers will be perfectly free to enter into any arrangements which may be mutually agreed upon—a state of things which experience has shewn to be much more conducive to contentment and prosperity than any other.—Thirdly. The contribution to the Emigration Fund being a necessary preliminary to the acquisition of land, labourers taken out comfree, before becoming landowners, and thus ceasing to work for others, will furnish the means of carrying out other labourers to supply their places. This arrangement, the fairness of which must be obvious to every one, is really beneficial, not only to those who are landowners in the first instance, but to those also who may become such by a course of industry and frugality; for while it diminishes the injurious facility with which, in most new colonies,

person with scarcely any capital can become a petty landowner or *cottier*—a temptation which few have sufficient strength of mind to resist, notwithstanding the state is one of incessant care and toil—it holds out a prospect of real independence and comfort to those who will patiently wait the very few years which are necessary to enable any one, with colonial wages, to acquire sufficient capital to purchase land and become a master.—Fourthly. As those who will cultivate their land, and thus require many labourers, will contribute no more to the Emigration Fund than those who may leave it waste, the non-cultivation of extensive appropriated districts—one of the chief obstacles to the progress of every colony hitherto established—will be greatly discouraged, if not altogether prevented.

5. "In determining the amount of contribution to the Emigration Fund, the Commissioners are required, at any given time, to make a uniform charge per acre, whatever may be the situation or quality of the land granted, and in no case to fix the charge at less than 12*s.* per acre. The payment is made once only,—namely, when the party receives a grant of the land, which grant gives him an absolute and unconditional title to the estate, the Crown making no reserve whatever.

6. "As the contribution to the Emigration Fund is the sole condition of obtaining land, the amount of contribution is described in the Act of Parliament and in the following regulations, as its price. It is worthy of remark, however, that as the Commissioners are required to expend the Emigration Fund, without any deduction whatever, in carrying out labourers, the whole contribution is returned to those who make it, in the form of passage-money for their labourers; and therefore, strictly speaking, it is not land, but the facility of obtaining labour, which is bought. It is important that this principle should be steadily kept in view by those who may desire to understand the plan on which the colony will be formed."

The "South Australian Gazette" contains the following account of the spontaneous productions of the land and water in South Australia:—

Slate, quarries of which are formed on Kangaroo Island, which might be exported to the Isle of France, where no other roofing is used.

Coal, which has been discovered in every part of Australia, and marts for which may be found at Calcutta, Madras, Bombay, Java, Canton, Sincapore, and the Isle of France.

Wood, adapted for cabinet-making and for ship-building.

Bark, containing the tanning principle to a highly concentrated degree.

Gums, particularly gum-arabic and manna.

Salt, in great quantities, marketable in New South Wales and Van Diemen's Land, where it is much inferior.

The Seal Fishery, both in furs and oil, will prove a valuable speculation.

The Sperm and Black Whale Fishery will afford some of the most important and lucrative articles of export.

Those productions which *now* form the articles of export from Australia, are—

Wheat and Flour, a ready market for which is found in the Isle of France, and in which the facility of labour renders it likely that the new colony will supersede the supplies from Van Diemen's Land, which are at present sent to Sydney.

Fine Wool will likewise be exported to this country, for "although land is uniformly to be sold instead of being given away, such arangement is not meant to prevent the occupation of land for breeding purposes without purchase, only on the distinct understanding that it shall not be cultivated or used in any other way." Individuals thus employing their capital in the new colony will have an advantage over the capitalists of Sydney and Van Diemen's Land, in the greater facility of obtaining shepherds, wool-dressers, &c. The Australian wools are now so much esteemed, they so decidedly govern the wool-markets, and, moreover, have been a source of so great wealth to her sister colonies, that it is unnecessary to expatiate on the advantages which must accrue from a judicious selection and management of sheep in South Australia.

Hides, Tallow, and Horns will naturally follow in time as articles of export.

Tobacco, from the constant labour and attention it requires, has not hitherto been exported from Australia, but it is recommended as one of the first articles to which the capitalist should direct his attention.

Many articles are now imported into the Australian colonies, which, with a combination of labour, might be cultivated there with profit; among these is Wine, the soil and climate offering peculiar advantages for the cultivation of the grape.

Flax and Hemp, which, although not indigenous, might be introduced with success. The flax of New Zealand is particularly excellent.

Cotton would form another article of export. Almonds, aniseed, bees'-wax and honey, barilla, cheese, for India and China, carraway, cochineal, coriander, dried fruits, hops, vegetable oils, olives, citrons, oranges, &c., &c., may all be produced, with an article first in the scale of importance—silk.

The sailing distance from England to Port Lincoln is 105 days: from Java, 18 days; Madras, 33 days; Cape of Good Hope, 40; Ceylon, 32; Sydney, 12; Van Diemen's Land, 6.

Every necessary information may be obtained by persons desirous of emigrating, at the office of the Commissioners in London.

CONVEYANCE OF NEWSPAPERS.

The Bill to consolidate and amend the Laws relating to the Conveyance of Newspapers by the Post, enacts—

1. That all newspapers sent by the General Post, within the United Kingdom, shall go free.

2. That all newspapers sent through the General Post, and delivered by the Penny or Twopenny Post, and *vice versâ*, go free.

3. That newspapers sent by the Twopenny Post only pay 1*d.*, and may be sent within post towns at the like rate.

4. That newspapers sent from the United Kingdom by packets to the Colonies, shall go free; as also newspapers sent by packets from the Colonies to the United Kingdom.

5. That newspapers may be sent from one Colony to another, *via* United Kingdom, by packet-boat, free of postage.

6. That newspapers sent from the United Kingdom to the Colonies, by private ships, shall pay 1*d.*

7. That newspapers brought into the United Kingdom from the Colonies, by private ships, shall pay 1*d.*

8. That newspapers to or from foreign countries shall pay 2*d.*; but that if any foreign State receives or sends newspapers to or from the United Kingdom free of duty, then no duty shall be charged on newspapers to or from such State, if by packet-boat; or if by other vessels, then only 1*d.*

9. That 1*d.* be paid masters of private ships for each newspaper.

10. That newspapers be sent without a cover, or in a cover open at the side, without writing or marks.

11. That they be put into the Post Office within seven days after date, if going out of the United Kingdom.

12. That the Postmaster-General shall be authorized to search, and charge treble postage, &c. The sender to be liable to treble duty on attempt to evade the duty of postage.

13. Newspapers re-directed are to be forwarded free of postage, if not opened.

CLOSE OF THE SESSION OF PARLIAMENT.

On Saturday, August 20th, his Majesty proceeded in state from St. James's Palace to the House of Lords, for the purpose of proroguing Parliament. His Majesty delivered the following Speech as soon as the Commons had been summoned:—

"My Lords and Gentlemen,

"The state of the public business enables me at length to relieve you from further attendance in Parliament; and in terminating your labours, I have again to acknowledge the zeal with which you have applied yourselves to the public business, and the attention which you have bestowed upon the important subjects which I brought under your consideration at the opening of the Session.

"The assurances of friendly dispositions which I receive from all Foreign Powers enable me to congratulate you upon the prospect that peace will continue undisturbed.

"I lament deeply that the internal state of Spain still renders that country an exception to the general tranquillity of Europe; and I regret that the hopes which have been entertained of the termination of the civil war have not hitherto been realized. In fulfilment of the engagements which I contracted by the Treaty of Quadruple Alliance, I have afforded to the Queen of Spain the co-operation of a part of my naval force, and I continue to look with unabated solicitude to the restoration of that internal peace in Spain which was one of the main objects of the Quadruple Treaty, and which is so essential to the interests of all Europe.

"I am happy to be able to inform you that my endeavours to remove the misunderstanding which had arisen between France and the United States have been crowned with complete success. The good offices which for that purpose I tendered to the two Governments were accepted by both in the most frank and conciliatory spirit; and the relations of friendship have been re-established between them in a manner satisfactory and honourable to both parties. I trust that this circumstance will tend to draw still closer the ties which connect this country with two great and friendly nations.

"I have regarded with interest your deliberations upon the Reports of the Commission appointed to consider the state of the dioceses in England and Wales; and I have cheerfully given my assent to the measures which have been presented to me for carrying into effect some of their most important recommendations.

"It is with no ordinary satisfaction that I have learned that you have with great labour brought to maturity enactments upon the difficult subject of tithe of England and Wales, which will, I trust, prove in their operation equitable to all the interests concerned, and generally beneficial in their results.

"The passing of the Acts for civil registration and for marriages in England has afforded me much satisfaction. Their provisions have been framed upon those large principles of religious freedom which, with a due regard to the welfare of the Established Church in this country, I have always been desirous of maintaining and promoting; and they will also conduce to the greater certainty of titles, and to the stability of property.

"It has been to me a source of the most lively gratification to observe the tranquillity which has prevailed, and the diminution of crimes which has lately taken place in Ireland. I trust that perseverance in a just and impartial system of government will encourage this good disposition, and enable that country to develope her great natural resources."

"Gentlemen of the House of Commons,

"I thank you for the liberality with which you have voted, not only the ordinary supplies of the year, but the additional sums required to provide for an increase in my naval force.

"I am also gratified to perceive that you have made provision for the full amount of the compensation awarded to the owners of slaves in my colonial possessions, and that the obligations entered into by the Legislature have thus been strictly fulfilled.

"The increased productiveness of the public revenue has enabled you to meet these charges, and at the same time to repeal or reduce taxes, of which some were injurious in their effects upon my people, and others unequal in their pressure upon various parts of my dominions abroad.

"The present condition of manufactures and commerce affords a subject of congratulation, provided the activity which prevails be guided by that caution and prudence which experience has proved to be necessary to stable prosperity."

"My Lords and Gentlemen,

"The advanced period of the year, and the length of time during which you have been engaged in public affairs, must render you desirous of returning to your respective counties. You will there resume those duties which are in importance inferior only to your legislative functions; and your influence and example will greatly conduce to the maintenance of tranquillity, the encouragement of industry, and the confirmation of those moral and religious habits and principles which are essential to the well-being of every community."

THE NEXT SESSION.

THE following are a few of the Notices of Motions which now stand in the Order Book of the House of Commons for the next Session:—

Mr. Buckingham,—Select Committee, to consider the best means of improving the forms of proceeding in the House of Commons, so as to ensure greater certainty and regularity in the order in which the various motions and Bills are to be brought on for discussion, as well as to secure to the public more faithful and accurate reports of the real business transacted by their representatives.

Mr. Buckingham,—Select Committee, to consider the best means of checking the progress of juvenile depravity in the populous towns of the kingdom.

Mr. Charles Buller,—Bill or Bills founded on the Report of the Select Committee on Controverted Elections.

Mr. Ewart,—Address for the appointment of a minister of education, regularly to lay before this House a report of the progress of the people in education and the arts.

Mr. Ewart,—Bill providing that, in case of intestacy, and in the absence of any settlement to the contrary, landed property shall be equally divided among the children, male and female, of the deceased; that such property shall pass, like personal property, through the hands of the executors, and be liable for the debts of the deceased.

Mr. Ewart,—That the Strangers' Gallery be opened to the public without a Member's Order, as well as without fee to any officer of the House.

Mr. Ewart,—Bill to give in all criminal cases the right of the last word to the accused.

Mr. Gillon,—To call the attention of the House to the unequal rates of taxation levied upon the different modes of internal communication, as unjust in themselves, as tending to discourage free competition, and thus highly prejudicial to the public interests.

Mr. Heathcote (of South Lincoln),—That the duties charged on wool imported from France be raised to the same paid on English wool imported into that country; unless the French duties be in the mean time placed on an equality with our own.

Mr. Barlow Hoy,—Select Committee, to inquire into the state of the law respecting benefit societies.

Mr, Hume,—Select Committee, to inquire into the establishment of the Mint, and its proceedings in regard to the coinage; and the laws respecting the metallic currency of the United Kingdom.

Mr. Mackinnon,—To renew the Patent Laws Amendment Bill for securing to individuals the benefit of their inventions.

Mr. O'Connell,—To move, that it be referred to a Committee, to inquire and report whether it be not necessary for the public weal of this realm, to reform the House of Lords by extending the principle of representation in the Peerage, and altering the quality of the electors and the mode of election.

Mr. O'Connell,—To move a Resolution, that it is the opinion of this House that, in justice to the Protestant Dissenters and Catholics of England and Wales, all church-rates ought to be defrayed out of the temporalities of the Established Church, as is the case in Ireland.

Sir Love Parry,—To call the attention of the House to the state of education in the Principality of Wales, with a view to confer that benefit on the poorer classes so essential to them, and to the nation.

Mr. Mark Philips,—To move the repeal of the duty on raw cotton.

Mr. Robinson,—Repeal or reduction of the duty on marine insurances.

Mr. Ruthven,—Bill to amend the law which obliges all shareholders in, and proprietors of, newspapers in Ireland, to be registered, so as to place newspaper property in Ireland on the same footing as it is at present in England.

Mr. Poulett Scrope, — Bill for opening a mendicity asylum in every Poor Law Union in England and Wales.

Mr. Serjeant Talfourd,—To call the attention of the House to the law of copyright, with a view to the extension of the time during which the interest of authors in their works shall continue.

Mr. Arthur Trevor,—To move, as an amendment to the notice given by the Member for Kilkenny relative to the House of Lords, that the same be expunged from the Journals of the House.

Mr. Arthur Trevor,—That an humble Address be presented to his Majesty, praying that he will be graciously pleased to take into consideration the expediency of granting a charter for conferring degrees to the University of Durham.

Mr. Wakley,—Select Committee to inquire into the nature and effects of the measures which have been provided in the unions and parishes of England and Wales, for supplying with medical attendance and medicines all sick persons who may be, or may have been, entitled to receive parochial relief under the existing, or any former poor-laws.

Mr. Wallace,—Bill to enable the inhabitants of every town in Great Britain and Ireland to convey their correspondence from place to place in any manner they shall see proper, provided the Post Office shall, on application being made, decline to carry it at least once a-day, and charge only the usual legal rate of postage on the distance by the direct carriage-road; also, to enable the inhabitants of every town to establish parcel-posts, similar to those in and around London, and to convey their correspondence and parcels by stage-coaches or other means, provided the Post Office shall decline to establish such posts.

Mr. Wallace,—Committee to inquire into the communication by post between London and Aberdeen by way of Edinburgh and Dundee; also from London to Glasgow by Carlisle; also between Liverpool and Glasgow.

Mr. Ward,—Bill for the better regulation of the metropolitan sewers.

Mr. Ward,—Bill for the sale of waste lands in the British colonies, and for the formation of an emigration fund out of the proceeds, founded upon the Resolutions of the Colonial Lands Committee.

Mr. Rigby Wason,—That the system which permits Members of the House of Commons to vote in Committees on Private Bills, without having heard the whole of the evidence adduced, is inconsistent with the first principles of justice, and ought to be altered.

Mr. Wilks,—Bill to amend the provision of the Reform Act, under which tenants at 50*l.* per annum are entitled to vote for counties, or for extending the elective franchise for counties.

LIST OF BILLS BROUGHT IN.

House of Commons.

July 22. Bill to amend two Acts of 4 and 5 Will. IV. relating to the temporalities of the Church of Ireland.

— Bill to enable tenants for life of estates in Ireland to make improvements in their estates, and to charge the inheritance with the monies expended in such improvements.

— Bill to promote the reclamation and improvement of uncultivated lands in Ireland.

— 23. Bill to enable the Commissioners of Woods and Forests to make a road in Sunk Island, Yorkshire.

— 23. Bill to prevent the advertising of foreign and other illegal lotteries.

— Bill for granting relief from the duties of assessed taxes, and on stage carriages, in certain cases, and to regulate the charging of the duty payable for taking or killing game, in Great Britain, and to provide for the collection of certain local taxes in Scotland.

— 25. Bill to explain and amend an Act of the present Session for imposing certain restrictions on the removal of leases by ecclesiastical persons.

— 26. Bill for suspending appointments to certain dignities and offices in cathedral and collegiate churches, and to sinecure rectories.

— Bill to amend Act 17 Geo. III., for preventing frauds and abuses by persons employed in the manufacture of hats, and in the woollen, linen, fustian, cotton, iron, leather, fur, hemp, flax, mohair, and silk manufacture, and also for making provisions to prevent frauds by journeymen dyers.

— 29. Bill to establish a council and auditors in every county in England and Wales for the better management of county-rates, and for amending the laws relating thereto.

— Bill to repeal so much of an Act of the 28th of Geo. III. as prevents more than five persons joining in the coal trade.

July 29. Bill to amend an Act for enabling his Majesty to carry into effect a Convention (Greek loan) made between his Majesty the King of the French, the Emperor of all the Russias, and the King of Bavaria.

August 2. Bill for the regulation of the offices of Vice-Treasurer and Teller of the Exchequer in Ireland.

— Bill to suspend for a limited time the making of lists and the ballots and enrolments for the militia of the United Kingdom.

— 5. Bill for carrying into further execution the Act for compensating owners of slaves upon the abolition of slavery.

— Bill to authorize his Majesty by Orders in Council to carry into immediate execution any treaties, conventions, or stipulations made with any Foreign Power for the suspension of the slave trade.

— 8. Bill to defray the charge of the pay, clothing, and contingent and other expenses of the disembodied militia in Great Britain and Ireland.

— Bill to regulate the landlords' right to hypothec in Scotland.

— Bill to continue an Act of 54th Geo. III., for rendering the payment of creditors more equal and expeditious in Scotland.

— Bill to amend an Act of 1st and 2nd Will. IV., for the extension and formation of public works in Ireland.

— 9. Bill to provide for certain cases in which elections have not been duly made according to the provisions of the Act to provide for the regulation of municipal corporations in England and Wales.

— Bill to extend the period for the repayment of loans made under the amended Poor Law Act.

— Bill to suspend proceedings for recovering payment of the money advanced under the Act for establishing tithe compositions in Ireland.

— Bill to repeal two Acts of Geo. II., for recovery of debts in Westminster.

— 13. Bill to legalize certain lists of voters and of claims and objections for the present year.

— Bill for the better administration of justice in certain boroughs.

— Bill for the better administration of the borough fund in certain boroughs.

— Bill to make temporary provision for the boundaries of certain boroughs.

— Bill to amend an Act of 9th Geo. IV., relative to the preservation of the salmon fisheries in Scotland.

LIST OF COMMITTEES APPOINTED.

House of Commons.

July 29. Committee to prepare estimates of the charge of the disembodied militia for a year, to 31st March, 1837.

New Member.

For Newcastle-upon-Tyne, John Hodgson, Esq., in the room of Sir M. W. Ridley, Bart., deceased. The election was contested, and the poll closed as follows:—Mr. Hodgson, 1576; Capt. Blackett, 1528. Majority 48.

New Writs Issued.

For the county Down, in the room of Lord Arthur Hill, now Lord Sandys, called up to the House of Peers.

For Sheffield, in the room of John Parker, Esq., appointed one of the Lords' Commissioners of his Majesty's Treasury.

For the borough of Warwick, in the room of Sir Charles Greville, who has accepted the Chiltern Hundreds.

For the eastern division of the county of Cumberland, in the room of W. Blamire, Esq., appointed Chief Commissioner for the Commutation of Tithes.

The representation of the borough of Calne is vacant by the death of the Earl of Kerry.

RESOLUTIONS OF THE SELECT COMMITTEE ON RAILWAY BILLS.

Amendments to the general rules on Petitions for Bills.

THAT the Select Committee of the House of Commons on Standing Orders do hereafter consist of fifteen Members.

That a Select Committee, consisting of forty-two Members, (not being Members of the Select Committee on Standing Orders,) shall be appointed at the commencement of every Session, to which shall be referred all petitions for Private Bills, except those for Bills to continue or amend any Act for making, maintaining, keeping in repair or improving any turnpike road.

That the said Committee have leave to make regulations for the transaction of business, and shall divide themselves into Sub-Committees, consisting of seven Members at the least.

That five be the quorum of any such Sub-Committee.

That before such Committee the compliance with the Standing Orders shall be proved, and any parties shall be at liberty to appear and be heard by themselves, their agents, and witnesses, upon any petition which may be referred to the Committee, complaining of a non-compliance with the Standing Orders, provided the matter complained of be specifically stated in such petition.

That when such Committee shall report to the House that the Standing Orders have not been complied with, they do report the facts upon which their decision is founded, and any special circumstances connected with the case.

That the Select Committee on Standing Orders shall thereupon determine whether the Standing Orders ought or ought not to be dispensed with, and do report the same to the House accordingly.

That there be seven clear days between the day on which the petition for any Private Bill relating to England shall be presented and the day on which the Committee shall sit thereupon; and fourteen days, in case such Bill shall relate to Scotland or Ireland.

That three clear days' notice be given of the meeting of such Committee.

That no Committee on any Private Bill shall have power to examine into the compliance with the Standing Orders, unless by the special direction of the House.

That the said Orders shall not apply to petitions for Bills, which, according to the rules and practice of the House, it may not be necessary to refer to a Committee.

That all notices required to be given in the Private Bill Office be delivered in the said office before six o'clock in the evening.

Railways: amended Standing Orders for next Session.

That when any application is intended to be made to the House for leave to bring in a Bill for making any railway, or for varying, extending, or enlarging any railway already authorized to be made, or for continuing or amending any Act passed for any of those purposes, or for the increase or alteration of the existing tolls, rates, or duties upon any such railway; notices of such intended application be given.

That such notices (except as hereinafter mentioned,) do contain the names of the parishes and townships from, in, through, and into which any such railway is intended to be made, varied, extended, or enlarged; and if an increase or alteration in any existing tolls, rates, or duties is intended to be proposed, the intention of proposing such increase or alteration be expressed therein. But in case any such Bill shall be for the purpose only of increasing or altering any existing tolls, rates, or duties, or of continuing or amending any former Act, solely for the purpose of tolls, it shall not be necessary to insert in such notices the names of the several parishes and townships.

That such notices be inserted three times in the months of August, September, October, and November of this year, or either of them, in some one and the same newspaper of every county in or through which any such railway is intended to be made, or in which such railway, already authorized to be made, is intended to be varied, extended, or enlarged, or if there is no such paper printed therein respectively, then in the newspaper of some county adjoining thereto.

That a map or plan and section of the whole of such intended railway, and also of any intended variation, extension, or enlargement of any railway authorized to be made, upon a scale of not less than four inches to a mile, shall be deposited for public inspection at the office of the clerk of the peace of every county, riding, or division, in or through which such railway, or such variation, extension, or enlargement is intended to be made, on or before the 30th day of November next, which map or plan shall describe the line of such intended railway, or of such intended variation, extension, or enlargement, and the lands in or through which the same is intended to be made, together with a book of reference, containing a list of the names of the owners or reputed owners, lessees or reputed lessees, and occupiers of such lands respectively; and where such railway or such variation, extension, or enlargement, is intended to pass through any buildings, yards, court-yards, or land within the curtilage of any building, or through any ground cultivated as gardens, an additional plan of such buildings, yards, land, and ground, and of the said railway, shall be laid down upon a scale of not less than a quarter of an inch to every 100 feet.

That such section shall be drawn to the same horizontal scale as the plan, and to a vertical scale of not less than one inch to every 100 feet, and shall show the surface of the ground in the line of railway marked on the plan, and shall also have marked on it a line showing the railway line when finished (which line shall correspond with the upper surface of the rails), and a datum horizontal line, which datum line shall be the same throughout the whole length of the railway, and shall be referred to some fixed point stated on the section.

That a vertical measure from such datum line to the line of the railway shall be marked, in feet and inches at each change of the gradient or inclination, and that the proportion or rate of inclination between each such change shall also be marked.

That the height of the railway over or under the surface of the ground shall be marked in figures at least twice in every mile, and also at every crossing of a turnpike-road and public carriage-road, navigable river, canal or railway, or junction with a railway, and that it shall be stated on the section, whether any and what alteration in the present level of such turnpike-road, carriage-road, river, canal, or railway is intended to be made.

That where tunnelling or arching is intended, the same shall be marked both on the plan and section.

That the clerks of the peace, or their respective deputies, do make a memorial in writing upon the map or plan, section, and book of reference so deposited with them, denoting the time at which the same were deposited in their respective offices, and do at all seasonable hours of the day permit any person to view and examine the same, and to make copies or extracts therefrom, such person paying for the same the sum of 1*s.* for every such inspection, and the further sum of 1*s.* for every hour during which such inspection shall continue after the first hour.

That within one calendar month from the time when the map or plan and section shall have been deposited with the clerk of the peace, a copy of so much of the said map or plan and section as relates to each parish, through which any railway is intended to be made, varied, extended, or enlarged, together with a book of reference thereto, shall be deposited with the parish clerk of each such parish in England, the schoolmaster of each such parish in Scotland, and the postmaster of the post town in or nearest to such parish in Ireland, for the inspection of all persons concerned, at all seasonable hours of the day, such person paying for each inspection the sum of 1*s.*

That within one calendar month from the time when the map or plan and section shall have been deposited with the clerk of the peace, a copy of the said map or plan, section, and book of reference, shall be deposited in the Private Bill Office of this House, and that a memorial in writing of the receipt thereof be indorsed by one of the clerks of the said office upon such map or plan, section, and book of reference.

That before any application is made to the House for a Bill for making any railway, or for varying, extending, or enlarging any railway already made, previous application in writing be made to the owners or reputed owners, lessees or reputed lessees, and be sent to their usual place of abode in the United Kingdom, or, in their absence, to their agents respectively, and to the occupiers of the lands through which any such railway is intended to be made,

varied, extended, or enlarged, and that such applications shall be made on or before the 31st day of December next, and that separate lists be made of the names of such owners, lessees, and occupiers, distinguishing which of them upon such application have assented to or dissented from such intended railway, or such variation, extension, or enlargement, or are neuter in respect thereof.

That before any petition shall be presented to the House for making any railway, or for varying, extending, or enlarging any such railway already made, the lists mentioned in the preceding resolution, and an estimate of the expense, signed by the person making the same, and a copy of the subscription contract after mentioned, be deposited in the Private Bill Office of this House, and that the receipt thereof be acknowledged accordingly by one of the clerks of the said office upon such petition.

That before any petition is presented to the House for a Bill for making any railway, a subscription to the amount of one-half at least of the estimated expense shall be entered into by persons under a contract, binding themselves, their heirs, executors, administrators, or assigns, for the payment of the money so subscribed.

That no such Bill shall be reported to the House until it has been proved to the satisfaction of the Committee, that three-fourths at least of the proposed capital of the company has been subscribed under a like contract.

That no such Bill shall be reported to the House unless provision be made:—1. That no such company shall be authorized to raise, by loan or mortgage, a larger sum than one-third of their capital, and that, until 50 per cent. on the whole of the capital shall have been paid up, it shall not be in the power of the company to raise any money by loan or mortgage. 2. That, where the level of any road shall be altered in making any railway, the ascent of any turnpike-road shall not be more than one foot in thirty feet; and of any other public carriage-road not more than one foot in twenty feet; and that a good and sufficient fence, of four feet high at the least, shall be made on each side of every bridge which shall be erected. 3. That no railway, whereon carriages are propelled by steam, shall be made across any highway on the level, unless the Committee on the Bill report that such a restriction ought not to be enforced.

A number of other resolutions are adopted as amended Standing Orders for subsequent Sessions.

ABSTRACTS OF REPORTS AND RETURNS PRESENTED TO PARLIAMENT.

Jurors.—The following is a Return, shewing the number of persons qualified and liable to serve on juries in each county in England and Wales, under the provisions of the Act 6 Geo. IV, c. 50, in the year ending December 31st, 1835. The jurors of many boroughs claim to be exempt from serving on juries for the county:—

England.			
Bedford	1,469	Lincoln	6,781
Berks	1,739	Middlesex	28,584
Buck	2,482	Monmouth	1,694

Temporary Houses of Parliament Expenses.—The amount expended in erecting the present temporary Houses of Parliament, and buildings connected with them, was 31,138*l.* 10*s.* 7*d.*; and an estimate of 500*l.* is made for works immediately required; namely, additional bookcases for the Lords and Commons, an office for the sale of the printed papers, and some addition to the prison-rooms. About 200*l.* more has been expended in fitting up Committee-rooms, &c., at the Speaker's late official residence. The amount expended in re-furnishing the House of Peers, after the fire, was 4,855*l.* 11*s.* 4*d.*; ordinary expenses to the 5th of July, 1836, were 460*l.* 0*s.* 8*d.*—Total 5,317*l.* 12*s.* The amount expended in re-furnishing the House of Commons, was 6,376*l.* 4*s.* 1*d.*; ordinary expenses to the 5th of July, 1836, including Speaker's new rooms, division-room, prison-rooms, and Committee-rooms 1,647*l.* 5*s.* 5*d.*; together 802*l.* 9*s.* 6*d.* Fitting up office in Abingdon-street 100. Total for supply for furniture to houses and offices 13,441*l.* 1*s.* 6*d.* Total of erection 32,140*l.* 0*s.* 7*d.* Grand total 45,581*l.* 2*s.* 1*d.*

MISCELLANEOUS.

The Manufacturing Districts.—It is stated in the official Report of the House of Commons, "That while the population of all England, with the exception of Middlesex, Surrey, Lancashire, and Yorkshire, is only 198 to one square mile; while the four largest counties, with the exception of Yorkshire and Lancashire, give only 156; the population within the three miles of the projected Manchester and Leeds railroad, is no less than 1849 to the square mile. The line of railroad running down the main valley of the district, passing by the populous towns of Middleton, Rochdale, Todmorden, Halifax, Dewsbury, and Wakefield, affords access to the manufactories on each side, which, through the whole length, swarm along the banks of the tributary streams. The raw cottons and woollens are sent backwards and forwards along this valley for the various purposes of spinning, weaving, bleaching, dyeing, and printing. The export, annually, of cotton-twist and manufactured goods, for the north of Europe, the whole of which must pass along this line, is stated by one witness at 80,000,000 lbs. annually; while another states the trade in twist, with Russia alone, to be 22,000,000 lbs., or in value about 1,500,000*l.*, of which he himself exports from 5,000,000 to 7,000,000 lbs.

City Revenue.—A Report of a Committee on the City Revenue states that the total income of the corporation in 1797 was 74,000*l.*, and in the year 1833 upwards of 141,000*l.*, and that a further sum of 74,000*l.* has been received from the public in fees and other charges by various officers of the corporation, connected with the several establishments and trusts under its management and control. The total annual income of the corporation is therefore upwards of 215,000*l.*

Port of Liverpool.—In the month ending June 14th, 1835, the number of vessels entered this port were 1620, tonnage 117,783; for the same period in 1836 the number of vessels entered was 1712, tonnage 209,748; increase in vessels 92, in tonnage 31,965. For the year ending June 24th, 1835, the number of vessels entered was 13,941, tonnage 1,768,426; same period ending June 24th, 1836, the number of vessels entered was 14,959, tonnage 1,947,613: increase in the number of vessels 1810, in tonnage 179,187.

Proportions of the leading items of Revenue.—It is calculated that the Customs and Excise contribute 72 per cent. of the whole revenue; the stamps 14 per cent.; the assessed and land taxes 9 per cent.; and the Post Office 5 per cent. The rate per cent. for which the gross receipt was collected in 1835, in Great Britain, was 6*l.* 5*s.* 6½*d.*; namely, Customs, 5*l.* 5*s.*; Excise, 6*l.* 13*s.* 6¾*d.*; stamps, 2*l.* 10*s.* 11¾*d.*; taxes, 5*l.* 7*s.* 9½*d.*; Post Office, 27*l.* 12*s.* 9*d.*; tax on pensions and salaries, 2*l.* 2*s.* 0½*d.*; Crown lands, 10*l.* 2*s.* 11¾*d.* The rate per cent. for which the gross receipts of revenue were collected in Ireland, in 1835, amounted to 11*l.* 17*s.* 2½*d.*; namely, Customs, 12*l.* 5*s.* 2¼*d.*; Excise, 9*l.* 1*s.* 6¼*d.*; stamps, 5*l.* 3*s.* 3½*d.*; Post Office, 39*l.* 4*s.* 2½*d.*

Price of Consols.—The following are the closing prices of the Three per Cent. Consols for Account on each of the undermentioned days:—

July 30.	August 6.	August 13.	August 20.
91	91⅜	91¼	91¼

Bank of England.—Quarterly Average of the Weekly Liabilities and Assets of the Bank of England from May 3, to July 26, 1836, inclusive, published pursuant to the Act 3 & 4 Will. IV. cap. 98:—

Liabilities.		Assets.	
Circulation...	£17,940,000	Securities....	£28,315,000
Deposits.....	14,495,000	Bullion.....	6,926,000
	£32,435,000		£35,241,000

Sugar.—Average price of Brown or Muscovado sugar per cwt., computed from the Returns published in the *London Gazette*:—

Bankruptcy Analysis from July 21st to August 21st.—Booksellers, 2; brewers, 2; builders, 2; cabinet-maker, 1; carrier, 1; cattle-dealer, 1; cheese-factor, 1; cloth-dresser, 1; coal-factor, 2; corn-dealer, 1; currier, 4; dealer, 1; drapers, 3; dyer, 1; farrier, 1; fish-curer, 1; flax merchant, 1; flour-seller, 1; glue manufacturer, 1; grocer, 6; hosier, 1; ironmonger, 1; joiner, 1; maltster, 1; merchants, 2; miller, 1; money-scrivener, 1; painter, 1; pawnbroker, 1; postmaster, 1; printer, 1; provision-agent, 1; ship-owner, 1; ship-agent, 1; silk-mercer, 1; silk-throwster, 1; stationers, 2; surgeons, 2; tailor, 1; victuallers, 2; woollen warehouseman, 1; wine-merchant, 1; wire-drawer, 1.—Total 61; from the 28th of December, 574.

CHRONICLE OF OCCURRENCES.

Aug. 1. At the half-yearly meeting of the Liverpool and Manchester Railway Company, it appeared from the Report, that during the preceding six months there had been received from passengers by coaches 57,914*l.*; for merchandise, 47,141*l.*; for coals, 4000*l.*:—total receipts in six months, 109,355*l.* The expenses for the same period were 69,953*l.*

Gratifying accounts continue to be received of the state of trade in the manufacturing districts. The old channels of commerce are all represented as extending, and new ones opening; the joint-stock projects are diminishing; merchants, manufacturers, and traders admit that trade was never in a sounder state, and with a better prospect of permanency; agriculture is recovering from its depression; and the labouring classes are fully employed and well paid.

5. The sixth half-yearly meeting of the London and Birmingham Railway Company was held at Birmingham. The Report announced that the whole line would be completed by the summer of 1838, and the first 21 miles from London, in the spring of 1837. The receipts to the 30th of June were 1,955,608*l.*, and the disbursements up to the same period, 1,492*l.* 10*s.*

15. *Whitehall.*—The King has been pleased to nominate, constitute, and appoint, the Right Honourable Lord John Russell, to be one of the Ecclesiastical Commissioners for England.

16. A public meeting was held at the Crown and Anchor, for the purpose of sympathizing with the recent attempts of the Spanish people to improve their political condition, by a renewed declaration of the Constitution of 1812; Colonel Thompson, M.P., in the Chair. Messrs. Murphy, Carpenter, Cleave, Carlisle, and one Member of Parliament, were present.

Since the retrospect of events in Spain was in type, the following telegraphic despatch, received by the French Government, has been made public:—

"St. Ildefonso, 13th August, 10 o'clock A.M.

"A military insurrection compelled the Queen-Regent, at two o'clock this morning, to accept the Constitution of 1812. All is perfectly tranquil here at this moment. The soldiers have re-entered their barracks."

"Madrid, 13th August, 6 o'clock P.M.

"The news of the events at St. Ildefonso is beginning to circulate in Madrid. The public tranquillity has not yet been disturbed. The Council of Ministers is at this moment sitting."

The Madrid Gazette of August 16, has also been received, containing the following decrees:—

"The Constitution of 1812 is proclaimed until the meeting of the Cortes, which will decide upon the institutions which shall be given to Spain:—M. Calatrava is appointed President of the Council;—M. Ferrer, Minister of Finance;—M. La Cuadra, Minister of the Interior;—General Seoane succeeds to General Quesada;—General Rodil is appointed Commandant of the Guard, and is trusted with the general inspection of the Militia.—The state of siege is raised, and the National Guard of Madrid is re-organized."

The Constitution of 1812 has been proclaimed at Santander and St. Sebastian.

METROPOLITAN BRITISH & FOREIGN CLOTHING ESTABLISHMENT,

LONDON. 97, FLEET-ST.

GEORGE DAVID BOURNEY.

In remarking on his
FIRST-RATE QUALITIES,
G. D. D. respectfully addresses Gentlemen who have hitherto found it necessary to pay extravagantly high prices for really First-rate Clothes; to such he guarantees a **DRESS COAT** of any colour—as stylish in make, as tasteful and talented in cut, and as good in quality, as any bearing the names of the most expensive and favourite Fashionable Houses, for.....£3 0
Surtouts, including, of course, Silk linings 3 10
Black and Blue. 10s. extra on each
Buckskin Trousers, on G. D. D.'s
New principles of Measurement, 1 8
Waistcoats 14
Ladies' Riding Habits..... 6 6
These will be found of that character which has raised this Establishment to such eminence in the estimation of the higher circles, where nothing short of **easy gentlemanly elegance** could be tolerated.

THE SECOND-RATE QUALITIES
Are especially recommended for Business and Travelling Clothes; also, to the **ECONOMIST** they are found preferable to the first on account of their Superior Durability, while in appearance none but the Connoisseur could discover a difference, excepting by comparison; in short, they are frequently substituted at other Houses for the Best. The Prices are, for **DRESS COATS**, of any colour (Style and Fit First-rate) £2 5
Surtouts, including Silk linings, 2 10
Black or Blue, 5s. each extra
Trousers 1 1
Waistcoats 10
The Army Blue Spanish Cloak, forming a circle of 9 yards round the bottom—the best Travelling Cloak that is made 2 10
A good Cloth ditto, with Fur Collar, and Cape—9 yds round 3 3
Milled Petersham Great Coat.. 2 2

CONTRACTS FOR FIRST-QUALITY CLOTHES
As generally adopted, are objectionable, because they confine Gentlemen to one particular Dress, or subject them to considerable Extra Charges: G. D. D.'s system removes this difficulty by leaving at the option of the Customer what he chooses to wear, whether Surtouts or Dress Coats, either Coloured or Black; his Prices, including all extras (excepting Velvet Collars), being for
Two Suits per Annum.....£10 0
Three ditto ditto 14 18
Four ditto ditto 19 12
and so on in proportion to the number of Suits. Each Suit to be returned on the delivery of its successor. Gentlemen who take three or more Suits per Annum are allowed two Suits in wear during the whole term; thus in a contract for three Suits a Dress Suit and an Undress Suit are supplied together. The Dress Suit to be kept for twelve months, and, at the expiration of six months, the Undress Suit is returned, and another supplied to continue to the end of the term, the contract amount for each Suit being paid on delivery. Contracts for the second quality would be much lower.

A Suit of First-rate Liveries..... £3 18 6
For **WASHING TROUSERS** and **WAISTCOATS** definite prices cannot be stated, on account of the variety of Materials; but a very superior article for **SUMMER TROUSERS** are charged **10s.** per pair, and **WAISTCOATS, 6s.** each

G. D. D respectfully informs **COUNTRY GENTLEMEN**, that, on account of the numerous invitations he has received to make Periodical Circuits through England, his Traveller will wait on them occasionally, or will proceed direct to any part where three or more Gents. (according to the distance) favour him with their Addresses.

THE FIRST HOUSE IN ENGLAND FOR DRESS WAISTCOATS.

BRILLIANT PIER AND CHIMNEY GLASSES, &c.

FAMILIES about to furnish will find many advantages at HENRY L. COOPER'S Manufactory for Upholstery, Carpeting, Chairs, Cabinet Work, and Looking Glasses, in design, quality, and price—93, Bishopsgate-street Within, and 57, Conduit-street, nine doors from Regent-street, left hand side.

Annexed are the Prices of current sizes of Plate Glass, for Sashes, &c.

EDWARD BATES, Resident Director.

USEFUL INVENTIONS.

KNIGHT'S PATENT BACK-SPRING PEN.

This Pen, by its hinge-like elasticity behind the slit, allows the distance between the nibs and writer's fingers to vary with the pressure of the hand, becoming thereby more pleasingly soft and yielding, and easier to write with than even a Quill Pen; and giving to the running-hand the clearness, uniformity, and beauty of slow careful writing with any other pen.

It has in itself a degree of the longitudinal elasticity of KNIGHT'S SPRING PEN-HOLDER, patented with it, and issued before it a year ago, for all other Pens. The number of attempts made to copy and approximate to it, distant as they all are, since the specification was enrolled, proves how important the Makers have deemed the new principle.

Each Pen is marked "C. KNIGHT'S PATENT," and each Card bears the Signature, *Charles Knight.*

Twelve Pens, with Holder, 2s. 6d.

KNIGHT'S PATENT SPRING PEN-HOLDER.

The use of Metallic Pens in this country has become so general that an invention which corrects their defects, and remarkably improves their usefulness, cannot be regarded as unimportant.

The new PATENT SPRING PEN-HOLDER, while it renders the act of writing itself easier with any pen, LEAVES TO THE METALLIC PEN ALL ITS ADVANTAGES OVER THE QUILL, AND ENTIRELY OBVIATES THE DISADVANTAGES. By allowing the length of what may be called the axis of the Pen, or the distance between the nibs and the writer's fingers, to vary according to the pressure made, the hand may descend considerably without making the pen scratch the paper, and rise without causing the pen to leave it. The freedom of motion thus attained produces these effects:—

1. The difficulty of writing with the common Steel Pen at once ceases when the pen is united with the Patent Spring Holder. 2. The fatigue is prevented. 3. The slowness is replaced by rapidity.

The elasticity of the Holder is regulated by a screw, so that every writer is enabled to adjust it to his own habit or fancy.

The instrument is not in the least complicated, and not liable to be out of order.

It may be used with any of the numerous descriptions of Metallic Pens now made.

It is not of expensive construction, so that it may be attained at small cost by the thousands of persons who now use Steel Pens.

The Patent Spring Pen-Holder is issued in cases, adapted for the waistcoat pocket, with directions for use, signed by C. Knight on each, at the following prices:

In ALBATA, for any pen, 2s.
Ditto, superior quality, 2s. 6d.
In ALBATA, for SHORT pen, with four pens, 3s.
In SILVER, EBONY Handle, for SHORT pen, with four pens, 6s.
In SILVER, IVORY Handle, for SHORT pen, with four pens, 7s.

Booksellers, Stationers, and Jewellers may be supplied wholesale, on application to Messrs. Knight and Co, 22, Ludgate Street, or through the agents for the sale of their Publications.

THE PATENT LEAF HOLDER.

By the means of a little instrument attached to the back of a Portfolio, as few as two or three, or as many as forty or fifty sheets, may be held tightly together as if they were bound, the volume thus secured opening with as much ease as a sewed book. The compression can be immediately withdrawn, and the number or numbers added or subtracted without the slightest difficulty. The principle is, of course, equally applicable to music, prints, and manuscripts. A Patent has been taken out for this invention; and the Portfolios, with leather backs and cloth sides, may now be had of the following sizes, and at the affixed retail prices:—

	Iron Holder.	Brass Holder.
	s. d.	s. d.
Demy Octavo, for the Mirror, and similar Publications, Pamphlets, &c.	3 6	
Post Quarto, for Letters		4 6
Ditto (Black) Sermon Cases		4 6

London: CHARLES KNIGHT & Co., 22, Ludgate Street.

LIBRARY FOR THE YOUNG.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

Just published, with SIX Wood-cuts, price 3*s.* 6*d.*,

HISTORICAL SKETCHES:—SPAIN AND PORTUGAL, Vol. II., completing the Work.

London: CHARLES KNIGHT & Co., 22, Ludgate Street.

LIBRARY OF ANECDOTE AND TABLE-TALK.

This Day is published, in fcp. 8vo, price 6*s.* each volume,

THE BOOK OF TABLE-TALK, Vols. I. & II., illustrated with many Wood-cuts.

"I love anecdotes. I fancy mankind may come, in time, to write all aphoristically, except in narrative; grow weary of preparation, and connexion, and illustration, and all those arts by which a big book is made. If a man is to wait till he weaves anecdotes into a system, we may be long in getting them, and get but few in comparison of what we might get."—*Dr. Johnson* (*Boswell's Tour*).

London: CHARLES KNIGHT & Co., 22, Ludgate Street.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

This Day is published, in 2 vols., post 8vo., illustrated with Wood-cuts, price One Guinea,

THE CHINESE: A General Description of the Empire of China and its Inhabitants. By JOHN FRANCIS DAVIS, Esq., F.R.S., late his Majesty's Chief Superintendent in China.

"In Mr. Davis's account of China we find every subject brought forward that can throw light on the laws and institutions of a people to whom, we think, that justice has not been rendered by foreigners which is their due. Mr. Davis brings to his task advantages which have fallen to the lot of few Europeans. He resided twenty years at Canton, where he at length rose to be chief of the factory; he accompanied Lord Amherst's embassy to Pekin; and he ranks as one of the few Europeans who have ever really mastered the language and literature of China. He has rendered into English several pieces from their romances, their poetry, and their dramatic works; of which last class, in all tongues, but more especially in the unique tongue of China, it is particularly difficult to preserve the spirit in a translation. We have a right, therefore, to consider the statements which he has now submitted to the public, as containing as full and correct a view of this singular people, of their government, laws, and institutions—and, in short, of the whole frame of their society, as the many difficulties with which the subject is beset, will admit."—*Quarterly Review, July*, 1836.

FLOWERS of POETRY for YOUNG PERSONS. Arranged as a Companion or Sequel to MISS TAYLOR'S ORIGINAL POEMS.

CRITICAL NOTICES.

"A gradation of Poetry was wanting, and these Volumes will be serviceable in the School Room. The selections are made with much poetical taste, and the subjects introduced are of the most improving kind."—*Educational Magazine.*

"A very instructive and pleasing selection."—*Baptist Magazine.*

"Flowers of Poetry for Young Persons compose two little volumes which are designed to accompany Miss Taylor's Original Poems. They are every way worthy the honour to which they aspire, and will be received among the young with much pleasure."—*Remembrancer.*

"Very pretty and pleasing."—*Literary Gazette.*

"These attractive, cheap, and useful volumes of Poems will speedily become standard favorites with all classes, and, to the Conductors of Schools who are anxious to furnish their Pupils with a selection of superior poetry free from objectional pieces, they will indeed be invaluable."—*Nottingham Mercury.*

"These two pretty little volumes of Poems are especially adapted for the use of Schools and Young Persons."—*Pinnock* (*Author of Popular Catechisms*).

"They combine every requisite to instruct, elevate, and entertain."—*Worcestershire Guardian.*

"Much taste and piety have been displayed in this selection of Poetry."—*Evangelical Magazine.*

"Every piece inculcates some virtuous principle; and the volumes may be put into the hands of the Young with a certainty that they will at once improve their taste, and elevate and confirm their moral and religious affections."—*Hampton Chronicle.*

FRENCH GRAMMAR SIMPLIFIED, AND THE DIFFICULTIES OF TEACHING OR ACQUIRING THE LANGUAGE REMOVED.

This day is published in one volume neatly half-bound and lettered, price only six shillings, a new edition of

MONSIEUR MARTIN'S CELEBRATED WORK ON THE FRENCH VERBS.

In this work the conjugation of every Verb in the French Language, regular and irregular, is fully exemplified under its respective head. There are also given a full illustration of the use of the Imperfect and Preterit Tenses, succinct Rules for ascertaining the gender of Nouns Substantive, several highly useful and important Tables shewing the peculiarities of the Language, and a selection of Idiomatical Sentences. It was originally printed exclusively for the use of the Author's own pupils, but the numerous applications for Copies having led to his disposal of the Copyright, it is now published for the general advantage of English Teachers and Learners of the French Language. The following are a few brief extracts from the numerous recommendations of the Reviewers:—

"Amid the multitude of works for the acquisition of the French Language we have found this to be sterling and efficient. It is particularly ample and well done in respect to the use of the imperfect and preterit Tenses, and a good selection of Idiomatical Sentences concludes it with *eclat*."—*Literary Gazette.*

"One of the greatest difficulties encountered by students in acquiring the French Language, is known to be in the Conjugation of the Verbs and in the use of the imperfect and peterit tenses. An admirable Treatise upon these points lies before us from the pen of Mons. Martin, which has rapidly reached a third edition, and which we strongly recommend as an invaluable epitome to all engaged both in Teaching and Learning French."—*Worcestershire Guardian.*

"The above Treatise will be of very considerable service to those engaged in Teaching French."—*Educational Magazine.*

"A successful attempt to *simplify* one of the most difficult portions of French Grammar."—*Athenæum.*

"It is eminently adapted to abridge the labour of the Teacher, at the same time that its use facilitates the progress of the pupil, and thus forms an indispensable requisite in Schools where instruction in the French Language forms a part of Education."—*Derby Reporter.*

"We have no hesitation in asserting that it richly merits and will speedily obtain a place in the hands of every Teacher and Learner of the French Language in this Kingdom."—*Nottingham Mercury.*
